## AURKTD5004 Analyse and evaluate tracked mobile plant undercarriage and suspension system faults

### Modification History

Release	Comment
Release 1	Replaces AURT572493A Analyse and evaluate tracked mobile plant undercarriage and suspension system faults Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to analyse and evaluate tracked mobile plant tracks, undercarriage and suspension systems in order to initiate action to sustain, vary or enhance performance.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.  The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning tracked mobile plant undercarriage and suspension systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.4. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.5. Tracked mobile plant undercarriage and suspension system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
	3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary tracked, undercarriage and suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- tracked mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- electrical theory covering voltage, current, resistance, power, magnetic.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- the functions of hydraulic pressure within undercarriage and suspension systems.
- detailed knowledge of the types, function, operations and limitations of mobile plant tracked systems/components.
- detailed knowledge of the types, function, operations and limitations of tracked mobile plant undercarriage systems/components.
- detailed knowledge of the types, function, operations and limitations of tracked mobile plant suspension systems/components.
- general knowledge of mobile plant digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
equipment. <ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work instructions and requirements and locate, interpret and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Comply with regulatory and commercial obligations.
- Complete failure analyses on a minimum of three undercarriage and suspension systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for plant undercarriage and suspension systems.
- Document and report analysis and evaluation processes, findings and outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, operational tracked mobile plant undercarriage and suspension systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Competence in this unit may be assessed in conjunction with other

<b>EVIDENCE GUIDE</b>	
	functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Tracked mobile plant</b>	Tracked mobile plant covers all mobile plant with tracked undercarriage, including tracked type loaders, crawler tractors tracked type plant, hydraulic excavators and face shovels, material handling machines, agricultural tracked equipment and other rural equipments.
<b>Tracked systems</b>	Tracked systems to be covered in this unit are to include linked, sealed, and sealed and lubricated.
<b>Undercarriage systems and components</b>	Undercarriage systems and components to be covered in this unit are to include rollers, idlers, frames and recoil mechanisms.
<b>Suspension systems and components</b>	Suspension systems and components to be covered in this unit are to include rigid platform, low track, live axle, dead axle and elevated sprocket.
<b>Failures</b>	Failures to be covered in this unit are to include alignment, abnormal wear, component out of specification, component damage, mechanical variations, adjustment errors, inadequate modifications.
<b>Variations and failures</b>	Variations and failures covered by this unit are to include those caused by the influence of external systems which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Standards, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include callipers, infrared temperature sensor, micrometers, profile and template gauges, tape measures, temperature measuring equipment and verniers, and may include laser alignment system and ultrasound systems (metal thickness).
<b>Tests</b>	Tests to be conducted are to include material thickness, temperature variation, tracking alignment, and wear rate analysis.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to tracked mobile plant undercarriage and suspension systems.</li> <li>• Australian Standards.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging undercarriage and suspension system technology and technology changes.</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning mobile plant engine and fuel systems are accessed and interpreted.</p> <p>1.3. National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work.</p> <p>1.4. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.5. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.6. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Mobile plant engine and fuel system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary mobile plant engine and fuel systems, monitoring and testing processes, diagnostic methods and options and safety procedures..
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetics and inductance (including semi-conductors and electronic system applications).
- general knowledge of the types, functions, operations and limitations of mobile plant engines.
- detailed knowledge of the types, function, operations and limitations of mobile plant fuel systems/components, including all current electronically controlled and/or actuated arrangements.
- detailed knowledge of the types, function, operations and limitations of mobile plant engine and fuel electrical systems/components.
- detailed knowledge of the types, function, operations and limitations of mobile plant intake systems/components, including charge cooling and after/inter-cooling arrangements.
- detailed knowledge of the types, function, operations and limitations of mobile plant exhaust systems/components, including single and multi-staged turbo charging.
- detailed knowledge of the types, function, operations and limitations of mobile plant

**REQUIRED SKILLS AND KNOWLEDGE**

- lubrication systems/components.
- detailed knowledge of the types, function, operations and limitations of mobile plant cooling systems/components.
- national environment protection measure for diesel vehicles.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of automotive digital computing systems.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three mobile plant engine and fuel systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for mobile plant engine and fuel systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, mobile plant engine and fuel systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Mobile plant</b>	Mobile plant covers all mobile plant, including both wheeled and tracked undercarriage. Included are loaders, dump trucks, graders, scrapers, industrial tractors, materials handling machines, agricultural harvesters and other rural equipment.
<b>Engine and fuel systems</b>	Engine and fuel systems to be covered in this unit are to include the engine and related fuel, electrical, intake, exhaust, lubrication and cooling systems.
<b>Coverage</b>	Coverage is to include electronic monitoring, real time diagnostics, fuel monitoring, closed loop diesel engine management, advanced emission reduction technology, ceramic and other new component materials and evaluation for reuse.
<b>Engine and fuel system failures</b>	<ul style="list-style-type: none"> <li>Engine and fuel system failures covered by this unit are to include engine and fuel management, engine performance (response, fuel consumption, power), charging, contamination, damaged components, emissions, forced induction, fuel pressure/supply, lighting leaks, operating temperature, overheating, sensors, starting.</li> <li>Engine and fuel system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with National Environment Protection Measures for Diesel Vehicles.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include compression gauges, computerised diagnostic system, cooling system analyser, dynamometer, manometer, multimeter, pressure gauges, pyrometer, refractometer, temperature gauges, vacuum gauges and may include anemometer, barometer, hygrometer, specific gravity gauge.
<b>Tests</b>	Tests to be conducted are to include component wear analysis, compression, cylinder leakage, engine performance, exhaust gas sampling, lubricant sampling, oil consumption, pressure sample (intake, exhaust, crank case and turbo-charger boost), sample collection/processing, sensor and actuator integrity and function, temperature and wiring harness integrity.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to mobile plant engine and fuel systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging engine and fuel system technology and technology changes.</li> <li>• Environment Protection Regulations (Diesel Fuels)/ National Environment Protection Measure for Diesel Vehicle Guidelines.</li> </ul>

## AURKTQ3001 Diagnose and repair mobile plant final drive assemblies

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair final drive assemblies fitted to mobile plant. It involves diagnosing deviations from correct operation, repair operations of final drive assemblies and associated systems, and post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the final drive assemblies of mobile plant equipment in the mining, construction and agricultural environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a final drive assembly	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a final drive assembly	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a final drive assembly	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
  - coordinate work with site supervisor and other workers
  - report work outcomes and problems
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and other measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of mobile plant final drive assemblies, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing mobile plant final drive assemblies
- legislation and regulatory requirements
- dangers of working with mobile plant final drive assemblies
- application, purpose and operating principles of mobile plant final drive assemblies
- testing procedures for mobile plant final drive assemblies
- repair procedures for mobile plant final drive assemblies
- post-repair testing procedures for mobile plant final drive assemblies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of mobile plant final drive assemblies
- diagnose and repair mobile plant final drive assembly according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- mobile plant with final drive assembly faults relevant to the qualification being sought
- equipment appropriate for the testing of mobile plant final drive

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

assemblies

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of mobile plant final drive assemblies.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• mobile plant final drive assembly diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of mobile plant final drive assembly</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• mobile plant final drive assembly service requirements and repair manuals.</li> </ul>
<b>Diagnosis options</b> may	<ul style="list-style-type: none"> <li>• isolation of faults</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• component inspection and evaluation.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• loss of drive</li> <li>• noisy final drive assembly.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• assessment of final drive noise</li> <li>• assessment of final drive operation.</li> </ul>

**Unit Sector(s)**

## AURKTR3001 Diagnose and repair electric-over-hydraulic control systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to carry out repairs to electric over hydraulic control systems fitted to vehicles. It involves identifying and confirming safety requirements, diagnosing deviations from correct operation, repair operations of electric over hydraulic control systems and associated systems, and post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the electric over hydraulic control systems of vehicles in the road transport, mining, construction, agricultural, marine and other industrial environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<ul style="list-style-type: none"> <li>1. Prepare to diagnose and repair an electric over hydraulic control system</li> </ul>	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose an electric over hydraulic control system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair an electric over hydraulic control system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
  - coordinate work with site supervisor and other workers
  - report work outcomes and problems
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and other measuring equipment
  - measure and calculate length, area and volume
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of electric over hydraulic control systems, including the use of:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- specialised tools and equipment
- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing electric over hydraulic control systems
- legislation and regulatory requirements
- dangers of working with electric over hydraulic control systems
- application, purpose and operating principles of electric over hydraulic control systems
- testing procedures for electric over hydraulic control systems
- repair procedures for electric over hydraulic control systems
- post-repair testing procedures for electric over hydraulic control systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of electric over hydraulic control systems
- diagnose and repair electric over hydraulic control systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with electric over hydraulic control systems relevant to the qualification being sought
- equipment appropriate for the testing of electric over hydraulic

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

control systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of electric over hydraulic control systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• electric over hydraulic control system diagnosis and repair methods, processes and equipment</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of electric over hydraulic control systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• electric over hydraulic control system service requirements and repair manuals.</li> </ul>
<b>Diagnosis options</b> may	<ul style="list-style-type: none"> <li>• isolation of faults</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"><li>• component inspection and evaluation.</li></ul>
<b><i>Fault</i></b> may include:	<ul style="list-style-type: none"><li>• hydraulic component faults</li><li>• electrical component faults.</li></ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"><li>• component repair procedures, including:<ul style="list-style-type: none"><li>• removal, replacement and adjustment procedures</li><li>• dismantle, repair, re-assembly and adjustment procedures.</li></ul></li></ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"><li>• hydraulic pressure checks</li><li>• electrical checks, such as voltage drop, resistance and current flow.</li></ul>

  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair powershift transmissions systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- computerised Technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing powershift transmissions
- legislation and regulatory requirements
- dangers of working with heavy vehicle powershift transmissions
- application, purpose and operating principles of heavy vehicle powershift transmissions
- testing procedures for powershift transmissions
- repair procedures for powershift transmissions
- post-repair testing procedures for powershift transmissions

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of powershift transmissions
- diagnose and repair heavy vehicle powershift transmissions according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements..

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with powershift transmission faults relevant to the qualification being sought
- equipment appropriate for the testing of heavy vehicle powershift transmissions

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of heavy vehicle powershift transmissions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• heavy vehicle powershift transmission diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>

## AURKTX4003 Diagnose complex faults in mobile plant transmission systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in mobile plant transmission systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of transmission systems in the mobile plant environment.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning mobile plant transmission systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS)</b> requirements, equipment and system isolation requirements and personal protection needs are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in mobile plant transmission systems are identified and confirmed from direct and/or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to mobile plant transmission systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of mobile plant transmission systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to electric over hydraulic systems
- concepts, types, functions, operations and limitations of mobile plant transmission systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to mobile plant transmission systems
- testing procedures for mobile plant transmission systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

• EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• interpret workplace instructions and locate and apply information</li> <li>• apply safety requirements, including the use of personal protective equipment</li> <li>• identify and select appropriate diagnosis processes to be performed</li> <li>• complete diagnosis of complex faults on a minimum of three different mobile plant transmission systems with real or simulated faults</li> <li>• document and report outcomes and required actions of diagnosis of complex faults in mobile plant transmission systems.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• vehicles systems with real or simulated mobile plant</li> </ul>

## • EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

transmission system faults

- tools and equipment appropriate for the diagnosis of complex faults in mobile plant transmission systems
- technical reference information and workplace instructions..

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults*** may include:

- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration or adjustment specifications
- component specifications, component assembly, component damage and system modifications
- indirect mechanical faults.
- mechanical and hydraulic system faults

***Tests*** may include:

- wiring and connector integrity
- operation and specification of input and output devices
- controlling electronic components and computers
- data interpretation and readings related to direct indirect and intermittent causes
- hydraulic systems testing
- electrical systems testing
- mechanical systems testing
- road test.

***Testing equipment*** may include:

- analogue and digital multimeters
- lab oscilloscopes
- scan tools
- test lights and test LEDs
- pulse generators
- manufacturer and component supplier testing equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• pressure gauges</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to mobile plant transmission systems</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Mobile Plant
<b>Unit sector</b>	Technical – Transmission

**Custom Content Section**

## AURKTX5002 Analyse and evaluate wheeled mobile plant transmission system faults

### Modification History

Release	Comment
Release 1	Replaces AURT572193A Analyse and evaluate wheeled mobile plant transmission system faults Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to analyse and evaluate wheeled mobile plant transmission systems in order to initiate action to sustain, vary or enhance performance.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.  The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning wheeled mobile plant transmission systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Wheeled mobile plant transmission system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary wheeled mobile plant transmission systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- wheeled mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant clutch systems/ components.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant torque converter systems/components.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant transmission systems/components.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant driveline systems/ components.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant

## **REQUIRED SKILLS AND KNOWLEDGE**

- differential systems/ components.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant final drive systems/ components.
- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three wheeled mobile plant transmission systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for wheeled mobile plant transmission systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, wheeled mobile plant transmission systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

<b>EVIDENCE GUIDE</b>	
	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstance.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Wheeled mobile plant</b>	Wheeled mobile plant covers all mobile plant other than that with tracked undercarriage. Included are loaders, dump trucks, graders, scrapers, industrial tractors, materials handling machines, agricultural harvesters and other rural equipment.
<b>Systems</b>	Transmission systems to be covered in this unit are to include mechanical, power shift and automatic transmissions with integrated computer controls and clutches, torque converters, drivelines, differentials and final drive sub-systems.
<b>System faults</b>	Transmission system faults covered by this unit are to include abnormal component wear, clutch operations, clutch pack slippage, contamination, driveline phasing and alignment, hard shifting, leaks, loose mountings, lubrication, modulation, noises, operating temperature, system pressures, torque converter slippage and vibrations.
<b>System failures</b>	Transmission system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria

<b>RANGE STATEMENT</b>	
	and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include computer-based diagnostic systems, micrometers, multimeters, pressure gauges, spring compression testers, tachometer, temperature gauges and verniers.
<b>Tests</b>	Tests to be conducted are to include component wear, lubricant sampling, operating temperature, pressure (torque converter and transmission pressure), torque converter stall, transmission clutch slippage, sensor integrity and function, wiring harness integrity, and diagnosis for module and parts replacement in related electrical and electronic control systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to wheeled mobile plant transmission systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li> </ul>

## Unit Sector(s)

<b>Unit sector</b>	Mechanical - Mobile Plant
--------------------	---------------------------

## Co-requisite units

Not applicable.

## Competency field

Competency field	Technical - Transmission
------------------	--------------------------

## AURLLD3001 Determine compliance of steering and suspension modifications

### Modification History

Release	Comment
Release 1	<p>Replaces AURT316316A Determine compliance of steering and suspension modifications</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to advise customers whether their proposed or actual steering and suspension modifications comply with Australian Design Rules for normal road usage.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, clarification of the customers' needs, the analysis of needs/proposals against Australian Design Rules requirements, recommendation as to a compliant plan of action and completion of work finalisation processes, including clean-up and documentation.</p> <p>The unit applies to steering and suspension systems fitted to a range of light vehicles, which includes 4WD vehicles and light commercial vehicles.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clarify details of steering and suspension modifications	<ul style="list-style-type: none"><li>1.1. Confirmation is sought, through discussion with the customer, if steering and suspension modifications are actual or proposed</li><li>1.2. Reasons for modifications are discussed and confirmed with the customer</li><li>1.3. Modification specifications and dimensions are determined and documented</li><li>1.4. Non-standard steering and suspension components are identified</li></ul>
2. Determine specific Australian Design Rules information relating to steering and suspension modifications	<ul style="list-style-type: none"><li>2.1. Australian Design Rules bulletin applicable to modifications is identified</li><li>2.2. Section providing a ruling on the legality of modifications is identified</li><li>2.3. Any ruling against modifications is interpreted</li><li>2.4. Interpretation of the ruling made in relation to modifications is clarified and discussed with customer</li></ul>
3. Recommend a plan of action to achieve customer requirements	<ul style="list-style-type: none"><li>3.1. Implications of non-compliance with a specific Australian Design Rules is discussed with the customer</li><li>3.2. Suitable plan of action to meet Australian Design Rules requirements is discussed and clarified with customer</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage)
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to determining compliance of steering and suspension modifications, including the use of measuring equipment, electronics, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- purpose and format of Australian Design Rules
- contents of Australian Design Rules relative to steering and suspension systems
- enterprise procedures for determining compliance or non-compliance
- enterprise procedures for making recommendations to resolve non-compliance situations
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- completing preparatory activity in a systematic manner
- locating and interpreting Australian Design Rules in relation to a customer suspension modifications
- discussing Australian Design Rules interpretations at an understandable level with customer
- making recommendations to avoid non-compliance situations
- recommending a plan of action to provide a compliant response to customer's needs

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to determining compliance of steering and suspension modifications
- equipment and tooling appropriate to determining compliance of steering and suspension modifications
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Steering and suspension modification</b>	Types of steering and suspension modification may include lowered or raised normal ride heights, increased track width, variations between front and rear ride heights and reductions in ground clearance due to fitting non-standard components
<b>Work requirements</b>	<ul style="list-style-type: none"> <li>• Work involves ability to access technical information from published Australian Design Rules bulletins and interpret the content applicable to a customer specific steering and suspension modifications</li> <li>• Work includes ability to be able to explain in 'easy to understand terms' mandatory requirements to customer and be able to discuss implications of non-compliance findings</li> <li>• Competence may be demonstrated in a variety of workplaces involved with specific steering and suspension procedures, such as: service stations, dealerships, road-side repairers and automotive after-market specialists</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement and working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company

<b>RANGE STATEMENT</b>	
	quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include road springs, shock absorbers, sway bars and bump stops
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to determining compliance of steering and suspension modifications</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Unit Sector(s)

## AURLTA1001 Apply automotive mechanical system fundamentals

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to demonstrate basic knowledge and awareness of automotive terminology and mechanical terms and principles as they apply to vehicle mechanical systems, components and technologies found in modern motor vehicles.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to light vehicles and is based on demonstrating knowledge of systems and components function, location and operation, as well as an understanding of basic automotive mechanical terminology.</p> <p>Applying knowledge of fundamental operating principles of vehicular mechanical systems, including internal combustion engines, vehicular drivetrain, braking, suspension and steering systems and technologies forms the basis of this unit.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify mechanical fundamentals	<p>1.1.Suitable relevant <i>sources of information</i> are located to assist with mechanical fundamentals research</p> <p>1.2.General automotive mechanical system fundamentals are identified in relation to modern vehicle platforms</p> <p>1.3.Mechanical terminology and operating principles of systems and components are referred to and identified for a particular application</p>
2. Identify operation of system or component	<p>2.1.Component or system to be researched is identified</p> <p>2.2.Information is researched to ensure sufficient understanding of component or system to assist with its further identification and application</p> <p>2.3.Potential for unsafe conditions or <i>safety hazards</i> is identified</p>
3. Locate system or component on vehicle	<p>3.1.Suitable <i>automotive systems and components</i> are sourced to assist with task</p> <p>3.2.Location of system or component is confirmed in relation to modern vehicle configuration</p>
4. Apply mechanical fundamentals	<p>4.1.<i>Workplace health and safety (WHS) requirements</i> are observed and applied throughout the work</p> <p>4.2.System or component is examined and sub-assembly components are identified</p> <p>4.3.Method of operation is determined to confirm principles of system or component function</p> <p>4.4.System or component relationship to light vehicle operation is determined</p> <p>4.5.Potential <i>common faults</i> with system or component are identified</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate ideas and information in verbal and written report
  - use questioning and active listening skills, e.g. when clarifying information
- initiative and enterprise skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand workplace safety-related procedures
  - read and follow information in written instructions, specifications and other applicable reference documents
- numeracy skills to use and communicate basic mathematical ideas and techniques that relate to automotive systems and components
- planning and organising skills to:
  - identify risk factors
  - plan and organise activities that implement and follow standard procedures
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as workplace safe operating procedures
- technical skills to:
  - collect, organise and understand technical information relating to:
    - recognising and reporting unsafe situations
    - automotive components and systems identification, location and function
  - select tools and equipment appropriate to the task
  - safely use workplace tools and equipment when applying mechanical fundamentals
- technology skills to use information technology equipment to assist with research

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- methods of sourcing information relevant to mechanical systems
- types, functions, location and basic operation of major vehicle systems and components, including basic automotive mechanical terminology
- common faults of major vehicle systems and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- identify automotive mechanical systems and components
- source relevant technical information
- locate mechanical systems and components on modern motor vehicles
- explain the function of at least three major systems of a modern motor vehicle
- demonstrate basic knowledge of possible causes of faults or problems with vehicle systems.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- technical reference information
- a range of functioning automotive systems and components
- vehicles relevant to the qualification being sought
- automotive tools and equipment

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- personal protective equipment and workplace safety equipment.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Sources of information</i></b> may include:	<ul style="list-style-type: none"> <li>• vehicle workshop manuals</li> <li>• service bulletins</li> <li>• automotive texts</li> <li>• magazine technical articles</li> <li>• written instructions</li> <li>• documented workplace procedures.</li> </ul>
<b><i>Safety hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• electricity and water</li> <li>• toxic substances</li> <li>• broken or damaged equipment</li> <li>• flammable materials and fire hazards</li> <li>• lifting practices</li> <li>• spillages.</li> </ul>
<b><i>Automotive systems and components</i></b> may include:	<ul style="list-style-type: none"> <li>• engine systems</li> <li>• transmissions and drivetrains</li> <li>• steering and suspension systems</li> <li>• fuel systems</li> <li>• cooling systems</li> <li>• braking systems</li> <li>• exhaust systems.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Hand tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hammers</li> <li>• screwdrivers</li> <li>• wrenches</li> <li>• sockets and accessories</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• pliers</li> <li>• specialist tools for component removal or adjustment.</li> </ul>
<i>Common faults</i> may include:	<ul style="list-style-type: none"> <li>• failure to achieve ignition and power</li> <li>• failure to achieve fuel flow</li> <li>• excessive exhaust smoke or noise</li> <li>• unusual engine noises or vibrations</li> <li>• excessive play or vibration through steering</li> <li>• loss of coolant</li> <li>• slow response or excessive pedal travel when braking</li> <li>• system or component fluid or gas leakage.</li> </ul>

## AURLTB3003 Diagnose and repair light vehicle hydraulic braking systems

### Modification History

Release	Comment
Release 1	Replaces AURT310166A Repair hydraulic braking systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern light vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair hydraulic braking systems fitted to light vehicles. It involves identifying and confirming safety requirements, diagnosing deviations from correct operation, repairing light vehicle braking system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the braking systems of light vehicles, four-wheel drive and light commercial vehicles. This unit does not apply to work related to antilock braking systems (ABS) or to air braking systems.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a light vehicle braking system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a light vehicle braking system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a light vehicle braking system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
- clarify **workplace instructions and determine job requirements**
- **gain information** from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- technical skills to use workplace tools relating to the repair of light vehicle braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to light vehicle braking systems, including:
  - lifting and supporting procedures for light vehicles
  - dangers of working with brake dust and brake fluid
- operating principles of light vehicle braking systems
- application, purpose and operation of light vehicle braking systems
- testing procedures for light vehicle braking systems
- repair procedures for light vehicle braking systems
- post-repair testing procedures for light vehicle braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of light vehicle hydraulic braking systems, including disc brake and drum brake systems
- diagnose and repair light vehicle hydraulic braking systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- light vehicles with hydraulic braking faults relevant to the qualification being sought
- equipment appropriate for the testing of light vehicle hydraulic

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

braking systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of light vehicle hydraulic braking systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• light vehicle braking system diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of light vehicle braking systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• light vehicle service requirements and repair manuals.</li> </ul>
<b><i>Diagnostic tests</i></b> may	<ul style="list-style-type: none"> <li>• friction material wear</li> <li>• brake drum component serviceability</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"><li>• disc brake component serviceability</li><li>• vehicle braking efficiency.</li></ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"><li>• poor braking performance</li><li>• worn, damaged or badly-adjusted components.</li></ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"><li>• removal, replacement and adjustment procedures</li><li>• dismantle, repair, re-assembly and adjustment procedures.</li></ul>
<b><i>Post-repair</i></b> testing may include:	<ul style="list-style-type: none"><li>• mobile or stationary tests to evaluate braking system performance.</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Light Vehicle
<b>Unit sector</b>	Technical – Brakes

**Custom Content Section**

## AURLTB4001 Overhaul braking system components (light)

### Modification History

Release	Comment
Release 1	<p>Replaces AURT410145AA Overhaul braking system components (light)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out an overhaul of hydraulic, mechanical, vacuum and power assisted, and electric light braking system components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, overhauling of braking system components, conducting of serviceability tests on components, preparing brake components for use or storage and completion of work finalisation processes, including clean-up and documentation</p> <p>This unit of competence applies to light vehicles, motorcycles, trailers, caravans and outdoor power equipment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul braking system components	1.1. Nature and scope of the work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for overhaul are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with stored energy as in emergency braking actuators are observed 1.7. Dangers working with brake dust and preventative measures are observed
2. Overhaul braking system components/sub-assemblies	2.1. Information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Braking system components are overhauled using approved methods, equipment and materials, in accordance with manufacturer/component supplier specifications 2.3. Overhaul of braking system components/sub assemblies is completed without causing damage to any component or system 2.4. All braking systems component overhaul activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
3. Conduct serviceability tests on components	3.1. Methods for the conduct of the test is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2. Observations on the performance of the components is noted during the test 3.3. A determination is made as to the serviceability of components 3.4. Failed components are tagged for rework 3.5. Documentation of observations are completed
4. Prepare brake components for use and/or storage	4.1. Inspection is made to ensure safety features are in place 4.2. Final inspection is made to ensure work is to workplace expectations 4.3. Brake components are presented for use or stored to

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use workplace technology related to the overhaul of light braking system components, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- health hazards working with brake dust
- hydraulic principles
- operating principles of light braking systems and their components
- overhaul procedures
- test procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the overhaul of a range of braking system components in accordance with workplace and manufacturer/component supplier requirements
- interpreting test results
- completing the work within workplace timeframes
- presentation/storage of brake components in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the overhaul of light vehicle braking systems
- equipment, hand and power tooling appropriate to the overhaul of light vehicle braking systems
- activities covering the mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Actuating mechanisms</b>	Actuating mechanisms may include fluid operated, mechanically operated, power assisted, anti-lock brake systems, computer systems, dual braking systems and anti-dive systems
<b>System components</b>	System components may include disc pads, master cylinders, brake shoes, brake callipers, brake hoses, brake actuators, mechanical devices and hydraulic valves
<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental</b>	Environmental requirements are to include but are not limited to

<b>RANGE STATEMENT</b>	
<b>requirements</b>	waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for removal/adjustment, lifting and supporting equipment, brake dust extraction equipment, measuring instruments and overhaul machining equipment
<b>Materials</b>	Materials may include spare parts, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the overhaul of light vehicle braking systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURLTB4004 Diagnose complex faults in light vehicle braking systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in light vehicle braking systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of braking systems of light vehicles, four wheel drive and light commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning light vehicle braking systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in light vehicle braking systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to light vehicle braking systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of light vehicle braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electrical and electronic systems related to light vehicle braking systems
- types, functions, operations and limitations of light vehicle braking systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to light vehicle braking systems
- testing procedures for light vehicle braking systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different light vehicle braking systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in light vehicle braking systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated light vehicle

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

braking system faults

- tools and equipment appropriate for the diagnosis of complex faults in light vehicle braking systems
- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications</li> <li>• component specifications, component assembly, component damage and system modifications</li> <li>• mechanical and hydraulic system faults.</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes</li> <li>• brake fluid testing</li> <li>• on-road braking efficiency testing</li> <li>• component test.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• decelerometer or brake test meter</li> <li>• brake fluid tester</li> <li>• ABS sensor tester</li> <li>• analogue and digital multimeters, lab oscilloscopes, scan tools, test lights and test LEDs</li> <li>• pulse generators</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• manufacturer/component supplier testing equipment.</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer/component supplier specifications, schematics and operational procedures related to braking systems</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology.</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Light Vehicle
<b>Unit sector</b>	Technical – Brakes

**Custom Content Section**

## AURLTB5002 Analyse and evaluate light vehicle braking system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT570393A Analyse and evaluate light vehicle braking system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate light vehicle braking systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations.</p> <p>It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning light vehicle braking systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Light vehicle braking system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary light vehicle braking systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- light vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic theory covering electrics, hydraulics, friction, mechanical advantage, levers, heat, pressure and area.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and electrical braking systems, including performance and balance.
- functions of brake fluid.
- detailed knowledge of the types, functions, operations and limitations of light vehicle braking systems/components.
- detailed knowledge of the types, function, operations and limitations of abs braking systems/components.
- detailed knowledge of the Australian Design Rules requirements related to light vehicle braking.
- working knowledge of the types, function, operations and limitations of light vehicle air braking (multiple trailer) systems/components.

**REQUIRED SKILLS AND KNOWLEDGE**

- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three light vehicle braking systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for light vehicle braking systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, light vehicle braking systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure and analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Vehicles</b>	Light vehicles are to include two wheel and four wheel drive vehicles.
<b>Braking systems</b>	Braking systems to be covered in this unit are to include disc, drum, ABS, AJPB, brake by wire and ceramic brakes.
<b>Drum brakes</b>	Drum brakes are to include leading/trailing, twin leading, duo servo, multiple shoe variations, cast iron and aluminium brake drums.
<b>Park brakes</b>	Park brakes are to include hand, foot, electric and Banksia type.
<b>Electronic systems</b>	Electronic systems are to include anti-lock braking systems and brake by wire.
<b>Braking system failures</b>	Braking system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.

<b>RANGE STATEMENT</b>	
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	<ul style="list-style-type: none"><li>• Testing equipment is to include decelerometer, electronic brake fluid analyser, multimeter, data scanner, oscilloscopes, pressure gauges, vacuum gauge, brake tester.</li><li>• Testing equipment may include a chassis dynamometer.</li></ul>
<b>Tests</b>	<ul style="list-style-type: none"><li>• Tests to be conducted are to include performance, brake fluid boiling point, rotor and drum wear, pad and lining thickness, brake pedal travel, handbrake mechanism travel, NVH, directional control and ABX operation and performance.</li><li>• Tests may include braking during cornering, friction material wear rate, and disc drum and rotor temperature.</li></ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"><li>• Workplace procedures relating to the use of tooling and equipment.</li><li>• Workplace procedures relating to reporting and communication.</li><li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light vehicle braking systems.</li><li>• Australian Design Rules.</li><li>• Vehicle industry regulations.</li><li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li></ul>

## AURLTD3001 Select and install performance enhanced suspension system products

### Modification History

Release	Comment
Release 1	<p>Replaces AURT316168A Select and install performance enhanced suspension system products</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to select and install performance enhanced products to light vehicle suspension systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work involves selecting products to suit a customer's proposed suspension system modification requirements. It also includes removal of existing components, installation of new products and suspension system adjustments.</p> <p>The unit applies to suspension system configurations fitted to light vehicles, which may include 4WD vehicles, light commercial vehicles and off-road and motorsport vehicles.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify customer requirements and assess for practicality and safety compliance	1.1. Purpose for proposed modifications are established and confirmed with the customer 1.2. Practicality of the customer requirements are assessed and discussed with the customer 1.3. Proposed modifications are assessed in relation to safety and Australian Design Rules compliance 1.4. Project parameters, including cost and timeframe considerations, are discussed and confirmed with the customer 1.5. Vehicle is road tested to ensure proposed modifications are relevant and the condition of the vehicle is appropriate to safely incorporate performance enhanced products 1.6. Written quote is prepared to be authorised by the customer according to enterprise procedures
2. Prepare vehicle for modifications	2.1. Suspension system components needed for project are sourced and ordered 2.2. Service information is accessed and interpreted prior to commencing removal procedures 2.3. Vehicle is road tested to confirm roadworthiness prior to commencing component removal procedures
3. Fit components and make suspension system adjustments	3.1. Original components are removed and stored according to customer requirements or enterprise disposal procedures 3.2. New components are inspected to confirm serviceability of use prior to installation 3.3. New components are installed according to manufacturer/component supplier instructions and enterprise guidelines 3.4. Fluids and lubricants are added to components according to manufacturer/component supplier guidelines and enterprise procedures 3.5. Suspension system adjustments are completed according to manufacturer/component supplier specifications
4. Road test vehicle, make final adjustments and complete documentation	4.1. Vehicle is road tested to ensure compliance with project intent 4.2. Suspension system is inspected to confirm it is free of leaks and other malfunctions 4.3. Final adjustments are completed 4.4. Vehicle is road tested with the customer to confirm acceptance of work carried out 4.5. Documentation relating to the work carried out is completed

ELEMENT	PERFORMANCE CRITERIA
	and distributed/filed according to enterprise procedures
5. Clean up work area	<p>5.1. Material that can be reused is collected and stored according to enterprise procedures</p> <p>5.2. Equipment used in the job tasks is cleaned and returned to designated locations in the workplace</p> <p>5.3. Work area is cleaned and inspected for serviceable and safe working conditions according to enterprise requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collecting, analysing and organising information from a variety of sources to ensure the performance enhanced products are selected to achieve the customer's proposed modifications
- discussing job card requirements and desired vehicle performance characteristics with the customer
- following removal, refitting and adjusting procedures in a planned sequence as in workshop manuals and other technical publications to achieve desired system modifications within efficient timeframes
- selection and fitting of specialised products requires cooperative working arrangements with colleagues and supervision relating to sharing of specialist equipment, sharing of technical knowledge and procurement of specialist parts
- applying basic mathematical techniques when converting specification details to the processes of adjustment procedures and dimension recording
- establishing safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- using workplace technology related to the selection and installation of performance enhanced suspension system products, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- operating principles of various suspension systems and major components
- how specific performance enhanced suspension products affect suspension system and driving characteristics
- enterprise product ordering procedures
- component removal, refitting and adjusting procedures
- road test principles and procedures
- methods of using lubricants and sealants
- methods of fitting gaskets and circlips
- methods of interpreting results from specific testing equipment (eg shock absorber tester)
- how to access information from a computer
- methods of effectively requesting advice or additional information from others in the workplace
- effective communication techniques with customers

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Applying and using safety equipment and items of PPE
- Selecting and fitting performance enhanced suspension system products to suit a customer requirements
- Following task instructions, operating procedures and approved inspection processes to:
  - minimise risk of injury to self and others
  - prevent damage to workshop equipment and customer vehicles
  - achieve outcomes within quoted timeframes quality standards
- Applying safe work practices
- Correctly interpreting and communicating technical information
- Applying safe and effective vehicle road testing techniques
- Correctly completing workplace documentation
- Working with and around other team members
- Working effectively with others
- Modifying work activities to cater for variations in workplace context and environment

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

Assessment is to be conducted without additional assistance from supervision or other work colleagues except where it is normal practice to consult or clarify with others on matters pertinent to specific job tasks

Information accessed by an external assessor during assessment procedures, which is derived from enterprise policies and practices, must be treated as commercial-in-confidence and not passed on to unauthorised persons

The following resources should be made available:

## EVIDENCE GUIDE

	<ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the selection and installation of performance enhanced suspension system products</li> <li>• equipment, hand and power tooling appropriate to the selection and installation of performance enhanced suspension system products</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul> <p>Candidate for assessment should be able to access resources to complete job tasks if they are deemed part of normal workplace job requirements. However, if assessment is to be conducted in a simulated work environment, resources must be provided but with additional verbal questioning to confirm how the candidate would access these resources in the workplace</p>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment of workplace outcomes performance must only take place after a sufficient period of supervised practice and repetitive experience</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>WHS</b>	WHS requirements include WHS legislation, safety management systems, hazardous substances and dangerous goods code, enterprise safe operating procedures and Australian Design Rules
<b>Modifications</b>	Modifications refer to suspension system components which have been altered from the standard manufacturer design either in material, shape, specification or adjustments according to an aftermarket component manufacturer with the intent of enhancing or improving the function of the standard suspension system
<b>Legislative requirements</b>	Work is carried out in accordance with legislative obligations, environmental legislation, WHS regulations, manual handling and lifting equipment procedures and enterprise insurance requirements
<b>Work requirements</b>	<ul style="list-style-type: none"> <li>• Work involves being able to correctly select and install products which will address the requirements of the customer and ensuring the customer is conversant with the altered ride and handling characteristics of their vehicle</li> <li>• Work also involves the ability to discuss requirements of the customer at a suitable technical level that does not intimidate or confuse the customer. It also includes being able to access technical information from workshop manuals, technical bulletins and manufacturer/component supplier publications of performance enhanced suspension system products to assist the customer to understand how their requirements may be achieved</li> </ul>
<b>Proposed modifications</b>	<p>Types of proposed modifications may include:</p> <ul style="list-style-type: none"> <li>• modified spring rates</li> <li>• modified shock absorbers and struts</li> <li>• modified sway bars</li> <li>• modified suspension bushes</li> <li>• modified torsion bars</li> <li>• removal of factory fitted electronic suspension systems and replacement with non-electronic components</li> </ul>
<b>Project parameters may include:</b>	<p>Project parameters may include:</p> <ul style="list-style-type: none"> <li>• whether work will be carried out in phases</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• requesting specific persons to carry out the work</li> <li>• using specific manufacturer/component supplier products</li> <li>• variation to product final adjustments</li> </ul>
<b>Suspension system components</b>	<p>Suspension system components may include:</p> <ul style="list-style-type: none"> <li>• shock absorbers and struts</li> <li>• coil springs</li> <li>• leaf springs</li> <li>• torsion bars</li> <li>• panhard rods</li> <li>• suspension bushes</li> <li>• bump stops</li> <li>• dust boots</li> <li>• shackle and sway bar bushes</li> <li>• ball joints</li> </ul>

## AURLTD3002 Service and rectify faults in lift assisted suspension systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT316171A Service and rectify faults in lift assisted suspension systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out specific servicing procedures and to locate and rectify faults in various types of lift assisted suspension systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and servicing of systems, rectification of system faults, final testing of the system and completion of work finalisation processes including clean-up and documentation.</p> <p>Work involves servicing various types of lift assisted suspension systems and rectifying faults identified during the servicing procedures.</p> <p>The unit applies to all types of lift assisted suspension systems fitted to light vehicles which may include 4WD and light commercial vehicles.</p> <p>Work requires individuals to demonstrate judgment and problem-solving skills in managing work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements including method, process and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work activity 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Service lift assisted suspension systems	2.1. Service information is accessed and interpreted prior to commencing servicing procedures 2.2. Current status and previous fault history of lift assisted suspension system is determined in conjunction with customer 2.3. Current status of lift assisted suspension system is confirmed through a road test program 2.4. Lift assisted suspension system is serviced in accordance with manufacturer/component supplier specifications and enterprise procedures 2.5. Fluids and lubricants are used in accordance with WHS and manufacturer/component supplier specifications 2.6. Used fluids and lubricants are disposed of according to enterprise and WHS procedures
3. Rectify lift assisted suspension system faults	3.1. Road test results are interpreted to verify system fault diagnosis 3.2. The customer is notified of fault(s) which are discussed to obtain agreement to carry out work 3.3. Faulty components are removed and replaced with approved replacement parts in accordance with workplace procedures and customer requirements 3.4. Faulty components are disposed of in accordance with workplace procedures and warranty requirements 3.5. System adjustments are completed relevant to components replaced
4. Test and confirm system faults have been rectified	4.1. Test procedures are carried out to confirm rectification of system faults 4.2. Outcomes of rectification work are explained to the satisfaction of the customer to enable invoicing/documentation to be completed 4.3. Documentation is completed in accordance with workplace/

ELEMENT	PERFORMANCE CRITERIA
	customer requirements
5. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>5.1. Material that can be reused is collected and stored</li><li>5.2. Waste and scrap is removed following workplace procedure</li><li>5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</li><li>5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</li><li>5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and workplace procedures</li><li>5.6. Tooling and equipment is maintained in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collecting information from a variety of sources to ensure the major component can be serviced to achieve the manufacturer/component supplier intent
- discussing job card requirements and vehicle symptoms with the customer
- following up fault diagnosis outcomes, which may also require ongoing consultation with the customer to confirm a course of repair action
- servicing and fault rectification procedures need to be followed in a set order as specified in workshop manuals and other technical publications to achieve a serviceable outcome within efficient timeframes
- the servicing of components requires cooperative working arrangements with colleagues and supervision relating to sharing of specialist equipment, sharing of technical knowledge and the procurement of spare parts
- establishing safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- using mathematical ideas and techniques to correctly calculate time, assess tolerances, apply measurements, calculate material requirements and establish quality checks
- using workplace technology related to the servicing and rectification of faults in lift assisted suspension systems, including the use of specialist tools, measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- principles of operation relating to various types of hydraulic and pneumatic lift assisted suspension systems
- construction and operation of major components
- system testing procedures
- servicing procedures
- road-testing techniques
- fault diagnostic methods and procedures
- methods of accessing and interpreting manufacturer/ component supplier specification charts
- enterprise procedures for reporting system faults and material defects
- safe methods of using lubricants and sealants
- methods and techniques for using specific precision measuring tools
- methods of using and interpreting results from specific test equipment
- enterprise and customer documentation

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved or affected by the work
- selection methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- completing fault diagnosis and analysis
- completing servicing and fault rectification procedures to workplace and manufacturer/component supplier requirements
- completing work within workplace timeframes
- presentation of equipment to customer in compliance with workplace requirements
- correctly completing job documentation

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements including specified Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to servicing and rectification of faults in lift assisted suspension systems
- equipment, hand and power tools appropriate to servicing and rectification of faults in lift assisted suspension systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Lift assisted suspension systems</b>	Types of lift assisted suspension systems may include hydraulic and pneumatic
<b>Road test programs</b>	Types of road test programs may include off-road terrain, highway, city and proving ground facilities
<b>Test procedures</b>	Types of test procedures to confirm fault rectification may include shock absorber testing
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations including Australian Standards, internal enterprise quality policy and standards and enterprise operations and

<b>RANGE STATEMENT</b>	
	procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, load testing devices, computerised diagnostic equipment and shock absorber testers
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets and diagrams or sketches</li><li>• safe work procedures related to the servicing and rectification of faults in lift assisted suspension systems</li><li>• regulatory/legislative requirements pertaining to automotive industry including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external personnel</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to reset steering system alignment	<p>1.1. Work instructions are used to determine job requirements, including quality, material, equipment and quantities</p> <p>1.2. Job specifications are read and interpreted</p> <p>1.3. WHS requirements, including breathing protection, personal protection needs, are observed throughout the work</p> <p>1.4. Material for application is selected and inspected for quality</p> <p>1.5. Correct hand and power tooling are identified and checked for safe use</p> <p>1.6. Products are determined to minimise waste material</p> <p>1.7. Reasons for resetting alignment specifications to non-standard settings are discussed and clarified with customer</p>
2. Carry out alignment pre-checks	<p>2.1. Non-standard adjustment settings are confirmed as technically appropriate and are safe to carry out</p> <p>2.2. Modifications made to steering and suspension system are inspected to confirm they do not make the vehicle unroadworthy if it is designed for road use</p> <p>2.3. Serviceability status of components involved in alignment adjustments is confirmed</p> <p>2.4. Vehicle is tested to confirm the serviceability of steering and suspension system</p>
3. Make alignment adjustments to achieve specifications	<p>3.1. Alignment equipment is safely connected to the vehicle according to enterprise work practices</p> <p>3.2. Wheel alignment measuring equipment is used in a safe manner in accordance with manufacturer/component/ supplier/enterprise instructions and work practices</p> <p>3.3. Alignment adjustments are completed without causing damage to system components and/or alignment equipment</p> <p>3.4. Any alignment problems are notified and discussed with the customer prior to rework being carried out</p> <p>3.5. Vehicle is tested to confirm customer requirements have been achieved</p>
4. Complete documentation and vehicle history	<p>4.1. Alignment adjustment data is entered in customer's vehicle history file(s)</p> <p>4.2. Customer documentation is completed and</p>

ELEMENT	PERFORMANCE CRITERIA
records	confirmed
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored 5.2. Waste and scrap is removed following workplace procedures 5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace 5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures 5.6. Tooling is maintained in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- methods of accessing and interpreting manufacturer/ component supplier standard wheel alignment specifications
- principles of steering geometry, including 4WS
- implications of making non-standard alignment settings on driving and ride characteristics
- procedures for using specific enterprise wheel alignment equipment
- methods of effectively road testing a vehicle before and after wheel alignment procedures
- enterprise and customer documentation
- work organisation and planning processes

## EVIDENCE GUIDE

accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### **Resetting alignment specifications**

Reasons for resetting alignment specifications to non-standard settings may include:

- for off-road use
- vehicle ride height is altered
- non-standard wheel and tyre combinations fitted
- variations to amounts of oversteer or understeer
- for specific motorsport requirements

#### **Steering and suspension modifications**

Types of steering and suspension modifications may include:

- modified road springs
- revised shock absorbers
- modified sway bar (stabiliser bar) fitted
- altered ride heights
- types of alignment adjustments may include:
- camber
- caster
- toe-in or toe-out
- scrub radius

#### **Alignment equipment**

Alignment equipment may include:

- two head alignment equipment
- four head alignment equipment

#### **Vehicle history data**

Types of vehicle history data may include:

- information derived from customer
- computer vehicle history files
- customer vehicle history data files (hard copy version)

#### **WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This

<b>RANGE STATEMENT</b>	
	may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repair of steering system	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or operational requirements for inspecting and repairing steering systems are sourced and support tooling and equipment are identified and prepared</p> <p>1.6.Warnings in relation to working with wheeled and tracked vehicles are observed</p>
2. Conduct test and analyse results	<p>2.1.Methods for steering system tests are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>2.2.Inspection/test results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repairs	<p>3.1.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Adjustments, including wheel bearing adjustments are made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle/ equipment for customer and/or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- operating principles of mechanical and power assisted steering systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)

**REQUIRED SKILLS AND KNOWLEDGE**

- dangers of working with vehicles
- steering systems testing and adjusting procedures
- steering systems repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting test results
- completing repair to a range of steering systems to manufacturer/component supplier requirements
- completing repairs within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of steering systems
- equipment, hand and power tooling appropriate to the repair of steering systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training

**EVIDENCE GUIDE****Package**

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Repair of steering systems and equipment

Repair of steering systems and equipment may include:

- component and/or system adjustments
- ball joints, struts, idler arms, steering boxes, steering columns, steering racks
- electronic controlled systems and two and four wheel steer
- power assisted steering

#### Repair methods

Methods are to include:

- operational testing, electrical testing
- visual, aural and functional assessments (including: damage, corrosion, wear)
- principles, angles and geometry of vehicle wheel alignment

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to

<b>RANGE STATEMENT</b>	
	others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, testing equipment and devices, including camber, caster, KPI and toe out on turns measuring systems
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair of steering systems</li> <li>• regulatory/legislative requirements pertaining</li> </ul>

**RANGE STATEMENT**

	<p>to automotive industry, including Australian Design Rules</p> <ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURLTD3005 Repair suspension systems (light vehicle)

### Modification History

Release	Comment
Release 1	Replaces AURTL316166A Repair suspension systems (light vehicle) Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out the repairs to suspension systems and associated components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspections/testing and analysis of outcomes and completion of repair actions and work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence applies to the following and should be contextualised to the qualification to which it is being applied:</p> <ul style="list-style-type: none"><li>• light vehicles and outdoor power equipment</li></ul> <p>Work involves wheeled vehicles, including chain drive vehicles.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repairs to suspension systems and associated components	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or measurement requirements for suspension systems are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with wheeled are observed</p>
2. Conduct inspection/test and analysis	<p>2.1.Methods for inspection/test procedures and manufacturer/ component supplier specifications</p> <p>2.2.Inspection/test results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repairs	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for repair are identified and support equipment is identified and prepared</p> <p>3.4.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.5.Adjustments made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- the types, characteristics, uses and limitations of commonly encountered suspension systems
- dangers of working with equipment on chassis
- types and layout of service/repair manuals (hard copy and electronic)
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting inspection/test results
- conducting repair of a range of systems in accordance with manufacturer/component supplier and workplace requirements
- completing repairs within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of suspensions systems
- equipment, hand and power tooling appropriate to the repair of suspensions systems
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment

**EVIDENCE GUIDE**

guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Suspension systems

- Suspension systems may be gas, hydraulic, pneumatic, mechanical or rubber suspension
- Suspension systems may include:
  - lateral and longitudinal arms, independent suspension
  - ball joints, rose joints
  - self-levelling device, ride control, height control

#### Repair methods

- Methods are to include:
- functional testing, pressure testing, electrical testing
  - visual, aural and functional assessments (including: damage, corrosion, fluid levels, fluid leaks, air leaks, wear, alignment)
  - adjustment of shock absorbers

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to

<b>RANGE STATEMENT</b>

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out wheel alignment pre-checks	1.1.Information is gained from customer outlining handling characteristics and history 1.2.Nature and scope of work requirements are identified and confirmed 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Vehicle/equipment tests are performed to confirm need for alignment 1.5.Vehicle wheel alignment pre-checks are carried out in accordance with manufacturer/component supplier procedures and workplace requirements
2. Perform vehicle wheel alignment	2.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2.Wheel alignment measuring equipment is connected to vehicle in accordance with manufacturer/component supplier specifications 2.3.Wheel alignment is completed without causing damage to any component or system 2.4.Corrective adjustments/repairs are carried out in accordance with manufacturer/component supplier specifications 2.5.Vehicle/equipment is tested to confirm accuracy of adjustments according to manufacturer/component supplier specifications and customer requirements 2.6.Wheel alignment testing and adjustment is carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies 2.7.Customer is notified of any major problem(s) prior to rework being carried out 2.8.Workplace documentation is completed and dealt with relevant to alignment outcomes
3. Complete documentation and service history documents	3.1.Service history is updated in accordance with workplace requirements 3.2.Before and after alignment measurements are documented and included in customer documentation 3.3.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of steering geometry and wheel alignment
- wheel alignment procedures
- relationships between fault symptoms and component defects
- frame alignment checks
- wheel alignment system types and their construction
- use of measuring tools and testing equipment
- use of hand tools and specialised equipment

**REQUIRED SKILLS AND KNOWLEDGE**

- pre-check procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Critical aspects of evidence

- 
- It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:
  - observing safety procedures and requirements
  - communicating effectively with others involved in or affected by the work
  - selecting methods and techniques appropriate to the circumstances
  - completing preparatory activity in a systematic manner
  - conducting the alignment of a range of wheels in accordance with workplace and manufacturer/component supplier requirements
  - accurately interpreting wheel alignment measurements
  - completing wheel alignment within workplace timeframes
  - vehicle/equipment is presented to customer in compliance with workplace requirements

#### Context of assessment

- Application of competence is to be assessed in the workplace or simulated worksite
  - Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints
  - Assessment is to comply with regulatory requirements, including Australian Standards
- The following resources should be made available:
- workplace location or simulated workplace
- material relevant to wheel alignment operations
- equipment, hand and power tooling appropriate to wheel alignment operations
- activities covering mandatory task requirements

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions</li> </ul>

## AURLTD4009 Diagnose complex faults in light vehicle steering and suspension systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in light vehicle steering and suspension systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic, hydraulic or pneumatic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of steering and suspension systems of light vehicles, four wheel drive and light commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <i>light vehicle steering and suspension systems</i> are accessed and interpreted</p> <p>1.3. <i>Workplace health and safety (WHS) requirements</i>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <i>faults</i> in light vehicle steering and suspension systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <i>tests</i> and testing process are identified and selected from the range of available options</p> <p>2.4. <i>Testing equipment</i> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <i>diagnostic processes</i> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to light vehicle steering and suspension systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of light vehicle steering and suspension systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to light vehicle steering and suspension systems
- concepts, types, functions, operations and limitations of light vehicle steering and suspension systems and components
- steering geometry, including:
  - caster
  - camber
  - steering axis inclination
  - toe-in and toe-out
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to light vehicle steering and suspension systems
- testing procedures of light vehicle steering and suspension systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and

<b>REQUIRED SKILLS AND KNOWLEDGE</b>

This section describes the skills and knowledge required for this unit.
---

recommendations.
------------------

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different light vehicle steering and suspension systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in light vehicle steering and suspension systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated light vehicle steering

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

and suspension system faults

- tools and equipment appropriate for the diagnosis of complex faults in light vehicle steering and suspension systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Light vehicle steering and suspension systems</i></b> may include:	<ul style="list-style-type: none"> <li>• mechanical, power and electric steering systems</li> <li>• coil, spring, torsion bar and leaf-spring type suspension systems.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• tyre wear, driveability, vibration, directional stability, tracking, calibration and adjustment specifications, component specifications and component assembly</li> <li>• component damage and system modifications</li> <li>• erratic steering, mechanical damage, sub-frame alignment.</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• ball-joint wear, camber, castor, leveller operation pitman arm specifications, ride height, steering access inclination, steering linkage specification, sub-frame alignment, thrust line, toe-in, toe-out turns, turning radius, tyre pressures, tyre tread and wheel bearing specification.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• tape measure, tyre pressure gauge, string line, adjustable electronic bubble level</li> <li>• laser or computerised wheel alignment system.</li> </ul>
<b><i>Diagnostic processes</i></b> may include:	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to steering and suspension systems</li> <li>• six-step troubleshooting plan</li> <li>• discover-investigate-fix methodology.</li> </ul>

### Modification History

Release	Comment
Release 1	Replaces AURT570093A Analyse and evaluate light vehicle steering and suspension system faults Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to analyse and evaluate light vehicle steering and suspension systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations.</p> <p>It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	--

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning light vehicle steering and suspension systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Light vehicle steering and suspension system components are prepared for the diagnostic process, including park-up, isolation and cleaning.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## **REQUIRED SKILLS AND KNOWLEDGE**

### **Required skills**

- research, organise and understand technical information related to contemporary light vehicle steering and suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

### **Required knowledge**

- light vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetics and inductance.
- theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- steering system theory, including steering angles (camber, castor, steering axis inclination, toe-in and toe-out).
- functions of hydraulic pressure with steering and suspension systems.
- detailed knowledge of the types, function, operations and limitations of light vehicle manual steering, power steering and suspension systems/components.
- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different light vehicle steering and suspension systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different light vehicle steering and suspension systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objectives for analysis and evaluation, light vehicle steering and suspension systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objectives, research facilities and technical information, and a work environment.

## EVIDENCE GUIDE

### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Vehicles</b>	Light vehicles are to include two-wheel and four-wheel drive vehicles.
<b>Steering systems</b>	Steering systems to be covered in this unit are to include mechanical and power.
<b>Steering failures</b>	Light vehicle steering failures covered by this unit are to include tyre wear, driveability, vibration, directional stability, tracking, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Suspension systems</b>	Suspension systems are to cover coil, spring and spring leaf types.
<b>Suspension system failures</b>	Light vehicle suspension system failures covered by this unit are to include erratic steering, mechanical damage, sub-frame alignment, component damage and systems modifications.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and</li> </ul>

<b>RANGE STATEMENT</b>	
	problem-solving skills in the diagnosis of faults.
<b>Evaluation criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include tape measure, tyre pressure gauge, string line, adjustable electronic bubble level and may include laser wheel alignment system.
<b>Tests</b>	Tests to be conducted are to include ball-joint wear, camber, castor, leveller operation pitman arm specifications, ride height, steering access inclination, steering linkage specification, sub-frame alignment, thrust line, toe-in, toe-out turns, turning radius left/right, tyre pressures, tyre tread and wheel bearing specification.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light vehicle steering and suspension systems.</li> <li>• Australian design rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li> </ul>

## AURLTE2001 Remove and install light vehicle engine assemblies

### Modification History

Release	Comment
Release 1	Replaces AURT201164A Remove and install engine assemblies Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern light vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove and install engine assemblies fitted to light vehicles. It involves the identification of work requirements, preparation for work, removal of assemblies, installation of engine assemblies and completion of work finalisation processes, including cleaning and documentation, and post-installation testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the engine assemblies of motorcycles, light vehicles, four wheel drive and light commercial vehicles.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove light vehicle engine assemblies	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to removing light vehicle engine assemblies</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Removal options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Warnings in relation to working with lifting and jacking equipment are observed</p>
2. Carry out the removal of light vehicle engine assemblies	<p>2.1. Engine assembly is removed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. <b>Observations</b> are noted and documented during the removal of engine assembly</p>
3. Install light vehicle engine assemblies	<p>3.1. <b>Installation options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools and equipment are selected and prepared</p> <p>3.3. Engine assembly is installed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Carry out post-installation adjustments and tests	<p>4.1. <b>Post-installation adjustments</b> are carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>4.2. <b>Post-installation tests</b> are carried out according to workplace procedures and manufacturer and component supplier specifications</p>
5. Clean up work area and finalise work processes	<p>5.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>5.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>5.3. Workplace documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret gauges, instruments and measuring equipment
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the removal and installation of light vehicle engine assemblies
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with lifting and jacking equipment
- methods of disconnecting related systems, including:
  - air conditioning system
  - cooling system
  - electrical systems
  - exhaust system
  - fuel system
  - power steering system
  - transmission systems, including:
    - automatic transmission

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- manual transmission
- removal procedures for light vehicle engine assemblies, including:
  - correct use of lifting and supporting equipment
  - item tagging procedures
  - correct disposal methods of hazardous substances
- installation procedures for light vehicle engine assemblies
- post-installation testing and adjustment procedures for light vehicle engine assemblies, including:
  - pre-start procedures
  - operational testing and run-in procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- remove and install a range of light vehicle engine assemblies according to workplace, manufacturer and component supplier requirements
- present light vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- light vehicles and light vehicle engine assemblies
- tools and equipment appropriate for the removal and installation of light vehicle engine assemblies
- specifications and workplace instructions.

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• removal and installation methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the removal and installation of light vehicle engine assemblies</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• light vehicle service requirements and repair manuals.</li> </ul>
<b>Removal options</b> may	<ul style="list-style-type: none"> <li>• removal of the engine assembly alone or with the transmission assembly</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>removal with the engine attached to chassis.</li> </ul>
<i>Observations</i> may include:	<ul style="list-style-type: none"> <li>routing of system components</li> <li>damaged or faulty components</li> <li>components and parts required for engine installation.</li> </ul>
<i>Installation options</i> may include:	<ul style="list-style-type: none"> <li>installation of the engine assembly alone or with the transmission assembly</li> <li>installation with the engine attached to chassis.</li> </ul>
<i>Post-installation adjustments</i> may include:	<ul style="list-style-type: none"> <li>drive belts</li> <li>fluid level checks</li> <li>cable freeplay.</li> </ul>
<i>Post-installation tests</i> may include:	<ul style="list-style-type: none"> <li>stationary and mobile engine performance tests</li> <li>testing of associated systems, including:               <ul style="list-style-type: none"> <li>air conditioning system</li> <li>cooling system</li> <li>power steering system</li> <li>transmission system.</li> </ul> </li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repair of engines	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks</p> <p>1.4.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.5.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6.Technical and/or calibration requirements for engine systems repair are sourced and support equipment is identified and prepared</p> <p>1.7.Warnings in relation to working with engines and associated systems are observed</p>
2. Conduct engine systems tests and analyse results	<p>2.1.Methods for engine systems tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Engine is started and run up to operating temperature and checked for leaks, abnormal noises and pressures</p> <p>2.3.Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.4.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.5.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repair	<p>3.1.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Adjustments made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle/ equipment for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to</p>

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations 4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety

## REQUIRED SKILLS AND KNOWLEDGE

requirements

- National Environmental Protection Measures for Diesel Vehicles as applicable to tasks
- engine construction and operation relevant to application
- types and layout of service/repair manuals (hard copy and electronic)
- engine/component repair procedures
- engine removal and replacement procedures
- measuring and testing procedures
- equipment/component safety requirements
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- dismantling, evaluating, assembling, adjustment, measuring and testing
- repairing a range of engines and associated components to workplace requirements and specifications
- repairing of engine and associated components completed within workplace guidelines and timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of engines and associated engine components
- equipment, hand and power tooling appropriate to the repair of engines and associated engine components
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Engines</b>	Engines may be: <ul style="list-style-type: none"> <li>• four stroke spark ignition engines for light vehicle, motorcycle and marine craft</li> <li>• two stroke spark ignition engines for motorcycle and marine craft</li> <li>• four stroke compression ignition engines for light vehicle, heavy vehicle, mobile plant and marine craft</li> <li>• two stroke compression ignition for heavy vehicle, mobile plant, and marine craft</li> </ul>
<b>Repair methods</b>	Repair methods are to include identification of component wear/damage, fluid leakage, removal, dismantling, reassembly, refitting, adjusting and testing
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

<b>RANGE STATEMENT</b>	
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tools and equipment may include hand tools, power tools, lifting and jacking equipment, specialist tools and lubricant dispensing equipment
<b>Materials</b>	Materials may include spare parts, consumables, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to repairing engines and associated components</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules, Environment Protection</li></ul>

## RANGE STATEMENT

	<p>Regulations (Diesel Fuels), National Environment Protection For Diesel Vehicle Guidelines Engineer's design specifications and instructions</p> <ul style="list-style-type: none"> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURLTE4004 Diagnose complex faults in light vehicle petrol engines

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose complex faults in light vehicle petrol engines in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults will be mechanical by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to and includes system fault and failure diagnosis of petrol engines of light vehicles, four wheel drive and light commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <i>light vehicle petrol engines</i> are accessed and interpreted</p> <p>1.3. <i>Workplace health and safety (WHS) requirements</i>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <i>faults</i> in light vehicle petrol engines are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <i>tests</i> and testing process are identified and selected from the range of available options</p> <p>2.4. <i>Testing equipment</i> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <i>diagnostic processes</i> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternative or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to light vehicle petrol engines
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of light vehicle petrol engines, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of light vehicle petrol engines
- types, function, operation and limitations of light vehicle petrol engines, including:
  - intake, exhaust, lubrication, cooling and engine mounting systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to light vehicle petrol engines
- testing procedures of light vehicle petrol engines, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different light vehicle petrol engines with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in light vehicle petrol engines.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with real or simulated light vehicle petrol

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

engine faults

- tools and equipment appropriate for the diagnosis of complex faults in light vehicle petrol engines
- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Light vehicle petrol engines</i></b> may include:	<ul style="list-style-type: none"> <li>two-stroke, four-stroke or rotary petrol engines to 8 litres</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>may include: <ul style="list-style-type: none"> <li>protective clothing and equipment</li> <li>use of tools and equipment</li> <li>handling of material</li> <li>use of fire-fighting equipment</li> <li>first aid equipment</li> </ul> </li> <li>hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>engine (poor performance, excessive oil consumption, engine stoppages)</li> <li>intake system (leakage, noise, vibration, inadequate control)</li> <li>exhaust system (pressure, abnormal emissions)</li> <li>lubrication (pressure, flow, leakage, abnormal engine wear, inadequate filtration, sludge formation, excessive deposits, overheating)</li> <li>cooling (overcooling, insufficient cooler flow, coolant out of specification, lack of air flow, internal corrosion)</li> <li>indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations</li> <li>component specifications, component assembly, component damage and system modifications</li> <li>indirect engine mechanical faults</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>component wear analysis, compression testing, cylinder leakage, engine performance analysis, exhaust gas sampling, oil consumption analysis, oil pressure testing, temperature and engine vacuum measurement.</li> <li>mechanical systems testing</li> <li>road test</li> </ul>
<b><i>Testing equipment</i></b> may	<ul style="list-style-type: none"> <li>bore gauges, compression gauges, scan tools, cooling system analyser, dial gauges, exhaust gas analysers, micrometers,</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:

multimeter, oscilloscope, pressure gauges, stethoscope, telescopic gauges, temperature gauges, tachometer, timing lights, vacuum gauges, verniers, barometers

- manufacturer/component supplier testing equipment

***Diagnostic processes*** may include:

- analysing manufacturer/component supplier specifications, schematics and operational procedures related to light vehicle petrol engines
- component substitution
- six-step troubleshooting plan
- discover-investigate-fix methodology

**Unit Sector(s)**

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning light vehicle engines are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet objectives of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Light vehicle engine and fuel system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary

**REQUIRED SKILLS AND KNOWLEDGE**

light vehicle engine and fuel systems, monitoring and testing processes, diagnostic methods and options and safety procedures.

- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

**Required knowledge**

- light vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the types, functions, operations and limitations of light vehicle engines.
- detailed knowledge of the types, function, operations and limitations of light vehicle fuel, ignition, intake, exhaust, lubrication, cooling and engine mounting systems/ components.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analysis on a minimum of three light vehicle engine and fuel systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measures.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for light vehicle engine and fuel systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objectives for analysis and evaluation, light vehicle engine and fuel systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objectives, research facilities and technical information and a work environment.

**EVIDENCE GUIDE****Method of assessment**

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Failure analysis and evaluation process

The objectives of the failure analysis and evaluation process may determine fault rectification measures, effect variation in system characteristics and parameters or enhancing system performance.

#### Engine and fuel systems

- Engine and fuel systems are to include two-stroke, four-stroke rotary, petrol engine to 8 litres and diesel engine to 8 litres.
- Engine and fuel systems to be covered in this unit are to include the engine and related fuel, ignition, intake, exhaust, lubrication and cooling systems. Systems are to include innovative engine design and ceramic engine componentry.

#### Engine and fuel system failures

- Engine and fuel system failures covered by this unit are to include engine (poor performance, excessive oil consumption, engine stoppages), fuel (contamination, flow, pressure, leakage), ignition (no-start, no-run, misfire, erratic operation, lack of power, charging), intake (leakage, noise, vibration, inadequate control, exhaust (pressure, abnormal emissions), lubrication (pressure, flow, leakage, abnormal engine wear, inadequate filtration, sludge formation, excessive deposits, overheating), cooling (overcooling, insufficient cooler flow, coolant out of specification, lack of air flow, internal corrosion), mounting (noise, vibration, hardness, clutch shudder, erratic transmission control).
- Engine and fuel system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.

#### Unit context

- WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods

<b>RANGE STATEMENT</b>	
	<p>code and safe operating procedures.</p> <ul style="list-style-type: none"> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include bore gauges, compression gauges, computer-based diagnostic system (direct and internet), cooling system analyser, dial gauges, exhaust gas analysers, micrometers, multimeter, oscilloscope, pressure gauges, stethoscope, telescopic gauges, temperature gauges, tachometer, timing lights, vacuum gauges, verniers, and may include anemometer, barometer, hygrometer, specific gravity gauge.
<b>Tests</b>	Tests are to include component wear analysis, compression, cylinder leakage, engine performance, exhaust gas sampling, flow, oil consumption, pressure, sample collection/processing, specific gravity, temperature and vacuum.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for</li> </ul>

**RANGE STATEMENT**

	<p>testing equipment and materials.</p> <ul style="list-style-type: none"><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light vehicle engine and fuel systems.</li><li>• Australian Design Rules.</li><li>• Vehicle industry regulations.</li><li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li></ul>

## AURLTF3001 Diagnose and repair mechanical fuel injection systems

### Modification History

Release	Comment
Release 1	Replaces AURT303166B Repair petrol fuel systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect mechanical fuels injections technologies
Release 2	Minor typographical errors corrected

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair mechanical fuel injection systems fitted to vehicles. It involves diagnosing deviations from correct operation, repairing mechanical fuel injection components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the mechanical fuel injection systems of light vehicles in the passenger vehicle and light commercial environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a mechanical fuel injection system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a mechanical fuel injection system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a mechanical fuel injection system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and other measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of motorcycle braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
  - equipment to measure and adjust exhaust emissions
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- operate diagnostic and test equipment
- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with petrol
- principles of carburation
- application, purpose and operation of mechanical fuel injection systems
- testing procedures for mechanical fuel injection systems
- repair procedures for mechanical fuel injection systems
- post-repair testing procedures for mechanical fuel injection systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of mechanical fuel injection systems
- diagnose and repair mechanical fuel injection systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with mechanical fuel injection faults relevant to the qualification being sought
- equipment appropriate for the testing of mechanical fuel

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

injection systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of light vehicle mechanical fuel injection systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• mechanical fuel injection system diagnosis and repair methods, processes and equipment</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of mechanical fuel injection systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• light vehicle service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> must	<ul style="list-style-type: none"> <li>• cold-start enrichment inspection</li> <li>• cold and hot engine exhaust gas analysis.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	
<b><i>Diagnostic tests</i></b> may include:	<ul style="list-style-type: none"> <li>• associated component inspection and evaluation</li> <li>• fuel pump pressure, vacuum and flow tests</li> <li>• testing for air leaks</li> <li>• isolation of faults.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen).</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> must include:	<ul style="list-style-type: none"> <li>• cold-start enrichment operation</li> <li>• exhaust gas analysis.</li> </ul>

## AURLTJ2001 Select tyres and rims for specific applications (light)

### Modification History

Release	Comment
Release 1	Replaces AURT217668A Select tyres and rims for specific applications (light) Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to select tyres and rims to suit specific applications in an automotive retail, service and/or repair context.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, selection of tyres and rims and completion of work finalisation processes, including clean-up and documentation.</p> <p>Tyres and rims may be those covered by the RS&amp;R Training Package and may include, but are not limited to light vehicles, motorcycles, trailers that are used on sealed and unsealed surfaces.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to select tyres and rims for specific applications	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals specifications, and tooling required, are sourced 1.4.Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures
2. Select tyre and rims for specific applications	2.1.Information required for the work is accessed from manufacturer/component supplier specifications and correctly interpreted 2.2.Tyre and rim options are analysed to identify technical compliance and economic benefits 2.3.Selection procedures are carried out in accordance with legislation, industry and enterprise policies/procedures guidelines 2.4.Selected products are those which most closely meet customer requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to

**REQUIRED SKILLS AND KNOWLEDGE**

customers

- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the selection of tyres and rims, including the use of measuring equipment, computerised technology and communication devices and the reporting/ documenting of results

**Required knowledge**

- WHS regulations/requirements, Australian Design Rules equipment, material and personal safety requirements
- tyre and rim terminology and codes
- differing rim and tyre types and tread patterns and their applications
- safe handling and storage procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• accurately interpreting information upon which selection is based</li> <li>• conducting selection in accordance with customer and workplace requirements</li> <li>• achieving the closest possible match between products and requirements</li> <li>• completing selection within workplace timeframes</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the selection of tyres and rims</li> <li>• equipment, hand and power tooling appropriate to the selection of tyres and rims</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning</p>

**EVIDENCE GUIDE**

knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Tyres</b>	Tyres may include tube, tubeless, dual sizing, radial, belted bias or directional
<b>Specific applications</b>	Specific applications may include varying terrain and soils, weather conditions and tracking requirements
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, machinery movement working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but not limited operating safely in the event of fires, enterprise first aid requirements and plant evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian

<b>RANGE STATEMENT</b>	
	Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment are to include a range of different tyres and wheels for different applications
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the selection of tyres and rims</li> <li>• regulatory/legislative requirements pertaining to the Automotive manufacturing</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

### Modification History

Release	Comment
Release 1	<p>Replaces AURT217766A Remove, inspect, repair and fit tyres and tubes (light)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to remove, inspect, repair and fit tubes and tyres.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, removal, repair and fitting of tyres and tubes and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes light vehicles, motorcycles, trailers and outdoor power equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to remove, repair and fit tyres and tubes</b>	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical requirements for removal, repair and fitting of tyres and tubes are sourced and support equipment is identified and prepared
2. <b>Remove tyre from rim</b>	2.1.Methods for the removal are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Removal of tyre is carried out in accordance with vehicle/ plant/system manufacturer/component supplier requirements 2.3.Tyre is removed without causing damage to any component 2.4.Tyre is inspected in readiness for repair 2.5.Tyre removal activity is carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
3. <b>Repair tyres and tubes</b>	3.1.Methods for the repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.Repair of tyre and tube are carried out in accordance with vehicle/plant/system manufacturer/component supplier requirements 3.3.Tyre and tube are repaired without causing damage to any component 3.4.Tyre removal activity is carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. <b>Fit tyres and tubes</b>	4.1.Methods for the fitting are implemented in accordance with workplace procedures and manufacturer/component supplier specifications

ELEMENT	PERFORMANCE CRITERIA
	4.2.Tyre and tube are mounted onto rim 4.3.Tyre and tube assembly are pressure tested
5. <b>Prepare tyre and tube assembly for use or storage</b>	5.1.Repair documentation is completed 5.2.Final inspection is made to ensure work is to workplace expectations 5.3.Tyre and tube assembly are presented for use or storage to workplace expectations 5.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal, repair and fitting of tubes and

**REQUIRED SKILLS AND KNOWLEDGE**

tyres, including the use of measuring equipment, specialist tooling, computerised technology and communication devices and the reporting/documenting of results

**Required knowledge**

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with tyre changing equipment
- general knowledge of types of rim and tyre construction, terms and codes
- types and layout of service/repair manuals (hard copy and electronic)
- removal, repair and fitting procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the removal, inspection, and fitting of tyres in accordance with workplace and manufacturer/ component supplier requirements
- completing the repair of tyres in accordance with Australian Design Rules
- completing the work within workplace timeframes
- presenting wheel assembly to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the removal, repair and fitting of tyres and tubes
- equipment, hand and power tooling appropriate to the removal, repair and fitting of tyres and tubes
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Tyres</b>	Tyres may include: tube, tubeless, dual sizing, radial, belted bias, directional
<b>Repairs</b>	Repairs to tyres are to be within the specifications and limits imposed current Australian Design Rules
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and

<b>RANGE STATEMENT</b>	
	clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialised equipment such as buffs, spreaders, tyre removal equipment, immersion tanks and various repair material
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the removal, repair and fitting of tubes and tyres (light)</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

**Unit Sector(s)**

## AURLTJ2003 Remove, inspect, and refit light vehicle wheel assemblies

### Modification History

Release	Comment
Release 1	Replaces AURT217665A Remove, fit and inspect wheel assemblies  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern light vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove, inspect and fit wheel assemblies fitted to light vehicles. It involves diagnosing deviations from correct operation, removal, inspection and fitting procedures of wheel assemblies.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the wheel assemblies of light vehicles, four wheel drive, light commercial vehicles and light trailers. This unit does not apply to work related to motorcycle or heavy vehicle wheel assemblies.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove wheel assembly	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements relating to removing light vehicle wheel assemblies</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Removal options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate tools and equipment are selected and prepared</p>
2. Remove and inspect wheel assembly	<p>2.1. Wheel assembly is removed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. <b>Inspection of wheel assembly</b>, mounting points and fittings for damage and wear is carried out</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Fit wheel assembly	<p>3.1. <b>Fitting options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools and equipment are selected and prepared</p> <p>3.3. Wheel assembly is fitted according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>3.4. Wheel operation is checked for correct assembly, run-out and alignment according to workplace procedures and manufacturer and component supplier specifications</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to interpret gauges, instruments and measuring equipment
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the removal, inspection and fitting of wheel assemblies
- technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with light vehicle wheel assemblies
- lifting and supporting procedures for light vehicles
- types and applications of wheels and rims, including:
  - stamped or pressed-steel rims
  - die-cast or forged rims
- removal, inspection and fitting procedures of light vehicle wheel assemblies
- post-fitting procedures and checks of light vehicle wheel assemblies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- remove, inspect and fit a range of light vehicle wheel assemblies according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- light vehicles and light vehicles wheel assemblies
- tools and equipment appropriate for the removal, inspection and fitting of light vehicle wheel assemblies
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace instructions** may include:

- computer-generated instructions
- verbal instructions
- written instructions.

**Workplace health and safety (WHS) requirements:**

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

**Procedures and information** may include:

- safe work procedures relating to the removal, inspection and fitting of light vehicle wheel assemblies
- verbal, written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins or memos
- material safety data sheets (MSDS)
- diagrams or sketches
- regulatory and legislative requirements relating to the automotive industry
- Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards
- light vehicle service requirements and repair manuals.

**Removal options** may include:

- front wheel removal
- rear wheel removal
- removal of other systems to gain access to wheel

**Inspection of wheel**

- tyre condition

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>assembly</i> may include:	<ul style="list-style-type: none"><li>• rim condition</li><li>• wheel bearing condition</li></ul>
<i>Fitting options</i> may include:	<ul style="list-style-type: none"><li>• manual handling or motor-assisted handling of wheel assemblies</li><li>• manual or power-tool tightening of wheel nuts</li></ul>
<i>Final inspection</i> may include:	<ul style="list-style-type: none"><li>• wheel assembly run-out and alignment testing</li><li>• the correct operation of vehicle systems affected by the removal and fitting of wheel assemblies</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Light Vehicle
<b>Unit sector</b>	Technical – Wheels and Tyres

Not applicable.

## AURLTJ3004 Provide advice on the effects of wheel and tyre combinations

### Modification History

Release	Comment
Release 1	Replaces AURT318054A Provide advice on the effects of wheel and tyre combinations Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to effectively advise customers on how specific wheel and tyre combinations can affect their vehicle's ride and handling characteristics.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>The unit applies to light vehicles, including 4WDs, light commercial vehicles and various types of motorsport vehicles.</p> <p>It includes identification and confirmation of work requirement, preparation for work, confirmation of customer needs, technical analysis of needs and options, provision of advice on compliance, recommendation as to a plan of action and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involves advising customers how specific non-standard wheel and tyre combinations can affect ride and handling characteristics of their vehicle.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm facts relating to customer enquiry	1.1. Customer is consulted to determine if wheel and tyre modifications are actual or proposed 1.2. Reasons for requiring alternative wheel and tyre combinations are discussed and confirmed with customer 1.3. Specifications of proposed or actual wheel and tyre combinations are clarified with customer
2. Access and confirm data to make an informed technical opinion	2.1. Technical product persons from identified wheel and tyre manufacturer/component supplier are consulted to access technical information and advice 2.2. Proposed or actual modifications are confirmed if they contravene Australian Design Rules 2.3. Technical product information to assist with providing information about wheel and tyre modifications is researched and accessed 2.4. Colleagues are consulted who may be able to assist through previous technical knowledge and experience
3. Recommend a plan of action to meet customer requirements	3.1. An explanation is given to the customer on how specifications relate to intended use of vehicle 3.2. Implications of wheel and tyre combination not complying with a specific Australian Design Rules regulation is discussed with customer 3.3. Suitability of proposed or actual wheel and tyre combination is discussed with customer and advice is given based on experience or facts derived from product sources 3.4. Suitable plan of action is discussed and clarified to meet customer needs

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
<ul style="list-style-type: none"> <li>• apply research and interpretive skills sufficient to locate, interpret and apply</li> </ul>

**REQUIRED SKILLS AND KNOWLEDGE**

- manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
  - apply plain English literacy and communication skills in relation to dealing with customers and team members
  - apply questioning and active listening skills for example when obtaining information from customers
  - apply oral communication skills sufficient to convey information and concepts to customers
  - apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
  - interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
  - establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
  - use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
  - use workplace technology related to advising on wheel and tyre combinations, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

**Required knowledge**

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- the implications of contravening Australian Design Rules
- principles of wheel and tyre technology
- types, characteristics, uses and limitations of wheel and tyre combinations
- methods of effectively discussing technical information with customers
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- confirming facts relating to wheel and tyre modifications
- accessing sources of wheel and tyre technical information
- developing a plan of action which satisfies customer requirements in the most economical and legal fashion
- presenting automotive wheel and tyre technical information and specifications at an understandable level to customer

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to advising on wheel and tyre combinations
- equipment and tooling appropriate to advising on wheel and tyre combinations
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

	<p>of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Wheel and tyre specifications**

Types of wheel and tyre specifications are to include wheel rim sizes, wheel material, wheel diameters, tyre sizes, tyre compounds and tyre tread designs

**Product sources**

Product sources are to include specialist tyre retail outlets, specialist wheel retail outlets, specialist

<b>RANGE STATEMENT</b>	
	wheel and tyre repairers, wheel and tyre manufacturer/component suppliers
<b>Colleagues</b>	Colleagues may include other mechanics or technicians, supervisory staff and contacts made with wheel and tyre manufacturer/component suppliers
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, breaker devices, gauges, jacks, hoists and pressure testing devices
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and

## AURLTQ3001 Repair final drive assemblies (light vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURTL312666A Repair final drive assemblies (light vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out repairs to final drive assemblies.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing, analysis of results and carrying out repairs to final drive assemblies and associated components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes light vehicles, motorcycles and outdoor power equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repairs to final drive assemblies	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for final drive assembly repair are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with final drive assemblies are observed</p>
2. Conduct final drive assembly tests and analyse results	<p>2.1.Methods for test on final drive assembly are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repairs	<p>3.1.Methods for repairs are implemented in accordance with workplace procedures and manufacture/component supplier specifications</p> <p>3.2.Adjustments made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled and tracked vehicles and equipment
- the identification of application, purpose and operation
- the identification of component parts to include physical, fluid, gases and heat

**REQUIRED SKILLS AND KNOWLEDGE**

- generation
- types and layout of service/repair manuals (hard copy and electronic)
- inspection and test procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- application of full repair sequence as per the Range Statement to a final drive assembly relative to the qualification being sought
- interpreting test results
- repair of final drive assembly and associated components completed within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of final drive assemblies
- equipment, hand and power tooling appropriate to the repair of final drive assemblies
- activities covering mandatory task requirements

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Variables</b>	Variables to include bevel, spiral bevel and hypoid gearing
<b>Repair methods and sequence</b>	Repair methods and sequence are to include isolation of fault(s), dismantling, inspection and evaluation, replacement of components parts, assembly and completion of operational tests and records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, pulling, pushing and load testing devices
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repair of final drive assemblies and associated components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repairs to final drive driveline	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for repair of drivelines are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with rotating components are observed</p>
2. Test driveline and analyse results	<p>2.1.Methods for tests associated with drivelines is implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Driveline test results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is processed in accordance with workplace procedures</p>
3. Carry out repairs	<p>3.1.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Adjustments made during the repair work are in accordance with manufacturer/component supplier specifications</p>
4. Prepare equipment for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- the identification of application, purpose and operation
- the identification of component parts to include physical, fluid, gases and heat generation
- dangers of working with rotating shafts and gear systems
- types and layout of service/repair manuals (hard copy and electronic)
- testing procedures, including balancing shaft
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- application of full repair sequence as per the Range Statement to a driveline relative to the qualification being sought
- interpreting test results
- conducting repair in accordance with workplace and manufacturer/component supplier requirements
- completing repair of driveline and associated components within workplace timeframes
- equipment presentation to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to repairing final drivelines
- equipment, hand and power tools appropriate to repairing final drivelines

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Variables</b>	Variables include universal joints, constant velocity joints and centre bearings
<b>Repair methods and sequence</b>	Repair methods and sequence are to include isolation of fault(s), dismantling, inspection and evaluation, replacement of components parts, assembly and completion of operational tests and records
<b>Faults</b>	Faults to include: <ul style="list-style-type: none"> <li>• driveline vibration</li> <li>• abnormal noises</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency

<b>RANGE STATEMENT</b>	
	shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair of final drive (driveline) and associated components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements</p> <p>1.2. Benchmark specifications for correctly functioning light vehicle driveline systems are accessed and interpreted</p> <p>1.3. WHS requirement, including equipment and system isolation requirements and personal protection needs are observed throughout the work</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objectives of the work</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use</p> <p>2.6. Light vehicle driveline system components are prepared for the diagnostic process, including park-up, isolation and cleaning</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary light vehicle driveline systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- light vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, function, operations and limitations of light vehicle clutch, torque converter, manual transmission, automatic transmission, drive shaft, final drive systems/components.
- detailed knowledge of the types, function, operations and limitations of four wheel drive system components using transfer cases, differentials and free wheel hubs.
- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and

**REQUIRED SKILLS AND KNOWLEDGE**

- planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three light vehicle driveline systems with real or simulated multi-system and intermittent faults, and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for light vehicle driveline systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objectives for analysis and evaluation, light vehicle driveline systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objectives, research facilities and technical information and a work environment.

**EVIDENCE GUIDE****Method of assessment**

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Vehicles</b>	Light vehicles are to include two wheel and four-wheel drive vehicles.
<b>Driveline systems</b>	Driveline systems are to cover all sub-systems and components, including clutches, torque converters, manual transmissions (including electric and clutch less), automatic transmissions, drive shafts and final drives.
<b>Diagnosis</b>	Diagnosis is to cover module and parts replacement in related electrical and electronic control systems.
<b>Driveline system failures</b>	<ul style="list-style-type: none"> <li>• Driveline system failures covered by this unit are to include abnormal gear wear, abnormal clutch operations, contamination, hard shifting, harshness, loose mountings, leaks, lubrication, noises, transmission slippage and vibrations.</li> <li>• Driveline system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, WHS, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate</li> </ul>

<b>RANGE STATEMENT</b>	
	research, analytical, judgement and problem-solving skills in the diagnosis of faults.
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include compound levels, pressure gauges, multimeters, tachometers and computerised diagnostic systems.
<b>Tests</b>	Tests to be conducted are to include lubricant inspection, pressure, road testing, sensor integrity and function, solenoid operation/function, wiring and power control ECU integrity.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"><li>• Workplace procedures relating to the use of tooling and equipment.</li><li>• Workplace procedures relating to reporting and communication.</li><li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light vehicle driveline systems.</li><li>• Australian Design Rules.</li><li>• Vehicle industry regulations.</li><li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake testing of manual transmission	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for testing of manual transmissions are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with manual transmissions are observed</p>
2. Test manual transmission and analyse results	<p>2.1.Methods for tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Road/site test is conducted for abnormalities</p> <p>2.3.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.4.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.5.Report is processed in accordance with workplace procedures</p>
3. Prepare to repair manual transmissions	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for repair are identified and support equipment is identified and prepared</p>
4. Carry out repairs	<p>4.1.Methods for repairs are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments made during repairs are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle/	5.1.Repair schedule documentation is completed

ELEMENT	PERFORMANCE CRITERIA
equipment for use or storage	<p>5.2.Road/site test is conducted to ensure transmission operation is to manufacturer/component supplier specifications</p> <p>5.3.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.4.Final inspection is made to ensure work is to workplace expectations</p> <p>5.5.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>5.6.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment,

**REQUIRED SKILLS AND KNOWLEDGE**

computerised technology and communication devices and the documenting/recording of results

**Required knowledge**

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with transmissions
- the identification of application, purpose and operation
- the identification of component parts to include physical, fluid, gases and heat generation
- types and layout of service/repair manuals (hard copy and electronic)
- diagnostic procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques, appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting testing results
- identification of application, purpose and operation
- application of full repair sequence as per the Range Statement to a manual transmission relative to the qualification being sought
- conducting repairs in accordance with workplace and manufacturer/component supplier requirements
- completing repair of transmissions and associated components within workplace timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to repairing manual transmissions
- equipment, hand and power tools appropriate to repairing manual transmissions
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Repair methods</b>	<p>Methods include:</p> <ul style="list-style-type: none"> <li>• road testing, test under operating conditions</li> <li>• visual, aural and functional assessment (including: fluid leakage, gear selection, wear, damage, corrosion)</li> </ul>
<b>Specific requirements</b>	<p>Specific requirements:</p> <ul style="list-style-type: none"> <li>• manual transmissions, front and/or rear wheel drive configurations</li> <li>• belt drive transmission</li> <li>• transmission must be of multiple speed constant mesh or synchromesh design</li> </ul>
<b>Variables</b>	<p>Other variables may include:</p> <ul style="list-style-type: none"> <li>• power take off assemblies</li> <li>• multiple forward and reverse gears</li> <li>• multi countershaft</li> <li>• synchronised and non-synchronised gear selection</li> <li>• metal and non-metal gears</li> <li>• electrical/pneumatic control</li> <li>• transverse/longitudinal mounting</li> <li>• helical, double helical and spur gears</li> <li>• transaxle, overdrive, transfer case and belt drive speed control</li> </ul>
<b>Repair methods and sequence</b>	<p>Repair methods and sequence are to include isolation of fault(s); dismantling, inspection and evaluation; replacement of component parts; assembly and completion of operational tests and records</p>
<b>Faults</b>	<p>Faults to include noisy operation, jumping out of gear, external oil leaks, loss of drive</p>

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to repair, removal and replacement of manual transmissions and/or associated components</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURLTX3002 Repair transmissions - automatic (light vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURTL307166A Repair transmissions - automatic (light vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the repair of automatic and semi-automatic transmissions and associated components, including torque converters.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and analysis of systems, repair or replacement of and automatic and semi-automatic transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>For repairs to electronic control drive management systems refer to AURETR3044 Service and repair electronic drive management systems.</p> <p>Work involved includes automatic and semi-automatic transmissions in light vehicles.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own</p>
-------------------------	--

	work activities and contributing to a productive team environment.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test transmission	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tools, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for testing of transmissions are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with semi automatic, automatic transmissions are observed</p>
2. Test transmission and analyse results	<p>2.1.Methods for system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Road/site test is conducted to identify transmission operational abnormalities</p> <p>2.3.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.4.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.5.Report is processed in accordance with workplace procedures</p>
3. Prepare to repair and/or replace transmission	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for repair are identified and support equipment is identified and prepared</p>
4. Carry out repair and/or replacement	<p>4.1.Methods for repair and/or replacement are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>4.2.Adjustments made during the repair and/or</p>

ELEMENT	PERFORMANCE CRITERIA
	replacement are in accordance with manufacturer/component supplier specifications
5. Prepare vehicle/ equipment for use or storage	5.1.Repair and/or replacement schedule documentation is completed 5.2.Final inspection is made to ensure protective guards, safety features are in place 5.3.Final inspection is made to ensure work is to workplace expectations 5.4.Vehicle/equipment is cleaned for use or storage to workplace expectations 5.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks

**REQUIRED SKILLS AND KNOWLEDGE**

- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

**Required knowledge**

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with transmissions
- operating principles of automatic and semi automatic transmissions and their relationship to other systems
- types and layout of service/repair manuals (hard copy and electronic)
- diagnostic procedures
- repair and/or replacement procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques, appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting diagnosis results
- conducting repair and/or replacement of a range of transmissions in accordance with workplace and manufacturer/component supplier requirements
- completing work within workplace timeframes
- vehicle/transmissions presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to carrying out repairs to automatic and semi-automatic transmissions and associated components
- equipment, hand and power tooling appropriate to carrying out repairs to automatic and semi-automatic transmissions and associated components
- activities covering mandatory task requirements

## AURLTX3003 Diagnose and repair light vehicle clutch systems

### Modification History

Release	Comment
Release 1	Replaces AURT306170A Inspect, service and/or repair clutch assemblies and associated operating system components  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern light vehicle technologies

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose and repair clutch systems fitted to light vehicles. It involves diagnosing deviations from correct operation, repairing clutch components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	Work applies to the clutch systems of light vehicles, four wheel drive and light commercial vehicles. This unit does not apply to work related to motorcycle or heavy vehicle clutch systems.
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a light vehicle clutch system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> relating to <b>light vehicle clutch systems</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a light vehicle clutch system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a light vehicle clutch system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - obtain, record and interpret measurements
  - reading and interpretation of mathematical information
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of light vehicle clutch systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing light vehicle clutch systems
- dangers of working with light vehicle clutch systems
- operating principles of light vehicle clutch systems
- application, purpose and operation of light vehicle clutch systems
- testing procedures for light vehicle clutch systems
- repair procedures for light vehicle clutch systems
- post-repair testing procedures for light vehicle clutch systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of light vehicle clutch systems
- diagnose and repair light vehicle clutch systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- light vehicles with clutch system faults relevant to the qualification being sought
- equipment appropriate for the testing of light vehicle clutch systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of light vehicle clutch systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• light vehicle clutch system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of light vehicle clutch systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• light vehicle service requirements and repair manuals.</li> </ul>
<b>Light vehicle clutch systems</b>	<ul style="list-style-type: none"> <li>• dry single or multi-plate clutch</li> <li>• cable operated clutch</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

may include:	<ul style="list-style-type: none"> <li>hydraulically-operated clutch</li> <li>mechanically operated clutch.</li> </ul>
<b><i>Diagnostic tests</i></b> may include:	<ul style="list-style-type: none"> <li>analysis of clutch system operation during mobile or stationary tests</li> <li>isolation of faults</li> <li>component inspection and evaluation.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>clutch slippage</li> <li>clutch drag and binding</li> <li>clutch chatter</li> <li>clutch pedal pulsation</li> <li>clutch vibration</li> <li>clutch system noise.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>component repair procedures, including: <ul style="list-style-type: none"> <li>removal, replacement and adjustment procedures</li> <li>dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>testing of clutch system operation during mobile or stationary tests.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Light Vehicle
<b>Unit sector</b>	Technical – Transmission

## AURLTX4004 Diagnose complex faults in light vehicle transmission and driveline systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in light vehicle transmission and driveline systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of transmission and driveline systems of light vehicles, four wheel drive and light commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning light vehicle transmission and driveline systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, equipment and system isolation requirements and personal protection needs, are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in light vehicle transmission and driveline systems are identified and confirmed from direct or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to diagnose faults	<p>2.1. Criteria for fault diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements and discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process, are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to light vehicle transmission and driveline systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of light vehicle transmission and driveline systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of light vehicle transmission and driveline systems
- types, functions, operations and limitations of light vehicle transmission and driveline systems and components
- types, functions, operations and limitations of diagnostic testing equipment relating to light vehicle transmission and driveline systems
- testing procedures for light vehicle transmission and driveline systems, including procedures for accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• interpret workplace instructions and locate and apply information</li> <li>• apply safety requirements, including the use of personal protective equipment</li> <li>• identify and select appropriate diagnosis processes to be performed</li> <li>• complete diagnosis of complex faults on a minimum of three different light vehicle light vehicle transmission and driveline systems with real or simulated faults</li> <li>• document and report outcomes and required actions of diagnosis of complex faults in light vehicle light vehicle transmission and driveline systems.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• vehicles with real or simulated light vehicle transmission and</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

driveline system faults

- tools and equipment appropriate for the diagnosis of complex faults in light vehicle transmission and driveline systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Workplace health and safety (WHS) requirements:</i></b></p>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<p><b><i>Faults</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• faults with: <ul style="list-style-type: none"> <li>• clutches</li> <li>• torque converters</li> <li>• mechanical and automatic transmissions</li> <li>• drive and power take-off shafts</li> <li>• differentials</li> <li>• mechatronic modules and multi-class bus systems</li> <li>• input sensors</li> <li>• output actuators</li> <li>• wiring harnesses</li> <li>• computer systems</li> </ul> </li> <li>• indirect faults caused by the influence of external electrical and electronic systems, which may or may not be faulty in their primary operations</li> <li>• component specifications, component assembly, component damage and system modifications</li> <li>• mechanical and hydraulic system faults.</li> </ul>
<p><b><i>Tests</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• wiring and connector integrity and the operation of input and output devices controlling electronic components and computers</li> <li>• data interpretation relating to direct, indirect and intermittent causes</li> <li>• brake fluid testing</li> </ul>

## ***RANGE STATEMENT***

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• on-road transmission and driveline efficiency testing</li> <li>• component tests.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• analogue and digital multimeters</li> <li>• lab oscilloscopes</li> <li>• scan tools</li> <li>• test lights and test LEDs</li> <li>• pulse generators</li> <li>• manufacturer and component supplier testing equipment.</li> </ul>
<b><i>Diagnostic processes</i></b> may include:	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures relating to transmission and driveline systems</li> <li>• six-step troubleshooting plan</li> <li>• discover-investigate-fix methodology.</li> </ul>

## AURLTZ3001 Diagnose and repair light vehicle emission control systems

### Modification History

Release	Comment
Release 1	Replaces AURT304666A Repair and replace emission control systems  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern light vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair emission control systems fitted to light vehicles. It involves diagnosing deviations from correct operation, repairing emission control components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the emission control systems of motorcycles, passenger and light commercial vehicles.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a light vehicle emission control system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> related to <b>light vehicle emission control systems</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a light vehicle emission control system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a light vehicle emission control system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to interpret instruments, gauges and other measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of light vehicle emission control systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- operate diagnostic and test equipment
- use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing light vehicle emission control systems
- dangers of testing exhaust gases
- legislation and regulatory requirements relating to light vehicle emission control systems
- identification of motor vehicle emissions and their effects on the environment and health
- operating principles of light vehicle emission control systems
- application, purpose and operation of light vehicle emission control systems, including:
  - effects of associated systems on vehicle emissions
- testing procedures of light vehicle emission control systems
- repair procedures of light vehicle emission control systems
- post-repair testing procedures of light vehicle emission control systems.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of light vehicle emission control systems
- diagnose and repair light vehicle emission control systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- light vehicles with emission control faults relevant to the qualification being sought
- equipment appropriate for the testing of light vehicle emission

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

control systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of light vehicle emission control systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• light vehicle emission control system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of light vehicle emission control systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• light vehicle emission control systems service requirements and repair manuals.</li> </ul>
<b>Light vehicle emission</b>	<ul style="list-style-type: none"> <li>• evaporative emission control</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>control systems</i></b> may include:	<ul style="list-style-type: none"> <li>• crankcase ventilation</li> <li>• exhaust gas recirculation</li> <li>• diesel exhaust fluid</li> <li>• catalytic converters</li> <li>• diesel particulate filters.</li> </ul>
<b><i>Diagnostic test</i></b> may include:	<ul style="list-style-type: none"> <li>• exhaust gas analysis</li> <li>• isolation of fault(s)</li> <li>• component inspection and evaluation.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen)</li> <li>• excessive oil consumption.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• exhaust gas colour assessment</li> <li>• exhaust gas composition analysis</li> <li>• on-board diagnostic system assessment procedures.</li> </ul>

## AURMBA2001 Transport a light competition vehicle and support equipment

### Modification History

Release	Comment
Release 1	Replaces AURM240173A Transport a light competition vehicle and support equipment Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to prepare support equipment and a competition vehicle for transportation.</p> <p>It requires the ability to select, prepare and pack the tools and equipment, prepare and fit transportation devices, components and covers to a competition vehicle, and load and unload the tooling, equipment and competition vehicle.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who prepare support equipment, tools and competition vehicles for transportation in a motorsports environment.</p> <p>For the purposes of this unit of competency, light competition vehicles are vehicles under 300 kg unladen weight, such as go-carts, motorbikes, mountain bikes and jet skis.</p>
--------------------------------	--

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare specific tooling and equipment needed for an event	<ul style="list-style-type: none"><li>1.1. Use team instructions/specifications and category rules and supplementary regulations to specify job requirements, including configuration, quality, equipment and quantities</li><li>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs throughout the work</li><li>1.3. Select specific tooling and equipment needed for an event</li><li>1.4. Pack and secure tooling and equipment to avoid damage during transportation</li><li>1.5. Check equipment listing and account for resources</li></ul>
2. Load and secure competition vehicle and equipment for transportation	<ul style="list-style-type: none"><li>2.1. Compile checklist for resources and vehicle securing</li><li>2.2. Conduct loading according to team procedures</li><li>2.3. Safely secure vehicle and equipment and check mechanisms</li><li>2.4. Store hazardous material in accordance with team requirements</li><li>2.5. Secure tailgates, ramps, doors and bins</li></ul>
3. Unload competition vehicle and support equipment	<ul style="list-style-type: none"><li>3.1. Unload light competition vehicle according to team procedures</li><li>3.2. Unload tooling and equipment according to team procedures</li><li>3.3. Clean transport vehicle and prepare for subsequent use</li><li>3.4. Report problems to appropriate person</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to lifting equipment
- communication skills to the level required to communicate ideas and information to enable organisation of tooling and equipment and reporting of progress against schedule
- literacy skills to the level required to collect, organise and understand information related to storage and transportation of dangerous goods and hazardous chemicals, team tool and equipment requirements, and event scheduling and location details
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and estimate material requirements required for the work
- problem-solving skills to the level required to use checking and inspection techniques to maximise space utilisation
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including loading and unloading sequence, to avoid backtracking or workflow interruptions

#### Required knowledge

Required knowledge includes:

- storage and transportation of hazardous chemicals and dangerous goods methods and equipment
- competition vehicle transportation preparation methods
- competition vehicle security principles
- load distribution principles
- loading and unloading techniques
- securing methods and equipment
- record keeping techniques
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to preparing competition vehicles and support equipment for transportation, including manual handling and loading heavy equipment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules, and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly load and unload a minimum of one (1) light competition vehicle and support equipment in differing conditions:
  - weather
  - day or night
  - terrain conditions
  - load lists
- work with and around other team members
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

**RANGE STATEMENT**

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Loading of the light competition vehicle**

Loading of the light competition vehicle may include:

- removing fluids, including fuel
- disconnecting battery/power supply
- gear position

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing, including closed-in shoes, long trousers, handling gloves and other equipment
- safety equipment
- first aid equipment
- hazard and risk control
- control of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- material safety management systems
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care
- health regulations

<b>RANGE STATEMENT</b>	
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• competition vehicle</li><li>• transporters and associated support equipment</li><li>• materials handling equipment</li></ul>

## AURMBA3002 Load and unload a competition vehicle and support equipment

### Modification History

Release	Comment
Release 1	Replaces AURM340205A Load and unload a competition vehicle and support equipment Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to prepare, load and unload support equipment and a competition vehicle for transportation.</p> <p>It requires the ability to select, prepare and pack tools and equipment, prepare and fit transportation devices, components and covers to a competition vehicle and load and unload the tooling, equipment and competition vehicle.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who prepare support equipment, tools and competition vehicles for transportation in a motorsports environment.</p> <p>For the purpose of this unit of competency a competition vehicle is an automobile over 300 kg unladen weight, which competes in any event of a competitive nature.</p>
--------------------------------	--

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare specific tooling and equipment needed for an event	<ul style="list-style-type: none"><li>1.1. Clarify job requirements using team instructions, specifications, category rules and supplementary regulations, including configuration, quality, equipment and quantities</li><li>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs throughout the work</li><li>1.3. Select specific tooling and equipment needed for an event</li><li>1.4. Pack and secure tooling and equipment to avoid damage during transportation</li><li>1.5. Check equipment listing and account for resources</li></ul>
2. Prepare competition vehicle for transportation	<ul style="list-style-type: none"><li>2.1. Clean competition vehicle and prepare for transportation</li><li>2.2. Fit specific transportation devices, components and covers</li><li>2.3. Identify secure locations on vehicle and transporters</li><li>2.4. Report problems with required equipment or vehicle to appropriate persons</li></ul>
3. Load and secure competition vehicle and equipment for transportation	<ul style="list-style-type: none"><li>3.1. Compile checklist for resources and vehicle securing</li><li>3.2. Conduct loading to team procedures</li><li>3.3. Safely secure vehicle and equipment and check mechanisms</li><li>3.4. Store hazardous material in accordance with legislative requirements</li><li>3.5. Secure transporters tailgates/ramps and doors/bins</li></ul>
4. Unload competition vehicle and support equipment	<ul style="list-style-type: none"><li>4.1. Unload competition vehicle according to team procedures</li><li>4.2. Unload tooling and equipment according to team procedures</li><li>4.3. Clean transporters and prepare for subsequent use</li><li>4.4. Complete team/event documentation</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to lifting and securing equipment
- communication skills to the level required to communicate ideas and information to enable organisation of tooling and equipment and reporting of progress against schedule
- literacy skills to the level required to collect, organise and understand information related to storage and transportation of dangerous goods and hazardous chemicals, team tool and equipment requirements, and event scheduling and location details
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and estimate material requirements required for the work
- problem-solving skills to the level required to use checking and inspection techniques to maximise space utilisation
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including loading and unloading sequence, to avoid backtracking or workflow interruptions

#### Required knowledge

Required knowledge includes:

- storage and transportation of hazardous chemicals and dangerous goods methods and equipment
- competition vehicle transportation preparation methods
- competition vehicle security principles
- load distribution principles
- loading and unloading techniques
- securing methods and equipment
- record keeping techniques
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to preparing competition vehicles and support equipment for transportation, including manual handling and loading heavy equipment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly prepare, load and unload a minimum of one (1) competition vehicle and support equipment on two (2) occasions in differing conditions
- work with and around other team members
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - transporter over 4.5 tonne unladen
  - competition vehicles
  - process equipment, materials, work instructions and

<b>EVIDENCE GUIDE</b>	
	<p>deadlines</p> <ul style="list-style-type: none"> <li>• access to a competition vehicle, transporters and associated support equipment</li> <li>• lifting and materials handling equipment</li> <li>• team procedures</li> <li>• securing equipment guidelines.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

**RANGE STATEMENT****Preparation of the competition vehicle**

Preparation of the competition vehicle may include:

- applying vehicle-specific transportation requirements
- removing fluids, including fuel
- disconnecting battery/power supply
- downloading data
- gear position
- other transportation requirements necessary for transportation by a third party via means such as road freight, air, rail or sea

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing, including closed-in shoes, long trousers, handling gloves and other equipment
- safety equipment
- first aid equipment
- hazard and risk control
- management of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- confidentiality and privacy

<b>RANGE STATEMENT</b>

## AURMCA5001 Manage motorsport team media liaison

### Modification History

Release	Comment
Release 1	Replaces AURM542538A Manage motorsport team media liaison Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the skills and knowledge required to identify team media requirements and limitations, prepare media information, issue media information, arrange media interviews and evaluate publicity benefits.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>Work involves all aspects of liaising with the media on behalf of a motorsport team and supporting team members with media interviews and appearances. It includes researching the media liaison needs of the team and the most appropriate media outlets, and preparation of a budget to support media liaison activities.</p> <p>Tasks require individuals to demonstrate discretion, judgement and problem-solving skills in the development of media releases and arrangement of media interviews.</p> <p>Competence may be demonstrated in a motorsport team workplace, a simulated environment, or workplaces of enterprises supporting and working closely with motorsport teams.</p>
--------------------------------	---

## Licensing/Regulatory Information

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify team media requirements and limitations	<p>1.1.Desired outcomes of media liaison are identified in relation to team goals</p> <p>1.2.Limitations on information to be provided are identified in accordance with team requirements, confidentiality, ethical conduct and promotion partner requirements</p> <p>1.3.Media liaison budget is developed</p> <p>1.4.Media outlets and persons are researched and choices made according to team requirements, ethical conduct and promotional partner requirements</p>
2. Prepare media information	<p>2.1.Media suitable for promotional strategy and team requirements is selected</p> <p>2.2.Specific media outlet information needs are researched</p> <p>2.3.Media needs/requests are considered in light of team objectives, confidentiality requirements and ethical issues</p> <p>2.4.Team information and performance statistics are researched and documented</p> <p>2.5.Information prepared is clear, succinct and appropriate to target audience</p> <p>2.6.Information prepared meets team and media outlet needs and industry ethics</p>
3. Issue media information	<p>3.1.Media persons are contacted and release timing arrangements made</p> <p>3.2.Team management approval is obtained and information provided to media outlet</p> <p>3.3.Promotional partner representatives are advised of release details</p>
4. Arrange media interviews	<p>4.1.Media persons are contacted and requirements negotiated</p> <p>4.2.An interview schedule and agenda is determined</p> <p>4.3.Material for interviews is researched and prepared</p> <p>4.4.Team persons are briefed and coached in presentation techniques where required</p> <p>4.5.Team management are regularly informed of arrangements and outcomes</p> <p>4.6.Promotional partner representatives are advised of interview details</p>

ELEMENT	PERFORMANCE CRITERIA
5. Evaluate publicity benefits	<ul style="list-style-type: none"><li>5.1.Exposure statistics are obtained from media outlets</li><li>5.2.Promotional partner feedback on media release/interview is obtained</li><li>5.3.Data and feedback is analysed to assess effectiveness</li><li>5.4.Outcomes are measured against media liaison budget and team objectives</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to media, team and promotional partner publicity requirements
- communicate ideas and information to enable effective team appearances and information dissemination
- plan and organise activities including team member media appearances
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to set-up scheduling and operate budget
- use knowledge of scenario planning, logistics and differing requirements to meet team, promotional partner and media outlet needs
- use workplace technology, including facsimiles, telephones and computer software related to planning and information presentation

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations
- workplace health and safety (WHS) requirements, including state/territory and federal legislation
- ethical advertising legislation and code of practice
- communication principles and techniques
- presentation techniques
- media content requirements
- interview techniques

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply controlling body and category rules and supplementary regulations
- apply safety requirements including the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - achieve required outcomes within team time and quality standards
  - develop media releases for a minimum of three (3) types of media
- arrange a minimum of two (2) media appearances for team persons. Appearances must be for two (2) types of media, which may include:
  - radio
  - television
  - live appearance at an event
  - guest speaker
- conduct work to quality and timeliness standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

- Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.
- Assessment of this competence may include project related tasks and require portfolios or other forms of indirect evidence of process.
- Access to controlling body rules, category rules and supplementary regulations and legislation as identified in the Range Statement.

#### Method of assessment

- Assessment methods must confirm consistency of

**EVIDENCE GUIDE**

	<p>performance over time and in a range of workplace contexts.</p> <ul style="list-style-type: none"> <li>• Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>• Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Research team media needs</b>	<p>Research of team media needs includes:</p> <ul style="list-style-type: none"> <li>• clarification of team goals and objectives with team members</li> <li>• identification of promotional partner expectations</li> <li>• consideration of ethical issues in advertising and promotion</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research team marketing opportunities and promotional partner requirements	1.1. Team strengths, weaknesses, opportunities and threats (SWOT) are identified, analysed and documented 1.2. Team members and other parties are consulted and specialist marketing advice is sought where necessary and opportunities/requirements are documented 1.3. Promotional partner requirements are researched and documented 1.4. Principles, policies and strategic direction of the team are identified and documented to enable marketing effort to be focused 1.5. Workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, are observed throughout the work
2. Devise and implement a team marketing strategy	2.1. Promotional strategies emphasising team strengths are analysed with team members 2.2. The legal, ethical and environmental constraints of the market are identified and their effect on marketing objectives determined 2.3. Promotional strategies are researched and a marketing strategy, including measurable performance targets, is developed and documented 2.4. Risk management strategies are developed and documented 2.5. Team members are briefed on their roles and responsibilities
3. Prepare promotional partnership proposals	3.1. Team funding/sponsorship amount and type required is determined 3.2. Networks for funding/sponsorship are researched and developed in line with the policies, aims and objectives of the team 3.3. Potential promotional partners are identified on the basis of supporting the principles and policies of the team and approached with the aim of forming a promotional partnership 3.4. Potential promotional partner requirements are researched and documented 3.5. Benefits to the promotional partner are identified and documented 3.6. Information regarding opportunities and benefits is prepared in a professional format and distributed to

ELEMENT	PERFORMANCE CRITERIA
	potential promotional partners
4. Present to promotional partners	4.1. Follow-up is conducted with promotional partner persons to arrange meeting details 4.2. Presentations and supporting material specific to potential promotional partners are prepared 4.3. Introductory/supporting material is forwarded prior to the meeting 4.4. Meeting with potential promotional partner is attended and presentation is conducted 4.5. Follow-up information is supplied
5. Coordinate promotional partnership activities	5.1. Written contracts/agreements are made with the promotional partner, including full details of the commitments made by both parties 5.2. Team members are briefed on details and commitments of promotional partnership arrangements 5.3. Activities are organised in accordance with promotional partnership agreements and agreements made are honoured 5.4. Activities are monitored and evaluated in terms of team and promotional partner objectives 5.5. Feedback is provided to and requested from promotional partner as required 5.6. Payments from promotional partners and other contract formalities are actioned and monitored

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to market information and promotional partner/s
- communicate ideas and information to enable effective presentation of proposals and strategies
- plan and organise activities including proposal and strategy presentation

## **REQUIRED SKILLS AND KNOWLEDGE**

- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly determine financial requirements and benefits
- use knowledge of group dynamics, scenario planning and the motorsport industry to match team and potential promotional partner requirements
- use workplace technology related to planning and presentation including computer software

### **Required knowledge**

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations
- WHS requirements, including state/territory and federal legislation, material safety management systems and local safe operating procedures
- legislation and codes of practice relating to ethical advertising
- intellectual property and copyright principles and practices
- communication principles
- marketing plan development
- presentation techniques

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>interpret and apply controlling body and category rules and supplementary regulations</li> <li>apply safety requirements, including the use of personal protective equipment</li> <li>follow task instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>minimise the risk of injury to self or others</li> <li>achieve required outcomes within team time and quality standards</li> </ul> </li> <li>prepare and present a minimum of two (2) promotional proposals. Each proposal is to include, as a minimum: <ul style="list-style-type: none"> <li>a profile of the team and members</li> <li>team achievements</li> <li>proposed partnership arrangements</li> <li>marketing strategy</li> <li>benefits to promotional partner</li> </ul> </li> <li>conduct work to quality and timeliness standards</li> <li>work effectively with others</li> <li>modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.</li> <li>Assessment of this competence may include project related tasks and require portfolios or other forms of indirect evidence.</li> <li>Access to controlling body rules, category rules and supplementary regulations and legislation as identified in the Range Statement.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</li> </ul>

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>• Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Promotional partners**

Promotional partners include:

- existing or potential partners that are an external individual or organisation, providing financial or in-kind support to a motorsport team

Promotional partners may also be termed 'sponsors' or 'business partners'

Teams may have more than one promotional partner

There may be one major or exclusive promotional partner or a number of smaller promotional partners

**WHS requirements**

WHS requirements include:

- state/territory and federal legislation
- material safety management systems
- controlling body requirements
- manufacturer specifications and local safe

<b>RANGE STATEMENT</b>	
	operating procedures
<b>Legislative requirements</b>	Work is carried out in accordance with legislative obligations (including environmental requirements), health regulations and team insurance requirements
<b>Resources</b>	Resources may include: <ul style="list-style-type: none"> <li>• a computer and word-processing, presentation and spreadsheet software</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• team policies and procedures on customer relations</li> <li>• contracted promotional partner requirements</li> <li>• task instructions including worksheets, checklists and plans</li> <li>• team procedures relating to reporting and communication</li> <li>• manufacturer/component supplier specifications and application procedures for presentation material</li> <li>• team policies and procedures relating to confidentiality and protection of intellectual property</li> </ul>

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to develop and update general knowledge of the motorsport industry, including industry structure, event categories and classifications, rules and regulations, and roles of officials and volunteers. This knowledge underpins effective participation and officiating in all motorsport events.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who undertake officiating, support or voluntary roles in motorsport events, including practice sessions.</p> <p>The unit acknowledges the need for individuals who participate in the motorsport industry to be able to source, develop and apply current and emerging information about the industry in order to effectively carry out their role. The unit is relevant to those individuals working in an officiating and voluntary support role. More specialised and advanced motorsport officiating, event organisation and management knowledge is found in other units.</p>
--------------------------------	--

## Licensing/Regulatory Information

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research information on the structure and operation of the motorsport industry	<p>1.1. Correctly identify sources of information about the motorsport industry, including sources providing information relating to industry structure, major industry bodies or associations, different motorsport types and disciplines, event protocols, rules and regulations, competition calendars and participation opportunities</p> <p>1.2. Access sources of information and establish networks and key contacts to obtain information</p>
2. Source and apply information on ethical and legal issues for motorsport officiating	<p>2.1. Obtain information on ethical and legal issues to assist effective work performance</p> <p>2.2. Ensure own status and conduct complies with legal obligations and ethical industry practices</p>
3. Explore opportunities to participate and update motorsport knowledge	<p>3.1. Compile an annual calendar of events for a motorsport discipline</p> <p>3.2. Describe the range of officiating and volunteer roles in motorsport events</p> <p>3.3. Identify the roles best suited to own level of knowledge, skills and interest</p> <p>3.4. Identify and use a range of opportunities to improve own performance and update knowledge of the motorsport industry</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate information and communications technology to access information
- communication skills to the level required to communicate effectively with other motorsport industry personnel, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and interpret a wide variety of

**REQUIRED SKILLS AND KNOWLEDGE**

information sources

- research skills to the level required to source information on motorsport industry issues within a defined range
- problem-solving skills to the level required to identify needs and to organise thoughts and information in a systematic manner

**Required knowledge**

Required knowledge includes:

- structure and hierarchy of the motorsport industry
- participation opportunities within the motorsport industry
- general knowledge of different types of motorsports
- in depth knowledge of a specific discipline, including:
  - competition categories and scope
  - event rules and regulations, including supplementary regulations
  - types and roles of officials and volunteers
  - protocols and procedures for communicating with stewards, officials and other relevant persons
  - key organisations and associations
- legal and ethical issues that impact on officials and volunteers
- ethical and unethical conduct in officiating
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS) and environmental regulations, relevant to officiating or volunteering in a motorsport event
- organisational policies and procedures, including safety requirements, personal presentation, communication, reporting and recording procedures, and organisation and planning processes, related to officiating or volunteering in a motorsport event

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- explain the ways in which industry knowledge can be applied to maximise effective performance as an official or volunteer
- communicate effectively with others to source, develop and share motorsport information
- describe the organisational structure, competition categories, event rules and regulations, and roles of officials and volunteers in at least one (1) motorsport discipline
- apply knowledge of motorsport protocols, rules and regulations in specific motorsport event contexts.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability
- The following resources should be made available:
  - access to information and communication technology, including the internet
  - access to current sources of motorsport industry information
  - NCR and event supplementary regulations
  - industry magazines and related publications.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> <li>• case studies and problem-solving to assess application of knowledge in different motorsport event contexts</li> <li>• questions to assess knowledge of different aspects of the motorsport industry as detailed in the Evidence Guide</li> <li>• review of portfolios of evidence and third-party reports of on-the-job performance by the candidate.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process/</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances/</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role/</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsports**

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Make pre-event preparations	<ul style="list-style-type: none"><li>1.1. Read documentation supplied by the event organiser and clarify any items not understood</li><li>1.2. Identify and prepare personal requirements and equipment and check for safe and operational condition</li><li>1.3. Prepare for conditions on the day, including weather, nutrition and personal comfort</li><li>1.4. Attend pre-event briefing session and confirm own role and responsibilities</li></ul>
2. Carry out assigned duties	<ul style="list-style-type: none"><li>2.1. Confirm with supervisor the designated work practices for carrying out assigned duties safely and effectively</li><li>2.2. Follow instructions carefully and remain alert to safety hazards and risks</li><li>2.3. Recognise own limitations and seek advice and help, when necessary</li><li>2.4. Carry out all activities according to event rules and regulations, official's codes of practice, organisational safety and emergency procedures</li></ul>
3. Review and analyse performance	<ul style="list-style-type: none"><li>3.1. Attend post-event debriefing session</li><li>3.2. Reflect upon own performance and seek feedback to identify areas for improvement</li><li>3.3. Develop personal plan in consultation with support personnel for improving officiating performance</li><li>3.4. Undertake additional training in deficient areas to improve performance</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- communication skills to the level required to receive and clarify information and instructions from other motorsport personnel, to seek advice and feedback on own

**REQUIRED SKILLS AND KNOWLEDGE**

- performance, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and understand information related to the conduct of the event, rules and regulations, workplace health and safety (WHS) requirements and safe work practices
  - problem-solving skills to the level required to recognise and respond appropriately to actual and potential problems and emergencies
  - team skills to the level required to work effectively and cooperatively with others

**Required knowledge**

Required knowledge includes:

- organisational structure of the motorsport event, including authority and communication lines
- basic knowledge of rules and regulations pertaining to the motorsport event
- professional and ethical responsibilities of officiating
- personal preparations, resources and equipment required for officiating
- potential risks associated with motorsport officiating
- organisational policies and procedures, including ethical requirements, emergency response, reporting and recording procedures, and work organisation and planning processes, related to motorsport officiating

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- complete preparatory activities in a systematic manner
- follow safe work practices as directed by supervisor
- communicate effectively with other personnel involved in the event
- develop and implement a plan for improving own officiating performance
- act as a trainee official or volunteer in at least two (2) motorsport events.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to suitable motorsport events
  - all documentation, including rules and regulations, safety procedures and event procedures
  - all equipment, including personal safety equipment.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and

**EVIDENCE GUIDE**

	<p>Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## AURMDA3004 Recover a motorsport vehicle

### Modification History

Release	Comment
Release 1	Replaces AURMO3007A Recover a motorsport vehicle Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to recover damaged or broken-down vehicles in motorsport events in a safe and timely manner without causing further damage to the vehicle.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who perform vehicle recovery operations in motorsport events, including practice sessions. This can include carrying out pre-operational checks on recovery vehicles and equipment, driving a recovery vehicle carrying/towing a load, operating ancillary equipment, and completing documentation.</p> <p>Persons achieving competence in this unit will need to fulfil the applicable legislation and relevant regulations covering the operation of the tow truck and related equipment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess situation and plan recovery	1.1. Assess the equipment requirements and techniques to carry out the recovery 1.2. Confirm availability of recovery vehicle and associated equipment and personnel to carry out the job 1.3. Identify potential hazards at the recovery site and during the recovery operation and take appropriate precautions and strategies to manage and control the risks involved 1.4. Identify the type of vehicle to be towed and determine critical aspects of vehicle design that could impact recovery operations 1.5. Plan the recovery operation with consideration for security and safety of persons, vehicles and property
2. Set up and secure the recovery situation	2.1. Set up and secure the recovery situation in accordance with the established action plan 2.2. Deploy safety equipment, barriers and warning signs in accordance with operating procedures and regulatory requirements 2.3. Manage spectators and other personnel in the vicinity of the towing situation in accordance with safety procedures and security requirements 2.4. Manoeuvre vehicle to be recovered into position using appropriate equipment and standard operating procedures 2.5. Prepare the vehicle for recovery without causing damage to any component or system, as far as possible
3. Recover vehicle	3.1. Use personal protective equipment in accordance with standard operating procedures and workplace health and safety (WHS) requirements 3.2. Operate recovery equipment in accordance with manufacturer specifications, safe working practices and regulatory requirements 3.3. Identify attachment points and check the weight of the vehicle being recovered to ensure that they are consistent with established guidelines, regulatory requirements and the permissible safe working loads for the recovery vehicle and its associated equipment 3.4. Secure the recovered vehicle using appropriate winches, ropes and cables in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>relevant load restraint regulations and standard operating procedures</p> <p>3.5.Safely convey and unload the recovered vehicle to the designated location</p>
4. Clean up and complete reports	<p>4.1.Clear the recovery area and its near vicinity of debris and clean up any spills</p> <p>4.2.Complete recovery vehicle log in accordance with organisational requirements and regulations</p> <p>4.3.Complete incident report and official forms related to recovery operations</p>
5. Check and maintain equipment	<p>5.1.Check recovery vehicle and equipment for operational effectiveness in accordance with manufacturer specifications and standard operating procedures</p> <p>5.2.Carry out routine servicing and lubrication checks of the recovery vehicle and its equipment in accordance with the maintenance and service schedule</p> <p>5.3.Identify and tag faulty equipment or components that may affect the safe operation of the vehicle and report to the appropriate personnel for rectification</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate recovery vehicle and associated tools and equipment
- communication skills to the level required to understand and relay technical information and instructions, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and interpret instructions, procedures, regulations, signs, charts, maps and labels, relevant to recovery operations
- numeracy skills to the level required to calculate loads, assess tolerances and apply accurate measurements
- problem-solving skills to the level required to modify activities and take

**REQUIRED SKILLS AND KNOWLEDGE**

appropriate initiatives depending on differing recovery contexts, risk situations and environments

- team skills to the level required to ensure completion of tasks in a safe and timely manner

**Required knowledge**

Required knowledge includes:

- procedures for recovery type, preparation of vehicles, recovery procedure and worksite clean-up requirements
- recovery vehicle controls, instruments and indicators and their use
- recovery vehicle handling procedures, both with and without a tow or load
- procedures to be followed in the event of an emergency when operating a recovery vehicle, including the use of portable fire extinguishers
- pre-operational checks carried out on a recovery vehicle and its equipment and related action that should be taken
- communication procedures, including reporting lines within the motorsport environment
- range of potential workplace hazards, risks and emergency situations
- basic principles of risk management
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environmental regulations, relevant to recovering vehicles in a motorsport event
- organisational policies and procedures, including safety requirements, hazard identification, risk assessment and emergency response procedures, related to recovering vehicles in a motorsport event

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activities in a systematic manner
- complete vehicle recovery procedures safely and without damage to vehicle or equipment
- complete area clean-up
- complete log book and reporting requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to relevant recovery vehicle and equipment
  - access to suitable motorsport events
  - applicable personal protection and safety equipment and resources
  - copies of safe work practices and standard operating procedures.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

**EVIDENCE GUIDE**

	<p>workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsports**

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international events

**Potential hazards**

Potential hazards at the recovery location may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• other vehicular traffic</li> <li>• live electrical wires</li> <li>• contaminated blood at scene</li> <li>• weather conditions</li> <li>• spilt or leaking oil or fuel (slippery surfaces)</li> <li>• unsafe or damaged equipment</li> <li>• unsafe procedures in the use of recovery equipment</li> <li>• fire</li> <li>• unsafe manual lifting procedures</li> <li>• sharp edges</li> </ul>
<b>Recovery vehicle</b>	<p>Recovery vehicle may include:</p> <ul style="list-style-type: none"> <li>• tow truck</li> <li>• tilt tray</li> <li>• trailer</li> <li>• dolly wheels</li> <li>• low loader</li> </ul>
<b>Safe work practices</b>	<p>Safe work practices may include:</p> <ul style="list-style-type: none"> <li>• use of flashing lights on vehicles</li> <li>• deployment of safety equipment (e.g. warning signs or witch's hats)</li> <li>• strategic positioning of recovery vehicle</li> <li>• use of appropriate personal protective equipment and clothing</li> <li>• checking equipment and isolating, rectifying or reporting any defective equipment</li> <li>• following correct procedures in the event of spilt or leaking fuel or oil</li> <li>• using correct portable firefighting equipment</li> <li>• use of reflective raincoats and vests</li> <li>• correct manual lifting strategies</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• chains, slings and ropes</li> <li>• safety equipment</li> <li>• towing bar</li> <li>• jack</li> <li>• shovel, broom and spill kit</li> <li>• remote lights, signs, torch and work light</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• air lines and fittings</li> <li>• reduction blocks</li> <li>• communication equipment</li> </ul>
<b>Communication skills</b>	<p>Communication skills to manage the reactions of participants to decisions may include:</p> <ul style="list-style-type: none"> <li>• addressing people politely</li> <li>• clarifying the relevant rule or regulation</li> <li>• presenting information in logical order</li> <li>• refraining from swearing, arguing or fighting</li> <li>• remaining patient</li> <li>• refraining from interrupting</li> <li>• speaking clearly</li> <li>• using language that is not patronising but at a suitable level</li> <li>• using body language and voice in an assertive but not aggressive manner</li> <li>• using non-discriminatory language</li> <li>• using effective listening and speaking skills</li> <li>• verifying what has been said or done and why it has been said or done</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• hardcopy and electronic media</li> <li>• verbal, written and graphical information</li> <li>• safe work procedures related to vehicle recovery and equipment operation</li> <li>• regulatory/legislative requirements pertaining to operating a recovery vehicle</li> <li>• National Competition Rules (NCR) and event supplementary regulations</li> <li>• motorsport organisation manuals, codes of conduct, policies and procedures</li> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• event policies and procedures relating to work areas, authorities and lines of communication</li> <li>• task instructions, including briefings, worksheets, checklists and plans</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory</p>

<b>RANGE STATEMENT</b>	
	<p>legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to the recovery vehicle operations</li> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• habitat, flora and fauna protection</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li> <li>• industry codes of practice</li> </ul>

**RANGE STATEMENT**

## AURMDA3005 Act as a marshal in a motorsport event

### Modification History

Release	Comment
Release 1	Replaces AURMO3006A Act as a marshal in a motorsport event Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to perform the duties of a marshal as assigned in a motorsport event.</p> <p>It requires the ability to observe event conditions and activities in own area of responsibility and correctly apply rules and regulations, as required, to ensure safety and compliance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the duties of a marshal in a motorsport event.</p> <p>A marshal may perform general duties or be assigned to a specific role, such as paddock marshal, assembly marshal, grid marshal, pit marshal, communications marshal, course marshal or sector marshal.</p> <p>The role of a flag marshal is covered by AURMDA3006 Communicate using flags and signals in a motorsport event.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Make pre-event preparations	<ul style="list-style-type: none"><li>1.1. Read and interpret event documentation, including rules and regulations</li><li>1.2. Ensure all personal documentation is up to date</li><li>1.3. Identify and prepare personal clothing and equipment requirements and check for safe and operational condition</li><li>1.4. Prepare for conditions on the day, including weather, nutrition and personal comfort</li><li>1.5. Attend pre-race briefing session and confirm own role and responsibilities</li></ul>
2. Prepare post	<ul style="list-style-type: none"><li>2.1. Confirm location of allocated post and identity other team members</li><li>2.2. Set up post and any equipment, if required</li><li>2.3. Assess location for risks and plan an emergency escape route</li><li>2.4. Check that communication system is operational</li></ul>
3. Carry out marshalling duties	<ul style="list-style-type: none"><li>3.1. Maintain communication with chief marshal and other official personnel and report, as required</li><li>3.2. Remain vigilant and alert at assigned post to monitor event conditions and respond to flags, signals or announcements</li><li>3.3. Carry out all activities according to event rules and regulations, Officials Code of Conduct, and safety and emergency procedures</li><li>3.4. Respond to emergency situations in accordance with event procedures and within limits of own authority</li><li>3.5. Manage the reactions of participants to decisions and deal with conflict situations in accordance with the rules and regulations</li><li>3.6. Record any incidents or observations to include in final report</li></ul>
4. Finalise duties	<ul style="list-style-type: none"><li>4.1. Check, maintain and return all communication and other equipment</li><li>4.2. Clean and secure marshalling post</li><li>4.3. Prepare a written report for the chief marshal</li><li>4.4. Attend post-meeting debriefing session</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use communication and other equipment required to carry out marshalling duties in a motorsport environment
- communication skills to the level required to receive and convey information and instructions with other motorsport personnel, deal with conflict, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to collect, organise and understand information related to rules and regulations, marshalling duties, workplace health and safety (WHS) requirements and team procedures, related to safety and emergency response
- numeracy skills to the level required to count and measure
- problem-solving skills to the level required to apply rules and regulations, and recognise and respond appropriately to actual and potential problems and emergencies
- team skills to the level required to work effectively and cooperatively with others

#### Required knowledge

Required knowledge includes:

- organisational structure of the motorsport event, including authority and communication lines
- rules and regulations applicable to the motorsport event
- professional and ethical responsibilities of officiating
- responsibilities and tasks of a marshal, and relationship with other officials
- personal preparations, resources and equipment required for officiating
- communication techniques, including radio etiquette and hand signalling
- motorsport flag and light signal types and their meaning
- risks associated with motorsport officiating
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environmental legislation and regulations, relevant to motorsport officiating
- organisational policies and procedures, including ethical requirements, emergency response, reporting and recording procedures, and work organisation and planning processes, related to motorsport officiating

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- complete preparatory activities in a systematic manner
- observe safety procedures and requirements
- assess risks and plan an emergency escape route
- communicate effectively with others using communication equipment and hand signals
- respond to flags, signals and announcements in accordance with instructions and rules and regulations
- carry out the duties of a marshal safely and efficiently in at least two (2) motorsport events
- prepare written reports.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to suitable motorsport events
  - all documentation, including rules and regulations, safety procedures and event procedures
  - all equipment, including communication and personal safety equipment.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of

**EVIDENCE GUIDE**

	<p>Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Make pre-event preparations	<ul style="list-style-type: none"><li>1.1. Read and interpret event documentation, including rules and regulations</li><li>1.2. Identify and prepare personal requirements and equipment and check for safe and operational condition</li><li>1.3. Prepare for conditions on the day, including weather, nutrition and personal comfort</li><li>1.4. Attend pre-race briefing session and confirm own role and responsibilities</li></ul>
2. Prepare post	<ul style="list-style-type: none"><li>2.1. Confirm location of allocated post and identity of other team members</li><li>2.2. If flags are to be used, ensure flag set is complete and lay out flags ready for use</li><li>2.3. If signal lights are to be used, check for correct operation</li><li>2.4. Check and prepare signal boards and related equipment</li><li>2.5. Assess location for risks and plan an emergency escape route</li><li>2.6. Check that communication system is operational</li></ul>
3. Use flags and signals during the event	<ul style="list-style-type: none"><li>3.1. Maintain communication with chief marshal and other official personnel and report, as required</li><li>3.2. Remain vigilant throughout the event to identify need for flags or signals</li><li>3.3. Use flags or signals, when necessary, in accordance with relevant motorsport rules and regulations</li><li>3.4. Carry out all activities according to event rules and regulations, Officials Code of Practice, and safety and emergency procedures.</li></ul>
4. Finalise duties	<ul style="list-style-type: none"><li>4.1. Check, maintain and return all flags and communication equipment</li><li>4.2. Clean and secure marshalling post</li><li>4.3. Prepare a written report for the chief marshal</li><li>4.4. Attend post-meeting debriefing session</li></ul>

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills include:

- technical skills to the level required to apply flag and signalling rules and techniques and use communication systems in a motorsport environment
- communication skills to the level required to receive and convey information and instructions with other motorsport personnel, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to collect, organise and understand information related to controlling body rules, category rules and supplementary regulations, workplace health and safety (WHS) requirements and team procedures, related to safety
- numeracy skills to the level required to count and measure
- problem-solving skills to the level required to recognise and respond appropriately to actual and potential problems and emergencies
- team skills to the level required to work effectively and cooperatively with others

**Required knowledge**

Required knowledge includes:

- organisational structure of the motorsport event, including authority and communication lines
- all rules and regulations pertaining to the motorsport event
- professional and ethical responsibilities of officiating
- responsibilities and tasks of a flag marshal, and relationship with other officials
- personal preparations, resources and equipment required for officiating
- communication techniques, including radio etiquette and hand signalling
- motorsport flag and light signal types and their meaning
- flag rules and flagging techniques
- risks associated with motorsport officiating
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environmental legislation and regulations, relevant to motorsport activities
- organisational policies and procedures, including ethical requirements, emergency response, reporting and recording procedures and work organisation and planning processes, related to motorsport officiating

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- complete preparatory activities in a systematic manner
- observe safety procedures and requirements
- assess risks and plan an emergency escape route
- communicate effectively with others using communication equipment and hand signals
- use flags or signalling techniques appropriate to the circumstances and in accordance with rules and regulations
- prepare written reports.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to suitable motorsport events
  - all documentation, including rules and regulations, safety procedures and event procedures
  - all equipment, including flags, communication and personal safety equipment.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsport**

Motorsport may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international events

**Flags**

Flag rules and techniques include:

- regulation sizes and colours
- single or double flags
- waved or stationary

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• duration of flagging</li> <li>• facing direction and positioning of flag marshal</li> </ul>
<b>Other signals</b>	<p>Other signal methods may include:</p> <ul style="list-style-type: none"> <li>• lights</li> <li>• hand signals</li> <li>• signal boards</li> </ul>

## AURMDA3007 Act as a steward in a motorsport event

### Modification History

Release	Comment
Release 1	Replaces AURMO3005A Act as a steward in a motorsport event Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to act as a steward in a motorsport event.</p> <p>It requires strong verbal and written communication skills, extensive knowledge of the conduct of the applicable motorsport category, its rules and regulations and judiciary processes.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who perform the duties of a steward in a motorsport event, including practice sessions.</p> <p>The steward is usually appointed by the motorsport controlling body and has the authority to act on their behalf to ensure the event is conducted in compliance with all applicable rules and regulations. This includes ensuring all aspects of the event organisation meet requirements before the event can proceed. During the event, the steward must ensure it is conducted in accordance with the rules and regulations and has the power to stop the event or suspend participants, if necessary. The steward can also adjudicate on protests, disputes or breaches of the rules.</p>
--------------------------------	--

## Licensing/Regulatory Information

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Authorise the commencement of the event	1.1. Evaluate all event documentation for clarity and compliance with controlling body requirements 1.2. Ensure all essential official positions are filled by suitably qualified or experienced people 1.3. Ensure facilities, equipment, personnel and safety arrangements meet controlling body requirements 1.4. Order the commencement of the event
2. Monitor the conduct of the event	2.1. Ensure the meeting is run in accordance with the published program and all applicable rules and regulations 2.2. Maintain communication with the Clerk of Course throughout the conduct of the event 2.3. In consultation with the Clerk of the Course, authorise any modifications to the program or event conditions deemed necessary to meet safety requirements or in exceptional circumstances 2.4. Settle any issue that might arise, and impose penalties, subject to the right of appeal 2.5. Exclude from the event any vehicle deemed to be unsafe or non-compliant and any participant deemed to be unfit 2.6. Order the administration of any vehicle, fuel or other compliance test 2.7. Amend the results in accordance with rules and regulations
3. Adjudicate on protests or disputes	3.1. Notify persons involved to attend the hearing 3.2. Clarify the nature of the protest or dispute 3.3. Identify the applicable rules and regulations 3.4. Hear and evaluate the evidence 3.5. Make decision and impose penalty, if required 3.6. Implement procedures for an appeal, if necessary 3.7. Maintain accurate records of the proceedings and the outcomes
4. Complete final report	4.1. At the conclusion of the meeting, collect all personal notes, event documentation and results on which the report will be based 4.2. Write a report detailing the conduct of the meeting, the results of each competition, and details of any protests, decisions, penalties and appeals

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Secure any evidence for appeals or future reference</p> <p>4.4. Submit the report to the controlling body within the designated time after the event</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use communications, information and business technology to access and produce event information and results and maintain contact with event personnel
- communication skills to the level required to gather, interpret and relay information with other stewards, officials and event personnel, to conduct hearings and manage conflict, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read, interpret and apply information related to event operations, rules and regulations, and to complete detailed written reports
- problem-solving skills to the level required to modify event proceedings to ensure safety, adjudicate protests and disputes, apply relevant rules and regulations and assign penalties
- team skills to the level required to lead and work effectively with others

#### Required knowledge

Required knowledge includes:

- organisational structure of the motorsport event, including authority and communication lines
- extensive knowledge of rules and regulations pertaining to the motorsport event
- professional and ethical responsibilities of stewards
- potential risks associated with motorsport
- application of risk management principles
- protest, inquiry and appeal processes and procedures
- principles of administrative law and natural justice when applied to motorsport investigations, protests, inquiries and appeals
- conflict management techniques
- reporting requirements and procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- procedures for operation and maintenance of required equipment and technology
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS) and environmental regulations, relevant to motorsport events
- organisational policies and procedures, including ethical requirements, emergency response, reporting and recording procedures, and work organisation and planning processes, related to motorsport events

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- demonstrate extensive knowledge of rules and regulations applicable to the motorsport category
- undertake pre-event inspections and authorisation in a systematic manner
- apply rules and regulations correctly to facilitate safe and effective conduct of a motorsport event
- communicate effectively with other personnel involved in the event
- participate effectively in protests and hearings, make decisions and impose penalties
- complete a written final report to the controlling body.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to suitable motorsport events
  - all documentation, including rules and regulations, safety procedures and event procedures
  - all equipment, including communications and personal safety equipment.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

**EVIDENCE GUIDE**

	<p>workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsport**

Motorsport may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international events

**Rules and regulations**

Motorsport rules and regulations may include:

- National Competition Rules (NCR)

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• National Rally Code (NRC)</li> <li>• event supplementary regulations</li> <li>• technical regulations</li> <li>• association and club rules, regulations and codes</li> <li>• Officials Code of Conduct</li> <li>• international sporting code</li> <li>• Federation Internationale de l'Automobile (FIA)</li> <li>• Federation Internationale Motocycliste (FIM)</li> </ul>
<b>Professional and ethical standards</b>	<p>Professional and ethical standards for officials may include:</p> <ul style="list-style-type: none"> <li>• dress, personal presentation, preparedness and personal conduct</li> <li>• respect for the rights and responsibilities of others</li> <li>• commitment and responsibility to safety</li> <li>• confidentiality, impartiality and no conflict of interest</li> <li>• contribution to the overall effectiveness of the team</li> <li>• self-improvement through feedback, performance appraisal and training</li> </ul>
<b>Pre-event inspection</b>	<p>Items to be checked before authorising an event to proceed may include:</p> <ul style="list-style-type: none"> <li>• applicable rules and regulations, including supplementary regulations</li> <li>• event program</li> <li>• instructions for participants</li> <li>• appointment of essential officials</li> <li>• number of officials and volunteers</li> <li>• adequacy and condition of facilities and equipment</li> <li>• safety arrangements, including emergency response</li> <li>• communication systems</li> <li>• eligibility of vehicles and participants</li> <li>• event documentation and information</li> <li>• suitability of signs and advertisements</li> </ul>
<b>Information and documents</b>	<p>Information and documents may include:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>controlling body rules, category rules and supplementary regulations</li> <li>event policies and procedures relating to work areas, authorities and lines of communication</li> <li>task instructions, including briefings, worksheets, checklists and plans</li> <li>industry codes of practice</li> <li>instructions issued by authorised internal or external persons</li> <li>material safety data sheets (MSDS)</li> <li>diagrams or sketches</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>award and enterprise agreements</li> <li>industrial relations</li> <li>confidentiality and privacy</li> <li>WHS</li> <li>the environment</li> <li>equal opportunity</li> <li>anti-discrimination</li> <li>duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>personal protective equipment and clothing</li> <li>safety equipment</li> <li>first aid equipment</li> <li>hazard and risk control</li> <li>elimination of hazardous materials and substances</li> <li>manual handling, including shifting, lifting and carrying</li> <li>emergency procedures</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>waste management</li> <li>noise</li> <li>dust</li> </ul>

## AURMGA2001 Set up and dismantle temporary work location and equipment

### Modification History

Release	Comment
Release 1	Replaces AURM240172B Set up and dismantle temporary work location and equipment Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to set up temporary work location and equipment according to team requirements.</p> <p>It requires the ability to set up and dismantle temporary shelter and equipment storage, layout equipment, erect team promotional signage and set up functional workspace.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake site preparation and assembly and disassembly of temporary work locations in a motorsports environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare site	1.1. Interpret site information and requirements and confirm with site supervisor/circuit manager 1.2. Consider security and confidentiality issues and select risk management measures 1.3. Identify potential hazards and select risk management measures 1.4. Consider path of movement (obstacles, hazards and safety conditions) in positioning of equipment and tooling and take measures to eliminate hazards 1.5. Observe workplace health and safety (WHS) requirements, including equipment and system isolation requirements, and observe personal protection needs throughout the work
2. Assemble temporary work location	2.1. Unload equipment and tooling from transporters in accordance with team requirements 2.2. Assemble, erect and secure temporary work shelter and associated fittings in accordance with shelter manufacturer/component supplier procedure, team requirements and event supplementary regulations
3. Position equipment and tooling	3.1. Assemble equipment according to manufacturer/component supplier specifications 3.2. Position equipment according to team requirements, WHS requirements, controlling body rules, category rules and supplementary regulations 3.3. Identify, fit and install required protective equipment in accordance with manufacturer/component supplier and team guidelines 3.4. Monitor effectiveness of area layout during use and make recommendations for changes to appropriate persons 3.5. Identify problems with the work area and report to appropriate persons
4. Dismantle temporary work location	4.1. Clean, dismantle and pack temporary work shelter in preparation for transportation in accordance with team procedures 4.2. Account for tooling and equipment and maintain and pack in preparation for transportation in accordance with team procedures 4.3. Load shelter, equipment and tooling on transporters in accordance with team procedures

ELEMENT	PERFORMANCE CRITERIA
	4.4. Clean and inspect work area for serviceable condition in accordance with local requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to lifting and measuring devices and equipment connections
- communication skills to the level required to communicate ideas and information to enable checking of temporary work location and stowage of tooling of equipment in transporters, and to report work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to set-up and dismantling of temporary work location structure and layout, set-up of equipment, event, and category rules and supplementary regulations
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements relating to team operating area layout and equipment positioning
- problem-solving skills to the level required to use checking and inspection techniques to ensure safety of temporary work location structure and equipment positioning
- team skills to the level required to work with others and in a team by using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities to set up and dismantle site under limited supervision

#### Required knowledge

Required knowledge includes:

- event category rules, supplementary regulations, site and team requirements
- principles and functionality requirements of the layout of temporary work location
- workflow of pit lane/service area operations
- tooling and equipment required for specific events
- temporary shelter assembly and erection methods and techniques
- positioning of equipment for ease of access, security, logical workflow and ergonomic use
- set-up of equipment for safe and effective operation (e.g. correct boom height, securing of gas bottles, and secure service area moorings/pontoon)
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to loading and unloading equipment and shelter erection

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly set up and dismantle a temporary work location on a minimum of three (3) occasions, in at least two (2) different locations, and complete the following:
  - identify/confirm temporary location layout
  - establish the area layout
  - confirm effectiveness of area layout
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• an area to set-up a temporary work location</li> <li>• standard operating procedures</li> <li>• tools and equipment.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Ancillary set-up</b>	<p>Ancillary set-up may include:</p> <ul style="list-style-type: none"> <li>• erection of temporary wheel alignment and</li> </ul>

<b>RANGE STATEMENT</b>	
	weighing equipment <ul style="list-style-type: none"> <li>• installation of pit wall resources:               <ul style="list-style-type: none"> <li>• data acquisition beacon</li> <li>• pit board</li> <li>• stop watches</li> <li>• links</li> <li>• cabling</li> </ul> </li> </ul>
<b>Temporary work locations</b>	Temporary work locations may include <ul style="list-style-type: none"> <li>• specified pit areas (e.g. pit lane and pit bay)</li> <li>• service areas for rally and boating events</li> </ul>
<b>Setting up a temporary work location</b>	Setting up a temporary work location may include: <ul style="list-style-type: none"> <li>• installation of floor matting</li> <li>• set-up of tables and benches</li> <li>• positioning of tooling and equipment, including category specific resources, such as:               <ul style="list-style-type: none"> <li>• nitrogen bottles</li> <li>• tyre warmers</li> <li>• power leads</li> <li>• jacking systems</li> </ul> </li> <li>• installation of computing and data acquisition equipment</li> <li>• installation of firefighting and environmental protection equipment, including:               <ul style="list-style-type: none"> <li>• drip/spill trays</li> <li>• oil absorbent material</li> <li>• cleaning agents</li> <li>• disposal containers</li> </ul> </li> <li>• erection of promotional signage and security barriers</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>substances</p> <ul style="list-style-type: none"><li>• manual handling, including shifting, lifting and carrying</li><li>• emergency procedures</li><li>• team insurance requirements</li><li>• material safety management systems</li><li>• controlling body requirements</li><li>• manufacturer/component supplier specifications</li><li>• local safe operating procedures</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish personal presentation standards	1.1. Clarify team, role and personal presentation expectations 1.2. Maintain personal presentation standards of team 1.3. Develop and implement strategies to achieve personal presentation standards
2. Determine potential career paths in motorsport	2.1. Identify, develop and implement personal strengths and opportunities for improvement 2.2. Identify personal attitudes needed to succeed in motorsport 2.3. Review and link personal goals and team goals 2.4. Consider career options within the team and outside the team 2.5. Identify potential career paths to achieve personal goals 2.6. Document achievements and experience in the form of a comprehensive résumé
3. Manage personal learning	3.1. Research different learning styles and identify own learning style preference 3.2. Develop strategies to maximise the effectiveness of personal learning 3.3. Research and apply the effects of preferred learning styles in the team environment 3.4. Review and modify strategies, as necessary
4. Develop personal health and fitness plan	4.1. Manage personal nutritional requirements for functioning in a motorsport environment 4.2. Manage stress and fatigue using appropriate strategies 4.3. Manage personal physical fitness requirements in relation to team role requirements 4.4. Develop strategies to manage the impact of legal and illegal drugs on personal competence and performance within a motorsport environment 4.5. Review and modify own health and fitness plan
5. Establish personal conflict resolution strategies	5.1. Identify potential causes of conflict in relation to preferred learning style within the team environment 5.2. Implement personal strategies for dealing with conflict 5.3. Research communication techniques 5.4. Implement strategies for improving communication

ELEMENT	PERFORMANCE CRITERIA
	with team members

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology to assist research and store information
- communication skills to the level required to communicate ideas and information to enable development of conflict management strategies and effective ways for working with other team members, and to report work outcomes and issues
- literacy skills to the level required to collect, organise and understand information related to team roles and relationships, learning styles, health and nutrition, communication and conflict resolution
- numeracy skills to the level required to use mathematical ideas and techniques to estimate the financial and time wastage impact of inefficient working strategies
- problem-solving skills to the level required to use scenario planning techniques to assist in determining career choices and knowledge of group dynamics to anticipate potential conflict situations and plan management strategies
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise information flow and communication
- planning skills to the level required to plan and organise activities, including research into learning styles, career options, conflict management strategies, and nutrition and physical fitness requirements

#### Required knowledge

Required knowledge includes:

- team roles, responsibilities and relationships
- motorsport sectors and categories
- goal setting methods, such as specific, measurable, achievable, realistic, timely (SMART)
- personal presentation standards, including hair, clothes, personal hygiene, posture, body language and speech
- résumé and curriculum vitae development

**REQUIRED SKILLS AND KNOWLEDGE**

- learning styles and the impact of appropriate persons with different learning styles working together in normal and pressure environments
- positive and negative effects of personal attitudes in a motorsport environment
- communication principles and techniques
- group dynamics in high-pressure environments
- conflict management strategies and techniques
- human nutritional requirements, food groups and their effect on the human body, including specific nutritional requirements for functioning in a motorsport environment
- the impact of legal and illegal drugs on the human body and their implications in motorsport
- principles of physical fitness and fitness requirement for functioning effectively in a motorsport environment

**Evidence Guide****EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team standards and expectations
- demonstrate personal presentation and conduct to team expectations for a minimum duration of one (1) day on at least three (3) occasions in motorsport environments, including:
  - workshop
  - competition event
  - promotional activity

(each environment must be covered at least once)

- develop a personal résumé, including detailed statements of:
  - qualifications and training
  - experience in the motorsport industry

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• relevant experience beyond the motorsport industry</li> <li>• testimony from employers, colleagues or training bodies</li> <li>• develop a personal health and fitness plan, including detailed statements of: <ul style="list-style-type: none"> <li>• a minimum of three (3) strategies for managing nutrition needs. Each strategy must demonstrate a knowledge of recommended nutritional intake</li> <li>• a minimum of three (3) strategies for increasing personal fitness. Strategies must address at least one (1) of flexibility, cardiovascular fitness, muscular strength and endurance</li> <li>• a minimum of three (3) stress management strategies</li> </ul> </li> <li>• demonstrate a minimum of three (3) conflict resolution strategies, in situations covering: <ul style="list-style-type: none"> <li>• tight timeframes or extended working hours</li> <li>• differing expectations</li> <li>• different working styles</li> <li>• appropriate persons external to the team</li> </ul> </li> <li>• work with and around other team members</li> <li>• modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.</li> <li>• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</li> <li>• Assessment is to comply with relevant regulatory requirements, including specified Australian standards.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• access to job/role descriptions</li> <li>• documentation of team procedures and processes.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of</li> </ul>

**EVIDENCE GUIDE**

	<p>Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Career planning**

Career planning may include:

- researching personal expectations and potential career paths within and beyond the motorsport team, including national and international opportunities

**Managing personal learning**

Managing personal learning may include:

- researching different learning styles
- determining personal preferences
- devising strategies to increase the effectiveness of personal learning

**RANGE STATEMENT****Health in a motorsport environment**

Health in a motorsport environment may include understanding:

- the principles of fitness
- nutrition
- the impact of legal and illegal drugs on body functioning
- performance and stress management

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Information and procedures**

Information and procedures may include:

- controlling body rules, category rules and supplementary regulations
- team policies and procedures relating to representing the team in public
- team procedures relating to reporting and communication

## AURMKA4001 Manage motorsport data

### Modification History

Release	Comment
Release 1	Replaces AURM441438B Manage motorsport data acquisition Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to configure a data acquisition system and to analyse and present motorsport data.</p> <p>It requires the ability to analyse data requirements, configure an electronic system and retrieve, analyse and present data in various forms, including charts, graphs, tables, comparisons and reports.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the identification of data acquisition needs of a motorsport team and configure a system so as to retrieve, analyse and present the data. Data may be related to weather, circuit, driver/rider characteristics, systems capability and vehicle design specifications.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Prerequisite units	
AURETR2012	Test and repair basic electrical circuits
AURMTA3009	Collect and log motorsport data
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm data acquisition requirements	<ul style="list-style-type: none"><li>1.1. Use controlling body rules, category rules, supplementary regulations and team requirements to specify task requirements, including configuration, equipment, quality and quantities</li><li>1.2. Access and interpret benchmark specifications for a correctly functioning electronic data acquisition system</li><li>1.3. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work</li></ul>
2. Configure electronic data acquisition systems	<ul style="list-style-type: none"><li>2.1. Select and prepare tools and material to support the data acquisition process</li><li>2.2. Calculate and enter component rates/ratios and parameters for input sensors within system math channels</li><li>2.3. Enter sample rates most suited to particular data logging channel</li><li>2.4. Conduct system check in accordance with regulatory, manufacturer/component supplier and team requirements</li></ul>
3. Retrieve data	<ul style="list-style-type: none"><li>3.1. Use team instructions and procedures to identify data retrieval requirements for specific purposes</li><li>3.2. Follow data retrieval process in accordance with specifications and directions</li><li>3.3. Verify data retrieved, where appropriate, by using reliable alternate or optional processes</li><li>3.4. Identify variables and potential for inaccurate results</li></ul>
4. Analyse data	<ul style="list-style-type: none"><li>4.1. Compare all sources of collected data</li><li>4.2. Analyse data using mathematical processes</li><li>4.3. Analyse trends and patterns in data including non-conforming results outside of the predicted outcomes</li><li>4.4. Investigate possible reasons for trends and patterns</li><li>4.5. Identify potential performance enhancement solutions</li><li>4.6. Report problems with the required data and/or the operation of the equipment to appropriate persons</li></ul>
5. Present data	<ul style="list-style-type: none"><li>5.1. Identify end users of statistical data and their</li></ul>

ELEMENT	PERFORMANCE CRITERIA
	<p>preferred format</p> <p>5.2.Represent data to meet the needs of the end user</p> <p>5.3.Document appropriate recommendations</p> <p>5.4.Present recommendations with supporting data</p>
6. Clean up work area and maintain equipment	<p>6.1.Clean, maintain and prepare equipment ready for future use and store in accordance with manufacturer/component supplier specifications and team requirements</p> <p>6.2.Remove waste material according to team procedures</p> <p>6.3.Diagnose faults in acquisition systems and components</p> <p>6.4.Document unserviceable equipment and faults and take appropriate action in accordance with team procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to configuring data acquisition systems, retrieving and presenting collected data
- communication skills to the level required to communicate ideas and information to enable clarification of work requirements, coordination of work with team members, and reporting of work outcomes and issues
- literacy skills to the level required to collect, organise and understand information related to configuring data acquisition systems, retrieving and presenting collected data, and the analysis of data system requirements for end users
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during the configuration of data acquisition systems and presentation of data
- problem-solving skills to the level required to use problem-solving techniques to anticipate changing information requirements and influences
- team skills to the level required to work with others to foster the team, recognise dependencies, and use cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the coordination of data acquisition equipment, systems and materials to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- data acquisition channel requirements, including types, characteristics, uses and limitations of signal devices/sensors
- methods for determining/calculating component rates and ratios
- configuration, inspection and system checks of data acquisition systems
- operation of data acquisition systems and the inputting of variables
- data retrieval processes and techniques
- data analysis principles, techniques and methodology, including associated mathematical formulae
- types of statistical representations of motorsport data, users of the data and their preferred format of data display
- types of motorsport data sources include vehicle, weather, circuit and driver/rider
- mathematical processes to arrange data
- data comparison methods

**REQUIRED SKILLS AND KNOWLEDGE**

- data presentation methods
- data acquisition system fault diagnosis
- data security and confidentiality procedures
- procedures for reporting equipment faults and data defects
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to managing data acquisition

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements, including the isolation of equipment and the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly configure data acquisition, acquire, analyse and present motorsport data on a minimum of two (2) occasions. At least one (1) of these must be an appropriate event, and cover each of the following:
  - vehicle data
  - weather data
  - circuit data
  - driver/rider characteristics
- retrieve data within relevant team quality and timeliness standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to

**EVIDENCE GUIDE**

	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <ul style="list-style-type: none"> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• team requirements</li> <li>• access to data acquisition system and associated material and equipment</li> <li>• information on work specifications</li> <li>• organisational procedures</li> <li>• safety procedures, regulations and quality standards.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Tools and equipment

Tools and equipment may include:

- data acquisition tools
- multimeters
- computers
- hand-held calculators
- mathematical tables
- graphing and charting equipment

#### WHS requirements

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

#### Legislative requirements

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess event conditions	<ul style="list-style-type: none"><li>1.1.Familiarise self with rules and regulations governing the event or competition</li><li>1.2.Assess the participant status and criteria for the event or competition</li><li>1.3.Ensure the environment, facilities and equipment within own area of responsibility are in accordance with requirements for the event or competition</li><li>1.4.Assess and confirm that the safety and other risk management issues are within acceptable levels prior to the commencement of the event or competition, within own area of responsibility</li><li>1.5.Report any concerns promptly to senior official</li></ul>
2. Observe the conduct of an event	<ul style="list-style-type: none"><li>2.1.Maintain vigilant and alert observation of the event or competition at all times</li><li>2.2.Undertake observation in accordance with relevant rules, regulations and guidelines for the event or competition</li><li>2.3.Respond to identified problems without delay and take appropriate safety and risk management actions</li></ul>
3. Interpret and apply rules and regulations	<ul style="list-style-type: none"><li>3.1.Follow the rules and regulations of motorsport in the performance of duties</li><li>3.2.Practice ethical behaviour in the application of rules and regulations</li><li>3.3.Discuss the consequences of perceived corruption or conflict of interest on the image of motorsport</li><li>3.4.Determine the rule or regulation which is appropriate for the given situation</li><li>3.5.Interpret the rule or regulation for the given situation to ensure consistency with competition outcomes</li><li>3.6.Make decisions based on fairness</li><li>3.7.Comply with directions and requests from stewards and senior officials</li></ul>
4. Communicate decisions	<ul style="list-style-type: none"><li>4.1.Communicate decisions in accordance with the rules, regulations and guidelines, and the level of competition</li><li>4.2.Manage the reactions of participants to decisions in accordance with the rules, regulations and guidelines</li><li>4.3.Report incidents or non-compliant activities to senior official and/or stewards</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate information and communications technology to access and apply information on rules and regulations
- communication skills to the level required to communicate and discuss rules and regulations, deal with minor disputes, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and interpret rules and regulations and to accurately record and report details of incidents and non-compliance
- problem-solving skills to the level required to determine the rule or regulation which applies to a given situation and make appropriate decisions
- team skills to the level required to ensure completion of tasks in a safe and timely manner

#### Required knowledge

Required knowledge includes:

- relevant motorsport codes, guidelines and rules and regulations
- ethical and unethical conduct in officiating
- appeals and inquiries processes and procedures
- communication procedures, including reporting lines, within the motorsport environment
- basic conflict management techniques
- range of potential workplace hazards, risks and emergency situations
- basic principles of risk management
- procedures for reporting incidents and documentation which needs to be completed
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS) and environmental regulations, relevant to officiating or volunteering in a motorsport event
- organisational policies and procedures, including safety requirements, hazard identification, risk assessment and emergency response procedures, related to officiating or volunteering in a motorsport event

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- demonstrate sufficient knowledge of relevant rules, regulations and guidelines and ability to apply them to facilitate the outcome of an activity
- assess that conditions are in compliance with event rules and regulations
- observe the conduct of an activity and identify information on which to base decisions
- practice fairness and ethical behaviour in the application of rules and regulations
- communicate decisions and manage outcomes in accordance with relevant rules, regulations and guidelines.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to relevant rules and regulations, codes and guidelines
  - access to suitable motorsport events
  - applicable personal protection and safety equipment and resources.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

**EVIDENCE GUIDE**

	<p>workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsports**

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international events

**Rules and regulations**

Rules and regulations impacting on officials may include:

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• current edition of the relevant National Competition Rules (NCR)</li> <li>• supplementary regulations for the event or competition</li> <li>• Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM) policies and procedures</li> <li>• organisations' rules, policies and procedures regarding competent and ethical officiating, dress requirements and protocols, health and safety, and other values underpinning the activity</li> <li>• professional association regulations and codes of conduct</li> <li>• Australian Sports Commission Officials Code of Conduct policy</li> <li>• relevant national, state/territory or local government regulations and guidelines</li> </ul>
<b>Fairness</b>	<p>Fairness relates to:</p> <ul style="list-style-type: none"> <li>• consistent interpretation and application of rules and regulations</li> <li>• elimination of biases towards one team or competitor</li> <li>• one team or competitor not gaining an unfair advantage over another</li> </ul>
<b>Communication skills</b>	<p>Communication skills to manage the reactions of participants to decisions may include:</p> <ul style="list-style-type: none"> <li>• addressing people politely</li> <li>• clarifying the relevant rule or regulation</li> <li>• presenting information in logical order</li> <li>• refraining from swearing, arguing or fighting</li> <li>• remaining patient</li> <li>• refraining from interrupting</li> <li>• speaking clearly</li> <li>• using language that is not patronising but at a suitable level</li> <li>• using body language and voice in an assertive but not aggressive manner</li> <li>• using non-discriminatory language</li> <li>• using effective listening and speaking skills</li> <li>• verifying what has been said or done and why</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide information on rules and regulations	<ul style="list-style-type: none"><li>1.1. Accurately and clearly explain to personnel relevant rules and regulations, including organisation-specific policies and procedures</li><li>1.2. Make all current and updated rules and regulations readily accessible to staff in a timely and regular manner according to organisational procedures</li><li>1.3. Regularly provide information and clearly explain to the work group information about the application and interpretation of rules and regulations</li><li>1.4. Provide opportunities for staff members to contribute their views on the application and interpretation of rules and regulations, including possible ramification of poor decisions and conflicts of interest</li></ul>
2. Monitor application of rules and regulations	<ul style="list-style-type: none"><li>2.1. Monitor ongoing compliance with rules and regulations and ethical behaviour in the application of rules and regulations</li><li>2.2. Take prompt and appropriate action to address non-compliance or misinterpretations of rules and regulations</li><li>2.3. Monitor the effectiveness of rules and regulations in maintaining the integrity of the event and ensuring fair outcomes for participants</li><li>2.4. Provide timely feedback on non-compliance to designated person according to organisation procedures</li></ul>
3. Adjudicate on decisions	<ul style="list-style-type: none"><li>3.1. Adjudicate on decisions, where required, in accordance with the rules and regulations</li><li>3.2. Manage the reactions of participants to decisions in accordance with the rules and regulations</li><li>3.3. Use effective communication skills to manage and resolve conflict situations</li><li>3.4. Report incidents or non-compliant activities to senior official and/or stewards</li></ul>
4. Identify training needs	<ul style="list-style-type: none"><li>4.1. Provide advice on training needs of individuals and workgroup based on monitoring of team performance</li><li>4.2. Provide coaching and mentoring assistance to team members and/or facilitate arrangements for fulfilling training needs in consultation with appropriate management and according to organisation policies</li></ul>

ELEMENT	PERFORMANCE CRITERIA
	and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate information and communications technology to access and disseminate information on rules and regulations
- communication skills to the level required to communicate and discuss rules and regulations, promote compliance, deal with conflict and disputes, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and interpret rules and regulations, and to accurately record and report details of incidents and non-compliance
- problem-solving skills to the level required to determine the rule or regulation which applies to a given situation, to assess situations and make appropriate decisions
- team skills to the level required to coordinate team adherence to, and correct and consistent application of, rules and regulations

#### Required knowledge

Required knowledge includes:

- applicable motorsport codes, guidelines, and rules and regulations
- ethical and unethical conduct in officiating
- communication procedures, including reporting lines, within the motorsport environment
- types and causes of conflict that typically occurs and resolution techniques
- organisation policies and procedures on conflicts and complaints, including any reporting requirements
- procedures for reporting incidents and documentation which needs to be completed
- appeals and inquiries processes and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS) and environmental regulations, relevant to officiating or volunteering in a motorsport event
- organisational policies and procedures, including safety requirements, hazard

**REQUIRED SKILLS AND KNOWLEDGE**

identification, risk assessment and emergency response procedures, related to officiating or volunteering in a motorsport event

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- demonstrate broad knowledge of relevant rules, regulations and guidelines, and the ability to apply them to facilitate the outcome of an activity
- provide clear and accurate explanations of rules and regulations to other personnel
- monitor the application of rules and regulations and identify non-compliance
- practice fairness and ethical behaviour in the application of rules and regulations
- adjudicate decisions and manage conflict in accordance with relevant rules, regulations and guidelines
- complete accurate reports on incidents and disputes.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to relevant rules and regulations, codes and guidelines
  - access to suitable motorsport events
  - applicable personal protection and safety equipment and resources.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsports**

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international events

**Rules and regulations**

Rules and regulations impacting on officials may

<b>RANGE STATEMENT</b>	
	<p>include:</p> <ul style="list-style-type: none"> <li>• current edition of the relevant National Competition Rules (NCR)</li> <li>• supplementary regulations for the event or competition</li> <li>• organisations' rules, policies and procedures regarding competent and ethical officiating, dress requirements and protocols, health and safety, and other values underpinning the activity</li> <li>• professional association regulations and codes of conduct</li> <li>• Australian Sports Commission Officials Code of Conduct policy</li> <li>• relevant national, state/territory or local government regulations and guidelines</li> <li>• Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM) policies and procedures</li> </ul>
<b>Implications</b>	<p>Implications of non-compliance with rules and regulations may include:</p> <ul style="list-style-type: none"> <li>• health and safety</li> <li>• duty of care</li> <li>• employment</li> <li>• privacy</li> <li>• natural justice</li> <li>• tribunals/judiciaries/hearings</li> <li>• contracts</li> <li>• sponsorship</li> </ul>
<b>Fairness</b>	<p>Fairness relates to:</p> <ul style="list-style-type: none"> <li>• consistent interpretation and application of rules and regulations</li> <li>• elimination of biases towards one team or competitor</li> <li>• one team or competitor not gaining an unfair advantage over another</li> </ul>
<b>Conflict resolution techniques</b>	<p>Conflict resolution techniques include:</p> <ul style="list-style-type: none"> <li>• problem solving</li> <li>• negotiation</li> <li>• use of appropriate communication skills</li> </ul>

**RANGE STATEMENT****Communication skills**

Communication skills to manage the reactions of participants to decisions may include:

- addressing people politely
- clarifying the relevant rule or regulation
- presenting information in logical order
- refraining from swearing, arguing or fighting
- remaining patient
- refraining from interrupting
- speaking clearly
- using language that is not patronising but at a suitable level
- using body language and voice in an assertive but not aggressive manner
- using non-discriminatory language
- using effective listening and speaking skills
- verifying what has been said or done and why it has been said or done

**Information/documents**

Sources of information/documents may include:

- hardcopy and electronic media
- verbal, written and graphical information
- safe work procedures related to motorsport officiating and volunteering
- regulatory/legislative requirements pertaining to motorsport officiating and volunteering
- NCR and event supplementary regulations
- motorsport organisation manuals, codes of conduct, policies and procedures
- controlling body rules, category rules and supplementary regulations
- event policies and procedures relating to work areas, authorities and lines of communication
- task instructions, including briefings, worksheets, checklists and plans

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"><li>• hazard and risk control</li><li>• elimination of hazardous materials and substances</li><li>• manual handling, including shifting, lifting and carrying</li><li>• emergency procedures</li></ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"><li>• award and enterprise agreements</li><li>• industrial relations</li><li>• confidentiality and privacy</li><li>• WHS</li><li>• the environment</li><li>• equal opportunity</li><li>• anti-discrimination</li><li>• relevant industry codes of practice</li><li>• duty of care</li></ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include but are not limited to:</p> <ul style="list-style-type: none"><li>• waste management</li><li>• noise</li><li>• habitat, flora and fauna protection</li><li>• clean-up management</li></ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li><li>• industry codes of practice</li><li>• safe work procedures</li><li>• communication, reporting and recording procedures</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for scrutineering	1.1. Be conversant with rules and regulations governing vehicle and driver eligibility and safety criteria for the event 1.2. Ensure the scrutineering bay has all necessary tools and equipment to perform tests and measurements 1.3. Assess and confirm that safety and other risk management issues are within acceptable levels, within own area of responsibility 1.4. Ensure all necessary documentation is on hand 1.5. Report any concerns promptly to Chief Scrutineer or Clerk of Course 1.6. Attend pre-event briefing session
2. Confirm driver eligibility	2.1. Examine each driver's documents to confirm status and eligibility for the event 2.2. Examine each driver's clothing and equipment for compliance with safety specifications
3. Confirm vehicle compliance	3.1. Examine each vehicle to ensure it complies with mechanical and safety specifications for the event 3.2. Complete an inspection report for each vehicle 3.3. Document any discrepancies in log book 3.4. Impound defective parts, components or whole vehicles, where necessary
4. Monitor vehicle compliance	4.1. Observe vehicles in the assembly and starting areas to identify any mechanical or safety problems 4.2. Oversee work done on vehicle during pit stops to ensure it is in accordance with relevant rules and regulations 4.3. Examine vehicle damage after an incident to ascertain roadworthiness for re-entry into the event 4.4. Prepare damage reports on vehicles and note logbook, as required
5. Communicate decisions and complete reports	5.1. Advise Chief Scrutineer or Clerk of Course of any breach of compliance 5.2. Manage the reactions of participants to decisions in accordance with rules, regulations and Officials Code of Conduct 5.3. Ensure inspection reports are completed accurately and signed 5.4. Complete a scrutineer's report at the end of the

ELEMENT	PERFORMANCE CRITERIA
	event

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate testing and measuring instruments, tools and equipment
- communication skills to the level required to communicate and discuss rules and regulations, deal with minor disputes, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and interpret rules and regulations, mechanical specifications and safety criteria, and to accurately record and report details of incidents and non-compliance
- problem-solving skills to the level required to determine the rule or regulation which applies to a given situation, assess level of damage or non-compliance and make appropriate decisions
- team skills to the level required to ensure completion of tasks in a safe and timely manner

#### Required knowledge

Required knowledge includes:

- relevant motorsport codes, guidelines, and rules and regulations
- mechanical knowledge to a level appropriate to the situation
- safe operation of testing and measuring instruments and equipment
- methods for examining vehicles and equipment for mechanical and safety compliance
- procedures for reporting non-compliance and incidents and documentation which needs to be completed
- communication procedures, including reporting lines, within the motorsport environment
- range of potential workplace hazards, risks and emergency situations
- basic principles of risk management
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS) and environmental

**REQUIRED SKILLS AND KNOWLEDGE**

- regulations, relevant to officiating or volunteering in a motorsport event
- organisational policies and procedures, including safety requirements, hazard identification, risk assessment and emergency response procedures, related to officiating or volunteering in a motorsport event

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- demonstrate sufficient knowledge of relevant rules and regulations and the ability to apply them to determine eligibility of vehicles and participants
- act as a scrutineer in at least two (2) motorsport events
- use relevant tools, instruments and equipment
- conduct all activities in accordance with safety and risk management procedures
- practice fairness and ethical behaviour in the application of rules and regulations
- communicate decisions and manage outcomes in accordance with relevant rules, regulations and guidelines
- complete documents and reports accurately.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to relevant rules and regulations, codes and guidelines
  - access to suitable motorsport events
  - access to facilities, tools and equipment to check vehicles
  - applicable personal protection and safety equipment and resources.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsports**

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international

<b>RANGE STATEMENT</b>	
	events
<b>Rules and regulations</b>	<p>Rules and regulations may include:</p> <ul style="list-style-type: none"> <li>• current edition of the relevant National Competition Rules (NCR)</li> <li>• supplementary regulations for the event or competition</li> <li>• organisations' rules, policies and procedures regarding competent and ethical officiating, dress requirements and protocols, health and safety, and other values underpinning the activity</li> <li>• professional association regulations and codes of conduct</li> <li>• Australian Sports Commission Officials Code of Conduct policy</li> <li>• relevant national, state/territory or local government regulations and guidelines</li> <li>• Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM) policies and procedures</li> </ul>
<b>Eligibility criteria</b>	<p>Eligibility criteria will vary according to different motorsport categories and may include regulations or specifications for:</p> <ul style="list-style-type: none"> <li>• participant or competitor registration or licence</li> <li>• participant or competitor safety apparel and equipment</li> <li>• fitness of the person to participate in the event</li> <li>• vehicle markings, including advertising</li> <li>• vehicle construction</li> <li>• engine capacity</li> <li>• mechanical components and systems (e.g. brakes, exhaust, steering and driveline)</li> <li>• safety devices (e.g. fire protection, safety cage, roll bars and safety harness)</li> <li>• windscreens and window nets</li> <li>• vehicle weight</li> <li>• noise emission</li> <li>• wheels and tyres</li> <li>• fuels, lubricants and consumables</li> </ul>

**RANGE STATEMENT****Tools and equipment**

Tools and equipment used to check vehicle compliance may include:

- computerised diagnostic equipment
- multimeters
- dynamometers
- measuring equipment (e.g. micrometers, depth gauges, vernier calipers, dial gauges and pressure gauges)
- exhaust gas analysers

**Communication skills**

Communication skills to manage the reactions of participants to decisions may include:

- addressing people politely
- clarifying the relevant rule or regulation
- presenting information in logical order
- refraining from swearing, arguing or fighting
- remaining patient
- refraining from interrupting
- speaking clearly
- using language that is not patronising but at a suitable level
- using body language and voice in an assertive but not aggressive manner
- using non-discriminatory language
- using effective listening and speaking skills

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine potential career path and develop individual goals	1.1.Observe workplace health and safety (WHS), including regulatory requirements and personal protection needs, throughout the work 1.2.Identify structure of the motorsport sector, including the roles and functions of industry/association bodies, identified 1.3.Assess personal skills to identify strengths and weaknesses 1.4.Research motorsport team expectations 1.5.Set goals to achieve personal expectations 1.6.Research potential career paths in motorsport and match with personal goals 1.7.Identify training needs and incorporate into career planning
2. Meet motorsport team employment requirements	2.1.Identify team organisational structure and team member roles and responsibilities 2.2.Comply with obligations to employers and others, including confidentiality requirements 2.3.Identify and comply with team lines of communication and authority 2.4.Comply with legislation, regulations, codes of practice and team expectations, policies and procedures 2.5.Identify and demonstrate principles and methods of gaining and maintaining health and fitness levels to job role
3. Manage daily work activities	3.1.Comply with own work role and responsibilities 3.2.Use required lines of communication with supervisors, peers and external persons 3.3.Identify, prioritise and complete individual tasks within designated timeframes and team standards and according to work schedule 3.4.See assistance from appropriate persons when difficulties arise in achieving allocated tasks 3.5.Make changes to workload or work priorities where unforeseen circumstances or developments occur 3.6.Monitor own work and adjust according to feedback obtained from supervisors 3.7.Maintain a well organised and safe personal workspace in accordance with team and workplace

ELEMENT	PERFORMANCE CRITERIA
	standards 3.8. Identify potentially discriminating or hazardous practices and policies and report to team persons
4. Contribute to a productive team environment	4.1. Share information and knowledge with team members to ensure designated work goals are met 4.2. Identify and prioritise personal work objectives in accordance with team requirements 4.3. Receive, encourage, acknowledge and act upon constructive feedback from other team persons 4.4. Detect variations in the quality of components or work practices from team standards and report to team persons in accordance with team procedures 4.5. Actively seek assistance from, or provide to, other persons when difficulties arise 4.6. Use communication techniques to gather and understand instructions 4.7. Identify signs of potential interpersonal conflict and constructively act upon or refer to a supervisor

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to measurement, including tooling, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information, to articulate personal goals, career choices and information to team members, and to report work outcomes and issues
- literacy skills to the level required to collect, organise and understand information related to the motorsport sector, including team roles and responsibilities, WHS, motorsport categories and potential career paths
- numeracy skills to the level required to use mathematical ideas and techniques, to interpret work instructions and complete tasks
- problem-solving skills to the level required to use problem-solving techniques to develop solutions to unpredicted situations, to clarify work instructions, where necessary, and to resolve conflict
- team skills to the level required to work with others and in a team using cooperative approaches to optimise work practices and contribute to a productive team environment
- planning skills to the level required to plan and organise activities, including equipment and resources to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- motorsport categories
- roles of Australian and international motorsport regulatory bodies
- structure of the motorsport sector, roles within teams and their relationship with one another
- authority and communication lines within teams
- motorsport work ethic and team expectations, including personal attitudes needed
- motorsport terminology used to assist work performance
- performance vehicle components, tooling and equipment used by motorsport teams
- workshop layout and organisation
- principles and methods of gaining and maintaining health and fitness, including nutritional requirements
- goal setting methods and techniques
- communication principles and techniques
- conflict resolution principles and techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to operating in a motorsport environment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- produce a career plan covering:
  - personal goals and expectations
  - opportunities
  - timeframe and personal development needs
- correctly perform a range of daily work activities for a minimum duration of one (1) day on at least three (3) occasions in motorsport environments covering:
  - routine maintenance
  - pre-event preparation
  - a competition event
  - post-event maintenance and repairs
- work with and around other team members
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory

**EVIDENCE GUIDE**

	<p>requirements, including specified Australian standards.</p> <ul style="list-style-type: none"> <li>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>motorsport team policies and procedures related to job descriptions, authority and communication lines</li> <li>tooling and equipment.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

**RANGE STATEMENT**

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsport teams**

Motorsport teams may include national and international teams in any category, including:

- car/truck
- motorcycle
- go-cart
- boat
- off-road
- drag racing sectors (e.g. V8 Supercar, Formula 1, Formula Ford, Superbike, Sprintcars, Jet-sprint boat and off-shore power boat categories)

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>
<b>Team expectations</b>	<p>Team expectations may include standards of:</p> <ul style="list-style-type: none"> <li>• dress, personal presentation, preparedness and personal conduct, including respect for the rights and responsibilities of others</li> <li>• quality and timeliness of work and the role of excellence and innovation</li> <li>• knowledge of tooling and equipment and specific work area functions</li> <li>• commitment, responsibility and preparedness for work, including working flexible hours to meet deadlines</li> <li>• confidentiality and ethical work practices</li> <li>• contribution to the overall effectiveness of the team</li> </ul>
<b>Australian and international motorsport regulatory bodies</b>	<p>Australian and international motorsport regulatory bodies include:</p> <ul style="list-style-type: none"> <li>• Fédération Internationale De l'Automobile (FIA)</li> <li>• Confederation of Australian Motorsport (CAMS)</li> <li>• Australian National Drag Racing Association (ANDRA)</li> <li>• Australian Rally Commission (ARCom)</li> <li>• Motorcycling Australia</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> <li>• pneumatic impact wrench (rattle gun)</li> <li>• boom</li> <li>• gas bottle</li> <li>• fire extinguisher</li> <li>• car stands</li> <li>• spanner types</li> <li>• wheel nut types and hub components</li> <li>• suspension components</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• damper components</li><li>• lifting devices, including jacks</li><li>• front and rear bars/spoilers</li><li>• anti-roll bars</li></ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"><li>• controlling body rules, category rules and supplementary regulations</li><li>• team procedures and standards related to:<ul style="list-style-type: none"><li>• work areas, authorities and lines of communication</li><li>• competition vehicle assembly</li><li>• reporting and communication</li><li>• use of tooling and equipment</li><li>• emergency service contacts and team persons emergency contacts</li><li>• team emergency and event procedures for accidents or injury</li></ul></li><li>• work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</li><li>• manufacturer/component supplier specifications and application procedures for test equipment and material</li><li>• safety body publications</li><li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li></ul>

## AURMMA3007 Follow motorsport event and team safety requirements

### Modification History

Release	Comment
Release 1	Replaces AURM340175A Follow motorsport event and team safety requirements Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to safely operate in a motorsport team.</p> <p>It requires the ability to understand motorsport event and team safety rules and regulations, and to identify risks in the team operating area.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Individuals would typically be using and handling fuels and hazardous chemicals, servicing and undertaking emergency repairs on competition vehicles and working with and around other team members in a motorsport environment.</p> <p>This unit applies to individuals working under direct supervision and with no responsibilities for other people.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess and report safety risks	1.1. Follow workplace procedures accurately to assess and control risks in own work area 1.2. Categorise risks according to severity and impact on team operations 1.3. Identify and report inadequacies in existing risk control measures not addressed by team procedures, controlling body rules, category rules or supplementary regulations
2. Follow event and team safe work practices and procedures	2.1. Clarify and follow controlling body rules, category rules and supplementary regulations related to safety 2.2. Clarify personal and motorsport team safety procedures and requirements 2.3. Recognise and report hazards in the work area to appropriate people according to workplace procedures 2.4. Wear required personal protection equipment, as required 2.5. Safely handle and store dangerous goods and hazardous substances according to team and legislative requirements 2.6. Identify and follow workplace procedures for dealing with incidents, fire and other emergencies

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to categorise risks, use pre-checking and inspection techniques to anticipate potentially hazardous situations and work procedures to avoid accidents, injury and damage to competition vehicle, tooling and equipment, and to use workplace technology related to safe handling
- communication skills to the level required to communicate ideas and information to enable identified risks to be managed, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities

**REQUIRED SKILLS AND KNOWLEDGE**

- literacy skills to the level required to collect, organise and understand information related to controlling body rules, category rules and supplementary regulations, workplace health and safety (WHS) requirements and team procedures related to safety
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements relating to event and team safety procedures
- problem-solving skills to the level required to anticipate changing information requirements or influences
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise safety and workflow
- planning skills to the level required to plan and organise activities, including work tasks and flow, to avoid potentially hazardous situations to self and others

**Required knowledge**

Required knowledge includes:

- team safety policies and procedures, including:
  - emergency procedures relating to accident and injuries
  - dangerous goods and hazardous substances handling and storage requirements
  - safety and personal protective equipment and correct applications
  - preventative measures, such as maintenance of a clean and tidy work area, resource storage, and clean and functioning tooling and equipment
- identification and classification of dangerous goods and hazardous substances relevant to motorsport
- component manufacturer/supplier specifications and local safe operating procedures
- controlling body requirements, category rules and supplementary regulations
- competition vehicle movement procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, reporting and recording procedures, relevant to a motorsport event and team safety

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- interpret correctly safety rules and regulations
- assess the risk of the team operating area
- apply safe working practices on two (2) occasions. One (1) of these must be at and during an event. Each of the following must be covered:
  - the use, handling and storage of fuels and hazardous chemicals
  - personnel movement and positioning during an event
  - competition vehicle control
  - servicing and emergency repairs on competition vehicles
  - working with and around other team members
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory

**EVIDENCE GUIDE**

	<p>requirements, including specified Australian standards.</p> <ul style="list-style-type: none"> <li>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>access to an appropriate motorsport event</li> <li>material work instructions and deadlines</li> <li>controlling body rules</li> <li>category rules</li> <li>supplementary regulations</li> <li>safety and hazardous substances legislation and team procedures.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Assessing risk in the team operating area**

Assessing risk in the team operating area may include considering:

- movement of personnel, including team members, guests or members of the public, in the team operating area
- positioning of appropriate persons prior to and during competition vehicle stops
- use of dangerous goods or hazardous substances
- emergency repair procedures
- team member responsibilities

**Motorsport team procedures to achieve a safe working environment**

Motorsport workplace procedures to achieve a safe working environment may include:

- an awareness of competition vehicles
- an awareness of other people when working with tooling and equipment in the team operating area
- the handling of dangerous goods and substances
- reporting all breakdowns in relation to machinery and equipment
- follow manual handling according to worksite procedures
- following team communication procedures
- wearing appropriate personal protection equipment

**Motorsport team procedures for dealing with incidents, fire and other emergencies**

Motorsport workplace procedures for dealing with incidents, fire and other emergencies may include:

- following worksite illness and accident policies and procedures
- locating safety alarms
- contacting qualified persons in the event of accident or sickness
- following worksite evacuation procedures

**RANGE STATEMENT****Team working area**

The team working area may include:

- pit lane
- pit wall
- pit bay
- service area
- pontoon/jetty
- workshop and storage area
- competition vehicle transporters

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- material safety management systems
- controlling body requirements
- manufacturer specifications
- local safe operating procedures
- personal protective equipment and clothing including closed-in shoes, long trousers, fire suit, gloves/helmet, and eye and ear protection
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity

<b>RANGE STATEMENT</b>

## AURMMA3008 Coordinate operations of a motorsport team

### Modification History

Release	Comment
Release 1	Replaces AURM340710B Coordinate operations of a motorsport team  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to coordinate operations of a small motorsport team at a club non-professional level.</p> <p>It requires the ability to use skills to coordinate a small motorsport team at club/non-paid level, including team persons, finances, logistics, time management and competition strategy development.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who coordinate the activities of a small team of a minimum of three (3) persons in an informal, but competitive environment in a motorsport club/non-paid environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop team role and responsibility descriptions	<ul style="list-style-type: none"><li>1.1.Specify team goals in consultation with team members and develop review schedule</li><li>1.2.Specify team roles and responsibilities and develop review schedule</li><li>1.3.Check roles and responsibilities for compliance with controlling body rules, category rules and supplementary regulations</li><li>1.4.Modify roles and responsibilities</li><li>1.5.Document and implement team roles and responsibilities</li></ul>
2. Manage team finances	<ul style="list-style-type: none"><li>2.1.Estimate team financial requirements in consultation with team members</li><li>2.2.Prepare team budget</li><li>2.3.Devise financial documentation procedures</li><li>2.4.Document financial transactions</li><li>2.5.Prepare financial reports and present to team members for review</li></ul>
3. Develop team competition strategy	<ul style="list-style-type: none"><li>3.1.Seek input from team members</li><li>3.2.Review past performance</li><li>3.3.Devise team strategies for attaining competitive advantage, including technical, promotional or psychological advantage</li><li>3.4.Devise contingency strategies</li></ul>
4. Coordinate team participation at events	<ul style="list-style-type: none"><li>4.1.Develop team event schedule and distribute to team members</li><li>4.2.Arrange team travel, and accommodation, where required, requirements</li><li>4.3.Allocate responsibilities and tasks and brief team members</li><li>4.4.Supervise competition vehicle preparation</li><li>4.5.Arrange competition vehicle transport requirements</li><li>4.6.Supervise team operations at events and make regular checks with team members</li></ul>
5. Coordinate post-event activities	<ul style="list-style-type: none"><li>5.1.Arrange post-event team debriefing sessions</li><li>5.2.Coordinate competition vehicle post-event check and repairs</li><li>5.3.Coordinate component and material replenishment</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to planning and logistics, including computer software assembly problems
- communication skills to the level required to communicate ideas and information to enable effective team operation
- literacy skills to the level required to collect, organise and understand information related to category rules and supplementary regulations, team requirements, bookkeeping requirements and financial reporting, to ensure compliance with rules and regulations
- numeracy skills to the level required to use mathematical ideas and techniques to correctly determine requirements and keep financial records
- problem-solving skills to the level required to anticipate changing information requirements or influences
- team skills to the level required to use knowledge of group dynamics, scenario planning, logistics and financial planning to keep team operating
- planning skills to the level required to plan and organise activities, including team practice, attendance at events and test sessions

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations
- principles of group dynamics
- basic bookkeeping systems
- scenario and logistics planning
- time management strategies
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, reporting and recording procedures, relevant to team coordination

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply controlling body and category rules and supplementary regulations
- apply safety requirements including the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- develop and implement team operational requirements for a minimum of two (2) motorsport events, one (1) of which may be a simulated event. Operational areas are to include, as a minimum:
  - team member roles and responsibilities
  - team financial management
  - event participation
  - competition strategy
  - post-event activities
- conduct work to quality and timeliness standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to

<b>EVIDENCE GUIDE</b>	
	<p>work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <ul style="list-style-type: none"> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>controlling body rules, category rules and supplementary regulations and legislation</li> <li>process equipment, material, work instructions and deadlines.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and</p>

## AURMMA4002 Manage the preparation of a competition vehicle

### Modification History

Release	Comment
Release 1	Replaces AURM441638B Manage the preparation of a competition vehicle  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to develop competition vehicle preparation specifications, checklists and schedules, and to supervise the preparation and post-preparation checks to the competition vehicle.</p> <p>It requires the ability to research for information, assess personnel capabilities, schedule constraints, and supervise others to prepare a competition vehicle and to check the post-preparation vehicle and work area.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who research, plan for and supervise the preparation and post-preparation of a competition vehicle in the motorsport environment.</p> <p>A competition vehicle can be described as any automobile which competes in any event of a competitive nature.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research information to develop preparation specifications and checklists	1.1. Use controlling body rules, category rules, supplementary regulations and team requirements to specify task requirements, including configuration, equipment, quality and quantities 1.2. Examine regulations and specifications/tolerances for competitive advantage 1.3. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work 1.4. Write job specifications containing steps and stages and communicate to appropriate persons 1.5. Produce preparation checklists 1.6. Develop procedures for minimising waste material
2. Develop preparation schedule	2.1. Assess equipment and appropriate person capabilities to meet job specifications 2.2. Consider constraints to schedule, including timing and location of upcoming event, and equipment/component and appropriate personnel availability 2.3. Document optimum sequence for preparation 2.4. Document critical path and factors affecting that path 2.5. Produce and communicate preparation schedule to appropriate persons
3. Supervise preparation	3.1. Monitor implementation of preparation schedule 3.2. Monitor work area cleanliness and layout for job requirements 3.3. Install and supervise inspections for quality and readiness of components for installation 3.4. Supervise installation sequence and techniques 3.5. Conduct checks during and after installation to ensure accurate and complete fitting 3.6. Evaluate and resolve problems with the work area or the operation of equipment 3.7. Evaluate and resolve problems with proposals for modifications or adaptation of equipment and components
4. Supervise post-preparation	4.1. Inspect vehicle and identify and address problems 4.2. Supervise post-preparation checks and vehicle

ELEMENT	PERFORMANCE CRITERIA
checks	start-up 4.3. Supervise vehicle baseline set-up 4.4. Supervise clean-up of work area 4.5. Inspect work area and vehicle completion and complete documentation

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the management of assembly and preparation, including tooling, measuring devices, equipment, calculators and computers
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with technical supervisors and other team members, and to report work outcomes and resolution of problems
- literacy skills to the level required to research, collect, organise and understand information related to competition vehicle assembly and preparation processes, including technical, regulatory, environmental and safety requirements
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during the management of the preparation of a competition vehicle
- problem-solving skills to the level required to create and apply systematic problem-solving techniques to anticipate problems, avoid reworking and avoid wastage
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise communication, workflow and productivity
- planning skills to the level required to plan and organise activities, including the development of specifications, checklists and schedules, and the coordination of appropriate personnel, equipment, systems and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- team requirements/job specifications, supplementary regulations and component supplier specifications including the examination of information for competitive advantage
- resources availability, including competencies of individuals in the team/group
- specification, checklist and schedule preparation
- work area and component layout
- inspection methods
- assembly and preparation processes applicable to competition vehicles
- problem-solving techniques
- WHS requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- record keeping techniques
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to supervising the preparation of a competition vehicle

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly manage the preparation of a competition vehicle on at least one (1) occasion, covering each of the following:
  - develop task specifications, preparation checklists and schedules
  - supervise competition vehicle preparation and post-preparation checks
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• access to competition vehicles</li> <li>• assembly tooling</li> <li>• computing, operational and inventory support systems</li> <li>• material, equipment and information on work specifications</li> <li>• team requirements</li> <li>• organisational procedures</li> <li>• safety procedures and regulations</li> <li>• quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

**RANGE STATEMENT**

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Competitive advantage**

Competitive advantage may include:

- technical advantage
- psychological advantage
- promotional advantage

**Preparation checklists**

Preparation checklists may include:

- assembly checklists
- worksheets
- pre-race/event checklists
- pit lane checklists
- post-race/event checklists

**Tooling and equipment**

Tooling and equipment may include:

- hand tooling
- measuring devices
- computers

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory

**RANGE STATEMENT**

	<p>legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• event scheduling and location details</li> <li>• team procedures and standards related to: <ul style="list-style-type: none"> <li>• the preparation of competition vehicles</li> <li>• reporting and communication</li> <li>• use of tooling and equipment</li> <li>• emergency service contacts and team personnel emergency contacts</li> <li>• team emergency and event procedures for accidents or injury</li> </ul> </li> <li>• work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</li> <li>• manufacturer/component supplier specifications and application procedures for test equipment and material</li> <li>• Australian Design Rules (where applicable)</li> <li>• safety body publications</li> <li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li> <li>• motorsport/performance enhancement industry publications and electronic sources of information related to the preparation of</li> </ul>

## AURMMA5003 Manage motorsport operations

### Modification History

Release	Comment
Release 1	Replaces AURM542338A Manage motorsport operations Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge to manage motorsport operations. It includes motorsport team leadership, decision making, ensuring team compliance with motorsport regulatory requirements, and managing logistics and resourcing.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work involves managing team operations and may include, but is not limited to, workshop management, specific event preparation management, innovation and component management.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in consultation with team members, decision making and planning</p> <p>Competence may be demonstrated in workplaces involved in motorsport, associated with motorsport teams or in a simulated environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Lead team members in undertaking tasks	1.1. Models of leadership are researched and appropriate models applied 1.2. Personal leadership preferences, strengths and weaknesses are identified and strategies developed to enhance leadership 1.3. Team goals are developed in consultation with team members and documented 1.4. Workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, are observed throughout the work 1.5. Tasks are delegated, monitored and feedback on performance of tasks given 1.6. Team member performance reporting and review mechanisms are developed and implemented
2. Apply decision-making strategies	2.1. Information is gathered from a variety of sources and team members are consulted 2.2. All information is considered in determining options 2.3. The most appropriate option, given the team circumstances and goals, is chosen 2.4. Decisions are communicated to team members 2.5. Decisions are reviewed and modifications made where required
3. Supervise team compliance with regulatory body requirements	3.1. Regulatory body requirements are interpreted 3.2. Instructions for team members are developed and implemented 3.3. Team members are briefed 3.4. Liaison with regulatory body officials is undertaken
4. Plan resources for team operations	4.1. Team resource and equipment requirements are researched and documented 4.2. Resource needs are prioritised and matched to team budget and priorities are confirmed (or modified) after consultation with team members 4.3. Resource and equipment suppliers are identified and confirmed 4.4. Procurement plan with prioritised purchasing is devised and resources are procured accordingly
5. Plan logistics for team operations	5.1. Operational work plans including role responsibilities, timeframes and milestones are developed

ELEMENT	PERFORMANCE CRITERIA
	<p>5.2. Operations are checked to ensure optimum use of human and physical resources</p> <p>5.3. Operational plans are implemented and team members briefed as to roles and responsibilities</p> <p>5.4. Operational plans are documented and amended in accordance with team procedures and expectations</p>
6. Evaluate operational processes	<p>6.1. Operational progress is closely monitored against required quality of work and adherence to both budget and time schedule and reported to appropriate persons in accordance with team requirements</p> <p>6.2. Opportunities for preventative or corrective changes are identified using outcomes of monitoring activity and feedback from team members</p> <p>6.3. Preventative or corrective action is recommended and implemented</p> <p>6.4. Changes are communicated to appropriate persons in a logical and easily understood manner</p> <p>6.5. Changes are monitored to confirm improvement to team efficiency</p> <p>6.6. Records are maintained of key information pertaining to operational processes in accordance with team requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to team resource and logistic requirements, legislative and motorsport regulatory requirements from a variety of sources, using a range of research techniques
- communicate ideas and information to enable input from team members and understanding by team members of plans developed
- plan and organise activities including consultation with team members to determine team resource and logistic requirements and development, implementation and review of operational plans
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise information flow and productivity
- use mathematical ideas and techniques to correctly interpret budgets and estimate material requirements required for team resource and logistic requirements
- use information gathering, analysis and evaluative techniques to determine team resource and logistic requirements and develop strategies to address these
- use workplace technology related to computer software programs for gathering and recording information, including internet search, spreadsheets and databases

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations
- leadership models
- goal development (e.g. SMART - specific, measurable, achievable, realistic and timely)
- delegation strategies
- information gathering strategies (including internet and library searching and networking)
- analytical tools (e.g. critical path, cause and effect, pros/cons, force-field, Pareto and strength, weakness, opportunity and threat (SWOT) analyses and decision trees)
- decision making and models and techniques
- operational plan development
- logistics and procurement management techniques
- process engineering techniques and systems
- materials handling techniques and options
- equipment and machines to be used to achieve business outcome

**REQUIRED SKILLS AND KNOWLEDGE**

- business processes used in workplace
- resource availability, including competencies of individuals in the team

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements including the use of personal protective equipment and materials handling equipment
- implement and supervise task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- complete the development of a significant operational procedure incorporating legislative safety requirements and covering:
  - a full analysis of the topic area
  - a step-by-step operational procedure
  - supporting documents to the procedure
- implement a process for an operational area as identified in the unit scope covering:
  - information dissemination
  - monitoring of operations
- complete a review and update of a process for an operational area as identified in the unit scope, covering:
  - system and sub-area/sub-system description
  - evaluation of the effectiveness of the process in achieving desired outcomes
  - legal, regulatory or intellectual property law requirements
  - documentation of modifications to improve the process
- complete work within team budgetary, quality and timeliness standards
- work effectively with others

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.</li> <li>Access to team budgets and inventories as identified in the Range Statement and team procedures.</li> <li>This unit may be undertaken under the guidance of a mentor in the workplace (e.g. team manager), where tasks are undertaken, but ultimate responsibility rests with the mentor.</li> <li>Assessment of this competence may include project related tasks and require portfolios or other forms of indirect evidence of process.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</li> <li>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop and implement team roles and responsibilities	1.1. Team roles and responsibilities in the workshop and event environment are determined and documented 1.2. Role descriptions are written in conjunction with team members 1.3. Authority hierarchies are identified and related to team roles and joint responsibilities are determined and documented 1.4. Workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs are observed throughout the work 1.5. Team members are briefed, roles implemented and modifications to role descriptions are made where necessary
2. Develop and foster motorsport teamwork ethic and image	2.1. Team image, philosophy and goals are defined through consultation with team members and promotional partners and documented 2.2. Information on team goals, image and attitudes is disseminated to team members 2.3. Personal attitudes needed to succeed in motorsport are identified 2.4. Strategies to support team members to reflect desired team image are developed 2.5. Team standards of behaviour, commitment and presentation are defined and expectations communicated to team members 2.6. Team members are briefed on how their decisions and actions must be consistent with team image, goals and personal goals philosophy 2.7. Maintenance of work ethic and image is encouraged, monitored and corrected where necessary
3. Develop and implement team member health and fitness policy	3.1. Basic nutritional requirements for persons operating in a motorsport environment are researched and documented 3.2. Event catering procedures suitable for the team are developed and documented 3.3. Strategies for coping with stress and fatigue are developed, communicated to team members and monitored 3.4. Physical fitness requirements of team members in relation to role requirements are developed,

ELEMENT	PERFORMANCE CRITERIA
	<p>communicated to team members and monitored</p> <p>3.5.The impact of drugs on personal competence within a motorsport environment is communicated to team members and monitored</p>
<p>4. Apply conflict resolution strategies</p>	<p>4.1.Opportunities for team members to discuss problems which directly or indirectly affect their work are regularly provided</p> <p>4.2.Potential and actual conflict situations are recognised and assistance is sought to resolve conflict with the appropriate persons involved in accordance with team procedures</p> <p>4.3.Options for resolution of conflict are identified allowing for constructive responses to be negotiated and enable established work relationships to continue</p> <p>4.4.The dispute or conflict is managed to optimise the likelihood of a favourable outcome for all parties and is in line with team goals</p> <p>4.5.The strategy selected for resolution is consistent with team practices/procedures</p> <p>4.6.Resolution and counselling skills to the situation are applied</p> <p>4.7.Outcomes meet individual, enterprise and legislative requirements</p> <p>4.8.Where records of the conflict and outcomes are kept, they are accurate, complete and comply with organisational requirements and are stored securely, only accessible to authorised persons</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to team roles and relationships, image and goals, nutrition and physical fitness of team members
- communicate ideas and information to enable confirmation of team roles and relationships, work ethic and team image expectations and standards and communicating with team members to resolve conflict
- plan and organise activities including professional development of team members regarding team goals and image, health and fitness requirements, stress management and conflict resolution strategies
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise information flow and communication
- use mathematical ideas and techniques to assist research, analysis and presentation of information
- use scenario planning techniques and knowledge of group behaviour and team dynamics to anticipate potential conflict situations and plan and implement resolution strategies
- use workplace technology to assist research, storage and presentation of information

#### Required knowledge

Required knowledge includes:

- team roles, responsibilities and interrelationship of roles
- leadership styles and decision-making models
- personal and work attitudes desired within the motorsport sector
- positive and negative potential of different personal attitudes in a motorsport environment
- positive and negative potential of differences between team and personal goals
- ways in which individual team members can promote or negatively impact on desired team image
- human nutritional requirements, the five food groups and their effect on the human body
- specific nutritional requirements for operating in a motorsport environment
- impact on the human body of using legal and illegal drugs and implications for a motorsport team
- principles of physical fitness and fitness requirements to operate in a motorsport environment

**REQUIRED SKILLS AND KNOWLEDGE**

- group dynamics in stressful environments
- communication principles and techniques
- causes of conflict
- conflict resolution models and strategies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements including the use of personal protective equipment
- implement and supervise task instructions, operating procedures and processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- write role descriptions for all team members. These must include:
  - tasks (and sub-tasks)
  - responsibilities for outcomes
  - responsibilities for tooling, equipment and material
  - responsibilities for persons
  - responsibilities for systems
  - accountability
  - relationships with other team members
- develop at least three (3) conflict resolution strategies. They must contain:
  - rationale for choice in relation to the team environment
  - examples of scenarios where they could be implemented
  - a list of strengths and weaknesses
- complete work within team quality and timeliness standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

**EVIDENCE GUIDE****Context of, and specific resources for assessment**

- Assessment may occur on the job or in a workplace simulated facility with access to a motorsport team.
- Assessment of this competence may include project related tasks and require portfolios or other forms of indirect evidence.
- Access to job/role descriptions and advertising/promotional material as identified in the Range Statement and documentation of team procedures and processes.

**Method of assessment**

- Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Teams**

Teams may be small (4 or less persons), medium (5-15 persons) or large (more than 15 persons). The team context includes roles less central to the team operations. These include team owner, promotional partners and advertising/publicity persons

**Team roles**

Team roles may be highly differentiated or team members may perform multiple roles within the team

<b>RANGE STATEMENT</b>	
<b>WHS requirements</b>	WHS requirements include: <ul style="list-style-type: none"><li>• state/territory and federal legislation</li><li>• material safety management systems</li><li>• controlling body requirements</li><li>• manufacturer specifications and local safe operating procedures</li></ul>
<b>Legislative requirements</b>	Work is carried out in accordance with legislative obligations (including environmental requirements), health regulations, manual handling procedures and team insurance requirements
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"><li>• controlling body rules, category rules and supplementary regulations</li><li>• current team role/job descriptions</li><li>• task instructions including worksheets, checklists, plans, drawings and designs</li><li>• team procedures relating to reporting and communication</li><li>• team procedures relating to the use of tooling and equipment</li><li>• manufacturer/component supplier specifications and application procedures for tooling, equipment and material</li><li>• team advertising, promotional and/or promotional partner material</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop pit lane/service area management plan	1.1. Workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, are observed throughout the work 1.2. Controlling body rules, category rules and supplementary regulations requirements are checked and implemented 1.3. Required tooling and equipment are identified and checklists developed 1.4. Competition vehicle on-track support strategies are devised and documented 1.5. Team member responsibilities are determined and communicated 1.6. Task timings are determined, documented and communicated 1.7. Communication strategy is developed and team members briefed 1.8. Team work area and equipment security procedures are developed and team members briefed 1.9. Contingency plan is developed and documented
2. Inspect pit lane/service area operation readiness	2.1. Pit lane/service area layout is devised and implemented 2.2. Equipment and tool checks for operation, positioning and compliance with team specifications, controlling body rules, category rules, supplementary regulations and WHS requirements are supervised 2.3. Correct positioning of competition vehicle stop and service markings are checked
3. Supervise technical/service crew	3.1. Team members are briefed on their responsibilities, task timings, category rule and supplementary regulations requirements, WHS and environmental legislative requirements and security procedures prior to an event 3.2. Responsibilities and tasks are reviewed with team members at an event site 3.3. Communications equipment is allocated and communication strategy is reviewed with team members 3.4. Pit lane/service area operations are supervised and work is controlled as required

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5.Safe working environment and practices are monitored and corrected as required</p> <p>3.6.Emergency repairs on competition vehicle are supervised and decision on re-entering event given</p> <p>3.7.Checks with team members are made regularly during an event</p>
4. Coordinate competition vehicle on-track support	<p>4.1.Technical advice is provided to driver/rider during competition and additional information is sought should clarification be required</p> <p>4.2.Competition related information and strategy is communicated to the driver/rider and team members during competition</p> <p>4.3.Records of race and team performance are maintained</p> <p>4.4.Liaison with event officials is conducted</p>
5. Supervise post-event operations	<p>5.1.Team members are supervised to ensure post-event impoundment procedures are followed as per controlling body rules, category rules or supplementary regulations</p> <p>5.2.Dismantling of pit lane/service area is supervised</p> <p>5.3.Clean-up of work area is supervised</p> <p>5.4.Disposal of waste material is supervised to ensure compliance with local requirements, environmental and WHS regulations</p> <p>5.5.Team/event documentation is completed</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to category rules and supplementary regulations, pit lane/service area operational tasks, legislative and team requirements to develop contingency strategies and a pit lane/service area management plan
- communicate ideas and information to enable team compliance with the pit lane/service area management plan and procedures
- plan and organise activities including pit lane/service area operations to avoid workflow interruptions, competition vehicle damage, injury or time wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly gauge task timing, material requirements, vehicle stop markings and equipment and tooling positioning
- use scenario planning, critical path analysis and logistics planning techniques to accommodate workflow, positioning, storage and works sequencing requirements
- use workplace technology related to planning and logistics, including computer hardware and software

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations
- controlling safe working practices in a pit lane/service area
- pit lane/service area operational tasks
- communication principles
- group dynamics principles
- effective supervision techniques
- scenario and logistics planning
- critical path analysis
- operational plan development

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements including use of personal protective equipment and materials handling equipment
- implement and supervise task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- develop and implement a pit lane/service area management plan, covering:
  - minimisation of risk of injury to self or others
  - minimisation of the risk of damage to competition vehicle, tooling and equipment and wastage of material
  - minimisation of service and emergency repair times
  - addressing of potential problems
- supervise team members effectively
- modify activities to cater for variations in context and environment.

#### Context of, and specific resources for assessment

- Assessment must occur at and during a motorsport event.
- Access to category rules and supplementary regulations and legislation as identified in the Range Statement, team procedures and past performance data.

#### Method of assessment

- Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Pit lane/service area</b>	Pit lane/service area is defined as the area where the team technical support crew works on the competition vehicle during an event and includes the pit bay
<b>WHS requirements</b>	WHS requirements include: <ul style="list-style-type: none"> <li>state/territory and federal legislation</li> <li>material safety management systems</li> <li>hazardous substances and dangerous goods code</li> <li>local safe operating procedures</li> </ul>
<b>Legislative requirements</b>	Work is carried out in accordance with environmental legislation, health regulations and team procedures
<b>Tooling and equipment</b>	Tooling and equipment may include, but is not limited to: <ul style="list-style-type: none"> <li>pneumatic wrenches</li> <li>boom and hoses</li> <li>gas cylinders</li> <li>jacks and jacking safety locks</li> <li>smash repair equipment</li> <li>spare components</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• cleaning equipment</li> <li>• fuel churns and refuelling equipment</li> <li>• fuel spill equipment</li> <li>• brake piston retraction tool</li> <li>• lifting devices and/or stands</li> <li>• boat launch equipment (e.g. winches, trailers, lifting slings and decanting equipment)</li> </ul>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices, including:</p> <ul style="list-style-type: none"> <li>• heat-proof gloves</li> <li>• enclosed shoes</li> <li>• long trousers</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• team procedures relating to pit lane/service area operation, team member roles, confidentiality and security</li> <li>• controlling body rules, category rules and supplementary regulations relating to pit lane/service area operations</li> <li>• environmental, hazardous chemical and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop event strategy	<p>1.1. Workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, are observed throughout the work</p> <p>1.2. Input is sought from team members and compared with available event data, including past performance, and points documented</p> <p>1.3. Team strategies are devised for attaining competitive advantage</p> <p>1.4. Team members are briefed on security of information and intellectual property procedures</p> <p>1.5. Contingency plans are developed and documented</p>
2. Communicate strategy plan and contingencies to team members	<p>2.1. Responsibilities within strategy, plan and contingencies are identified and confirmed with each team member</p> <p>2.2. Authority hierarchies and relationships are clearly explained</p> <p>2.3. Team feedback is sought, evaluated and incorporated</p>
3. Implement race strategies	<p>3.1. Team roles and responsibilities are reinforced with team members at an event, prior to event commencement</p> <p>3.2. Strategies are implemented and clearly communicated to team members during an event</p> <p>3.3. Contingency plans are communicated and team member roles and responsibilities outlined</p> <p>3.4. Strategy outcomes are monitored and amended as necessary during an event</p>
4. Conduct post-event review	<p>4.1. Event debrief is conducted with driver/rider and team members as soon as practicable following a race</p> <p>4.2. Data is analysed and points documented</p> <p>4.3. Technician reports are considered and points documented</p> <p>4.4. Team debrief is conducted and outcome including recommendations are documented</p> <p>4.5. Event strategies are reviewed with team members</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to previous event vehicle performance and potential performance, competitor performance, promotional partner exposure requirements and team pit lane/service area operation times
- communicate ideas and information to enable event strategies and contingencies to be understood by team members
- plan and organise activities including pit lane/service area and drive/ride sequencing to avoid backtracking, workflow interruptions or time wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and estimate time requirements pit lane/service area stops, driver changes where needed and competition vehicle servicing
- use problem-solving techniques to anticipate potential event scenarios and plan responses
- use workplace technology related to data analysis

#### Required knowledge

Required knowledge includes:

- vehicle and component system performance
- principles of psychological advantage
- problem-solving techniques, including but not limited to, brainstorming; scenario planning; critical path, force field, Pareto, pros/cons and SWOT analysis, and decision trees
- group dynamics and communication principles and techniques
- strategy planning

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**EVIDENCE GUIDE****Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements including the use of personal protective equipment
- devise task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- develop and implement race strategies for a minimum of two (2) events (or simulated events). The following must be demonstrated during development:
  - consultation with team members
  - use of problem-solving techniques
  - consideration of driver/rider strengths and weaknesses
  - consideration of driver/rider characteristics
  - consideration of event variations
- complete all work data within team quality and timeliness standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment
- apply team data security and confidentiality procedures and processes at all times.

**Context of, and specific resources for assessment**

- Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.
- Access to previous performance data, regulatory body and category rules and supplementary regulations.

**Method of assessment**

- Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of

**EVIDENCE GUIDE**

	<p>competency.</p> <ul style="list-style-type: none"> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Race strategies**

Race strategies include:

- consideration of own and competitor strengths and weaknesses
- driver/rider psychology
- determination of suitable pace, timing of pit stops/driver/rider changes, tyre choice and fuel load

**Contingency plans**

Contingency plans address potential risks and uncontrollable variables. These include, but are not limited to:

- weather changes
- variation in circuit conditions
- competition vehicle damage
- driver error
- possible competitor strategies

**WHS requirements**

WHS requirements include:

- state/territory and federal legislation
- material safety management systems
- controlling body requirements
- manufacturer specifications and local safe

RANGE STATEMENT	
	operating procedures
<b>Legislative requirements</b>	Work is carried out in accordance with legislative obligations (including environmental requirements), health regulations, manual handling procedures and team insurance requirements
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• data acquisition equipment and computer software and analysis programs</li></ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"><li>• controlling body rules, category rules and supplementary regulations</li><li>• team procedures relating to race strategies</li><li>• task instructions including worksheets, checklists, plans, drawings and designs</li><li>• team procedures relating to reporting and communication</li><li>• team procedures relating to the use of tooling and equipment</li><li>• manufacturer/component supplier specifications and application procedures for tooling and equipment</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Follow safety procedures	<ul style="list-style-type: none"><li>1.1. Identify safe work practices that apply in a motorsport event</li><li>1.2. Conduct all activities using safe operating practices in accordance with legislative and organisational requirements</li><li>1.3. Identify designated persons for reporting queries and concerns about safety in the workplace</li><li>1.4. Identify and follow organisational procedures and documentation for reporting safety information</li></ul>
2. Follow procedures for hazard identification and risk management	<ul style="list-style-type: none"><li>2.1. Identify existing and potential hazards in the workplace and report them to designated persons</li><li>2.2. Identify and implement organisational procedures and instructions for controlling risks</li><li>2.3. Record any incidents in accordance with organisational procedures</li></ul>
3. Deal with emergency situations	<ul style="list-style-type: none"><li>3.1. Identify emergency situations and promptly notify relevant persons</li><li>3.2. Follow emergency procedures correctly within limits of own authority</li><li>3.3. Identify personal limitations and promptly request backup support or further instructions</li><li>3.4. Report incidents and responses accurately in accordance with organisational procedures and legislative requirements</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate information and communications technology to access information
- communication skills to the level required to communicate and discuss workplace health and safety (WHS) concerns and information, and to relate to people from a

**REQUIRED SKILLS AND KNOWLEDGE**

range of social, cultural and ethnic backgrounds and of varying physical and mental abilities

- literacy skills to the level required to read and interpret safety information, signs, symbols and notices, and to accurately record and report details of hazards, risks and incidents
- research skills to the level required to source information on motorsport industry issues within a defined range
- problem-solving skills to the level required to identify common risks and hazards in a motorsport environment and to analyse options in an emergency situation
- team skills to the level required to ensure completion of tasks in a safe and timely manner

**Required knowledge**

Required knowledge includes:

- responsibilities of employers and employees under relevant WHS legislation
- organisational procedures for emergency and first aid response
- commonly used hazard signs and safety symbols
- common types and uses of personal protective equipment
- communication procedures, including reporting lines, within the motorsport environment
- range of potential workplace hazards, risks and emergency situations
- basic principles of risk management
- procedures for reporting risks and hazards and documentation which needs to be completed
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environmental regulations, relevant to officiating or volunteering in a motorsport event
- organisational policies and procedures, including safety requirements, hazard identification, risk assessment and emergency response procedures, related to officiating or volunteering in a motorsport event

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• follow organisational procedures relating to identifying, assessing and reporting risks and hazards within limits of own authority</li> <li>• follow organisational emergency procedures, including notification of relevant persons, request for backup assistance and accurate reporting of response</li> <li>• contribute to workplace safety arrangements to ensure a current knowledge and understanding of safety issues, practices and compliance requirements</li> <li>• accurately record and report safety risks and hazards using standard proformas or documentation.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.</li> <li>• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</li> <li>• Assessment is to comply with relevant regulatory requirements, including specified Australian standards.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• access to legislative and organisational information on WHS policies and procedures</li> <li>• access to suitable motorsport events</li> <li>• NCR and event supplementary regulations</li> <li>• applicable personal protection and safety equipment and resources.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and</li> </ul>

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsports**

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international events

**WHS policies and procedures**

WHS policies and procedures may relate to:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• application of first aid</li> <li>• emergency and evacuation response</li> <li>• equipment maintenance and use</li> <li>• hazard and risk identification and reporting</li> <li>• WHS consultation and participative arrangements</li> <li>• reporting accidents, incidents, injuries and near misses</li> <li>• risk assessment and control measures</li> <li>• safe operating procedures and instructions for use of equipment and technology</li> <li>• use and maintenance of personal protective equipment</li> <li>• use, storage and disposal of hazardous substances or dangerous items</li> </ul>
<b>Hazard</b>	<p>Hazard relates to:</p> <ul style="list-style-type: none"> <li>• a thing, including an intrinsic property of a thing, or situation with the potential to cause injury or harm</li> </ul>
<b>Hazard identification</b>	<p>Hazards may be identified through:</p> <ul style="list-style-type: none"> <li>• continuous monitoring of work environment</li> <li>• debrief and review of incidents</li> <li>• regular formal and informal discussions with colleagues</li> <li>• regular inspections of equipment and work area</li> <li>• review of workplace health and safety records</li> </ul>
<b>Risk</b>	<p>Risk relates to</p> <ul style="list-style-type: none"> <li>• the likelihood of a hazard causing injury or harm</li> </ul>
<b>Risk control</b>	<p>Procedures for controlling risks may include:</p> <ul style="list-style-type: none"> <li>• application of the hierarchy of control</li> <li>• basic risk assessment</li> <li>• communicating WHS information to others</li> <li>• complying with safe operating procedures for equipment</li> <li>• correct selection, use, storage and maintenance procedures for personal protective equipment</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• evacuation</li> <li>• maintaining vigilance, awareness and observation in the work environment</li> <li>• reporting of identified risks or hazards</li> <li>• requests for backup support or instructions</li> <li>• safe lifting and manual handling</li> <li>• security of documents, cash, equipment and persons</li> <li>• use of fire safety equipment</li> </ul>
<b>Emergency situations</b>	<p>Emergency situations may include:</p> <ul style="list-style-type: none"> <li>• accidents</li> <li>• collapse or partial collapse of buildings or structures</li> <li>• damage to people or property</li> <li>• explosion</li> <li>• fire</li> <li>• natural disasters</li> <li>• spill or release of toxic chemicals or biological substances</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• hardcopy and electronic media</li> <li>• verbal, written and graphical information</li> <li>• safe work procedures related to motorsport officiating and volunteering</li> <li>• regulatory/legislative requirements pertaining to motorsport officiating and volunteering</li> <li>• Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM) policies and procedures</li> <li>• National Competition Rules (NCR) and event supplementary regulations</li> <li>• motorsport organisation manuals, code of conduct, policies and procedures</li> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• event policies and procedures relating to work areas, authorities and lines of communication</li> <li>• task instructions, including briefings, worksheets, checklists and plans</li> </ul>

<b>RANGE STATEMENT</b>	
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"><li>• personal protective equipment and clothing</li><li>• safety equipment</li><li>• first aid equipment</li><li>• hazard and risk control</li><li>• elimination of hazardous materials and substances</li><li>• manual handling, including shifting, lifting and carrying</li><li>• emergency procedures</li></ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice and may include:</p> <ul style="list-style-type: none"><li>• award and enterprise agreements</li><li>• industrial relations</li><li>• confidentiality and privacy</li><li>• WHS</li><li>• the environment</li><li>• equal opportunity</li><li>• anti-discrimination</li><li>• relevant industry codes of practice</li><li>• duty of care</li></ul>

## AURMSA3002 Implement and monitor safety and risk management in a motorsport environment

### Modification History

Release	Comment
Release 1	<p>Replaces AURMO3001A Implement and monitor safety and risk management in a motorsport environment</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to implement predetermined workplace health and safety (WHS) policies and procedures and to monitor WHS practices and manage risks as a supervisory function.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake a leadership role to promote and monitor the application of safe work practices and control of risks within teams of officials, contractors and volunteers in motorsport events, including practice sessions. They have a key role in ensuring the safe conduct of events and in influencing the ongoing safety of the workplace.</p> <p>Under WHS law, all organisations must ensure the health, safety and welfare at work of all employees and the safety of people, other than their workers, who may be present at the workplace. In the motorsport industries, the workplace would include any location where an event is held and 'others' would include contractors, volunteers, competitors and spectators.</p>

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Provide information on health, safety and control of risks	<p>1.1. Accurately and clearly explain to personnel relevant WHS information, including organisation-specific policies and procedures</p> <p>1.2. Make all current and updated WHS information readily accessible to staff in a timely and regular manner according to organisational procedures</p> <p>1.3. Regularly provide information and clearly explain to the work group information about identifying hazards and controlling risks</p> <p>1.4. Provide the opportunity for staff members to contribute their views on current and future WHS practices, including views on how to eliminate or control risks</p>
2. Monitor safe work practices	<p>2.1. Monitor ongoing compliance with safe work practices and vigilance on the job</p> <p>2.2. Take prompt and appropriate action to address non-compliance with procedures, safe work practices and non-attention to event conditions</p> <p>2.3. Monitor the effectiveness of work practices in maintaining the safety of personnel and managing risks through close attention to event operations and conditions</p> <p>2.4. Provide timely feedback on WHS management practices to designated person according to organisation procedures</p>
3. Implement and monitor procedures for identifying hazards, and assessing and controlling risks	<p>3.1. Provide advice on hazards in work area according to organisation WHS policies and procedures</p> <p>3.2. Support the implementation of procedures to control risks using the hierarchy of controls and in accordance with organisational procedures</p> <p>3.3. Monitor the effectiveness of control measures, promptly identify any inadequacies and resolve or report them to the appropriate person</p> <p>3.4. Report incidents and responses accurately in accordance with organisational procedures and legislative requirements</p>
4. Identify training needs	<p>4.1. Provide advice on WHS training needs of individuals and workgroup based on monitoring of team performance</p> <p>4.2. Provide coaching and mentoring assistance to team members and/or facilitate arrangements for fulfilling</p>

ELEMENT	PERFORMANCE CRITERIA
	training needs in consultation with appropriate management and according to organisation policies and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to operate information and communications technology to access information
- communication skills to the level required to communicate and discuss WHS information, processes and concerns, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to read and interpret safety information, signs, symbols and notices, and to accurately record and report details of hazards, risks and incidents
- research skills to the level required to source information on motorsport industry safety issues within a defined range
- problem-solving skills to the level required to identify hazards in a motorsport environment, assess risks and to identify improvements in processes
- team skills to the level required to coordinate team adherence to safe work practices

#### Required knowledge

Required knowledge includes:

- responsibilities of employers and employees under relevant health and safety legislation
- organisational policies and procedures for WHS and risk management
- commonly used hazard signs and safety symbols
- common types and purpose of personal protective equipment
- communication procedures, including reporting lines, within the motorsport environment
- range of potential workplace hazards, risks and emergency situations
- basic principles of risk management
- procedures for reporting risks and hazards and documentation which needs to be completed
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environmental regulations, relevant to officiating or volunteering in a motorsport event
- organisational policies and procedures, including safety requirements, hazard identification, risk assessment and emergency response procedures, related to officiating or volunteering in a motorsport event

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>• provide information and clear explanations to team members on health, safety and control of risks</li> <li>• monitor ongoing compliance of team with safe work practices</li> <li>• take prompt and appropriate action to address non-compliance with safe work practices</li> <li>• provide advice on hazards in the work area and support the implementation of procedures to control risks</li> <li>• participate in procedures for monitoring and improving safety and risk management policies</li> <li>• accurately record and report WHS risks and hazards using standard proformas or documentation</li> <li>• provide advice on WHS training needs of individuals and workgroup.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.</li> <li>• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</li> <li>• Assessment is to comply with relevant regulatory requirements, including specified Australian standards.</li> <li>• Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• access to legislative and organisational information on WHS policies and procedures</li> <li>• access to suitable motorsport events</li> <li>• NCR and event supplementary regulations</li> <li>• applicable personal protection and safety equipment and resources.</li> </ul> </li> </ul>

## EVIDENCE GUIDE

### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

### Guidance information for assessment

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Motorsports

Motorsports may include:

- automobile (car, truck and cart), motorcycle and powerboat events
- competitions and practice sessions
- circuit, track, speedway, rally, road and off-road events
- club, state/territory, national and international

<b>RANGE STATEMENT</b>	
	events
<b>WHS policies and procedures</b>	<p>WHS policies and procedures may relate to:</p> <ul style="list-style-type: none"> <li>• application of first aid</li> <li>• emergency and evacuation response</li> <li>• equipment maintenance and use</li> <li>• hazard and risk identification and reporting</li> <li>• WHS consultation and participative arrangements</li> <li>• reporting accidents, incidents, injuries and near misses</li> <li>• risk assessment and control measures</li> <li>• safe operating procedures and instructions for use of equipment and technology</li> <li>• use and maintenance of personal protective equipment</li> <li>• use, storage and disposal of hazardous substances or dangerous items</li> </ul>
<b>Hazard</b>	<p>Hazard relates to:</p> <ul style="list-style-type: none"> <li>• any thing (including an intrinsic property of a thing) or situation with the potential to cause injury or harm</li> </ul>
<b>Hazard identification</b>	<p>Hazards may be identified through:</p> <ul style="list-style-type: none"> <li>• continuous monitoring of work environment</li> <li>• debrief and review of incidents</li> <li>• regular informal and informal discussions with colleagues</li> <li>• regular inspections of equipment and work area</li> <li>• review of workplace health and safety records</li> </ul>
<b>Risk</b>	<p>Risk relates to</p> <ul style="list-style-type: none"> <li>• the likelihood of a hazard causing injury or harm</li> </ul>
<b>Risk control</b>	<p>Procedures for controlling risks may include:</p> <ul style="list-style-type: none"> <li>• application of the hierarchy of control</li> <li>• basic risk assessment</li> <li>• communicating WHS information to others</li> <li>• complying with safe operating procedures for equipment</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• correct selection, use, storage and maintenance procedures for personal protective equipment</li> <li>• evacuation</li> <li>• maintaining vigilance, awareness and observation in the work environment</li> <li>• reporting of identified risks or hazards</li> <li>• requests for backup support or instructions</li> <li>• safe lifting and manual handling</li> <li>• security of documents, cash, equipment and persons</li> <li>• use of fire safety equipment</li> </ul>
<b>Emergency situations</b>	<p>Emergency situations may include:</p> <ul style="list-style-type: none"> <li>• accidents</li> <li>• collapse or partial collapse of buildings or structures</li> <li>• damage to people or property</li> <li>• explosion</li> <li>• fire</li> <li>• natural disasters</li> <li>• spill or release of toxic chemicals or biological substances</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• hardcopy and electronic media</li> <li>• verbal, written and graphical information</li> <li>• safe work procedures related to motorsport officiating and volunteering</li> <li>• regulatory/legislative requirements pertaining to motorsport officiating and volunteering</li> <li>• National Competition Rules (NCR) and event supplementary regulations</li> <li>• Federation Internationale de l'Automobile (FIA) and Federation Internationale Motocycliste (FIM) policies and procedures</li> <li>• motorsport organisation manuals, codes of conduct, policies and procedures</li> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• event policies and procedures relating to work areas, authorities and lines of communication</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>task instructions, including briefings, worksheets, checklists and plans</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>personal protective equipment and clothing</li> <li>safety equipment</li> <li>first aid equipment</li> <li>hazard and risk control</li> <li>elimination of hazardous materials and substances</li> <li>manual handling, including shifting, lifting and carrying</li> <li>emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>award and enterprise agreements</li> <li>industrial relations</li> <li>confidentiality and privacy</li> <li>WHS</li> <li>the environment</li> <li>equal opportunity</li> <li>anti-discrimination</li> <li>relevant industry codes of practice</li> <li>duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include but are not limited to:</p> <ul style="list-style-type: none"> <li>waste management</li> <li>noise</li> <li>habitat, flora and fauna protection</li> <li>clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>WHS, sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"><li>• industry codes of practice</li><li>• safe work procedures</li><li>• communication, reporting and recording procedures</li></ul>

## AURMTA2001 Prepare and service a light competition vehicle

### Modification History

Release	Comment
Release 1	Replaces AURM240174A Prepare and service a light competition vehicle Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to prepare and service an already assembled light competition vehicle in the workshop or at an event.</p> <p>It requires the ability to use skills to prepare the competition vehicle in accordance with team requirements and event supplementary regulations, including cleaning, securing, shielding and checking the vehicle.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who undertake the preparation of a light competition vehicle in a motorsports environment.</p> <p>For the purposes of this unit of competency, light competition vehicles are vehicles under 300 kg unladen weight, such as a go-carts, motorbikes and jet skis.</p> <p>Competition vehicles can be described as vehicles which compete in any motorsport event of a competitive nature.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Identify job requirements 1.2. Identify specifications for required operating conditions and supplementary regulations 1.3. Identify steps and stages in the vehicle repair process 1.4. Identify procedures for minimising waste material 1.5. Clean work area and lay out to meet job requirements 1.6. Organise and check tooling and equipment for safe and effective operation 1.7. Observe workplace health and safety (WHS) requirements throughout the work 1.8. Report any problems with the work area or the operation of the equipment to appropriate persons
2. Prepare competition vehicle	2.1. Clean competition vehicle 2.2. Identify vehicle securing locations 2.3. Fit and secure vehicle transportation devices, components and covers 2.4. Shield vehicle components, as appropriate 2.5. Report any problems with vehicle to appropriate persons
3. Check competition vehicle	3.1. Check and top-up vehicle fluids 3.2. Remove temporary bungs and covers 3.3. Conduct engine pre-start checks 3.4. Check pressures and temperatures and for noises and leaks 3.5. Check sub-assembly and systems operation 3.6. Report potential or existing problems to appropriate persons
4. Clean up work area and maintain records	4.1. Maintain tooling and return to storage 4.2. Pack and store surplus components/consumables 4.3. Clean vehicle 4.4. Complete team documentation

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology, including tooling, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other team members, and reporting of work outcomes and problems
- literacy skills to the level required collect, organise, report and understand information related to competition vehicle preparation, team requirements, manufacturer/component supplier specifications, plans and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during preparation of a competition vehicle
- problem-solving skills to the level required to use checking and inspection techniques to anticipate problems in order to work efficiently and effectively
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- approaches to optimise workflow within strict timeframes
- planning skills to the level required to plan and organise activities, including preparation and layout of the work area, tools and equipment, to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- team requirements/job specifications
- work area and component layouts
- cleaning methods and precautions
- types of securing devices and securing methods
- types of shielding devices and shielding methods
- record keeping techniques
- team procedures for reporting equipment faults and component defects
- workplace guidelines
- team WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to preparing and servicing a light competition vehicle

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage to competition vehicle
  - achieve required outcomes within team time and quality standards
- correctly prepare and service a light competition vehicle on a minimum of two (2) occasions covering each of the following:
  - cleaning of vehicle
  - conducting vehicle checks
  - assisting in setting vehicle baseline configuration
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• non-complex competition vehicles</li> <li>• work instructions and deadlines</li> <li>• tools, materials and equipment</li> <li>• team procedures</li> <li>• safety procedures and regulations</li> <li>• quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>RANGE STATEMENT</b>	
<b>Light competition vehicles</b>	Light competition vehicles may include: <ul style="list-style-type: none"><li>• motorcycles</li><li>• watercraft modified or built specifically for competition</li><li>• go-carts</li><li>• motorbikes</li><li>• jet skis</li></ul>
<b>Ancillary systems</b>	Ancillary systems may include: <ul style="list-style-type: none"><li>• pneumatic</li><li>• fluid</li><li>• communications</li><li>• electrical/electronic</li><li>• fire systems</li></ul>
<b>Critical components</b>	Critical components may include: <ul style="list-style-type: none"><li>• electronic control units</li><li>• data acquisition system components</li><li>• communication equipment</li><li>• circuit breakers, and relay and isolation switches</li><li>• fuel tank/cell</li><li>• pumps and reservoirs</li><li>• fire bottles and controller</li></ul>
<b>Securing methods</b>	Securing methods may include: <ul style="list-style-type: none"><li>• general fasteners (e.g. bolts, screws and rivets)</li><li>• specialist motorsport fasteners (e.g. dzus fasteners)</li><li>• line clamps</li></ul>
<b>Shielding</b>	Shielding may include protection from: <ul style="list-style-type: none"><li>• heat</li><li>• vibration</li><li>• radio frequency interference</li><li>• impact</li></ul>
<b>Cleaning methods</b>	Cleaning methods may include: <ul style="list-style-type: none"><li>• solvent baths</li><li>• chemical cleaning</li><li>• pressure cleaning</li><li>• bead blasting</li></ul>

**RANGE STATEMENT****WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing, including closed shoes, long trousers, fire-retardant gloves, crash helmets and other equipment
- safety equipment
- first aid equipment
- hazard and risk control
- control of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- material safety management systems
- team requirements
- manufacturer specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care

**Tooling and equipment**

Tooling and equipment may include:

- component supplier specified tooling
- non-destructive testing equipment
- measuring devices
- hand and power tooling

**Information and procedures**

Information and procedures may include:

- controlling body rules, category rules and

**RANGE STATEMENT**

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

<b>Prerequisite units</b>	
AURLTD3006	Carry out wheel alignment operations (light vehicle)
AURMTA3006	Perform torquing and fastening
AURMTA3007	Conduct non-destructive testing

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect information and analyse assembly requirements	1.1. Use team instructions, supplementary regulations and component supplier specifications to clarify job requirements, including design, quality, material, equipment and quantities 1.2. Check specifications for required operating conditions and seek clarification of specifications, where required 1.3. Observe workplace health and safety (WHS) requirements, including equipment and system isolation requirements and personal protection needs, throughout the work 1.4. Clarify steps and stages in the process 1.5. Make proposals for modifications or adaptation of equipment 1.6. List and communicate component requirements to appropriate persons 1.7. Locate procedures for minimising waste material
2. Prepare work area and equipment	2.1. Locate tooling and equipment and check for safe and effective operation 2.2. Clean and lay out work area for job requirements 2.3. Report problems with the work area or the operation of the equipment to appropriate persons
3. Prepare components for assembly	3.1. Clean components to facilitate pre-assembly inspection 3.2. Take precautions to avoid component damage 3.3. Inspect and organise components for function and quality to ensure optimum use of resources 3.4. Report problems with the components to appropriate persons
4. Install sub-assemblies	4.1. Inspect sub-assemblies for quality and readiness for installation 4.2. Use installation sequences and techniques 4.3. Install sub-assemblies and tension fasteners to team/component supplier specifications 4.4. Make checks during and after installation to ensure accurate and complete fitting 4.5. Report problems with sub-assemblies to appropriate persons
5. Install ancillary	5.1. Locate critical components on the basis of function,

ELEMENT	PERFORMANCE CRITERIA
systems	<p>susceptibility to damage and ease of maintenance</p> <p>5.2.Install critical components and tension fasteners to team/component supplier specifications</p> <p>5.3.Confirm optimum layout for wiring loom, connectors, hoses, hard lines and ancillary components</p> <p>5.4.Install wiring loom, connectors, hoses, hard lines and ancillary components and tension fasteners to team/component supplier specifications</p> <p>5.5.Secure entire installation and shield to maximise reliability and minimise susceptibility to damage</p> <p>5.6.Make checks during and after installation to ensure accurate and complete fitting</p> <p>5.7.Report problems with the components to appropriate persons</p>
6. Conduct post-assembly checks	<p>6.1.Check fluids and top up, as required</p> <p>6.2.Remove temporary bungs and covers</p> <p>6.3.Conduct engine pre-start checks</p> <p>6.4.Check pressures, temperatures, noises and leaks</p> <p>6.5.Check sub-assembly and systems operation</p>
7. Set vehicle baseline configuration	<p>7.1.Use team instructions, category regulations and component supplier specifications are used to clarify vehicle baseline settings</p> <p>7.2.Establish a level surface to place vehicle on for set-up</p> <p>7.3.Install springs and dampers</p> <p>7.4.Measure and adjust ride height, if necessary</p> <p>7.5.Measure and adjust corner weight, if necessary</p> <p>7.6.Measure and adjust steering angles, if necessary</p> <p>7.7.Report potential or existing problems in accordance with enterprise procedures</p>
8. Clean up work area and maintain records	<p>8.1.Maintain tooling and return to storage</p> <p>8.2.Tag and shelve/store surplus components/consumables</p> <p>8.3.Remove all surplus material from work area</p> <p>8.4.Clean up spillage from work area and vehicle</p> <p>8.5.Complete team/component supplier documentation</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to torquing and fastening, including tooling, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other team members, and to report work outcomes and problems
- literacy skills to the level required collect, organise and understand information related to competition vehicle assembly and preparation, team requirements, manufacturer/component supplier specifications, plans and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during assembly of a competition vehicle
- problem-solving skills to the level required to use pre-checking and inspection techniques to anticipate assembly problems in order to work efficiently and effectively
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity within strict timeframes
- planning skills to the level required to plan and organise activities, including preparation and layout of the work area, and the coordination of equipment, systems and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules, supplementary regulations, component supplier specifications and team requirements/job specifications
- work area and component layout
- component cleaning methods and precautions
- sub-assembly and system installation sequence and techniques
- critical components location selection
- optimum layout for conduits and ancillary components
- types of securing devices and securing methods
- types of shielding devices and shielding methods
- vehicle baseline configuration
- record keeping techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- procedures for reporting equipment faults and component defects
- workplace guidelines regarding acceptable tolerance levels
- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to assembling and preparing a competition vehicle

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly assemble and prepare a minimum of two (2) competition vehicles covering each of the following:
  - install electrical/electronic systems
  - install fluid/pneumatic/fire systems
  - conduct post-assembly checks
  - set vehicle baseline configuration
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to

**EVIDENCE GUIDE**

	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <ul style="list-style-type: none"> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>work instructions and deadlines</li> <li>computing, operational and inventory support systems</li> <li>material, equipment and work specifications information</li> <li>customer requirements</li> <li>organisational procedures</li> <li>safety procedures and regulations</li> <li>quality standards.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Competition vehicles**

Competition vehicles may include:

- motorcycles
- cars
- trucks
- watercraft (modified or built specifically for competition)

**Ancillary systems**

Ancillary systems may include:

- pneumatic
- fluid
- communications
- electrical/electronic
- fire systems

**Critical components**

Critical components may include:

- electronic control units
- data acquisition system components
- communication equipment
- circuit breakers, relays and isolation switches
- fuel tank/cell
- pumps and reservoirs
- fire bottles and controller

**Securing methods**

Securing methods may include:

- tie wraps
- spiral wrap/heat shrink
- line clamps

**Shielding**

Shielding may include protection from:

- heat
- vibration
- radio frequency interference
- impact

**Cleaning methods**

Cleaning methods may include:

- solvent baths

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• chemical cleaning</li> <li>• pressure cleaning</li> <li>• ultrasonic cleaning</li> <li>• bead blasting</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing, including closed shoes, long trousers, fire-retardant gloves, crash helmets and other equipment</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• team insurance requirements</li> <li>• material safety management systems</li> <li>• controlling body requirements</li> <li>• manufacturer specifications</li> <li>• local safe operating procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment must include component

<b>RANGE STATEMENT</b>	
	<p>supplier specified tooling and may include:</p> <ul style="list-style-type: none"> <li>• non-destructive testing equipment</li> <li>• measuring devices</li> <li>• hand and power tooling</li> </ul>

## AURMTA3004 Perform competition vehicle preparation procedures at an event

### Modification History

Release	Comment
Release 1	<p>Replaces AURM340851B Perform competition vehicle preparation procedures at an event</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to perform competition vehicle preparations at an event.</p> <p>It requires the ability to interpret category, event and 'on the day' team specifications, finalise technical preparations, conduct pre-race checks and post-race maintenance, and prepare a vehicle for scrutineering.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake competition vehicle preparation procedures at a motorsport event.</p> <p>A competition vehicle can be described as any vehicle which competes in any event of a competitive nature.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Prerequisite units	
AURMTA3002	Assemble and prepare a competition vehicle

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Use team instructions/specifications and category rules and supplementary regulations to determine job requirements, including configuration, quality, equipment and quantities</p> <p>1.2. Check task requirements against 'on the day' operating conditions and seek clarification of specifications, where required</p> <p>1.3. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs, throughout the work</p> <p>1.4. Locate tooling and equipment and check for safe and effective operation</p> <p>1.5. Clean and lay out work area for job requirements</p>
2. Finalise technical preparation	<p>2.1. Configure vehicle settings for each race in accordance with team specifications, baseline configurations, category rules and supplementary regulations</p> <p>2.2. Report problems with the work area or the operation of the equipment to appropriate persons</p> <p>2.3. Make proposals for modifications or adaptation of equipment</p> <p>2.4. Document settings in accordance with team procedures</p>
3. Conduct pre-race checks	<p>3.1. Conduct checks in accordance with team checklists</p> <p>3.2. Take precautions to ensure no component damage</p> <p>3.3. Report problems with the components or systems to appropriate persons</p>
4. Prepare vehicle for scrutineering	<p>4.1. Inspect vehicle systems and safety components in accordance with regulatory body requirements, category rules and supplementary regulations</p> <p>4.2. Identify and rectify problems with vehicle compliance</p> <p>4.3. Report problems with vehicle compliance that cannot be rectified to appropriate persons in accordance with team procedures</p>
5. Conduct between-race maintenance	<p>5.1. Inspect components/systems condition in accordance with team checklist and repair/replace, as required</p> <p>5.2. Clean and refuel vehicle</p> <p>5.3. Collect and log manual data/download and electronic</p>

ELEMENT	PERFORMANCE CRITERIA
	data 5.4. Conduct and/or contribute to driver/rider technical debrief
6. Clean up work area and finalise documentation	6.1. Return tooling to storage 6.2. Tag and shelve/store surplus components/consumables 6.3. Remove surplus material from work area 6.4. Clean spillage from work area and vehicle 6.5. Assist with loading of vehicle and equipment for transportation and undertake dismantling of temporary work location 6.6. Complete team/event documentation

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to preparation of a competition vehicle, including tooling, equipment, measuring devices and computers, and use pre-checking and inspection techniques to anticipate preparation problems in order to work efficiently and effectively
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other team members, and to report work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to competition vehicle preparation, team requirements, category rules and supplementary regulations, component suppliers' specifications, plans and safety procedures requirements, and financial reporting to ensure compliance with rules and regulations
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during the preparation of a competition vehicle
- problem-solving skills to the level required to anticipate changing information requirements or influences
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area, and the coordination of equipment, systems and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations and team requirements/job specifications
- work area layouts
- preparation processes applicable to competition vehicles at an event
- scrutineering requirements and inspection techniques
- gear ratio calculations
- pre-race checks and between-race maintenance conduct
- equipment faults and component defects reporting procedures
- workplace guidelines regarding:
  - acceptable tolerance levels

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• record keeping techniques</li><li>• applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, reporting and recording procedures, relevant to vehicle preparation procedures</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply controlling body and category rules and supplementary regulations
- apply safety requirements, including the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly perform competition vehicle preparation procedures at a minimum of two (2) events, one (1) of which may be a simulated event. Each of the following must be covered:
  - finalise technical preparation prior to a race
  - conduct pre- and post-race checks and maintenance
  - prepare a vehicle for scrutineering
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• access to competition vehicles and associated tooling</li> <li>• computing, operational and inventory support systems</li> <li>• work specifications</li> <li>• team requirements</li> <li>• organisational procedures</li> <li>• safety procedures and regulations</li> <li>• quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

**RANGE STATEMENT**

regional contexts) may also be included.

**An event**

An event can be defined as the race meeting itself. This may be the whole day, weekend or week

**A race**

A race can be defined as one part or section of the program during an event and may include:

- team promotional ride (e.g. teams may have ride days for their sponsors)
- heat (e.g. teams may have multiple heats to complete during the same event)
- test run (e.g. practice runs or qualifying runs during the same event)
- time trial (e.g. any run during the same event where they are timed over the distance)

**Components/systems to be inspected**

Components/systems to be inspected may include:

- consumable items, such as tyres and brake pads
- non-consumable components, such as steering linkages and drive shafts

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures
- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory

**RANGE STATEMENT**

	<p>legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>
<b>Vehicle settings</b>	<p>Vehicle settings may include:</p> <ul style="list-style-type: none"> <li>• aerodynamic devices</li> <li>• engine/engine management</li> <li>• driveline, including gear ratios</li> <li>• suspension</li> <li>• driver/rider comfort considerations</li> <li>• fuel load</li> <li>• brakes</li> <li>• data acquisition system</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• measuring devices</li> <li>• refuelling equipment</li> <li>• hand tools</li> </ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• team procedures and standards relating to: <ul style="list-style-type: none"> <li>• competition vehicle preparation</li> <li>• reporting and communication</li> <li>• use of tooling and equipment</li> <li>• emergency service contacts and team persons emergency contacts</li> <li>• team emergency and event procedures for accidents or injury</li> <li>• safety requirements</li> </ul> </li> <li>• work instructions, including worksheets,</li> </ul>

**RANGE STATEMENT**

	<p>material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</p> <ul style="list-style-type: none"><li>• manufacturer/component supplier specifications and application procedures for test equipment and material</li><li>• safety body publications</li><li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li></ul>

## AURMTA3005 Perform pit lane and service area operations

### Modification History

Release	Comment
Release 1	Replaces AURM340951B Perform pit lane/ service area operations Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to perform pit lane and service operations within the time constraints of motorsport events.</p> <p>It requires the technical ability to prepare for vehicle stops, service and perform adjustments or emergency repairs during stops, and conduct post-stop clean-ups.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake repairs, adjustments and service work on competition vehicles during pit lane, pit bay or service area stops in a motorsports environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Use team instructions/specifications and category rules and supplementary regulations to determine job requirements, including configuration, quality, equipment and quantities</p> <p>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, complying with controlling body rules, category rules and supplementary regulations, equipment and system isolation requirements, and personal protection needs, throughout the work</p> <p>1.3. Position equipment and tooling and eliminate hazards and obstacles to ensure path of movement</p> <p>1.4. Locate tooling and equipment and check for safe and effective operation</p> <p>1.5. Clean and lay out work area for job requirements</p>
2. Follow pit lane/service area safety procedures	<p>2.1. Fit jacks and other lifting devices, including lifting lock-outs, prior to underbody servicing</p> <p>2.2. Follow fire hazard and prevention procedures according to team procedures or event category rules and supplementary regulations</p> <p>2.3. Use pit lane/service area signals according to team procedures, and event category rules and supplementary regulations</p> <p>2.4. Follow event category and supplementary regulations relating to pit lane/service area operations</p> <p>2.5. Monitor non-team persons access to pit area and walkways according to team procedures</p>
3. Conduct pit stop/competition vehicle service	<p>3.1. Check competition vehicle components according to team pit stop/service area schedule</p> <p>3.2. Perform minor adjustments in accordance with instructions</p> <p>3.3. Conduct emergency repairs in accordance with instructions</p> <p>3.4. Replace components, as required</p> <p>3.5. Modify work practices and pit stop/service area procedures to manage contingency issues</p> <p>3.6. Report problems to team members</p>
4. Conduct post-stop clean-up	<p>4.1. Prepare and position tooling and equipment ready for the next vehicle stop</p> <p>4.2. Tag and shelve/store surplus</p>

ELEMENT	PERFORMANCE CRITERIA
	components/consumables 4.3.Clean spillage and dispose of correctly 4.4.Complete team/event documentation

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing and conducting emergency repairs on a competition vehicle, including tooling, equipment and measuring devices, and use checking and inspection techniques
- communication skills to the level required to communicate ideas and information to respond to issues during pit stops/competition and vehicle servicing, and to report problems for post-stop or post-event analysis
- literacy skills to the level required to collect, organise and understand information related to servicing procedures and emergency repairs
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and adjustments
- problem-solving skills to the level required to identify faults or required adjustments and analysis and judgement when interpreting instructions for adjustment and emergency repair within strict timeframes
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow within strict timeframes
- planning skills to the level required to plan and organise activities, including conduct of service procedures to avoid backtracking or workflow interruptions

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations and team requirements/job specifications
- work area layout at an event
- preparation processes applicable to pit stops/service area
- pit stop/service area sequence and conduct
- pit/lane service area signals and communication techniques
- emergency repair methods and techniques
- record keeping techniques
- equipment faults and component defects reporting procedures
- workplace guidelines regarding acceptable tolerance levels
- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to

**REQUIRED SKILLS AND KNOWLEDGE**

performing pit lane servicing operations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly perform pit lane/service area operations on a minimum of 2 (two) occasions, both of which must be at an appropriate event
- work with and around other team members
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - process equipment, material, work instructions and deadlines
  - access to a competition vehicle at an appropriate event

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>motorsport team procedures and instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Servicing of the vehicle</b>	<p>Servicing of the vehicle as allowed in:</p> <ul style="list-style-type: none"> <li>event category and supplementary regulations</li> <li>emergency repairs</li> <li>supporting driver changeover</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Stops</b>	<p>Stops include:</p> <ul style="list-style-type: none"> <li>• scheduled stops according to event category/ supplementary regulations</li> <li>• unscheduled stops for emergency repairs or refuelling</li> </ul>
<b>Pit stops/competition vehicle servicing tasks</b>	<p>Pit stops/competition vehicle servicing tasks may include:</p> <ul style="list-style-type: none"> <li>• replacing tyres/wheels</li> <li>• refuelling</li> <li>• cleaning windscreen/visor/fairing/screen</li> <li>• minor adjustments (e.g. wing angles and roll centres)</li> <li>• removing pit stop notification tag</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing, including closed shoes, long trousers, fire-retardant gloves, crash helmets and other equipment</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• control of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• team insurance requirements</li> <li>• material safety management systems</li> <li>• controlling body requirements</li> <li>• manufacturer specifications</li> <li>• local safe operating procedures</li> </ul>

Release 1	Replaces AURM341051B Perform torquing and fastening Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to torque and fasten competition vehicle components according to supplier and team specifications.</p> <p>It requires the ability to prepare components, select tools and use fastener securing methods.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake torquing and fastening in a motorsports environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Read and interpret component supplier and team torquing and fastening specifications</li><li>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work</li><li>1.3. Check tools and equipment for safe and effective operation</li><li>1.4. Clean and lay out work area for job requirements</li><li>1.5. Report problems with the work area and/or the operation of the equipment to appropriate persons</li></ul>
2. Fasten components	<ul style="list-style-type: none"><li>2.1. Select materials according to application</li><li>2.2. Inspect and prepare components for assembly</li><li>2.3. Use installation sequences and techniques to assemble components, including applying/installing gaskets, sealants, adhesives and/or lubricants</li><li>2.4. Tension fasteners in stages and sequence to team/component supplier specifications</li><li>2.5. Check during and after installation to ensure accurate and complete fitting</li><li>2.6. Fit mechanical fastener securing devices</li><li>2.7. Check sealant and liquid locking adhesive cure times observed, if applicable</li><li>2.8. Report problems with the components to appropriate persons</li></ul>
3. Clean up work area and complete record keeping	<ul style="list-style-type: none"><li>3.1. Return tools to storage</li><li>3.2. Tag and shelve/store surplus components</li><li>3.3. Remove all surplus material from work area</li><li>3.4. Clean up all spillage from work area and vehicle</li><li>3.5. Complete team/component supplier documentation</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use the workplace technology related to torquing and fastening, including tools, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with technical supervisors, other technicians and workers, and to report work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to torquing and fastening operations, work orders, plans, checklists and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and procedures to team specifications
- problem-solving skills to the level required to use pre-checking and inspection techniques to anticipate torquing and fastening problems in order to work efficiently and effectively
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any backtracking, work flow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- types, characteristics, uses and limitations of fasteners used in motorsport/performance enhancement, including material stress
- the types, characteristics, uses and limitations of mechanical locking devices (e.g. lock wire and lock tabs) and chemical/liquid fastener locking devices (e.g. liquid locking compounds/adhesives), including shelf life expiry
- torquing principles, applications, methods, techniques and preparation of components for assembly
- regulatory requirements relating to securing of fasteners
- record keeping techniques
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to performing torquing and fastening

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly fasten a minimum of six (6) different components/sub-assemblies which include:
  - identifying compatibility/incompatibility of materials, adhesives, fittings and fasteners for the application
  - selecting and applying assembly, torquing and fastening techniques
  - ensuring that the assembly satisfies the specification
  - and where the components/sub-assemblies necessitate, the use of a range of fasteners, sealants and fasteners securing devices
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to

<b>EVIDENCE GUIDE</b>	
	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <ul style="list-style-type: none"> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>process equipment, materials, work instructions and deadlines</li> <li>access to components, fasteners, assemblies, tools and equipment.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and</p>

**RANGE STATEMENT**

regional contexts) may also be included.

**Torque measurements and fastener tensions**

Torque measurements and fastener tensions are undertaken using:

- conventional torque wrenches
- angular torque tools
- strain gauges

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>health regulations</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment may include:</p> <ul style="list-style-type: none"> <li>torque (tension) wrenches</li> <li>angular torque tools</li> <li>dial test indicators</li> <li>feeler gauges</li> <li>special service tools</li> <li>general hand tools</li> <li>strain gauges</li> <li>vertical height gauges</li> <li>gauge blocks</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>type and grade of fastener</li> <li>liquid locking adhesive and primers</li> <li>gasket and/or sealant</li> <li>lock wire/lock tabs or other mechanical fastener securing devices</li> </ul>
<b>Fasteners</b>	<p>Fasteners may include:</p> <ul style="list-style-type: none"> <li>threaded fasteners</li> <li>quick release fasteners</li> <li>sheet metal fasteners (e.g. rivets)</li> </ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>controlling body rules, category rules and supplementary regulations</li> <li>team procedures and standards related to: <ul style="list-style-type: none"> <li>performing torquing and fastening</li> <li>competition vehicle assembly</li> <li>reporting and communication</li> <li>use of tooling and equipment</li> <li>emergency service contacts and team persons emergency contacts</li> <li>team emergency and event procedures for accidents or injury</li> </ul> </li> <li>work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</li> <li>manufacturer/component supplier</li> </ul>

**RANGE STATEMENT**

	<p>specifications and application procedures for test equipment and material</p> <ul style="list-style-type: none"><li>• Australian Design Rules (where applicable)</li><li>• safety body publications</li><li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li></ul>

## AURMTA3007 Conduct non-destructive testing

### Modification History

Release	Comment
Release 1	Replaces AURM340550B Conduct non-destructive testing Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to perform non-destructive testing on competition vehicle components and materials.</p> <p>It requires the ability to use technical skills to prepare for and conduct non-destructive testing.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who conduct non-destructive testing of competition vehicle components in order to determine component serviceability by checking for material defects and malfunctions in a motorsport environment.</p> <p>It also applies to workplaces involved in the design, development, manufacture and maintenance of performance vehicles or performance vehicle components and assemblies used in motorsport.</p>
--------------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for non-destructive testing	<p>1.1. Use team instructions, controlling body rules, category rules, supplementary regulations and component supplier specifications to determine job requirements, including quality, materials, equipment and quantities</p> <p>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, throughout the work</p> <p>1.3. Clean and prepare inspection areas for testing using procedures and materials</p> <p>1.4. Check tooling and equipment for safe and effective operation</p> <p>1.5. Prepare test equipment for non-destructive testing in accordance with equipment manufacturer/supplier instructions and team requirements</p> <p>1.6. Report problems with the work area or the operation of equipment to appropriate persons</p>
2. Perform non-destructive testing	<p>2.1. Specify testing methods using standard operating procedures and team requirements</p> <p>2.2. Identify hazards associated with testing and identify safety requirements</p> <p>2.3. Carry out testing in accordance with task instructions, team procedures and WHS requirements</p> <p>2.4. Identify non-conformance and defects against component manufacturer/supplier specifications and team standards</p> <p>2.5. Verify test results</p> <p>2.6. Document test results in accordance with team procedures</p>
3. Clean up work area	<p>3.1. Maintain and store testing equipment in accordance with team procedures and WHS requirements</p> <p>3.2. Clean and prepare work area for subsequent use</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to non-destructive testing, including tooling, equipment and measuring devices, and to use pre-checking and inspection techniques to anticipate issues to avoid reworking and wastage
- communication skills to the level required to communicate ideas and information to enable confirmation of work requirements, coordination of work with technical supervisors, other technicians and workers, and to report work outcomes and problems
- literacy skills to the level required to collect, analyse, organise and understand information related to non-destructive test results
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and estimate material requirements required for the work
- problem-solving skills to the level required to anticipate changing information requirements or influences
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area, and obtaining equipment and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- principles and methods of penetrant, magnetic and Rockwell and Brinell hardness testing, including limitations, advantages and hazards associated with testing
- non-destructive testing terminology
- non-destructive test equipment use, maintenance and storage
- non-destructive testing preparation procedures
- non-destructive testing verification methods and techniques
- non-destructive testing analysis techniques
- techniques for recording results of non-destructive testing
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, reporting and recording procedures, relevant to non-destructive testing

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- prepare equipment for testing (including zeroing and calibration checks)
- correctly conduct non-destructive testing on a minimum of four (4) components. Each component must be tested using at least two (2) testing methods as detailed in the range statement. Each of the following must be covered:
  - select and apply testing methods
  - verify results
  - record outcomes
- perform work within team quality and timeliness standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to

**EVIDENCE GUIDE**

## AURMTA3009 Collect and log motorsport data

### Modification History

Release	Comment
Release 1	Replaces AURM340312B Collect and log motorsport data Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to collect and log motorsport data.</p> <p>It requires the ability to identify the data, prepare collection methods and systems, and use technical skills to collect and evaluate data.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake data collection and logging in a motorsports environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify situations where motorsport data is required	1.1. Clarify purpose of data collection 1.2. Clarify sources of data 1.3. Use team instructions and procedures to specify data requirements 1.4. Clarify end users of motorsport data 1.5. Interpret controlling body rules, category rules and supplementary regulations 1.6. Observe workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, throughout the work
2. Prepare resources for data collection	2.1. Develop checklists/recording sheets according to team specifications 2.2. Prepare manual instruments for data collection 2.3. Check electronic data acquisition system settings 2.4. Check and adjust equipment settings, calibration and system in accordance with task requirements and equipment manufacturer instructions 2.5. Conduct trial runs to check equipment and procedures for function, accuracy and efficiency 2.6. Make necessary adjustments to equipment or procedures
3. Collect data	3.1. Carry out data acquisition system start-up procedure in accordance with manufacturer instructions 3.2. Operate data acquisition system in accordance with its designed capacity and purpose and to manufacturer recommendations 3.3. Estimate and describe potential for inaccurate results arising from variables 3.4. Collect data using manual and electronic methods 3.5. Check data for accuracy 3.6. Report problems with the required data or the operation of the equipment to appropriate persons
4. Log data	4.1. Import selected data into data analysis software 4.2. Evaluate data for preliminary indication of non-conformity and trends or patterns 4.3. Collate findings from data and report to appropriate persons 4.4. Store data for later retrieval in accordance with team procedures

ELEMENT	PERFORMANCE CRITERIA
5. Maintain data acquisition equipment	<p>5.1.Clean, maintain and prepare equipment and support material ready for further use and store in accordance with manufacturer specifications and team requirements</p> <p>5.2.Conduct systems check</p> <p>5.3.Tag unserviceable equipment and document faults in accordance with team procedures</p> <p>5.4.Complete operator maintenance in accordance with manufacturer specifications and team procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use technology related to preparing for and collecting data electronically, data representation and the maintenance of data acquisition systems, including electronic data acquisition systems, calculators and measuring devices and computer-aided systems
- communication skills to the level required to communicate effectively regarding work requirements and specifications with the supervisor and with other workers within the team, to communicate ideas and information, to report data collection and data systems outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, and to interpret team requirements, technical information and specifications
- numeracy skills to the level required to accurately collect, log, represent and analyse data
- problem-solving skills to the level required to anticipate changing information requirements or influences
- team skills to the level required to work effectively and cooperatively with others to recognise dependencies, and use cooperative approaches to optimise workflow and productivity

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

Required knowledge includes:

- end users of motorsport data and their needs
- manual and electronic data collection and logging methods and techniques, including the production and use of worksheets and checklists
- types, characteristics, components, uses and limitations of data acquisition systems
- techniques for inspection and basic fault-finding of data acquisition systems
- procedures for reporting equipment faults and data irregularities
- preliminary data evaluation techniques
- manufacturer, component supplier and team guidelines regarding acceptable tolerance levels
- team policies and procedures, including quality requirements, and reporting and recording procedures related to collecting and logging data
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to collecting and logging motorsport data

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- apply team requirements, controlling body and category rules, and supplementary regulations
- observe and apply safety procedures and requirements including the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly collect and log data using manual and electronic systems on a minimum of two (2) occasions, covering each of the following:
  - vehicle data
  - weather data
  - circuit data
  - driver/rider characteristics
- collect and log data within team quality and time line standards
- work effectively with others
- modify activities to cater for variations in workplace context and environment
- follow team data security and confidentiality procedures and processes at all times.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</li> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>a range of electronic systems and components</li> <li>specifications and work instructions</li> <li>relevant information, including manufacturer specifications.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work

**RANGE STATEMENT**

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Motorsport data**

Motorsport data may include:

- vehicle data
- weather data
- circuit data
- driver/rider characteristics

**Manual data collection**

Manual data collection may include using:

- observation
- listening
- stop watches
- video cameras
- radar guns
- instrument telltales
- temperature tape or paint

**Electronic data acquisition system components**

Electronic data acquisition system components include:

- sensors and transducers
- electronic or dash loggers
- analysis software
- wiring looms or electrical connectors
- lap beacons
- communications and telemetry components

**Team policies and procedures**

Team policies and procedures may include:

- team requirements relating to data acquisition
- team procedures relating to the use of data acquisition systems and equipment
- task instructions, including worksheets, checklists and plans
- team procedures relating to reporting and communication
- team procedures relating to the use of tooling and equipment
- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes

<b>RANGE STATEMENT</b>	
	<p>of practice</p> <ul style="list-style-type: none"> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• data acquisition system</li> <li>• multimeters</li> <li>• calculators</li> <li>• mathematical tables</li> <li>• graphing and charting equipment</li> <li>• computers and manual data collection equipment</li> </ul>

## AURMTA5003 Determine material suitability for competition vehicle components

### Modification History

Release	Comment
Release 1	<p>Replaces AURM542216A Determine material suitability for competition vehicle component construction</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge required to determine material suitability for competition vehicle component construction. It includes determining component performance specifications, researching component operating environment, establishing material specifications for component and testing material suitability.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work involves the production of new components from a design or existing components from a new material</p> <p>Work requires individuals to demonstrate analytical and organisational ability, judgement and problem-solving skills in the management of competition vehicle construction</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Prerequisite units	
AURMTA3007	Conduct non-destructive testing
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish component performance specifications	<p>1.1.Regulatory body and category rules, supplementary regulations, component supplier specifications and team instructions are used to develop component specifications including design, quality, material, equipment and quantities</p> <p>1.2.Component operating function is confirmed</p> <p>1.3.Component operating environment is established</p> <p>1.4.Component performance specifications are prepared</p> <p>1.5.Workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work</p>
2. Establish material performance specifications	<p>2.1.Material operating function is confirmed</p> <p>2.2.Criteria to be used in the selection of material and in the evaluation of outcomes are identified and documented</p> <p>2.3.Benchmark specifications for material are accessed and interpreted</p> <p>2.4.Possible legal and safety impacts of the material chosen are considered and responded to in accordance with regulatory and team obligations and practices</p> <p>2.5.Material performance specifications are prepared and documented to industry and team standards</p>
3. Test material suitability against material performance specifications	<p>3.1.Material capable of undertaking the operating function are identified</p> <p>3.2.The proposed material is selected following the identification, consideration and evaluation of the full range of available and relevant options</p> <p>3.3.The selected option, including material choices and processes, is developed in detail and progressively validated against established criteria</p> <p>3.4.Material compatibility is confirmed</p> <p>3.5.Material is selected/constructed to component specifications</p> <p>3.6.Test material are listed against material performance specifications</p> <p>3.7.Material failure causes are identified</p> <p>3.8.Testing procedures and results are documented</p> <p>3.9.Recommendations for material usage are devised</p>

ELEMENT	PERFORMANCE CRITERIA
4. Test component suitability against component performance specifications	4.1.Component test procedures are determined 4.2.Component is tested against component performance specifications 4.3.Testing procedures and results are documented 4.4.Recommendations for component usage are devised

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- research, collect, organise and understand information related to the suitability of material for competition vehicle components including the technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other workers and the reporting of work outcomes and resolution of problems
- plan and organise activities including the development of specifications, checklists and schedules and the coordination of appropriate persons, equipment, systems and material to avoid back-tracking, workflow interruptions or wastage
- work with others to foster the team by recognising dependencies and using cooperative approaches to optimise communication, workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate technical specifications, calibrate and establish test equipment and evaluate test results against pre-established criteria
- create and apply systematic problem-solving techniques to anticipate problems, avoid reworking and avoid wastage
- use workplace technology related to the management of assembly and preparation including tooling, measuring devices, equipment, calculators and computers

#### Required knowledge

Required knowledge includes:

- regulatory body and category rules and component supplier specifications
- possible legal and safety impacts of material selection
- molecular structure of material
- physical properties of fabrication material and composites of this material
- chemical properties of fabrication material and composites of this material
- material treatment processes
- causes of fabrication material degradation
- mechanical properties of fabrication material and composites of this material
- appropriateness of testing procedures to material characteristics being sought
- material and component testing procedures, both:
  - destructive
  - non-destructive
- problem-solving techniques
- supervision of WHS requirements

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• record keeping methods</li><li>• associated WHS policies and procedures</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly determine material suitability for a minimum of two (2) competition vehicle components. At least one (1) component must be made from metal and one (1) from a composite material. Each of the following must be covered:
  - selection, development and recording of material and component performance specifications and evaluation criteria before undertaking component production and testing
  - selection, development and validation of component production methodology, processes and specifications
  - application of the component production specifications and testing against predetermined criteria
  - recording and reporting of outcomes
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.
- Access to competition vehicles and associated assembly tooling in real or simulated situations involving the

<b>EVIDENCE GUIDE</b>	
	<p>application of assembly techniques and to the related computing, operational and inventory support systems.</p> <ul style="list-style-type: none"> <li>• Access to material, testing equipment and fabrication equipment to confirm component appropriateness.</li> <li>• Access to real or simulated work areas, material, equipment and information on work specifications, customer requirements, organisational procedures, safety procedures and regulations and quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</li> <li>• Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>• Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</li> </ul>

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Components include</b>	<p>Components include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• competition vehicle structural (e.g. brackets, braces, roll cages, and tubs/cockpits/hulls) and operating components (linkages, suspension components and drive train components)</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements include:</p> <ul style="list-style-type: none"> <li>• state/territory and federal legislation</li> <li>• material safety management systems</li> <li>• controlling body requirements</li> <li>• manufacturer specifications and local safe operating procedures</li> </ul>
<b>Legislative requirements</b>	<p>Work is carried out in accordance with legislative obligations (including environmental requirements), manual handling procedures and team insurance requirements</p>
<b>Material</b>	<p>Material may include, but is not limited to:</p> <ul style="list-style-type: none"> <li>• metals (including alloys) and composite material (plastics, fibreglass/carbon/Kevlar based material) which may be single material or combination material</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include, but is not limited to:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• fabrication equipment</li> <li>• measuring devices</li> <li>• testing devices</li> <li>• tools for calibration of measuring and testing devices</li> <li>• computers and relevant software</li> </ul>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and</p>

RANGE STATEMENT	
	enterprise policies and practices
<b>Information/ documents</b>	<p>Information/ documents may include:</p> <ul style="list-style-type: none"> <li>• regulatory body and category rules</li> <li>• trade/professional journals, reports and electronic sources of information</li> <li>• team procedures relating to documentation, reporting, testing, calibration and communication</li> <li>• component supplier specifications and assembly procedures</li> <li>• test equipment supplier specifications</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine optimum tyre setting	<p>1.1. Controlling body rules, category rules, supplementary regulations, manufacturer/component supplier specifications and team requirements are used to identify setting requirements</p> <p>1.2. Regulations and specifications/tolerances are examined to determine competitive advantage (technical, psychological and/or promotional advantage)</p> <p>1.3. Workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs, are observed throughout the work</p> <p>1.4. Specifications are checked for required operating conditions and clarification of specifications is sought where required</p> <p>1.5. Tyre setting requirements are calculated/determined according to known factors</p> <p>1.6. The effects of selected tyre settings on overall vehicle performance are evaluated</p> <p>1.7. Anticipated performance improvement is quantified and optimum settings are documented</p>
2. Determine optimum steering and suspension settings	<p>2.1. Controlling body and category rules, supplementary regulations, component supplier specifications and team requirements are used to establish settings</p> <p>2.2. Regulations and specifications/tolerances are examined to determine competitive advantage (technical, psychological and/or promotional advantage)</p> <p>2.3. Specifications are checked for required operating conditions and clarification of specifications is sought where required</p> <p>2.4. Steering and suspension setting requirements are calculated/determined according to known factors</p> <p>2.5. The effects of selected steering and suspension settings on overall vehicle performance are evaluated</p> <p>2.6. Anticipated performance improvement is quantified and optimum settings are documented</p>
3. Determine optimum aerodynamic device settings	<p>3.1. Controlling body rules, category rules, supplementary regulations, component supplier specifications and team requirements are used to establish settings</p> <p>3.2. Regulations and specifications/tolerances are</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>examined for competitive advantage (technical, psychological and/or promotional advantage)</p> <p>3.3. Specifications are checked for required operating conditions and clarification of specifications is sought where required</p> <p>3.4. Aerodynamic device setting requirements are calculated/determined according to known factors</p> <p>3.5. The effects of selected aerodynamic device settings on overall vehicle performance are evaluated</p> <p>3.6. Anticipated performance improvement is quantified and optimum settings are documented</p>
<p>4. Supervise the configuration of aerodynamic and vehicle dynamic settings</p>	<p>4.1. Tooling and equipment are checked for safe and effective operation</p> <p>4.2. The configuration of aerodynamic and vehicle dynamic settings is supervised</p> <p>4.3. During and after configuration, checks are made to ensure accurate and complete changes</p> <p>4.4. Problems with the work area or the operation of equipment are evaluated and decisions implemented</p> <p>4.5. Proposals for modifications or adaptation of equipment/components are evaluated and implemented</p> <p>4.6. Work area cleanliness and layout for job requirements is monitored</p>
<p>5. Test aerodynamic and vehicle dynamic settings</p>	<p>5.1. Test procedures are determined</p> <p>5.2. Settings are tested against anticipated performance improvement</p> <p>5.3. Testing procedure and results are documented</p> <p>5.4. Recommendations for settings usage are devised and implemented</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- research, collect, organise and understand information related to the application of aerodynamic and vehicle dynamic principles and effects to competition vehicles, including the technical, regulatory, environmental and safety requirements
- communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other workers and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the coordination of equipment, systems and material to avoid backtracking, workflow interruptions or wastage
- work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements and calculations required during the application of aerodynamic and vehicle dynamic principles and effects to competition vehicles
- create and apply systematic problem-solving techniques to anticipate problems, avoid reworking and avoid wastage
- use workplace technology related to determining requirements for the application of aerodynamic and vehicle dynamic principles and effects to competition vehicles including tooling, measuring devices, equipment, calculators and computers

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations relating to establishing settings
- terminology, principles and effects of the physics involved in resistance and motion
- manufacturer/component supplier specifications and team instructions relating to establishing settings
- aerodynamic and vehicle dynamic principles and their effects on competition vehicles
- competition vehicle test methods and procedures, including record keeping methods
- mathematical computations to determine optimum settings
- team guidelines regarding acceptable tolerance levels
- WHS policies and procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>Assessors must be satisfied that the candidate can competently and consistently:</p> <ul style="list-style-type: none"> <li>interpret and apply team requirements, controlling body and category rules and supplementary regulations</li> <li>apply safety requirements, including the use of personal protective equipment</li> <li>follow task instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>minimise the risk of injury to self or others</li> <li>prevent damage to competition vehicle or equipment</li> <li>achieve required outcomes within team time and quality standards</li> </ul> </li> <li>correctly determine and supervise the configuration of optimum aerodynamic and vehicle dynamic settings on a minimum of two (2) occasions. Each of the following must be covered: <ul style="list-style-type: none"> <li>tyre settings</li> <li>steering and suspension settings</li> <li>aerodynamic device settings</li> </ul> </li> <li>select and correctly conduct test procedures</li> <li>document test results and compare to anticipated performance improvements</li> <li>manage time efficiently</li> <li>work effectively with others</li> <li>modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.</li> <li>Assessment of this competence may include project-related tasks and require portfolios or other forms of indirect evidence of process.</li> <li>Direct evidence will include endorsement of final outcome/product by team management or authorisation</li> </ul>

<b>EVIDENCE GUIDE</b>	
	<p>for use by a competent authority.</p> <ul style="list-style-type: none"> <li>• Access to competition vehicles and associated assembly tooling in real or simulated situations involving the application of repair/modification techniques and the related computing, operational and inventory support systems.</li> <li>• Access to real or simulated work areas, material, equipment and information on work specifications, team requirements, organisational procedures, safety procedures and regulations, and quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</li> <li>• Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>• Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>WHS requirements</b>	<p>WHS requirements include:</p> <ul style="list-style-type: none"> <li>• state/territory and federal legislation,</li> <li>• material safety management systems</li> <li>• controlling body requirements</li> <li>• manufacturer specifications and local safe</li> </ul>

<b>RANGE STATEMENT</b>	
	operating procedures
<b>Legislative requirements</b>	Work is carried out in accordance with legislative obligations (including environmental requirements), health regulations, manual handling procedures and team insurance requirements
<b>Tyre settings</b>	<p>Tyre settings include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• construction and compound</li> <li>• size (including stagger)</li> <li>• pressures</li> <li>• loadings</li> <li>• temperatures</li> </ul>
<b>Steering and suspension settings</b>	<p>Steering and suspension settings include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• wheel rate and linkage/leverage ratios</li> <li>• spring rate and spring pre-load</li> <li>• vehicle weight, sprung and unsprung weight</li> <li>• anti-roll bar rate (where fitted)</li> <li>• steering angles including toe-in/out, camber and caster</li> <li>• roll centres</li> <li>• ride height</li> <li>• centre of gravity</li> </ul>

## AURMTD4001 Test suspension dampers using a dynamometer

### Modification History

Release	Comment
Release 1	Replaces AURM442076B Test suspension dampers using a dynamometer  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to test suspension dampers using a dynamometer.</p> <p>It requires the technical ability to use a dynamometer to test suspension dampers and to analyse and interpret test results in order to maximise damper performance in the motorsport and performance enhancement environments.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who set up, conduct dynamometer tests on suspension damper performance and log, analyse and report the test data in order to maximise damper performance in motorsport and performance enhancement environments.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Prerequisite units	
MEM30012A	Apply mathematical techniques in a manufacturing, engineering or related environment

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for dynamometer operation	<p>1.1. Use team instructions, category regulations and component supplier specifications are used to specify job requirements, including design, quality, materials, equipment and specifications</p> <p>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work</p> <p>1.3. Check dynamometer for calibration and serviceability and prepare for operation</p>
2. Conduct dynamometer testing	<p>2.1. Determine appropriate load and run sequence and test parameters</p> <p>2.2. Connect dampers to dynamometer and confirm security of connections</p> <p>2.3. Perform the selected dynamometer testing sequence in accordance with technical specifications and directions and/or the locally authorised method</p> <p>2.4. Analyse dynamometer test data and make valid conclusions about damper condition and performance</p> <p>2.5. Report findings, including recommendations for damper configuration and/or modifications to improve performance based on dynamometer data, to appropriate persons</p> <p>2.6. Test damper modifications with confirmation runs</p> <p>2.7. Present data to team members to complement suspension set-up</p>
3. Clean up work area and log test results	<p>3.1. Perform dynamometer shutdown procedure in accordance with manufacturer requirements</p> <p>3.2. Disconnect dampers from dynamometer</p> <p>3.3. Clean and refurbish dynamometer and associated tooling and equipment</p> <p>3.4. Conduct operator maintenance of dynamometer</p> <p>3.5. Log dynamometer test results to create/add to damper history</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to dynamometers, including associated software and hardware, tooling, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable confirmation of work requirements, coordination of work with technical supervisors, other technicians and team members, and to report work outcomes and problems
- literacy skills to the level required to collect, organise, understand and analyse information related to dynamometer test results, team requirements and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurement of suspension damper performance required for the team
- problem-solving skills to the level required to use pre-checking and inspection techniques to anticipate test problems in order to work efficiently and effectively
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area, and the obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- suspension damper and dynamometer terminology
- preparation procedure for dynamometer testing
- dynamometer operation and use of associated hardware and software
- test environment correction factors
- dynamometer data interpretation and analysis
- damper modification and adjustment procedures
- operator dynamometer maintenance
- procedures for reporting task completion
- metric and imperial units of measurement
- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to

**REQUIRED SKILLS AND KNOWLEDGE**

testing suspension dampers using a dynamometer

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly set up and operate a damper dynamometer to test a minimum of two (2) different dampers, with each being a different type or brand, to complete the following:
  - determine damper performance
  - analyse damper performance data
  - assess effect of damper changes and present to team members as information to complement suspension set-up
  - confirm effectiveness of damper set-up modifications
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<b>RANGE STATEMENT</b>	
<b>Test parameters</b>	<p>Test parameters may include:</p> <ul style="list-style-type: none"> <li>• ambient and damper temperature</li> <li>• damper stroke and frequency</li> <li>• sample rates</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing and other equipment</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• team insurance requirements</li> <li>• material safety management systems</li> <li>• controlling body requirements</li> <li>• manufacturer/component supplier specifications</li> <li>• local safe operating procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>

**RANGE STATEMENT****Tooling and equipment**

Tooling and equipment may include:

- damper dynamometer
- hand and power tooling
- diagnostic computer hardware and software

**Information and procedures**

Information and procedures may include:

- controlling body rules, category rules and supplementary regulations
- event scheduling and location details
- team procedures and standards related to:
  - testing suspension dampers using a dynamometer
  - reporting and communication
  - use of tooling and equipment
  - emergency service contacts and team persons emergency contacts
  - team emergency and event procedures for accidents or injury
- work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists
- manufacturer/component supplier specifications and application procedures for test equipment and material
- Australian Design Rules (where applicable)
- safety body publications
- environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents

## AURMTD4002 Prepare competition vehicle suspension

### Modification History

Release	Comment
Release 1	Replaces AURM441749B Prepare competition vehicle suspension Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to test, dismantle, inspect, reassemble and adjust the suspension of a competition vehicle.</p> <p>It requires the technical ability to determine competition vehicle suspension requirements and the effects of making changes to variables.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who test, dismantle, inspect, reassemble and adjust the suspension of a competition vehicle in the motorsport environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Prerequisite units	
AURLTD3005	Repair suspension systems (light vehicle)
AURTTD2004	Inspect and service suspension systems

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine competition vehicle suspension requirements	<p>1.1. Use controlling body and category rules, supplementary regulations, component supplier specifications and team instructions to specify task requirements, including design, quality, material, equipment and quantities</p> <p>1.2. Examine regulations, specifications and tolerances for competitive advantage</p> <p>1.3. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work</p> <p>1.4. Check specifications for required operating conditions and seek clarification, where required</p> <p>1.5. Calculate suspension requirements according to known factors</p> <p>1.6. List component requirements and communicate to appropriate persons</p>
2. Prepare for work on suspension	<p>2.1. Check tooling and equipment for safe and effective operation</p> <p>2.2. Clean and lay out work area for job requirements</p> <p>2.3. Clean vehicle and prepare for initial measurement</p> <p>2.4. Measure existing suspension settings and document prior to component removal or adjustment</p> <p>2.5. Report problems with the work area or the operation of the equipment to appropriate persons</p>
3. Dismantle, repair/modify and assemble dampers	<p>3.1. Identify methods for removing and dismantling dampers according to team procedures and manuals/specifications</p> <p>3.2. Test, dismantle and clean dampers and check tolerances/wear against manufacturer specifications</p> <p>3.3. Inspect components for functioning and quality</p> <p>3.4. Make decision to retain, replace, repair, adjust or service component according to team policies and procedures</p> <p>3.5. Carry out repairs/modifications to dampers in accordance with manufacturer specifications for methods, equipment and tolerances</p> <p>3.6. Re-oil, bleed, bench test and re-gas (if required) dampers</p>
4. Dismantle, replace	<p>4.1. Identify methods for removing and dismantling</p>

ELEMENT	PERFORMANCE CRITERIA
and/or change springs	<p>springs according to team procedures and manuals/specifications</p> <p>4.2.Document dimensions before disassembly</p> <p>4.3.Disassemble and clean springs and check rates/tolerances against specifications and retain or replace according to team policies and procedures</p> <p>4.4.Test replacement springs for rate and wear</p>
5. Configure suspension components/settings	<p>5.1.Inspect removed suspension components quality and readiness for installation</p> <p>5.2.Use installation sequence and techniques</p> <p>5.3.Install sub-assemblies and tension fasteners to manufacturer/component supplier specifications</p> <p>5.4.Check to ensure accurate and complete fitting during and after installation</p> <p>5.5.Inspect associated components, sub-assemblies or structural elements of vehicles that may affect suspension configuration for serviceability and repair, where necessary</p> <p>5.6.Configure suspension components/settings within tolerances</p>
6. Configure suspension components/settings	<p>6.1.Document settings in accordance with team procedures</p> <p>6.2.Report problems with sub-assemblies to appropriate persons</p>
7. Clean up work area and complete record keeping	<p>7.1.Maintain tooling, as required, and return to storage</p> <p>7.2.Tag and shelve/store surplus components/consumables</p> <p>7.3.Remove surplus material from work area</p> <p>7.4.Clean up spillage from work area and vehicle</p> <p>7.5.Complete team/component supplier documentation</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to determining requirements for the preparation of competition vehicle suspension, including tooling, measuring devices, equipment, calculators and computers
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other workers, and to report work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to preparing competition vehicle suspension, including team requirements, manufacturer specifications, plans and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to complete measurements and calculations required during the preparation of competition vehicle suspension
- problem-solving skills to the level required to use pre-checking and inspection techniques to anticipate assembly problems in order to work efficiently and effectively
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area, and the coordination of equipment, systems and materials to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- team requirements/job specifications, supplementary regulations and component supplier specifications
- competition vehicle suspension component types, function, applications, limitations and configuration considerations
- suspension-related calculations
- safety in relation to repair of suspension components and assemblies
- damper disassembly, inspection, repair/modification, assembly, re-oiling, bleeding, re-gassing and bench testing techniques, suspension components/settings configuration
- record keeping techniques
- procedures for reporting equipment faults and component defects
- workplace guidelines regarding acceptable tolerance levels

**REQUIRED SKILLS AND KNOWLEDGE**

- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to complex fuel systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly prepare suspension on a minimum of two (2) competition vehicles in situations involving each of the following:
  - calculations to determine spring rate and spring pre-load
  - determination of component selection within constraints of known factors
  - configuration of dampers and springs
  - adjustment of suspension components/settings
- work effectively with others
- modify activities to cater for variations in workplace context and environment and within tolerances.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Competition vehicle suspension components**

Competition vehicle suspension components may include:

- springs
- dampers
- suspension/swing arms/joints
- pivot locations/pickup points
- lateral control devices
- travel limiters
- anti-roll bars
- weight jackers

**Dismantling, repair/modification and assembly of dampers**

Dismantling, repair/modification and assembly of dampers applies only to:

- non-sealed dampers (manufacturer/component supplier safety recommendations must be observed at all times)

**Factors and calculations for determining suspension requirements**

Factors for determining suspension requirements may include:

- regulatory constraints
- team budgetary constraints
- load and speed characteristics
- terrain and climate conditions
- driver/rider preferences

When determining suspension requirements calculations may include:

- wheel rate
- spring rate
- linkage and leverage ratios
- spring pre-load
- vehicle weight
- sprung and unsprung weight
- anti-roll bar rate

Determinations can be confirmed through the use

## AURMTE4001 Test engines using a dynamometer

### Modification History

Release	Comment
Release 1	Replaces AURM441976B Test engines using a dynamometer Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to test engines using a dynamometer.</p> <p>It requires the technical ability to use a dynamometer to test engine performance and to analyse and interpret test results in order to maximise engine performance in the motorsport and performance enhancement environments.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who set up, conduct dynamometer tests on engines and log, analyse and report the test data in order to maximise engine performance in motorsport and performance enhancement environments.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for dynamometer operation	<p>1.1. Use team instructions, controlling body rules, category rules and component supplier specifications to specify job requirements, including design, quality, materials, equipment and specifications</p> <p>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, extraction, fire hazard, fuel storage, scatter shields, noise regulations, environmental regulations and personal protection needs, throughout the work</p> <p>1.3. Check dynamometer for calibration and serviceability and prepare for operation</p> <p>1.4. Connect engine to dynamometer, including ancillary systems and monitoring/control systems</p> <p>1.5. Connect exhaust extraction and check for serviceability</p> <p>1.6. Prepare engine for dynamometer testing, including checking oil and water levels, and confirm engine tune and condition</p>
2. Conduct dynamometer testing	<p>2.1. Identify load and run sequence, including run-in period for new engines</p> <p>2.2. Calculate correction factors and apply to results</p> <p>2.3. Check engine connections to the dynamometer</p> <p>2.4. Perform selected dynamometer testing sequence in accordance with technical specifications and directions and/or the locally authorised method</p> <p>2.5. Analyse dynamometer test data and make valid conclusions about engine and sub-system condition and performance</p> <p>2.6. Report findings, including recommendations for engine configuration and/or modifications to improve performance based on dynamometer data, to appropriate persons</p> <p>2.7. Test approved modifications with confirmation runs</p> <p>2.8. Present data to team members as information to complement engine/vehicle set-up</p>
3. Clean up work area and log test results	<p>3.1. Perform dynamometer shutdown procedure in accordance with manufacturer/component supplier requirements</p> <p>3.2. Disconnect engine from dynamometer</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3.Clean and refurbish dynamometer and associated tooling and equipment</p> <p>3.4.Conduct operator maintenance of dynamometer</p> <p>3.5.Log dynamometer test results to create/add to engine history</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to dynamometers, including tooling, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable confirmation of work requirements, coordination of work with technical supervisors, other technicians and team members, and to report work outcomes and problems
- literacy skills to the level required to collect, organise, understand and analyse information related to dynamometer test results, team requirements and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurement of engine performance required for the team
- problem-solving skills to the level required to use dynamometer testing to solve problems with engine performance
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area, and the obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- engine performance and dynamometer terminology
- preparation procedure for dynamometer testing
- dynamometer operation and use of associated hardware and software
- test environment correction factors
- dynamometer data interpretation and analysis
- operator dynamometer maintenance
- procedures for reporting task completion
- metric and imperial units of measurement
- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to testing engines using a dynamometer

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly set up and operate an engine dynamometer to test a minimum of two (2) engines to complete the following:
  - determine engine performance
  - analyse engine performance data
  - assess effect of engine and sub-system modifications and present to team members as information to complement engine/vehicle set-up
  - confirm effectiveness of engine and sub-system modifications
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to

	<p>accommodate ethnicity, age, gender, demographics and disability.</p> <ul style="list-style-type: none"> <li>The following resources should be made available: <ul style="list-style-type: none"> <li>access to tooling and equipment</li> <li>engines</li> <li>dynamometer and test equipment</li> <li>technical references or information.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

**RANGE STATEMENT**

regional contexts) may also be included.

**Dynamometers**

Dynamometers may include:

- engine and chassis dynamometers
- water loaded dynamometers
- electrically loaded dynamometers

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing, including closed-in shoes, long trousers, handling gloves and other equipment
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination

<b>Release 1</b>	Replaces AURM441394A Analyse and repair complex performance carburetted fuel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Changes to pre-requisite units

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to inspect, analyse and repair carburetted fuel systems, associated components and refuelling equipment.</p> <p>It requires the technical ability to conduct and interpret tests, determine repair and/or performance improvement strategies and conduct repairs, adjustments and post-repair checks.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who analyse faults and implement performance improvement strategies in carburetted fuel systems, associated components and refuelling equipment in the motorsport and performance enhancement environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

<b>Prerequisite units</b>	
AURTTTF2001	Service petrol fuel systems
AURTTTF3006	Diagnose and repair petrol carburettor systems

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the faults	1.1. Use controlling body rules, category rules, supplementary regulations and team requirements to specify task requirements, including configuration, equipment, quality and quantities 1.2. Access and interpret benchmark specifications for a correctly functioning fuel system 1.3. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work 1.4. Examine the details of the fault and document available preliminary information 1.5. Identify the effects of the fault and confirm from direct and/or indirect evidence 1.6. Respond to possible safety impacts of the fault in accordance with regulatory and team obligations and practices
2. Prepare for fault analysis	2.1. Identify possible causes of the fault, including intermittent faults, from an analysis of technical support information and available onboard diagnostic systems 2.2. Develop the most appropriate analysis process, including sequence, tests and testing equipment, and select from the range of available options 2.3. Obtain test equipment and prepare for the application in accordance with regulatory, manufacturer and team requirements 2.4. Select and prepare tooling and materials required to support the diagnostic process
3. Analyse the faults and determine repair/performance enhancement strategies	3.1. Follow the selected analysis process in accordance with technical specifications and directions and/or the locally authorised method 3.2. Conduct test using testing equipment in accordance with regulatory requirements and manufacturer/component supplier specifications 3.3. Verify test results and other diagnostic findings, if necessary, and use reliable alternative or optional processes 3.4. Obtain authority to partly dismantle components, to permit an accurate inspection of analysed faults, if required

ELEMENT	PERFORMANCE CRITERIA
	<p>3.5. Draw valid conclusions about the cause, and draw the direct and indirect consequences of the fault from available evidence and document to team requirements</p> <p>3.6. Research technical support information to identify options for rectifying the fault or enhancing performance</p> <p>3.7. Select the most appropriate option from an analysis of the options, the prevailing circumstances, regulatory requirements and team policies</p> <p>3.8. Document and communicate the selected repairs/modifications or adaptation of equipment to appropriate persons, including the analysis outcome and repair requirements</p>
4. Conduct repairs/implement performance improvement strategies	<p>4.1. Carry out repairs and adjustments to components/sub-assemblies in accordance with manufacturer/component supplier specifications for methods, equipment used and tolerances relative to the system</p> <p>4.2. Conduct post-repair checks and vehicle start-up</p>
5. Clean up work area and finalise documentation	<p>5.1. Clean, maintain and prepare equipment and tooling for future use and store in accordance with manufacturer/component supplier specifications and team requirements</p> <p>5.2. Remove surplus and unserviceable components in accordance with team procedures</p> <p>5.3. Report problems with the work area or the operation of the equipment to appropriate persons</p> <p>5.4. Record work/vehicle documentation</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to carburetted fuel systems, including tooling equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable confirmation of work requirements, coordination of work with technical supervisors, other technicians and workers, and reporting of work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to the analysis and repair of carburetted fuel, including technical, regulatory, environmental and safety requirements
- numeracy skills to the level required to use mathematical ideas and techniques to correctly interpret test results in order to determine required action for the maintenance of carburetted fuel systems
- problem-solving skills to the level required to use pre-checking and inspection techniques to anticipate maintenance and repair problems, avoid reworking and avoid wastage
- team skills to the level required to work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area and obtaining equipment and material, to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- types, function, operations and limitations of carburetted fuel systems and components
- properties of fuels used in the motorsport industry, including compatibility with carburetted fuel systems components
- carburetted fuel systems layouts
- diagnosis and testing procedures, and test instrument application
- symptom and cause differentiation
- repair and/or performance improvement strategies
- removal, replacement and repair, adjustment and post-repair check procedures
- diagnosis theory, including concept, design and planning
- record keeping procedures, including procedures for reporting equipment faults and

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<p>component defects</p> <ul style="list-style-type: none"><li>• team guidelines regarding acceptable quality and tolerance levels</li><li>• equipment safety requirements</li><li>• WHS policies and procedures</li><li>• applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to systems</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements, including the isolation of equipment and the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly analyse, repair and conduct post-repair checks on a minimum of three (3) performance carburetted system faults, involving:
  - rough running, under/over fuelling, misfiring, poor performance, contamination or leaks, with:
    - at least one fault having a possible combination of causes involved in the sub-systems (e.g. fuel cells, pumps, pressure and/or flow regulation, management/control system and injection)
    - the scope of the faults necessitates the use of a range of testing equipment
- work effectively with others.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

**EVIDENCE GUIDE**

	<p>disability.</p> <ul style="list-style-type: none"> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• access to competition vehicles carburetted systems and associated test instruments</li> <li>• material and equipment</li> <li>• information on work specifications</li> <li>• team requirements</li> <li>• organisational procedures</li> <li>• safety procedures, regulations and quality standards.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

**RANGE STATEMENT**

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Carburetted fuel system**

A performance carburetted fuel system is defined as a specialised motorsport/performance system incorporating an adjustable fuel supply system, and may include:

- a duplicate/backup supply system
- single or multiple carburettor systems

**Fuel systems**

Fuel systems, including sub-systems and components, may include:

- fuel cells
- pumps
- pressure and/or flow regulation
- management/control system
- multiple carburetion components

**Diagnosis**

Diagnosis includes covering:

- module and parts replacement in related electrical, electronic and pneumatic control systems

**Fuel system faults**

Fuel system faults may include:

- rough running
- under/over fuelling
- misfiring
- poor performance
- contamination
- leakage
- indirect faults caused by the influence of external systems which may or may not be faulty in their primary operation

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine and select competition vehicle tyres and wheels	1.1. Use controlling body and category rules, supplementary regulations, component supplier specifications and team instructions to specify task requirements, including design, quality, material, equipment and quantities 1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work 1.3. Use regulations and specifications/tolerances to identify a competitive advantage 1.4. Check specifications for required operating conditions and seek clarification of specifications, where required 1.5. Formulate tyre and wheel requirements according to known factors 1.6. Select tyre and wheel assemblies for application against requirements and document and report to appropriate persons
2. Prepare work area and equipment	2.1. Check tooling and equipment for safe and effective operation 2.2. Clean and lay out work area for job requirements 2.3. Report problems with the work area or the operation of equipment to appropriate persons
3. Mount tyre and wheel assembly to vehicle	3.1. Clean or treat mounting surfaces and threaded components and check for damage 3.2. Select tyre and wheel assemblies from stock according to markings (i.e. scrutineers/category officials or team markings) and check against criteria for an event 3.3. Inspect tyre and wheel assemblies for serviceability 3.4. Fit tyre and wheel assemblies using mounting sequence and techniques 3.5. Tension fasteners to team/component supplier specifications and engage fastener locking device, where fitted 3.6. Check during and after installation to ensure accurate and complete fitting 3.7. Report problems with tyre and wheel assemblies to appropriate persons

ELEMENT	PERFORMANCE CRITERIA
4. Conduct pre-race tyre and wheel preparation	<ul style="list-style-type: none"><li>4.1. Obtain recommended start/cold pressures and optimum operating/hot pressures</li><li>4.2. Set tyre inflation pressures to specifications</li><li>4.3. Measure and document baseline tyre temperature, ambient and traction surface temperatures</li><li>4.4. Buff tyres, if specified</li><li>4.5. Fit and turn on tyre warmers, if specified (and if allowed in category rules)</li></ul>
5. Conduct post-race tyre and wheel maintenance	<ul style="list-style-type: none"><li>5.1. Check tyre pressures and temperatures at specified times and document data</li><li>5.2. Read tyre contact surface for handling and wear indications and document data</li><li>5.3. Question driver/rider for assessment of handling characteristics and document data</li><li>5.4. Source additional data, as required, and identify changes (if any) required to tyres and wheels prior to next race</li><li>5.5. Clean tyre contact surfaces, as required</li><li>5.6. Change tyres to different compound or pattern, as required</li><li>5.7. Change tyre pressures, as required</li><li>5.8. Tag or mark removed tyres for data audit trail</li></ul>
6. Clean up and complete documentation	<ul style="list-style-type: none"><li>6.1. Pack and store tyres</li><li>6.2. Assess tyre and wheel stock inventory and document and report to appropriate persons</li><li>6.3. Maintain tooling and return to storage</li><li>6.4. Complete team/component supplier documentation</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to selecting and preparing tyres and wheels for motorsport applications, including tooling, equipment, calculators and measuring devices
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other workers, and to report work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to selecting and preparing tyres and wheels for motorsport applications, team requirements, manufacturer/component supplier specifications and safety procedures
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during the selection and preparation of tyres and wheels for motorsport applications
- problem-solving skills to the level required to use pre-checking and inspection techniques to anticipate assembly problems in order to work efficiently and effectively
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the worksite, and the coordination of equipment, systems and materials to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- controlling body rules, category rules and supplementary regulations, manufacturer/component supplier specifications (e.g. wheel size, application and pressures both cold and hot) and team requirements/job specifications
- wheel and tyre types, manufacturer/component supplier markings, function, application and limitations, including specifications, handling characteristics and manufacturer/component supplier recommendation for use
- tyre and wheel serviceability inspection techniques
- reading tyres for handling and wear indications
- driver/rider debriefing
- tyre temperature testing
- tyre measurement, including stagger calculations

**REQUIRED SKILLS AND KNOWLEDGE**

- tyre buffing, cleaning and warming
- tyre and wheel storage methods
- markings by scrutineers/category officials or team markings
- record keeping techniques
- procedures for reporting equipment faults and component defects
- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to selecting and preparing tyres

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- correctly apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly prepare and fit tyres and wheels to a minimum of two (2) different vehicles in differing situations
- comply with tyre and wheel manufacturer/component supplier recommendations for use
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to competition vehicles
  - associated assembly tooling
  - related computing, operational and inventory support

**EVIDENCE GUIDE**

	<p>systems</p> <ul style="list-style-type: none"> <li>• work areas</li> <li>• material and equipment</li> <li>• information on work specifications</li> <li>• customer requirements</li> <li>• organisational procedures</li> <li>• safety procedures and regulations</li> <li>• quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work

**RANGE STATEMENT**

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Inspection for serviceability**

Inspection for serviceability may include:

- checking wheel condition for damage or fatigue
- valve body/pressure relief valves
- ensuring inner surface of wheel is free from contaminants (e.g. oil/grease, water and dirt/gravel)
- checking tyre condition for signs of damage, excessive wear and flat spots

**Competitive advantage**

Competitive advantage may include:

- technical advantage
- psychological advantage
- promotional advantage

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing, including closed-in shoes, long trousers, handling gloves and other equipment
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements
- material safety management systems
- controlling body requirements
- manufacturer/component supplier specifications
- local safe operating procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• pit lane/service area specified tooling</li> <li>• lifting devices</li> <li>• air tooling</li> <li>• torque wrenches</li> <li>• tyre hardness test instruments</li> <li>• air pressure gauges</li> <li>• tyre buffers and cleaners</li> <li>• tyre heaters</li> <li>• pyrometers</li> <li>• hand tooling</li> </ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• event scheduling and location details</li> <li>• team procedures and standards related to: <ul style="list-style-type: none"> <li>• selecting and preparing tyres and wheels for motorsport applications</li> <li>• reporting and communication</li> <li>• use of tooling and equipment</li> <li>• emergency service contacts and team persons emergency contacts</li> <li>• team emergency and event procedures for accidents or injury</li> </ul> </li> <li>• work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</li> <li>• manufacturer/component supplier</li> </ul>

**RANGE STATEMENT**

	<p>specifications and application procedures for test equipment and material</p> <ul style="list-style-type: none"><li>• Australian Design Rules (where applicable)</li><li>• safety body publications</li><li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li></ul>

## AURMTQ4001 Analyse and repair complex performance driveline systems

### Modification History

Release	Comment
Release 1	Replaces AURM441293B Analyse and repair complex performance driveline systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to analyse and repair complex performance transmissions, final drive and drivelines, including engine to transmission drive couplings.</p> <p>It requires the technical ability to test, identify repairs or performance enhancement strategies, and to conduct repairs, adjustments and post-repair checks to complex performance transmissions, final drive and drivelines.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who analyse faults and repair and implement performance improvement strategies in complex performance transmissions, final drive and drivelines in the motorsport and performance enhancement environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Prerequisite units	
AURLTQ3001	Repair final drive assemblies (light vehicle)
AURLTQ3002	Repair final drive - driveline (light vehicle)
AURLTX3001	Repair transmissions - manual (light vehicle)
AURMTA3007	Conduct non-destructive testing

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm faults	<p>1.1. Use controlling body rules, category rules, supplementary regulations and team requirements to specify task requirements, including configuration, equipment, quality and quantities</p> <p>1.2. Access and interpret benchmark specifications for a correctly functioning transmission/final drive/driveline</p> <p>1.3. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work</p> <p>1.4. Examine the details of the fault and document available preliminary information</p> <p>1.5. Identify the effects of the fault and confirm from direct and/or indirect evidence</p> <p>1.6. Identify and respond to possible safety impacts of the fault in accordance with regulatory and team obligations and practices</p>
2. Prepare for fault analysis	<p>2.1. Identify possible causes of the fault, including intermittent faults, from an analysis of technical support information and available onboard diagnostic systems</p> <p>2.2. Develop the most appropriate analysis process, including sequence, tests and testing equipment, and select from the range of available options</p> <p>2.3. Obtain test equipment and prepare for the application in accordance with regulatory, manufacturer and team requirements</p> <p>2.4. Select and prepare for use, tooling and materials required to support the diagnostic process</p> <p>2.5. Prepare complex performance driveline system components for the diagnostic process, including isolation and cleaning requirements</p>
3. Diagnose the fault and determine repair/performance enhancement strategies	<p>3.1. Undertake the selected analysis process in accordance with technical specifications and directions and/or the locally authorised method</p> <p>3.2. Apply test and use testing equipment in accordance with regulatory requirements and manufacturer/component supplier specifications</p> <p>3.3. Verify test results and other diagnostic findings, if necessary, by using reliable alternative or optional</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>processes</p> <p>3.4.Obtain authority to partly dismantle components, to permit an accurate inspection of analysed faults, if required</p> <p>3.5.Draw valid conclusions about the cause, and draw direct and indirect consequences of the fault from available evidence and document to team requirements</p> <p>3.6.Research technical support information and use to identify options for rectifying the fault or enhancing performance</p> <p>3.7.Select the most appropriate option from an analysis of the options, the prevailing circumstances, regulatory requirements and team policies</p> <p>3.8.Document and communicate the selected repairs/modifications or adaptation of equipment to appropriate persons, including the analysis outcome and repair requirements</p>
4. Conduct repairs/ implement performance improvement strategies	<p>4.1.Carry out repairs and adjustments to components/sub-assemblies in accordance with manufacturer/component supplier specifications for methods, equipment used and tolerances relative to the system</p> <p>4.2.Conduct post-repair checks and vehicle start-up</p>
5. Clean up work area and finalise documentation	<p>5.1.Clean, maintain and prepare equipment and tooling for future use and store in accordance with manufacturer/component supplier specifications and team requirements</p> <p>5.2.Remove surplus and unserviceable components in accordance with team procedures</p> <p>5.3.Report problems with the work area or the operation of the equipment to appropriate persons</p> <p>5.4.Record work/vehicle documentation</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the analysis and repair of complex performance driveline systems, including tooling, measuring devices, test instruments, workshop equipment, calculators and computers
- communication skills to the level required to communicate ideas and information to enable clarification of requirements, coordination of work with supervisors and other workers, and to report work outcomes and resolution of problems
- literacy skills to the level required to collect, organise and understand information related to the analysis and repair of complex performance driveline systems, including technical, regulatory, environmental and safety requirements
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during the analysis and repair of complex performance driveline systems
- problem-solving skills to the level required to create and apply systematic diagnostic and problem-solving techniques to anticipate problems, avoid reworking and avoid wastage
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise communication, workflow and productivity
- planning skills to the level required to plan and organise activities, including the preparation and layout of the work area, and the coordination of equipment, systems and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- types, function, operations and limitations of complex performance transmission, final drive and drivelines, including engine-transmission drive couplings, such as clutches and torque converters
- diagnosis and testing procedures, and test instrument application
- symptom and cause differentiation
- repair and performance improvement strategies
- removal, replacement and repair, adjustment and post-repair check procedures
- diagnosis theory, including concept, design and planning
- record keeping procedures
- procedures for reporting equipment faults and component defects
- team guidelines regarding acceptable quality and tolerance levels

**REQUIRED SKILLS AND KNOWLEDGE**

- equipment safety requirements
- WHS policies and procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to complex fuel systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply safety requirements, including the isolation of equipment and the use of personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly analyse, repair and conduct post-repair checks on a minimum of four (4) driveline systems faults which could involve:
  - selection, noise, vibration, harshness or slipping faults
  - faults which give the same effects, but may have multiple causes
  - the scope of the faults necessitates the use of a range of testing equipment
- work effectively with others.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - access to competition vehicles driveline systems and

<b>EVIDENCE GUIDE</b>	
	<p>associated test instruments</p> <ul style="list-style-type: none"> <li>• material and equipment</li> <li>• information on work specifications</li> <li>• team requirements</li> <li>• organisational procedures</li> <li>• safety procedures, regulations and quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<b>RANGE STATEMENT</b>	
<b>Complex performance transmission</b>	A complex performance transmission is defined as one that is a specialised motorsport/performance component integrating two or more systems that use either mechanical, hydraulic, pneumatic or electrical/electronic media
<b>Driveline systems</b>	Driveline systems, including sub-systems and components, may include: <ul style="list-style-type: none"><li>• clutches</li><li>• torque converters</li><li>• manual and automatic transmissions</li><li>• drive shafts</li><li>• final drives</li></ul>
<b>Diagnosis</b>	Diagnosis includes covering: <ul style="list-style-type: none"><li>• module and parts replacement in related electrical, electronic, pneumatic or hydraulic control systems</li></ul>
<b>Driveline system faults</b>	Driveline system faults may include: <ul style="list-style-type: none"><li>• abnormal gear wear</li><li>• abnormal clutch operations</li><li>• contamination</li><li>• hard shifting</li><li>• harshness</li><li>• loose mountings</li><li>• leaks</li><li>• lubrication</li><li>• noises,</li><li>• transmission slippage and vibrations</li><li>• indirect faults caused by the influence of external systems which may or may not be faulty in their primary operation</li></ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include: <ul style="list-style-type: none"><li>• personal protective equipment and clothing, including closed-in shoes, long trousers, handling gloves and other equipment</li><li>• safety equipment</li><li>• first aid equipment</li></ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• team insurance requirements</li> <li>• material safety management systems</li> <li>• controlling body requirements</li> <li>• manufacturer/component supplier specifications\</li> <li>• local safe operating procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• manufacturer/component supplier specialist tooling</li> <li>• jacking and lifting equipment</li> <li>• measuring devices and test instruments</li> <li>• computerised diagnostic systems</li> <li>• computers and related software</li> </ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• event scheduling and location details</li> <li>• team procedures and standards related to:</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• applying diagnosing and maintaining complex performance driveline systems</li><li>• life of components</li><li>• reporting and communication</li><li>• use of tooling and equipment</li><li>• emergency service contacts and team persons emergency contacts</li><li>• team emergency and event procedures for accidents or injury</li><li>• work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</li><li>• manufacturer/component supplier specifications and application procedures for test equipment and material</li><li>• safety body publications</li><li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li></ul>

-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Use team instructions, supplementary regulations and component supplier specifications to determine job requirements, including design, quality, materials, equipment and quantities</li><li>1.2. Observe workplace health and safety (WHS) requirements, including regulatory requirements, equipment and system isolation requirements, and personal protection needs, throughout the work</li><li>1.3. Check specifications and seek clarification, where required</li><li>1.4. Organise hose/pipe type and fittings according to application</li><li>1.5. Organise tooling and equipment and check for safe and effective operation</li><li>1.6. Clean and lay out work area for job requirements</li><li>1.7. Report problems with the work area or the operation of equipment to appropriate persons</li><li>1.8. Identify procedures for minimising waste material</li></ul>
2. Construct hose/pipe assemblies	<ul style="list-style-type: none"><li>2.1. Measure and calculate hose/pipe length</li><li>2.2. Cut hose/pipe length</li><li>2.3. Bend hose/pipe to conform to fitting requirement</li><li>2.4. Install and secure fittings in accordance with component supplier specifications and procedures or team requirements</li><li>2.5. Clean and pressure-test assembly</li></ul>
3. Clean up work area and complete record keeping	<ul style="list-style-type: none"><li>3.1. Return tooling to storage</li><li>3.2. Tag and shelve/store surplus components and consumables</li><li>3.3. Remove surplus material from work area</li><li>3.4. Clean up spillage from work area and vehicle</li><li>3.5. Complete team/component supplier documentation</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the construction of hose/pipe assemblies for competition vehicles, including tooling, equipment, calculators and measuring devices, and to use pre-checking and inspection techniques to anticipate assembly problems
- communication skills to the level required to communicate ideas and information to enable clarification of requirements and coordination of work with site managers, supervisors or other workers, and to report work outcomes and problems
- literacy skills to the level required to collect, organise and understand information related to team requirements, manufacturer specifications, plans and safety procedures, including interpreting hose/pipe and fitting charts
- numeracy skills to the level required to use mathematical ideas and techniques to correctly complete measurements and calculations required during the construction of hose/pipe assemblies for competition vehicles (e.g. flow rates and pressures)
- problem-solving skills to the level required to anticipate changing information requirements or influences
- team skills to the level required to work with others to foster the team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- planning skills to the level required to plan and organise activities, including preparation and layout of the worksite, and coordination of equipment, systems and material to avoid backtracking, workflow interruptions or wastage

#### Required knowledge

Required knowledge includes:

- types of and selection of hoses/pipes and fittings, including:
  - sizing of hoses/pipes and fittings, such as Army-Navy (AN) thread dash number, Society of Automotive Engineers (SAE) and National Pipe Thread (NPT)
  - swaged and reusable fittings
  - hose/pipe material and construction
  - hose/pipe material fuel/lubricant/chemical compatibility
- supplementary regulations
- component supplier specifications
- techniques to:
  - locate and layout hose/pipe assembly

**REQUIRED SKILLS AND KNOWLEDGE**

- measure and cut hoses/pipes
- bend and flare pipes
- assemble hose/pipe
- flush and test hose/pipe assemblies
- protect methods for hose/pipe assemblies
- workplace guidelines:
  - acceptable tolerance levels
  - safety policies and procedures
  - procedures for reporting equipment faults and component defects
  - team requirements and job specifications
  - storage and maintenance of hoses/pipes
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, reporting and recording procedures, relevant to constructing hose and pipe assemblies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret and apply team requirements, controlling body and category rules and supplementary regulations
- apply and use safety equipment and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to competition vehicle or equipment
  - achieve required outcomes within team time and quality standards
- correctly construct and test hose/pipe assemblies according to application on a minimum of two (2) occasions, covering each of the following:
  - identify suitable hose/pipe and fittings for the application
  - select and apply construction and assembly techniques
  - test assembly to required specification
- work effectively with others
- modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• hose/pipe construction and testing tooling and equipment</li> <li>• computing, operational and inventory support systems</li> <li>• materials, equipment and information on work specifications</li> <li>• customer requirements</li> <li>• organisational procedures</li> <li>• safety procedures and regulations</li> <li>• quality standards.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work

**RANGE STATEMENT**

situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Techniques**

Techniques may include:

- measuring
- calculating
- cutting
- bending
- flaring
- assembling
- testing

**Components**

Components may include:

- braided hose (fabric, metal and Kevlar covered)
- replaceable hose ends and fittings
- metal pipe
- flared and ferrule fittings

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- material safety management systems
- controlling body requirements
- manufacturer specifications
- local safe operating procedures
- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- team insurance requirements

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• industrial relations</li> <li>• Australian standards</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• health regulations</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• component supplier tooling</li> <li>• test equipment</li> <li>• hand tooling</li> <li>• measuring devices</li> <li>• calculators</li> </ul>
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>• controlling body rules, category rules and supplementary regulations</li> <li>• team procedures and standards relating to:             <ul style="list-style-type: none"> <li>• constructing hose/pipe assemblies</li> <li>• reporting and communication</li> <li>• use of tooling and equipment</li> <li>• emergency service contacts and team persons emergency contacts</li> <li>• team emergency and event procedures for accidents or injury</li> <li>• safety requirements</li> </ul> </li> <li>• work instructions, including worksheets, material safety data sheets (MSDS), assembly procedures, plans, drawings, designs and checklists</li> <li>• manufacturer/component supplier specifications and application procedures for test equipment and material</li> <li>• safety body publications</li> <li>• environmental, hazardous chemicals and dangerous goods legislation and local requirements relating to the disposal and use of fuels, lubricants, coolants and cleaning agents</li> </ul>

## AURNTA3001 Inspect, service and repair lift truck mast assemblies

### Modification History

Release	Comment
Release 1	<p>Replaces AURT300771A Inspect, service and repair lift truck mast assemblies</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the inspection, service and repair of lift truck mast assemblies.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and analysis of results, completion of servicing and repair activities and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes lift truck mast assemblies.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect lift truck mast assemblies	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. Technical and/or calibration requirements for inspecting lift truck mast assemblies are sourced and support equipment is identified and prepared</p> <p>1.6. Warnings in relation to working with lift truck mast assemblies are observed</p>
2. Conduct inspection and analyse results	<p>2.1. Methods for inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2. Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3. Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4. Report is processed in accordance with workplace procedures</p>
3. Prepare to service/repair lift truck mast assemblies	<p>3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2. Procedures and information identified and sourced</p> <p>3.3. Technical and tool requirements for service/repair of lift truck mast assemblies are identified and support equipment is identified and prepared</p>
4. Carry out service and repairs	<p>4.1. Methods for service and repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2. Adjustments made during the service and repair are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle for use or storage	<p>5.1. Service/repairs schedule documentation is completed</p> <p>5.2. Final inspection is made to ensure protective guards,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>safety features and cowlings are in place</p> <p>5.3. Final inspection is made to ensure work is to workplace expectations</p> <p>5.4. Lift truck is cleaned for use or storage to workplace expectations</p> <p>5.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection, servicing and repair of lift truck mast assemblies, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with lift truck mast assemblies
- operating principles of lift truck mast assemblies and their relationship to other components
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service and/or repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting inspection results
- conducting inspection, service and repair in accordance with workplace and manufacturer/component supplier requirements
- completing service and repair of lift truck mast assemblies and associated components within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection, servicing and repair of lift truck mast assemblies
- equipment, hand and power tooling appropriate to inspection, servicing and repair of lift truck mast assemblies
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment,

<b>RANGE STATEMENT</b>	
	use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and cleanup management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault

<b>RANGE STATEMENT</b>	
	documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection, servicing and repair of lift truck mast assemblies</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURPTA1001 Carry out pre-repair operations to outdoor power equipment

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to prepare and clean outdoor power equipment and components by mechanical or chemical means and prepare equipment or components in readiness for either storage or repair.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, cleaning of components, the removal of components, tagging and storage of components and completion of work finalisation processes, including clean-up and documentation.</p> <p>No licencing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to lawn mowers, chainsaws, pumps, post-hole borers, portable generators and stationary engines, as well as brush cutters, leaf blowers and other light-engine outdoor power equipment.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake pre-repair operations	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Method options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate tools and equipment are selected and prepared</p> <p>1.6. Warnings relating to working with <b>cleaning materials</b> are observed</p>
2. Clean equipment or components prior to repair or storage	<p>2.1. Cleaning materials and <b>equipment</b> are used according to workplace procedures and manufacturer and component supplier specifications</p> <p>2.2. Components are cleaned to workplace expectations and without causing damage to components or systems</p> <p>2.3. Used cleaning agents and waste materials are safely disposed of according to industry regulations and guidelines and workplace requirements</p> <p>2.4. Cleaning activities are carried out according to industry regulations and guidelines, workplace health and safety and <b>environmental requirements</b></p>
3. Clean up work area and finalise work processes	<p>3.1. Components are prepared for further repair procedures or treated with rust prevention material when being stored</p> <p>3.2. Components are stored according to workplace procedures, to prevent injury to self and others or damage to components</p> <p>3.3. Tools and equipment are checked and stored according to workplace expectations</p> <p>3.4. Pre-repair operation documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to follow oral and written instructions
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during pre-repair operations
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
- technical skills to use workplace tools and equipment relating to the pre-repair operations of outdoor power equipment

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with chemical cleaning agents and cleaning equipment
- cleaning procedures
- environmental considerations related to chemical and cleaning agent use
- storage procedures of cleaned outdoor power equipment components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- conduct cleaning and storage operations according to workplace requirements
- complete workplace documentation according to workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available for the assessment of this unit:

- workplace location or simulated workplace
- outdoor power equipment and outdoor power equipment components requiring pre-repair operations
- equipment, cleaning agents and material relevant to carrying out pre-repair operations
- hand tools appropriate to carrying out pre-repair operations

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and work instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace instructions*** may include:

- computer-generated instructions
- verbal instructions
- written instructions.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Procedures and information*** may include:

- safe work procedures relating to outdoor power equipment pre-repair operations
- verbal, written and graphical instructions
- signage.
- work schedules, plans and specifications
- work bulletins or memos
- material safety data sheets (MSDS)
- diagrams or sketches
- regulatory and legislative requirements relating to the automotive industry
- Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards
- outdoor power equipment repair manuals.

***Method options*** may include:

- steam cleaning
- high-pressure washing
- manual washing
- the use of protective coverings

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>dismantling.</li> </ul>
<i><b>Cleaning materials</b></i> may include:	<ul style="list-style-type: none"> <li>cleaning agents</li> <li>sprays (dewaxing, detergents, degreasers, special purpose agents)</li> <li>rust prevention material.</li> </ul>
<i><b>Equipment</b></i> may include:	<ul style="list-style-type: none"> <li>hand tools and equipment</li> <li>personal and vehicle protection</li> <li>storage tubs and racks</li> <li>special equipment (pressure washers, steam cleaners, spray equipment), power tools</li> <li>jacks and stands</li> <li>lifting equipment.</li> </ul>
<i><b>Environmental requirements</b></i> may include:	<ul style="list-style-type: none"> <li>waste management</li> <li>chemical and cleaning agent management</li> <li>control of noise and fumes</li> <li>clean-up management.</li> </ul>

## AURPTA1002 Perform minor adjustments to outdoor power equipment

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to carry out minor adjustments to components and equipment on outdoor power equipment.</p> <p>The unit involves demonstrating knowledge of outdoor power equipment componentry and operation and using mechanical hand tools to make adjustments to outdoor power equipment to ensure safe and efficient performance.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to minor mechanical adjustment of outdoor power equipment, components and systems.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and adjust outdoor power equipment	1.1. Job requirements are checked and confirmed according to <b>workplace procedures</b> and customer requirements 1.2. <b>Tools and equipment</b> are selected to meet job requirements 1.3. Work area is checked for safe working conditions and cleanliness prior to commencing task 1.4. <b>Workplace health and safety (WHS) requirements</b> and other appropriate precautions are identified and taken
2. Inspect outdoor power equipment and determine work requirement	2.1. Standard workplace inspection procedures for <b>outdoor power equipment</b> are used to determine condition 2.2. Service and repair options for outdoor power equipment are identified 2.3. <b>Workplace documentation</b> procedures are used to record minor adjustments to be performed
3. Perform minor adjustments	3.1. Tools and equipment are handled and used according to WHS requirements 3.2. <b>Minor adjustments</b> are performed on outdoor power equipment according to manufacturer and component supplier specifications 3.3. Outdoor power equipment component or system having undergone maintenance is operated through full range, noting test results, including non-conformity 3.4. Workplace documentation is used to record any work requirements beyond the scope of minor adjustments being performed
4. Clean up work area and finalise work processes	4.1. Tools and equipment are checked and stored according to workplace expectations 4.2. Work area is cleaned and tidied according to workplace procedures 4.3. Workplace documentation is completed according to workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor or other workers
  - report work outcomes and other requirements
- literacy skills:
  - reading skills to the level required to understand information relating to work orders, including common industry terminology and safety procedures
  - writing skills to prepare reports and interpret technical information and specifications
- numeracy skills to interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow standard workplace procedures
- problem-solving skills to:
  - identify technical and procedural problems
  - refer problems outside area of responsibility to appropriate person
  - self-management skills to:
    - locate and identify appropriate tools and equipment
    - recognise limitations and seek timely advice
    - follow basic workplace documentation, such as minor maintenance procedures
- teamwork skills to: work with others to contribute to job requirements and work outcomes
- technical skills to:
  - select tools and equipment appropriate to the task
  - use tools and equipment to perform minor adjustments to outdoor power equipment components and systems
- technology skills to use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relevant to outdoor power equipment
- methods of sourcing information relevant to performing minor adjustments to outdoor power equipment
- types and application of appropriate tools and equipment
- adjustment methods for outdoor power equipment
- workplace documentation policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select adjustment methods and techniques appropriate to the circumstances
- carry out a minimum of three minor adjustments according to workplace and manufacturer and component supplier specifications

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- a range of outdoor power equipment
- hand and power tools and specialised repair tools and equipment appropriate for performing minor adjustments to outdoor power equipment
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace procedures** may include:

- verbal or written and graphical instructions
- written maintenance procedures
- safety and emergency procedures
- service instructions
- reporting and recording procedures
- sustainability and environmental considerations
- organisational quality policies and procedures.

**Tools and equipment** may include:

- hand tools
- hand-held power tools and air tools
- specialised outdoor power equipment repair tools
- floor stands, workbench.

**Workplace health and safety (WHS) requirements:**

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

**Outdoor power equipment** types may include:

- lawn mowers
- chainsaws
- line trimmers
- mulchers
- pumps
- post-hole borers
- portable generators
- stationary engines
- brush cutters
- leaf blowers.

**Workplace documentation** may include:

- job card or work schedule
- work bulletins
- memos

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• regulatory/legislative requirements pertaining to outdoor power equipment safety</li> <li>• manufacturers design specifications and maintenance instructions</li> <li>• organisation work specifications and requirements</li> <li>• Australian standards.</li> </ul>
<i>Minor adjustments</i> may include adjustments to:	<ul style="list-style-type: none"> <li>• cutting systems</li> <li>• belt tension</li> <li>• cables and controls</li> <li>• carburettors</li> <li>• engine components</li> <li>• brakes</li> <li>• clutch</li> <li>• steering system</li> <li>• chain tension</li> <li>• foot controls.</li> </ul>

## AURPTA2003 Service and repair rotary cutting systems

### Modification History

Release	Comment
Release 1	Replaces AURP245171B Service and repair rotary cutting systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service and repair rotary cutting systems, including removal, repair/replacement, fitting and adjustment of components.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake servicing and repair of rotary cutting systems in the outdoor power equipment industry.</p> <p>Rotary cutting systems include electric and petrol driven rotary mowers, lawn edgers and brush cutters, and rotary cutting systems fitted to tractors, such as rotary hoes, chippers and mulchers.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service and repair operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer information 1.3. Identify and prepare tools, equipment and materials required for servicing and repair job 1.4. Set up work area
2. Determine service and repair requirements	2.1. Check customer requirements and equipment specifications, following workplace procedures 2.2. Test rotary cutting system, identify and document faults following workplace procedures 2.3. Plan and cost service and repair procedure 2.4. Discuss recommended repair process with customer and obtain authorisation to proceed
3. Service and repair rotary cutting system	3.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 3.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.3. Remove components for repair procedure and inspect for condition and serviceability 3.4. Discard unusable components and retain reusable and repairable components, following workplace procedures 3.5. Determine availability of replacement parts, qualified repair staff or subcontractors and facilities 3.6. Follow service and repair procedures and check work at designated points to determine serviceability of sub-assemblies and conformity to specifications 3.7. Fit reusable, repaired and replacement parts in accordance with manufacturer/component supplier specifications and workplace procedures
4. Check rotary cutting system for normal operation	4.1. Operate rotary cutting system through full operating range 4.2. Check operation against equipment specifications and customer requirements 4.3. Make any adjustments as required and re-test 4.4. Check adjustments, fluid levels and alignments

ELEMENT	PERFORMANCE CRITERIA
	4.5. Complete workplace documentation and update customer and warranty information as required
5. Complete work and return unit to customer	5.1. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place 5.2. Clean unit to workplace expectations 5.3. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures 5.4. Provide customer report on repairs and replacements and explain follow-up adjustments, use and care of equipment and warranty requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to repairing rotary cutting systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with rotary cutting equipment
- the relationship of a rotary cutting system to the power unit, drive, safety and adjustment systems and overload protection device
- mechanical and hydraulic principles relevant to rotary cutting systems
- classifications of rotary cutting systems and components
- material used in rotary cutting system components
- types and causes of faults in rotary cutting systems
- types and layout of service/repair manuals (hard copy and electronic)
- servicing and repair procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and

**REQUIRED SKILLS AND KNOWLEDGE**

- repairing rotary cutting systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing and repairing rotary cutting systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- conduct service and repair of a range of rotary cutting systems in accordance with workplace and manufacturer/component supplier requirements
- complete service and repair of rotary cutting systems and associated components within workplace timeframes
- present rotary cutting equipment to customer in compliance with workplace requirements
- complete workplace records.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of rotary cutting systems and components
  - an area for safe testing of rotary cutting systems
  - materials relevant to servicing and repair of rotary cutting systems
  - equipment, hand and power tooling appropriate to

<b>EVIDENCE GUIDE</b>	
	servicing and repair of rotary cutting systems <ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Rotary cutting systems</b>	Rotary cutting systems may include: <ul style="list-style-type: none"> <li>• electric or petrol driven</li> <li>• rotary mowers, lawn edgers and brush cutters</li> <li>• rotary cutting systems fitted to tractors, such</li> </ul>

<b>RANGE STATEMENT</b>	
	as rotary hoes, chippers and mulchers
<b>Servicing and repair methods</b>	<p>Servicing and repair methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site servicing and repair</li> <li>• inspection, repair and replacement of components</li> <li>• adjustments</li> <li>• lubricating</li> <li>• testing of repaired unit</li> <li>• communicating with customers</li> <li>• documenting and reporting on service and repair</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• equipment/floor stands</li> <li>• specific service/repair and general workshop equipment and tooling</li> <li>• jacks, air and electric tooling</li> <li>• measuring equipment</li> <li>• exhaust gas extraction system</li> <li>• lifting equipment</li> <li>• lubricating equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• cleaning materials</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to servicing and repairing rotary cutting systems</li> <li>• regulatory/legislative requirements pertaining to rotary cutting systems</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• pollution</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements may include:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• enterprise operations and procedures</li></ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"><li>• quality policies and procedures, including Australian standards</li><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li><li>• manufacturer specifications and industry codes of practice</li><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service and repair operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer's information 1.3. Identify and prepare tools, equipment and materials required for servicing and repair job 1.4. Set up work area
2. Determine service and repair requirements	2.1. Check customer requirements and equipment specifications following workplace procedures 2.2. Test drum cutting system, identify and document faults following workplace procedures 2.3. Plan and cost service and repair procedure 2.4. Discuss recommended repair process with customer and obtain authorisation to proceed
3. Service and repair drum cutting system	3.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 3.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.3. Remove components for repair procedure and inspect for condition and serviceability 3.4. Discard unusable components and retain reusable and repairable components, following workplace procedures 3.5. Determine availability of replacement parts, qualified repair staff or subcontractors and facilities 3.6. Follow service and repair procedures and check work at designated points to determine serviceability of sub-assemblies and conformity to specifications 3.7. Fit reusable, repaired and replacement parts in accordance with manufacturer/component supplier specifications and workplace procedures
4. Check drum cutting system for normal operation	4.1. Operate drum cutting system through full operating range 4.2. Check operation against equipment specifications and customer requirements 4.3. Make any adjustments as required and re-test 4.4. Check adjustments, fluid levels and alignments

ELEMENT	PERFORMANCE CRITERIA
	4.5. Complete workplace documentation and update customer and warranty information as required
5. Complete work and return unit to customer	5.1. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place 5.2. Clean unit to workplace expectations 5.3. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures 5.4. Provide customer report on repairs and replacements and explain follow-up adjustments, use and care of equipment and warranty requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to repairing drum cutting systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with drum cutting equipment
- the relationship of a drum cutting system to the power unit, drive, safety and adjustment systems and overload protection device
- mechanical principles relevant to drum cutting systems
- classifications of drum cutting systems and components
- material used in drum cutting system components
- types and causes of faults in drum cutting systems
- types and layout of service/repair manuals (hard copy and electronic)
- servicing and repair procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and

**REQUIRED SKILLS AND KNOWLEDGE**

- repairing drum cutting systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing and repairing drum cutting systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- conduct service in accordance with workplace and manufacturer/component supplier requirements
- repair/replace, fit and adjust components in accordance with specifications and workplace procedures
- check adjustments and alignments of drum cutting systems
- complete service and repair of drum cutting systems and associated components within workplace timeframes
- present drum cutting equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of drum cutting systems and components
  - an area for safe testing of drum cutting systems

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>materials relevant to servicing and repair of drum cutting systems</li> <li>equipment, hand and power tooling appropriate to servicing and repair of drum cutting systems</li> <li>specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Drum cutting systems</b>	Drum cutting systems may include:

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service and repair operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer information 1.3. Identify and prepare tools, equipment and materials required for servicing and repair job 1.4. Set up work area
2. Determine service and repair requirements	2.1. Check customer requirements and equipment specifications following workplace procedures 2.2. Follow safety procedures, including personal protection needs, for handling chainsaws 2.3. Remove chain and guide bar and inspect for wear and damage 2.4. Plan and cost service and repair procedure 2.5. Discuss recommended repair process with customer and obtain authorisation to proceed
3. Service and repair chainsaw cutting system	3.1. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.2. Check equipment manufacturer/component supplier service specifications and recommendations 3.3. Remove components for repair procedure and inspect for condition and serviceability 3.4. Discard unusable components and retain reusable and repairable components following workplace procedures 3.5. Determine availability of replacement parts, qualified repair staff or subcontractors 3.6. Fit reusable, repaired and replacement parts in accordance with manufacturer/component supplier specifications and workplace procedures 3.7. Sharpen chain cutting system components to provide effective cutting edges 3.8. Adjust and tension components in accordance with manufacturer/component supplier specifications 3.9. Perform lubrication and alignment checks
4. Check chainsaw cutting system for normal operation	4.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs, for operating a chainsaw

ELEMENT	PERFORMANCE CRITERIA
	<ul style="list-style-type: none"><li>4.2.Start up chainsaw and check operation of safety features against equipment specifications</li><li>4.3.Make any adjustments as required and re-test</li><li>4.4.Check adjustments, fluid levels and alignments</li><li>4.5.Complete workplace documentation and update customer and warranty information as required</li></ul>
5. Complete work and return unit to customer	<ul style="list-style-type: none"><li>5.1.Inspect repaired unit to ensure protective guards, cowlings and safety features are in place</li><li>5.2.Clean unit to workplace expectations</li><li>5.3.Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</li><li>5.4.Provide customer report on repairs and replacements and explain follow-up adjustments, use and care of equipment and warranty requirements</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to repairing chainsaw cutting systems and to safely start a chainsaw
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with chainsaw cutting equipment
- safe starting procedures for chainsaws
- the relationship of a chainsaw cutting system to the power unit, drive, safety and adjustment systems and overload protection device
- mechanical principles relevant to chainsaw cutting systems
- classifications of chainsaw cutting systems and components
- material used in chainsaw cutting system components
- types and causes of faults in chainsaw cutting systems
- types and layout of service/repair manuals (hard copy and electronic)
- servicing and repair procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications

**REQUIRED SKILLS AND KNOWLEDGE**

- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and repairing chainsaw cutting systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing and repairing chainsaw cutting systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- conduct service in accordance with workplace and manufacturer/component supplier requirements
- repair/replace, fit, sharpen and adjust a range of chainsaw components in accordance with specifications and workplace procedures
- safely start and check operation, adjustments and alignments of chainsaw cutting systems
- complete service and repair of chainsaw cutting systems and associated components within workplace timeframes
- present repaired chainsaw cutting equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of chainsaw cutting systems and components

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• area and equipment, including personal protection needs for safe testing of chainsaw cutting systems</li> <li>• materials relevant to servicing and repair of chainsaw cutting systems</li> <li>• equipment, hand and power tooling appropriate to servicing and repair of chainsaw cutting systems</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<b>RANGE STATEMENT</b>	
<b>Chainsaw cutting systems</b>	<p>Chainsaw cutting systems may include:</p> <ul style="list-style-type: none"> <li>• electric, air, hydraulic and petrol powered</li> <li>• equipment fitted with a chain cutting system</li> <li>• chain cutting system components fitted to chainsaws</li> </ul>
<b>Chainsaw system variables</b>	<p>Chainsaw system variables may include:</p> <ul style="list-style-type: none"> <li>• nickel alloy and chrome-plated cutters</li> <li>• replaceable sprocket nose or stellite-tipped bar</li> <li>• impact and overload protection</li> <li>• safety brake</li> <li>• manual and automatic lubrication</li> </ul>
<b>Servicing and repair methods</b>	<p>Servicing and repair methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site servicing and repair</li> <li>• inspection, repair and replacement of components</li> <li>• fault rectification, sharpening, grinding, tension adjusting and testing chain cutting system components</li> <li>• breaking and joining, adjusting, aligning, lubricating and testing chainsaw cutting systems</li> <li>• communicating with customers</li> <li>• documenting and reporting on service and repair</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• general workshop equipment</li> <li>• sharpening equipment</li> <li>• equipment stands/vices</li> <li>• air tooling</li> <li>• grinders</li> <li>• chain breaking and riveting equipment</li> <li>• exhaust gas extraction system</li> <li>• lubrication and cleaning equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• cleaning materials</li> </ul>

**RANGE STATEMENT**

<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to servicing and repairing chainsaw cutting systems and operating chainsaws</li> <li>• regulatory/legislative requirements pertaining to chainsaw cutting systems and chainsaw operation</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	Environmental requirements may include: <ul style="list-style-type: none"> <li>• waste management</li> <li>• pollution</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements may include: <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> <li>• enterprise operations and procedures</li> </ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## AURPTA2006 Service line trimming systems and components

### Modification History

Release	Comment
Release 1	Replaces AURP245465B Service line trimming systems and components  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service line trimming systems, including removal, replacement, fitting and adjustment of components.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake servicing and repair of line trimming systems in the outdoor power equipment industry.</p> <p>Line trimming equipment may include brush cutters and lawn edgers which may be electric or petrol driven, stand-alone or fitted to other equipment systems.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer's information 1.3. Identify and prepare tools, equipment and materials required for servicing job 1.4. Set up work area
2. Determine service requirements	2.1. Check customer requirements and equipment specifications following workplace procedures 2.2. Check line trimming system components for suitability of purpose 2.3. Plan and cost service procedure 2.4. Discuss recommended service items with customer and obtain authorisation to proceed
3. Service line trimming system	3.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 3.2. Plan task sequence to include testing and checking processes 3.3. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.4. Remove components as planned and inspect for condition and serviceability 3.5. Discard unusable components and retain reusable and components following workplace procedures 3.6. Fit reusable and replacement components and adjust to line trimming system specifications and customer requirements
4. Check line trimming system for normal operation	4.1. Operate line trimming system through full operating range 4.2. Check operation against equipment specifications and customer requirements 4.3. Make any adjustments as required and re-test 4.4. Complete workplace documentation and update customer and warranty information as required
5. Complete work and return unit to customer	5.1. Inspect serviced unit to ensure protective guards, cowlings and safety features are in place 5.2. Clean unit to workplace expectations

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3.Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p> <p>5.4.Provide customer report on service and replacements and explain follow-up adjustments, use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to removing, fitting and adjusting line trimming system components
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles of line trimming systems
- classifications of line trimming systems and components
- material used in line trimming system components
- types and causes of faults in line trimming systems
- types and layout of service/repair manuals (hard copy and electronic)
- component removal, fitting and adjusting procedures
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing line trimming systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing line trimming systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- complete removal, fitting and adjustment of a range of line trimming system components in accordance with workplace and manufacturer/component supplier requirements
- complete work within workplace timeframes
- present line trimming equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of line trimming systems and components
  - an area for safe testing of line trimming systems
  - materials relevant to servicing of line trimming systems
  - equipment, hand and power tooling appropriate to servicing of line trimming systems

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Line trimming equipment</b>	<p>Line trimming equipment may include:</p> <ul style="list-style-type: none"> <li>• brush cutters and lawn edgers</li> <li>• electric motor and petrol engine driven</li> <li>• stand-alone or fitted to other equipment systems</li> </ul>

**RANGE STATEMENT****Component variables**

Component variables may include:

- impact and overload protection
- automatic and manual line adjustment
- line sizes and types
- metal blades
- handles and harness
- brush cutter angle drives
- bent and straight drive shafts

**Servicing and repair methods**

Servicing and repair methods may include:

- on- and off-site servicing and repair
- inspection and replacement of components
- adjustments
- testing of unit
- communicating with customers
- documenting and reporting on service and replacement

**Tooling and equipment**

Tooling and equipment may include:

- equipment/floor stands
- specific service/repair and general workshop equipment and tooling
- measuring equipment
- exhaust gas extraction system
- lubricating equipment

**Materials**

Materials may include:

- spare parts
- line
- lubricants
- cleaning materials

**Information/documents**

Information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches
- safe work procedures related to servicing line trimming systems
- regulatory/legislative requirements pertaining to line trimming systems
- engineer's design specifications and

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service and repair operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer information 1.3. Identify and prepare tools, equipment and materials required for servicing and repair job 1.4. Set up work area
2. Determine service and repair requirements	2.1. Check customer requirements and equipment specifications following workplace procedures 2.2. Test post-boring system, identify faults and document test results following workplace procedures 2.3. Plan and cost service and repair procedure 2.4. Discuss recommended repair process with customer and obtain authorisation to proceed
3. Service and repair post-boring system	3.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 3.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.3. Remove components for repair procedure and inspect for condition and serviceability 3.4. Discard unusable components and retain reusable and repairable components following workplace procedures 3.5. Determine availability of replacement parts, qualified repair staff or subcontractors and facilities 3.6. Follow service and repair procedures and check work at designated points to determine serviceability of sub-assemblies and conformity to specifications 3.7. Fit reusable, repaired and replacement parts in accordance with manufacturer/component supplier specifications and workplace procedures
4. Check post-boring system for normal operation	4.1. Operate post-boring system through full operating range 4.2. Check operation against equipment specifications and customer requirements 4.3. Make any adjustments as required and re-test

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Check adjustments, fluid levels and alignments</p> <p>4.5. Complete workplace documentation and update customer and warranty information as required</p>
5. Complete work and return unit to customer	<p>5.1. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place</p> <p>5.2. Clean unit to workplace expectations</p> <p>5.3. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p> <p>5.4. Provide customer report on repairs and replacements and explain follow-up adjustments, use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to repairing and testing post-boring systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with post-boring equipment
- the relationship of a post-boring system to power unit, drive, safety, reversing and adjustment systems and overload protection device
- mechanical principles relevant to post-boring systems
- classifications of post-boring systems and components
- material used in post-boring system components
- types and causes of faults in post-boring systems
- types and layout of service/repair manuals (hard copy and electronic)
- servicing and repair procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and

**REQUIRED SKILLS AND KNOWLEDGE**

- repairing post-boring systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing and repairing post-boring systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- repair/replace, fit and adjust components in accordance with specifications and workplace procedures
- complete service and repair of post-boring systems within workplace timeframes
- present post-boring equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of post-boring systems and components
  - an area for safe testing of post-boring systems
  - materials relevant to servicing and repair of post-boring systems
  - equipment, hand and power tooling appropriate to servicing and repair of post-boring systems

## AURPTA2008 Service and repair post-hole digging systems

### Modification History

Release	Comment
Release 1	Replaces AURP245671B Service and repair post-hole digging systems  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to rectify faults in post-hole digging systems.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake servicing and repair of post-hole digging systems in the outdoor power equipment industry.  Post-hole digging systems may be powered by electric, diesel and petrol engines and may be hand-held equipment or fitted to tractors or platforms.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service and repair operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer's information 1.3. Identify and prepare tools, equipment and materials required for servicing and repair job 1.4. Set up work area
2. Determine service and repair requirements	2.1. Check customer requirements and equipment specifications following workplace procedures 2.2. Test post-hole digging system, identify faults and document test results following workplace procedures 2.3. Plan and cost service and repair procedure 2.4. Discuss recommended repair process with customer and obtain authorisation to proceed
3. Service and repair post-hole digging system	3.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 3.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.3. Remove components for repair procedure and inspect for condition and serviceability 3.4. Discard unusable components and retain reusable and repairable components following workplace procedures 3.5. Determine availability of replacement parts, qualified repair staff or subcontractors and facilities 3.6. Follow service and repair procedures and check work at designated points to determine serviceability of sub-assemblies and conformity to specifications 3.7. Fit reusable, repaired and replacement parts in accordance with manufacturer/component supplier specifications and workplace procedures
4. Check post-hole digging system for normal operation	4.1. Operate post-hole digging system through full operating range 4.2. Check operation against equipment specifications and customer requirements 4.3. Make any adjustments as required and re-test

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Check adjustments, fluid levels and alignments</p> <p>4.5. Complete workplace documentation and update customer and warranty information as required</p>
5. Complete work and return unit to customer	<p>5.1. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place</p> <p>5.2. Clean unit to workplace expectations</p> <p>5.3. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p> <p>5.4. Provide customer report on repairs and replacements and explain use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology, equipment and tools related to repairing and testing post-hole digging systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with post-hole digging equipment
- the relationship of a post-hole digging system to power unit, drive, safety, reversing and adjustment systems and overload protection device
- mechanical principles relevant to post-hole digging systems
- classifications of post-hole digging systems and components
- material used in post-hole digging system components
- types and causes of faults in post-hole digging systems
- types and layout of service/repair manuals (hard copy and electronic)
- servicing and repair procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and

**REQUIRED SKILLS AND KNOWLEDGE**

- repairing post-hole digging systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes related to servicing and repairing post-hole digging systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- repair/replace, fit and adjust components in accordance with specifications and workplace procedures
- complete service and repair of post-hole diggers and associated components within workplace timeframes
- present post-hole digging equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of post-hole digging systems and components
  - an area for safe testing of post-hole digging systems
  - materials relevant to servicing and repair of post-hole digging
  - equipment, hand and power tooling appropriate to servicing and repair of post-hole digging systems

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Post-hole digging systems</b>	<p>Post-hole digging systems may be:</p> <ul style="list-style-type: none"> <li>• powered by electric, diesel and petrol engines</li> <li>• hand-held equipment</li> <li>• fitted to tractors or platforms</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Component variables</b>	<p>Post-hole digging system variables may include:</p> <ul style="list-style-type: none"> <li>• tungsten, diamond-tipped and steel augers</li> <li>• impact and overload protection</li> <li>• height adjustment</li> </ul>
<b>Servicing and repair methods</b>	<p>Servicing and repair methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site servicing and repair</li> <li>• inspection, repair and replacement of components</li> <li>• adjustments</li> <li>• lubricating</li> <li>• testing of repaired unit, including overload protection</li> <li>• communicating with customers</li> <li>• documenting and reporting on service and repair</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• equipment/floor stands</li> <li>• specific service/repair and general workshop equipment and tooling</li> <li>• jacks, air and electric tooling</li> <li>• measuring equipment</li> <li>• exhaust gas extraction system</li> <li>• lifting equipment</li> <li>• welding equipment</li> <li>• lubricating equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• cleaning materials</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to servicing and repairing post-hole digging systems</li> <li>• regulatory/legislative requirements pertaining to post-hole digging systems</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• pollution</li> <li>• noise</li> <li>• dust</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements may include: <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> <li>• enterprise operations and procedures</li> </ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## AURPTA2009 Service and repair reciprocating cutting systems

### Modification History

Release	Comment
Release 1	Replaces AURP245771B Service and repair reciprocating cutting systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service and repair reciprocating cutting systems fitted to outdoor power equipment.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake servicing and repair of reciprocating cutting systems in the outdoor power equipment industry.</p> <p>Reciprocating cutting systems include hedge trimmers, tree loppers and power shears, which may be electric, air, hydraulic or petrol driven.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service and repair operation	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service and repair procedures, workshop manuals and manufacturer information 1.3. Identify and prepare tools, equipment and materials required for servicing and repair job 1.4. Set up work area
2. Determine service and repair requirements	2.1. Check customer requirements and equipment specifications following workplace procedures 2.2. Test reciprocating cutting system, identify and document faults following workplace procedures 2.3. Plan and cost service and repair procedure 2.4. Discuss recommended repair process with customer and obtain authorisation to proceed
3. Service and repair reciprocating cutting system	3.1. Identify and observe applicable workplace health safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 3.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 3.3. Remove components for repair procedure and inspect for condition and serviceability 3.4. Discard unusable components and retain reusable and repairable components following workplace procedures 3.5. Determine availability of replacement parts, qualified repair staff or subcontractors and facilities 3.6. Follow service and repair procedures and check work at designated points to determine serviceability of sub-assemblies and conformity to specifications 3.7. Fit reusable, repaired and replacement parts in accordance with manufacturer/component supplier specifications and workplace procedures
4. Check reciprocating cutting system for normal operation	4.1. Operate reciprocating cutting system through full operating range 4.2. Check operation against equipment specifications and customer requirements 4.3. Make any adjustments as required and re-test 4.4. Check adjustments, fluid levels and alignments

ELEMENT	PERFORMANCE CRITERIA
	4.5. Complete workplace documentation and update customer and warranty information as required
5. Complete work and return unit to customer	5.1. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place 5.2. Clean unit to workplace expectations 5.3. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures 5.4. Provide customer report on repairs and replacements and explain follow-up adjustments, use and care of equipment and warranty requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology, equipment and tools related to repairing reciprocating cutting systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with reciprocating cutting equipment
- dangers of working with 240 V equipment
- operating principles of reciprocating cutting systems
- the relationship of a reciprocating cutting system to power unit, drive, safety and adjustment systems and overload protection device
- classification of reciprocating cutting systems and identification of components
- types and causes of faults in reciprocating cutting systems
- types and layout of service/repair manuals (hard copy and electronic)
- servicing and repair procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and

**REQUIRED SKILLS AND KNOWLEDGE**

- repairing reciprocating cutting systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes related to servicing and repairing reciprocating cutting systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- complete service and repair of a range of reciprocating cutting systems and associated components within workplace timeframes and to manufacturer specifications
- present reciprocating cutting equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of reciprocating cutting systems and components
  - an area for safe testing of reciprocating cutting systems
  - materials relevant to servicing and repair of reciprocating cutting systems
  - equipment, hand and power tooling appropriate to

<b>EVIDENCE GUIDE</b>	
	servicing and repair of reciprocating cutting systems <ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake test	1.1. Confirm nature and scope of work requirements 1.2. Identify and source procedures, information and tooling required 1.3. Analyse method options, select those most appropriate to the circumstances and make preparations 1.4. Source technical and/or calibration requirements for testing and prepare support equipment 1.5. Identify chemical cleaning agents, their safe handling and disposal methods in accordance with environmental requirements
2. Conduct test and analyse results	2.1. Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, throughout the work 2.2. Carry out tests in accordance with workplace procedures and manufacturer/component supplier specifications 2.3. Compare test results with specifications to indicate compliance or non-compliance 2.4. Document results with evidence and supporting information and make recommendations 2.5. Forward report to persons for action in accordance with workplace procedures
3. Prepare for service operation	3.1. Confirm work to be carried out 3.2. Access and interpret service procedures, workshop manuals and manufacturer information 3.3. Identify and prepare tools, equipment and materials required for servicing job 3.4. Set up work area
4. Service pumping system	4.1. Identify and observe applicable WHS requirements, including state/territory regulatory requirements and personal protection needs 4.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 4.3. Service pump system following manufacturer/component supplier recommended procedures and specifications 4.4. Complete service operations without causing damage

ELEMENT	PERFORMANCE CRITERIA
	to any vehicle/machine or component
5. Complete work and return unit to customer	<p>5.1. Complete service schedule documentation and update customer and warranty information as required</p> <p>5.2. Inspect serviced unit to ensure protective guards, cowlings and safety features are in place</p> <p>5.3. Clean unit to workplace expectations</p> <p>5.4. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p> <p>5.5. Provide customer report on service and explain use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to testing and servicing pumping systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess test results, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles of positive and non-positive displacement pumping systems
- classifications of pumping systems and components
- types and causes of problems in pumping systems
- types and layout of service/repair manuals (hard copy and electronic)
- pump system service procedures
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing pumping systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing pumping systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- conduct testing and servicing in accordance with workplace and manufacturer/component supplier requirements
- complete servicing of pumping systems and associated components within workplace timeframes
- present serviced pumping system to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of pumping systems and components
  - materials relevant to servicing of pumping systems
  - equipment, hand and power tooling appropriate to servicing of pumping systems
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Pumping systems**

Pumping systems may include:

- centrifugal pumps as used for fire fighting, irrigation and water transfer
- high-pressure piston pumps as used in pressure cleaners
- diaphragm pumps as used in orchard spraying

**RANGE STATEMENT****Pump system variables**

Pump system variables may include:

- heating devices as found in hot pressure washes
- high-pressure low volume centrifugal
- low-pressure high volume centrifugal
- vane, rotor, piston and gear pumps

**Servicing methods**

Servicing methods may include:

- on- and off-site servicing and repair
- inspection and replacement of seals, filters and components
- adjustments
- testing of unit for pressure, suction and discharge
- communicating with customers
- documenting and reporting on service and replacement

**Tooling and equipment**

Tooling and equipment may include:

- specific service/repair and general workshop equipment and tooling
- pressure gauges
- flow meters
- cleaning equipment

**Materials**

Materials may include:

- spare parts
- lubricants
- cleaning materials

**Information/documents**

Information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches
- safe work procedures related to servicing pumping systems
- regulatory/legislative requirements pertaining to pumping systems
- engineer's design specifications and instructions
- organisation work specifications and

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake test	1.1. Confirm nature and scope of work requirements 1.2. Identify and source procedures, information and tooling required 1.3. Analyse method options, select those most appropriate to the circumstances and make preparations 1.4. Source technical and/or calibration requirements for testing and prepare support equipment 1.5. Identify chemical cleaning agents, their safe handling and disposal methods with respect to environmental requirements
2. Conduct test and analyse results	2.1. Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, throughout the work 2.2. Carry out tests in accordance with workplace procedures and manufacturer/component supplier specifications 2.3. Compare test results with specifications to indicate compliance or non-compliance 2.4. Document results with evidence and supporting information and make recommendations 2.5. Process report or forward to persons for action in accordance with workplace procedures
3. Prepare for repair operation	3.1. Confirm work to be carried out 3.2. Plan repair operation, including post-repair testing 3.3. Access and interpret service procedures, workshop manuals and manufacturer information 3.4. Identify and prepare tools, equipment and materials required for servicing job 3.5. Set up work area
4. Repair pumping system	4.1. Identify and observe applicable WHS requirements, including state/territory regulatory requirements and personal protection needs 4.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 4.3. Repair pump system following manufacturer/component supplier recommended procedures and specifications

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Complete repair operations without causing damage to any vehicle/machine or component</p> <p>4.5. Make necessary adjustments in accordance with manufacturer/component supplier specifications</p>
5. Complete work and return unit to customer	<p>5.1. Complete repair schedule documentation and update customer and warranty information as required</p> <p>5.2. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place</p> <p>5.3. Clean unit to workplace expectations</p> <p>5.4. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p> <p>5.5. Provide customer report on repair and explain use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

##### Required skills include:

- technical skills to the level required to use workplace technology and tools related to testing and repairing pumping systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess test results, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

##### Required knowledge includes:

- operating principles of positive and non-positive displacement pumping systems
- chemical cleaning agents and HAZCHEM warnings
- identification of the unit application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- types, characteristics, uses and limitations of centrifugal and positive displacement pumps
- pressure and force and their relationship to each other
- types and causes of problems in pumping systems
- types and layout of service/repair manuals (hard copy and electronic)
- pump system service procedures
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and

**REQUIRED SKILLS AND KNOWLEDGE**

codes of practice, including WHS and environment, relevant to testing and repairing pumping systems

- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to testing and repairing pumping systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- identify the application, purpose and operation of the pumping system
- select testing and repair methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret test results
- conduct testing and repairs in accordance with workplace and manufacturer/component supplier requirements
- follow correct handling and disposal procedures for chemical cleaning agents
- present repaired pumping system to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of pumping systems and components
  - materials relevant to testing and repair of pumping systems
  - equipment, hand and power tooling appropriate to

## AURPTE2002 Service engines and engine components (outdoor power equipment)

### Modification History

Release	Comment
Release 1	Replaces AURP201570B Service engines and engine components (outdoor power equipment)  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to service small engines and engine components appropriate to outdoor power equipment.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake servicing of outdoor power equipment engines which may be stationary or mobile, air and liquid cooled, overhead and side valve, 2- and 4-stroke spark ignition and 4-stroke compression ignition engines.  For service and repair of light/heavy vehicle engines refer to AURTTE2004 Inspect and service engines.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for engine service	1.1. Identify and confirm work to be carried out 1.2. Access and interpret service procedures, workshop manuals and manufacturer information 1.3. Identify and prepare tools, equipment and materials required for servicing job 1.4. Set up work area
2. Service engines and engine components	2.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 2.2. Perform service operations in accordance with workplace procedures and manufacturer/component supplier specifications 2.3. Apply appropriate lubricants to engine 2.4. Start engine and run up to operating temperature and check for leaks, abnormal noises and pressures, where applicable 2.5. Make any adjustments as required and re-test 2.6. Complete workplace documentation and update customer and warranty information, as required
3. Complete work	3.1. Inspect serviced unit to ensure protective guards, cowlings and safety features are in place 3.2. Clean engine to workplace expectations 3.3. Clean work area, dispose of waste and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to servicing outdoor power equipment engines
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- construction and operating principles of 2- and 4-stroke spark ignition engines and 4-stroke compression ignition engines
- types and layout of service/repair manuals (hard copy and electronic)
- servicing procedures
- different servicing requirements for different engines
- minor adjustment procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing engines in outdoor power equipment
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to

## AURPTE3003 Repair engines and engine components (outdoor power equipment)

### Modification History

Release	Comment
Release 1	Replaces AURP301566B Repair engines and engine components (outdoor power equipment)  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to repair small engines and engine components appropriate to outdoor power equipment.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake repair of outdoor power equipment engines which may be stationary or mobile, air and liquid cooled, overhead and side valve, 2- and 4-stroke spark ignition and 4-stroke compression ignition engines.  For service and repair of light/heavy vehicle engines refer to AURLTE3002 Repair engines and associated engine components (light vehicle)  or  AURHTE3002 Repair engines and associated engine components (heavy vehicle)
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to repair engine	1.1. Identify and confirm work to be carried out 1.2. Access and interpret repair procedures, workshop manuals and manufacturer information 1.3. Identify and prepare tools, equipment and materials required for repair operations 1.4. Set up work area
2. Repair engine and engine components	2.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 2.2. Dismantle engine and components and inspect for wear and damage 2.3. Perform repair operations in accordance with workplace procedures and manufacturer/component supplier specifications 2.4. Assemble engine within manufacturer/component supplier specifications and tolerances 2.5. Apply appropriate lubricants to engine 2.6. Start engine and run up to operating temperature and check for leaks, abnormal noises and pressures where applicable 2.7. Make any adjustments as required and re-test 2.8. Complete workplace documentation and update customer and warranty information as required
3. Complete work	3.1. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place 3.2. Clean engine to workplace expectations 3.3. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to repairing outdoor power equipment engines
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- construction and operating principles of two and four stroke spark ignition engines and four stroke compression ignition engines
- types and layout of service/repair manuals (hard copy and electronic)
- repair procedures and methodologies
- different repair requirements for different engines
- testing and adjustment procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications and tolerances
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to repairing engines in outdoor power equipment
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

repairing engines in outdoor power equipment
--

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select repair methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- complete repairs to a range of engines and associated components to workplace and manufacturer/component supplier requirements
- complete repair of engine and associated components within workplace timeframes
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of outdoor power equipment engines and components
  - materials relevant to repairing engines
  - equipment, hand and power tooling appropriate to repairing of outdoor power equipment engines
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Outdoor power equipment engines**

Outdoor power equipment engines may include:

- stationary or mobile
- air and liquid cooled
- overhead and side valve
- 2- and 4-stroke spark ignition
- 4-stroke compression ignition

**Repair methods**

Repair methods may include:

- on- and off-site repairs

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• engine dismantling and reassembly</li> <li>• repair and replacement of components</li> <li>• testing and adjustments</li> <li>• lubricating</li> <li>• communicating with customers</li> <li>• documenting and reporting on service</li> </ul>

## AURPTE4004 Overhaul engines and engine components (outdoor power equipment)

### Modification History

Release	Comment
Release 1	Replaces AURP401245B Overhaul engines and engine components (outdoor power equipment)  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to overhaul small engines and engine components appropriate to outdoor power equipment.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake the overhaul of outdoor power equipment engines, which may be stationary or mobile, air and liquid cooled, overhead and side valve, 2- and 4-stroke spark ignition and 4-stroke compression ignition engines. The work includes rebuilding or replacement of out-of-specification parts.  For overhaul of light/heavy vehicle engines refer to AURTTE4005 Overhaul engines and associated engine components.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul engine	1.1. Identify and confirm work to be carried out 1.2. Access and interpret repair procedures, workshop manuals and manufacturer's information 1.3. Identify and prepare tools, equipment and materials required for repair operations 1.4. Set up work area
2. Dismantle and inspect engine and components	2.1. Identify and observe applicable workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs 2.2. Dismantle engine in a logical sequence 2.3. Complete dismantling operation without causing damage to components or system 2.4. Clean and arrange components ready for inspection 2.5. Access and interpret relevant information from manufacturer/component supplier specifications and repair/reclaim methods 2.6. Measure components and compare against manufacturer/component supplier specifications and tolerances 2.7. Make decisions as to serviceability and repair method of each component 2.8. Source replacement parts, as required 2.9. Identify and arrange outsourcing of third-party repair
3. Overhaul and assemble engine and engine components	3.1. Perform repair, rebuild or replacement operations in accordance with workplace procedures and manufacturer/component supplier specifications and tolerances 3.2. Assemble engine following manufacturer/component supplier procedures 3.3. Measure running clearances against manufacturer/component supplier specifications and make necessary adjustments 3.4. Apply appropriate lubricants to engine 3.5. Complete assembly within timeframe and without causing damage to components or system
4. Check engine operation	4.1. Securely mount engine in preparation for starting 4.2. Check engine fluid levels, including lubrication and coolant

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Check gauges and warning devices for operation prior to starting</p> <p>4.4. Start engine and run up to operating temperature and check for leaks, abnormal noises and pressures where applicable</p> <p>4.5. Make any adjustments as required and re-test</p> <p>4.6. Complete workplace documentation and update customer and warranty information as required</p>
5. Complete work	<p>5.1. Seal engine orifices against ingress of foreign matter</p> <p>5.2. Inspect repaired unit to ensure protective guards, cowlings and safety features are in place</p> <p>5.3. Clean and store engine to workplace expectations</p> <p>5.4. Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools, including specialist tooling, measuring equipment and computerised technology related to overhauling outdoor power equipment engines
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to research, interpret and apply manufacturer/component supplier information, procedures and specifications
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities, to establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to interpret test results and develop creative solutions
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- construction and operating principles of 2- and 4-stroke spark ignition engines and 4-stroke compression ignition engines
- types and layout of service/repair manuals (hard copy and electronic)
- overhaul procedures and methodologies
- component evaluation methods
- different repair requirements for different engines
- testing and adjustment procedures
- types of lubricants, application and methods of lubrication
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications and tolerances
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to overhauling engines in outdoor power equipment
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

overhauling engines in outdoor power equipment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select overhaul methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- dismantle, evaluate, assemble, adjust, measure and test engines and components in accordance with workplace requirements and manufacturer/component supplier requirements
- complete overhaul of a range of engines and associated components within workplace guidelines and timeframes
- present repaired equipment to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of outdoor power equipment engines and components
  - materials relevant to overhauling engines
  - equipment, hand and power tooling appropriate to overhauling of outdoor power equipment engines

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Outdoor power equipment engines</b>	<p>Outdoor power equipment engines may include:</p> <ul style="list-style-type: none"> <li>• stationary or mobile</li> <li>• air and liquid cooled</li> <li>• overhead and side valve</li> <li>• 2- and 4-stroke spark ignition</li> </ul>

## AURPTR2002 Test and service outdoor electric powered equipment

### Modification History

Release	Comment
Release 1	<p>Replaces AURE222976B Test and service outdoor electric powered equipment</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to carry out testing and servicing of outdoor electric powered equipment, including shears, blowers, shredders and mulchers.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake testing and servicing of outdoor electric powered equipment.</p> <p>The testing and servicing of 240 V portable generators is covered by the unit AURPTR3001 Test and service 240 V portable generators.</p> <p>Where state/territory legislation requires a Restricted Electrical Licence (REL) or other such requirement to undertake work on electric 240 V, the appropriate units of competency from the UEE11 Electrotechnology or MEM05 Metal and Engineering Training Packages should be sourced as electives.</p>
-------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for test	1.1. Confirm nature and scope of work requirements 1.2. Identify and source procedures, information and tooling required 1.3. Analyse method options, select those most appropriate to the circumstances and make preparations 1.4. Source technical and/or calibration requirements for testing and prepare support equipment
2. Conduct test and analyse results	2.1. Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, throughout the work 2.2. Observe warnings in relation to working with 240 V 2.3. Carry out load test in accordance with workplace procedures and manufacturer/component supplier specifications 2.4. Compare test results with specifications to indicate compliance or non-compliance 2.5. Document results with evidence and supporting information and make recommendations 2.6. Forward report to persons for action in accordance with workplace procedures
3. Prepare to service equipment	3.1. Confirm work to be carried out 3.2. Access and interpret service procedures, workshop manuals and manufacturer's information 3.3. Identify and prepare tools, equipment and materials required for servicing job 3.4. Set up work area
4. Carry out equipment service	4.1. Service equipment following manufacturer/component supplier recommended procedures and specifications 4.2. Make minor adjustments during the service in accordance with manufacturer/component supplier specifications 4.3. Replace electronic module, as required
5. Prepare equipment for delivery to customer	5.1. Complete service schedule documentation and update customer and warranty information, as required 5.2. Inspect serviced unit to ensure protective guards,

ELEMENT	PERFORMANCE CRITERIA
	<p>cowlings and safety features are in place</p> <p>5.3.Clean unit to workplace expectations</p> <p>5.4.Clean work area, dispose of waste, and store tools and equipment in accordance with workplace procedures</p> <p>5.5.Provide customer report on service and explain use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to testing and servicing electric powered equipment
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess test results, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with 240 V equipment
- WHS regulations/requirements, equipment, material and personal safety requirements
- volts, amperage and power and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- electrical testing procedures
- equipment servicing procedures
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to testing and servicing electric powered equipment
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to

**REQUIRED SKILLS AND KNOWLEDGE**

testing and servicing electric powered equipment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- accurately interpret test results
- complete preparatory activity in a systematic manner
- conduct the testing in accordance with workplace requirements
- complete servicing to manufacturer/component supplier requirements
- present equipment to customer in compliance with workplace requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of electric powered equipment and components
  - materials relevant to testing and servicing of outdoor electric powered equipment
  - equipment, hand and power tooling appropriate to

<b>EVIDENCE GUIDE</b>	
	testing and servicing of electric powered equipment <ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Outdoor power equipment</b>	Outdoor power equipment may include: <ul style="list-style-type: none"> <li>• shears, blowers, blower vacs, shredders and mulchers, which may be electric or power</li> </ul>

<b>RANGE STATEMENT</b>	
	driven
<b>Servicing methods</b>	<p>Servicing may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site servicing and repair</li> <li>• inspection and replacement of components</li> <li>• adjustments</li> <li>• communicating with customers</li> <li>• documenting and reporting on service and replacement</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• specific service/repair and general workshop equipment and tooling</li> <li>• multimeter and electrical testing equipment</li> <li>• cleaning equipment</li> <li>• ear muffs and safety glasses</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• cleaning materials</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to testing and servicing electric powered equipment</li> <li>• regulatory/legislative requirements pertaining to testing and servicing electric powered equipment</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• electrical safety</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• pollution</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements may include:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> <li>• enterprise operations and procedures</li> </ul>

## AURPTR3001 Test and service 240V portable generators

### Modification History

Release	Comment
Release 1	<p>Replaces AURP322776B Test and service 240V portable generators</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing / Regulatory Information updated</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to carry out load testing and servicing of portable power generators rated at 240V output.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake servicing of small portable generators in the outdoor power equipment industry.</p> <p>Portable generators include small 240V units that are used for recreational and professional purposes. Testing and servicing relates only to the 240V generator and not the engine driving the generator.</p>
-------------------------	--

## Licensing/Regulatory Information

Where state/territory legislation requires a Restricted Electrical Licence (REL) or other such requirement to undertake work on power generation of 240V output, units of competency from the UEE11 Electrotechnology Training Package or the MEM05 Metal and Engineering Training Package should be sourced as electives.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake load test	1.1. Confirm nature and scope of work requirements 1.2. Identify and source procedures, information and tooling required 1.3. Analyse method options, select those most appropriate to the circumstances and make preparations 1.4. Source technical and/or calibration requirements for load testing and prepare support equipment
2. Conduct test and analyse results	2.1. Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, throughout the work 2.2. Observe warnings in relation to working with 240V 2.3. Carry out load test in accordance with workplace procedures and manufacturer/component supplier specifications 2.4. Compare test results with specifications to indicate compliance or non-compliance 2.5. Document results with evidence and supporting information and make recommendations 2.6. Forward report to persons for action in accordance with workplace procedures
3. Prepare for service operation	3.1. Confirm work to be carried out 3.2. Access and interpret service procedures, workshop manuals and manufacturer's information 3.3. Identify and prepare tools, equipment and materials required for servicing job 3.4. Set up work area
4. Service generator	4.1. Identify and observe applicable WHS requirements, including state/territory regulatory requirements and personal protection needs 4.2. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 4.3. Service generator following manufacturer/component supplier recommended procedures and specifications
5. Complete work and return unit to	5.1. Complete service schedule documentation and update customer and warranty information as

ELEMENT	PERFORMANCE CRITERIA
customer	<p>required</p> <p>5.2. Inspect serviced unit to ensure protective guards, cowlings and safety features are in place</p> <p>5.3. Clean unit to workplace expectations</p> <p>5.4. Clean work area, dispose of waste and store tools and equipment in accordance with workplace procedures</p> <p>5.5. Provide customer report on service and explain use and care of equipment and warranty requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to testing and servicing portable generators
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier information, workplace policies and procedures
- numeracy skills to the level required to correctly calculate time, assess test results, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- dangers of working with 240V equipment
- volts, amperage, wattage, frequency (hertz) and power generation and their relationship to each other
- identification of portable generator application, purpose and operating principles
- resistive load testing procedures
- classifications of portable generators and components
- types and causes of problems in portable generators
- types and layout of service/repair manuals (hard copy and electronic)
- portable generator service procedures
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to testing and servicing portable generators

**REQUIRED SKILLS AND KNOWLEDGE**

- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to testing and servicing portable generators

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- identify generator application, purpose and operating principles
- conduct inspection, servicing and operational testing in accordance with workplace and manufacturer/component supplier specifications
- accurately interpret test results
- service a range of generators to manufacturer/component supplier requirements
- present serviced generator to customer in compliance with workplace requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of portable generators and components
  - materials relevant to testing and servicing of generators

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to testing and servicing of generators</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Portable generators</b>	<p>Portable generator types may include:</p> <ul style="list-style-type: none"> <li>• inverter</li> <li>• cyclo-converter</li> </ul>

## AURREA2001 Apply environmental and sustainability best practice in a marine workplace

### Modification History

Release	Comment
Release 1	Replaces AURR271103A Apply environmental regulations in the marine service industry Performance Criteria updated to reflect sustainability

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to identify and apply environmental regulations and sustainability best practice to work safely and avoid potential environmental hazards in the maintenance and service of marine vessels.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work involves the theory, knowledge and application of skills related to environmental regulations and sustainability best practice in a marine workplace while maintaining and servicing marine vessels.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and apply environment regulations	<p>1.1.Reasons for <i>ethical environmental practice</i> in an marine mechanical workplace are identified</p> <p>1.2.Environmental responsibilities and penalties for individual breaches of legislation and regulations are identified</p> <p>1.3.<i>Documents and procedures</i> relevant to environmental safety and <i>hazards</i> are located and determined</p> <p>1.4.<i>Safety equipment and other material</i> necessary to support environmentally sound practices are identified and sourced</p>
2. Identify and avoid hazards to water, foreshores and marine environments	<p>2.1.Wastewater or <i>contaminants</i> are contained to restrict entry to water systems, foreshores or marine environments</p> <p>2.2.Vessel and component maintenance, service and repair is undertaken in an environmentally responsible manner to avoid hazards to water systems, foreshores and marine environments</p> <p>2.3.Preparation areas are checked to ensure accidental spillage cannot escape into water systems, foreshores and marine environments</p> <p>2.4.Spill kit is identified and located in preparation to prevent damage to the marine environment</p> <p>2.5.Waste containment areas are identified and inspected to avoid contamination of the surrounding area</p>
3. Identify and avoid hazards to air quality	<p>3.1.Hazardous airborne particles, including anti-foulant are identified, minimised and contained</p> <p>3.2.Hazardous gases and fumes are identified, minimised and contained</p> <p>3.3.Clean-up of guns, general tools, equipment and spray and painting equipment is conducted in an environmentally safe manner</p>
4. Identify and avoid noise hazards	<p>4.1.Hazardous noise activities are identified, prevented, reduced and contained</p> <p>4.2.Hazardous noise activities are carried out within approved operating hours and regulations</p>
5. Identify and apply sustainability best practice	<p>5.1.<i>Sustainability best practice</i> is identified and applied to minimise waste and potential damage to the environment according to workplace policies and procedures</p> <p>5.2.Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are identified and applied</p> <p>5.3.Environmental damage and breaches of environmental regulations are reported</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - communicate verbal and written ideas and information as they relate to environmental regulations and sustainability best practice of a marine mechanical workplace
- initiative and enterprise to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - identify and apply workplace environmental procedures
  - read and apply environmental regulations for a marine mechanical workplace
- numeracy skills to measure and calculate length, area and volume
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental contamination and wastage
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - identify processes which contribute to improvements for sustainability best practice
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to:
  - collaborate and cooperate with other team members relating to environmental and sustainability issues
- technical skills to:
  - collect, organise and interpret technical information relating to recognising workplace situations that are potentially harmful to the environment
  - use spill kits
- technology skills to:
  - use workplace environmental and safety-related technology to assist with clean and safe work practices

#### Required knowledge

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- effects of pollution and methods to minimise it
- environmental regulations and their implications for work being undertaken in a marine mechanical service and repair workplace
- characteristics and potential environmental impact of products used in the maintenance, repair and service of marine vessels, components and electrical systems
- philosophy of prevention, reuse, reduce, recycle
- awareness of the environmental effects of chemicals and contaminants on the marine environment
- procedures for use of spill kit
- reporting procedures for environmental damage and breaches of environmental regulations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- apply environmental regulations and sustainability best practice in a marine mechanical service and repair workplace
- identify materials used in an marine mechanical workplace and assess their potential environmental impact
- use a spill kit
- report environmental damage and breaches of environmental regulations.

#### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- access to environmental legislation, regulations and best practice models including access to workplace documents and reference images
- access to a marine maintenance and service workplace or simulated environment that accurately reflects workshop working conditions, including conditions for the removal and application of anti-foulants, recycling bins, liquid, sludge and

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

solid wastes

- access to PPE and other equipment of the type intended to be used in response to an environmental incident or accident.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Ethical environmental practice</i></b> may include:	<ul style="list-style-type: none"> <li>• correct disposal methods for waste and cleaning and/or washing of internal and external surfaces, glass surfaces and wet areas</li> <li>• painting with anti-foulant based products</li> <li>• compliance with legislative obligations</li> <li>• hazardous materials handling best practice applications</li> <li>• organisation insurance requirements</li> <li>• discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</li> </ul>
<b><i>Documents and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• environmental legislation</li> <li>• health regulations</li> <li>• hazardous substances register</li> <li>• site environmental policy</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures.</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices.</li> </ul>
<b><i>Safety equipment and other material</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>waste bags</li> <li>waste segregation systems</li> </ul>
<b><i>Contaminants</i></b> may include:	<ul style="list-style-type: none"> <li>solid or liquid wastes</li> <li>oil, fuel and grease</li> <li>hydrocarbon based degreasing agents and solvents</li> <li>acids</li> <li>alkaline wastes</li> <li>tributyltin, arsenic, mercury and DDT</li> <li>paint, lacquer, varnish</li> <li>anti-foulant based products</li> <li>glues and adhesive compounds</li> <li>household chemicals and pesticides.</li> </ul>

## AURREA3002 Monitor environmental and sustainability best practice in the marine mechanical industry

### Modification History

Release	Comment
Release 1	Replaces AURR371181A Implement and monitor environmental regulations in the marine repair industry Performance Criteria updated to reflect sustainability

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to monitor environmental regulations and sustainability best practice whilst undertaking the repair, maintenance and installation of marine craft engines and or components and electrical systems in a manner that ensures the protection of the environment in the marine repair industry.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work involves the theory, knowledge and application of skills related to environmental regulations and sustainability best practice in the marine repair industry.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply and monitor environment regulations	<p>1.1.Reasons for <i>ethical environmental practice</i> in an marine workplace are identified</p> <p>1.2.Environmental responsibilities and penalties for individual breaches of legislation and regulations are identified</p> <p>1.3.<i>Documents and procedures</i> relevant to environmental safety and <i>hazards</i> are applied</p> <p>1.4.<i>Safety equipment and other material</i> necessary to support environmentally sound practices are identified and sourced</p>
2. Monitor and avoid contamination to water systems and marine environments	<p>2.1.Wastewater or <i>contaminants</i> are contained to restrict entry to water systems, foreshores or marine environments</p> <p>2.2.Vessel and component maintenance, service and repair is undertaken in an environmentally responsible manner to avoid hazards to water systems, foreshores and marine environments</p> <p>2.3.Engine and component cleaning is carried out in an area that is bunded or graded to a collection pit</p> <p>2.4.All preparation areas, in particular anti-foulant paint preparation, is bunded and under cover to ensure accidental spillage cannot escape into water systems, foreshores and marine environments</p> <p>2.5.All components containing environmentally hazardous material are stored undercover in a sealed and bunded area</p> <p>2.6.Liquid wastes are drained into appropriate storage or recycling containers</p> <p>2.7.Bilge water is disposed of in an appropriate manner</p> <p>2.8.Spill kit is located and used as needed and disposed of as controlled waste by a licensed contractor to prevent water, foreshore pollution and damage to the marine environment</p> <p>2.9.Spills are cleaned up immediately and the workplace is kept clean to prevent unintentional pollution to water, foreshores and the marine environment</p>
3. Monitor and avoid hazards to air quality	<p>3.1.Welding, soldering and thermal cutting is conducted in a well-ventilated area</p> <p>3.2.Hazards of airborne particles are monitored, minimised and contained</p> <p>3.3.Hazards of gases are identified, monitored and contained</p> <p>3.4.Clean-up of guns and general tools and equipment is conducted in an environmentally safe manner</p>
4. Monitor and avoid noise hazards	<p>4.1.Hazardous noise activities are monitored, prevented, reduced and contained</p>

	4.2. Hazardous noise activities are carried out within approved operating hours and regulations
5. Monitor and apply sustainability best practice	<p>5.1. <i>Sustainability best practice</i> is monitored and applied to minimise waste and potential damage to the environment according to workplace policies and procedures</p> <p>5.2. Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are monitored and applied</p> <p>5.3. Environmental damage and breaches of environmental regulations are monitored and recorded</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate ideas and information (verbal and written) relating to the monitoring of environmental regulations and sustainability best practice for a marine mechanical workplace
- initiative and enterprise to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - interpret and monitor marine mechanical workplace environmental procedures
  - read and apply environmental regulations for a marine workplace
  - record environmental damage and breaches of environmental regulations
- numeracy skills to:
  - interpret instruments, gauges and other recording equipment
  - measure and calculate length, area and volume
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental contamination and wastage
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - identify processes which contribute to improvements for sustainability best practice
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to:
  - work with others and in a team by cooperating with team members
- technical skills to:
  - collect, organise and interpret technical information relating to recognising marine mechanical workplace situations that are potentially harmful to the environment
  - use and monitor spill kits, including kit reordering and disposal
- technology skills to:
  - use workplace environmental safety-related technology to assist with clean and safe work

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

practices

### Required knowledge

- aspects of environmental regulations and implications for work being undertaken in a marine workplace
- characteristics and potential environmental impact of products used in the repair, maintenance and installation of marine craft engines, components and electrical systems
- philosophy of prevention, reuse, reduce, recycle
- procedures for use of spill kit
- effects of pollution and methods to minimise it
- actions to be undertaken in case of significant environmental threat in a marine mechanical workplace
- monitoring and recording procedures for environmental damage and breaches of environmental regulations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- monitor and apply environmental regulations and sustainability best practice as they apply in an marine mechanical workplace
- identify materials used in an marine mechanical workplace and assess their potential environmental impact
- monitor and record environmental damage and breaches to environmental regulations.

#### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- access to environmental legislation, regulations and best practice models
- access to an marine workplace or simulated environment that accurately reflects marine workshop working conditions
- access to workplace documents and reference images
- access to personal protective and environmental protection equipment of the type intended to be used in response to an environmental incident or accident.

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Ethical environmental practice</i></b> may include:	<ul style="list-style-type: none"> <li>• compliance with legislative obligations</li> <li>• hazardous materials handling best practice applications</li> <li>• organisation insurance requirements</li> <li>• discretion, judgement and problem-solving skills in undertaking environmentally sound work practices</li> </ul>
<b><i>Documents and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• hazardous substances register</li> <li>• environmental legislation</li> <li>• health regulations</li> <li>• site environmental policy</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices</li> </ul>
<b><i>Safety equipment and other material</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> <li>• waste bags</li> <li>• waste segregation systems</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Contaminants*** may include:

- solid or liquid wastes
- oil, fuel and grease
- hydrocarbon based degreasing agents and solvents
- acids
- alkaline wastes
- paint, lacquer, varnish
- glues and adhesive compounds
- household chemicals and pesticides

***Sustainability best practice*** may include:

- recycling waste
- energy conservation practices
- natural resources (water, etc.) conservation practices
- reusing
- environmental (green) purchasing practices
- noise minimisation

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and manage compliance with of environment regulations	<p>1.1.Reasons for ethical environmental practice in a marine repair and/or service workshop are identified</p> <p>1.2.Environmental responsibilities of employers and staff in a marine repair and/or service workshop are identified</p> <p>1.3.Penalties for company and individual breaches of legislation are identified</p> <p>1.4.Waste products are minimised and facilities are provided for waste materials, including biological material (marine biota) to be stored for recycling or disposal</p> <p>1.5.Collection and recycling arrangements are sourced and implemented for liquids, sludge, solids and other waste</p> <p>1.6.Suppliers with minimal excess packaging on goods received are sourced. Packaging on goods received is sorted and disposed of appropriately</p> <p>1.7.Waste and energy conservation strategies are identified and implemented strategies are identified and implemented</p>
2. Manage potential hazards to stormwater systems, foreshores and marine environments to avoid contamination	<p>2.1.Systems are in place to ensure wastewater or contaminants do not enter stormwater systems, foreshores or marine environments</p> <p>2.2.All drains and flows are identified on a site map or directly indicating where they flow</p> <p>2.3.Appropriate trade waste permits are put in place</p> <p>2.4.Slipways and hardstand areas are fitted with a containment system that prevents wastewater from entering the stormwater systems, foreshores and the marine environment</p> <p>2.5.Undercover, bunded and/or graded areas are provided and used for surface cleaning and preparation and the storage of all parts and components containing environmentally hazardous material</p> <p>2.6.Clearly identifiable storage or recycling containers are provided for all liquid wastes</p> <p>2.7.Oil separator and pits are cleaned and maintained as per manufacturer and/or component supplier/component supplier specifications</p> <p>2.8.An appropriate system is sourced and implemented</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>for the disposal of bilge water</p> <p>2.9. Spill kit is provided and used as needed by staff trained in its use to prevent the contamination of stormwater systems, foreshores and marine environments</p> <p>2.10. Workplace is kept clean to prevent unintentional pollution of stormwater systems, foreshores and marine environment</p>
3. Manage potential hazards to air quality to avoid contamination	<p>3.1. Activities generating fine particles in particular anti-foulant or other deleterious material removal are identified, minimised and contained</p> <p>3.2. A slipway, hardstand or approved method/area is provided for abrasive sanding activities</p> <p>3.3. An undercover and well ventilated area is provided for Fibre glassing</p> <p>3.4. Identify whether an approved spray booth is necessary for surface coating operations and if so ensure that it is properly maintained</p> <p>3.5. A well ventilated room is provided for paint preparation</p> <p>3.6. A well ventilated area is provided for any welding activities</p> <p>3.7. Hazards of gases and fumes are identified, minimised and contained</p> <p>3.8. Clean-up of guns and general tools and equipment is conducted in an environmentally safe manner</p>
4. Minimisation of noise hazards is planned and managed	<p>4.1. Noise generating activities are minimised and carried out within approved operating hours</p> <p>4.2. Fixed machinery has silencers fitted or is contained within a noise minimisation structure</p>
5. Management systems	<p>5.1. An environmental policy and contingency plan suitable to the needs of the business is developed and implemented</p> <p>5.2. Waste to landfill is calculated and possible savings through reuse and recycling are calculated</p> <p>5.3. Payback period on environmental equipment is calculated</p> <p>5.4. Manage staff adherence to environmental responsibilities</p> <p>5.5. Environmental records are accurately and legibly maintained and stored securely in a form accessible</p>

ELEMENT	PERFORMANCE CRITERIA
	for reporting procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to environmental procedures from legislation, regulations, policies, guidelines, standards and workplace best practices in a marine repair and service business
- communicate ideas and information to enable all work undertaken is in accordance with environmental best practice
- seek support from stakeholders for implementing suitable innovation and continuous improvement
- plan and organise activities, including the preparation of equipment and materials, recycling and waste management system and the selection of appropriate worksite to avoid any environmental contamination, backtracking, workflow interruptions or wastage
- promote work with others and in a team by recognising dependencies and using cooperative approaches to minimise wastage, optimise workflow and productivity
- use planning, checking and inspection techniques to avoid environmental contamination and wastage
- use mathematical ideas and techniques to correctly complete measurements and estimate material requirements required for the work and calculate wastage rates of various methods
- use the workplace technology related to environmental protection and recycling equipment

#### Required knowledge

Required knowledge includes:

- aspects of environmental legislation and its relationship with workplace health and safety (WHS), financial and risk management
- requirements for trade waste permits
- spill clean-up procedures
- characteristics and potential environmental impact of products used in the repair and service of vessels

**REQUIRED SKILLS AND KNOWLEDGE**

- philosophy of sustainability through prevent, reduce, reuse and recycle
- procedures for rectifying machinery faults and material defects
- action to be undertaken in case of significant environmental threat in the workplace
- reporting procedures for significant environmental damage occurring in the workplace
- awareness of the environmental effects of tributyltin, arsenic, mercury, copper, lead, hydrocarbons, oil/oily water and DDT on marine environments
- cleaner production and eco-efficient strategies to avoid the production of waste

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Plan and manage safe handling requirements for equipment, products and materials, including use of personal protective equipment.
- Plan and manage environmental protection procedures in the business.
- Identify materials used in the repair and service process and assess and manage their environmental impact.
- Effective recycling processes are in place.
- Plan and manage work instructions, operating procedures and inspection processes are followed to:
  - minimise the risk of injury to self and others
  - maintain a clean workplace
  - prevent damage and wastage of goods, equipment and products
  - dispose of waste in accordance with legislative requirements and best practice
  - maintain required production output and product quality.
- Report significant environmental damage or spills.
- Plan and manage operator maintenance on tools and equipment to ensure environmental efficiency.
- Plan and manage operator maintenance on spray booth and spray equipment is conducted where applicable, to ensure environmental efficiency.
- Manage effective planning and teamwork related to environmental best practice.
- Develop/implement or audit an existing business environmental policy which covers at a minimum:
  - waste, recycling, hazards to stormwater, air quality, noise, energy minimisation and costs.
- Modify activities to cater for variations in workplace context and the environment.

##### Context of, and specific resources for assessment

- Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>Access to a marine repair and service workshop with access to marine or components requiring repair, maintenance, testing or installing of components and/or systems, parts washers, recycling bins, bunded/graded wash bays, oil water separator liquid, sludge and solid wastes.</li> <li>Resources may include, pressure washing and facilities for the use of recycled water.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</li> <li>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.</li> <li>Assessment of this competency is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include, certification of compliance of the final outcome/product or authorisation for use by a component authority.</li> <li>Assessment must confirm the inference that competency is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>RANGE STATEMENT</b>	
<b>Marine repair and service workshop</b>	<p>Marine repair and service workshop includes:</p> <ul style="list-style-type: none"> <li>marine workshop undertaking the repair or service of marine and marine components</li> </ul>
<b>Work requirements</b>	<p>Work involves the planning and management of normal activities of a marine repair and service workshop, including:</p> <ul style="list-style-type: none"> <li>the installation, removal, repair, testing and replacement of marine craft engines and associated components</li> <li>the installation, removal, repair, testing and replacement of marine electrical systems and components</li> <li>welding, soldering and thermal cutting of marine components</li> <li>water testing</li> <li>cleaning and washing of external and internal surfaces, including glass and wet areas</li> <li>the removal and preparation of vessel surfaces and components for painting with anti-foulant based products</li> </ul>
<b>WHS</b>	<p>WHS requirements include:</p> <ul style="list-style-type: none"> <li>safety management systems, hazardous substances and dangerous goods code and safe operating procedures</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment are to include:</p> <ul style="list-style-type: none"> <li>spill kits, recycling bins and drums, parts washers, bunded/graded wash bays, air extraction equipment, slipways or hardstand areas with pollution control measures and diversion valves, an oil water separator, a containment area for hazardous substances and a wastewater management system</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>material data safety sheets (MSDS), manufacturer and/or component supplier/component specifications, environmental records and costings of equipment</li> <li>staff environmental induction material</li> </ul>

RANGE STATEMENT	
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
<b>Information and procedures</b>	Information and procedures may include: <ul style="list-style-type: none"><li>• environmental legislation, regulations and advice</li><li>• workplace procedures relating to the use of tools and equipment</li><li>• work instructions and procedures</li><li>• site environmental policy</li><li>• workplace procedures relating to reporting and communication</li><li>• manufacturer and/or component supplier/component supplier specifications and operational procedures</li><li>• local council and waterways regulations</li></ul>

## AURRGA3001 Launch and recover a vessel using a trailer

### Modification History

Release	Comment
Release 1	Replaces AURR346336A Launch and recover a vessel using a trailer  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to use a trailer to launch and recover a motor driven vessel in an estuary or seaway.</p> <p>It requires the ability to operate equipment to launch and recover a vessel and the ability to understand safety and pre-launch requirements.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions (e.g. boat licence requirements for each state and territory). Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to marine mechanics who undertake the launching and recovering of a vessel in an estuary or seaway using a trailer so as to water test the vessel to confirm that repairs have been successfully undertaken.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for vessel launch	1.1. Read and interpret job requirements and specifications 1.2. Locate workplace health and safety (WHS) requirements, including personal protection needs 1.3. Collect tools and equipment and check for their safe and effective operation 1.4. Outline procedures to minimise task time 1.5. Check weather, tidal and launch site for safe launching conditions
2. Conduct pre-launch safety inspection	2.1. Audit vessel safety equipment 2.2. Inspect systems and components for seaworthiness and conformity to manufacturer and component supplier specifications and regulations to ensure vessel safety 2.3. Check vessel for safety using testing equipment, as appropriate 2.4. Repair systems and components that fail the safety inspection in accordance with manufacturer and component supplier specifications and site procedures
3. Launch vessel	3.1. Manoeuvre appropriate vehicle to position trailer in suitable depth of water on launch way 3.2. Secure trailer as required by state and territory regulations 3.3. Operate tilting and winch mechanisms and remove safety chain and winch strap from vessel 3.4. Tether vessel to trailer using suitable rope and knots 3.5. Move vessel from launch way to a safe area in the water 3.6. Park vehicle and trailer in suitable area
4. Recover vessel	4.1. Manoeuvre vehicle to position trailer in suitable depth of water on launch way 4.2. Remove detachable trailer fixtures and fit trailer retrieval guide poles 4.3. Manoeuvre vessel into recovery area and align with trailer guides and rollers 4.4. Tether vessel to trailer using suitable rope and knots 4.5. Operate tilting and winch mechanisms and attach safety chain and winch strap to vessel

ELEMENT	PERFORMANCE CRITERIA
	<p>4.6. Secure vessel and trailer safely</p> <p>4.7. Recover vessel according to WHS and environmental legislation, manufacturer specifications, industry regulations, and enterprise policies and procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use a trailer winch and tilt mechanism, launch and recover a vessel, and use safety inspection tools and computerised equipment
- communication skills to the level required to communicate effectively regarding work requirements, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to read and understand vessel specifications and operation
- literacy skills to the level required to locate and understand information related to work orders and WHS and organisational policies and procedures related to launching and recovering a vessel using a trailer
- numeracy skills to the level required to read weather charts and to complete tests and measurements to determine vessel seaworthiness
- problem-solving skills to the level required to identify technical and procedural problems related to launching and recovering a vessel using a trailer
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity
- planning skills to the level required to use pre-checking and seaworthiness inspection techniques to anticipate problems and avoid wastage of time and material

#### Required knowledge

Required knowledge includes:

- tare weight, gross vehicle mass and aggregate trailer mass regulations related to trailer weights on single, dual and tri axle trailers
- inspection requirements and standards for safety equipment, hull and fittings
- daily maintenance requirements for vessels
- manufacturer and/or component supplier specifications, including workshop manuals
- water depth required for vessel flotation
- pre-launch inspection procedures
- equipment requirements and standards
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to marine launch site and trailer winch and tilt mechanisms
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to marine operations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparation for launch in a systematic manner
- inspect a vessel for safe operation in an estuary or seaway
- follow legislative, state and territory regulations and organisational requirements
- launch a range of vessels using a trailer
- recover a range of vessels vessel using a trailer.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate vessels
  - trailer
  - equipment and tools appropriate to checking, launching and recovering vessel
  - technical specifications.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

**EVIDENCE GUIDE**

	<p>workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Inspecting seaworthiness of vessel**

Inspecting seaworthiness of vessel may include:

- checking safety equipment and fitment
- checking currency and accessibility of vessel safety equipment
- checking vessel hull and fittings for safety and journey suitability
- checking fuel and battery
- ensuring fresh water is onboard
- checking other resources
- inspecting hull for secured watertight mechanisms (e.g. seacocks, drain plugs and

<b>RANGE STATEMENT</b>	
	watertight flotation chambers)
<b>Conditions</b>	<p>Conditions may include:</p> <ul style="list-style-type: none"> <li>• coastal</li> <li>• estuary</li> <li>• day and night</li> <li>• salt and fresh water</li> <li>• tides and currents</li> <li>• varying water depths</li> <li>• climatic conditions</li> <li>• launch site (e.g. beach launch and boat ramp surfaces)</li> </ul>
<b>Vessels</b>	<p>Vessels may include:</p> <ul style="list-style-type: none"> <li>• vessels up to 10 metres in length with a maximum beam of 2.5 metres</li> <li>• single or multi-hulled</li> <li>• flat bottomed</li> <li>• planing and displacement hulls</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include operational risk assessments associated with marine licence requirements and the International Regulations for Preventing Collisions at Sea 1972 (COLREGS), and include:</p> <ul style="list-style-type: none"> <li>• rope, chain and steel cable dangers</li> <li>• vessel and dockside flammable materials</li> <li>• fire prevention</li> <li>• rope, chain and steel cable dangers</li> <li>• vessel and dockside flammable materials</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• communication equipment (e.g. Emergency Position Indicating Radio Beacon (EPIRB))</li> <li>• suitable ropes, chains, shackles and tie-downs</li> <li>• general hand tools and lubricants</li> <li>• specialist hand tools (e.g. electric winch harness and remote, winch handles and</li> </ul>

<b>RANGE STATEMENT</b>	
	leather gloves) • tow vehicle suitable for the task
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• vessel manufacturer and/or component supplier specifications (operational), seaworthiness vessel and equipment checklist and vessel operational checklist</li> <li>• safe work procedures related to the driving and manoeuvring of motorised vessel</li> <li>• regulatory/legislative requirements pertaining to marine craft</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external personnel</li> <li>• Australian standards</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> </ul>
<b>Legislative requirements</b>	Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include: <ul style="list-style-type: none"> <li>• International Regulations for Preventing Collisions at Sea 1972 (COLREGS)</li> <li>• award and enterprise agreements</li> <li>• tare weight, gross vehicle mass and aggregate trailer mass (ATM) regulations</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>

**RANGE STATEMENT****WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures

**Environmental requirements**

Environmental requirements may include:

- waste management
- noise
- dust
- clean-up management

**Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice
- safe work procedures
- reporting and recording procedures

## AURRGA3002 Launch and recover a vessel from crane, gantry and forklift

### Modification History

Release	Comment
Release 1	<p>Replaces AURR346435B Launch and recover vessel from crane, gantry and forklift</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to launch and recover a vessel from a crane, gantry or forklift.</p> <p>It requires the ability to identify and confirm work requirements, launch and recover the vessel and complete work finalisation processes.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions (e.g. forklift licence and vessel operation licence). Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the launching and recovery of a vessel from a crane, gantry or forklift in a marine environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area 1.6. Carry out pre-launch check 1.7. Carry out pre-launch vessel check
2. Launch vessel	2.1. Attach and position slings and lifting equipment to hull 2.2. Manoeuvre and operate crane, gantry or forklift to place vessel in suitable depth of water at launch site avoiding damage to vessel and the environment 2.3. Remove slings and lifting equipment 2.4. Move vessel from launch site to safe area 2.5. Move crane, gantry or forklift from launch site 2.6. Carry out all activities according to industry regulations and guidelines, WHS and environmental legislation, and enterprise policies and procedures
3. Recover vessel	3.1. Position crane, gantry or forklift to lift point ensuring suitable depth of water is present 3.2. Manoeuvre vessel into recovery area and align with lifting equipment 3.3. Attach and position slings and lifting equipment to hull to prevent hull damage 3.4. Operate lifting equipment avoiding damage to vessel and environment 3.5. Secure vessel 3.6. Carry out all activities according to industry regulations and guidelines, WHS and environmental legislation, and enterprise policies and procedures
4. Clean up work area and finalise work	4.1. Clean and inspect equipment and tooling according to workplace requirements 4.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 4.3. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures 4.4.Finalise and process work completion documentation and give to appropriate persons, as required

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to vessel launching and recovery, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes

- water depth requirements for vessel flotation
- pre-launch inspection procedures, equipment requirements and standards
- lifting sling equipment and vessel attachment points
- techniques for manoeuvring a crane, gantry, forklift and attached vessel
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the vessel launching and recovery from a crane, gantry and forklift, including safe lifting requirements and launch site licensing requirements
- organisational policies and procedures, including quality, reporting and recording procedures, related to vessel launching and recovery from a crane, gantry and forklift

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- launch and recover a vessel using a crane, gantry and forklift
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location
  - vessel and a crane, gantry and forklift
  - materials relevant to the launching and recovery of vehicles using crane, gantry or forklift
  - equipment, hand and power tools appropriate to the launching and recovery of vessel using crane, gantry forklift
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Vessels**

Vessels may include:

- vessels up to 10 metres in length with a maximum beam of 2.5 metres
- single or multi-hulled
- flat bottomed
- planing and displacement hulls

**Conditions**

Conditions may include:

- coastal

<b>RANGE STATEMENT</b>

## AURRGA3003 Moor a motor-driven vessel

### Modification History

Release	Comment
Release 1	Replaces AURR346543A Moor a motor driven vessel Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to moor and dock a motor driven vessel to or from a dockside or swing mooring.</p> <p>It requires the ability to operate equipment to moor and dock a vessel and the ability to understand the safety requirements.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions (e.g. boat licence requirements for each state and territory). Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	This unit applies to marine mechanics who undertake the launching and mooring of a vessel for water testing so as to confirm vessel repairs have been successfully undertaken. This would occur at a fixed dock or a swing mooring in a marine environment.
--------------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare vessel	1.1.Read and interpret job requirements and specifications 1.2.Locate workplace health and safety (WHS) requirements, including personal protection needs 1.3.Collect appropriate tools and equipment and check for their safe and effective operation 1.4.Outline procedures to minimise task time 1.5.Check weather, tidal conditions and launch site for safe launching conditions
2. Conduct safety inspection prior to moving off	2.1.Audit vessel safety equipment 2.2.Inspect hull and vessel systems and components for seaworthiness and conformity to manufacturer and component supplier specification and regulations to ensure vessel safety 2.3.Check vessel for safety using testing equipment, as appropriate 2.4.Start and check engines, controls, autopilot and failsafe systems 2.5.Repair systems and components that fail the safety inspection in accordance with manufacturer, industry and component supplier specifications, and site procedures
3. Move off mooring	3.1.Remove and attach appropriate lines using suitable knots, taking into account weather conditions, currents, tides, tidal flows and safety 3.2.Manoeuvre vehicle avoiding damage to vessel and environment 3.3.Move vessel off dockside
4. Dock and moor vessel	4.1.Select mooring site and attachment equipment as appropriate for vessel and mooring site 4.2.Locate suitable attachment points on the mooring dock and vessel 4.3.Manoeuvre vessel avoiding damage to vessel and environment 4.4.Link vessel to the mooring and secure attachment equipment in accordance with Maritime Regulations 4.5.Secure vessel alongside using appropriate docklines and knots and in accordance with regulatory requirements

ELEMENT	PERFORMANCE CRITERIA
	4.6. Use buffering equipment, as required 4.7. Moor vessel according to WHS and environmental legislation, manufacturer specifications, industry regulations and enterprise policies and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to launch and recover a vessel from a dockside, use safety inspection tools and computerised equipment and tie appropriate knots
- communication skills to the level required to communicate effectively regarding work requirements, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to read and understand vessel specifications and operation
- literacy skills to the level required to locate and understand information related to work orders and WHS and organisational policies and procedures related to launching and recovering a vessel from a dockside
- numeracy skills to the level required to read weather charts and to complete tests and measurements to determine vessel seaworthiness
- problem-solving skills to the level required to identify technical and procedural problems related to launching and recovering a vessel from a dockside
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity
- planning skills to the level required to use pre-checking and seaworthiness inspection techniques to anticipate problems, and avoid wastage of time and materials

#### Required knowledge

Required knowledge includes:

- knot types for a variety of situations including dock, fixed pier, jetty, public or private wharf, concrete pontoon and plastic pontoon
- swing mooring types and construction methods as required by regulating authority and vessel size
- inspection requirements and standards for safety equipment, hull and fittings
- daily maintenance requirements for vessels and mooring docklines
- manufacturer and component supplier specifications, including workshop manuals
- inspection procedures related to moving away or off a swing mooring or dockside
- equipment requirements and standards
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to marine dockside launching and mooring
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to marine operations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparation of launch in a systematic manner
- inspect a vessel for seaworthiness
- follow legislative, state and territory regulations and organisational requirements
- safely and responsibly move a vessel to a position alongside a dockside
- safely and responsibly move a vessel off/away from a dockside
- safely and responsibly move a vessel toward a swing mooring, retrieving and securing the mooring buoy and securely attaching the mooring chain in accordance with Maritime Regulations
- safely and responsibly move a vessel away from a swing mooring and inspect and release the mooring buoy and chain in accordance with Maritime Regulations
- safely moor a vessel to a dock.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• appropriate workplace (i.e. dockside)</li> <li>• appropriate vessel</li> <li>• equipment and tools appropriate to launching and mooring a motorised vessel</li> <li>• organisational procedures, including WHS requirements.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<b>RANGE STATEMENT</b>	
<b>Check safety equipment</b>	<p>Check safety equipment may include:</p> <ul style="list-style-type: none"> <li>• checking navigation lights</li> <li>• checking bilge pump capacity</li> <li>• checking rope and cable size and length</li> </ul>
<b>Manoeuvre and secure vessel</b>	<p>Manoeuvre and secure a vessel may include manoeuvring and securing:</p> <ul style="list-style-type: none"> <li>• to a dock</li> <li>• to a swing mooring</li> <li>• off a dock</li> <li>• off and away from a swing mooring</li> </ul>
<b>Inspecting seaworthiness of vessel</b>	<p>Inspecting seaworthiness of vessel may include:</p> <ul style="list-style-type: none"> <li>• checking safety equipment for fitment</li> <li>• checking currency and accessibility of vessel</li> <li>• checking vessel hull and fittings for safety and journey suitability</li> <li>• checking fuel</li> <li>• checking other resources</li> </ul>
<b>Conditions</b>	<p>Conditions may include:</p> <ul style="list-style-type: none"> <li>• coastal</li> <li>• estuary</li> <li>• day and night</li> <li>• salt and/or fresh water</li> <li>• varying water depth</li> <li>• climatic conditions</li> </ul>
<b>Vessel</b>	<p>Vessel may include:</p> <ul style="list-style-type: none"> <li>• vessels up to 90 metres</li> <li>• single or multi-hull</li> <li>• powered or non-powered propulsion system</li> <li>• open, half or full cabin</li> <li>• wood, aluminium or composite material construction</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include operational risk assessments associated with marine licence requirements and the International Regulations for Preventing Collisions at Sea 1972 (COLREGS), and includes:</p> <ul style="list-style-type: none"> <li>• rope, chain and steel cable dangers</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• vessel and dockside flammable materials</li> <li>• fire prevention</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• communication equipment (e.g. emergency position indicating radio beacon (EPIRB))</li> <li>• suitable ropes, chains and tie-downs</li> <li>• general hand tools and lubricants</li> <li>• specialist tools (e.g. electric winch harness and remote, winch handles and leather gloves)</li> <li>• tow vehicle suitable for the task</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• vessel manufacturer and/or component supplier specifications (operational), seaworthiness vessel and equipment checklist and vessel operational checklist</li> <li>• safe work procedures related to the driving and manoeuvring of motorised vessel</li> <li>• regulatory/legislative requirements pertaining to marine craft</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external personnel</li> <li>• Australian standards</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• International Regulations for Preventing Collisions at Sea 1972 (COLREGS) award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> <li>• current boating licence</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> </ul>

## AURRTA2001 Service deck, hull and cabin equipment

### Modification History

Release	Comment
Release 1	Replaces AURR246870B Service deck, hull and cabin equipment Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to perform servicing procedures to the vessel deck, hull and cabin equipment.</p> <p>It requires the ability to identify and confirm work requirements, prepare for and service deck, hull and cabin equipment and fittings and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the return to serviceable condition of deck, hull and cabin equipment and fittings on vessels of varying types and sizes in a marine environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Determine service method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.6. Set up work area
2. Service deck, hull and cabin equipment and fittings	2.1. Carry out service and adjustments to deck and hull in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Carry out service and adjustments to cabin equipment and fittings in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.3. Test systems for correct operation, make required adjustments and re-test
3. Clean up work area and maintain equipment	3.1. Clean and inspect equipment and tooling according to workplace requirements 3.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.3. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required 3.4. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing procedures of marine deck, hull and cabin equipment and fittings and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customer, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications, and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- vessel classifications and component types
- operating principles and construction of marine deck, hull and cabin equipment
- mechanical, hydraulic, electrical and electronic principles and procedures applicable to service procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing procedures of marine deck, hull and cabin equipment and fittings, including power lifting equipment
- organisational policies and procedures, including quality, reporting and recording procedures, related to servicing procedures of marine deck, hull and cabin equipment and fittings

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service the deck, hull and cabin equipment and fittings of a range of vessels to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - deck, hull and cabin equipment and fittings requiring repair
  - equipment, hand and power tools appropriate to the servicing of deck, hull and cabin equipment and related equipment and fittings
  - activities covering the mandatory task requirements

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Fittings</b>	<p>Fittings may include:</p> <ul style="list-style-type: none"> <li>• bollards, ferrules, runners, clamps, cleats, turnbuckles and press studs</li> <li>• winches and capstans</li> <li>• bow and stern rails, rudder and steering</li> </ul>

<b>RANGE STATEMENT</b>	
	bushes and bearings <ul style="list-style-type: none"> <li>• fishing rods, bait boxes and cabin fixtures</li> </ul>
<b>Servicing methods</b>	Servicing methods may include: <ul style="list-style-type: none"> <li>• on- and off-site repairs</li> <li>• minor adjustments and operational testing</li> <li>• replacement of fluids and filters</li> </ul>
<b>Marine engines</b>	Marine engines may include: <ul style="list-style-type: none"> <li>• 2-stroke petrol</li> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Vessels</b>	Vessels may include: <ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• fluids</li> <li>• cleaning materials</li> </ul>
<b>Safe operating procedures</b>	Safe operating procedures may include: <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>

RANGE STATEMENT	
<b>Environmental requirements</b>	Environmental requirements may include: <ul style="list-style-type: none"><li>• waste management</li><li>• noise</li><li>• dust</li><li>• clean-up management</li></ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"><li>• quality policies and procedures, including Australian standards</li><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li><li>• manufacturer specifications and industry codes of practice</li><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

## AURRTA3002 Carry out hull repairs

### Modification History

Release	Comment
Release 1	Replaces AURR346108B Carry out hull repairs Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to inspect the hull of a vessel for deterioration and damage and complete repairs using approved methods, materials and equipment.</p> <p>It requires the ability to identify and confirm work requirements, inspect and repair the hull of a vessel and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake an inspection of the hull of a vessel for deterioration and damage and complete repairs in a marine environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Confirm nature and scope of work to be carried out</li><li>1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work</li><li>1.3. Access and interpret repair method, workshop manuals and manufacturer information</li><li>1.4. Check and prepare tools, equipment and materials</li><li>1.5. Set up work area</li></ul>
2. Inspect hull deterioration and damage and complete repairs	<ul style="list-style-type: none"><li>2.1. Inspect hull and identify deterioration and damage</li><li>2.2. Carry out repairs in accordance with vessel manufacturer and component specifications, and WHS and workplace environmental and sustainable procedures and practices</li><li>2.3. Test repairs, make required adjustments and re-test</li><li>2.4. Determine the need for water testing</li></ul>
3. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>3.1. Clean and inspect equipment and tooling according to workplace requirements</li><li>3.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements</li><li>3.3. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</li><li>3.4. Finalise and process work completion documentation and give to appropriate persons, as required</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the diagnosis and repair of marine hulls, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- vessel classification, component types and identification
- repair requirements and standards as specified by the manufacturer and component supplier
- types of materials used in vessel hulls
- repair methods related to vessel hulls
- use and application of testing, measuring and specialised servicing equipment
- inspection techniques
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the diagnosis and repair of vessel hulls, including safety precautions, properties and use of repair materials and products used in repair procedures
- organisational policies and procedures, including quality, reporting and recording

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, related to the repair of vessel hulls

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- carry out repairs to a range of faults in vessel hulls and using a variety of materials, including aluminium, wood and composite materials within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials to the repair of marine hulls
  - equipment, hand and power tools appropriate to the repair of marine hulls
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Repairs**

Repairs may include:

- wood repairs
- plastic repairs
- composite material repairs
- aluminium repairs
- steel repairs
- fibreglass repairs

**Tooling and equipment**

Tooling and equipment may include:

## AURRTA3003 Winterise vessel and engine systems

### Modification History

Release	Comment
Release 1	Replaces AURR346650A Winterise vessel and engine systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to winterise or prepare a vessel and its engine systems for seasonal shutdown and storage.</p> <p>It requires the ability to identify and confirm work requirements, winterise the vessel and engine systems and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake the preparation and winterisation of vessels and their engine systems in a marine environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Use work instructions to determine the job requirements and specifications, including method, process and equipment 1.2. Locate workplace health and safety (WHS) requirements, including personal protection needs 1.3. Check equipment and tools for safe and effective operation 1.4. Determine procedures to minimise task time
2. Winterise vessel systems	2.1. Test vessel systems and compare to system specifications prior to winterising 2.2. Report vessel systems that fail testing and gain rectification approval from customer 2.3. Carry out winterising procedures in accordance with vessel manufacturer and component specifications and guidelines, WHS and environmental legislation, and enterprise policies and procedures 2.4. Prepare report for the customer detailing work undertaken and technical and/or regulatory requirements
3. Winterise engine systems	3.1. Test engine systems and compare to system specifications prior to winterising 3.2. Report engine systems which fail testing to the customer and obtain rectification approval 3.3. Carry out winterising procedures in accordance with manufacturer and component specifications and guidelines, WHS and environmental legislation, and enterprise policies and procedures 3.4. Seal engine openings against ingress of foreign matter 3.5. Prepare report for the customer detailing work undertaken and technical and/or regulatory requirements
4. Clean up work area and finalise work	4.1. Clean and inspect equipment and tooling according to workplace requirements 4.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 4.3. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures 4.4. Finalise and process work completion

ELEMENT	PERFORMANCE CRITERIA
	<p>documentation and give to appropriate persons, as required</p> <p>4.5.Prepare report for the customer detailing work undertaken and technical or regulatory requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the preparation and winterisation of a vessel and its engine systems for seasonal shutdown and storage, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and to identify diagnose and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- vessel classification, system type and component identification
- engine classification, system types and component identification
- engine system requirements and their relationship to vessel systems and associated components
- propulsion system requirements and their relationship to vessel systems and associated components
- mechanical, hydraulic, electrical and electronic principles and application
- properties and use of servicing fluids, and lubricants and anti-corrosion products used in winterising procedures
- servicing requirements as specified by manufacturer's and component suppliers
- use and application of testing, measuring and specialised servicing equipment
- manufacturer and component supplier specifications, including workshop manuals

**REQUIRED SKILLS AND KNOWLEDGE**

and repair guides

- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the preparation and winterisation of a vessel and its engine systems
- organisational policies and procedures, including quality, reporting and recording procedures, related to the preparation and winterisation of a vessel and its engine systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- test, winterise and store a range of vessels
- test, winterise and store a range of marine engine systems
- complete clean-up activity in a systematic manner
- safely operate power lifting equipment
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - appropriate vessels and engine systems
  - materials relevant to the preparation and winterising of vessels and engine systems
  - equipment, hand and power tools appropriate to the winterising of vessel and engine systems
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment

**EVIDENCE GUIDE**

	<p>Guidelines of this Training Package.</p> <ul style="list-style-type: none"> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Preparing to winterise**

Preparing to winterise may include:

- inspecting engine
- reading service data
- compiling report
- testing, inspecting, adjusting, cleaning, and weatherproofing components and systems

**Vessels**

Vessels may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> <li>• powered or non-powered propulsion system</li> <li>• open, half or full cabin</li> <li>• wood, aluminium or composite material construction</li> </ul>
<b>Engine systems</b>	<p>Engine systems may include:</p> <ul style="list-style-type: none"> <li>• inboard or outboard</li> <li>• 2- or 4-stroke</li> <li>• single or multi-cylinder</li> <li>• water or air cooled</li> <li>• electrical or electronic</li> <li>• remote or local controlled</li> </ul>
<b>Fuel systems</b>	<p>Fuel systems may include</p> <ul style="list-style-type: none"> <li>• petrol</li> <li>• diesel</li> <li>• gas</li> <li>• carburetion or fuel injection</li> <li>• manual or electric start</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• testing equipment, including multimeters</li> <li>• power tooling</li> <li>• air tooling</li> <li>• specialist tooling and equipment</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current boating licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• road rules</li><li>• safe driving policy</li></ul>

## AURRTA3004 Recommission vessel systems

### Modification History

Release	Comment
Release 1	Replaces AURR346660B Recommission vessel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to prepare a vessel system for use after seasonal shutdown and storage.</p> <p>It requires the ability to identify and confirm work requirements, test and recommission vessel systems and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake the recommissioning of a vessel system for use after seasonal shutdown and storage in a marine environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Recommission vessel systems	2.1. Carry out recommissioning procedures in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Test vessel systems and compare to manufacturer and component specifications 2.3. Determine and report vessel systems which fail testing and gain rectification approval from customer 2.4. Repair and test failed systems 2.5. Commission vessel system 2.6. Determine the need for water testing
3. Clean up work area and finalise work	3.1. Clean and inspect equipment and tooling according to workplace requirements 3.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.3. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures 3.4. Finalise and process work completion documentation and give to appropriate persons, as required 3.5. Prepare report for the customer detailing work undertaken and technical or regulatory requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the recommissioning of vessel systems, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- vessel classification, system type and component identification
- principles and application of mechanical, hydraulic, electrical and electronic principles
- propulsion system requirements and relationship to vessel systems and associated components
- properties and use of servicing fluids and lubricants products used in recommissioning procedures
- recommissioning requirements and specifications as specified by the manufacturer and component supplier, including workshop manuals and repair guides
- use and application of testing, measuring and specialised servicing equipment
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the recommissioning of vessel systems, including power lifting requirements and licensing

**REQUIRED SKILLS AND KNOWLEDGE**

- organisational policies and procedures, including quality, reporting and recording procedures, related to the recommissioning of vessel systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- recommission and test a range of vessel systems to manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - vessel systems requiring recommissioning
  - equipment, hand and power tools appropriate to the recommissioning of vessel systems
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Vessels**

Vessels may include:

- single or multi-hull
- inboard or outboard drive
- powered or non-powered propulsion system
- open, half or full cabin
- wood, aluminium or composite material construction

**Marine engines**

Marine engines may include:

- 2-stroke petrol

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Recommissioning</b>	<p>Recommissioning may include:</p> <ul style="list-style-type: none"> <li>• engine system inspection</li> <li>• reading service data</li> <li>• compiling reports</li> <li>• testing, inspecting, adjusting, cleaning, and repairing components and systems</li> </ul>
<b>Systems</b>	<p>Systems may include:</p> <ul style="list-style-type: none"> <li>• propeller or jet drive propulsion systems with tilt, trim and manual adjustment</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Repair deck and hull	2.1. Inspect deck and hull and identify deterioration and damage 2.2. Perform repairs and adjustment operations in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.3. Test repairs, make required adjustments and re-test 2.4. Determine the need for water testing
3. Repair cabin equipment and fittings	3.1. Inspect cabin equipment and fittings and identify deterioration and damage 3.2. Perform repairs and adjustment operations in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices
4. Test and recommission vessel	4.1. Test deck, hull and cabin equipment and fittings for correct operation in accordance with manufacturer and component supplier specifications 4.2. Repair and test failed systems 4.3. Determine and report vessel deck, hull and cabin equipment and fittings which fail testing and gain rectification approval from customer 4.4. Determine the need for water testing 4.5. Carry out recommissioning procedures in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices
5. Clean up work area and finalise work	5.1. Clean and inspect equipment and tooling according to workplace requirements 5.2. Tag unserviceable equipment and faults identified in

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with workplace requirements</p> <p>5.3.Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</p> <p>5.4.Finalise and process work completion documentation and give to appropriate persons, as required</p> <p>5.5.Prepare report for the customer detailing work undertaken and technical or regulatory requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the repair of deck, hull and cabin equipment and fittings, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- vessel classification, component type and identification
- principles and application of mechanical, hydraulic, electrical and electronic principles, as applicable to cabin and deck equipment
- properties and use of repair materials and products used in repair procedures
- inspection techniques
- types of materials used in deck, hull and cabin equipment and fittings
- repair methods related to deck, hull and cabin equipment and fittings and the relationship of these parts and fittings to the integrity of the vessel
- use and application of testing, measuring and specialised servicing equipment
- recommissioning requirements and specifications as specified by the manufacturer and component supplier, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the

**REQUIRED SKILLS AND KNOWLEDGE**

- repair of deck, hull and cabin equipment and fittings
- organisational policies and procedures, including quality, reporting and recording procedures, related to the repair and recommissioning of deck, hull and cabin equipment and fittings

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair and recommission and test a range of deck, hull and cabin equipment and fittings to manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - deck, hull and cabin equipment and fittings requiring repair
  - materials relevant to the repair of deck, hull and cabin equipment and fittings
  - equipment, hand and power tools appropriate to the repair of deck, hull and cabin equipment and fittings

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ## AURRTA3006 Water test a vessel

### Modification History

Release	Comment
Release 1	Replaces AURR346931A Water test a vessel Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to water test a vessel so as to meet specific customer performance specifications and ensure conformity to statutory regulations.</p> <p>It requires the ability to establish customer requirements, conduct pre-water safety inspection, water test and repair failed system and components, and complete work processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the water testing of a vessel after service, repair or installation work to ensure that the work meets specific customer performance specifications and conformity to statutory regulations.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1.Establish vessel configuration performance to be checked with customer 1.2.Select test procedure and equipment required for water testing 1.3.Check manufacturer and component supplier specifications 1.4.Check equipment and tools for safe and effective operation 1.5.Locate workplace health and safety (WHS) requirements, including personal safety needs, for the work activity
2. Conduct pre-water test safety inspection	2.1.Check safety of vessel according to industry regulations and guidelines, WHS and environmental legislation, and enterprise policies and procedures 2.2.Repair systems and components that fail the safety inspection prior to vessel leaving mooring
3. Water test vessel	3.1.Test and document engine performance 3.2.Test and document propulsion unit 3.3.Test and document hull and hull fittings 3.4.Compare water test performance data with manufacturer and component supplier specifications 3.5.Prepare customer test report and recommend any additional repairs and/or modifications required 3.6.Present vessel to customer as required by workplace procedures 3.7.Carry out all activities according to industry regulations and guidelines, WHS and environmental legislation, and enterprise policies and/or procedures
4. Clean up work area and maintain equipment	4.1.Collect and store material that can be reused 4.2.Remove waste and scrap following workplace procedures 4.3.Clean and inspect equipment and work area for serviceable condition in accordance with workplace procedures 4.4.Tag unserviceable equipment and faults identified in accordance with workplace requirements 4.5.Complete operator maintenance in accordance with manufacturer and component supplier specifications and site procedures

ELEMENT	PERFORMANCE CRITERIA
	4.6.Maintain tooling and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to safety and water testing a vessel, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- vessel, component and system performance assessment standards based on manufacturer and component supplier specifications and regulatory requirements
- vessel operating systems, components and fittings
- inspection techniques
- test report compilation and presentation
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to water testing a vessel so as to meet specific customer performance specifications and conformity to statutory regulations
- organisational policies and procedures, including quality, reporting and recording procedures, related to water testing a vessel

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate
- complete preparatory activity in a systematic manner
- conduct water testing of configuration and vessel in accordance with workplace and manufacturer and component supplier requirements for a range of vessels
- accurately record and interpret the test data for a range of vessel testings
- complete the testing within workplace timeframes
- present equipment to customer in compliance with workplace requirements
- complete the configuration checking within workplace timeframes.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - appropriate vessels for water testing
  - materials relevant to the water testing of vessels
  - equipment, hand and power tools appropriate to the water testing of vessels

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Water testing</b>	<p>Water testing may include:</p> <ul style="list-style-type: none"> <li>• testing engine performance by operating the engine through the full operating range</li> <li>• testing propulsion unit by operating through the full range of speeds and directions</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• testing hull and hull fittings by operating through the full range of performance conditions</li> <li>• testing to establish that current configuration is performing to manufacturer and component supplier specification</li> <li>• testing components</li> <li>• checking hull performance</li> <li>• checking faults as referred by the customer</li> </ul>
<b>Factors influencing vessel performance</b>	<p>Factors influencing vessel performance may include:</p> <ul style="list-style-type: none"> <li>• hull design</li> <li>• engine and hull match</li> <li>• engine propeller match</li> <li>• engine set-up</li> <li>• aerodynamics</li> <li>• vessel type, size, age, modifications, developmental and additions to existing vessel</li> <li>• engine type, size, single or multi</li> <li>• propulsion unit installed propeller or jet drive</li> <li>• hull type, including planing, displacement, single, multi-hull and hull fittings</li> <li>• variance between performance data and specifications</li> <li>• climatic (e.g. time of day, saltwater or freshwater, coastal, estuary or marine, water depth and weather)</li> </ul>
<b>Safety check of vessel</b>	<p>Safety check of vessel may include:</p> <ul style="list-style-type: none"> <li>• auditing vessel safety equipment</li> <li>• visually inspecting systems and components for conformity to manufacturer and component supplier specification</li> <li>• inspecting for conformity to regulations</li> <li>• adequate fuel and freshwater for journey</li> </ul>
<b>Test report</b>	<p>Test report may include:</p> <ul style="list-style-type: none"> <li>• recommendations for repairs and/or modifications</li> <li>• component conformity to manufacturer and supplier specifications</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• performance enhancing components which may satisfy the customer requirement</li> <li>• conformity to and implications of local, state and territory regulations and laws which may influence customer decisions</li> <li>• component manufacturer and component supplier warranty considerations</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• testing equipment, including multimeters</li> <li>• power tooling</li> <li>• air tooling</li> <li>• specialist tooling and equipment</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current boating licence</li> </ul>
<b>Legislative requirements</b>	Legislative requirements are to be in accordance

<b>RANGE STATEMENT</b>	
	<p>with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

## AURRTA5007 Analyse and evaluate light marine hydraulic system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT573593A Analyse and evaluate light marine hydraulic system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate light marine hydraulic systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning light marine hydraulic systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Light marine hydraulic system/components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary light marine hydraulic systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic hydraulic theory covering pressure, flow and force.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- mechanical theory covering the concepts and principles of mechanical, systems and levers.
- detailed knowledge of the types, characteristics, functions and limitations of hydraulic steering.
- detailed knowledge of the types, characteristics, functions and limitations of power steering for inboard and outboard systems.
- detailed knowledge of the types, characteristics, functions and limitations of power trim and tilt systems for outboard and stern drive units.
- general knowledge of boat drive and steering forces.
- general knowledge of the theory of diagnosis, including concept, design and planning.

**REQUIRED SKILLS AND KNOWLEDGE**

- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different light marine hydraulic systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different light marine hydraulic systems.
- Document and report the diagnostic process and findings and recommended rectification for the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, light marine hydraulic systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

#### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of

**EVIDENCE GUIDE**

	<p>compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Marine hydraulic systems</b>	Marine hydraulic systems to be covered in this unit are to include power assisted steering, hydraulic steering, bow thrusters, trim tabs, tilt and trim systems and winches.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, environmental legislation, health regulations, manual handling procedures and organisation insurance</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>requirements.</p> <ul style="list-style-type: none"> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include pressure gauges and may include valve pressure testing equipment
<b>Tests</b>	Tests to be conducted are to include stroke times for trim and tilt operation, leak down and creep, and full load water testing.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light marine hydraulic systems.</li> <li>• Marine industry regulations.</li> <li>• Marine industry publications related to emerging marine hydraulic system technology and technology changes.</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary light marine hull performance systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- light marine terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, function, operations and characteristics of marine two-stroke, four-stroke and diesel engines.
- detailed knowledge of marine engine installation and rigging techniques.
- detailed knowledge of propeller selection techniques and procedures.
- detailed knowledge of boat trimming methods and planing aspects
- detailed knowledge of marine hull performance and design characteristics.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions and operations of diagnostic testing

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
equipment. <ul style="list-style-type: none"><li>• general knowledge of marine engine digital computing systems.</li><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li></ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three different light marine hull performance systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different light marine hull performance systems.</li> <li>• Document and report the diagnostic process and findings and recommended rectification for two of the above.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, operational light marine hull performance systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<b>Method of assessment</b>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process.</p> <p>Direct evidence may include certification of compliance of</p>

## EVIDENCE GUIDE

	<p>the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Total systems</b>	Total systems to be covered in this unit are to include the boat and engine combination as well as boat trimming systems, boat loading and fitted accessories.
<b>Boats</b>	Boats are to include inboard and outboard propelled vessels, including twin engine installations, which are fifty horsepower or above. They can be either two-stroke, four-stroke or diesel.
<b>Failures</b>	Failures covered by this unit are to include engine

<b>RANGE STATEMENT</b>	
	(poor performance, poor selection, incorrect fitting, overloading, overpowering), propeller selection (size, pitch, material and application), hull faults and stress (transom rot, delamination, hook, rocker, power hook, surface finish and design), mounting (noise, vibration, hardness).
<b>Boat performance</b>	Boat performance and control faults covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operation.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include compression gauges, computer-based diagnostic system, straight edges, engineer's protractor or inclinometer, tape measure, tachometer, feeler gauges, analogue and digital multimeter, pressure gauges, stethoscope, temperature gauges, timing lights, torque gauges, verniers, hand and power tooling, engine alignment bar, transom compass and drilling jig.
<b>Tests</b>	Tests to be conducted are to include engine performance and maximum speed, propeller matching, hull performance and stability water

<b>RANGE STATEMENT</b>	
	tests, water flow and temperature, hull integrity, fuel and oil consumption.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to marine installation guidelines.</li> <li>• Marine industry legislation/regulations.</li> <li>• Marine industry publications related to emerging engine/hull system technology and technology changes.</li> </ul>

## AURRTD3001 Diagnose and repair marine steering systems

### Modification History

Release	Comment
Release 1	Replaces AURR346267A Diagnose and repair marine steering systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to diagnose and repair wire/rope, push pull cable, hydraulic and chain marine steering systems to a safe working condition.</p> <p>It requires the ability to identify and confirm work requirements, diagnose and repair marine steering systems and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake the diagnosis and repair of steering systems on boats and vessels in a marine environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Diagnose faults	2.1. Develop a diagnosis strategy 2.2. Undertake tests in accordance with workplace procedures and manufacturer and component supplier specifications 2.3. Compare test results with manufacturer and component supplier specifications to identify compliance or non-compliance 2.4. Decide upon a plan of action to rectify faults 2.5. Document results, including evidence, relevant information and recommendations 2.6. Forward report to persons for action in accordance with workplace procedures 2.7. Finalise repair requirements
3. Repair rope, cable, chain systems and associated components	3.1. Perform repair and adjustment operations in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 3.2. Operate rope, cable and chain system through full operating range, noting test results and any non-conformity 3.3. Make required adjustments and re-test 3.4. Check that protective guards, cowlings and safety features are in place according to workplace expectations 3.5. Determine the need for water testing
4. Clean up work area and finalise work	4.1. Clean and inspect equipment and tooling according to workplace requirements 4.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 4.3. Finalise and process work completion

ELEMENT	PERFORMANCE CRITERIA
	<p>documentation, update customer and warranty information and give to appropriate persons, as required</p> <p>4.4.Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the diagnosis and repair of marine steering systems, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements, calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- types of rope, cable and chain systems
- purpose and requirements of rope, cable and chain systems and their relationship to vessel and mooring systems
- materials and construction of materials used in rope, cable and chain systems
- measuring and testing procedures
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the diagnosis and repair of marine steering systems, including the safe working load of ropes, chains and cables
- organisational policies and procedures, including quality, reporting and recording procedures, related to the diagnosis and repair of marine steering systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of marine steering systems to workplace and manufacturer and component supplier requirements
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine steering systems in need of repair
  - equipment, hand and power tools appropriate to the diagnosis and repair of vessel rope, cable and chain systems
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of

**EVIDENCE GUIDE**

	<p>workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Repair methods**

Repair methods may include:

- isolation of faults
- dismantling, inspection and evaluation
- replacement of components parts
- assembly
- completion of operational tests
- completion of records

**Marine engines**

Marine engines may include:

- 2-stroke petrol

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current boating licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>

## AURRTE1001 Prepare outboard engines for wet-run testing

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to prepare outboard engines for wet-run testing.</p> <p>The unit involves identifying and confirming work requirements, preparing engine for testing procedure, performing wet run testing, and completing work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the testing of an outboard engine out of water in a marine maintenance environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to wet run an outboard engine	<ul style="list-style-type: none"><li>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to wet-running outboard engines</li><li>1.2. <b>Workplace Health and Safety (WHS) requirements</b> are observed and applied throughout the work</li><li>1.3. Procedures and information are sourced and interpreted</li><li>1.4. Test method is selected for particular application</li><li>1.5. Appropriate <b>tools and equipment</b> are selected and prepared</li></ul> Work area is located and prepared
2. Set up testing equipment	<ul style="list-style-type: none"><li>2.1. <b>Engine systems'</b> settings are determined for <b>wet-run testing</b> according to manufacturer requirements</li><li>2.2. Testing equipment is attached to engine according to manufacturer and component supplier specifications</li></ul>
3. Perform wet-run test	<ul style="list-style-type: none"><li>3.1. Wet-run test is commenced by starting and operating engine according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</li><li>3.2. Engine test performance is monitored</li><li>3.3. <b>Engine test results</b> are compared with manufacturer and component supplier specifications</li><li>3.4. Tests are conducted giving consideration to workplace <b>environmental requirements</b></li></ul>
4. Clean up work area and finalise work processes	<ul style="list-style-type: none"><li>4.1. Tools and equipment are checked and stored according to workplace expectations</li><li>4.2. Work area is cleaned and tidied according to workplace procedures</li><li>4.3. Workplace documentation is completed according to workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- literacy skills to:
  - read and follow manufacturer information
  - read and follow information in standard operating procedures and testing instructions
  - report and record actions
- numeracy skills to interpret gauges and measuring equipment
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow standard workplace procedures
  - identify environmental constraints associated with task
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - locate technical information
  - follow basic workplace documentation, such as operating procedures
  - recognise limitations and seek timely advice
- technical skills to select and use tools and equipment appropriate for wet-run testing of marine engines
- technology skills to use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to marine engine wet-run testing
- types and classifications of marine engines and system components
- starting procedures of outboard engines
- testing procedures appropriate to wet running outboard engines
- environmental considerations of wet run testing of outboard engines
- workplace documentation policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- wet-run test a minimum of three marine outboard engines
- complete workplace documents and clean-up requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice

The following resources must be made available:

- workplace location or simulated workplace
- operational marine outboard engines, including 2 and 4 stroke type
- equipment and hand tools appropriate to the wet-run testing of outboard engines
- engine specifications and work instructions
- workplace documentation.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• outboard engine wet run methods, processes and equipment</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Tools and equipment</b> may include:</li> </ul>	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• flushing or wet-run fittings</li> <li>• water hose and fittings</li> <li>• specialist tools and equipment</li> </ul>
<b>Engine systems</b> may include:	<ul style="list-style-type: none"> <li>• 2 or 4 stroke</li> <li>• outboard engines fitted or not fitted to a vessel</li> </ul>
<b>Wet-run testing</b> may include:	<ul style="list-style-type: none"> <li>• using lifting equipment to locate engine for test</li> <li>• attaching flushing device or fitting</li> <li>• checking security of fittings</li> <li>• connecting remote water supply</li> <li>• regulating water supply for test</li> <li>• checking throttle / choke / fast idle settings</li> <li>• making battery connections</li> </ul>
<b>Engine test results</b> may include:	<ul style="list-style-type: none"> <li>• test report recommendations for repairs and/or modifications</li> <li>• component conformity to manufacturer and supplier specifications</li> <li>• component manufacturer and component supplier warranty considerations</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Environmental***

***requirements*** may include:

- noise
- water use and runoff
- ensuring exhaust emissions are removed as required by state and territory laws

## AURRTE2002 Service outboard engines and components

### Modification History

Release	Comment
Release 1	Replaces AURR201103A Service outboard engines and components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service outboard engines and components.</p> <p>It requires the ability to identify and confirm work requirements, service marine engines and to complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake and document the servicing of two and four cycle outboard engines and components in a marine environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Decide service method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.6. Set up work area
2. Service engines and engine components	2.1. Conduct service in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Conduct pre-start checks, make required adjustments and re-test 2.3. Apply appropriate lubricants to engine 2.4. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.5. Determine the need for water testing
3. Clean up work area and finalise work	3.1. Seal engine orifices against ingress of foreign matter 3.2. Clean and store engine according to workplace requirements 3.3. Clean and inspect equipment and tooling according to workplace requirements 3.4. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.5. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required 3.6. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing of outboard engines and components, including use of workplace computerised technology for the testing, reporting and recording of results
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications and to prepare reports
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles, construction and types of two and four cycle outboard engines
- servicing procedures and methodologies for different engines types
- minor adjustment procedures for different engines types
- types of lubricants and application methods
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides related to the servicing of marine engines and engine components
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the servicing of outboard engines and components
- organisational policies and procedures, including quality requirements, reporting and recording procedures, related to servicing outboard engines and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service a range of two and four cycle outboard engines and components to workplace and manufacturer requirements and within workplace timeframe
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - a range of marine two and four cycle engines and components requiring servicing
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to repairing marine engines
  - relevant information, including manufacturer specifications.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Marine engines**

Marine engines may include:

- 2-stroke petrol and diesel
- 4-stroke petrol and diesel

**Vessels**

Vessels may include:

- single or multi-hull
- inboard or outboard drive

<b>RANGE STATEMENT</b>	
<b>Servicing methods</b>	<p>Servicing methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site repairs</li> <li>• minor adjustments and operational testing</li> <li>• replacement of fluids and filters</li> </ul>
<b>Pre-start checking procedures</b>	<p>Pre-start checking procedures may include:</p> <ul style="list-style-type: none"> <li>• running to operating temperature</li> <li>• priming oil</li> <li>• checking engine fluid levels, including lubrication and coolant</li> <li>• checking fuel system for leaks</li> <li>• checking for abnormal noises</li> <li>• checking for pressures</li> <li>• checking gauges and warning devices for operation</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> <li>• lubricating equipment</li> <li>• measuring equipment</li> <li>• pressure gauges</li> <li>• vacuum gauges</li> <li>• manufacturer's special stools</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• fluids</li> <li>• cleaning materials</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>

**RANGE STATEMENT****Information/documents**

Information/documents may include:

- verbal, written and graphical instructions issued by authorised internal and external persons
- parts listing prices and catalogues
- inventory systems
- Repair Times manuals
- material safety data sheets (MSDS)
- diagrams or sketches
- engineer's design specifications and instructions
- manufacturer specifications
- industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)
- industry codes of practice
- Australian standards
- workplace specifications and requirements
- current driver's licence

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian Standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## AURRTE2003 Service inboard engines and components

### Modification History

Release	Comment
Release 1	Replaces AURR201104A Service inboard engines and components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service inboard engines and components.</p> <p>It requires the ability to identify and confirm work requirements, service the inboard engines and to complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake and document the servicing of inboard engines and components in a marine environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer's information 1.4. Check and prepare tools, equipment and materials 1.5. Decide service method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.6. Set up work area
2. Service engine and engine components	2.1. Conduct service in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Conduct pre-start checks, make required adjustments and re-test 2.3. Apply appropriate lubricants to engine 2.4. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.5. Determine the need for water testing
3. Clean up work area and finalise work	3.1. Seal engine orifices against ingress of foreign matter 3.2. Clean engine according to workplace requirements 3.3. Clean and inspect equipment and tooling according to workplace requirements 3.4. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.5. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required 3.6. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing of inboard engines and components, including use of workplace computerised technology for the testing, reporting and recording of results
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications and to prepare reports
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles, construction and types of inboard engines
- servicing procedures and methodologies for different engines types
- minor adjustment procedures for different engines types
- types of lubricants and application methods
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides related to the servicing of marine engines and engine components
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the servicing of inboard engines and components
- organisational policies and procedures, including quality requirements, reporting and recording procedures related to servicing inboard engines and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service a range of marine inboard engines and components to workplace and manufacturer requirements and within workplace timeframe
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - a range of marine inboard engines and components requiring servicing
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to repairing marine engines
  - relevant information, including manufacturer specifications.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Inboard marine engines**

Marine engines may include:

- 2-stroke petrol and diesel
- 4-stroke petrol and diesel

**Vessels**

Vessels may include:

- single or multi-hull
- inboard or outboard drive

<b>RANGE STATEMENT</b>	
<b>Servicing methods</b>	Servicing methods may include: <ul style="list-style-type: none"><li>• on- and off-site repairs</li><li>• minor adjustments and operational testing</li><li>• replacement of fluids and filters</li></ul>

Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the diagnosis and repair of marine electrical system components, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles and construction of marine dash instrumentation, switch and fuse panels, bilge pumps and lighting
- electrical principles and procedures applicable to repair procedures
- wiring diagram interpretation
- diagnostic and repair procedures, including component and assembly removal and placement
- measuring and testing procedures
- construction and operation of jet propulsion drive systems
- types of lubricants and their application
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and

**REQUIRED SKILLS AND KNOWLEDGE**

codes of practice, including WHS, personal safety and environment, relevant to diagnosing and repairing of marine electrical system components

- organisational policies and procedures, including quality, reporting and recording procedures, related to diagnosing and repairing of marine electrical system components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- test marine electrical systems and components
- complete diagnosis of faults correctly
- diagnose and repair a range of marine electrical systems and components to manufacturer and component supplier requirements, including dash instrumentation, switch and fuse panels, bilge pumps and lighting within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - faulty marine electrical systems and components

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to the diagnosis and repair of faults in marine electrical system components</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Marine electrical systems</b>	Marine electrical systems may include low voltage:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"><li>• switch and fuse panels</li><li>• bilge water, grey water, black water and freshwater pumps</li><li>• pump control systems (e.g. float switches)</li><li>• battery motorised ventilation</li><li>• solar systems</li><li>• carbon monoxide gas alarm systems</li><li>• low voltage charging stations</li><li>• lighting (e.g. incandescent, fluorescent and LED)</li></ul>
<b>Marine engines</b>	Marine engines may include: <ul style="list-style-type: none"><li>• 2-stroke petrol</li><li>• 4-stroke diesel and petrol</li></ul>
<b>Vessels</b>	Vessels may include: <ul style="list-style-type: none"><li>• single or multi-hull</li><li>• inboard or outboard drive</li></ul>
<b>Repair methods</b>	Repair methods may include: <ul style="list-style-type: none"><li>• isolation of faults</li><li>• dismantling, inspection and evaluation</li><li>• replacement of components parts</li><li>• assembly</li><li>• completion of operational tests</li><li>• completion of records</li></ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• hand tools</li><li>• testing equipment, including multimeters</li><li>• power tools</li><li>• air tools</li><li>• specialist tools and equipment</li></ul>
<b>Safe operating procedures</b>	Safe operating procedures may include: <ul style="list-style-type: none"><li>• operational risk assessment and treatments</li><li>• toxic substances</li><li>• electrical safety</li><li>• machinery movement and operation</li><li>• manual and mechanical lifting and shifting</li><li>• working in proximity to others</li></ul>

<b>RANGE STATEMENT</b>	
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for engine repair work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Conduct engine system tests and analyse results	2.1. Develop a diagnosis strategy 2.2. Undertake engine system tests in accordance with workplace procedures and manufacturer and component supplier specifications 2.3. Start and run engine to operating temperature and check for leaks, abnormal noises and pressures 2.4. Compare test results with manufacturer and component supplier specifications to identify compliance or non-compliance 2.5. Document results, including evidence, relevant information and recommendations 2.6. Forward report to persons for action in accordance with workplace procedures 2.7. Finalise repair requirements
3. Dismantle engine and components	3.1. Dismantle engine and components in a logical sequence without causing damage 3.2. Clean engine and arrange components ready for inspection 3.3. Measure and compare components against supplier specifications and tolerances 3.4. Decide repair method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 3.5. Source parts as required 3.6. Determine and arrange outsourcing of third-party repair
4. Repair and rebuild engine and engine components	4.1. Perform repair and rebuild operations in accordance with workplace procedures and manufacturer and component supplier specifications and tolerances 4.2. Re-assemble engine and components following manufacturer and component supplier procedures

ELEMENT	PERFORMANCE CRITERIA
	<ul style="list-style-type: none"><li>4.3.Measure running clearances against component manufacturer and supplier specifications</li><li>4.4.Conduct pre-start checks, make required adjustments and re-test</li><li>4.5.Apply appropriate lubricants to engine</li><li>4.6.Check that protective guards, cowlings and safety features are in place according to workplace expectations</li><li>4.7.Perform hot run testing in test tank or at launching ramp</li><li>4.8.Complete workplace documentation and deal with as relevant to repair outcomes</li></ul>
5. Prepare engine for delivery to customer or storage	<ul style="list-style-type: none"><li>5.1.Seal engine orifices against ingress of foreign matter</li><li>5.2.Determine the need for water testing</li><li>5.3.Make final inspection to ensure protective features are in place and according to workplace requirements</li><li>5.4.Clean and store engine according to workplace requirements</li><li>5.5.Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required</li><li>5.6.Clean work area, dispose of waste and store tools and equipment in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the testing, diagnosis and repair of marine engines and components, including use of specialist tooling, measuring equipment, use of communication devices and workplace technology to record results of repair work
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications, and to prepare reports
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles and construction of two and four cycle outboard engines and components
- repair and rebuild procedures and methodologies for different engines types
- testing and adjustment procedures for different engine types
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to testing, diagnosing and repairing two and four cycle outboard engines and components
- organisational policies and procedures, including quality requirements, reporting and recording procedures, WHS regulations and requirements, equipment, material

**REQUIRED SKILLS AND KNOWLEDGE**

and personal safety requirements related to testing, diagnosing and repairing two and four cycle outboard engines and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select repair methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair and rebuild a range of two and four cycle outboard engines from single cylinder to current multi-cylinder engines and their components to manufacturer and component specifications
- complete the repair of two and four cycle outboard engine and components within workplace timeframes
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - range of two and four cycle marine engines and components
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to repairing marine engines
  - relevant information, including manufacturer

<b>EVIDENCE GUIDE</b>	
	specifications.
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Marine engines</b>	<p>Marine engines may include:</p> <ul style="list-style-type: none"> <li>2-stroke petrol</li> <li>4-stroke diesel and petrol</li> </ul>
<b>Repair and rebuild</b>	<p>Repair and rebuild may include:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"><li>• on- and off-site repairs</li><li>• dismantling and reassembly</li><li>• repair and replacement of components</li><li>• testing and adjustments</li></ul>
<b>Pre-start checking procedures</b>	Pre-start checking procedures may include: <ul style="list-style-type: none"><li>• running to operating temperature</li><li>• priming oil</li><li>• checking engine fluid levels, including lubrication and coolant</li><li>• checking fuel system for leaks</li><li>• checking for abnormal noises</li><li>• checking for pressures</li><li>• checking gauges and warning devices for operation</li></ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• specific service and general workshop equipment and tooling</li><li>• measuring equipment</li><li>• lubricating equipment</li></ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>• spare parts</li><li>• lubricants</li><li>• fluids</li><li>• cleaning materials</li></ul>
<b>Environmental work practices</b>	Environmental work practices may include: <ul style="list-style-type: none"><li>• use of renewable, recyclable, reusable and recoverable resources</li><li>• minimisation and appropriate disposal of waste and packaging</li><li>• prevention of contaminants and wastewater entering stormwater drains, waterways or marine environments</li><li>• minimisation and containment of hazards to air quality</li><li>• minimisation of noise generating activities</li><li>• safe storage of parts and components containing environmentally hazardous material</li><li>• provision of appropriate storage or recycling</li></ul>

<b>RANGE STATEMENT</b>	
	<p>containers for solid and liquid waste</p> <ul style="list-style-type: none"> <li>• use of impervious paved area for surface cleaning, engine degreasing and preparation</li> <li>• use of an approved parts washer</li> <li>• use of drip trays under vehicles</li> <li>• cleaning hands over drains connected to an oil/water separator or liquid waste collection drums</li> <li>• minimisation of vehicle exhausts and emissions and provision of ventilated work areas</li> <li>• use of a ventilated, enclosed booth or chamber for spray painting and abrasive sanding</li> <li>• recovering CFCs, HCFCs and blends from air conditioning systems for recycling or approved disposal</li> <li>• prevention of tributyltin, arsenic, mercury and DDT entering the marine environment</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current boating licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the testing, diagnosis and repair of marine inboard engines and components, including use of specialist tooling, measuring equipment, use of communication devices and workplace technology to record results of repair work
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications, and to prepare reports
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles and construction of two and four cycle inboard engines and components
- repair and rebuild procedures and methodologies for different engines types
- testing and adjustment procedures for different engine types
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to testing, diagnosing and repairing two and four cycle inboard engines and components
- organisational policies and procedures, including quality requirements, reporting and recording procedures, WHS regulations and requirements, equipment, material

**REQUIRED SKILLS AND KNOWLEDGE**

and personal safety requirements related to testing, diagnosing and repairing two and four cycle inboard engines and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select repair methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair and rebuild a range of inboard engines and their components to manufacturer and component specifications within workplace timeframes
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - range of marine inboard engines and components
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to repairing marine engines
  - relevant information, including manufacturer specifications.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Marine engines**

Marine engines may include:

- 2-stroke petrol
- 4-stroke diesel and petrol

**Repair and rebuild**

Repair and rebuild may include:

- on- and off-site repairs
- dismantling and reassembly
- repair and replacement of components
- testing and adjustments

**RANGE STATEMENT****Pre-start checking procedures**

Pre-start checking procedures may include:

- running to operating temperature
- priming oil
- checking engine fluid levels, including lubrication and coolant
- checking fuel system for leaks
- checking for abnormal noises
- checking for pressures
- checking gauges and warning devices for operation

**Tooling and equipment**

Tooling and equipment may include:

- specific service and general workshop equipment and tooling
- measuring equipment
- lubricating equipment

**Materials**

Materials may include:

- spare parts
- lubricants
- fluids
- cleaning materials

**Environmental work practices**

Environmental work practices may include:

- use of renewable, recyclable, reusable and recoverable resources
- minimisation and appropriate disposal of waste and packaging
- prevention of contaminants and wastewater entering stormwater drains, waterways or marine environments
- minimisation and containment of hazards to air quality
- minimisation of noise generating activities
- safe storage of parts and components containing environmentally hazardous material
- provision of appropriate storage or recycling containers for solid and liquid waste
- use of impervious paved area for surface cleaning, engine degreasing and preparation
- use of an approved parts washer

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• use of drip trays under vehicles</li> <li>• cleaning hands over drains connected to an oil/water separator or liquid waste collection drums</li> <li>• minimisation of vehicle exhausts and emissions and provision of ventilated work areas</li> <li>• use of a ventilated, enclosed booth or chamber for spray painting and abrasive sanding</li> <li>• recovering CFCs, HCFCs and blends from air conditioning systems for recycling or approved disposal</li> <li>• prevention of tributyltin, arsenic, mercury and DDT entering the marine environment</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current boating licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• confidentiality and privacy</li><li>• WHS</li><li>• the environment</li><li>• equal opportunity</li><li>• anti-discrimination</li><li>• duty of care</li></ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"><li>• personal protective equipment and clothing</li><li>• safety equipment</li><li>• first aid equipment</li><li>• hazard and risk control</li><li>• elimination of hazardous materials and substances</li><li>• manual handling, including shifting, lifting and carrying</li><li>• emergency procedures</li><li>• road rules</li><li>• safe driving policy</li></ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"><li>• waste management</li><li>• noise</li><li>• dust</li><li>• clean-up management</li></ul>

## AURRTE3008 Install marine engines, controls and instruments

### Modification History

Release	Comment
Release 1	Replaces AURR346131B Install marine engines, controls and instruments  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to install, test and commission inboard and outboard engines, system controls and instrumentation to a vessel.</p> <p>It requires the ability to identify and confirm work requirements, prepare for, install and commission engines, controls or instruments and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who undertake installation, testing and commissioning of inboard and outboard engines, system controls and instrumentation to a vessel in a marine environment.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source installation procedures and relevant workshop manuals and manufacturer information 1.4. Determine installation method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.5. Set up work area
2. Install inboard/outboard engine	2.1. Carry out engine installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Test inboard or outboard engine for correct operation, make required adjustments and re-test 2.3. Determine the need for water testing
3. Install controls/steering system	3.1. Carry out installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 3.2. Test controls/steering system for correct operation, make required adjustments and re-test 3.3. Determine the need for water testing
4. Install instruments/accessories	4.1. Carry out installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 4.2. Test instruments and accessories for correct operation, make required adjustments and re-test 4.3. Identify the need for water testing
5. Commission the installation	5.1. Test vessel engine/steering system/controls/instruments or accessories under normal conditions for correct operation and in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices
6. Clean up work area and maintain	6.1. Make final inspection 6.2. Clean and inspect equipment and tooling according

ELEMENT	PERFORMANCE CRITERIA
equipment	<p>to workplace requirements</p> <p>6.3.Tag unserviceable equipment and faults identified in accordance with workplace requirements</p> <p>6.4.Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required</p> <p>6.5.Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the installation of marine engines, controls and instruments, to perform diagnosis and repair actions, and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications, and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- construction and operating principles of inboard and outboard engines, control systems and instrumentation
- installation procedures
- measuring and testing procedures
- commissioning procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to installing marine engines, controls and instruments
- organisational policies and procedures, including quality, reporting and recording procedures, related to installing marine engines, controls and instruments

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- install and test prior to placing in service a minimum of three (3) inboard and outboard engines to workplace and manufacturer and component supplier requirements within workplace timeframes
- install and test prior to placing in service a minimum of three (3) controls and steering systems to workplace and manufacturer and component supplier requirements within workplace timeframes
- install and test prior to placing in service a minimum of three (3) instruments and accessories to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>workplace location or simulated workplace</li> <li>materials relevant to the installation of marine engines, controls and steering, instruments and accessories</li> <li>equipment, hand and power tools appropriate to the installation of marine engines, controls and steering, instruments and accessories</li> <li>specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>RANGE STATEMENT</b>	
<b>Recommissioning</b>	Recommissioning may include: <ul style="list-style-type: none"><li>• engine system inspection</li><li>• reading service data</li><li>• compiling reports</li><li>• testing, inspecting, adjusting, cleaning, and repairing components and systems</li></ul>
<b>Installation</b>	Installation may include: <ul style="list-style-type: none"><li>• minor adjustments, alignment and operational testing</li><li>• functional operation</li><li>• functional operation and testing of components</li></ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• hand tools</li><li>• testing equipment, including multimeters</li><li>• power tools</li><li>• air tools</li><li>• specialist tools and equipment</li></ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>• spare parts</li><li>• lubricants</li><li>• fluids</li><li>• cleaning materials</li></ul>
<b>Safe operating procedures</b>	Safe operating procedures may include: <ul style="list-style-type: none"><li>• operational risk assessment and treatments</li><li>• toxic substances</li><li>• electrical safety</li><li>• machinery movement and operation</li><li>• manual and mechanical lifting and shifting</li><li>• working in proximity to others</li></ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"><li>• verbal, written and graphical instructions issued by authorised internal and external persons</li><li>• parts listing prices and catalogues</li><li>• inventory systems</li><li>• material safety data sheets (MSDS)</li></ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• waste management</li><li>• noise</li><li>• dust</li><li>• clean-up management</li></ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"><li>• quality policies and procedures, including Australian standards</li><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li><li>• manufacturer specifications and industry codes of practice</li><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Confirm nature and scope of work to be carried out</li><li>1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work</li><li>1.3. Access and interpret repair method, workshop manuals and manufacturer information</li><li>1.4. Check and prepare tools, equipment and materials</li><li>1.5. Set up work area</li></ul>
2. Recommission engine systems	<ul style="list-style-type: none"><li>2.1. Carry out recommissioning procedures in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices</li><li>2.2. Test engine systems and compare to manufacturer and component specifications</li><li>2.3. Determine and report engine systems which fail testing and gain rectification approval from customer</li><li>2.4. Repair and test failed systems</li><li>2.5. Commission engine system</li><li>2.6. Determine the need for water testing</li></ul>
3. Clean up work area and finalise work	<ul style="list-style-type: none"><li>3.1. Clean and inspect equipment and tooling according to workplace requirements</li><li>3.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements</li><li>3.3. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</li><li>3.4. Finalise and process work completion documentation and give to appropriate persons, as required</li><li>3.5. Prepare report for the customer detailing work undertaken and technical or regulatory requirements</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the preparation of an engine for use after seasonal shutdown and storage, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- mechanical, hydraulic, electrical and electronic principles and application
- engine system requirements and their relationship to vessel systems and associated components
- engine classification, system types and component identification
- safety precautions
- properties and use of servicing fluids, and lubricants and anti-corrosion products used in winterising procedures
- recommissioning requirements and specifications as specified by the manufacturer and component supplier, including workshop manuals and repair guides
- use and application of testing, measuring and specialised servicing equipment
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the preparation of an engine for use after seasonal shutdown and storage, including

**REQUIRED SKILLS AND KNOWLEDGE**

- power lifting requirements and licensing
- organisational policies and procedures, including quality, reporting and recording procedures, related to the preparation of an engine for use after seasonal shutdown and storage

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- recommission and test of a range of marine engine systems to manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine engine systems requiring recommissioning
  - equipment, hand and power tools appropriate to the recommissioning of engine systems
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Engine systems**

Engine systems may include:

- inboard or outboard
- 2- or 4-stroke
- single or multi-cylinder
- water or air cooled
- electrical or electronic
- remote or local controlled

**Fuel systems**

Fuel systems may include

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• petrol</li> <li>• diesel</li> <li>• gas</li> <li>• carburetion or fuel injection</li> <li>• manual or electric start</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Set up testing equipment	2.1. Prepare engine for testing 2.2. Link testing equipment to engine in accordance with manufacturer and component supplier specifications 2.3. Carry out all activities according to industry regulations and guidelines, WHS and environmental legislation, and enterprise policies and procedures
3. Performance test engine	3.1. Conduct test by starting and operating engine through speed ranges as specified in test procedure 3.2. Document performance data during engine test sequence 3.3. Compare engine performance data to manufacturer and component supplier specifications 3.4. Prepare test reports and make recommendations for repairs and/or modifications
4. Clean up work area and finalise work	4.1. Clean and inspect equipment and tooling according to workplace requirements 4.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 4.3. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures 4.4. Finalise and process work completion documentation and give to appropriate persons, as required

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to marine engine inspection and tank testing, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- marine engine and system components classifications and types
- electronic, electrical and hydraulic controls
- engine operating systems
- engine performance report compilation and presentation
- types and layout of service and/or repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to marine engine inspection and tank testing
- organisational policies and procedures, including quality, reporting and recording procedures, related to marine engine inspection and tank testing

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- performance test a minimum of three (3) ignition engines with fuel and temperature faults within workplace timeframes
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - faulty engines, including engines with fuel and temperature faults
  - equipment, hand and power tools appropriate to the water testing of engines in tanks
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Engine systems**

Engines systems may include:

- 2- or 4-stroke
- inboard or outboard engine
- fitted or not fitted to a vessel

**Prepare engine for testing**

Prepare engine for testing may include:

- using lifting equipment to locate engine in tank
- checking security of water tank
- ensuring exhaust emissions are removed as

<b>RANGE STATEMENT</b>	
	required by state and territory laws
<b>Test report</b>	<p>Test report may include:</p> <ul style="list-style-type: none"> <li>• recommendations for repairs and/or modifications</li> <li>• component conformity to manufacturer and supplier specifications</li> <li>• performance enhancing components which may satisfy the customer requirement</li> <li>• conformity to and implications of local, state and territory regulations and laws which may influence the customer decisions</li> <li>• component manufacturer and component supplier warranty considerations</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to carry out engine overhaul	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work 1.3. Access and interpret overhaul method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Dismantle engine and components	2.1. Dismantle engine and components in a logical sequence without causing damage 2.2. Clean engine and arrange components ready for inspection 2.3. Measure and compare components against supplier specifications and tolerances 2.4. Decide serviceability and repair method of each component in accordance with WHS, environmental and industry regulations and guidelines, and enterprise procedures 2.5. Source replacement parts as required 2.6. Determine and arrange outsourcing of third-party repair
3. Overhaul and assemble engine and components	3.1. Perform overhaul operations in accordance with workplace procedures and manufacturer and component supplier specifications and tolerances 3.2. Re-assemble engine following manufacturer and component supplier procedures 3.3. Measure running clearances against component manufacturer and supplier specifications 3.4. Make the necessary adjustments 3.5. Apply appropriate lubricants to engine 3.6. Complete assembly of engine within established industry guidelines and timeframes and without causing damage to system or components
4. Undertake engine pre-start check	4.1. Mount engine securely in preparation for starting 4.2. Conduct pre-start checks, make required adjustments and re-test 4.3. Seal engine openings against ingress of foreign matter 4.4. Make final inspection to ensure protective features

ELEMENT	PERFORMANCE CRITERIA
	are in place and according to workplace requirements 4.5.Determine the need for water testing
5. Clean up work area and finalise work	5.1.Clean and store engine according to workplace requirements 5.2.Clean and inspect equipment and tooling according to workplace requirements 5.3.Tag unserviceable equipment and faults identified in accordance with workplace requirements 5.4.Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required 5.5.Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the overhaul of two and four cycle engines and components, including use of specialist tooling, measuring equipment, use of communication devices and workplace technology to record results of repair work
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications and to prepare reports
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity
- analytical skills to the level required to analyse technical information and issues related to the overhaul of two and four cycle engines and components

#### Required knowledge

Required knowledge includes:

- operating principles, construction and types of two and four cycle engines and components
- engine overhaul procedures and methodologies
- component evaluation methods
- dismantling, assembling and adjustment methods
- measuring, testing and adjustment procedures
- types of lubricants and application methods
- manufacturer and component supplier specifications and tolerances, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the

**REQUIRED SKILLS AND KNOWLEDGE**

- overhaul of two and four cycle engines and components
- organisational policies and procedures, including quality requirements, reporting and recording procedures, related to repairing engines and components,
- WHS regulations and requirements, equipment, and material and personal safety requirements, related to the overhaul of two and four cycle engines and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to overhauling marine engines and components
- complete preparatory activity in a systematic manner
- overhaul a range of two and four cycle outboard engines to industry and manufacturer specifications and within workplace timeframes
- test prior to placing in service
- complete workplace records as required by the workplace.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - range of two and four cycle outboard engines
  - work instructions
  - equipment, hand and power tooling appropriate to repairing marine engines
  - relevant information, including manufacturer

<b>EVIDENCE GUIDE</b>	
	specifications .
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Engines</b>	<p>Engines may include:</p> <ul style="list-style-type: none"> <li>• 2-stroke spark ignition for marine craft</li> <li>• 4-stroke compression ignition engines for marine craft</li> </ul>
<b>Overhaul</b>	Overhaul may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• complete dismantling of an assembly and component parts</li> <li>• measuring and evaluation of wear</li> <li>• the replacement, repair, rebuilding or reconditioning of parts comparable to original parts</li> <li>• re-assembly procedures</li> <li>• performance of functional testing</li> <li>• completion of records</li> </ul>
<b>Pre-start checking procedures</b>	<p>Pre-start checking procedures may include:</p> <ul style="list-style-type: none"> <li>• running to operating temperature</li> <li>• priming oil</li> <li>• checking engine fluid levels, including lubrication and coolant</li> <li>• checking fuel system for leaks</li> <li>• checking for abnormal noises</li> <li>• checking for pressures</li> <li>• checking gauges and warning devices for operation</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include operational risk assessments associated with:</p> <ul style="list-style-type: none"> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Environmental work practices</b>	<p>Environmental work practices may include:</p> <ul style="list-style-type: none"> <li>• use of renewable, recyclable, reusable and recoverable resources</li> <li>• minimisation and appropriate disposal of waste and packaging</li> <li>• prevention of contaminants and wastewater entering stormwater drains, waterways or marine environments</li> <li>• minimisation and containment of hazards to air quality</li> <li>• minimisation of noise generating activities</li> <li>• safe storage of parts and components containing environmentally hazardous material</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• provision of appropriate storage or recycling containers for solid and liquid waste</li> <li>• use of impervious paved area for surface cleaning, engine degreasing and preparation</li> <li>• use of an approved parts washer</li> <li>• use of drip trays under vehicles</li> <li>• cleaning hands over drains connected to an oil/water separator or liquid waste collection drums</li> <li>• minimisation of vehicle exhausts and emissions and provision of ventilated work areas</li> <li>• use of a ventilated, enclosed booth or chamber for spray painting and abrasive sanding</li> <li>• recovering chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs) and blends from air conditioning systems for recycling or approved disposal</li> <li>• prevention of tributyltin, arsenic, mercury and dichlorodiphenyltrichloroethane (DDT) entering the marine environment</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• Environment Protection Regulations related to diesel fuels</li> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying of engine cradles, slings and shackles and the safety ratings against the load to be lifted</li> <li>• emergency procedures</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> </ul>

## AURRTE5012 Analyse and evaluate light marine engine and powerhead system faults

### Modification History

Release	Comment
Release 1	Replaces AURT573793A Analyse and evaluate light marine engine and powerhead system faults Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate light marine engine and powerhead systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	<p>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
---	---

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning light marine engine and powerhead systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Light marine engine and powerhead system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3.Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4.Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate persons in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary light marine engine and powerhead systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- light marine terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the types, functions, operations and limitations of light marine engines.
- detailed knowledge of the types, function, operations and limitations of light marine fuel systems/components.
- detailed knowledge of the types, function, operations and limitations of light marine ignition systems/components.
- detailed knowledge of the types, function, operations and limitations of light

## REQUIRED SKILLS AND KNOWLEDGE

- marine intake systems/components.
- detailed knowledge of the types, function, operations and limitations of light marine exhaust systems/components.
- detailed knowledge of the types, function, operations and limitations of light marine lubrication systems/components.
- detailed knowledge of the types, function, operations and limitations of light marine cooling systems/components.
- detailed knowledge of the types, function, operations and limitations of light marine engine mounting systems/ components.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of marine digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to:               <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three different light marine engine and powerhead systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different light marine engine and powerhead systems.</li> <li>• Document and report the diagnostic process and findings and recommended rectification for two of the above.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, light marine engine and powerhead systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<b>Method of assessment</b>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process.</p> <p>Direct evidence may include certification of compliance of</p>

**EVIDENCE GUIDE**

	<p>the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Failure analysis and evaluation process**

The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

**Engine systems**

- Engine systems are to include two-stroke, four-stroke, diesel and petrol engines.
- Engine systems to be covered in this unit are to include the engine and related fuel, ignition, intake, exhaust, lubrication and cooling systems.
- Coverage is to include direct high-pressure petrol injection two-stroke.

**Engine system failures**

- Engine system failures covered by this unit are to include engine (poor performance, excessive oil consumption, engine stoppages), fuel (contamination, flow, pressure, leakage),

<b>RANGE STATEMENT</b>	
	<p>ignition (pre-ignition, detonation, no-start, no-run, misfire, erratic operation, lack of power, charging), intake (leakage, noise, vibration, inadequate control, exhaust (pressure, abnormal emissions against current and proposed standards), lubrication (pressure, flow, leakage), abnormal engine wear, inadequate filtration, sludge formation, excessive deposits, overheating, cooling (overcooling, coolant out of specification, lack of water flow, internal corrosion), mounting (noise, vibration, harshness) engine management, engine performance (response, fuel consumption), contamination, emissions, forced induction, fuel supply/pressure, leaks, sensors, starting and damaged components.</p> <ul style="list-style-type: none"> <li>• Engine system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include bore gauges, compression gauges, computer-based diagnostic system (direct and internet), cooling system

<b>RANGE STATEMENT</b>	
	analyser, dial gauges, micrometers, multimeter, oscilloscope, pressure gauges, stethoscope, telescopic gauges, temperature gauges, tachometer, timing lights, vacuum gauges, verniers, and may include anemometer, barometer, specific gravity gauge.
<b>Tests</b>	Tests to be conducted are to include component wear analysis, compression, cylinder leakage, engine performance, oil consumption, pressure, sample collection/processing, specific gravity, temperature, vacuum, ignition timing adjustments, injector pump timing.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light marine engine systems.</li> <li>• Marine industry regulations.</li> <li>• Marine industry publications related to emerging engine system technology and technology changes.</li> </ul>

## AURRTQ2001 Service inboard propeller drive systems

### Modification History

Release	Comment
Release 1	Replaces AURR213670A Service inboard propeller drive systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to carry out the service of inboard propeller drive systems and associated components on vessels.</p> <p>It requires the ability to identify and confirm work requirements, prepare for, service and test inboard propeller drive systems and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who undertake servicing of drive systems installation of inboard propeller drive systems.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Determine service method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.6. Set up work area
2. Service propeller drive systems and associated components	2.1. Conduct service in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Conduct pre-start checks, make required adjustments and re-test 2.3. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.4. Determine the need for water testing
3. Clean up work area and maintain equipment	3.1. Make final inspection 3.2. Clean and inspect equipment and tooling according to workplace requirements 3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required 3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the servicing of inboard propeller drive systems, to perform diagnosis and repair actions, and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles of inboard propeller drive systems
- servicing procedures for inboard propeller drive systems
- measuring and testing procedures
- types of lubricants and application methods
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing inboard propeller drive systems
- organisational policies and procedures, including quality, reporting and recording procedures, related to servicing inboard propeller drive systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service a range of inboard propeller drive systems to workplace and manufacturer and component supplier requirements and within workplace timeframe
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - inboard propeller drive systems
  - equipment, hand and power tools appropriate to the servicing of inboard propeller drive systems
  - activities covering the mandatory task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment

**EVIDENCE GUIDE**

	<p>Guidelines of this Training Package.</p> <ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Marine inboard propeller drive systems**

Marine inboard propeller drive systems may include:

- sterntube
- 'A' frame strut
- 'T' strut
- cutlass bearing
- fibre bearing

<b>RANGE STATEMENT</b>	
<b>Marine engines</b>	<p>Marine engines may include:</p> <ul style="list-style-type: none"> <li>• 2-stroke petrol</li> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Vessels</b>	<p>Vessels may include:</p> <ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> </ul>
<b>Servicing methods</b>	<p>Servicing methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site repairs</li> <li>• minor adjustments and operational testing</li> <li>• replacement of fluids and filters</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> <li>• lubricating equipment</li> <li>• measuring equipment</li> <li>• pressure gauges</li> <li>• vacuum gauges</li> <li>• manufacturer's special stools</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• fluids</li> <li>• cleaning materials</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>persons</p> <ul style="list-style-type: none"> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard) w</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• emergency procedures</li><li>• road rules</li><li>• safe driving policy</li></ul>
<b>Environmental requirements</b>	Environmental requirements may include: <ul style="list-style-type: none"><li>• waste management</li><li>• noise</li><li>• dust</li><li>• clean-up management</li></ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"><li>• quality policies and procedures, including Australian standards</li><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li><li>• manufacturer specifications and industry codes of practice</li><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

### Modification History

Release	Comment
Release 1	Replaces AURR214170B Service jet drive propulsion systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to carry out the servicing of jet propulsion systems.</p> <p>It requires the ability to identify and confirm work requirements, prepare for and service jet propulsion systems, and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who undertake servicing of jet propulsion systems as fitted to vessels in a marine environment.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Confirm nature and scope of work to be carried out</li><li>1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work</li><li>1.3. Source service procedures and relevant workshop manuals and manufacturer information</li><li>1.4. Check and prepare tools, equipment and materials</li><li>1.5. Determine service method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures</li><li>1.6. Set up work area</li></ul>
2. Service jet drive propulsion systems and associated components	<ul style="list-style-type: none"><li>2.1. Conduct service in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices</li><li>2.2. Conduct pre-start checks, make required adjustments and re-test</li><li>2.3. Check that protective guards, cowlings and safety features are in place according to workplace expectations</li><li>2.4. Determine the need for water testing</li></ul>
3. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>3.1. Clean and inspect equipment and tooling according to workplace requirements</li><li>3.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements</li><li>3.3. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required</li><li>3.4. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing of jet drive propulsion systems and components, and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications, and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles and construction of jet drive propulsion systems and components
- servicing procedures
- minor adjustment procedures for different system types
- types of lubricants and application methods
- measuring and testing procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing of jet drive propulsion systems and components
- organisational policies and procedures, including quality, reporting and recording procedures, related to servicing of jet drive propulsion systems and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret the servicing data
- conduct the servicing of a minimum of three (3) jet drive propulsion systems to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - jet drive propulsion systems
  - equipment, hand and power tools appropriate to servicing of jet drive propulsion systems
  - activities covering the mandatory task requirements
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Marine jet drive propulsion systems**

Marine jet drive propulsion systems may include:

- axial
- mixed
- geared
- variable

**Marine engines**

Marine engines may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• 2-stroke petrol</li> <li>• 4-stroke diesel and petrol</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work 1.3. Source installation procedures and relevant workshop manuals and manufacturer information 1.4. Determine installation method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.5. Set up work area
2. Install and commission propeller drive systems and associated components	2.1. Carry out propeller drive system installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Test propeller drive systems for correct operation, make required adjustments and re-test 2.3. Commission propeller drive system 2.4. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.5. Determine the need for water testing of vessel's propeller drive system
3. Clean up work area and maintain equipment	3.1. Make final inspection of propeller drive system 3.2. Clean and inspect equipment and tooling according to workplace requirements 3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required 3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the installation of inboard propeller systems, to perform diagnosis and repair actions, and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications, and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- selection and installation procedures, including component and assembly removal and placement
- operating principles of jet propulsion drive systems
- measuring and testing procedures
- types of lubricants and application methods
- commissioning procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to installing inboard propeller systems
- organisational policies and procedures, including quality, reporting and recording

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, related to installing inboard propeller systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- install a minimum of three (3) inboard propeller drive systems to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the installation of an inboard propeller drive system
  - equipment, hand and power tools appropriate to installation of propeller drive systems
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>

Access and interpret repair method, workshop manuals and manufacturer information</li><li>1.4. Check and prepare tools, equipment and materials</li><li>1.5. Set up work area</li></ul>
2. Diagnose faults	<ul style="list-style-type: none"><li>2.1. Develop a diagnosis strategy</li><li>2.2. Undertake tests in accordance with workplace procedures and manufacturer and component supplier specifications</li><li>2.3. Compare test results with manufacturer and component supplier specifications to identify compliance or non-compliance</li><li>2.4. Decide upon a plan of action to rectify faults</li><li>2.5. Document results, including evidence, relevant information and recommendations</li><li>2.6. Forward report to persons for action in accordance with workplace procedures</li><li>2.7. Finalise repair requirements</li></ul>
3. Repair inboard propeller drive systems and associated components	<ul style="list-style-type: none"><li>3.1. Perform repair and adjustment operations in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices</li><li>3.2. Test system, make required adjustments and re-test</li><li>3.3. Check that protective guards, cowlings and safety features are in place according to workplace expectations</li><li>3.4. Determine the need for water testing</li></ul>
4. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>4.1. Clean and inspect equipment and tooling according to workplace requirements</li><li>4.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements</li><li>4.3. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required</li></ul>

ELEMENT	PERFORMANCE CRITERIA
	4.4.Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the diagnosis and repair of inboard propeller drive systems, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customer, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- diagnostic and repair procedures, including component and assembly removal and placement
- measuring and testing procedures
- construction and operation of inboard propeller drive systems
- types of lubricants and their application
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to diagnosing and repairing inboard propeller drive systems
- organisational policies and procedures, including quality, reporting and recording procedures, related to diagnosing and repairing inboard propeller drive systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret diagnosis results
- conduct repair requirements to a range of inboard propeller drive systems to manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - faulty inboard propeller drive systems
  - equipment, hand and power tools appropriate to the diagnosis and repair of inboard propeller drive systems
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Marine inboard propeller drive systems**

Marine inboard propeller drive systems may include:

- sterntube
- 'A' frame strut
- 'T' strut
- cutlass bearing
- fibre bearing

**Marine engines**

Marine engines may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• 2-stroke petrol</li> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Vessels</b>	<p>Vessels may include:</p> <ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> </ul>
<b>Repair methods</b>	<p>Repair methods may include:</p> <ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• dismantling, inspection and evaluation</li> <li>• replacement of components parts</li> <li>• assembly</li> <li>• completion of operational tests</li> <li>• completion of records</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</p> <ul style="list-style-type: none"> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>

## AURRTQ3005 Install jet drive propulsion systems

### Modification History

Release	Comment
Release 1	Replaces AURR314131B Install jet drive propulsion systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to install and commission jet drive propulsion systems and associated components on vessels.</p> <p>It requires the ability to identify and confirm work requirements, prepare for, install and commission inboard jet drive propulsion systems and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	This unit applies to individuals who undertake installation and commissioning of jet drive propulsion systems in a marine environment.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work 1.3. Source installation procedures and relevant workshop manuals and manufacturer information 1.4. Determine installation method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.5. Set up work area
2. Install and commission jet drive propulsion system and associated components	2.1. Carry out jet drive propulsion system installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Test jet drive propulsion system for correct operation, make required adjustments and re-test 2.3. Commission jet drive propulsion system 2.4. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.5. Determine the need for water testing of vessel's jet drive propulsion system
3. Clean up work area and maintain equipment	3.1. Make final inspection of jet drive propulsion system 3.2. Clean and inspect equipment and tooling according to workplace requirements 3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required 3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the installation of jet drive propulsion systems, to perform diagnosis and repair actions, and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications, and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- construction and operating principles of jet propulsion drive systems
- installation procedures, including component and assembly removal and placement
- measuring and testing procedures
- types of lubricants and application methods
- commissioning procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to installing inboard propeller systems
- organisational policies and procedures, including quality, reporting and recording procedures, related to installing inboard propeller systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- install a minimum of three (3) jet drive propulsion systems to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the installation of jet drive propulsion systems
  - equipment, hand and power tools appropriate to the installation of jet drive propulsion systems
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Marine jet drive propulsion systems**

Marine jet drive propulsion systems may include:

- axial
- mixed
- geared
- variable

**Marine engines**

Marine engines may include:

- 2-stroke petrol
- 4-stroke diesel and petrol

<b>RANGE STATEMENT</b>	
<b>Vessels</b>	Vessels may include: <ul style="list-style-type: none"><li>• single or multi-hull</li><li>• inboard or outboard drive</li></ul>
<b>Recommissioning</b>	Recommissioning may include: <ul style="list-style-type: none"><li>• engine system inspection</li><li>• reading service data</li><li>• compiling reports</li><li>• testing, inspecting, adjusting, cleaning, and repairing components and systems</li></ul>
<b>Installation</b>	Installation may include: <ul style="list-style-type: none"><li>• minor adjustments, alignment and operational testing</li><li>• functional operation</li><li>• functional operation and testing of components</li></ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• hand tools</li><li>• testing equipment, including multimeters</li><li>• power tools</li><li>• air tools</li><li>• specialist tools and equipment</li></ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>• spare parts</li><li>• lubricants</li><li>• fluids</li><li>• cleaning materials</li></ul>
<b>Safe operating procedures</b>	Safe operating procedures may include: <ul style="list-style-type: none"><li>• operational risk assessment and treatments</li><li>• toxic substances</li><li>• electrical safety</li><li>• machinery movement and operation</li><li>• manual and mechanical lifting and shifting</li><li>• working in proximity to others</li></ul>

## AURRTR1001 Inspect, service and maintain marine battery storage systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes to inspect service and maintain battery storage systems in recreational boating equipment and marine applications.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to marine applications ranging from personal leisure craft to light commercial applications for inboard, stern drive and outboard marine applications.</p> <p>Work requires individuals to demonstrate limited judgement and problem-solving skills in managing own work activities.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection	<ul style="list-style-type: none"><li>1.1. Nature and scope of work requirements are identified and confirmed</li><li>1.2. <b>Workplace Health and Safety (WHS) requirements</b> and other appropriate precautions are identified and taken</li><li>1.3. Technical inspection requirements are sourced</li><li>1.4. Tools and equipment are located and prepared</li><li>1.5. <b>Safe operating procedures</b> for working with batteries are identified and confirmed</li></ul>
2. Conduct inspection	<ul style="list-style-type: none"><li>2.1. Inspection methods are implemented according to workplace procedures</li><li>2.2. Inspection results are compared with job requirements</li><li>2.3. Results are documented with evidence and supporting information and recommendations made</li><li>2.4. Inspection report is forwarded to persons for action according to workplace procedures</li></ul>
3. Carry out service and maintenance	<ul style="list-style-type: none"><li>3.1. <b>Service and/or maintenance methods</b> are carried out according to workplace procedures and job requirements</li><li>3.2. Adjustments made during service and/or maintenance are carried out according to workplace requirements and job requirements</li><li>3.3. Unserviceable components are removed and tagged and faults are identified according to work requirements</li></ul>
4. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>4.1. Work area is tidied, and tools and equipment are replaced according to workplace requirements</li><li>4.2. Workplace documentation is completed according to workplace requirements</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - communicate information relating to work requirements and battery safety
- literacy skills to:
- read and follow battery inspection and maintenance information
  - read and follow information on standard operating procedures and job requirements
  - numeracy skills to interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow standard workplace procedures
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - locate technical information
  - recognise limitations and seek timely advice
- technical skills to:
  - select tools and equipment appropriate to the inspection, service and maintenance of marine batteries
  - use battery servicing and testing tools and equipment correctly
- technology skills to:
  - use workplace technology to assist with work practices
  - use workplace technology to access and transfer information including the reporting/documenting of results

#### Required knowledge

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- battery inspection and maintenance procedures
- dangers of working with batteries and battery testing equipment
- operating principles and layout of marine battery storage systems
- work organisation and planning processes
- workplace documentation procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe workplace safety procedures and battery safety requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- inspect, service and maintain battery storage systems in marine applications according to workplace, manufacturer and component supplier requirements
- complete workplace documents.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice

The following resources should be made available:

- workplace location or simulated workplace environment that reflects a marine maintenance facility or environment
- material relevant to inspection, servicing and maintenance of battery storage systems for marine or pleasure craft
- tools and equipment appropriate for the inspection and servicing and maintenance of battery storage systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Safe operating procedures may include:***

- the conduct of operational risk assessment
- toxic substances awareness
- electrical safety
- manual and mechanical lifting and shifting
- working in proximity to others and site visitors.

***Service and/or maintenance methods may include:***

- inspection of battery and leads
- inspection of battery securing system
- battery removal
- battery and battery compartment cleaning
- battery fluid top-up
- hydrometer testing
- battery charging.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Confirm nature and scope of work to be carried out</li><li>1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work</li><li>1.3. Source installation procedures and relevant workshop manuals and manufacturer information</li><li>1.4. Determine installation method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures</li><li>1.5. Set up work area</li></ul>
2. Install marine electronic systems and components	<ul style="list-style-type: none"><li>2.1. Carry out marine electronic systems and components installation in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices</li><li>2.2. Conduct pre-start checks, make required adjustments and re-test</li><li>2.3. Determine the need for water testing</li></ul>
3. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>3.1. Make final inspection of electronic systems</li><li>3.2. Clean and inspect equipment and tooling according to workplace requirements</li><li>3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements</li><li>3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required</li><li>3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the installation and testing of marine electronic systems and components, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and electrical circuit and component installation procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customer, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, procedures for circuit and component testing, major repairs, installation and component replacement, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements to determine electrical circuit and component installation requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- the principles of electronics
- the principles of interference suppression
- procedures for the installation of marine electronic systems and components
- wiring diagram interpretation
- measuring and testing procedures
- manufacturer and component supplier specifications and procedures, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to installing marine electronic systems
- organisational policies and procedures, including quality, reporting and recording procedures, related to installing marine electronic systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- install a range a range of electronic systems and components to workplace and manufacturer and component supplier requirements, including GPS, depth sounders, fish finders, communications equipment, audiovisual equipment and radar
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine electronic systems and components
  - equipment, hand and power tooling appropriate to the installation of marine electronic systems and

<b>EVIDENCE GUIDE</b>	
	components <ul style="list-style-type: none"> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Electronic systems and components</b>	Electronic systems and components may include: <ul style="list-style-type: none"> <li>• GPS</li> <li>• depth sounders</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• fish finders</li> <li>• communications equipment and radar</li> <li>• audiovisual equipment</li> </ul>
<b>Repair and test</b>	<p>Repair and rebuild may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site repairs</li> <li>• dismantling and reassembly</li> <li>• repair and replacement of components</li> <li>• testing and adjustments</li> </ul>
<b>Low voltage marine electronic systems and components</b>	<p>Low voltage marine electronic systems and components may include:</p> <ul style="list-style-type: none"> <li>• GPS</li> <li>• depth sounders</li> <li>• communications equipment</li> <li>• radar</li> <li>• inverters</li> <li>• alarm systems</li> <li>• digital antenna systems</li> <li>• television</li> <li>• remote phone antenna</li> <li>• coaxial cable appliances</li> </ul>

## AURRTR3003 Test, diagnose and repair marine electronic systems and components

### Modification History

Release	Comment
Release 1	Replaces AURE321832A Test, diagnose and repair marine electronic systems and components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to diagnose and repair marine electronic systems and components.</p> <p>It requires the ability to identify and confirm work requirements, prepare for, test, diagnose and repair marine low voltage electronic systems and components and complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake the repair of electronic systems and components in a marine environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for systems and component repair work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Access and interpret test and repair methods, workshop manuals and manufacturer information 1.4. Check and prepare tools, measuring equipment and materials 1.5. Set up work area
2. Conduct system tests and analyse results	2.1. Develop a diagnosis strategy 2.2. Undertake system tests in accordance with workplace procedures and manufacturer and component supplier specifications 2.3. Compare test results with manufacturer and component supplier specifications to identify compliance or non-compliance 2.4. Document results, including evidence, relevant information and recommendations 2.5. Forward report to persons for action in accordance with workplace procedures 2.6. Finalise repair requirements
3. Dismantle systems and components	3.1. Dismantle electronic system and components in a logical sequence without causing damage 3.2. Clean and arrange components ready for inspection and testing 3.3. Measure and compare components against supplier specifications and tolerances 3.4. Decide repair method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 3.5. Source parts, as required 3.6. Determine and arrange outsourcing of third-party repair
4. Repair, reassemble and reconnect systems and components	4.1. Perform repair and rebuild operations in accordance with workplace procedures and manufacturer and component supplier specifications and tolerances 4.2. Re-assemble electronic systems and components following manufacturer and component supplier procedures to industry standards

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Test systems for correct and safe operation and make required adjustments and re-test</p> <p>4.4. Complete workplace documentation and deal with as relevant to repair outcomes</p>
<p>5. Prepare for delivery to customer</p>	<p>5.1. Determine the need for water testing</p> <p>5.2. Make final inspection to ensure protective features are in place and according to workplace requirements</p> <p>5.3. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required</p> <p>5.4. Clean work area, dispose of waste and store tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the repair and testing of marine electronic systems and components, including use of specialist tooling, measuring equipment, use of communication devices and workplace technology, to record results of repair work
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures and sufficient to interpret technical information and specifications and to prepare reports
- numeracy skills to the level required to correctly calculate time, assess meter readings, apply accurate measurements, calculate electrical requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles, construction and types of marine related electronic systems and components
- test and repair procedures and methodologies for different electronic systems and components
- testing and adjustment procedures for different electronic systems and components types
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to repairing and testing electronic systems and components

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>organisational policies and procedures, including quality requirements, reporting and recording procedures related to repairing and testing electronic systems and components, WHS regulations and requirements, equipment, material and personal safety requirements</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select repair methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair and test a range of electronic systems and components to workplace and manufacturer and component supplier requirements, including GPS, depth sounders, fish finders, communications equipment, audiovisual equipment and radar
- complete repair of electronic systems and components within workplace timeframes
- complete workplace records.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - a range of electronic systems and components
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to repairing marine engines
  - relevant information, including manufacturer

<b>EVIDENCE GUIDE</b>	
	specifications.
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Confirm nature and scope of work to be carried out</li><li>1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work</li><li>1.3. Source installation procedures and relevant workshop manuals and manufacturer's information</li><li>1.4. Determine installation method in accordance with WHS, environmental and industry regulations and guidelines and enterprise procedures</li><li>1.5. Set up work area</li></ul>
2. Install marine electrical systems and components	<ul style="list-style-type: none"><li>2.1. Install and wire marine electrical systems and components in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices</li><li>2.2. Conduct pre-start check, make required adjustments and re-test</li><li>2.3. Determine the need for water testing</li></ul>
3. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>3.1. Make final inspection of electrical systems</li><li>3.2. Clean and inspect equipment and tooling according to workplace requirements</li><li>3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements</li><li>3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required</li><li>3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the installation and testing of marine electrical systems and components, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and electrical circuit and component installation procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, procedures for circuit and component testing, major repairs, installation and component replacement, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements to determine electrical circuit and component installation requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- the principles of electricity
- types of installation materials and their application
- electrical connection, crimping and soldering techniques
- installation and testing procedures for marine electrical systems and components
- measuring and testing procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to installing marine electrical systems
- organisational policies and procedures, including quality, reporting and recording

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, related to installing marine electrical systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- perform electrical connections, including crimping and soldering
- install a range of marine electrical systems and components to manufacturer and component supplier requirements, including dash instrumentation, switch and fuse panels, bilge pumps, and lighting and navigation aids within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine electrical systems and components
  - equipment, hand and power tooling appropriate to

<b>EVIDENCE GUIDE</b>	
	<p>the installation of marine electrical systems and components</p> <ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Marine electrical systems</b>	<p>Marine electrical systems may include low voltage:</p> <ul style="list-style-type: none"> <li>• switch and fuse panels</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• bilge water, grey water, black water and freshwater pumps</li> <li>• pump control systems (e.g. float switches)</li> <li>• battery motorised ventilation</li> <li>• solar systems</li> <li>• carbon monoxide gas alarm systems</li> <li>• low voltage charging stations</li> <li>• lighting (e.g. incandescent, fluorescent and LED)</li> </ul>
<b>Marine engines</b>	<p>Marine engines may include:</p> <ul style="list-style-type: none"> <li>• 2-stroke petrol</li> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Vessels</b>	<p>Vessels may include:</p> <ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> </ul>
<b>Installation methods</b>	<p>Installation methods may include:</p> <ul style="list-style-type: none"> <li>• reading and interpreting wiring diagrams</li> <li>• soldering and crimping</li> <li>• installing components and wiring</li> <li>• adjustments and post-installation checks</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• Repair Times manuals</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current driver's licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting</li> </ul>

<b>RANGE STATEMENT</b>	
	and carrying <ul style="list-style-type: none"> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>
<b>Environmental requirements</b>	Environmental requirements may include: <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## AURRTX2001 Service marine outboard and stern drive transmissions

### Modification History

Release	Comment
Release 1	Replaces AURR207670B Service marine outboard and stern drive transmissions Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to carry out the servicing of outboard and stern drive transmissions and associated components on vessels.</p> <p>It requires the ability to identify and confirm work requirements, service marine outboard and stern drive transmissions and to complete work finalisation processes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake servicing of outboard and stern drive transmissions in a marine environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Determine service method in accordance with WHS, environmental and industry regulations, and guidelines and enterprise procedures 1.6. Set up work area
2. Service outboard and stern drive transmissions and associated components	2.1. Conduct service in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Conduct pre-start checks, make required adjustments and re-test 2.3. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.4. Determine the need for water testing
3. Clean up work area and finalise work	3.1. Make final inspection 3.2. Clean and inspect equipment and tooling according to workplace requirements 3.3. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.4. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required 3.5. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing of outboard and stern drive marine transmissions and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications, and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles of outboard and stern drive marine transmissions
- servicing procedures
- minor adjustment procedures for different engines types
- types of lubricants and application methods
- measuring and testing procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environments, relevant to servicing outboard and stern drive marine transmissions
- organisational policies and procedures, including quality, reporting and recording procedures, related to servicing outboard and stern drive marine transmissions

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- conduct the servicing of a minimum of two (2) outboard and two (2) stern drive transmissions to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine outboard and stern drive transmissions
  - equipment, hand and power tools appropriate to the servicing of marine transmissions
  - activities covering the mandatory task requirements
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Outboard and stern drive marine transmissions**

Outboard and stern drive marine transmissions may include:

- cone clutch
- mechanical dog clutch

**Marine engines**

Marine engines may include:

- 2-stroke petrol

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Vessels</b>	<p>Vessels may include:</p> <ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> </ul>
<b>Servicing methods</b>	<p>Servicing methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site repairs</li> <li>• minor adjustments and operational testing</li> <li>• replacement of fluids and filters</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> <li>• lubricating equipment</li> <li>• measuring equipment</li> <li>• pressure gauges</li> <li>• vacuum gauges</li> <li>• manufacturer's special stools</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• fluids</li> <li>• cleaning materials</li> </ul>

2. Service marine inboard transmissions and associated components	2.1. Conduct service in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 2.2. Conduct pre-start checks, make required adjustments and re-test 2.3. Check that protective guards, cowlings and safety features are in place according to workplace expectations 2.4. Determine the need for water testing
3. Clean up work area and maintain equipment	3.1. Clean and inspect equipment and tooling according to workplace requirements 3.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 3.3. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as required 3.4. Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing of marine inboard transmissions and to use workplace computerised technology for the reporting and recording of actions
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology and safety procedures, to interpret technical information and specifications and to record servicing details
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- operating principles and construction of inboard marine transmissions
- servicing procedures
- minor adjustment procedures for different engines types
- types of lubricants and application methods
- measuring and testing procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing marine inboard transmissions
- organisational policies and procedures, including quality, reporting and recording procedures, related to servicing marine inboard transmissions

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- conduct the servicing requirements on a minimum of one (1) velvet drive and one (1) 'V' drive inboard transmission to workplace and manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - marine inboard transmissions
  - equipment, hand and power tools appropriate to the servicing of marine inboard transmissions
  - activities covering the mandatory task requirements
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Inboard marine transmissions**

Inboard marine transmissions may include:

- 'V' drive transmissions
- step up transmissions
- hydraulic transmissions
- mechanical transmissions
- counter shaft transmissions

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• planetary gear transmissions</li> <li>• mechanical dog clutch</li> </ul>
<b>Marine engines</b>	<p>Marine engines may include:</p> <ul style="list-style-type: none"> <li>• 2-stroke petrol</li> <li>• 4-stroke diesel and petrol</li> </ul>
<b>Vessels</b>	<p>Vessels may include:</p> <ul style="list-style-type: none"> <li>• single or multi-hull</li> <li>• inboard or outboard drive</li> </ul>
<b>Servicing methods</b>	<p>Servicing methods may include:</p> <ul style="list-style-type: none"> <li>• on- and off-site repairs</li> <li>• minor adjustments and operational testing</li> <li>• replacement of fluids and filters</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> <li>• lubricating equipment</li> <li>• measuring equipment</li> <li>• pressure gauges</li> <li>• vacuum gauges</li> <li>• manufacturer's special stools</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• fluids</li> <li>• cleaning materials</li> </ul>
<b>Safe operating procedures</b>	<p>Safe operating procedures may include:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>

**RANGE STATEMENT****Information/documents**

Information/documents may include:

- verbal, written and graphical instructions issued by authorised internal and external persons
- parts listing prices and catalogues
- inventory systems
- material safety data sheets (MSDS)
- diagrams or sketches
- engineer's design specifications and instructions
- manufacturer specifications
- industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)
- Australian standards
- workplace specifications and requirements

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices, applicable to the work 1.3. Access and interpret repair method, workshop manuals and manufacturer information 1.4. Check and prepare tools, equipment and materials 1.5. Set up work area
2. Diagnose faults	2.1. Develop a diagnosis strategy 2.2. Undertake transmission tests in accordance with workplace procedures and manufacturer and component supplier specifications 2.3. Compare test results with manufacturer and component supplier specifications to identify compliance or non-compliance 2.4. Decide upon a plan of action to rectify faults 2.5. Document results, including evidence, relevant information and recommendations 2.6. Forward report to persons for action in accordance with workplace procedures 2.7. Finalise repair requirements
3. Repair outboard and stern drive transmissions and associated components	3.1. Perform repair and adjustment operations in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices 3.2. Test transmission, make required adjustments and re-test 3.3. Check that protective guards, cowlings and safety features are in place according to workplace expectations 3.4. Determine the need for water testing
4. Clean up work area and finalise work	4.1. Clean and inspect equipment and tooling according to workplace requirements 4.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 4.3. Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons as

ELEMENT	PERFORMANCE CRITERIA
	<p>required</p> <p>4.4.Clean work area, dispose of waste and scrap, and store tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to the diagnosis and repair of marine outboard and stern drive transmissions, to use specialist tooling and equipment and computerised measuring equipment, and to report and record actions
- communication skills to the level required to confirm work requirements and diagnosis and repair procedures and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to research, analyse and interpret information related to work orders and manufacturer and component supplier requirements, and to record servicing details
- numeracy skills to the level required to correctly complete tests and measurements, including assessing tolerances, applying accurate measurements and calculating material requirements
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- diagnostic and repair procedures, including component and assembly removal and placement
- measuring and testing procedures
- construction and operation of marine outboard and stern drive transmissions
- types of lubricants and their application
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to diagnosing and repairing marine outboard and stern drive transmissions
- organisational policies and procedures, including quality, reporting and recording procedures, related to diagnosing and repairing marine outboard and stern drive

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret the diagnosis results
- diagnose and repair a minimum of two (2) outboard and two (2) stern drive transmissions to manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - faulty marine outboard and/or stern drive transmissions
  - equipment, and hand and power tools appropriate to the diagnosis and repair of marine outboard and stern drive transmissions

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret diagnosis results
- conduct repair requirements to a range of transmission drive systems to manufacturer and component supplier requirements within workplace timeframes
- test prior to placing in service
- complete workplace and equipment records and workplace clean-up requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - workplace location or simulated workplace
  - faulty marine inboard transmissions
  - equipment, hand and power tools appropriate to the diagnosis of faults and the repair of marine inboard transmissions
  - activities covering the mandatory task requirements
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Repair methods**

Repair methods may include:

- isolation of faults
- dismantling, inspection and evaluation
- replacement of components parts
- assembly
- completion of operational tests

## AURRTX5005 Analyse and evaluate light marine transmission system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT573693A Analyse and evaluate light marine transmission system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to analyse and evaluate light marine transmission systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning light marine transmission systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Light marine transmission system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary light marine transmission systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- light marine transmission terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- mechanical theory covering the concepts and principles of bearings, gears and shafts.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- detailed knowledge of the function, operation, settings and adjustment of stern drives, inboard shaft and 'V' drives, outboards, jet drives, cooling systems, drivelines, shift controls and propellers.
- detailed knowledge of engine and shaft alignment for inboard and stern drive installations.
- detailed knowledge of propeller theory.
- general knowledge of marine digital computing system.

**REQUIRED SKILLS AND KNOWLEDGE**

- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
    - minimise the risk of injury to self and others
    - prevent damage and wastage of goods, equipment and products
    - maintain required production output and product quality.
  - Complete failure analyses on a minimum of three different light marine transmission systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
  - Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different light marine transmission systems.
  - Document and report the diagnostic process and findings and recommended rectification for the above.
  - Work effectively with others.
  - Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, light marine transmission systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

#### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process.

**EVIDENCE GUIDE**

	<p>Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Failure analysis</b>	Failure analysis is to include component failure, cooling, hydraulic pressures, driveline vibration, driveline sealing, shift control, and propeller selection and failure.
<b>Marine transmission systems</b>	Light marine transmission systems to be covered in this unit are to include stern drive, inboard shaft and 'V' drive, outboard, counter rotating outboard propellers and jet drive.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, industry regulations, safety management systems,</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>hazardous substances and dangerous goods code and safe operating procedures.</p> <ul style="list-style-type: none"> <li>• Work is carried out in accordance with legislative obligations, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include dial indicator, gearbox pressure and vacuum tester, multimeter, computerised diagnostic system, cover nut tool, drive shaft spline tool, slide hammer, pinion height gauge, pressure gauge, temperature gauge, torque wrench and shaft alignment tool.
<b>Tests</b>	Tests to be conducted are to include shaft run out, pinion depth, gear backlash, component wear analysis, pressure and vacuum tests, tooth contact markings, propeller shaft end float, engine alignment, shift adjustment, shift interrupt adjustment.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and Procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to light marine transmission system.</li><li>• Marine industry regulations.</li><li>• Marine industry publications related to emerging light marine transmission system technology and technology changes.</li></ul>

## AURSAA2001 Process customer complaints

### Modification History

Release	Comment
Release 1	Replaces AURS252290A Process customer complaints Unit code updated to meet policy requirements Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the competence to deal with customer complaints in a manner satisfying the customer but complies with enterprise policies and procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	Every action or output has a customer and therefore customers may be internal work colleagues or external to the enterprise.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Clarify the nature of complaint	1.1.Details of the complaint are established 1.2.Summary of the complaint is documented accurately 1.3.Any inconvenience to the customer is acknowledged and an apology is made
2. Identify options for complaint resolution	2.1.Options for resolving the complaint are identified 2.2.Complaint is referred to designated officer if resolution is not possible
3. Act to resolve complaint	3.1.Optimal solution is negotiated with customer 3.2.Chosen solution is implemented within agreed timeframe 3.3.Necessary documentation is finalised 3.4.Effectiveness of solution and related outcomes is evaluated 3.5.Any necessary changes to enterprise procedures are identified and passed on to appropriate persons for action

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to:
- technical literacy and interpretive skills to interpret and discern facts related to the customer complaint
- basic research and analytical skills to investigate and identify factors which caused/contributed to the complaint
- communicate ideas and information
- plain English literacy and communication skills in relation to dealing with customers and their complaints
- questioning and active listening skills, for example when obtaining factual information from excitable customers
- plan and organise activities to plan an approach to identify and resolve a complaint
- work with others and in a team by involving a designated officer if solution is not possible
- use mathematical ideas and techniques when options/solutions are costed
- establish diagnostic processes including basic conflict resolution skills for handling difficult or abusive customers, and greeting/farewelling techniques
- use workplace technology related to use of business technology to make changes to enterprise procedures

#### Required knowledge

- general knowledge of range of enterprise merchandise and services, location of departments/sections and telephone extensions of departments/sections
- general operational knowledge of industry/workplace codes of practice in relation to customer service
- basic working knowledge of legislation and statutory requirements, including consumer law, trade practices and fair trading legislation
- working knowledge of enterprise policies and procedures in regard to:
  - customer service
  - dealing with difficult customers
  - allocated duties/responsibilities
- working knowledge of enterprise complaints handling procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- accurately clarifying the nature and extent of complaint
- identifying options for complaint resolution
- resolving complaint to customer satisfaction
- contributing to avoidance of further complaints
- communicating effectively with others involved in or affected by the work.

#### Context of, and specific resources for assessment

- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment covering a range of customer types
- The following are required:
  - a workplace or simulated workplace
  - enterprise or equivalent policy and procedures relating to customer service and complaint handling processes
  - enterprise or equivalent instructions related to legal implications of customer relations and complaints
  - a range of customers with complaints (real or simulated)
  - a qualified workplace assessor.

#### Method of assessment

- This unit may be assessed in conjunction with other units forming part of the job role or function
- It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

#### Guidance information for

**EVIDENCE GUIDE****assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Complaints**

Complaints may include:

- matters related to personal interaction with customers, incorrect products, faulty products, charging/costing policy, delivery system failures, installation deficiencies and service delays

**Customers**

Customers may be regular or new and may have routine or special requests. They may include persons from a range of social, cultural or ethnic backgrounds and physical and intellectual abilities. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied. Customer contact may be face to face, by telephone, by electronic means or in writing

**Customer service**

Customer service may include:

- enterprise activities, internal and external customers and follow-up in event of delays in service provision

**Customer needs**

Customer needs may include:

- information regarding products or services available, quality of products or services, complementary products or services, enterprise facilities and services and location of specific items

**Staff**

Staff may be:
