## AURSAA2002 Maintain customer aftermarket relations

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to work in an aftermarket role in customer relations. It covers communication processes, addressing customer needs, and other post-sale and service activities.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to those working in an automotive administration or sales-related position in a wide range of automotive workplace that build after-market long-term relationships with customers.</p> <p>These people provide advice and after-market support to customers in the automotive retail, service and repair sectors of the industry.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish customer needs	<p>1.1. <i>Customer</i> needs are regularly monitored via formal and informal <i>communication</i> channels</p> <p>1.2. Products and services are assessed against customer needs to determine the ability of the workplace to meet customer aftermarket needs</p> <p>1.3. Trends in customer service needs are documented and reported to appropriate persons periodically for planning purposes</p>
2. Update workplace customer database	<p>2.1. Customer <i>database</i> and documents are regularly updated and vital data is kept for existing and potential customers</p> <p>2.2. Customer data is maintained to ensure databases are current</p> <p>2.3. Information on customers' sales and service history is gathered and entered into database</p>
3. Process customer feedback	<p>3.1. Customer requirements are determined</p> <p>3.2. Customer requirements are responded to according to <i>workplace policies and procedures</i></p> <p>3.3. Customer is contacted where appropriate to clarify and confirm feedback</p> <p>3.4. Response to customer is provided in a satisfactory manner that meets expectations</p>
4. Maintain professional treatment of customer	<p>4.1. Workplace sales and service policy standards are regularly reviewed to ensure customer expectations are met</p> <p>4.2. <i>Customer loyalty</i> strategies are established and implemented to secure customer loyalty</p> <p>4.3. Customer service is provided in a professional manner</p> <p>4.4. Work activities are reviewed regularly to ensure customer requirements are met</p> <p>4.5. Staff are actively involved in providing customer information to improve sales and service operations and activities</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to follow workplace verbal instructions
- initiative and enterprise skills to:
  - recognise a customer problem or potential problem and take action
  - adapt sales and service activities to customer aftermarket relations and communications
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information in written job instructions, specifications, standard operating procedures, lists, drawings and other reference documents
- numeracy skills to interpret workplace charts and database
- planning and organising skills to:
  - plan aftermarket activities and processes
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate customer communication procedures
  - recognise own limitations and seek advice
  - follow workplace policy
- teamwork skills to:
  - work with diverse individuals and groups
  - apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technology skills to use IT to collect and store customer information

#### Required knowledge

- procedures for customer service
- product knowledge
- processes for maintaining customer databases
- strategies for dealing with difficult customers
- allocated duties and responsibilities

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- workplace services
- location of departments, sections and telephone extensions
- workplace procedures and processes for customer service relating to:
- workplace health and safety (WHS)
- consumer law
- fair trading legislation

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- maintain relevant and current customer databases according to workplace policies and procedures
- monitor, review and assess customer needs and trends
- ensure appropriate treatment of customers.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- a workplace or simulated workplace
- information relating to customer service
- telephone directory
- legislation and codes of practice
- computer
- database software
- customer information and workplace policies and procedures
- a range of customers with different requirements, real or simulated

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- a communication system or a range of communication equipment
- real or simulated customer database.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Customer</i></b> may include:	<ul style="list-style-type: none"> <li>• regular client</li> <li>• new client</li> <li>• person or workplace receiving product or service</li> <li>• person or workplace with the potential to receive product or service</li> <li>• colleague.</li> </ul>
<b><i>Communication</i></b> may include:	<ul style="list-style-type: none"> <li>• email</li> <li>• Facebook</li> <li>• face-to-face</li> <li>• surveys</li> <li>• telephone</li> <li>• Twitter</li> <li>• written and verbal.</li> </ul>
<b><i>Database</i></b> may include:	<ul style="list-style-type: none"> <li>• customer contact details</li> <li>• purchase history</li> <li>• services history</li> <li>• information and enquiry requests</li> <li>• special customer requests and needs</li> <li>• workplace customer rating</li> <li>• business, social and individual group listing.</li> </ul>
<b><i>Workplace policies and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace operational policies and procedures</li> <li>• workplace customer service policy</li> <li>• product manufacturer and component supplier specifications</li> <li>• legislative and regulatory requirements</li> <li>• industry codes of practice</li> <li>• customer follow-up procedures</li> <li>• post-sale and post-service workplace policy.</li> </ul>
<b><i>Customer loyalty</i></b> may include:	<ul style="list-style-type: none"> <li>• product and services update</li> <li>• quality of products or services</li> <li>• complementary products or services</li> <li>• client reward schemes</li> <li>• credit or discount facilities</li> <li>• formal letters of thanks</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- promotional items
- follow-up phone calls.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Receive incoming goods	1.1.Cleanliness and orderliness in receiving bay are maintained according to enterprise policy 1.2.Goods are unpacked using correct techniques and equipment in line with enterprise policy 1.3.Packing materials are removed and disposed of according to enterprise policy 1.4.Incoming stock is checked and validated against purchase orders and delivery documentation according to enterprise policy 1.5.Items received are inspected for damage, quality, use-by dates, breakage or discrepancies and documented according to enterprise policy 1.6.Stock levels are accurately documented on enterprise stock systems, according to enterprise policy
2. Store goods	2.1.Deliveries are promptly and safely transported to the storage area without damage to product or packaging 2.2.Containers are labelled according to contents 2.3.Goods are transferred to suitable containers and are placed safely in the storage area, with old stock to the front 2.4.Goods are stored at correct temperatures to maintain optimum quality 2.5.Storage procedures are carried out according to industry regulations/guidelines, workplace health and safety (WHS) legislation, statutory legislation and regulations and enterprise policies and procedures
3. Dispatch goods	3.1.Goods to be returned to supplier are identified and labelled with date, supplier and reason for return or referred to management 3.2.Credit request documentation is completed 3.3.Goods are stored securely while awaiting dispatch 3.4.Delivery documentation is completed 3.5.Special delivery instructions are noted 3.6.Items are packed safely and securely to avoid damage in transit 3.7.Goods are dispatched to appropriate area/department

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related warehousing procedures
- plain English literacy skills in relation to stock records and delivery documentation
- operation skills and techniques in following set routines and procedures
- work with others and in a team by consulting with experienced staff to carry out warehousing procedures
- numerical skills in relation to completing stock records and delivery documentation
- establish diagnostic processes including problem-solving and analytical skills for a range of unpredictable circumstances relevant to warehousing procedures
- technical skills in the use of electronic labelling/ticketing equipment and mechanical handling equipment

#### Required knowledge

- operational knowledge of enterprise policies and procedures in regard to:
  - storage of stock
  - enterprise labelling policy
  - product quality standards
  - unpacking of goods
  - out of date, missing or damaged stock
  - equipment used
  - stock location
  - waste disposal
  - methods of storage
  - delivery documentation
  - stock record documentation
  - dispatch documentation
- operational knowledge of manual handling and safe lifting techniques
- basic operational knowledge of legislation and statutory requirements, including WHS requirements
- basic operational knowledge of industry codes of practice

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competency to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- consistently applying enterprise policies and procedures, industry codes of practice and legislation and statutory requirements in regard to storage of stock
- consistently applying safe work practices in the manual handling and moving of stock, according to WHS legislation/regulations/codes of practice
- consistently applying safe work practices in the mechanical handling and moving of stock, according to WHS legislation/regulations/codes of practice
- interpreting and applying manufacturer/component supplier instructions with regard to handling stock and using equipment
- receiving and processing incoming goods and dispatching outgoing goods according to enterprise policies and procedures
- interpreting and processing information accurately and responsibly.

#### Context of, and specific resources for assessment

- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated worksite
- Evidence is best gathered using products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies
- The following are required:
  - a workplace or simulated workplace
  - access to equipment, including stock moving equipment, manual and electronic labelling/ticketing equipment and computers/stock recording equipment
  - documentation, such as invoices, packing slips, dispatch documentation, order forms, store policy and procedures manuals, WHS regulations, legislative and statutory requirements and industry codes of practice

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>a qualified workplace assessor.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>An integrated competency assessment approach is required to ensure that holistic assessment occurs for inter-related units of competency. This unit should be assessed in conjunction with other units within the context of the candidate's job role or function</li> <li>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Enterprise</b>	Enterprises may vary in size, type and location, in the range of stock or goods to be stored, in the equipment used and in delivery procedures
<b>Legislative requirements</b>	<p>Legislative requirements include:</p> <ul style="list-style-type: none"> <li>state/territory legislation related to WHS, particularly, manual and mechanical handling and storage/dispatch of hazardous substances</li> </ul>
<b>Stock</b>	Stock may need to conform to established quality guidelines, and may vary according to seasonal and supplier availability

<b>RANGE STATEMENT</b>	
<b>Stock handling</b>	Stock may be moved manually or mechanically Handling techniques may vary according to stock characteristics and industry codes of practice
<b>Staff</b>	Staff may be full-time, part-time or casual and vary in terms of training and staffing levels. Staff may be operating in routine or busy trading conditions
<b>Information</b>	Information may include: <ul style="list-style-type: none"> <li>enterprise policies and procedures with regard to stock or goods storage, dispatch and delivery, product manufacturer/component supplier specifications and industry codes of practice</li> </ul>
<b>WHS requirements</b>	WHS requirements may include: <ul style="list-style-type: none"> <li>state/territory legislation related to WHS, particularly manual and mechanical handling and storage/dispatch of hazardous substances</li> </ul>

## AURSBA3002 Apply automotive parts interpretation process

### Modification History

Release	Comment
Release 1	Replaces AURS338103A Apply automotive parts interpretation process Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence to identify uncommon or unusual automotive parts based on evidence from customers and/or other sources which may include catalogue numbers, samples and verbal, written or graphic descriptions of parts or their purpose.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	The parts or vehicle may not be in common use and therefore research and/or interpretation may be required to identify and satisfy customer requirements.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the part and its end use	1.1. Customer is made to feel welcome and valued 1.2. Available information on required part is gathered, documented and confirmed with customer 1.3. End use or host for the part, i.e. vehicle/unit assembly or vehicle/unit assembly options, is established from an analysis of available information
2. Identify and record details of the part	2.1. The parts cataloguing system to host vehicle/unit is identified and accessed 2.2. Part is matched accurately with cataloguing information by accessing and using the catalogue system, its aids and user guides 2.3. Expert advice is sought from provider/supplier to clarify imprecise identification outcomes 2.4. Details of identity of the part are documented and processed
3. Part is supplied or ordered for customer	3.1. Customer accepts process used 3.2. Part is supplied or ordered if not in stock 3.3. Customer records are updated

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to technical literacy and interpretive skills sufficient to access keywords and phrases and to interpret schematics and technical drawings
- communicate ideas and information
- questioning and active listening skills, for example when eliciting information on product and end use issues
- plain English literacy and communication skills in relation to dealing with customer and providers/suppliers
- plan and organise activities when planning a logical approach to identify part/product
- work with others and in a team by seeking assistance from team members
- use mathematical ideas and techniques to estimate quantities if part/product is to be

**REQUIRED SKILLS AND KNOWLEDGE**

ordered

- establish diagnostic processes including problem-solving and analytical skills for a range of unpredictable circumstances, for example, clarifying a general need and researching through parts catalogue systems to correctly identify part or technically acceptable options. This may involve recognition of pathways addressing country of origin, historic or period-based terminology/language variations
- use workplace technology related to computing skills in relation to accessing and interpretation of computer-based parts catalogue systems

**Required knowledge**

- general knowledge of current and historic automotive terminology
- general knowledge of main automotive systems and assemblies and their functions
- general knowledge of historic background to the parts system
- general knowledge of range of manual and computerised parts catalogue systems in common usage throughout industry
- detailed knowledge of the parts catalogue systems, both brand specific and general options, used by enterprise
- general knowledge of legal issues associated with supply and use of non-conforming parts/components/accessories
- broad knowledge of workplace health and safety (WHS) in relation to customer safety and ergonomics of computer workstations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- eliciting sufficient information from the customer and/or other sources to enable a confirmed identification of vehicle or unit the part is intended
- identifying and locating parts catalogue systems associated with required vehicle/unit
- using parts catalogues and equivalent documentation, both hard copy and electronic, to trace and identify specific brand parts
- using parts catalogues and equivalent documentation, both hard copy and electronic medium, to trace and identify general or optional parts/products.

#### Context of, and specific resources for assessment

- Assessment is to cover both manual and computer-aided/ based parts catalogue systems
- Assessment of this unit must be completed on the job or in a simulated work environment reflecting a range of parts identification requirements in terms of available information, customer types and complexity of parts tracking.
- Assessment must cover both specified brand and general parts and is to occur in an environment where competing demands of a number of customers are evident
- The following are required:
  - a workplace or simulated workplace
  - customers and requests for parts information
  - parts cataloguing systems (both computerised and manual)
  - a qualified workplace assessor.

#### Method of assessment

- It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances.
- Customers, team leaders/members or other appropriate persons, subject to agreed authentication arrangements,

**EVIDENCE GUIDE**

	<p>may provide evidence of performance</p> <ul style="list-style-type: none"> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li> <li>• This unit should be assessed in conjunction with other units within context of the candidate's job role or function.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Automotive parts</b>	<p>Automotive parts may include:</p> <ul style="list-style-type: none"> <li>• automotive parts, components and accessories specific to vehicle type or are for general use by industry. They will generally be for older, rare or specialised vehicles</li> </ul>
<b>Customers</b>	<p>Customers include both external and internal customers who may be technically qualified to describe parts, or technical novices requiring detailed support. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied</p>
<b>Vehicle/unit identity options</b>	<p>An examination of a sample of required part or customer vehicle may be necessary to clarify situation</p>
<b>Solution</b>	<p>Solution is not necessarily apparent where hybrid vehicles/units are concerned and a range of options may need to be identified and pursued</p>

<b>RANGE STATEMENT</b>	
<b>Legislative requirements</b>	<p>Legislative requirements include:</p> <ul style="list-style-type: none"> <li>state/territory legislation related to WHS and Australian Design Rules</li> </ul>
<b>Communications</b>	<p>Communications with customer/user may be:</p> <ul style="list-style-type: none"> <li>face to face, by telephone or by other electronic means</li> </ul>
<b>Recording of information</b>	<p>Recording of information provided by customer may need to be used when customer is no longer present and therefore an accurate record of information needs to be completed, retained and recovered when needed</p>
<b>Resources</b>	<p>Resources may include:</p> <ul style="list-style-type: none"> <li>hard copies of catalogues, databases and access to internet</li> </ul>
<b>Parts information</b>	<p>Parts information may include:</p> <ul style="list-style-type: none"> <li>manufacturer/component supplier specifications and technical documentation, enterprise procedures and documentation, enterprise or industry comparative specifications, diagrams, sketches, verbal descriptions and physical and visual evidence</li> </ul> <p>This may range from an accurate catalogue number or reference to a generalised description of purpose by a customer who has little technical knowledge or expertise</p>
<b>Information gathering techniques</b>	<ul style="list-style-type: none"> <li>Customer may require active assistance and questioning to fully describe requirement in terms of vehicle/unit model, date of manufacture, purpose and appearance of the part and other tracking information</li> <li>Customer may be seeking an inappropriate solution to a technical problem and if sufficient doubt exists, may require referral to a service provider</li> </ul>
<b>Parts cataloguing systems</b>	<p>Parts cataloguing systems may be:</p> <ul style="list-style-type: none"> <li>hard copy (book-fast, loose-leaf) micro-fiche/micro-film, stand-alone computer or networked/on-line computer-supported services</li> </ul>

RANGE STATEMENT	
	Depending on age of required part, any or all of above systems may need to be accessed
<b>Catalogue system aids and user guides</b>	Catalogue system aids and user guides may include: <ul style="list-style-type: none"><li>• written instructions within the system, guides in the form of diagrams, flow charts and process schematics, menus and prompts and one to three dimensional system/component diagrams, models and graphics</li></ul>
<b>Provider/supplier information</b>	Provider/supplier information is not always required, but should be sought or accessed where incorrect identification of parts may result in legal liability, customer dissatisfaction and/or alienation

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify the part/product and its end use	1.1.Customer is made to feel welcome and valued 1.2.Available information on the required part/product is gathered, documented and confirmed with customer 1.3.End use or host for the part/product, i.e. vehicle/unit assembly or vehicle/unit assembly options, is established from an analysis of available information
2. Identify details of the part/product	2.1.The parts/product cataloguing system is identified and accessed 2.2.Part/product is matched accurately with cataloguing information by accessing and using the catalogue system 2.3.Details of identity of the part/product are documented and processed
3. Part/product is supplied or ordered for customer	3.1.Customer accepts process used 3.2.Part/product is supplied or ordered if not in stock 3.3.Customer records are updated

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customer and team members
- apply questioning and active listening skills, for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good

**REQUIRED SKILLS AND KNOWLEDGE**

- use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons, including product specialists, both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
  - establish safe and effective work processes which anticipate and/or resolve problems, to systematically develop solutions to avoid or minimise reworking and to avoid wasting customer time
  - use mathematical ideas and techniques to correctly calculate material requirements, estimate and calculate costs and establish quality checks
  - use workplace technology related to customer services, including use of measuring equipment, computerised technology, use of communication devices and reporting/documenting of results

**Required knowledge**

A working knowledge of:

- workplace health and safety (WHS) in relation to customer safety and ergonomics of computer workstations
- common automotive terminology
- the main automotive systems and assemblies and their functions
- the parts/product catalogue systems, both brand-specific and general options, used by enterprise
- the legal issues associated with the supply and use of non-conforming parts/components/accessories
- enterprise quality processes
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- eliciting sufficient information from the customer and/or other sources to enable a confirmed identification of vehicle or unit the part/product intended
- accessing the parts/products catalogue systems associated with required vehicle/unit
- using both manual and computer-based parts/products catalogues and equivalent documentation to trace and identify common specific brand parts/products
- communicating effectively with others involved in or affected by the work.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - information and material identifying and selecting automotive parts and products
  - equipment identifying and selecting automotive parts and products
  - activities covering task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project related

**EVIDENCE GUIDE**

	<p>conditions (real or simulated) and require evidence of process.</p> <ul style="list-style-type: none"> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Automotive part/product**

Automotive part/product may include:

- automotive parts, components and accessories specific to vehicle type or are for use by industry, and refinishing and treatment products

**Customers**

Customers include both external and internal customers who may be technically qualified to describe parts/products, or technical novices requiring detailed support. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied

<b>RANGE STATEMENT</b>	
<b>Part/product information</b>	<p>Part/product information may include:</p> <ul style="list-style-type: none"> <li>manufacturer/component supplier specifications and technical documentation, enterprise procedures and documentation, enterprise or industry specifications, diagrams, sketches, verbal descriptions and physical and visual evidence</li> </ul>
<b>Information gathering techniques</b>	<p>Customer may require active assistance and questioning to fully describe requirement in terms of common vehicle/unit model, date of manufacture, purpose and appearance of product and other tracking information</p>
<b>Recording of information</b>	<p>Information provided by customer may need to be used when customer is no longer present and therefore an accurate record of information needs to be completed, retained and recovered when needed</p>
<b>Parts/products cataloguing systems</b>	<p>Parts/products cataloguing systems may be hard-copy (book-fast, loose-leaf), stand-alone computer or networked/online computer-supported services</p>
<b>Provider/supplier information</b>	<p>Provider/supplier information is not always required, but should be sought or accessed where incorrect identification of the part/product may result in legal liability, customer dissatisfaction and/or alienation</p>
<b>WHS requirements</b>	<p>WHS is to be in accordance with legislation/regulations/ codes of practice and enterprise safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire-fighting equipment, enterprise first-aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices</p>

<b>RANGE STATEMENT</b>	
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• conduct of operational risk assessment and treatments associated with customer safety and working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• pollution and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards, enterprise quality policy, standards, operations and procedures</li> </ul>
<b>Legislative requirements</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• verbal and visual instructions and may include site specific instructions, telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, product specifications, catalogues, equipment manuals, databases, internet, material safety data sheets (MSDS) and graphical instructions</li> <li>• safe work procedures related to site and customer safety</li> <li>• regulatory/legislative requirements pertaining to commercial and retail operations and facilities</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• organisational work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian standards</li></ul>

## AURSCA2002 Present stock and sales area

### Modification History

Release	Comment
Release 1	Replaces AURS238150A Present stock and sales area Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency covers the competence required to establish and maintain stock and sales area.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit of competency applies to the following and should be contextualised to the qualification it is being applied: <ul style="list-style-type: none"><li>• retail, service and repair.</li></ul>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maximise and maintain presentation of vehicle/ products for sale	1.1.Vehicle/product is clean and prepared to maximise market appeal in accordance with enterprise policies and procedures 1.2.Vehicle/product is placed in correct position to maximise presentation 1.3.Vehicle/product condition is monitored and action taken where necessary to maintain maximum market appeal
2. Maximise presentation of sales area	2.1.Presentation area is defined from floor plan in accordance with enterprise policies and procedures 2.2.Minimum vehicle/product numbers/types are determined and presented 2.3.Display areas are clean, tidy and safe 2.4.Correct handling, storage and display techniques are adopted according to vehicle/product types, enterprise and industry practices
3. Review acceptance of presentation of stock and sales area	3.1.Feedback from customers is sought 3.2.Customer feedback is collated and analysed 3.3.Action is taken

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, analyse and understand information related to feedback from customers
- communicate ideas and information to draft presentation to management for support
- plan and organise activities to design presentation area
- work with others and in a team by involving other members of sales team in design and maintenance
- use mathematical ideas and techniques to develop roster to maintain area
- establish diagnostic processes for which design is both practical and safe
- use workplace technology related to process feedback

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

- enterprise policies and procedures
- enterprise sales presentation area and floor plan arrangements
- vehicle/product preparation and presentation techniques
- vehicle/product models/types

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- presenting vehicle/products in a manner to maximise market appeal
- maintaining suitable sales presentation area
- communicating effectively with others involved in or affected by the work.

#### Context of, and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job
- The following are required:
  - vehicle/products for sale
  - suitable presentation area
  - sales material (e.g. brochures, pamphlets, banners, flags, stands, ramps, turntables)
  - a qualified workplace assessor.

#### Method of assessment

- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- Prescribed outcome must be able to be achieved without direct supervision.
- Practical assessments:
  - present vehicle/products to maximise market appeal
  - maintain maximum merchandising effect of sales presentation area.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

#### Guidance information for assessment

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Demonstrate product knowledge	1.1. Knowledge of use and application of products and services is demonstrated 1.2. Experienced sales staff or product information guide are consulted to increase product knowledge
2. Approach customer	2.1. Timing of customer approach is determined and applied 2.2. Effective sales approach is identified and applied 2.3. Positive impression is conveyed to arouse customer interest 2.4. Knowledge of customer buying behaviour is demonstrated 2.5. Customer is focused on specific merchandise
3. Customer response	3.1. Questioning techniques are applied to determine customer buying motives 3.2. Listening skills are used to determine customer requirements 3.3. Non-verbal communication cues are interpreted and clarified 3.4. Customers are identified by name where possible
4. Apply product knowledge	4.1. Customer needs are matched to products and services 4.2. Knowledge of product features and benefits are communicated clearly to customers 4.3. Product use and safety requirements are described to customers 4.4. Customers are referred to product specialist 4.5. Routine customer questions about merchandise, e.g. price, price reductions, quality and usage, are answered accurately and honestly or referred to more experienced sales staff
5. Gather information	5.1. Customer objections are identified and accepted 5.2. Objections are categorised into price, time and merchandise characteristics 5.3. Solutions are offered according to store policy 5.4. Problem solving is applied to overcome customer objections
6. Close sale	6.1. Customer buying signals are monitored, identified and responded to

ELEMENT	PERFORMANCE CRITERIA
	6.2.Customer is encouraged to make purchase decision 6.3.Method of closing sale is selected and applied 6.4.Legislative and legal sales requirements/procedures are followed
7. Maximise sales opportunities	7.1.Opportunities for making additional sales are recognised and applied 7.2.Customer is advised of complementary products or services according to identified needs 7.3.Personal sales outcomes are reviewed to maximise future sales

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to questioning customers to gain information on need
- communicate ideas and information to the operation of product and safety requirements
- plan and organise activities for the development of a sales approach
- work with others and in a team by consulting with experienced staff to develop product knowledge and sales techniques
- use mathematical ideas and techniques for accurate processing and recording of sale and payment method
- establish diagnostic processes which develop solutions to customer objections
- use workplace technology related to the use of business technology in processing sale

#### Required knowledge

- technical information
- equipment safety requirements
- personal safety requirements
- specific selling skills/sales techniques
- sales/consumer legislation/legal requirements
- vehicle/component details
- automotive industry product knowledge

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- selling enterprise product and services to customers
- interpreting and communicating information
- the ability to communicate with customers
- sales skills
- communicating effectively with others involved in or affected by the work

#### Context of, and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job
- The following are required:
  - a workplace or simulated workplace
  - persons including customers and sales staff
  - access to products
  - documentation, store policy and procedures manuals, WHS, legislative and statutory requirements and industry codes of practice
  - a qualified workplace assessor.

#### Method of assessment

- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable
- Prescribed outcome must be able to be achieved without direct supervision
- Practical assessments:
  - access, interpret and apply technical information
  - apply sales techniques and product knowledge
  - convey information both orally and in writing
  - access, interpret and apply sales information
  - sell products
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**EVIDENCE GUIDE****Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods include:

- face-to-face selling, telephone/electronic selling and product enquiries
- verbal, written and practical demonstrations

Other variables may include:

- regular and new customers
- sales may be face-to-face or telephone/electronic

**Workplace health and safety (WHS) requirements**

WHS requirements may include:

- state/territory/industry WHS requirements

**Resources**

Resources may include:

- product and services
- customers
- product and services
- customers
- videos, selling manuals, brochures, pamphlets, audio tapes
- company/industry guidelines

**Information/documents**

Sources of information/documents may include:

- manufacturer/component supplier specifications
- enterprise operating procedures

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Handle cash transactions	1.1.Cash is received and counted 1.2. Correct balance is determined, taking price, invoices, discounts, etc. into account, and correct change is given 1.3. Irregularities are noted and referred to appropriate persons for resolution 1.4. Cash is stored according to enterprise policies and procedures 1.5. Receipts are issued and transaction documented according to enterprise policies and procedures
2. Handle credit/funds transfer card transactions	2.1. Correct documentation and equipment for particular credit/funds transfer card is identified and accessed 2.2. Credit/funds transfer card recording device is identified and accessed 2.3. Recording device is operated according to provider procedures and taking into account enterprise credit limits 2.4. Irregularities are noted and referred to appropriate persons for resolution 2.5. Receipts are issued and transaction documented according to enterprise policies and procedures
3. Handle cheque transactions	3.1. Cheques are received and examined for correctness (amount, dates and signature) 3.2. Irregularities are noted and referred to appropriate persons for resolution 3.3. Cheques are stored according to enterprise policies and procedures 3.4. Receipts are issued and transaction documented according to enterprise policies and procedures
4. Carry out invoicing procedures	4.1. Calculations are performed to produce accurate customer invoices 4.2. Documentation is completed to ensure accuracy of content 4.3. Invoices are distributed to appropriate persons/section for certification prior to being dispatched 4.4. Verified invoices are dispatched within designated time limits 4.5. Invoices are copied and filed for auditing purposes

ELEMENT	PERFORMANCE CRITERIA
	according to enterprise policies and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to collation of cheques for processing
- communicate ideas and information on irregularities in cash balancing to appropriate persons
- plan and organise activities for the development of invoices
- work with others and in a team with office persons to develop invoices
- use mathematical ideas and techniques to count cash
- establish diagnostic processes which re-count cash and credit transactions to balance books
- use workplace technology related to record sales

#### Required knowledge

- money handling security methods
- personal safety requirements
- applicable legislation
- GST information
- equipment safety requirements
- enterprise transaction policies
- cash/credit/funds transfer systems

#### Required skills

- collect, organise and understand information related to collect and interpret technical information
- communicate ideas and information to convey information to the customer
- plan and organise activities for sales demonstration
- work with others and in a team by consulting with experienced staff
- use mathematical ideas and techniques to include customer limitations of price and

**REQUIRED SKILLS AND KNOWLEDGE**

time in recommendations

- establish diagnostic processes which have legal requirements included in recommendations
- use workplace technology related to record sales

**Required knowledge**

- selling procedures
- communication skills (oral and written)
- communication techniques
- product information
- company policies and procedures
- stock presentation techniques
- industry legal requirements
- finance, leasing and insurance contracts/policies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- selling products to satisfy customer needs
- use of sales techniques
- communicating effectively with others involved in or affected by the work.

#### Context of, and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job
- The following are required:
  - a workplace or simulated workplace
  - sales manuals, time management guides, enterprise/industry guidelines and office equipment (e.g. computer, typewriter, telephone and fax)
  - sales videos, sales brochures
  - enterprise-based sales recording systems
  - various products retailed via automotive industry
  - a qualified workplace assessor.

#### Method of assessment

- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment in simulated workplace conditions is acceptable
- Prescribed outcome must be able to be achieved without direct supervision
- Practical assessments:
  - sell product(s) to satisfy customer needs in accordance with enterprise policies and procedures
  - use specific sales techniques
  - convey information both orally and in writing
  - access, interpret and apply sales information
  - apply time management techniques
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**EVIDENCE GUIDE****Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods include:

- demonstration to customer using sales techniques applied to product sold for or through automotive industry
- verbal, written, practical
- customers may be face to face or by telephone/ electronic media

**Workplace health and safety (WHS) requirements**

WHS requirements may include:

- state/territory/industry WHS requirements

**Resources**

Resources may include:

- sales manuals, time management guides, enterprise/industry guidelines, office equipment (e.g. computer, typewriter, telephone and fax)
- sales videos, sales brochures
- enterprise-based sales recording systems
- various products retailed via automotive industry

**Information/documents**

Sources of information/documents may include:

- enterprise operating procedures
- product manufacturer/component supplier specifications
- customer requirements
- industry/workplace codes of practice

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Promote products and services to customers	1.1.Explanations/demonstrations, where applicable, are conducted professionally 1.2.Product benefits and relevance of product to customer needs are highlighted during demonstration 1.3.Selling techniques are employed based on accepted and industry standards, legal requirements and enterprise policy
2. Establish on-sell opportunities	2.1.Customer interest areas and needs are identified 2.2.On-sell opportunities are assessed through knowledge of customer needs and interests, and enterprise products and services 2.3.Explanations are aligned to customer interest areas and needs 2.4.Customer needs for complementary products or services are determined
3. Recommend complementary products or services to customers	3.1.Complementary products or services of benefit to customer are identified 3.2.Benefits of product or service are discussed with customer 3.3.Cost estimates are prepared and documented

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to customer information when collected and analysed for on-selling
- communicate ideas and information when features and benefits are explained to customers
- plan and organise activities when promotions are planned and organised
- work with others and in a team by seeking involvement of team members
- use mathematical ideas and techniques when cost estimates are prepared for promotions
- establish diagnostic processes having cost and time limitations when considered in recommendations

**REQUIRED SKILLS AND KNOWLEDGE**

- use workplace technology related to business technology used to prepare cost estimates

**Required knowledge**

- workplace health and safety (WHS)
- oral and written communication skills for application
- buyer behaviour
- selling procedures/techniques
- product and service promotional procedures for application
- legislation/regulations/guidelines applicable to the industry sector
- advertising codes of practice

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- promoting products and services to customers and establishing on-selling opportunities
- communicating effectively with others involved in or affected by the work.

#### Context of, and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job
- The following are required:
  - products for sale
  - suitable presentation area
  - sales material (e.g. brochures, pamphlets, banners, flags, stands, ramps, turntables)
  - a qualified workplace assessor.

#### Method of assessment

- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable
- Prescribed outcome must be able to be achieved without direct supervision
- Practical assessments:
  - behave professionally in a manner appropriate to the situation and customer needs
  - demonstrate a range of products in a professional manner
  - apply promotional sales techniques to a range of sales situations and customer needs
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Promotion</b>	Promotion may include: <ul style="list-style-type: none"> <li>planned sales presentation, territory management and account management</li> </ul>

---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information to assist decision on used vehicle stock requirements	1.1.Procedures for collecting required data are identified and adopted 1.2.Data is obtained from the enterprise's used vehicle sales and managerial staff 1.3.Data is collected from the enterprise's used vehicle sales history records
2. Determine preferred used vehicle stock required	2.1.Data collected from different sources is compared and analysed 2.2.Preferred used vehicle stock requirements are established 2.3.Budget is set for vehicle stock required
3. Identify sources/ providers of required vehicle stock	3.1.Data is collected on history of vehicle purchases 3.2.Additional sources of preferred vehicle stock are researched and identified 3.3.Experienced enterprise staff are consulted for sources of preferred vehicle stock

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to collation of vehicle sales history
- communicate ideas and information to experienced staff when consulted for assistance
- plan and organise activities when planning collection of information to determine stock requirements
- work with others and in a team by involving experienced staff in decisions
- use mathematical ideas and techniques to ensure stock requirements are determined within budget
- establish diagnostic processes with differences in staff views being negotiated
- use workplace technology related to use of business technology to determine requirements

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- research and analysis techniques
- workplace record systems
- enterprise policies and procedures

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Canvass dealership persons to assist with deciding which vehicles to wholesale	1.1.Procedures for collecting data are established 1.2.Information is collected and documented 1.3.Collected information is compared from different sources
2. Check stock records to determine stock surpluses and/or wholesaling requirements	2.1.Procedures for collecting data are established 2.2.Information is collected and documented 2.3.Collected information is compared from different sources 2.4.Surpluses are determined in preparation of wholesaling used vehicle stock
3. Wholesale used vehicle stock	3.1.Potential buyers of surplus used vehicle stock requirements are located 3.2.A satisfactory selling/purchase price is negotiated 3.3.Surplus used vehicle stock is wholesaled, ensuring compliance with legislative and/or statutory requirements 3.4.Organisation records are updated to reflect wholesale used vehicle stock holding

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to collation of information on stock surpluses
- communicate ideas and information to negotiate sale of surplus stock
- plan and organise activities for sale of surplus stock
- work with others and in a team by involving team members in identifying surplus stock
- use mathematical ideas and techniques to update records of enterprise vehicle stock
- establish diagnostic processes recommending which vehicles are wholesaled
- use workplace technology related to use of business technology to wholesale surplus stock

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- communication/negotiation process and pitfalls in face-to-face communication
- workplace records and how to maintain them
- oral communication and English language
- written communication
- researching and comparison/analytical skills

## AURSCA3009 Provide vehicle technology information

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to present on-board vehicle technology information and vehicle operational instructions to customers at point of sale. The unit involves gathering information from a wide variety of sources, analysing it, and using it for planning purposes.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the automotive vehicle and component sales environment and involves the application of skills and knowledge when explaining on-board vehicle technology to customers.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain and evaluate on-board vehicle technology information	<p>1.1. Vehicle and accessory <i>instructions</i> are located and analysed</p> <p>1.2. Workplace, <i>legislative</i> and <i>workplace health and safety (WHS) requirements</i> relevant to vehicle handover procedures are complied with</p> <p>1.3. <i>Vehicle operating functions and technology</i> are explained to customers</p> <p>1.4. Vehicle operational instructions are read to identify correct operating procedures</p> <p>1.5. Vehicle type and model instruction information is regularly reviewed and updated for customers</p> <p>1.6. Vehicle information is assessed for its validity and reliability</p> <p>1.7. Difficult to understand or inadequate operating instructions are simplified for customers</p>
2. Communicate to customers	<p>2.1. Vehicle technologies are <i>communicated</i> to customers according to <i>dealership policies and procedures</i></p> <p>2.2. Customer technology information is presented in a professional manner in line with dealership policy</p> <p>2.3. Communications to customer regarding vehicle operating instructions are summarised so that they convey key points in a clear, concise manner in line with workplace procedures</p>
3. Record vehicle handover information	<p>3.1. Customer handover information is recorded according to workplace policy</p> <p>3.2. Information is recorded and stored using workplace systems and procedures</p>
4. Recommend and implement improvements to vehicle handover	<p>4.1. Feedback is sought on vehicle handover techniques and improvements are evaluated and recommended</p> <p>4.2. Vehicle handover strategies are maximised for customer service and repeat business</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - convey information in vehicle manuals and operational specification sheets
  - provide verbal instructions
- initiative and enterprise skills to adapt vehicle technology information for customers
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to read and follow information in written instructions, specifications, operating procedures, charts and other reference documents, such as owner's manuals and instruction manuals
- numeracy skills to interpret vehicle operating instrument settings
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - plan vehicle handover in line with workplace processes and customer activities
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - recognise a customer problem or potential problem and take action
  - refer problems to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate customer communication procedures
  - recognise own limitations and seek advice
- teamwork skills to work with diverse individuals and groups
- technology skills to use IT to collect vehicle technology data and customer information

#### Required knowledge

- product knowledge
- processes for maintaining customer databases
- procedures for dealing with customers
- vehicle specification sheets
- legislative and statutory requirements relating to:
  - WHS
  - consumer law
  - fair trading legislation
  - industry codes of practice

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- maintain relevant knowledge of vehicle technology information systems for customer needs
- instruct customers in correct operation of vehicle technology
- maintain a professional image with customers
- identify and implement strategies for delivering vehicle technology information to different customer demographic groups.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- a workplace or simulated workplace
- a range of vehicles
- workplace customer handover policies and procedures
- vehicle owner's manuals with vehicle information relating to make, model and customer needs
- vehicle technology specification instructions

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• vehicle illustrations and drawings</li><li>• original equipment manufacturer (OEM) instructions</li><li>• a range of customers with different requirements and demographics</li><li>• legislation and codes of practice</li><li>• computer.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• vehicle owner's manuals</li> <li>• vehicle accessories instruction manuals</li> <li>• vehicle technology specification instructions</li> <li>• vehicle manufacturer websites and handbooks</li> <li>• vehicle instrument illustrations and drawings</li> <li>• OEM instructions.</li> </ul>
<b><i>Legislative requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• customer relations</li> <li>• workplace agreements</li> <li>• privacy Act</li> <li>• duty of care</li> <li>• employee relations</li> <li>• environment protection</li> <li>• industrial relations</li> <li>• industry codes of practice.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace safety policies and procedures</li> <li>• personal protective equipment and clothing</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control and elimination, including of hazardous materials and substances</li> <li>• state and territory WHS legislation.</li> </ul>
<b><i>Vehicle operating functions and technology</i></b> may include:	<ul style="list-style-type: none"> <li>• entertainment systems</li> <li>• navigation systems</li> <li>• blue tooth systems</li> <li>• keyless entry</li> <li>• interior adjustment systems</li> <li>• basic maintenance requirements</li> <li>• spare wheel replacement procedure</li> <li>• warning lights</li> <li>• vehicle safety cameras</li> <li>• park assist systems</li> <li>• climate control system</li> <li>• passenger safety systems</li> </ul>

**RANGE STATEMENT**

## AURSCA3010 Appraise and purchase used motor vehicles to supplement stock for sale

### Modification History

Release	Comment
Release 1	<p>Replaces AURS344330A Inspect, appraise and purchase used motor vehicles to supplement stock for sale</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the competence required to inspect and appraise used motor vehicles against perceived needs and pricing guides in preparation to purchase used motor vehicles. It also identifies the competence required to negotiate and purchase used motor vehicle stock.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied:</p> <ul style="list-style-type: none"><li>• Administration/sales vehicle sales</li></ul>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out vehicle inspections	1.1.Vehicles are inspected and appraised as necessary 1.2.Collected information is used to compare appraised vehicles against pricing guides
2. Value used motor vehicles	2.1.Collected information is used to value vehicle 2.2.Vehicle is valued using organisation records in readiness to make buying offer 2.3.Issues/concerns are discussed with experienced staff
3. Negotiate used motor vehicles purchase price	3.1.Discuss appraisal with vehicle owner 3.2.Negotiate a satisfactory purchase price using collected information/details
4. Purchase used motor vehicles	4.1.Purchase used motor vehicles within budget 4.2.Comply with legislation and/or statutory requirements during the purchase process 4.3.Update organisation records to reflect purchased used motor vehicles

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>
<ul style="list-style-type: none"> <li>• collate information regarding vehicle appraisal</li> <li>• explain appraisal to the owner</li> <li>• plan appraisal and purchase of motor vehicle</li> <li>• experienced staff are consulted when issues arise with appraisal</li> <li>• purchases are completed within budget</li> <li>• price is negotiated with owner</li> <li>• use business technology to identify market prices</li> </ul>
<b>Required knowledge</b>
<ul style="list-style-type: none"> <li>• market values and factors affecting used vehicle valuation</li> <li>• industry records and how to maintain them</li> <li>• vehicle inspection methods</li> <li>• industry pricing guides</li> </ul>

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• vehicle supply/demand</li><li>• basic operating principles of motor vehicle systems/ components including types and models of vehicles</li><li>• used vehicle appraisal process</li><li>• negotiating skills and techniques</li><li>• industry legislation and paperwork requirements</li><li>• vehicle purchasing skills</li><li>• company stock policy</li></ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• inspecting vehicles to determine a purchase price</li> <li>• comparing determined information</li> <li>• negotiating skills</li> <li>• buying skills.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• Underpinning knowledge and skills may be assessed on or off-the-job</li> <li>• The following should be made available: <ul style="list-style-type: none"> <li>• enterprise specific records, industry pricing guides, newspapers, magazines, stock records, statutory requirements</li> <li>• business technology, computers/calculators</li> <li>• a qualified workplace assessor.</li> </ul> </li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment, in simulated workplace conditions is acceptable</li> <li>• Practical assessments: <ul style="list-style-type: none"> <li>• maintain industry records</li> <li>• access, interpret and apply technical information</li> <li>• compare appraisals with pricing guides and value used vehicles</li> <li>• carry out used vehicle inspections and appraisals</li> </ul> </li> <li>• The prescribed outcome must be able to be achieved without direct supervision</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Methods</b>	<p>Methods include:</p> <ul style="list-style-type: none"> <li>physically checking/inspecting vehicles, recording results, checking against price guides</li> <li>negotiating purchase prices, completing paperwork, carrying out vehicle security register checks and purchasing vehicles</li> </ul>
<b>Specific requirements</b>	<p>Specific requirements may include:</p> <ul style="list-style-type: none"> <li>manual and/or computer records</li> <li>knowledge of operating principles of vehicle systems and/or components</li> <li>knowledge of market trends and vehicle selling prices</li> </ul>
<b>Workplace health and safety (WHS) requirements</b>	<p>WHS requirements may include:</p> <ul style="list-style-type: none"> <li>state/territory WHS legislation</li> <li>award provisions</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>manufacturer/component supplier specifications</li> <li>enterprise operating procedures</li> <li>customer requirements</li> <li>industry/workplace codes of practice</li> </ul>

## AURSCP2001 Provide information to customers on automotive refinishing products

### Modification History

Release	Comment
Release 1	Replaces AURS238154A Provide information to customers on automotive refinishing products Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit of competency covers the competence to provide basic information to customers on automotive refinishing products, including information on surface preparation, fillers, coatings and polishes.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	--

### Application of the Unit

Application of the unit	
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Access and interpret information on refinishing products	1.1. Information on automotive refinishing products and their applications and limitations is accessed, interpreted and conveyed to other staff members 1.2. Comparisons between products are researched and applied, including brand options, product features, warranties and price
2. Identify customer requirements	2.1. Customer is made to feel welcome and valued 2.2. Questioning techniques are applied to determine nature of customer enquiry 2.3. Available information relating to customer requirements is gathered, documented and confirmed with customer
3. Provide information to customers on refinishing products	3.1. Refinishing products are evaluated according to customer requirements 3.2. Information on applicable products satisfying customer requirements is provided 3.3. Features, benefits, limitations and safety implications of products and techniques for applying products are demonstrated or explained to the customer to create a buying environment 3.4. Advice is sought from product specialist 3.5. Customer is advised to seek specialist advice where warranted

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to:
- questioning and active listening skills, for example when eliciting information from customers about products and services required
- plain English literacy and communication skills in relation to dealing with customers and providers/suppliers and recording information
- communicate ideas and information to provide customer with information about applicable products

## REQUIRED SKILLS AND KNOWLEDGE

- plan and organise activities to plan product presentations
- work with others and in a team by involving product specialists
- use mathematical ideas and techniques with numerical skills sufficient to estimate and calculate costs to pricing products
- establish diagnostic processes which evaluate different products for different needs
- use workplace technology related to technical skills to use a range of communication and electronic equipment

### Required knowledge

- general knowledge of enterprise/industry manuals and documentation (paper-based and computerised)
- broad operational knowledge of legislation and statutory requirements, including workplace health and safety (WHS) and customer safety
- broad operational knowledge of industry codes of practice, including scanning code
- general refinishing product knowledge including:
  - automotive coatings
  - fillers
  - anti-rust material
  - abrasives and buffers
  - polishes and polishing material
  - cleaning materials
- general knowledge of automotive refinishing techniques including:
  - repair of minor dents
  - treatment of rust
  - selection and application of fillers
  - surface preparation, including application of primers, guide
  - coats and finishing putties
  - application of top coats and clear coats
  - buffing
  - colour matching
- detailed knowledge of enterprise:
  - product and merchandise range
  - service range
  - procedures for taking customer orders
  - buying, pricing and ordering procedures
  - other policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- consistently applying store policies and procedures and industry codes of practice regarding customer service and selling materials and products
- accessing, interpreting and conveying knowledge of refinishing products to customers
- applying knowledge of refinishing products to provide accurate advice according to needs of the customer
- communicating effectively with others involved in or affected by the work.

#### Context of, and specific resources for assessment

- This unit may be assessed in conjunction with other units forming part of the job role or function
- The following are required:
  - a workplace or simulated workplace
  - range of products and merchandise (real and simulated)
  - documentation, such as inventory lists, price lists, enterprise policy and procedures manuals, delivery costs, and details of services available
  - a range of customers with different requirements (real or simulated)
  - a range of communication equipment
  - a qualified workplace assessor.

#### Method of assessment

- It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons, subject to agreed authentication arrangements
- Elements of competence contain knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment reflecting a range of products and services and a range of customers with

**EVIDENCE GUIDE**

	<p>different requirements</p> <ul style="list-style-type: none"> <li>• Evidence is best gathered using products and procedures of the individual workplace context as the means by which candidate achieves industry competencies</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Refinishing products</b>	<p>Refinishing products may include:</p> <ul style="list-style-type: none"> <li>• products and materials used for preparing automotive surfaces and applying coatings, fillers, anti-rust material and polish, and for conducting colour matching</li> </ul>
<b>Product application techniques</b>	<p>Product application techniques may include:</p> <ul style="list-style-type: none"> <li>• techniques for repair of minor dents, treatment of rust, selection and application of fillers, surface preparation, application of primers, guide coats and finishing putties, application of top coats and clear coats, buffing and colour matching</li> </ul>
<b>Specialist advice</b>	<p>Situations where customer may require advice from specialist automotive refinishers may :</p> <ul style="list-style-type: none"> <li>• structural damage, damage in awkward or difficult locations, specialty finishes or where experience of the customer is limited</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Enterprise</b>	Enterprises may vary in size, type and location and in range of merchandise and services provided
<b>Customers</b>	Customers may be regular or new and may have routine or special requests. They may include persons from a range of social, cultural or ethnic backgrounds and physical and intellectual abilities and may have special needs. Regardless, customers are made feel welcome, valued and, at end of the process, satisfied
<b>Staff</b>	Staff may be full-time, part-time or casual and vary in terms of staff training and in specialist knowledge of products and services. Staff may be operating in routine or busy trading conditions
<b>Legislative requirements</b>	Legislative requirements may include: <ul style="list-style-type: none"> <li>• state/territory legislation related to WHS and consumer law</li> <li>• industry codes of practice, including scanning code</li> </ul>
<b>Resources may include:</b>	Resources may include: <ul style="list-style-type: none"> <li>• range of products and merchandise (real and simulated)</li> <li>• documentation, such as inventory lists, price lists, enterprise policy and procedures manuals, delivery costs, details of services available</li> <li>• a range of customers with different requirements (real or simulated)</li> <li>• a range of communication equipment</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>• enterprise policies and procedures, product manufacturer/component supplier specifications, customer requirements and industry/enterprise codes of practice</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify legislation and documentation to sell product(s)	1.1.Legislation to sell product(s) is correctly identified and accessed where necessary 1.2.Product documentation and manuals are identified and available for customers
2. Apply legislation to sell product(s)	2.1.Product(s) are sold in accordance with identified legal requirements, including duty of care 2.2.Customer transaction is handled in accordance with consumer legislation
3. Record necessary information on product sales documentation	3.1.Correct product sales documentation is identified and accessed in accordance with enterprise policies and procedures 3.2.Required information is clearly and accurately provided to complete legal requirements for correct documentation 3.3.Customer is requested to sign acknowledgement of information provided, such as operation instructions for product, safety requirements and supply of manual for product

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to legislative requirements
- communicate ideas and information to explain safety and operation issues for products
- plan and organise activities to demonstrate safe operation of products
- work with others and in a team by consulting with experienced staff
- use mathematical ideas and techniques to have cost and time limitations included in demonstrations
- establish diagnostic processes recommending safe operating procedures
- use workplace technology related to the demonstration of safe operation of products

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- product sales legislation
- enterprise sales documentation procedures and policies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- identifying and correctly interpreting legal requirements for product sales
- application of legal requirements to product sales
- correctly completing required documentation to record sale
- communicating effectively with others involved in or affected by the work.

##### Context of, and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job
- The following are required:
  - documentation to fulfil legal requirements and enterprise policies
  - product manuals
  - a qualified workplace assessor.

##### Method of assessment

- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available assessment in simulated workplace conditions is acceptable
- Prescribed outcome must be able to be achieved without direct supervision
- Practical assessments:
  - access, interpret and apply legal requirements to sale of products
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

##### Guidance information for assessment

## Range Statement

### RANGE STATEMENT

## AURTEA4001 Manage environmental compliance in the mechanical repair industry

### Modification History

Release	Comment
Release 1	<p>Replaces AURT471782A Plan and manage compliance with environmental regulations in the mechanical repair industry</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to plan and implement a management system ensuring the protection of the environment in a mechanical repair business.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>Mechanical workplace or business undertaking either general or specialist mechanical repairs to light or heavy vehicles or their mechanical components, motorcycles or outdoor power equipment. Specialised mechanical repairs may include transmissions, steering and suspension, brakes, engine reconditioning, diesel fuelled plant, exhausts and radiators.</p> <p>This unit is applicable to mechanical repairs involving the removal of components containing oils or other fluids. Other mechanical qualifications should use AURAEA4004 Manage environmental compliance in an automotive workplace.</p> <p>Work involves the planning or management of normal activities in a mechanical or mechanical specialist workplace or business, including service, removal, repair or fitting of mechanical components for light vehicles, heavy vehicles, motorcycles, plant and outdoor power equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills to improve environmental performance by reducing environmental risk and waste.</p> <p>This unit is applicable to mechanical qualifications at both the Certificate IV and V level.</p>
--------------------------------	--

-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and manage compliance with environmental regulations	<p>1.1.Reasons for ethical environmental practice in an automotive workplace or business are identified.</p> <p>1.2.Environmental responsibilities of employers and staff in an automotive workplace or business are identified.</p> <p>1.3.Penalties for company and individual breaches of the legislation are identified.</p> <p>1.4.Waste products are minimised and facilities provided for waste materials to be stored in bins for recycling or disposal.</p> <p>1.5.Collection and recycling arrangements are implemented for liquids, sludge, solids and other waste.</p> <p>1.6.Suppliers with minimal excess packaging on goods received are sourced.</p> <p>1.7.Packaging on goods received is sorted and disposed of appropriately.</p> <p>1.8.Waste and energy conservation strategies are identified and implemented strategies are identified and implemented.</p>
2. Manage potential hazards to stormwater systems to avoid contamination	<p>2.1.Systems are in place to ensure waste water does not enter the stormwater system.</p> <p>2.2.All drains and flows are identified on a site map directly indicating where they flow.</p> <p>2.3.Appropriate trade waste permits are in place.</p> <p>2.4.Impervious paved, undercover and bunded or drained areas are provided and used for surface cleaning and preparation.</p> <p>2.5.Undercover and bunded or drained areas are provided and used for the storage of all materials, parts and components containing environmentally hazardous substances.</p> <p>2.6.Clearly identifiable storage or recycling containers are provided for all liquid wastes.</p> <p>2.7.Oil/water separator and pits are cleaned and maintained regularly as per manufacturer/component supplier specifications.</p> <p>2.8.Approved parts washer is supplied and maintained in a manner ensuring no contamination occurs.</p> <p>2.9.Spill kit is provided and used as needed to prevent</p>

ELEMENT	PERFORMANCE CRITERIA
	stormwater contamination by staff trained in its use. 2.10. Workplace is kept clean to prevent unintentional stormwater pollution.
3. Manage potential hazards to air quality to avoid contamination	3.1. Hazards to airborne particles are identified, minimised and contained. 3.2. Hazards to gases and fumes are identified, minimised and contained. 3.3. Systems are in place and implemented to ensure vehicle exhausts and emissions are minimised are not permitted to collect in the workplace. 3.4. A well-ventilated area is provided for welding activities.
4. Minimisation of noise hazards is planned and managed	4.1. Noise creating activities are minimised and carried out within approved operating hours. 4.2. Fixed machinery is fitted with silencers or surrounded by noise containment material.
5. Management systems	5.1. An environmental policy and contingency plan suitable to the needs of the business is developed and implemented. 5.2. Waste to landfill is calculated and possible savings through reuse and recycling are calculated. 5.3. Payback period on environmental equipment is calculated. 5.4. Staff adherence to environmental responsibilities is managed. 5.5. Environmental records are accurately and legibly maintained and stored securely in a form accessible for reporting procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to environmental procedures from legislation, regulations, policies, guidelines, standards and workplace best practices in an automotive mechanical business

## REQUIRED SKILLS AND KNOWLEDGE

- communicate ideas and information to enable work undertaken is in accordance with environmental best practice
- seek support from stakeholders for implementing suitable innovation and continuous improvement
- plan and organise activities, including preparation of equipment and materials recycling and waste management systems and selection of worksite to avoid environmental contamination, backtracking, workflow interruptions or wastage
- promote work with others and in a team by recognising dependencies and using cooperative approaches to minimise wastage, optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work and calculate wastage rates of various methods
- use planning, checking and inspection techniques to avoid environmental contamination and wastage
- use the workplace technology related to environmental protection and recycling equipment

## Required knowledge

- relevant aspects of environmental legislation and its relationship with WHS, and financial and risk management
- requirements for trade waste permits
- spill cleanup procedures
- characteristics and potential environmental impact of products used in the business
- philosophy of sustainability through prevention, reuse, reduce and recycle
- procedures for rectifying machinery faults and material defects
- action to be taken in case of significant environmental threat in the workplace
- reporting procedures for significant environmental damage occurring in the workplace
- cleaner production and eco-efficient strategies to avoid the production of waste

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Plan and manage safe handling requirements for equipment, products and materials, including use of personal protective equipment.
- Plan and manage environmental protection procedures in the business.
- Identify materials used in process in the business, and assess and manage their environmental impact.
- Ensure effective recycling processes are in place.
- Plan and manage work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others,
  - maintain a clean workplace,
  - prevent wastage and damage to goods, equipment and products,
  - dispose of waste in accordance with legislative requirements and best practice,
  - maintain required production output and product quality.
- Report significant environmental damage or spills.
- Plan and manage operator maintenance on equipment to ensure environmental efficiency.
- Manage effective planning and team work related to environmental best practice.
- Develop/implement or audit an existing business environmental policy covering, at a minimum: waste, recycling, hazards to stormwater, air quality, noise, energy minimisation and costs.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to an automotive mechanical workplace or business with a range of vehicles or mechanical components, waste materials of various types, recycling

## EVIDENCE GUIDE

	bins, spill kits, quick break degreasing agents, oil/water separator for liquids, sludge, solids and other waste.
<b>Method of assessment</b>	<p>Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</p> <p>Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</p> <p>Assessment should be conducted over time and should be in conjunction with assessment of other units of competence.</p> <p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a component authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Unit context

- Work is carried out in accordance with legislative obligations, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.
- Competence may be demonstrated in any mechanical workplace or business

#### WHS

WHS requirements include legislation, material safety data sheets, hazardous substances and dangerous goods code and safe operating procedures

#### Tooling and equipment

- Tooling and equipment are to include spill kits, recycling bins and drums, banded or drained wash bays and preparation areas, parts washers, quick break degreasing compounds, waste water management system.
- Tooling and equipment may include containment facilities for hazardous substances and staff environmental induction materials.

#### Materials

Materials may include:

- material safety data sheets, manufacturer/component supplier specifications, environmental records, costing of equipment and waste removal
- containment facilities for hazardous substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.

#### Information and procedures

Information and procedures may include:

- environmental legislation, regulations and advice
- workplace procedures relating to the use of

## RANGE STATEMENT

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including personal safety needs, are observed throughout the work 1.3. Equipment and tooling are identified and checked for safe and effective operation 1.4. Procedures are determined to minimise task time
2. Perform a preliminary safety check	2.1. Safety checks are completed without causing damage to trailer or components 2.2. Vehicle and coupling set-up are selected 2.3. Safe condition of towing vehicle is determined 2.4. Security of trailer load is ensured 2.5. Activities are carried out according to industry regulations/guidelines, WHS, environmental and legislation and enterprise policies/procedures
3. Connect trailer to vehicle	3.1. Vehicle to trailer alignment is achieved 3.2. Techniques are used for manual handling of trailer 3.3. Trailer is hitched to vehicle and ancillaries are connected 3.4. Connections are tested and checked 3.5. Activities are carried out according to industry regulations/guidelines, WHS, environmental and legislation and enterprise policies/procedures
4. Drive and manoeuvre trailer	4.1. Brake lockout devices are set correctly 4.2. Techniques are used to safely manoeuvre trailer and vehicle in forward and reverse directions and perform parking functions 4.3. Activities are carried out according to industry regulations/guidelines, WHS, environmental and legislation and enterprise policies/procedures
5. Disconnect trailer from vehicle	5.1. Parking devices are applied 5.2. Techniques are used for manual handling of trailer 5.3. Ancillary devices are disconnected and trailer is unhitched 5.4. Activities are carried out according to industry regulations/guidelines, WHS, environmental and legislation and enterprise policies/procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for driving and manoeuvre of trailers:
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the documenting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information trailer hitching and manoeuvre techniques
- plan and organise activities, including the preparation and layout of worksite and the obtaining of equipment and materials to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete tests and measurements to determine trailer load security, trailer hitching and driving
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform trailer driving/manoeuvring
- problem-solving skills for a range of differing procedural issues
- use the workplace technology related to:
  - trailer safety inspection
  - trailer hitching and load security
  - trailer driving, manoeuvring and parking

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- different trailer types
- State/Territory regulations for towing trailers
- manufacturer/enterprise policies

**REQUIRED SKILLS AND KNOWLEDGE**

- loading of trailers and travelling with a loaded trailer
- trailer hitching systems
- driving and manoeuvring techniques
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle and trailer protection requirements
- manoeuvring a minimum of two different types of trailers in restricted and non-restricted environments without damage to vehicle, trailer or surroundings

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- suitable area for trailer driving, manoeuvring and parking
- material relevant to driving and manoeuvring of trailers
- equipment and tooling appropriate to driving and manoeuvring of trailers
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods are to include:

- safety inspection
- trailer hitching to vehicle and ancillary connections
- securing load
- trailer driving, manoeuvring and parking
- trailer unhitching

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

**Personal protective equipment**

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

**Safe operating procedures**

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

**Emergency procedures**

Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions and plans or instructions related to job/task
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written instructions, signage, work schedules/plans/ specifications</li><li>• safe work procedures related to driving and manoeuvring of trailers</li><li>• regulatory/legislative requirements pertaining to driving and manoeuvring of trailers</li></ul>

## AURTNA5001 Estimate and calculate costs to repair, maintain or modify a vehicle

### Modification History

Release	Comment
Release 1	<p>Replaces AURT577727B Estimate and calculate costs to repair, maintain or modify a vehicle</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to estimate and calculate the costs to repair, maintain or modify a vehicle taking into account materials, labour and overhead costs.</p> <p>It requires the ability to estimate and calculate costs, analyse information, and report and document the costs.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who estimate and calculate the cost to repair, maintain or modify a vehicle in the vehicle repair and vehicle loss assessing industries. This calculation would normally be undertaken by the owner of the business as it incorporates materials, labour and overhead costs. Vehicles may include light vehicles, heavy vehicles, agricultural and plant equipment, recreational boats, recreational vehicles and motorcycles.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	1.1. Clarify the particular service required 1.2. Obtain and analyse details of the proposed service requirements 1.3. Obtain labour unit cost projections 1.4. Obtain and analyse logistic support contracts, supply agreements or equivalent 1.5. Obtain details of any proposed warehousing and physical distribution systems and related cost factors 1.6. Document and store information ready for retrieval and application
2. Estimate materials and labour	2.1. Estimate cost of repair time 2.2. Estimate labour requirements for direct services and related operations 2.3. Estimate cost of subcontractor work 2.4. Estimate type and cost of parts and materials according to industry and enterprise pricing standards 2.5. Document final estimate
3. Determine and calculate overheads	3.1. Determine components contributing to overhead costs 3.2. Calculate overhead costs to be attributed to the work in accordance with commercial and enterprise procedures
4. Calculate costs	4.1. Cost repair time in accordance with enterprise procedures 4.2. Cost direct labour costs and subcontractor work 4.3. Cost parts and materials 4.4. Calculate total job cost, including overheads and mark-up percentages in accordance with enterprise procedures 4.5. Calculate total service cost 4.6. Note potential quotation variations 4.7. Record cost calculations
5. Document and verify details	5.1. Document details of costs and charges in accordance with enterprise procedures 5.2. Verify costs, calculations and other details with relevant enterprise person 5.3. Document and file details for future reference and in

ELEMENT	PERFORMANCE CRITERIA
	accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use internet and other workplace technology related to calculating work costs
- communication skills to the level required to verify costs with others, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to undertake costing research, and to document and report findings
- numeracy skills to the level required to estimate and calculate labour, materials and on-costs and to validate work costs
- problem-solving skills to the level required to anticipate costing problems and to avoid reworking, wastage, and planning and scheduling problems
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- methods and processes for identifying, apportioning, summarising and validating total costs for work
- components of labour costs
- current assessing and quoting methodologies
- commercial approaches to warehousing and physical distribution and costing
- manufacturer and component supplier specifications and manuals, including costing catalogues
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to calculating vehicle repair, maintenance and modification costs
- organisational policies and procedures, including quality requirements, reporting and recording procedures, related to calculating vehicle repair, maintenance and

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

modification costs
--------------------

## Evidence Guide

<b>EVIDENCE GUIDE</b>
-----------------------

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.
--

**EVIDENCE GUIDE****Critical aspects of evidence**

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select appropriate methods and techniques
- interpret proposals, specifications and instructions for the work
- obtain information relevant to the determination of costs
- calculate and cost accurately the quantities of parts and materials, the amount of labour and time required to complete the work, and overheads for a range of vehicle repair, maintenance and modification quotes
- document the process and outcomes in accordance with enterprise practice.

**Context of assessment**

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - vehicles requiring repair that can be used for quotations
  - appropriate worksite and costing details
  - manufacturer and component costs, labour rates, commercial and industry information
  - Repair Times manuals
  - equipment, including calculators, computer and software
  - internet access
  - enterprise procedures.

**Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Specific resource requirements for this unit</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Service requirements**

Service requirements may include:

- specialised work
- subcontracting
- replacement parts
- repair timeframe

**Overhead costs**

Overhead costs may include:

- rental and leasing costs
- utilities

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• non-production resources</li> <li>• depreciation of plant and equipment</li> <li>• warehousing margins</li> <li>• warehousing costs</li> <li>• insurance and other costs incurred by doing business</li> <li>• material/supply costs, including catalogues, contracts, standing agreements, market rates and warehousing margins</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• Motor Vehicle Insurance and Repair Industry Code of Conduct</li> <li>• verbal, written and graphical instructions</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures for inspection of vehicles for saleable components</li> <li>• engineer's design specifications and instructions</li> <li>• workplace specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> <li>• current driver's licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>

**RANGE STATEMENT****WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- road rules
- safe driving policy

**Environmental requirements**

Environmental requirements may include:

- waste management
- noise
- dust
- clean-up management

**Organisational policies and procedures**

Organisational policies and procedures may include:

- financial management
- cost and apportioning overheads
- labour employment costs, including awards and contracts
- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice
- safe work procedures
- reporting and recording procedures

## AURTTA1001 Remove and tag steering, suspension and brake system components

### Modification History

Release	Comment
Release 1	Replaces AURT100164A Remove and tag steering, suspension and brake system components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor
Release 2	Minor typographical errors corrected

### Unit Descriptor

Unit descriptor	This unit covers the competence to remove and tag steering, suspension and brake system components. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	--

### Application of the Unit

Application of the unit	Work involved includes steering, suspension and brake systems on light vehicles, motorcycles, heavy vehicles road transport, heavy vehicles mobile plant and outdoor power equipment. Work requires individuals to demonstrate minimal judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove and tag steering, suspension and brake system components	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Dangers associated working with the removal and tagging of steering, suspension and brake components are observed</p>
2. Remove steering, suspension and brake system components	<p>2.1.Steering, suspension and brake system components for removal are identified</p> <p>2.2.Methods for the removal and tagging are implemented in accordance with manufacturer/component supplier specifications</p> <p>2.3.Components are removed without damage</p> <p>2.4.Inspection of components is carried out</p> <p>2.5.Report is processed in accordance with workplace procedures</p>
3. Tag steering, suspension and brake system components	<p>3.1.Tagging procedures are identified</p> <p>3.2.Resource requirements for tagging are identified and support equipment is identified and prepared</p> <p>3.3.Components are tagged without damage</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removing and tagging steering, suspension and brake components, including the use of measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- Steering, suspension and brake system terminology
- function of each component
- relationship of components to each other
- application of components
- removal procedures
- tagging procedures
- quality procedures

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• identifying, removing and tagging a range of components by their title and application</li> <li>• conducting the removal and tagging without damage to components or tooling and equipment.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>• Application of competence is to be assessed in the workplace or simulated worksite</li> <li>• Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</li> <li>• Assessment is to comply with regulatory requirements, including Australian Standards</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li> <li>• The following resources should be made available: <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to removing and tagging steering, suspension and brake components</li> <li>• equipment and hand and power tooling appropriate to removing and tagging steering, suspension and brake components</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions.</li> </ul> </li> </ul>

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies
- Assessment may be applied under project related conditions and require evidence of process
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**System components**

- System components include steering linkages, tie rod ends, "I" beam axle, independent suspension, ball joints, leading and trailing shoe, duo servo and disc braking
- Tagging is to be by title and application

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling and hand-held power tooling

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include tags and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information and procedures</b>	<p>Information and procedures may include:</p> <ul style="list-style-type: none"> <li>• enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets and Australian Design Rules</li> <li>• safe work procedures related to removing and tagging of steering, suspension and brake system components</li> <li>• organisation work specifications and requirements</li> </ul>

## AURTTA1002 Carry out workshop practice activities

### Modification History

Release	Comment
Release 1	Replaces AURT100308A Carry out workshop practice activities Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out workshop practice activities, including general fitting, housekeeping, component cleaning, documenting and reporting skills.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work involved includes all vehicle repair workshops.</p> <p>Work requires individuals to demonstrate some limited judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake workshop practice</b>	<ul style="list-style-type: none"><li>1.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.2.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</li><li>1.3.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.4.Technical requirements for workshop practice are sourced and support equipment is identified and prepared</li><li>1.5.Warnings in relation to working within a workshop environment are observed</li></ul>
2. <b>Workshop practice is carried out</b>	<ul style="list-style-type: none"><li>2.1.Methods for the workshop practice are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>2.2.Observations are noted during the procedure</li><li>2.3.Workshop practice scheduled documentation is completed</li><li>2.4.Final inspection is made to ensure work is to workplace expectations</li><li>2.5.Report is completed and delivered to persons</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques such as number and space techniques, estimation and approximation for practical purposes
- use workplace technology to combine physical and sensory skills needed to operate equipment with understanding of scientific and technological principles needed to explore and adapt systems

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with workshop equipment
- operating principles of machines and equipment and their relationship to each other
- fitting procedures
- workshop procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• conducting the workplace practice in accordance with workplace requirements</li> <li>• accurately interpreting workshop practice requirements</li> <li>• applying fitting skills to manufacturer/component supplier requirements</li> <li>• completing activities within workplace timeframes</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to carrying out workshop practice activities</li> <li>• equipment, hand and power tooling appropriate to carrying out workshop practice activities</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning</p>

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workshop practice activities**

Workshop practice activities are to include housekeeping, component cleaning, general fitting, reporting and documenting

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment,

<b>RANGE STATEMENT</b>	
	use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and responses associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, gauges, measuring and equipment cleaning devices
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and

RANGE STATEMENT	
	paggers
Information/documents	Sources of information/documents may include: <ul style="list-style-type: none"><li>• enterprise operating procedures</li><li>• job cards</li><li>• workshop manuals</li><li>• supplier data sheets</li><li>• parts catalogues</li><li>• customer orders</li><li>• industry/workplace codes of practice</li><li>• material safety data sheets</li><li>• Australian Design Rules</li></ul>

## AURTTA1003 Use and maintain basic measuring devices

### Modification History

Release	Comment
Release 1	<p>Replaces AURT125667A Use and maintain basic measuring devices</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to use and maintain measuring equipment used in general repair and of a basic nature.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, conduct of measurements, analysis and documenting of outcomes, maintenance of equipment and the completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes measurement of length, width, squareness, flatness and depth, using imperial and metric measurement.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake measurements</b>	<ul style="list-style-type: none"><li>1.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.2.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</li><li>1.3.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.4.Technical and/or calibration requirements for measuring equipment are sourced and support equipment is identified and prepared</li><li>1.5.Warnings in relation to working with precision tooling are observed</li><li>1.6.Correct and safe use of the repair equipment is demonstrated prior to work undertaken</li></ul>
2. <b>Conduct measurements and analyse results</b>	<ul style="list-style-type: none"><li>2.1.Methods for the conducting of measurements are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>2.2.Measurement results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</li><li>2.3.Results are documented with evidence and supporting information and recommendation(s) made</li><li>2.4.Report is processed in accordance with workplace procedures</li></ul>
3. <b>Maintain measuring equipment</b>	<ul style="list-style-type: none"><li>3.1.Information required for maintenance is accessed from manufacturer/component supplier specifications and correctly interpreted</li><li>3.2.Routine maintenance and storage of measuring equipment is carried out in accordance with manufacturer/component supplier specifications</li><li>3.3.Checks are completed without causing damage to component or system</li><li>3.4.Workplace documents are processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- Apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the use and maintenance of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- common automotive measurement terminology
- types of non-specialist measuring equipment and their applications
- measurement procedures
- measuring equipment maintenance procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## AURTTA2004 Carry out servicing operations

### Modification History

Release	Comment
Release 1	Replaces AURT200108A Carry out servicing operations Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out routine and scheduled servicing operations.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>It requires identification of servicing requirements, preparation for work, correct handling of lubricants and fluids, completion of servicing and work finalisation processes, including documentation.</p> <p>Work involved includes the routine and scheduled servicing of wheeled and tracked type vehicles and equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake servicing operations</b>	1.1. Work requirements, including the nature and scope of servicing, are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical requirements are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with vehicles and equipment are observed
2. <b>Apply correct lubricants and/or fluids handling techniques</b>	2.1. Correct lubricants/fluids are identified for components as per manufacturer/component supplier specifications 2.2. Fluid leaks are inspected in accordance with manufacturer/component supplier procedures 2.3. Used lubricants/fluids are disposed of in accordance with statutory requirements 2.4. Handling of lubricants/fluids is carried out according to industry regulations/guidelines, WHS legislation and legislation
3. <b>Carry out servicing operations</b>	3.1. Methods for the servicing operations are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2. Minor adjustments made during the servicing operations are in accordance with manufacturer/component supplier specifications
4. <b>Prepare vehicle for use or storage</b>	4.1. Vehicle servicing schedule documentation is completed 4.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3. Final inspection is made to ensure work is to workplace expectations 4.4. Servicing equipment is cleaned for use or storage to workplace expectations

ELEMENT	PERFORMANCE CRITERIA
	4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to vehicle servicing operations, including the use of diagnostic and specialist tooling and equipment, measuring equipment, computerised technology, and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with vehicles and/or equipment
- operating principles of vehicle systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- workshop procedures
- disposal of lubricants/fluids procedures
- enterprise quality procedures

<b>REQUIRED SKILLS AND KNOWLEDGE</b>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner for a range of servicing requirements:
- accurately interpret the servicing data
- conduct the servicing operations in accordance with workplace and manufacturer/component supplier requirements
- complete the work within workplace timeframes
- present equipment to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to vehicle servicing operations
- equipment, hand and power tooling appropriate to vehicle servicing operations
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

	<p>of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid,

<b>RANGE STATEMENT</b>	
	hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, measuring devices, job cards, hoists, jacks and lubrication equipment
<b>Materials</b>	Materials may include oils and lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or

**RANGE STATEMENT**

	instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to vehicle servicing operations</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to select and use bearings, seals, gaskets, sealants and adhesives</b>	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical requirements for testing and installation are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with sealants and adhesives are observed</p>
2. <b>Select and use sealants</b>	<p>2.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>2.2.Sealants and adhesives selected are those most appropriate for the work requirement</p> <p>2.3.Sealants and adhesives are used in accordance with manufacturer/component supplier instructions</p> <p>2.4.Sealants and adhesives are stored in accordance with manufacturer/component supplier instructions</p>
3. <b>Prepare to install bearings, seals and gaskets</b>	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information required are identified and sourced</p> <p>3.3.Technical and tool requirements for installation are identified and support equipment is identified and prepared</p>
4. <b>Carry out installation of bearings, seals and gaskets</b>	<p>4.1.Methods for the installation are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>4.2.Adjustments made during the service and/or repair are in accordance with manufacturer/component supplier specifications</p>
5. <b>Prepare vehicle/</b>	5.1.Selection and installation documentation is

ELEMENT	PERFORMANCE CRITERIA
<b>component for use or storage</b>	<p>completed</p> <p>5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.Equipment is cleaned for use or storage to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to the selection and use of bearings, seals, gaskets, sealants and adhesives, including the use of measuring equipment, specialist tooling and equipment, and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with sealants and adhesives
- operating principles of bearings, seals, gaskets and their relationship to other components
- types, characteristics, uses and limitations of sealants and adhesives
- types and layout of service/repair manuals (hard copy and electronic)
- bearings, seals and gaskets installation procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- sealant and adhesives application techniques
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- selecting and installing the following bearings to workplace and manufacturer/component supplier requirements:
  - plain
  - anti-friction
  - adjusting/pre-loading taper roller bearings
- selecting and using a minimum of three different types of lip seals and 'O' rings to workplace and manufacturer/component supplier requirements
- selecting and applying two different types of gaskets to manufacturer/component supplier requirements
- selecting and applying hardening and non-hardening sealants to manufacturer/component supplier requirements
- selecting and applying a polymer (silicone) adhesives to manufacturer/component supplier requirements
- vehicle/component is presented to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

<b>EVIDENCE GUIDE</b>	
	<p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the installation of bearings, seals and gaskets</li> <li>• material relevant to the selection and use of sealants and adhesives</li> <li>• equipment, hand and power tooling appropriate to installation of bearings, seals and gaskets</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

## Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Bearings</b>	Bearings are to include plain (bushes and bearing inserts) and anti-friction (ball and roller)
<b>Seals</b>	Seals are to include lip, face and 'O' ring (dynamic and static)
<b>Gaskets</b>	Gaskets are to include special papers, cork, and composite material types used for cylinder head (heat and pressure), cooling system and transmission system
<b>Sealants</b>	Sealants are to include hardening and non-hardening types which may be used with another seal (e.g. special papers) or as the only seal
<b>Adhesives</b>	Adhesives are to include polymers (silicone) which may be used for glass (windcreens) engine and transmission components
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation,

<b>RANGE STATEMENT</b>	
	manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, and load testing devices
<b>Materials</b>	Materials may include bearings, seals, gaskets, sealants, adhesives and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the selection and use of bearings, seals, gaskets, sealants and adhesives</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>australian design rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTA2006 Service hydraulic systems

### Modification History

Release	Comment
Release 1	Replaces AURT209170A Service hydraulic systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out the inspection and servicing of hydraulic systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing of systems, analysis of results and servicing of hydraulic systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involves vehicles fitted with hydraulic systems that are of an earthmoving or lifting and supporting nature.</p> <p>This unit is not intended for drive systems, power steering or hydraulic braking systems. See specific unit of competence for these systems.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake testing and servicing of hydraulic systems</b>	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical requirements for testing and servicing of hydraulic systems are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with hydraulics are observed
<b>2. Test hydraulic systems and analyse results</b>	2.1.Methods for the system tests and implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
<b>3. Carry out servicing</b>	3.1.Methods for the service implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.Adjustments made during the service are in accordance with manufacturer/component supplier specifications
<b>4. Prepare vehicle/system for use or storage</b>	4.1.Servicing schedule documentation completed 4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Vehicle/system is prepared for use or stored to workplace expectations 4.5.Job card is processed in accordance with workplace

	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to servicing hydraulic systems, including the use of measuring equipment, diagnostic and specialist tooling and equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with pressurised fluids
- identification of application, purpose and operating principles
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- servicing procedures
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting inspection results
- identification of application, purpose and operating principles
- conducting inspection, servicing and operational testing in accordance with workplace and manufacturer/component supplier specifications
- completing servicing of hydraulic systems and associated components within workplace timeframes
- vehicle/hydraulic system is presented to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of hydraulic systems
- equipment, hand and power tooling appropriate to the inspection and servicing of hydraulic systems
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Servicing**

Servicing to include fluids, filters, adjustments and operational testing, visual inspections and documents

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and fluid dispensing, disposal and load testing devices

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to servicing hydraulic systems</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake inspection of pneumatic systems</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and inspection requirements for pneumatic systems are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with pneumatic systems are observed
2. <b>Conduct inspection and analyse results</b>	2.1. Methods for the inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. <b>Prepare to service and repair pneumatic systems</b>	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information required are identified and sourced 3.3. Technical and tool requirements for the service and repair are identified and support equipment is identified and prepared
4. <b>Carry out service and repair</b>	4.1. Methods for the service and repair are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications 4.2. Adjustments made during the service and repair are in accordance with manufacturer/component supplier specifications

ELEMENT	PERFORMANCE CRITERIA
<b>5. Prepare vehicle/ equipment for use or storage</b>	<p>5.1. Service and repair schedule documentation is completed</p> <p>5.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3. Final inspection is made to ensure work is to workplace expectations</p> <p>5.4. Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>5.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection, servicing and repair of pneumatic systems, including the use of servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with pneumatic systems
- able to read and interpret schematic diagrams relevant to pneumatic systems
- identification of application, purpose and operating principles
- identification of pneumatic system schematic symbols
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures

<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<b>RANGE STATEMENT</b>	
<b>Servicing</b>	Servicing to include fluids, filters, adjustments and operational testing, visual inspections and documents
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice

<b>RANGE STATEMENT</b>	
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load and pressure testing devices
<b>Materials</b>	Materials may include fluids, minor spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to inspection, service and/or repair of pneumatic systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Dimensions of finished patterns or templates are determined	1.1.Customer orders are interpreted to determine required dimensions of finished products 1.2.Size requirements are checked in relation to the production process and finishing capacity of the workplace
2. Plan process	2.1.Material for pattern or template is identified for approximate size and characteristics 2.2.Required instruments and equipment are identified, located and assembled 2.3.Drawings and related specifications are interpreted 2.4.Procedures for using pattern development instruments and tooling are confirmed and equipment is prepared for use
3. Plot dimensions	3.1.Equipment and tooling are used following normal workplace procedures 3.2.Each dimension is measured, exploded and plotted maintaining angles, arcs and curves 3.3.Visual inspection and measurements are used to compare pattern dimensions and shapes with drawings and specifications
4. Complete pattern or template	4.1.Pattern or template is completed ensuring that the pattern indicates completion date and original drawing details. 4.2.Required workplace approval of pattern or template is obtained 4.3.Plans are marked with notations for workplace requirements, including authorship, process or customer requirements, authorisation and review dates 4.4.Plans are copied and filed according to workplace policies and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**REQUIRED SKILLS AND KNOWLEDGE****Required skills**

- research and interpretive skills to locate, interpret and apply pattern and template production procedures
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret materials required for the production of patterns and templates
- English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information of technical quality working practices and pattern and template production procedures
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the production of patterns and templates, including the use of measuring equipment and communication devices and the reporting/ documenting of results

**Required knowledge**

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- common automotive terminology and vehicle safety requirements
- theory for production of patterns or templates
- pattern and template production techniques and procedures
- preparing drawings and presenting information
- site reporting procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- determining dimensions of finished patterns or templates
- planning processes for producing patterns or templates
- plotting dimensions
- completing a range of patterns or template in accordance with enterprise procedures
- completing post-activity housekeeping

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the production of patterns and templates
- equipment, hand and power tooling appropriate to the production of patterns and templates
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Patterns/templates**

- Patterns/templates are to be used for the purposes of manufacturing parts or assisting the fitting of accessories
- Patterns/templates can be polymer, cardboard or composite material type
- Patterns/templates are to include those drawn and produced by hand and may include those produced by CAD means

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, workplace environment and safety and enterprise first aid
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with site safety, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Resources</b>	Resources may include hand tooling, power tooling, specialist tooling for producing patterns and/templates, specifications, dimensions, drawing equipment, computer equipment and software
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and may include site specific instructions, written instructions, plans or instructions related to

RANGE STATEMENT	
	job/task, telephones and pagers
Information/documents	Sources of information/documents may include: <ul style="list-style-type: none"><li>• schedules/plans/specifications, memos, material safety data sheets, diagrams or sketches</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTA2009 Carry out pre-repair operations (mechanical)

### Modification History

Release	Comment
Release 1	<p>Replaces AURT226008A Carry out pre-repair operations (mechanical)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to clean components by mechanical or chemical means and remove components in preparation for either storage or repair.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competence applies to vehicle body, light vehicle, heavy vehicle, mobile plant and motorcycle.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, cleaning of components, the removal of components, tagging and storage of components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake pre-repair operations	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical requirements for pre-repair are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with chemical cleaning agents are observed
2. Clean components prior to repair and/or storage	2.1.Cleaning agents are used according to cleaning agent manufacturer/component supplier instructions 2.2.Cleaning of components is achieved without causing damage to any component or system 2.3.Components of the vehicle are cleaned to facilitate inspection, assessment, replacement, repair and/or storage 2.4.Used cleaning agents and waste materials are safely disposed of according to statutory and enterprise requirements 2.5.Cleaning activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
3. Remove, tag and store components	3.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2.Components are removed, tagged and stored without causing damage to any component or system 3.3.Components are removed and tagged in preparation for storage or use 3.4.Components are treated with rust prevention following cleaning process and stored in accordance with manufacturer/component supplier specifications and enterprise procedures, to prevent injury to self and others or damage to components 3.5.Removal and storage activities are carried out according to industry regulations/guidelines, WHS

ELEMENT	PERFORMANCE CRITERIA
	<p>legislation, legislation and enterprise procedures/policies</p> <p>3.6. Report on additional parts required to complete the repair (not listed on quotation) is completed in accordance with enterprise policy</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to carry out pre-repair operations, including the use of measuring equipment, and communication devices, cleaning equipment and systems and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- types and layout of service/repair manuals (hard copy and electronic)
- dangers of working with chemical cleaning agents and cleaning equipment
- cleaning procedures
- dismantling procedures
- good working practices to avoid damage to electrical components
- manual handling techniques
- storage procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting cleaning, dismantling and storage in accordance with workplace requirements
- completing cleaning, dismantling and storage to manufacturer/component supplier requirements
- completing cleaning, dismantling and storage of components within workplace timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to carrying out pre-repair operations
- equipment, hand and power tooling appropriate to carrying out pre-repair operations
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

**EVIDENCE GUIDE**

	<p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Unit scope**

Methods include:

- steam cleaning, high-pressure washing, manual washing and the use of protective coverings
- dismantling

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This

<b>RANGE STATEMENT</b>	
	may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling and equipment, personal and vehicle protection, storage tabs and racks, special equipment (pressure washers, steam cleaners, spray equipment), power tooling, jacks and stands, lifting equipment

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include cleaning agents/sprays (dewaxing, detergents, degreasers, special purpose agents) and rust prevention material
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to carrying out pre-repair operations</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURTTA2010 Service and repair trailers up to 4.5 tonnes

### Modification History

Release	Comment
Release 1	Replaces AURT237272A Service and repair trailers up to 4.5 tonnes Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation
Release 2	Minor typographical errors corrected

## Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency describes the skills and knowledge required to service and repair trailers with an aggregate trailer mass (ATM) of up to 4.5 tonnes.</p> <p>It requires the ability to identify and confirm work requirements, to use technical skills to service, repair and/or maintain trailers up to 4.5 tonnes, and to complete the work finalisation processes.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to individuals who undertake and document the adjustment, servicing and repair of trailers with an ATM of up to 4.5 tonnes. This includes trailers of varying types and in varying environments.</p>
--------------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer information 1.4. Access and interpret state and territory regulations and requirements 1.5. Check and prepare tools, equipment and materials 1.6. Decide service and/or repair method in accordance with WHS, environmental and industry regulations and guidelines, and enterprise procedures 1.7. Set up work area
2. Adjust trailer to suit individual applications	2.1. Identify trailer application 2.2. Use methods, equipment and tolerances suitable to the trailer application and in accordance with manufacturer specifications to adjust suspension and chassis 2.3. Carry out adjustment in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices
3. Test, service, repair and/or maintain trailer	3.1. Select appropriate diagnostic test 3.2. Undertake testing of trailer 3.3. Identify service, repair and/or maintenance requirements 3.4. Carry out brake adjustment, including handbrake 3.5. Carry out bleeding of hydraulic braking system 3.6. Carry out service, repair and/or maintenance using methods, equipment and tolerances suitable to the trailer application in accordance with manufacturer specifications and WHS and workplace environmental and sustainable procedures and practices
4. Verify system	4.1. Apply and release brakes a number of times 4.2. Test trailer lighting circuits 4.3. Undertake visual and audible tests 4.4. Repair and eliminate identified issues 4.5. Organise for trailer to be tow tested

ELEMENT	PERFORMANCE CRITERIA
5. Clean up work area and maintain equipment	<p>5.1.Clean and inspect equipment and tooling according to workplace requirements</p> <p>5.2.Tag unserviceable equipment and faults identified in accordance with workplace requirements</p> <p>5.3.Finalise and process work completion documentation, update customer and warranty information and give to appropriate persons, as required</p> <p>5.4.Clean work area, dispose of waste and scrap, and store re-useable material, tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to service, repair and/or maintain trailers and components up to 4.5 tonnes, including use of workplace computerised technology for the testing, reporting and recording of results
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications, and to complete workplace documents
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- types of load carrying trailers with a gross trailer mass rating (GTMR) or ATM up to 4.5 tonnes
- brake types
- electrical circuit types and related Australian Design Rules
- trailer service, repair and maintenance procedures applicable to the trailer type
- work organisation and planning processes
- transport regulations for each state and territory, including braking requirements for trailers with a GTMR or ATM up to 4.5 tonnes
- documenting and reporting requirements/procedures
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides related to the servicing and repairing of trailers up to 4.5 tonnes and components

**REQUIRED SKILLS AND KNOWLEDGE**

- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the servicing and repairing of trailers up to 4.5 tonnes and components
- organisational policies and procedures, including quality requirements and reporting and recording procedures, related to servicing and repairing of trailers up to 4.5 tonnes and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing and repair methods and techniques appropriate to the circumstances and trailer type
- complete preparatory activity in a systematic manner
- adjust, service, repair and maintain three (3) different types of trailers
- complete workplace and equipment records and workplace clean-up requirements
- present trailer to customer or for storage in compliance with work requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - a range of trailers up to 4.5 tonnes requiring servicing, repairing and/or maintaining
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to servicing, repairing and/or maintaining trailers up to 4.5 tonnes
  - relevant information, including manufacturer

<b>EVIDENCE GUIDE</b>	
	specifications.
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Trailers</b>	<p>Trailers with a GTMR or ATM less than 4.5 tonnes may include:</p> <ul style="list-style-type: none"> <li>• boat trailers</li> <li>• car trailers</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• horse floats</li> <li>• plant trailers</li> <li>• farm trailers</li> <li>• mobile home carrier</li> <li>• motor cycle trailers</li> <li>• box trailers</li> <li>• caravan semi trailer</li> <li>• pig trailers</li> <li>• dog trailers</li> </ul>
<b>Servicing, repair and/or maintaining</b>	Servicing, repair and/or maintaining may include: <ul style="list-style-type: none"> <li>• minor adjustments</li> <li>• operational testing</li> <li>• replacement of fluids and filters</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters</li> <li>• brake bleeding equipment</li> <li>• power tools</li> <li>• air tools</li> <li>• specialist tools and equipment</li> <li>• lubricating equipment</li> <li>• measuring equipment</li> <li>• pressure gauges</li> <li>• vacuum gauges</li> <li>• manufacturer special stools</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts</li> <li>• lubricants</li> <li>• fluids</li> <li>• cleaning materials</li> </ul>
<b>Safe operating procedures</b>	Safe operating procedures may include: <ul style="list-style-type: none"> <li>• operational risk assessment and treatments</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• working in proximity to others</li> </ul>

**RANGE STATEMENT****Information/documents**

Information/documents may include:

- verbal, written and graphical instructions issued by authorised internal and external persons
- parts listing prices and catalogues
- inventory systems
- Repair Times manuals
- material safety data sheets (MSDS)
- diagrams or sketches
- engineer's design specifications and instructions
- manufacturer specifications
- industry standards (e.g. American Boat and Yacht Council, National Marine, Manufacturer's Association and US Coast Guard)
- Australian Road Transport (ARTSA) - Brake Code of Practice
- Australian standards
- workplace specifications and requirements
- current driver's licence

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>
<b>Environmental requirements</b>	Environmental requirements may include: <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install hydraulic systems	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed</li><li>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5.Technical requirements for testing and installing hydraulic systems are sourced and support equipment is identified and prepared</li><li>1.6.Warnings in relation to working with hydraulic systems are observed</li></ul>
2. Carry out installation	<ul style="list-style-type: none"><li>2.1.Methods for installation are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>2.2.Adjustments made during the installation are in accordance with manufacturer/component supplier specifications</li></ul>
3. Prepare vehicle/ hydraulic system for use or storage	<ul style="list-style-type: none"><li>3.1.Installation documentation is completed</li><li>3.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</li><li>3.3.Final inspection is made to ensure work is to workplace expectations</li><li>3.4.Vehicle/system is cleaned for use or storage to workplace expectations</li><li>3.5.Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the installation of hydraulic systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with hydraulic equipment
- operating principles of hydraulic systems and components and their relationship to each other, including actuators, conductors, pressure flow, and direction control systems
- types and layout of service/repair manuals (hard copy and electronic)
- hydraulic system operating procedures
- installation procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operating principles
- interpreting installation diagrams
- conducting installation in accordance with workplace and manufacturer/component supplier requirements
- completing installation of hydraulic systems and associated components within workplace timeframes
- vehicle/hydraulic system presentation to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the installation of hydraulic systems
- equipment, hand and power tooling appropriate to installation of hydraulic systems
- activities covering mandatory task requirements

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p>
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Variables</b>	<p>Variables are to include the installation of linear or rotary actuators, conductors and control valves</p>

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, hydraulic load testing devices and hydraulic schematic diagrams

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include spare parts, hydraulic fluids and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the installation of hydraulic systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to manufacture fluid power hose assemblies	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or installation requirements for hose assemblies are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with fluid power systems are observed
2. Manufacture fluid power hose assemblies	2.1. Methods for manufacture are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Adjustments made during manufacture are in accordance with manufacturer/component supplier specifications
3. Install fluid power hose assemblies	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information for installation are identified and sourced 3.3. Technical and tool requirements for installation are identified and support equipment is identified and prepared 3.4. Hose assemblies are installed in accordance with specifications
4. Conduct fluid power hose assembly tests and analyse results	4.1. Methods for fluid power hose assembly tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 4.2. Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 4.3. Results are documented with evidence and supporting information and recommendation(s) made

ELEMENT	PERFORMANCE CRITERIA
	4.4. Report is forwarded to persons for action in accordance with workplace procedures
5. Prepare fluid power system for use or storage	5.1. Documentation following manufacturing procedure is completed 5.2. Final inspection is made to ensure safety features are in place 5.3. Final inspection is made to ensure work is to workplace expectations 5.4. Fluid power system is cleaned for use or storage to workplace expectations 5.5. Job card is completed and delivered to appropriate persons

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the manufacture and installation of fluid power hose assemblies, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/ recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with fluid power equipment
- operating principles of power systems their relationship to each other
- manufacturing procedures
- installation procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- manufacturing and installing hose assemblies to manufacturer/component supplier requirements and within workplace timeframes
- conducting tests to manufacturer/component supplier requirements
- interpreting test results
- fluid power system presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the manufacture and installation of fluid power hose assemblies
- equipment, hand and power tooling appropriate to the manufacture and installation of fluid power hose assemblies
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake testing of hydraulic system	1.1. Nature and scope of the work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or hydraulic testing requirements for hydraulic systems are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with fluids under pressure are observed
2. Test hydraulic system and analyse results	2.1. Methods for the conduct of the testing implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is forwarded to appropriate persons for action in accordance with workplace procedures
3. Prepare to repair hydraulic systems	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information required are identified and sourced 3.3. Technical and tooling requirements for the repair are identified and support equipment is identified and prepared
4. Carry out repair	4.1. Methods for the conduct of the repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 4.2. All adjustments made during the repair are in accordance with manufacturer/component supplier specifications

ELEMENT	PERFORMANCE CRITERIA
5. Prepare vehicle/system for use or storage	<ul style="list-style-type: none"><li>5.1.Repair schedule documentation is completed</li><li>5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</li><li>5.3.Final inspection is made to ensure work is to workplace expectations</li><li>5.4.Vehicle/system is cleaned for use or stored to workplace expectations</li><li>5.5.Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the repair of hydraulic systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/ recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with hydraulically operated equipment
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of hydraulic system schematic symbols
- types and layout of service/repair manuals (hard copy and electronic)
- hydraulic system testing procedures
- hydraulic system repair procedures
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full repair sequence as per the Range Statement to a hydraulic system relative to the qualification being sought
- interpreting of the system test results
- conducting the repair in accordance with workplace and manufacturer/component supplier requirements
- completing repair of hydraulic systems and associated components within workplace timeframes
- vehicle/hydraulic system presentation to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to carrying out the testing and repair of hydraulic systems

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to carrying out the testing and repair of hydraulic systems</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Variables</b>	Variables include: <ul style="list-style-type: none"> <li>• linear or rotary actuators</li> <li>• conductors</li> <li>• pressure flow or directional control valves and pumps</li> <li>• pumps may be of gear, vane or piston design</li> </ul>
<b>Repair methods</b>	Repair methods and sequence are to include isolation of faults, dismantling, inspection and evaluation, replacement of components parts, assembly and completion of operational tests and records
<b>Faults</b>	Faults to include, excessive internal leakage in both actuators and pumps, low operating pressure and implement creep
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting,

<b>RANGE STATEMENT</b>	
	working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, and hydraulic hose repair and load testing devices
<b>Materials</b>	Materials may include hydraulic fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the testing and repair of hydraulic systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including</li> </ul>

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to assemble and install pneumatic systems/components	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and testing requirements for pneumatic systems are sourced and support equipment is identified and prepared 1.6. Support tooling and equipment are selected and prepared for use 1.7. Warnings in relation to working with pneumatic systems are observed
2. Assemble and install pneumatic systems/components	2.1. Methods for assembly and installation are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications 2.2. Adjustments made during the assembly/installation are in accordance with manufacturer/component supplier specifications 2.3. Documentation of observations is completed
3. Conduct and analyse pneumatic system tests	3.1. Methods for tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2. Test results are compared with manufacturer/component supplier specifications 3.3. Final adjustments are made to achieve compliance with manufacturer/component supplier specifications to indicate compliance or non-compliance 3.4. Results are documented with evidence and supporting information and recommendation(s) made 3.5. Report is forwarded to persons for action in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
4. Prepare vehicle/ pneumatic system for use or storage	4.1.Assembly and installation schedule documentation is completed 4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Vehicle/pneumatic system is cleaned for use or storage to workplace expectations 4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use workplace technology related to the assembly and installation of pneumatic systems/components, including the use of diagnostic and specialised tooling and equipments, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- types, characteristics, uses and limitations of common pneumatic systems
- operating principles of pneumatic systems and their relationship to each other
- dangers of working with pneumatic systems
- types and layout of service/repair manuals (hard copy and electronic)
- techniques for interpretation of schematic diagrams relevant to pneumatic systems
- techniques for reading and interpreting engineering drawings
- pneumatic systems test procedures
- pneumatic systems assembly/installation procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques, appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting assembly/installation of a range of pneumatic components in accordance with manufacturer/component supplier and workplace requirements
- interpreting test results
- completing work within workplace timeframes
- vehicle/pneumatic system presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the assembly and installation of pneumatic systems/components
- equipment, hand and power tooling appropriate to the assembly and installation of pneumatic systems/components
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use

<b>RANGE STATEMENT</b>	
	of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load and pressure testing devices
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific

**RANGE STATEMENT**

	instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the assembly and installation of pneumatic system/components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURTTA3015 Prepare engineering drawings

### Modification History

Release	Comment
Release 1	Replaces AURT325149A Prepare engineering drawings Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to prepare engineering drawings applicable to an automotive environment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit covers the preparation of engineering drawings applicable to manufacturing or modification of products in an automotive environment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Work instructions are used to determine the job requirements, including job sheets, preparation procedures and manufacturer/component supplier specifications</li><li>1.2. Job specifications are read and interpreted</li><li>1.3. WHS requirements, including personal protection needs, are observed throughout the work</li><li>1.4. Product/system/component/item to be drawn is identified</li><li>1.5. Correct instruments and equipment are identified and checked for safe use</li></ul>
2. Prepare engineering drawing	<ul style="list-style-type: none"><li>2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications</li><li>2.2. Drawing instruments, equipment and materials are selected to match the complexity of the requirement</li><li>2.3. Symbols, codes, legends and diagrammatic representations are used</li><li>2.4. Correct dimensions, tolerances and material specifications are used</li><li>2.5. Engineering drawings are completed and checked for accuracy</li><li>2.6. Activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies</li></ul>
3. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>3.1. Waste and scrap is removed following workplace procedure</li><li>3.2. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</li><li>3.3. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</li><li>3.4. Instruments are maintained and stored in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for preparing engineering drawings
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the documenting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment, materials and drawing instruments to avoid backtracking, workflow interruptions or time wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly represent unit/object/subject dimensions and specifications
- use pre-checking and inspection techniques to anticipate planning and scheduling problems and avoid wastage of time
- use workplace technology related to the preparation of engineering drawings, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- techniques for interpretation of manufacturing/ modification specifications
- equipment operating procedures
- ISO standards
- technical information, including symbols, codes, legends and diagrammatic representations
- computer-aided design techniques and applications
- engineering drawing procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- preparing engineering drawings covering manufacture or modification of a minimum of three different products both hand and computer-aided processes
- preparing and presenting engineering drawings to customer and enterprise requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the preparation of engineering drawings
- equipment, hand and power tooling appropriate to the preparation of engineering drawings
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

**EVIDENCE GUIDE**

	<p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods are to include:

- hand and instrument drawing
- computer-aided drawing

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, workplace environment and safety and enterprise

<b>RANGE STATEMENT</b>	
	first aid
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with site safety, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Resources</b>	Resources are to include computers, CAD software, drawing boards, drawing machines, drawing paper and rulers, T-squares, measuring equipment, pens and pencils
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• schedules/plans/specifications, memos, material safety data sheets, diagrams or sketches</li> <li>• regulatory/legislative requirements pertaining</li> </ul>

**RANGE STATEMENT**

	<p>to automotive industry, including Australian Design Rules</p> <ul style="list-style-type: none"><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake a vehicle safety inspection	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for inspection are sourced and support equipment is identified and prepared
2. Complete vehicle inspection	2.1. Correct information is accessed and interpreted from appropriate sources to enable inspection to conform to standards and procedures 2.2. Vehicle inspection is carried out using approved methods and equipment, according to specifications and tolerances relative to the vehicle 2.3. Inspection is completed without causing damage to any component or system 2.4. Vehicle components are compared to manufacturer/component supplier specifications
3. Report findings	3.1. Vehicle inspection report is completed in approved format 3.2. Vehicle system tolerances outside vehicle manufacturer/component supplier specifications are highlighted and drawn to the attention of customer and/or reported 3.3. Records relating to vehicle safety inspections are processed in accordance with company policy 3.4. Inspection is completed within enterprise guidelines 3.5. Inspections are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. Prepare vehicle for customer delivery	4.1. Inspection documentation is completed 4.2. Final inspection is made to ensure safety features are in place 4.3. Vehicle is presented to workplace expectations 4.4. Job card is completed and delivered to appropriate

ELEMENT	PERFORMANCE CRITERIA
	persons

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to vehicle safety/ roadworthy inspections, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- Australian Design Rules
- vehicle/component inspection procedures
- inspection checklists
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection in accordance with regulatory and/or workplace requirements
- interpreting condition of the components compared with manufacturer/component supplier specifications
- inspection of vehicle and its associated components within workplace timeframes
- completing the written inspection report
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to vehicle safety/roadworthy inspections
- equipment, hand and power tooling appropriate to vehicle safety/roadworthy inspections
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods include conducting a vehicle inspection by vehicle manufacturer/component supplier, State/Territory legislation, industry practices and/or customer requirements

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand or hand-held power tooling, ramps, hoists, pits, measuring equipment, specialist tooling for

RANGE STATEMENT	
	removal and testing equipment, including meters and gauges
<b>Materials</b>	Materials may include vehicle protection and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to vehicle safety/roadworthy inspections</li><li>• regulatory/legislative requirements pertaining to vehicle safety</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

### Modification History

Release	Comment
Release 1	Replaces AURT366108A Carry out diagnostic procedures Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to diagnose component/equipment faults from different symptoms and to nominate repair action.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose faults	1.1.Information is accessed from appropriate sources 1.2.Differentiate between "symptoms" and "causes" 1.3.Identify fault diagnosis as a process 1.4.Familiarisation of system(s) from the area of the fault's origin
2. Apply technology to isolate fault(s)	2.1.Diagnosis strategy is developed that can be used to determine a fault within the component/equipment 2.2.Meters/gauges/measuring equipment is applied to isolate fault 2.3.Identification of fault(s) are made from test results 2.4.Findings are confirmed by an alternate route/plan 2.5.Faults are diagnosed without causing damage to workplace property, component or equipment 2.6.Inspections are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
3. Recommend rectification method(s)	3.1.Report of findings is completed in workplace approved format 3.2.Rectification strategy is identified 3.3.Consequences of ignoring strategy are identified 3.4.Any faults in conflict with roadworthiness or safe operation of component/equipment are immediately brought to the attention of the supervisor for action
4. Component/equipment is prepared for customer use	4.1.Work schedule documentation is completed 4.2.Final inspection is made to ensure safety features are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Job card is completed and delivered to appropriate persons

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use workplace technology related to the diagnosis of faults, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- diagnostic procedures and problem-solving techniques
- documenting procedures
- symptom and cause differentiation
- documenting responsibilities
- work organisation and planning processes
- enterprise quality procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting diagnosis of a range of faults in accordance with workplace requirements to test and verify symptoms
- interpret results
- confirm diagnosis of fault(s)
- diagnosis carried out to manufacturer/component supplier requirements
- complete diagnosis within workplace timeframes
- component/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to diagnosis of faults
- equipment, hand and power tooling appropriate to the diagnosis of faults
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Diagnose problems**

Diagnosis is a process of elimination, fault find and fault isolation

**Diagnostic methods**

Diagnostic methods are to include:

- removal and replacement, dismantling,

<b>RANGE STATEMENT</b>	
	adjusting <ul style="list-style-type: none"> <li>• visual and aural identification and testing</li> <li>• component/equipment performance comparison</li> <li>• on-and off-site, indoor and outdoor and on-and off-shore diagnosis</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities

<b>RANGE STATEMENT</b>	
	administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include computer software, computer hardware, specific tooling and equipment used for dismantling, testing and diagnosis, meters, gauges and measuring equipment
<b>Materials</b>	Materials may include minor spare parts and consumables and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the diagnosis of faults</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules, Environment Protection Regulations (Diesel Fuels) and National Environment Protection For Diesel Vehicle Guidelines</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTA3019 Carry out advanced diagnostic procedures

### Modification History

Release	Comment
Release 1	<p>Replaces AURT366308A Carry out advanced diagnostic procedures</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to determine the precise location of component faults within various vehicle systems using advanced diagnostic procedures and specialist diagnostic tooling and equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, diagnosis and identification of cause(s) of faults, establishment of repair requirements and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for diagnostic procedures	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Technical and/or calibration requirements for testing and diagnosis are sourced and support equipment is identified and prepared</p>
2. Analyse reported faults	<p>2.1.Information is gathered to provide a full overview of faults and conditions under which they occur</p> <p>2.2.Function and operation of the system when operating correctly are identified</p> <p>2.3.Systematic faultfinding processes are used across systems to determine the extent of fault</p> <p>2.4.Additional technical sources are consulted to assist with analysis</p> <p>2.5.Actual faults are distinguished from perceived faults</p>
3. Identify causes of faults	<p>3.1.Selected diagnostic equipment is prepared for attachment or vehicle use according to manufacturer/component supplier instruction or enterprise standard operating procedures</p> <p>3.2.Vehicle is correctly and safely attached to or on selected diagnostic equipment according to enterprise work practices or standard operating procedures</p> <p>3.3.Calibration or pre-test adjustments are completed according to specific equipment operating procedures before diagnostic tests are carried out</p> <p>3.4.Diagnostic tests are carried out according to enterprise test guidelines to determine location of specific component faults</p> <p>3.5.Source/cause of faults isolated and confirmed</p>
4. Establish repair requirements	<p>4.1.Viability of repair or replacement is assessed</p> <p>4.2.Repair procedures are identified and prescribed to meet customer service requirements</p> <p>4.3.Repair requirements are clearly and legibly documented and/or communicated to appropriate persons</p> <p>4.4.Repairs involving equipment/skills not held in the workshop are sourced from specialist workshops</p> <p>4.5.Customer is informed of the diagnosis and repair</p>

ELEMENT	PERFORMANCE CRITERIA
	requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to advanced diagnostic procedures, including the use of measuring equipment, computerised technology and electronics, communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- correct function and operation of the complex automotive systems
- symptom and cause differentiation
- diagnostic procedures and problem-solving techniques
- test procedures and test instrument application
- documenting and documenting procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- analysing faults in complex systems, identifying cause(s) of faults and establishing repair requirements within an established timeframe for at least three of the following systems:
  - mechanical
  - hydraulic
  - pneumatic
  - electrical/electronic

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to advanced diagnostic procedures
- equipment, hand and power tooling appropriate to advanced diagnostic procedures
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

	<p>of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid,

<b>RANGE STATEMENT</b>	
	hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include multimeters, exhaust gas analysers, chassis dynamometers, shock absorber testers and electronic engine management testing equipment
<b>Materials</b>	Materials may include spare parts, consumables and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific

**RANGE STATEMENT**

	instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to advanced diagnostic procedures</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTA3020 Apply heat-induction processes

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to apply heat using induction processes when repairing vehicle chassis and components.</p> <p>Work involves identifying and confirming work requirements, preparing for work, selecting heat-induction equipment, applying methods and heat settings according to original equipment manufacturer (OEM) specifications, and completing clean-up and documentation. The process requires accurate control of heat to damaged vehicle sections in line with OEM specifications.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to the use of a heat-induction process for the repair of vehicle chassis and components. Work is undertaken at a body repair technician level.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>Work is carried out according to award provisions. Vehicles may include heavy vehicle trucks, buses, commercial vehicles, and agricultural and recreational vehicles.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine job requirements	<p>1.1.Job specifications and repair requirements are interpreted and determined from job sheet and work instructions</p> <p>1.2.Appropriate workplace health and safety (WHS) practices are identified and adhered to according to <b>WHS, legislative</b> and <b>workplace requirements</b></p> <p>1.3.Information is accessed from appropriate source to enable induction heating to be performed according to OEM-recommended procedures</p>
2. Plan and prepare to undertake the work	<p>2.1.Approved induction heat range and heating methods are accessed and used according to OEM specifications on a range of materials</p> <p>2.2.Equipment and <b>resources</b> are identified and inspected for compliance with OEM and job repair specifications</p> <p>2.3.Relevant heat-induction procedures, repair plans, drawings and reference texts are selected according to job sheet instruction</p> <p>2.4.Work is planned in detail in line with vehicle specifications, heating sequence and workplace procedures</p> <p>2.5.Work areas are prepared according to WHS, legislative and workplace requirements</p> <p>2.6.Potential hazards are identified and prevention measures selected according to workplace procedures</p> <p>2.7.Work quality and completion details are finalised according to workplace procedures</p>
3. Conduct work	<p>3.1.Induction heating activities are completed without causing damage to workplace property, vehicles, systems or components</p> <p>3.2.Heat-induction settings are adjusted and supervised according to OEM, industry and workplace <b>standards</b></p> <p>3.3.Repairs to damaged components are carried out according to OEM-recommended procedures and industry and workplace quality standards</p>
4. Clean up work area and maintain equipment	<p>4.1.Work area is cleaned and tidied according to workplace procedures</p> <p>4.2.Waste and scrap materials are removed following workplace and <b>environmental requirements</b> and procedures</p> <p>4.3.Tools and equipment are checked and faulty items are identified and tagged</p> <p>4.4.Equipment maintenance activities are completed according to workplace and manufacturer specifications</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow OEM and job specifications
  - follow workplace verbal instructions
- initiative and enterprise skills to recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other reference documents
  - document heat-induction repair procedures and required parts
- numeracy skills to interpret and calculate heat settings and repair measurements
- planning and organising skills to:
  - plan work requirements and prioritise repair activities to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate heat-induction equipment
  - recognise own limitations and seek advice
  - follow workplace policies and documentation, including industry codes of practice and procedures
- teamwork skills to:
  - work with diverse individuals and groups
  - apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to:
  - use workplace tools and equipment relating to the heat-induction process
  - correctly use specialist tools and equipment

#### Required knowledge

- WHS and personal safety requirements
- technical documentation covering procedures, specifications, schedules and work plans

**REQUIRED SKILLS AND KNOWLEDGE**

- industry quality standards, including work instructions, procedures, and performance and inspection processes
- cost minimisation and waste avoidance policies, procedures and practices
- environmental protection requirements relating to the disposal of waste material
- established communication channels and protocols
- problem-identification and resolution techniques
- procedures for the correct use of heat-induction equipment
- safety requirements for heat-induction equipment
- material types suitable for the application of heat-induction process

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- comply with relevant legislation, regulations, standards, codes of practice and workplace policies and procedures
- maintain working knowledge of current work system and practices
- work and communicate effectively with others involved in the work
- apply job requirements in relation to:
  - achieving induction heating goals
  - achieving work quality goals
  - responding positively to changing work requirements
- effectively apply problem-solving techniques
- modify activities to cater for variations in workplace context and environment
- interpret and communicate operational information
- comply with WHS requirements
- conduct heat-induction processes.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following workplace safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

The following resources must be made available for the assessment of this unit:

- safe work environment
- OEM repair specification
- heat-induction equipment
- workplace or simulated repair activity
- hand tools.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***WHS requirements:***

- are those prescribed under legislation, regulations, codes of practice and policies and procedures
- may include:
  - use of personal protective equipment and clothing
  - use of fire-fighting equipment
  - first aid equipment
  - control and elimination of hazards and risks
  - systems covering the use of hazardous materials and substances
  - manual-handling procedures, including for lifting and carrying.

***Legislative requirements***  
may include:

- applicable legislation, regulations and codes of practice, including those relating to:
  - award and enterprise agreements
  - duty of care
  - employee relations
  - environment protection
  - industry codes of practice.

***Workplace requirements***  
may include:

- environmental management: waste disposal, recycling and re-use guidelines
- emergency and evacuation procedures
- procedures for the use of heat-induction equipment
- legal obligations
- maintenance and storage procedures
- WHS requirements
- workplace guidelines
- policies and procedures relating to own role and responsibility
- instruction manuals
- quality assurance guidelines
- quality and continuous improvement processes and standards
- recording and reporting guidelines.

***Information*** may include:

- OEM-recommended repair specifications
- workplace operating procedures

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>customer requirements</li> <li>industry codes of practice</li> <li>material safety data sheets (MSDS)</li> <li>state and territory WHS legislation.</li> </ul>
<b>Resources</b> may include:	<ul style="list-style-type: none"> <li>hand tools</li> <li>heat-induction equipment</li> <li>components for repair</li> <li>identification of materials used by OEM in chassis and body components</li> <li>job sheets, drawings and work instructions</li> <li>workplace or simulated workplace.</li> </ul>
<b>Standards</b> may include:	<ul style="list-style-type: none"> <li>industry regulations and guidelines</li> <li>OEM repair guidelines</li> <li>WHS legislation</li> <li>workplace quality procedures.</li> </ul>
<b>Environmental requirements</b> may include:	<ul style="list-style-type: none"> <li>measures to reduce pollution</li> <li>waste management</li> <li>noise control</li> <li>dust control</li> <li>clean-up management.</li> </ul>

## AURTTA4021 Carry out diagnosis of complex system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT466208A Carry out diagnosis of complex system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to diagnose faults in systems integrating two or more automotive systems or incorporating three or more of mechanical, hydraulic, pneumatic, electrical or electronic media.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of the work requirement, preparation for work, diagnosis and identification of the causes of faults, establishment of the repair requirements and completion of work finalisation processes, including clean-up and documentation.</p> <p>The unit of competence should be contextualised to the qualification it is being applied.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for diagnostic procedure	1.1. Nature and scope of the work requirements are identified and confirmed. 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work. 1.3. Technical and/or calibration requirements for testing and diagnosis are sourced and support equipment is identified and prepared.
2. Analyse reported faults	2.1. Information is gathered from all sources to provide a full overview of all faults and conditions under which they occur. 2.2. Function and operation of the system when operating correctly are identified. 2.3. Systematic fault-finding processes are used across relevant systems to determine the extent of the fault. 2.4. Additional technical sources are consulted to assist with analysis, if necessary. 2.5. Actual faults are distinguished from perceived faults.
3. Identify causes of faults	3.1. Diagnostic equipment and tests are selected to facilitate precise identification of faults and causes. 3.2. Tests are applied systematically and efficiently to gather precise data on system operation. 3.3. Appropriate use is made of technical information to compare gathered data with specifications. 3.4. Test results and gathered data are compared to system specifications and normal functions, and discrepancies are identified. 3.5. Source/cause of fault is isolated and confirmed.
4. Establish repair requirements	4.1. Viability of repair or replacement is assessed. 4.2. Appropriate repair procedures are identified and prescribed to meet customer service requirements. 4.3. Repair requirements are clearly and legibly documented and/or communicated to appropriate persons. 4.4. Repairs involving equipment/skills not held in the workshop are sourced from specialist workshops. 4.5. Customer is informed of the diagnosis and repair requirements.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the diagnosis of complex system faults, including the use of measuring equipment, computerised technology and electronics, communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- function and operation of the appropriate complex automotive systems
- symptom and cause differentiation
- diagnostic procedures and problem-solving techniques
- test procedures and test instrument application
- documenting and reporting procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• analysing faults in complex systems, identifying the cause(s) of faults and establishing repair requirements within an established timeframe for faults incorporating at least three of the following single systems: mechanical, hydraulic, pneumatic and electrical/electronic.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite.</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards.</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• materials relevant to the diagnosis of complex system faults</li> <li>• equipment, hand and power tooling appropriate to the diagnosis of complex system faults</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training

**EVIDENCE GUIDE**

	<p>Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Complex systems**

A complex system is defined as one which integrates two or more automotive systems, or

**RANGE STATEMENT**

	<p>incorporates three or more of mechanical, hydraulic, pneumatic, electrical or electronic media. Examples include hydraulically/electronically controlled automatic transmissions, anti-lock braking systems, engine management systems integrating ignition, fuel and transmission control systems.</p> <p>Workplace example:</p> <ul style="list-style-type: none"> <li>Customer reports intermittent shifting into top gear on an electronically controlled automatic transmission. The customer is asked a number of questions about the conditions in which the problem occurs (e.g. frequency of the problem, speed, road conditions). A road test is conducted, and the technician detects intermittent speedometer operation. After testing of electrical connections, components and sensors, the intermittent speedometer operation is confirmed to be the problem. Repair requirements are determined to be securing the connections on the speedometer wiring.</li> </ul>
<b>Diagnostic methods</b>	<p>Diagnostic methods are to include:</p> <ul style="list-style-type: none"> <li>questioning of customer</li> <li>road testing</li> <li>hydraulic testing (e.g. performance testing of power steering systems)</li> <li>electrical testing (e.g. performance testing of engine starting systems)</li> <li>electronic testing (e.g. electronic interface diagnostic equipment)</li> <li>mechanical testing (e.g. compression testing on engines)</li> <li>chemical testing (e.g. testing of cooling systems)</li> <li>technical/service manuals</li> <li>component/equipment service history</li> <li>body measurements</li> </ul>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment,</p>

<b>RANGE STATEMENT</b>	
	use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include testing equipment, meters, CRO, code readers, gauges, measuring equipment, gas analysers and sensors
<b>Materials</b>	Materials may include cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault

**RANGE STATEMENT**

	reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to diagnosis of complex system faults</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian design rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

## AURTTA4025 Diagnose complex faults in vehicle integrated stability control systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnosis complex faults in vehicle integrated stability control systems in order to initiate action to service, repair, replace or to improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of vehicle integrated stability control systems of motorcycles, light vehicles, heavy commercial vehicles, and vehicles in the mining, construction and agricultural environments.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <i>integrated stability control systems</i> are accessed and interpreted</p> <p>1.3. <i>Workplace health and safety (WHS) requirements</i>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies and discrepancies or <i>faults</i> in integrated stability control systems are identified and confirmed from direct or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <i>tests</i> and testing process are identified and selected from the range of available options</p> <p>2.4. <i>Testing equipment</i> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <i>diagnostic processes</i> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to integrated stability control systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of integrated stability control systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to integrated stability systems
- concepts, types, functions, operations and limitations of integrated stability systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to integrated stability systems
- testing procedures for integrated stability systems, including procedures for accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different integrated stability systems that include steering, suspension and braking systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in integrated stability systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with real or simulated integrated stability control system faults

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• tools and equipment appropriate for the diagnosis of complex faults in integrated stability control systems</li> <li>• technical reference information and workplace instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Integrated stability control systems</i></b> may include:	<ul style="list-style-type: none"> <li>• traction control systems</li> <li>• electronic stability systems</li> <li>• vehicle dynamic control</li> <li>• closed loop electronic steering and multi-class bus systems</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• electrical and electronic failures in stability/steering/suspension/braking systems</li> <li>• direct faults in input sensors, output actuators, wiring harness or computer systems</li> <li>• calibration/adjustment specifications, component specifications, component assembly</li> <li>• component damage and system modifications</li> <li>• indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• wiring and connector integrity</li> <li>• operator and specification of input and output devices</li> <li>• controlling electronic components and computers</li> <li>• data interpretation</li> <li>• readings related to direct, indirect and intermittent causes</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• analogue and digital multimeters</li> <li>• lab oscilloscopes</li> <li>• scan tools</li> <li>• test lights</li> <li>• test LEDs</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"> <li>• pulse generators and may include manufacturer/component supplier testing equipment</li> </ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to integrated stability control systems</li> <li>• six-step troubleshooting plan</li> <li>• discover-investigate-fix methodology</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to electric over hydraulic systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of electric over hydraulic systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to electric over hydraulic systems
- concepts, types, functions, operations and limitations of electric over hydraulic systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to electric over hydraulic systems
- testing procedures for electric over hydraulic systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different electric over hydraulic systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in electric over hydraulic systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated electric over hydraulic system faults

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>tools and equipment appropriate for the diagnosis of complex faults in electric over hydraulic systems</li> <li>technical reference information and workplace instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults*** may include:

- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration or adjustment specifications
- component specifications, component assembly, component damage and system modifications
- indirect mechanical faults.

***Tests*** may include:

- wiring and connector integrity
- operation and specification of input and output devices
- controlling electronic components and computers
- data interpretation and readings related to direct indirect and intermittent causes
- hydraulic systems testing
- electrical systems testing
- mechanical systems testing
- road test.

***Testing equipment*** may include:

- pressure gauges
- charge stations
- analogue and digital multimeters, lab oscilloscopes, scan tools, test lights and test LEDs.

***Diagnostic processes*** may include:

- analysing manufacturer and component supplier specifications, schematics and operational procedures related to electric over hydraulic systems

## AURTTA5022 Develop and apply mechanical system modifications

### Modification History

Release	Comment
Release 1	Replaces AURT574020A Develop and apply mechanical systems modification  Unit code updated to meet policy requirements  Minor change to unit title  Reference to OHS legislation replaced with new WHS legislation  Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the competence to develop, apply and validate significant modifications to existing mechanical systems in order to vary or enhance performance.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This includes the preparation and application of specifications and processes complying with safety, legal and commercial obligations.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the modification requirement	<p>1.1.WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.2.Purpose and objectives of the modification are identified from an analysis of inputs and confirmed with the customer.</p> <p>1.3.Outline options for achieving the required purpose and objectives are identified, framed and presented to the customer prior to proceeding.</p> <p>1.4.Possible legal and safety impacts of the modification are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Develop and validate the modification specification	<p>2.1.Benchmark specifications for the existing mechanical system are accessed and interpreted.</p> <p>2.2.Criteria to be used in the selection of the modification method and in the evaluation of the outcomes are identified and documented.</p> <p>2.3.Proposed modification method is selected following the identification, consideration and evaluation of the full range of available and options.</p> <p>2.4.Selected option, including material choices and processes, is developed in detail and progressively validated against the established criteria.</p> <p>2.5.Modification specification is documented to industry and enterprise standards.</p>
3. Apply and test the modification specification	<p>3.1.Selected modification method and process is followed in accordance with the established specifications.</p> <p>3.2.Modification is completed using equipment, tooling and materials in accordance with accepted industry standards and practices.</p> <p>3.3.Tests and testing equipment are applied in accordance with regulatory requirements, manufacturer/component supplier specifications and modification specification.</p> <p>3.4.Test results and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes.</p> <p>3.5.Variations necessitated during the modification process or as a result of testing are incorporated into</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the modification specification.</p> <p>3.6.Information and detail related to the modification is documented and provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Clean up work area and maintain equipment	<p>4.1.Materials that can be reused is collected and stored.</p> <p>4.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>4.3.Waste and scrap is removed following workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand legal and technical information related to contemporary mechanical systems modifications.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the development and planning of modification processes, preparation and layout of the worksite and the obtaining of tooling, equipment, materials and testing equipment to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate specifications, calibrate and establish testing equipment and evaluate modification results against pre-established criteria.
- establish modification methods and processes which anticipate and allow for risks and avoid or minimise reworking and avoid wastage.
- use the full range of workplace technology related to mechanical systems modification, including testing equipment, maintenance equipment, tooling, calculators and measuring devices and information management systems.

#### Required knowledge

- electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, functions, operations and limitations of the main automotive industry mechanical systems.
- general knowledge of automotive digital computing systems.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting modification specifications and outcomes.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Modify a significant mechanical system or sub-system including:
  - the selection, development and documenting of success factors and evaluation criteria before undertaking the modification
  - the selection, development and validation of the modification methodology, process(es) and specification
  - the application of the modification specification (methodology and process), and
  - the documenting and reporting of the outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials and deadlines.

Access to operational mechanical system(s), information on the required or proposed modification, testing equipment for the work and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Mechanical modifications**

- Mechanical modifications to be covered by this unit are to cover significant and non-routine mechanical modifications which may include:
  - adapt or modify the mechanical system(s) of vehicles/plant to a significantly changed capability
  - adapt vehicles/plant mechanical systems for different working conditions, for example high altitude or underground mine
  - modify or install a significant mechanical system(s) for a special purpose vehicle in preparation for vehicle registration.

**Inputs to the modification method and processes**

Inputs to the modification method and processes may be obtained from customer requirements, manufacturer/ component supplier specifications, outcomes of diagnostic processes or from regulatory, licensing and intellectual property legislation, safety requirements and Australian Design Rules.

<b>RANGE STATEMENT</b>	
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluation criteria</b>	Evaluation criteria, sometimes referred to as success factors, are to be established prior to a modification being undertaken and are to cover safety, functionality, survivability, maintainability, life cycle cost and aesthetics.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Tests and testing equipment</b>	Tests and testing equipment is to include that appropriate to the modification being carried out but it should include computer-based diagnostic systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>Workplace procedures relating to the use of tooling and equipment.</li> <li>Workplace procedures relating to reporting and communication.</li> <li>Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>Manufacturer/component supplier specifications, schematics and operational procedures related to mechanical systems modification.</li> <li>Australian Design Rules.</li> <li>Vehicle industry regulations.</li> <li>Vehicle industry publications related to</li> </ul>

**RANGE STATEMENT**

	emerging transmission system technology and technology changes.

## AURTTA5023 Develop and apply hydraulic system modifications

### Modification History

Release	Comment
Release 1	<p>Replaces AURT574120A Develop and apply hydraulic systems modification</p> <p>Unit code updated to meet policy requirements</p> <p>Minor change to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to develop, apply and validate significant modifications to existing hydraulic systems in order to vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This includes the preparation and application of specifications and processes complying with safety, legal and commercial obligations.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the modification requirement	<p>1.1.WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.2.Purpose and objectives of the modification are identified from an analysis of inputs and confirmed with the customer.</p> <p>1.3.Outline options for achieving the required purpose and objectives are identified, framed and presented to the customer prior to proceeding.</p> <p>1.4.Possible legal and safety impacts of the modification are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Develop and validate the modification specification	<p>2.1.Benchmark specifications for the existing hydraulic system are accessed and interpreted.</p> <p>2.2.Criteria to be used in the selection of the modification method and in the evaluation of the outcomes are identified and documented.</p> <p>2.3.Proposed modification method is selected following the identification, consideration and evaluation of the full range of available and relevant options.</p> <p>2.4.Selected option, including material choices and processes, is developed in detail and progressively validated against the established criteria.</p> <p>2.5.Modification specification is documented to industry and enterprise standards.</p>
3. Apply and test the modification specification	<p>3.1.Selected modification method and process is followed in accordance with the established specifications.</p> <p>3.2.Modification is completed using equipment, tooling and materials in accordance with accepted industry standards and practices.</p>
4. Apply and test the modification specification	<p>4.1.Tests and testing equipment are applied in accordance with regulatory requirements, manufacturer/component supplier specifications and modification specification.</p> <p>4.2.Test results and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes.</p> <p>4.3.Variations necessitated during the modification process or as a result of testing are incorporated into</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the modification specification.</p> <p>4.4.Information and detail related to the modification is documented and provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
5. Clean up work area and maintain equipment	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p> <p>5.5.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand legal and technical information related to contemporary hydraulic systems modifications.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the development and planning of modification processes, preparation and layout of the worksite and the obtaining of tooling, equipment, materials and testing equipment to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate specifications, calibrate and establish testing equipment and evaluate modification results against pre-established criteria.
- establish modification methods and processes which anticipate and allow for risks and avoid or minimise reworking and avoid wastage.
- use the full range of workplace technology related to hydraulic systems modification, including testing equipment, maintenance equipment, tooling, calculators and measuring devices and information management systems.

#### Required knowledge

- electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- hydraulic theory covering the concepts and principles of hydraulic and pneumatic systems.
- detailed knowledge of the types, functions, operations and limitations of the main automotive industry hydraulic systems.
- general knowledge of automotive digital computing systems.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting modification specifications and outcomes.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Modify a significant hydraulic system or sub-system, including:
  - the selection, development and documenting of success factors and evaluation criteria before undertaking the modification
  - selection, development and validation of the modification methodology, process(es) and specification
  - application of the modification specification (methodology and process), and
  - documenting and reporting of the outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials and deadlines.

Access to operational hydraulic system(s), information on the required or proposed modification, testing equipment for the work and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand legal and technical information related to contemporary pneumatic systems modifications.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the development and planning of modification processes, preparation and layout of the worksite and the obtaining of tooling, equipment, materials and testing equipment to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate specifications, calibrate and establish testing equipment and evaluate modification results against pre-established criteria.
- establish modification methods and processes which anticipate and allow for risks and avoid or minimise reworking and avoid wastage.
- use the full range of workplace technology related to pneumatic systems modification, including testing equipment, maintenance equipment, tooling, calculators and measuring devices and information management systems.

#### Required knowledge

- electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- pneumatic theory covering the concepts and principles of pneumatic, pneumatic and pneumatic systems.
- detailed knowledge of the types, functions, operations and limitations of the main automotive industry pneumatic systems.
- general knowledge of automotive digital computing systems.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting modification specifications and outcomes.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Modify a significant pneumatic system or sub-system including:
  - the selection, development and documenting of success factors and evaluation criteria before undertaking the modification
  - the selection, development and validation of the modification methodology, process(es) and specification
  - the application of the modification specification (methodology and process)
  - the documenting and reporting of the outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials and deadlines.

Access to operational pneumatic system(s), information on the required or proposed modification, testing equipment for the work and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Pneumatic modifications</b>	<p>Pneumatic modifications to be covered by this unit are to cover significant and non-routine pneumatic modifications which may include:</p> <ul style="list-style-type: none"> <li>• adapt or modify the pneumatic system(s) of vehicles/plant to a significantly changed capability</li> <li>• modify or install a significant pneumatic system(s) for a special purpose vehicle in preparation for vehicle registration.</li> </ul>
<b>Inputs to the modification method and processes</b>	<ul style="list-style-type: none"> <li>• Inputs to the modification method and processes may be obtained from customer requirements, manufacturer/ component supplier specifications, outcomes of diagnostic processes, or from regulatory and licensing, intellectual property legislation, safety requirements and Australian Design Rules.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluation criteria</b>	Evaluation criteria, sometimes referred to as success factors, are to be established prior to a modification being undertaken and are to cover safety, functionality, survivability, maintainability, life cycle cost and aesthetics.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards

## AURTTB2001 Inspect and service braking systems

### Modification History

Release	Comment
Release 1	Replaces AURT210170A Inspect and service braking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to inspect and service braking systems and/or associated components, including pneumatic over hydraulic, air, hand and parking brake systems in an automotive retail, service and/or repair context.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency refers to braking systems associated with automotive retail, service and repair and should be contextualised to the level of qualification to which it is being applied:</p> <ul style="list-style-type: none"><li>• light vehicle, heavy vehicle, motorcycle or trailer or outdoor power equipment.</li></ul> <p>The unit includes identification and confirmation of work requirement, preparation for work, conduct of brake system wear analysis, servicing of braking systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake braking system inspection</b>	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4. Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures</p> <p>1.5. Resources required for inspection of braking systems are sourced and support equipment is identified and prepared</p> <p>1.6. Warnings in relation to working with braking systems are observed</p>
2. <b>Conduct braking system wear analysis</b>	<p>2.1. Braking system analysis is implemented in accordance with road safety legislation, workplace procedures and manufacturer/component supplier specifications</p> <p>2.2. Brake wear measurement results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3. Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4. Report is processed in accordance with workplace procedures</p>
3. <b>Prepare to service braking system and/or associated components</b>	<p>3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2. Procedures and information required are identified and sourced</p> <p>3.3. Resources required for servicing braking systems are identified and support equipment is identified and prepared</p>
4. <b>Carry out servicing of braking systems and/or associated components</b>	<p>4.1. Servicing is implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2. Adjustments made during the servicing are in accordance with manufacturer/component supplier</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications
<b>5. Prepare equipment for use or storage</b>	5.1.Servicing schedule documentation is completed 5.2.Final inspection is made to ensure protective features are in place 5.3.Final inspection is made to ensure work is to workplace expectations 5.4.Equipment is cleaned for use or storage to workplace expectations 5.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and servicing of braking systems, including the use of servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with braking systems
- operating principles of braking systems, components and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- analysis procedures
- servicing procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the inspection in accordance with workplace and manufacturer/component supplier requirements
- accurately interpreting wear analysis results
- completing service of braking systems in accordance with workplace and manufacturer/component supplier requirements
- completing service of braking systems and associated components within workplace timeframes
- equipment is presented to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of braking systems
- equipment, hand and power tooling appropriate to the inspection and servicing of braking systems
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Braking systems**

Types of braking systems may include:

- hydraulic

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• mechanical</li> <li>• pneumatic</li> </ul>
<b>System components</b>	<p>System components may include:</p> <ul style="list-style-type: none"> <li>• disc pads</li> <li>• master cylinders</li> <li>• brake shoes</li> <li>• brake callipers</li> <li>• brake hoses</li> <li>• brake actuators</li> <li>• mechanical devices</li> <li>• valves</li> </ul>
<b>Methods</b>	<p>Methods are to include:</p> <ul style="list-style-type: none"> <li>• visual, aural and functional assessments (including damage, corrosion, fluid leaks, wear)</li> <li>• measurements of pedal travel, free-play, disc runout, disc thickness, drum wear and pad/lining thickness</li> </ul>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices</p>
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, machinery movement and operation, manual lifting and shifting, working in proximity to others and site visitors</p>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to emergency</p>

<b>RANGE STATEMENT</b>	
	shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, gauges (including dial, verniers and micrometers), bleeding and brake testing devices, dust extraction equipment and grease guns
<b>Materials</b>	Materials may include lubricants, fluids, minor spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection and servicing of braking systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTB2002 Attach friction materials and radius grind

### Modification History

Release	Comment
Release 1	Replaces AURT210605A Attach friction materials and radius grind Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to attach brake and clutch frictional materials using bonding, riveting or screwing methods.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>Work involved includes:</p> <ul style="list-style-type: none"><li>• preparation and selection of material</li><li>• attachment of brake and clutch frictional materials by either bonding, riveting or screwing methods</li><li>• radius grinding of brake shoes.</li></ul> <p>The unit includes identification and confirmation of work requirement, preparation for work, selection of friction materials and attachment methods, attachment of friction material to brake shoes/pads and/or clutch plates, radius grinding of brake shoes and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to attach friction materials to brake shoes and/or disc pads and/or clutch plates</b>	1.1.The nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as manufacturer/component supplier procedures and specifications, and tooling required, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Warnings in relation to working with hazardous materials are observed
<b>2. Select and attach friction materials</b>	2.1.Brake shoes/pads and/or clutch plates are prepared for bonding/riveting 2.2.Materials to be attached are selected and prepared in accordance with site procedures 2.3.Friction material attachment procedures are carried out in accordance with legislation, industry and enterprise policies/procedures and guidelines
<b>3. Radius grind brake shoes</b>	3.1.Information required for radius grinding is accessed from manufacturer/component supplier specifications and correctly interpreted 3.2.Radius grinding procedures are carried out in accordance with legislation, industry and enterprise policies/procedures and guidelines 3.3.Brake shoes are tested in accordance with site procedures prior to being placed into service 3.4.Work is completed without causing damage to any component or system 3.5.Workplace documents are completed in accordance with enterprise procedures
<b>4. Prepare brake shoes/pads and/or clutch plate for use or storage</b>	4.1.Work schedule documentation is completed 4.2.Final inspection is made to ensure work is to workplace expectations 4.3.Brake shoes/pads and/or clutch plates are prepared for use or stored to workplace expectations 4.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- Apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to attaching friction materials and radius grinding brake and clutch components, including the use of bonding and grinding tooling and equipment, measuring equipment, and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- general knowledge of common automotive terminology and vehicle safety requirements
- dangers of working with hazardous material
- coefficient of friction as related to the different material used in brake and clutch applications
- bonding agents

**REQUIRED SKILLS AND KNOWLEDGE**

- material selection procedures
- bonding/riveting procedures
- enterprise quality procedures
- work organisation and planning processes
- site reporting procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- selecting and attaching friction material to brake shoes/clutch pads in accordance with workplace and manufacturer/component supplier requirements
- carrying out radius grinding of brake shoes to specification
- completing work within workplace timeframes
- brake and/or clutch components is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

The application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to attaching friction materials and radius grinding brake and clutch components
- equipment, hand and power tooling appropriate to attaching friction materials and radius grinding brake and clutch components
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment,

<b>RANGE STATEMENT</b>	
	use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, riveting machines and equipment, radius grinding machines, safety equipment, measuring equipment and specialist equipment, including beating and clamping equipment
<b>Materials</b>	Materials may include bonding material, brake shoes, clutch plates, rivets, bolts and nuts, brake

<b>RANGE STATEMENT</b>	
	and clutch linings and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to attaching friction materials and radius grinding brake and clutch components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to machine drums and rotors</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for machining are sourced and support equipment is identified and prepared
<b>2. Machine brake drums and brake disc rotors</b>	2.1. Components, tooling and equipment required for the work are identified, selected and prepared in accordance with site procedures 2.2. Brake drums and brake disc rotors to be reconditioned are prepared for machining in accordance with site procedures and manufacturer/component supplier safety specifications 2.3. Machining procedures are carried out in accordance with legislation, industry and enterprise policies/procedures guidelines
<b>3. Test machined component(s)</b>	3.1. Machined materials/component(s) are tested in accordance with authorised procedures prior to placing into service 3.2. Testing of machined component(s) is completed without causing damage to any component or system 3.3. Test results are documented to workplace requirements
<b>4. Prepare components for use or storage</b>	4.1. Final inspection is made to ensure work is to workplace expectations 4.2. Machined surfaces are protected against rust 4.3. Machined material/component is prepared for use or stored to workplace expectations 4.4. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to machining brake drums and brake disc rotors, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- types and layout of service/repair manuals (hard copy and electronic)
- machining procedures
- tool sharpening procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

## AURTTB2004 Inspect and service air braking systems

### Modification History

Release	Comment
Release 1	Replaces AURT211170A Inspect and service air braking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out inspection and servicing of air braking systems and/or associated components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspection, analysis and servicing of air braking systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involves vehicles fitted with air braking systems.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake inspection of air braking systems</b>	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for the inspection of air braking systems are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with air braking systems are observed</p>
2. <b>Conduct inspection and analyse results</b>	<p>2.1.Methods for the inspection are implemented in accordance with road safety legislation, workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is processed in accordance with workplace procedures</p>
3. <b>Prepare to service air braking systems</b>	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information required are identified and sourced</p> <p>3.3.Technical and tool requirements for servicing are identified and support equipment is identified and prepared</p>
4. <b>Carry out servicing</b>	<p>4.1.Methods for the servicing are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments are made during the service</p>
5. <b>Prepare equipment</b>	<p>5.1.Service schedule documentation is completed</p>

ELEMENT	PERFORMANCE CRITERIA
<b>for use or storage</b>	<p>5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.Equipment is cleaned for use or storage to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to servicing tooling and equipment, inspection, analysis and servicing of air braking systems, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with air brakes
- operating principles of air braking systems and components and their relationship to each other
- inspection procedures
- types and layout of service/repair manuals (hard copy and electronic)
- servicing procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting inspection results
- conducting the service in accordance with workplace and manufacturer/component supplier requirements
- completing service of air braking systems and associated components within workplace timeframes
- equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection, analysis and servicing of air braking systems
- equipment, hand and power tooling appropriate to the inspection, analysis and servicing of air braking systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

	<p>of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Components**

Components to be serviced include:

- compressors
- receivers
- drive belts
- actuator mechanisms

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, gauges and brake testing devices

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include fluids, minor parts, filters and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the inspection, analysis and servicing of air braking systems</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTB3005 Assemble and fit braking systems and components

### Modification History

Release	Comment
Release 1	<p>Replaces AURT310104A Assemble and fit braking systems/components</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to assemble, fit and test braking systems and associated components, including hydraulic, pneumatic, electrical and mechanical operating systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, assembly, fitting and testing of braking systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes braking components fitted to light vehicle, heavy vehicle, motorcycle and small engine equipment.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to assemble and fit braking system components	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. Technical requirements for work to be performed are sourced and support equipment is identified and prepared</p>
2. Assemble and fit braking system/components	<p>2.1. Braking system component assembly and fitting procedures are completed in accordance with manufacturer/component supplier specifications and tolerances</p> <p>2.2. Legislation, industry guidelines and enterprise policies/procedures are followed</p> <p>2.3. Undue damage to equipment or machinery is avoided</p>
3. Test braking system components and analyse results	<p>3.1. Information for testing is accessed from manufacturer/ component supplier specifications and correctly interpreted</p> <p>3.2. Tests are carried out in accordance with manufacturer/ component supplier specifications and tolerances</p> <p>3.3. Testing is completed without causing damage to any component or system</p> <p>3.4. Test results are analysed against manufacturer/component supplier specifications</p> <p>3.5. Determination is made as to the serviceability of system components</p> <p>3.6. Failed components are tagged for further work</p> <p>3.7. Test results are documented in accordance with workplace requirements</p>
4. Prepare braking system components for use or storage	<p>4.1. Inspection is made to ensure safety features are satisfied</p> <p>4.2. Final inspection is made to ensure work is to workplace expectations</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3.Components are cleaned and/or stored to workplace expectations</p> <p>4.4.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the assembly, fitting and testing of braking systems and associated components, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the documenting/recording of results)

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles different types of braking systems
- construction of different types of braking systems
- types and layout of service/repair manuals (hard copy and electronic)
- assembly procedures and techniques
- fitting procedures and techniques
- braking system testing techniques
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• conducting component assembly fitting and testing in accordance with workplace and manufacturer/ component supplier requirements</li> <li>• interpreting test results</li> <li>• completing assembly and fitting of braking components within workplace timeframes</li> <li>• presentation of components to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the assembly, fitting and testing of braking systems and associated components</li> <li>• equipment, hand and power tooling appropriate to the assembly, fitting and testing of braking systems and associated components</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect auxiliary braking system	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or calibration requirements for inspection are sourced and support equipment is identified and prepared
2. Conduct inspection and analyse results	2.1.Methods for inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is forwarded to persons for action in accordance with workplace procedures
3. Prepare to service and repair auxiliary braking system	3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2.Procedures and information are identified and sourced 3.3.Technical and tool requirements for service and repair are identified and support equipment is identified and prepared
4. Service and repair of auxiliary braking system	4.1.Methods for service and repair are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications 4.2.Service and repair adjustments made during the work are in accordance with manufacturer/component supplier specifications 4.3.Auxiliary brakes are tested for normal operation against manufacturer/component supplier specifications following the service and repair

ELEMENT	PERFORMANCE CRITERIA
5. Prepare auxiliary braking system for delivery to customer or storage	<ul style="list-style-type: none"><li>5.1. Work schedule documentation is completed</li><li>5.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</li><li>5.3. Final inspection is made to ensure work is to workplace expectations</li><li>5.4. Auxiliary brakes are cleared for service or stored to workplace expectations</li><li>5.5. Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection, service and repair of auxiliary braking systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- importance of the role of auxiliary brakes and the necessity of working within manufacturer/component supplier tolerances and adjustments
- operating principles of engine and exhaust brakes, hydraulic and electrical retarders and their component functions
- types and layout of service/repair manuals (hard copy and electronic)
- service procedures
- repair procedures
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection in accordance with workplace requirements
- interpreting inspection findings
- carrying out service and repair to manufacturer/ component supplier requirements on a minimum of two different systems
- completing service and/or repair of auxiliary braking systems and associated components within workplace timeframes
- auxiliary braking system presentation to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection, service and repair of auxiliary braking systems
- equipment, hand and power tooling appropriate to the

<b>EVIDENCE GUIDE</b>	
	<p>inspection, service and repair of auxiliary braking systems</p> <ul style="list-style-type: none"> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. ## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating</p>

**RANGE STATEMENT**

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

**Personal protective equipment**

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

**Safe operating procedures**

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

**Emergency procedures**

Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation

**Environmental requirements**

Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management

**Quality requirements**

Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures

**Statutory/regulatory authorities**

Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice

<b>RANGE STATEMENT</b>	
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, specialist tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include spare parts and consumables, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to inspection, servicing and repair of auxiliary braking systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTC2001 Inspect and service cooling systems

### Modification History

Release	Comment
Release 1	Replaces AURT202170B Inspect and service cooling systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

<b>Unit descriptor</b>	This unit of competency describes the skills and knowledge required to carry out the inspection and service of air and liquid cooling systems in an automotive retail, service and/or repair context.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	This unit applies to individuals who undertake inspection, analysis and servicing of cooling systems in light vehicles, heavy vehicles, motorcycles, marine craft and outdoor power equipment.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1.Determine job requirements, including method, processes and equipment</li><li>1.2.Read and interpret job specifications</li><li>1.3.Access and interpret information from manufacturer/component supplier specifications and workshop manuals</li><li>1.4.Identify equipment and tooling and check for safe and effective operation</li><li>1.5.Determine procedures to minimise task time</li></ul>
2. Inspect cooling systems and analyse results	<ul style="list-style-type: none"><li>2.1.Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, throughout the work</li><li>2.2.Observe warnings in relation to working with pressurised cooling systems</li><li>2.3.Perform cooling system inspection in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>2.4.Compare inspection results with manufacturer/component supplier specifications to indicate compliance or non-compliance</li><li>2.5.Document results with evidence and supporting information and make recommendations</li><li>2.6.Process report in accordance with workplace procedures</li></ul>
3. Carry out servicing	<ul style="list-style-type: none"><li>3.1.Carry out servicing and adjustments in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>3.2.Select and use appropriate tooling, techniques and materials</li><li>3.3.Make final inspection to ensure work is to workplace expectations</li></ul>
4. Prepare equipment for use or storage	<ul style="list-style-type: none"><li>4.1.Complete servicing schedule documentation</li><li>4.2.Remove waste and scrap following workplace procedures</li><li>4.3.Clean equipment and work area and inspect for serviceable condition in accordance with workplace procedures</li><li>4.4.Maintain and store tooling and equipment in accordance with workplace procedures</li></ul>

ELEMENT	PERFORMANCE CRITERIA
	4.5.Process job card in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related to the inspection and servicing of cooling systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to apply common industry terminology, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier technical information and specifications, workplace policies and safety procedures
- numeracy skills to the level required to correctly calculate time, complete tests and measurements to determine repair/replacement requirements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity
- organisational skills to the level required to plan and organise activities, including preparation and layout of worksite, and obtaining equipment and materials to avoid backtracking or workflow interruptions

#### Required knowledge

Required knowledge includes:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with coolants
- identification of application, purpose and operating principles
- inspection procedures
- types and layout of service/repair manuals (hard copy and electronic)
- cooling system service procedures
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications

**REQUIRED SKILLS AND KNOWLEDGE**

- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to inspection and servicing of cooling systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to inspection and servicing of cooling systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- accurately interpret analysis results
- identify application, purpose and operating principles
- conduct inspection, servicing and operational testing in accordance with workplace and manufacturer/component supplier specifications
- complete service of cooling systems and associated components within workplace timeframes
- present equipment to customer in compliance with workplace requirements.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of cooling systems and components relevant to the application
  - materials relevant to servicing cooling systems
  - equipment, hand and power tooling appropriate to servicing cooling systems

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li> <li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li> <li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Servicing</b>	<p>Servicing is to include:</p> <ul style="list-style-type: none"> <li>• fluids</li> <li>• filters</li> <li>• adjustments</li> <li>• operational testing, visual inspections and</li> </ul>

<b>RANGE STATEMENT</b>	
	documents
<b>Inspection methods</b>	<p>Inspection methods are to include:</p> <ul style="list-style-type: none"> <li>• visual, aural and functional assessments, including, damage, corrosion, fluid levels/leaks and wear</li> </ul>
<b>Specific requirements</b>	<p>Specific requirements include:</p> <ul style="list-style-type: none"> <li>• fluid cooled systems</li> <li>• air cooled systems</li> <li>• combination systems</li> </ul>
<b>System variables</b>	<p>System variables may include:</p> <ul style="list-style-type: none"> <li>• thermostats, water pumps, hoses, ducting, fans, drive belts, heat exchanger, electric and viscous fans, sealed and non-sealed systems, interior heater and coolant heater manifold</li> <li>• cooling fins size, material, colour and finish</li> <li>• ferrous and non-ferrous metals</li> <li>• keel cooling, heat exchanger, raw water cooling and sacrificial anodes</li> <li>• cooling system additives</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• meters, gauges and pressure testing devices</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• coolant</li> <li>• spare parts</li> <li>• cleaning materials</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to servicing cooling systems</li> <li>• regulatory/legislative requirements pertaining to servicing cooling systems</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>requirements</p> <ul style="list-style-type: none"> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• electrical safety</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• pollution</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>

RANGE STATEMENT	
Quality requirements	Quality requirements may include: <ul style="list-style-type: none"><li>• regulations, including Australian standards</li><li>• internal organisational quality policies and procedures</li><li>• enterprise operations and procedures</li></ul>
Organisational policies and procedures	Organisational policies and procedures may include: <ul style="list-style-type: none"><li>• quality policies and procedures, including Australian standards</li><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li><li>• manufacturer specifications and industry codes of practice</li><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

## AURTTC2002 Carry out radiator repairs

### Modification History

Release	Comment
Release 1	Replaces AURT202608A Carry out radiator repairs Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out radiator repairs.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, repairing of radiators and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake radiator repairs</b>	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed</li><li>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5.Technical and/or calibration requirements for radiator repairs are sourced and support equipment is identified and prepared</li></ul>
2. <b>Repair radiators and/or components</b>	<ul style="list-style-type: none"><li>2.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications</li><li>2.2.Radiators and/or associated components are repaired using approved methods and equipment, according to manufacturer/component supplier specifications</li><li>2.3.Radiators are repaired without causing damage to any component or system</li></ul>
3. <b>Prepare radiator for installation or use or storage</b>	<ul style="list-style-type: none"><li>3.1.Repairs are documented</li><li>3.2.Final inspection is made to ensure work is completed to workplace requirements</li><li>3.3.Radiator is prepared for use or stored to workplace expectations</li><li>3.4.Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to repairing radiators, including the use of measuring equipment, repair tooling and equipment and communication devices and the reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with heating equipment
- personal safety requirements
- identification of application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- types and layout of service/repair manuals (hard copy and electronic)
- soldering processes

**REQUIRED SKILLS AND KNOWLEDGE**

- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• identification of application, purpose and operation</li> <li>• application of the full repair sequence as per the Range Statement to a radiator relative to the qualification being sought</li> <li>• conducting repair in accordance with workplace and manufacturer/component supplier requirements</li> <li>• radiator is presented to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to repairing radiators</li> <li>• equipment, hand and power tooling appropriate to repairing radiators</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Repair methods**

Repair methods are to include pressure testing, tank testing, visual and functional assessments (including corrosion, fluid leaks and wear) welding, soldering, cutting and shaping

**Specific requirements**

Specific requirements include radiators (metal,

<b>RANGE STATEMENT</b>	
	plastic, copper, aluminium, cast)
<b>Faults</b>	<p>Faults may include:</p> <ul style="list-style-type: none"> <li>external coolant leaks</li> <li>engine overheating</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory Authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities

<b>RANGE STATEMENT</b>	
	administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling, welders, soldering equipment, testing equipment, including pressure testers, compressed air, testing tanks, jigs and vices
<b>Materials</b>	Materials may include coolants, minor spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repairing radiators</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURTTC3003 Diagnose and repair cooling systems

### Modification History

Release	Comment
Release 1	Replaces AURT202166B Repair cooling systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern technologies

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose and repair cooling systems fitted to vehicles. It involves diagnosing deviations from correct operation, repairing cooling system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	Work applies to the cooling systems of motorcycles, light vehicles, heavy commercial vehicles, and vehicles in the mining, construction, agricultural and marine environments.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a cooling system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a cooling system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a cooling system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - interpret gauges and measuring equipment
  - measure and calculate volumes and ratios
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of cooling systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing cooling systems
- dangers of working with cooling systems
- operating principles of cooling systems, including:
  - air cooled systems
  - liquid cooled systems
- application, purpose and operation of cooling systems
- testing procedures for cooling systems
- repair procedures for cooling systems
- post-repair testing procedures for cooling systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of cooling systems relative to the qualification being sought
- diagnose and repair cooling systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with cooling system faults relevant to the qualification being sought
- equipment appropriate for the testing of cooling systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of cooling systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• cooling system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of cooling systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> may include:	<ul style="list-style-type: none"> <li>• cooling system pressure test</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• isolation of fault(s)</li> <li>• component inspection and evaluation.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• internal cooling system leaks</li> <li>• external cooling system leaks</li> <li>• cooling system mechanical, electrical or hydraulic component failure.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• cooling system pressure test</li> <li>• cooling fan performance testing</li> <li>• interior heater performance testing.</li> </ul>

## AURTTD2001 Inspect steering systems

### Modification History

Release	Comment
Release 1	Replaces AURT215130A Inspect steering systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out inspection and testing of steering systems/components and assess their condition (including mechanical and power assisted steering systems) in an automotive retail, service and/or repair context.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>This unit of competence refers to steering systems associated with automotive retail, service and/or repair and should be contextualised to the level of the qualification to which it is being applied.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and testing of steering system/components, assessment of condition of steering system/components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to undertake steering system inspection</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures 1.5. Resources required for steering system inspection are sourced and support equipment is identified and prepared
2. <b>Inspect steering system/components and assess condition</b>	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Inspection of steering systems is carried out in accordance with manufacturer/component supplier specifications for methods, tooling and equipment 2.3. Steering system inspection is completed without causing damage to any component or system 2.4. System/component condition is determined by comparing actual component condition to manufacturer/component supplier specifications for limits/tolerances and to State/Territory legislation regarding vehicle roadworthiness 2.5. Steering system inspection and condition identification activities are carried out according to industry regulations/ guidelines, WHS legislation, legislation and enterprise procedures/policies
3. <b>Prepare vehicle for delivery to customer</b>	3.1. Inspection schedule documentation is completed 3.2. Final inspection is made to ensure work is to workplace expectations 3.3. Vehicle/equipment is presented to customer to workplace expectations 3.4. Workplace documentation is completed 3.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interacting effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and testing of steering system/components, including the use of hydraulic equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of mechanical and power assisted steering system relevant to the qualification to which it is applied
- types and layout of service/repair manuals (hard copy and electronic)
- steering system inspection and testing procedures
- steering system/components condition assessment procedures
- reporting procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• conducting the inspection of a range of steering systems in accordance with the workplace and manufacturer/component supplier requirements</li> <li>• accurately interpreting inspection results</li> <li>• completing inspection of steering system and associated components within workplace timeframes</li> <li>• vehicle/equipment is presented to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the inspection and testing of steering system/components</li> <li>• equipment, hand and power tooling appropriate to the inspection and testing of steering system/components</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Steering systems to be inspected**

Steering systems to be inspected may be those in light and heavy vehicle and outdoor power equipment

**Inspection methods**

Inspection methods are to include:

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• road testing, electrical testing</li><li>• visual, aural and functional assessments (including damage, corrosion, wear, leakage, electrical)</li></ul>
<b>Components</b>	Steering system components are to include ball joints, struts, idler arms, steering boxes and columns, electronic controlled systems and two and four wheel steer
	This operation is normally carried out prior to performing a wheel alignment

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, electrical safety, machinery movement and operation, manual lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for removal, testing equipment, vehicle-lifting equipment,

<b>RANGE STATEMENT</b>	
	safety stands, holding equipment, hydraulic testing equipment, multimeter, test light and precision measurement tooling
<b>Materials</b>	Materials may include cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection and testing of steering system/components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

Release 1	Replaces AURT215170A Inspect and service steering systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required carry out the inspection and servicing of wheeled and tracked type steering systems and associated components in an automotive retail, service and/or repair context.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit of competence refers to inspecting and servicing steering systems in an automotive retail, service and/or repair environment and should be contextualised to the level of the qualification to which it is being applied.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and servicing of wheeled and tracked type steering systems and associated components and completion of work finalisation processes, including clean-up and documentation.</p> <p>For bicycle steering service refer to unit AURBTD2001 Service bicycle steering systems.</p> <p>For marine steering service and repair refer to unit AURRTD3001 Diagnose and repair marine steering systems.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake inspection and servicing of steering systems and related components</b>	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures 1.5.Resources required for inspecting and servicing steering systems are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with wheeled and tracked vehicles are observed
<b>2. Conduct inspection and analyse results</b>	2.1.Inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is forwarded to persons for action in accordance with workplace procedures
<b>3. Carry out servicing</b>	3.1.Servicing are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.Adjustments, including wheel bearing adjustments are made during the service are in accordance with manufacturer/component supplier specifications
<b>4. Prepare vehicle for customer and/or storage</b>	4.1.Service schedule documentation is completed 4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations 4.5.Job card is processed in accordance with workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and servicing of steering systems and associated components, including the use of electronic measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled and/or tracked vehicles
- operating principles of mechanical and hydraulic steering systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service procedures

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• enterprise quality procedures</li><li>• work organisation and planning processes</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting service of a range of steering systems in accordance with the workplace and manufacturer/component supplier requirements
- accurately interpreting inspection results
- servicing of steering systems completed within workplace timeframes
- vehicle is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of steering systems and associated components
- equipment, hand and power tooling appropriate to the inspection and servicing of steering systems and associated components
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Steering systems**

Steering systems may be in wheeled and tracked vehicles, light and heavy vehicles, motorcycles and outdoor power equipment

<b>RANGE STATEMENT</b>	
<b>System components</b>	System components for inspection may include wheel bearings, ball joints, rose joints, struts, idler arms, steering boxes and columns, electronic controlled systems, two and four wheel steer and full hydraulic steering, including articulated vehicles and tracked type systems
<b>Methods</b>	Methods are to include visual, aural and functional assessments, including damage, corrosion, wear and electrical
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, electrical safety, machinery movement and operation, manual lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and

<b>RANGE STATEMENT</b>	
	standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, hydraulic testing equipment and devices
<b>Materials</b>	Materials may include lubricants and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection and servicing of wheeled and tracked type steering systems and associated components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake inspection of suspension system</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical requirements for inspection are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with wheeled or tracked equipments are observed
<b>2. Inspect suspension system/components and assess condition</b>	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Inspections of suspension systems are carried out in accordance with manufacturer/component supplier specifications for methods, tooling and equipment 2.3. Suspension system inspection is completed without causing damage to any component or system 2.4. System/component condition is determined by comparing actual component condition to manufacturer/component supplier specifications for limits/tolerances and to State/Territory legislation regarding vehicle roadworthiness 2.5. Suspension system inspection and condition identification activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
<b>3. Prepare vehicle/equipment for delivery to customer</b>	3.1. Inspection schedule documentation is completed 3.2. Final inspection is made to ensure work is to workplace expectations 3.3. Vehicle/equipment is presented to customer to workplace expectations 3.4. Workplace documentation is completed and dealt with relevant to inspection outcomes 3.5. Job card is processed in accordance with workplace

	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection of suspension systems, including the use of measuring equipment, computerised technology, specialist tooling and testing devices communication devices, the reporting/documenting of results and diagnostic and specialised tooling and equipment

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of suspension system relative to the qualification being applied
- types and layout of service/repair manuals (hard copy and electronic)
- suspension system inspection and testing procedures
- suspension system/components condition assessment procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection, testing and assessment in accordance with workplace and manufacturer/ component supplier requirements
- completing inspection of suspension system and associated components within workplace timeframes
- vehicle/equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection of suspension systems
- equipment, hand and power tooling appropriate to the inspection of suspension systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Suspension systems</b>	Suspension systems are those on light and heavy vehicles
<b>Systems</b>	Systems may include lateral and longitudinal arms, ball joints, self-levelling devices, ride control and height control
<b>Inspection methods</b>	Inspection methods are to include: <ul style="list-style-type: none"> <li>functional testing/road testing, pressure testing, measurement</li> <li>visual, aural and functional assessments (including damage, corrosion, leakage, wear)</li> </ul>
<b>Inspection</b>	Inspection is normally carried out prior to performing a wheel alignment
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

<b>RANGE STATEMENT</b>	
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand and power tooling, lifting equipment, safety stands and supporting equipment, measuring equipment and specialist tooling and testing equipment
<b>Materials</b>	Materials may include cleaning materials

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to inspect and service suspension systems and associated components</b>	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures</p> <p>1.5.Resources required for servicing suspension systems are sourced and support equipment and tooling are identified and prepared</p> <p>1.6.Warnings in relation to working with wheeled and/or tracked equipment are observed</p>
2. <b>Conduct inspection and analysis</b>	<p>2.1.Inspection is implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. <b>Carry out service</b>	<p>3.1.Service are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Adjustments made during the service are in accordance with manufacturer/component supplier specifications</p>
4. <b>Prepare vehicle/equipment for use or storage</b>	<p>4.1.Service schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and service of suspension systems, including the use of measuring equipment, computerised technology, specialist tooling and testing devices communication devices, the reporting/documenting of results and diagnostic and specialised tooling and equipment

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of suspension systems relevant to the qualification to which it is applied
- dangers of working with stored energy
- types and layout of service/repair manuals (hard copy and electronic)
- suspension system servicing procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- suspension system testing procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the inspection and servicing a range of suspension systems in accordance with workplace and manufacturer/component supplier requirements
- accurately interpreting test results
- completing service of suspension system and associated components within workplace timeframes
- vehicle/equipment is presented to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of suspension systems
- equipment, hand and power tooling appropriate to the inspection and servicing of suspension systems
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### **Suspension systems**

Suspension systems may be gas, hydraulic, pneumatic, mechanical and rubber suspension, and found on light and heavy vehicles, trailers, motorcycles and outdoor power equipment

#### **Systems**

Systems may include lateral and longitudinal arms, independent suspension, ball joints, rose joints, self levelling device, ride control, height control and tracked type systems

#### **Methods**

Methods are to include:

- functional testing, pressure testing, measurement
- visual, aural and functional assessments (including damage, corrosion, leakage, wear)
- adjustment of shock absorbers

#### **WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### **Personal protective equipment**

Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices

#### **Safe operating procedures**

Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, machinery movement and operation, manual lifting and shifting, working in proximity to

<b>RANGE STATEMENT</b>	
	others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, lifting equipment, safety stands and supporting equipment, measuring equipment, power tooling and testing equipment
<b>Materials</b>	Materials may include spare parts, lubricants and fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection and servicing of suspension systems</li> <li>• regulatory/legislative requirements pertaining</li> </ul>

**RANGE STATEMENT**

	<p>to the automotive industry, including Australian Design Rules</p> <ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTD4005 Overhaul steering system components

### Modification History

Release	Comment
Release 1	Replaces AURT415145A Overhaul steering system components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out an overhaul of steering system components, including mechanical and power assisted components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, testing and analysis of steering system components, dismantling, assembling, inspection, adjusting and preparation of the steering system and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake overhaul of steering system components	1.1.Nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or calibration requirements for overhaul are sourced and support equipment is identified and prepared
2. Test steering system and analyse results	2.1.Methods for the conduct of the system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
3. Overhaul steering systems and/or associated components	3.1.Information is accessed and interpreted from manufacturer/component supplier specifications 3.2.Overhaul and/or replacements to faulty steering systems are carried out in accordance with manufacturer/ component supplier specifications for methods, equipment and tolerances 3.3.Steering systems overhaul is completed without causing damage to any component or system 3.4.All steering systems overhaul, removal/replacement activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. Prepare components for use or storage	4.1.Overhaul schedule documentation is completed 4.2.Final inspection is made to ensure work is to workplace expectations 4.3.Components are presented for use or stored to

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the overhaul of steering system components, including the use of measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- the principles of gearing as applied to the steering systems
- types and layout of service/repair manuals (hard copy and electronic)
- steering systems overhaul procedures
- component repair and adjustment procedures
- manual handling procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting test results
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of a range of significant steering system components within workplace timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the overhaul of steering system components
- equipment, hand and power tooling appropriate to the overhaul of steering system components
- activities covering the mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment

**EVIDENCE GUIDE**

guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Steering system components</b>	Steering system components may be in light vehicles, heavy vehicles, including articulated, tracked and wheeled type vehicles and include mechanical steering boxes, power-assisted steering boxes and full power steering assemblies
<b>Steering components</b>	Steering components may include pumps, orbital valves, valves and actuators
<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting,

<b>RANGE STATEMENT</b>	
	working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for dismantling/assembling/ adjustment, testing equipment, hydraulic pressure testers, multimeters, test lights and precision measurement tooling
<b>Materials</b>	Materials may include steering components, spare parts, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the overhaul</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to remove and tag engine system components</b>	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Dangers associated working with the removal and tagging of engine components are observed</p>
2. <b>Remove engine system components</b>	<p>2.1.Engine system components for removal are identified</p> <p>2.2.Methods for the removal and tagging are implemented in accordance with manufacturer/component supplier specifications</p> <p>2.3.Components are removed without damage</p> <p>2.4.Inspection of components is carried out</p> <p>2.5.Report is processed in accordance with workplace procedures</p>
3. <b>Tag engine system components</b>	<p>3.1.Tagging procedures are identified</p> <p>3.2.Resource requirements for tagging are identified and support equipment is identified and prepared</p> <p>3.3.Components are tagged without damage</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- Apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removing and tagging engine system components, including use of measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- engine system terminology
- function of each component
- relationship of components to each other
- application of components
- removal procedures
- tagging procedures
- quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identifying, removing and tagging a range of components by their title and application
- conducting removal and tagging without damage to components or tooling and equipment

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated automotive site

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to removing and tagging engine system components
- equipment, hand and power tooling appropriate to removing and tagging engine system components
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

<b>RANGE STATEMENT</b>	
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment are may include hand tooling and hand-held power tooling
<b>Materials</b>	Materials may include tags and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include:

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets and Australian Design Rules</li><li>• safe work procedures related to removing and tagging engine system components</li><li>• organisation work specifications and requirements</li></ul>

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake the inspection of engines	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures</p> <p>1.5.Resources required for inspection of engine systems are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with engine systems are observed</p>
2. Conduct engine system inspections and analyse results	<p>2.1.Engine systems inspections are implemented in accordance with workplace procedures and manufacturer/component supplier specifications for engine servicing</p> <p>2.2.Engines are started and run up to operating temperature and inspected for leaks, abnormal noises and pressures</p> <p>2.3.Analysis results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.4.Results are documented with evidence and supporting information and recommendation(s) are made</p> <p>2.5.Report is processed in accordance with workplace procedures</p>
3. Prepare to service engines	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information required are identified and sourced</p> <p>3.3.Resources required for servicing are identified and support equipment is identified and prepared</p>
4. Carry out servicing	<p>4.1.Service is implemented in accordance with workplace procedures and manufacturer/component</p>

ELEMENT	PERFORMANCE CRITERIA
	supplier specifications 4.2.Adjustments made during the service are in accordance with manufacturer/component supplier specifications
5. Prepare vehicle for use or storage	5.1.Servicing schedule documentation is completed 5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 5.3.Final inspection is made to ensure work is to workplace expectations 5.4.Vehicle is cleaned for use or storage to workplace expectations 5.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to inspection and servicing of engines, including the use of tooling, manual and computerised, measuring equipment, servicing tooling and equipment and communication devices and the reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- National Environmental Protection Measures for Diesel Vehicles as applicable to tasks
- dangers of working with engines
- operating principles of engines, lubrication, cooling and fuel systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)

**REQUIRED SKILLS AND KNOWLEDGE**

- inspection procedures
- service procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately inspecting and documenting and interpreting analysis results
- conducting inspection and servicing of a range of engines in accordance with workplace and manufacturer/component supplier requirements and specifications
- completing the work within workplace timeframes
- equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of engines
- equipment, hand and power tooling appropriate to the inspection and servicing of engines
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Inspection and servicing of engines**

- Inspection and servicing of engines includes the assessment and adjustment/replacement of components in accordance with specifications including those associated with light vehicles, heavy vehicles, motorcycle and marine craft

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>It includes four stroke spark ignition, two stroke spark ignition and four stroke compression ignition</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, manual lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, load testing devices and oil sample analysis equipment

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Material may include oils, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to inspection and servicing of engines</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• Instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Unit Sector(s)

<b>Unit sector</b>	Mechanical Miscellaneous
--------------------	--------------------------

## Co-requisite units

Not applicable.

## Competency field

Competency field	Technical - Engines
------------------	---------------------

## AURTTE3001 Apply knowledge of engine science

### Modification History

Not applicable.

### Unit Descriptor

<b>Unit descriptor</b>	This unit describes the performance outcomes required to apply knowledge of engine components and systems.  No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	Work applies to everyday engine reconditioning activities and is carried out according to award provisions.
--------------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

### Pre-Requisites

Not applicable.

### Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply relevant information of engine construction and operation to work activities	<p>1.1.<b><i>Components</i></b> of an engine are identified during reconditioning activities</p> <p>1.2.Functions of engine components are identified during reconditioning activities</p> <p>1.3.<b><i>Relationships</i></b> between engine components are identified during reconditioning activities</p> <p>1.4.Engine configurations are identified during reconditioning activities</p>
2. Apply relevant information of engine diagnosis to work activities	<p>2.1.Using knowledge of engine diagnosis, causes of engine component wear or failure are identified during reconditioning activities</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to use diagnostic equipment
- literacy skills to read and interpret written technical information
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- numeracy skills to use mathematical ideas and techniques to calculate distances, areas, volumes, power and torque
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - follow workplace documentation, such as codes of practice and operating procedures
  - select and use appropriate equipment, materials, processes and procedures

### Required knowledge

- classifications of engines, including:
  - internal and external combustion
  - rotary and reciprocating engines
  - spark ignition and compression ignition engines
  - engine cylinder arrangements
- engine configurations, including:
  - inline engines, vee-type engines and slant cylinder engines
  - opposed cylinder engines
- camshaft and valve locations, including:
  - overhead cam (OHC)
  - overhead valve (OHV)
- engine operating principles, including:
  - combustion, including:
    - air-fuel ratios and flame propagation
    - direct and indirect fuel injection
    - detonation and pre-ignition
  - two-stroke and four-stroke cycles
- engine measurement and performance, including:
  - bore and stroke, including:
    - oversquare and undersquare engines
    - crank throw
  - swept volume and engine volume

- compression ratio
- engine efficiency, including volumetric efficiency, thermal efficiency and mechanical efficiency
- torque and horsepower, including brake horsepower
- construction and operation of petrol engines, including:
  - basic metallurgy relating to engines
  - identification of metric and imperial threads
  - engine components, including cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, spark plugs, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, cams and flywheels
- combustion chambers, including:
  - L-head, bath-tub, wedge, trapezoidal, hemispherical and heron-type shapes
  - multiple valve designs
- construction and operation of diesel engines, including:
  - direct and indirect injection
  - swirl chambers
  - pre-combustion chambers
- engine diagnosis, including:
  - wet and dry compression tests
  - cylinder leakage tests
  - cylinder power balance tests
  - vacuum tests
  - oil pressure tests
  - sources of fluid leaks
  - exhaust smoke diagnosis
- engine noise diagnosis, including identifying:
  - common engine noises
  - common abnormal combustion noises

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to demonstrate knowledge of:</p> <ul style="list-style-type: none"> <li>• engine components</li> <li>• engine layouts</li> <li>• operating principles of a range of engine types</li> <li>• common diagnosis procedures.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• a range of engine types and configurations.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of</p>

## Evidence Guide

	<p>workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>
--	---

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Components</i></b> may include	<ul style="list-style-type: none"> <li>• components of a rotary engine</li> <li>• components of a spark ignition or compression ignition engine.</li> </ul>
<b><i>Relationships</i></b> may include	<ul style="list-style-type: none"> <li>• where a component has an effect on another component, such as piston to connecting rod to crankshaft to flywheel.</li> </ul>

## AURTTE4005 Overhaul engines and associated engine components

### Modification History

Release	Comment
Release 1	<p>Replaces AURT401145A Overhaul engines and associated engine components</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to overhaul engines and associated engine components on an engine removed from its chassis.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, dismantling of engines, repair, assembly and final checking of engines and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence should be contextualised to the qualification it is being applied.</p> <p>For overhaul of outdoor power equipment engines and associated components see AURPTE4004 Overhaul engines and associated engine components (outdoor power equipment).</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to carry out engine overhaul	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks</p> <p>1.4.Technical and tooling requirements for overhaul are identified and support equipment is identified and prepared</p> <p>1.5.SWL rating of lifting devices, engine cradles, slings and shackles is confirmed against the load to be lifted</p>
2. Dismantle engine and components	<p>2.1.Engine is dismantled in a logical sequence</p> <p>2.2.Dismantling of engine and relevant components is completed without causing damage to any component or system</p> <p>2.3.Components are cleaned ready for inspection</p>
3. Overhaul engine components	<p>3.1.Information is accessed and interpreted from manufacturer/component supplier specifications and repair/reclaim methods</p> <p>3.2.Components are measured and compared against manufacturer/component supplier specifications and tolerances</p> <p>3.3.Decisions are made as to serviceability and repair method of each component</p> <p>3.4.Replacement parts are sourced</p> <p>3.5.Rebuild or replacement of engine and/or engine components is carried out in accordance with manufacturer/component supplier specifications and tolerances</p> <p>3.6.Overhaul activities are carried out according to industry regulations/guidelines, WHS legislation and enterprise procedures/policies</p>
4. Assemble engine and components	<p>4.1.Engine is assembled following manufacturer/component supplier procedures</p> <p>4.2.Running clearances are measured against manufacturer/component supplier specifications and necessary adjustments are made</p> <p>4.3.Assembly of engine is are completed within</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>established industry guidelines and timeframes</p> <p>4.4.Assembly is completed without causing damage to any component or system</p>
5. Check engine operation	<p>5.1.Engine is securely mounted in preparation for starting</p> <p>5.2.Engine fluid levels, including lubrication and coolant are checked</p> <p>5.3.Gauges and warning devices are checked for operation prior to starting</p> <p>5.4.Engine is started and checked for leaks and abnormal noises</p>
6. Prepare engine for delivery to customer or installation	<p>6.1.Engine orifices are sealed against ingress of foreign matter</p> <p>6.2.Work completion documentation is finalised and processed to appropriate persons</p> <p>6.3.Final inspection is made to ensure protective features are in place</p> <p>6.4.Engine is cleaned to workplace expectations</p> <p>6.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to overhaul of engines, including use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- types, characteristics and operating processes of engines
- types and layout of service/repair manuals (hard copy and electronic)
- engine overhaul procedures
- dismantling, assembling and adjustment methods
- measuring and testing procedures
- relevant technical information
- component safety requirements
- relevant enterprise policies

**REQUIRED SKILLS AND KNOWLEDGE**

- manual handling techniques

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- dismantling, evaluating, assembling, adjustment, measuring and testing engines in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of a range of engines and associated components within workplace guidelines and timeframes
- engine presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the overhaul of engines
- equipment, hand and power tooling appropriate to the overhaul of engines
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>RANGE STATEMENT</b>	
<b>Engines</b>	<p>Engines may be:</p> <ul style="list-style-type: none"> <li>• 4-stroke spark ignition engines for light vehicles, motorcycles and marine craft</li> <li>• 2-stroke spark ignition for motorcycles and marine craft</li> <li>• 4-stroke compression ignition engines for light vehicles, heavy vehicles, mobile plant and marine craft</li> <li>• 2-stroke compression ignition for heavy vehicles, mobile plant and marine craft</li> </ul>
<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid

<b>RANGE STATEMENT</b>	
	requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, lifting and jacking equipment, specialist tooling, measuring equipment and tensioning equipment
<b>Materials</b>	Materials may include engine oils, moving parts lubricants, replacement parts, gaskets, sealants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the overhaul of engines</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules, Environment Protection Regulations (Diesel Fuels), National Environment Protection For Diesel Vehicle Guidelines</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTF2001 Service petrol fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT203170B Service petrol fuel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out servicing on mechanical and basic electric/electronic petrol fuel system/ components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, servicing of petrol fuel system components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to service petrol fuel system components</b>	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures 1.5.Resources required for servicing are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with petrol are observed
<b>2. Service petrol fuel system components</b>	2.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2.Service of petrol fuel system/components are carried out in accordance with manufacturer/component supplier specifications 2.3.Petrol fuel system components service is completed without causing damage to any component or system 2.4.Adjustments made during the service are in accordance with manufacturer/component supplier specifications 2.5.Engine is run and petrol fuel system tested for correct operation
<b>3. Prepare fuel system for normal operation</b>	3.1.Service schedule documentation is completed 3.2.Final inspection is made to ensure safety features are in place 3.3.Final inspection is made to ensure work is to workplace expectations 3.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with petrol
- mechanical and electronic fuel systems
- service procedures
- vehicle safety procedures
- types and layout of service/repair manuals (hard copy and electronic)
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is the ability to transfer the competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting the service schedules
- conducting the service of a range of petrol fuel systems in accordance with workplace and manufacturer/component supplier requirements
- completing work in the agreed timeframe
- completing workplace/equipment documentation

##### Context of, and specific resources for assessment

Application of competence is to be assessed in workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to servicing petrol fuel systems
- equipment, hand and power tooling appropriate to servicing petrol fuel systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training

**EVIDENCE GUIDE**

	<p>Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Servicing procedures**

Servicing procedures may be performed on petrol fuel systems in light vehicles, heavy vehicles, motorcycles, marine engines and outdoor power

<b>RANGE STATEMENT</b>	
	equipment
<b>Systems</b>	Systems may be two stroke and/or four stroke, spark ignition fuel systems
<b>Fuel system components</b>	Fuel system components are to include basic EFI and/or carburettors (all positions, electronic, fixed venturi, variable venturi), such as mechanical and/or electrical fuel pumps, engine shutdown systems and electronic/mechanical fuel injectors, fuel filters and associated basic fuel injection components.
<b>Methods</b>	Methods are to include aural, visual and functional assessments (including damage, corrosion, fluid leaks, wear and safety aspects)
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, electrical safety, manual lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and

<b>RANGE STATEMENT</b>	
	clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, exhaust gas analyser, vacuum gauge, pressure gauge tachometer and multimeter
<b>Materials</b>	Materials may include oils and lubricants, minor spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to servicing petrol fuel systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

**Unit Sector(s)**

## AURTTF2002 Service diesel fuel injection systems

### Modification History

Release	Comment
Release 1	Replaces AURT203670B Service diesel fuel injection systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service diesel fuel injection systems and components in an automotive retail, service and/or repair context.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake servicing of diesel fuel injection systems and completion of work finalisation processes, including clean-up and documentation.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to service diesel fuel system components	1.1.Determine job requirements, including method, processes and equipment 1.2.Read and interpret job specifications 1.3.Access and interpret information from manufacturer/component supplier specifications and workshop manuals 1.4.Identify and prepare equipment, resources and tooling and check for safe and effective operation 1.5.Determine procedures to minimise task time
2. Carry out service	2.1.Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and warnings, in relation to working with diesel fuel injection systems throughout the work 2.2.Observe National Environmental Protection Measures for Diesel Vehicles (Guidelines) throughout the work, as applicable to tasks 2.3.Perform service in accordance with workplace procedures and manufacturer/component supplier specifications 2.4.Select and use appropriate tooling, techniques and materials 2.5.Make adjustments in accordance with manufacturer/component supplier specifications
3. Prepare equipment/ engine for use or storage	3.1.Complete servicing schedule documentation 3.2.Make final inspection to ensure work is to workplace expectations 3.3.Remove waste and scrap following workplace procedures 3.4.Clean equipment and work area in accordance with workplace procedures 3.5.Maintain and store tooling and equipment in accordance with workplace procedures 3.6.Process job card in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology and tools related servicing diesel fuel injection systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to apply common industry terminology, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders and to locate, interpret and apply manufacturer/component supplier technical information and specifications, workplace policies and safety procedures
- numeracy skills to the level required to correctly calculate time, complete tests and measurements to determine repair/replacement requirements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to plan and organise activities and establish safe and effective work processes which anticipate and/or resolve problems and downtime, and to systematically develop solutions to avoid or minimise reworking and avoid wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity
- organisational skills to the level required to plan and organise activities, including preparation and layout of worksite, and obtaining equipment and materials to avoid backtracking or workflow interruptions

#### Required knowledge

Required knowledge includes:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- National Environmental Protection Measures for Diesel Vehicles (Guidelines)
- dangers of working with diesel fuel injection systems
- identification of application, purpose and operating principles
- types and layout of service/repair manuals (hard copy and electronic)
- engine starting procedures
- bleeding procedures
- selection, checking and use of tooling and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing diesel fuel injection systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing diesel fuel injection systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- identify application, purpose and operating principles
- conduct inspection, servicing and operational testing in accordance with workplace and manufacturer/component supplier specifications
- complete service of diesel fuel system and associated components within workplace timeframes.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of diesel fuel injection and components relevant to the application
  - materials relevant to servicing diesel fuel injection systems
  - equipment, hand and power tooling appropriate to servicing diesel fuel injection systems
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment**

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Servicing**

Servicing is to include:

- fluids
- filters
- adjustments and operational testing
- visual inspections and documents
- injector (pop) testing

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• spill timing</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• gauges</li> <li>• calibration and pressure testing equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• lubricants</li> <li>• spare parts</li> <li>• cleaning materials</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to servicing diesel fuel injection systems</li> <li>• regulatory/legislative requirements pertaining to servicing diesel fuel injection systems</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• electrical safety</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>

**RANGE STATEMENT****Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- Environment Protection Regulations (Diesel Fuels)
- National Environment Protection Measures for Diesel Vehicles (Guidelines)
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

**Environmental requirements**

Environmental requirements may include:

- waste management
- pollution
- noise
- dust
- clean-up management

**Quality requirements**

Quality requirements may include:

- regulations, including Australian standards
- internal organisational quality policies and procedures
- enterprise operations and procedures

**Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice
- safe work procedures

**RANGE STATEMENT**

## AURTTF3004 Repair diesel fuel injection systems

### Modification History

Release	Comment
Release 1	Replaces AURT303666A Repair diesel fuel systems Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out repairs, including removal and replacement of diesel fuel systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, removal, inspection and testing of diesel fuel components, repair and replacement of diesel fuel system components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to repair diesel fuel system components	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.Underpinning principles of diesel fuel system operations, including air fuel ratios and atomisation are explained and observed</p> <p>1.3.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.4.National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks</p> <p>1.5.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.6.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.7.Technical and/or calibration requirements for repair of diesel fuel systems are sourced and support equipment is identified and prepared</p> <p>1.8.Warnings in relation to working with diesel fuel systems are observed</p>
2. Test fuel systems and analyse results	<p>2.1.Methods for conducting tests are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>2.2.Component test results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Repair fuel system	<p>3.1.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Diesel fuel system adjustments made during the engine operation are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle/ equipment for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the repair of diesel fuel systems, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- organisation and planning processes
- the identification of application, purpose and operation
- the identification of component parts to include physical, fluid, gases and heat generation
- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- application of full repair sequence as per the Range Statement to a diesel fuel system relative to the qualification being sought
- conducting repair on a range of diesel fuel systems in accordance with workplace and manufacturer/ component supplier requirements
- interpreting analysis and test results
- completing repair of diesel fuel system and associated components within workplace timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of diesel fuel systems
- equipment, hand and power tooling appropriate to the repair of diesel fuel systems
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Repair methods and sequence**

Repair methods and sequence are to include isolation of fault(s), dismantling, inspection and evaluation, replacement of components parts, assembly and completion of operational tests and

<b>RANGE STATEMENT</b>	
	records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, load testing devices, calibration

RANGE STATEMENT	
	and pressure testing equipment
<b>Materials</b>	Materials may include diesel fuels, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the repair of diesel fuel systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules, Environment Protection Regulations (Diesel Fuels), National Environment Protection For Diesel Vehicle Guidelines</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect engine forced induction system	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. Effects of vehicle emission on the environment are explained and understood</p> <p>1.3. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.4. Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.5. Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6. Technical and/or calibration requirements for inspection of forced induction systems are sourced and support equipment is identified and prepared</p> <p>1.7. Warnings in relation to working with forced induction systems are observed</p>
2. Conduct inspections and analyse results	<p>2.1. Methods for inspections are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>2.2. Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3. Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4. Report is processed in accordance with workplace procedures</p>
3. Prepare to repair/replace engine forced induction systems	<p>3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2. Procedures and information are identified and sourced</p> <p>3.3. Technical and tool requirements for repair and replacement are identified and support equipment is identified and prepared</p>
4. Carry out repair/ replacement of forced induction systems	<p>4.1. Methods for repair/replacement are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>4.2. Adjustments made during repair/replacement are in accordance with manufacturer/component supplier</p>

ELEMENT	PERFORMANCE CRITERIA
	specifications
5. Prepare vehicle/engine for use or storage	5.1.Documentation is completed 5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 5.3.Final inspection is made to ensure work is to workplace expectations 5.4.Vehicle/engine is cleaned for use or storage to workplace expectations 5.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to inspection, repair/ replacement of engine forced inductions systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with forced induction systems
- operating principles of forced induction systems and components and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- replacement procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• interpreting of test results</li> <li>• conducting inspection, repair and replacement of a range of engine forced induction systems and associated components in accordance with workplace and manufacturer/component supplier requirements</li> <li>• completing work within workplace timeframes</li> <li>• vehicle/engine presentation to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the inspection, repair/replacement of engine forced induction systems</li> <li>• equipment, hand and power tooling appropriate to the inspection, repair and replacement of engine forced induction systems</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

	<p>of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment,

<b>RANGE STATEMENT</b>	
	use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include spare parts, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault

**RANGE STATEMENT**

	documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to inspection, repair/ replacement of engine forced induction systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTF3006 Diagnose and repair petrol carburettor systems

### Modification History

Release	Comment
Release 1	Replaces AURT303166B Repair petrol fuel systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect carburettor technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair carburettor systems fitted to vehicles. It involves diagnosing deviations from correct operation, repairing carburettor components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the carburettor systems of motorcycles, light vehicles, heavy commercial vehicles, and vehicles in the mining, construction, agricultural and marine environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a petrol carburettor system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a petrol carburettor system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a petrol carburettor system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
- understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - measure and calculate length, area and volume
  - interpret instruments, gauges and other measuring equipment
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of carburettor systems, including the use of:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- specialised tools and equipment
- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing carburettor systems
- dangers of working with petrol
- operating principles of carburation
- application, purpose and operation of carburettor systems
- testing procedures of carburettor systems
- repair procedures of carburettor systems
- post-repair testing procedures of carburettor systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair at least one type of variable venturi carburettor
- diagnose and repair at least one type of multi-barrel carburettor
- diagnose and repair carburettor systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with carburettor faults relevant to the qualification being sought

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- equipment appropriate for the testing of carburettor systems
- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of vehicle carburettor systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• petrol carburettor system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of carburettor systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> must	<ul style="list-style-type: none"> <li>• cold-start enrichment inspection</li> <li>• cold and hot engine exhaust gas analysis</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>include:</b>	<ul style="list-style-type: none"> <li>• visual inspection of linkages and shafts.</li> </ul>
<b><i>Diagnostic tests</i> may include:</b>	<ul style="list-style-type: none"> <li>• associated component inspection and evaluation</li> <li>• fuel pump pressure, vacuum and flow tests</li> <li>• testing for air leaks</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Faults</i> may include:</b>	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen).</li> </ul>
<b><i>Repair options</i> may include:</b>	<ul style="list-style-type: none"> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i> must include:</b>	<ul style="list-style-type: none"> <li>• cold-start enrichment operation</li> <li>• exhaust gas analysis.</li> </ul>

## AURTTF4003 Overhaul diesel fuel injection systems

### Modification History

Release	Comment
Release 1	Replaces AURT403645A Overhaul diesel fuel injection systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to overhaul of diesel fuel injection system.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of the work requirement, preparation for work, testing and analysis of the system, overhaul of the system and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes all types of diesel fuel systems.</p> <p>These skills are usually acquired when working under the direction of a diesel fuel system specialist in pressurised dust-free facilities</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake the overhaul of diesel fuel injection system components	<p>1.1. Nature and scope of the work requirements are identified and confirmed</p> <p>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3. National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks</p> <p>1.4. Procedures and information such as workshop manuals, specifications and tooling, are sourced</p> <p>1.5. Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6. Technical and/or calibration requirements for the testing and overhaul of diesel fuel injection systems are sourced and support equipment is identified and prepared</p> <p>1.7. Warnings in relation to working with diesel fuels are observed</p>
2. Test diesel fuel injection systems	<p>2.1. Methods for conducting diesel fuel system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2. Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3. Results are documented with evidence and supporting information and recommendations made</p> <p>2.4. Report is forwarded to appropriate persons for action in accordance with workplace procedures</p>
3. Overhaul diesel fuel injection systems	<p>3.1. Information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>3.2. Overhaul of diesel fuel injection system components is carried out in accordance with manufacturer/component supplier specifications</p> <p>3.3. Diesel fuel injection system component overhaul is completed without causing damage to any component or system</p>
4. Prepare vehicle/system for customer and/or	<p>4.1. Work schedule documentation is completed</p> <p>4.2. Final inspection is made to ensure protective guards,</p>

ELEMENT	PERFORMANCE CRITERIA
storage	<p>safety features and cowlings are in place</p> <p>4.3. Final inspection is made to ensure work is to workplace expectations</p> <p>4.4. Vehicle fuel system and/or components are cleaned and/or stored to workplace expectations</p> <p>4.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the overhaul of diesel fuel injection systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- National Environment Protection Measure for Diesel Vehicles
- dangers of working with diesel fuel testing equipment
- operating principles of diesel fuel systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- diagnostic procedures
- calibration and phasing procedures
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- completing preparatory activity in a systematic manner, including the ability to test and analyse diesel fuel system faults
- interpreting the test results
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of diesel fuel system and associated components within workplace timeframes
- vehicle/system presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• materials relevant to the overhaul of diesel fuel injection systems</li> <li>• equipment, hand and power tooling appropriate to the overhaul of diesel fuel injection systems</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, pressure testing calibration equipment and devices
<b>Materials</b>	Materials may include spare parts, fuel and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the overhaul of diesel fuel injection systems</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules, Environment Protection Regulations (Diesel Fuels), National Environment Protection for Diesel Vehicle Guidelines</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

4. Prepare fuel system for normal service	<p>4.1.Overhaul work schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure work is to workplace expectations</p> <p>4.3.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to overhaul of petrol fuel system components, including use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with petrol
- operating principles of carburettors and fuel pumps
- types and layout of service/repair manuals (hard copy and electronic)
- overhaul procedures
- test procedures
- Australian Design Rules
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting test results/readings
- conducting the overhaul of a range of petrol fuel system components in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of fuel system components within workplace timeframes
- fuel system presentation in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the overhaul of petrol fuel system components
- equipment, hand and power tooling appropriate to the overhaul of petrol fuel system components
- activities covering the mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions (real or simulated) and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>RANGE STATEMENT</b>	
<b>Petrol fuel systems</b>	Petrol fuel systems may be in light vehicles, heavy vehicles, motorcycles, marine engines, small engines and outdoor power equipment
<b>Systems</b>	Systems may be two-stroke and/or four-stroke and spark ignition fuel systems
<b>Fuel system components</b>	Fuel system components are to include basic EFI components and/or carburettors (all positions, electronic, fixed venturi, variable venturi), fuel pumps, mechanical and electrical, and engine shutdown systems
<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment,

<b>RANGE STATEMENT</b>	
	extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and cleanup management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering the acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for disassembly/assembly and adjustment, and testing equipment, including hand held meters, computer testers, engine analysers, fuel pump testers and pressure testers
<b>Materials</b>	Materials may include spare parts, fuel and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the overhaul of petrol fuel system components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTJ2001 Balance wheels and tyres

### Modification History

Release	Comment
Release 1	Replaces AURT217606A Balance wheels and tyres Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to balance wheels and tyres.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and analysis of wheel balance, balancing of wheels and tyres and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved may include light vehicles, heavy vehicles, motorcycles and trailers.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to balance wheels and tyres</b>	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or operational requirements for balancing are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with balancing equipment are observed
2. <b>Conduct inspection and analyse results</b>	2.1.Methods for the inspection are in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
3. <b>Carry out balancing procedures</b>	3.1.Methods for balancing wheels and tyres are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.Adjustments made during the balancing procedure are in accordance with manufacturer/component supplier specifications
4. <b>Prepare equipment for customer and/or storage</b>	4.1.Work schedule documentation is completed 4.2.Final inspection is made to ensure safety features are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Equipment is cleaned for use or storage to workplace expectations

ELEMENT	PERFORMANCE CRITERIA
	4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to balancing wheels and tyres, including the use of measuring equipment, specialist tooling, computerised technology communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with balancing equipment
- on road operating characteristics of wheels and tyres and associated components are understood
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- balancing procedures
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting inspection results
- conducting balancing procedures in accordance with workplace and manufacturer/component supplier requirements
- completing balancing of wheels and tyres within workplace timeframes
- equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

- The following resources should be made available:
- workplace location or simulated workplace
- material relevant to balancing wheels and tyres
- equipment, hand and power tooling appropriate to balancing wheels and tyres
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

	<p>of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Variables**

Variables must include dynamic and static balance

Variables may include steel and alloy rims

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace

<b>RANGE STATEMENT</b>	
	environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and testing equipment, including static and dynamic balancing devices
<b>Materials</b>	Materials may include spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault

<b>RANGE STATEMENT</b>	
	reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to balancing wheels and tyres</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare for work</b>	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.Information required for the work is accessed from manufacturer/component supplier specifications and interpreted</p> <p>1.3.WHS policies and procedures are observed throughout the work processes</p> <p>1.4.Components, tooling and equipment required for the work are identified, selected and prepared in accordance with site procedures</p> <p>1.5.Wheel hub and brake components to be removed and refitted are identified and prepared in accordance with manufacturer/component supplier and site procedures</p>
2. <b>Remove wheel hubs and associated brake components</b>	<p>2.1.System components are removed using hand tooling and specialist equipment without causing damage and are stored in an appropriate location</p> <p>2.2.Identified component faults are reported to the customer and discussed for further instructions</p>
3. <b>Refit and adjust wheel hubs and associated brake components</b>	<p>3.1.Removed components are examined for serviceability prior to commencing the refitting procedures</p> <p>3.2.Serviceable components are refitted according to manufacturer/component supplier specifications and instructions</p> <p>3.3.Fluids and lubricants required during the refitting procedures are used in accordance with WHS and manufacturer/component supplier specifications</p> <p>3.4.Refitted components are adjusted according to manufacturer/component supplier specifications</p>
4. <b>Prepare wheel hub and brake components for use</b>	<p>4.1.Work schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure work is to workplace expectations</p> <p>4.3.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal and refitting of wheel hubs and associated brake components, including the use of measuring equipment, specialist tooling, computerised technology, and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with raised vehicles
- principles of hydraulic brake system operation
- brake bleeding methods
- methods of using and applying lubricants and sealants
- methods of fitting gaskets and circlips
- types of wheel bearings and their adjustment methods

**REQUIRED SKILLS AND KNOWLEDGE**

- dismantling, assembling and adjusting procedures
- types and layout of service/repair manuals (hard copy and electronic)
- accessing/recording information from a computer

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting removal, replacement and tightening sequence and tensioning of wheel hub and brake components in accordance with workplace and manufacturer/component supplier requirements
- completing work within workplace timeframes
- wheel hub and brake components are presented to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including, Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to removal, fitting and adjustment of wheel hub and brake components
- equipment, hand and power tooling appropriate to removal, fitting and adjustment of wheel hub and brake components
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**System components**

System components may include:

- brake drums
- brake shoes

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• disc brake calipers</li> <li>• wheel cylinders</li> <li>• disc pads</li> <li>• disc rotors</li> <li>• wheel hubs</li> <li>• wheel bearings</li> <li>• ABS rotors and sensors</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures

<b>RANGE STATEMENT</b>	
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"><li>• hand and power tooling</li><li>• lifting equipment and support stands</li><li>• dial indicators</li><li>• torque wrenches</li><li>• brake spring removing tool</li><li>• brake bleeding equipment</li><li>• wheel bearing removing tools</li><li>• wheel bearing grease</li><li>• brake fluid</li></ul>
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions, and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the removal, fitting and adjustment of wheel hub and brake components</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTK2001 Use and maintain measuring equipment in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURT225667A Use and maintain measuring equipment Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to use and maintain measuring equipment of a non-specialist nature.</p> <p>The unit involves identifying and confirming work requirements, preparing for work, conducting measurements, analysing and documenting outcomes, maintaining equipment, and completing work finalisation processes, including clean-up and documentation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to general automotive retail, service and repair environments of a non-specialist nature.</p> <p>Equipment is used to measure length, width, squareness, flatness, angles, roundness, depth, clearances, run out, pressure, temperature or any measurement that can be taken from analogue or digital devices using imperial and metric measurement.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p> <p>This unit should not be selected if the measuring equipment to be used is dedicated to electrical measurements, such as voltage, resistance or current flow.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake measurements	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.<b>Workplace health and safety (WHS) requirements</b> and appropriate precautions are identified and applied</p> <p>1.3.Procedures and instructions, including workshop manuals and specifications, are sourced and used to determine job requirements</p> <p>1.4.Measuring methods appropriate to the circumstances are selected and prepared according to <b>workplace procedures</b></p> <p>1.5.<b>Measuring equipment</b> is sourced and prepared</p> <p>1.6.Warnings relating to working with precision tools and equipment are observed</p>
2. Conduct measurements and analyse results	<p>2.1.Measurement is conducted according to workplace procedures and equipment manufacturer specifications</p> <p>2.2.Measurement results are compared with manufacturer specifications to indicate compliance or non-compliance</p> <p>2.3.Measurements are documented and recommendations made</p> <p>2.4.Reports are processed according to workplace procedures</p>
3. Maintain measuring equipment	<p>3.1.Information required for equipment maintenance is accessed from manufacturer specifications and interpreted</p> <p>3.2.Measuring equipment is checked against manufacturer recommendations and recommended <b>maintenance methods</b> are confirmed to ensure safe and accurate operating condition</p> <p>3.3.Measuring equipment is maintained and stored according to manufacturer specifications</p> <p>3.4.Equipment checks are completed without causing damage to component or system</p> <p>3.5.<b>Workplace documents</b> are completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analytical skills to identify and analyse technical information
- communication skills to:
  - follow verbal and written instructions
  - communicate information relating to the correct and safe use of equipment
- literacy skills to:
  - read and follow original equipment manufacturer (OEM) maintenance information and measuring equipment use
  - read and follow information on operating procedures and OEM repair guidelines
- numeracy skills to read and interpret metric and non-metric systems of measurement
- planning and organising skills to:
  - identify and minimise risk to operator and others
  - contribute to activities that implement and follow workplace procedures
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate measuring equipment
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as operating procedures
- technical skills to:
  - select measuring equipment appropriate to the task
  - use measuring equipment safely
  - maintain measuring equipment using appropriate techniques
  - calibrate or adjust measuring equipment
  - identify defects in measuring equipment and mark for repair
  - store measuring equipment according to manufacturer and workplace procedures
- technology skills to:
  - use manual, electronic and digital measuring equipment
  - use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, including personal safety requirements
- common automotive measurement terminology

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- types of non-specialist measuring equipment and their applications
- measurement procedures
- measuring equipment maintenance procedures
- work organisation and planning processes relating to using measuring equipment

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures</li> <li>• communicate effectively with others involved in or affected by the work</li> <li>• select approved measurement methods and techniques</li> <li>• measure dimensions or variables using a range of measuring equipment</li> <li>• accurately interpret measurements</li> <li>• maintain measuring equipment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• material relevant to the use and maintenance of measuring equipment</li> <li>• equipment and tools appropriate to the use and maintenance of measuring equipment</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Workplace procedures*** may include:

- conducting operational risk assessments and treatments associated with vehicle movement
- site-specific instructions
- safe work procedures relating to the use and maintenance of measuring equipment
- workplace policies and practices
- instructions issued by authorised workplace or external persons
- written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins or memos
- diagrams or sketches
- vehicle workshop manuals and information.

***Measuring equipment*** may include:

- internal and external micrometres
- Vernier calipers
- dial gauges
- depth gauges
- steel rulers
- tape measures
- squares
- straight edges
- dividers
- protractors

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• feeler gauges</li> <li>• thermometers</li> <li>• pressure gauges.</li> </ul>
<b><i>Maintenance methods</i></b> may include:	<ul style="list-style-type: none"> <li>• routine maintenance to tools and equipment as per schedules</li> <li>• calibrating or adjusting measuring equipment</li> <li>• minor repairs to tools and equipment</li> <li>• documenting or tagging equipment as faulty or out-of-service.</li> </ul>
<b><i>Workplace documents</i></b> may include:	<ul style="list-style-type: none"> <li>• fault or defect reporting documents</li> <li>• out-of-service reports</li> <li>• job or organisation work specifications and requirements.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical Miscellaneous
<b>Unit sector</b>	Technical – Tools and Equipment

Not applicable.

## AURTTK2002 Use and maintain workplace tools and equipment

### Modification History

Release	Comment
Release 1	Replaces AURT270278A Use and maintain workplace tools and equipment Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to select, safely use and maintain workplace tooling and equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, selection, use, servicing, maintenance and storage of tooling and equipment and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Select correct tooling and equipment for workplace application</b>	1.1.Tooling and equipment are selected to meet job requirements 1.2.Suitable tooling and equipment are selected for use within the workplace environment 1.3.Tooling and equipment are selected according to enterprise procedures/policies
2. <b>Use of tooling and equipment</b>	2.1.Tooling and equipment are used in a safe manner to prevent injury to self and others 2.2.Tooling and equipment are used in a manner that does not cause damage to other workplace equipment 2.3.Observations are noted during the use of tooling/equipment
3. <b>Service and maintain workplace tooling and equipment</b>	3.1.Tooling and equipment are regularly checked against manufacturer/component supplier recommendations to ensure safe operating condition 3.2.Damaged/worn tooling and equipment are tagged and removed from the workplace for repair or replacement and reported in accordance with enterprise requirements 3.3.Tooling/equipment are serviced, adjusted and/or maintained as per manufacturer/component supplier schedule to ensure safe and correct operation, within the scope of responsibility 3.4.Servicing and maintenance operations are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. <b>Store and secure tooling and equipment</b>	4.1.Tooling and equipment are cleaned, checked and stored 4.2.Tooling and equipment are securely stored 4.3.Documents are completed according to enterprise policies and procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**REQUIRED SKILLS AND KNOWLEDGE****Required skills**

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the use and maintenance of workplace tooling and equipment, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

**Required knowledge**

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- tool and equipment selection procedures
- basic maintenance procedures for tooling and equipment
- tool and equipment safety and operating procedures
- types, characteristics, uses and limitations of hand tooling
- types, characteristics, uses and limitations of power tooling
- types, characteristics, uses and limitations of workplace equipment
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- selection and safe use of hand tooling
- selection and safe use of workplace equipment
- basic maintenance of tooling and equipment within the scope of operator responsibility
- selection and safe use of personal protective equipment

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the use and maintenance of workplace tooling and equipment
- equipment, hand and power tooling appropriate to the use and maintenance of workplace tooling and equipment
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

**EVIDENCE GUIDE**

	<p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Tooling and equipment**

Tooling and equipment may include computer hardware/ software, calculators, general office equipment, hand and power tooling, specialist tooling for removal/adjustment, storage racks, protective covers, measuring devices, plastics repair equipment, sealing equipment, adhesive equipment, heating equipment, templates, welding equipment, including oxy, arc, MIG and TIG, vehicle cleaning equipment, service workshop manuals, product manuals, hydraulic breaker tooling, line oilers, filters and gauges, alternator and starting motor bench testers, paint mixers, key cutters, multimeters, load testers, brake and drum lathes, fuel injector cleaners, ignition module test instruments

<b>RANGE STATEMENT</b>	
<b>Maintenance methods</b>	Maintenance methods may include routine maintenance to tooling and equipment as per schedules, labelling faulty tooling and equipment, minor repairs to tooling and equipment, and the chocking, jacking and supporting of machines on level and incline planes
<b>Specific requirements</b>	Specific requirements may include hydraulic jacks, air bags and overhead cranes for lifting heavy machines
<b>Warehouse equipment</b>	Warehouse equipment includes auto picker, bag palletiser, barcode printer and scanner, belt conveyors, bolt cutter, cages, carton sealer, computers, forklifts, battery chargers, pallets, picking trolleys, sprinkler system, strapping machine, fire extinguishers, first aid box, safety signs, security alarm, safety harness, carton crushers, disposal bins, seals and ties, shrink wrap
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting,

<b>RANGE STATEMENT</b>	
	working in proximity to others and site visitors
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the use and maintenance of workplace tooling and equipment</li> <li>• regulatory/legislative requirements pertaining to the automotive industry</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURTTL3001 Service CNG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304370A Service CNG fuel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the competence required to carry out the servicing of CNG fuel systems.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	The unit includes identification and confirmation of work requirement, preparation for work, inspection, analysis of inspection results and servicing of CNG fuel systems and completion of work finalisation processes, including clean-up and documentation.  Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection of CNG fuel system	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for gas system are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with gas systems are observed</p>
2. Conduct inspection and analyse results	<p>2.1.Methods for gas system inspection is implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Prepare to service CNG fuel system	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for servicing are identified and support equipment is identified and prepared</p>
4. Carry out servicing	<p>4.1.Methods for servicing are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments made during the servicing are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle for	5.1.Service schedule documentation is completed

ELEMENT	PERFORMANCE CRITERIA
use or storage	<p>5.2.Final inspection is made to ensure safety features are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.Vehicle is cleaned for use or storage to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the servicing of CNG fuel systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with gas systems
- operating principles of CNG systems
- inspection procedures
- service procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection in accordance with workplace and manufacturer/component supplier requirements
- interpreting inspection results
- servicing the gas system and associated components within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian and Gas Industry Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to servicing of CNG fuel systems
- equipment, hand and power tooling appropriate to servicing of CNG fuel systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and

## AURTIL3002 Diagnose and repair CNG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304366A Repair CNG fuel systems and AURT404384A Diagnose CNG fuel system faults  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair Compressed Natural Gas (CNG) fuel systems fitted to vehicles. It involves diagnosing deviations from correct operation, repairing CNG fuel systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the CNG fuel systems of light vehicles, heavy commercial vehicles, and vehicles in the mining, construction and agricultural environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a CNG fuel system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a CNG fuel system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a CNG fuel system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of CNG fuel systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing CNG fuel systems
- dangers of working with gas systems
- operating principles of CNG systems
- application, purpose and operation of CNG fuel systems
- testing procedures for CNG fuel systems
- repair procedures for CNG fuel systems
- post-repair testing procedures for CNG fuel systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- diagnose and repair a range of CNG fuel systems
- diagnose and repair CNG fuel systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with CNG fuel system faults relevant to the qualification being sought
- equipment appropriate for the diagnosis and testing of CNG fuel systems
- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

CNG fuel systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Workplace instructions may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• CNG fuel system diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of CNG fuel systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Diagnostic tests</i></b> may	<ul style="list-style-type: none"> <li>• CNG fuel system component inspection and evaluation</li> <li>• cold-start enrichment inspection</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• cold and hot engine exhaust gas analysis</li> <li>• testing for air leaks</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen).</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• cold-start enrichment operation</li> <li>• exhaust gas analysis.</li> </ul>

## AURTTL3003 Install CNG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304331A Install CNG fuel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the competence required to carry out the installation of CNG fuel systems  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	The unit includes identification and confirmation of work requirement, preparation for work, installation of CNG fuel systems and completion of work finalisation processes, including clean-up and documentation.  Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake installation of CNG fuel system	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed</li><li>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3.Procedures and information such as workshop manuals, specifications, and tooling, are sourced</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5.Technical and/or calibration requirements for installation of systems are sourced and support equipment is identified and prepared</li><li>1.6.Warnings in relation to working with CNG fuel systems are observed</li></ul>
2. Carry out installation	<ul style="list-style-type: none"><li>2.1.Methods for installation are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>2.2.Adjustments made during the installation are in accordance with manufacturer/component supplier specifications</li></ul>
3. Prepare vehicle for use or storage	<ul style="list-style-type: none"><li>3.1.Installation documentation is completed</li><li>3.2.Final inspection is made to ensure safety features are in place</li><li>3.3.Final inspection is made to ensure work is to workplace expectations</li><li>3.4.Vehicle is cleaned for use or storage to workplace expectations</li><li>3.5.Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the installation of CNG fuel systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with CNG fuel systems
- operating principles of CNG fuel systems
- installation procedures
- testing procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting installation in accordance with workplace and manufacturer/component supplier requirements
- interpreting and recording test results
- installing CNG fuel systems and associated components within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian and Gas Industry Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the installation of CNG fuel systems
- equipment, hand and power tooling appropriate to the installation of CNG fuel systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and

<b>RANGE STATEMENT</b>	
	substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing and gas leak testing devices
<b>Materials</b>	Materials may include installation kits, spare parts, gas, sealants, adhesive and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or

**RANGE STATEMENT**

	instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the installation of CNG fuel systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules and gas industry standards</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection of LNG fuel system	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for gas system are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with gas systems are observed</p>
2. Conduct inspection and analyse results	<p>2.1.Methods for gas system inspection is implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Prepare to service LNG fuel system	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for servicing are identified and support equipment is identified and prepared</p>
4. Carry out service	<p>4.1.Methods for servicing are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments made during the service are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle for	5.1.Service schedule documentation is completed

ELEMENT	PERFORMANCE CRITERIA
use or storage	<p>5.2.Final inspection is made to ensure safety features are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.Vehicle is cleaned for use or storage to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers

## AURTIL3005 Diagnose and repair LNG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304466A Repair LNG fuel systems and AURT404484A Diagnose LNG fuel system faults  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair Liquefied Natural Gas (LNG) fuel systems fitted to vehicles. It involves diagnosing deviations from correct operation, repairing LNG fuel systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the LNG fuel systems of vehicles in the light vehicle, road transport, mining, construction and agricultural environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a LNG fuel system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a LNG fuel system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a LNG fuel system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of LNG fuel systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing LNG fuel systems
- dangers of working with gas systems
- operating principles of LNG systems
- application, purpose and operation of LNG fuel systems
- testing procedures for LNG fuel systems
- repair procedures for LNG fuel systems
- post-repair testing procedures for LNG fuel systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- diagnose and repair range of LNG fuel systems
- diagnose and repair LNG fuel systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with LNG fuel system faults relevant to the qualification being sought
- equipment appropriate for the diagnosis and testing of LNG fuel systems
- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

LNG fuel systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions may include:</b>	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• LNG fuel system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of LNG fuel systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> may	<ul style="list-style-type: none"> <li>• LNG fuel system component inspection and evaluation</li> <li>• cold-start enrichment inspection</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• cold and hot engine exhaust gas analysis</li> <li>• testing for air leaks</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen).</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• cold-start enrichment operation</li> <li>• exhaust gas analysis.</li> </ul>

## AURTTL3006 Install LNG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304431A Install LNG fuel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the installation of LNG fuel systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, installation of LNG fuel systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake installation of LNG fuel system	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for installation of system are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with gas fuel systems are observed
2. Carry out installation	2.1. Methods for installation are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Adjustments made during the installation are in accordance with manufacturer/component supplier specifications
3. Prepare vehicle for use or storage	3.1. Installation documentation is completed 3.2. Final inspection is made to ensure safety features are in place 3.3. Final inspection is made to ensure work is to workplace expectations 3.4. Vehicle is cleaned for use or storage to workplace expectations 3.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the installation of LNG fuel systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with gas fuel systems
- the operating principles of LNG fuel systems
- installation procedures
- test procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• conducting installation in accordance with workplace and manufacturer/component supplier requirements</li> <li>• interpreting and recording test results</li> <li>• installing gas fuel systems and associated components within workplace timeframes</li> <li>• vehicle presentation to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian and Gas Industry Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the installation of LNG fuel systems</li> <li>• equipment, hand and power tooling appropriate to the installation of LNG fuel systems</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning</p>

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and

<b>RANGE STATEMENT</b>	
	substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, load testing and gas leak testing devices
<b>Materials</b>	Materials may include installation kits, spare parts, gas, sealants, adhesives and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or

**RANGE STATEMENT**

	instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the installation of LNG fuel systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules and gas industry standards</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection of LPG fuel system	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for gas system are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with gas systems are observed</p>
2. Conduct inspection and analyse results	<p>2.1.Methods for gas system inspection is implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Prepare to service gas system	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for servicing are identified and support equipment is identified and prepared</p>
4. Carry out servicing	<p>4.1.Methods for servicing are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments made during the servicing are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle for	<p>5.1.Service schedule documentation is completed</p>

ELEMENT	PERFORMANCE CRITERIA
use or storage	<p>5.2.Final inspection is made to ensure safety features are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.Vehicle is cleaned for use or storage to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the servicing of LPG fuel systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with LPG fuel systems
- operating principles of LPG fuel systems
- inspection procedures
- service procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection in accordance with workplace and manufacturer/component supplier requirements
- interpreting inspection results
- servicing the gas system and associated components within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian and Gas Industry Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the servicing of LPG fuel systems
- equipment, hand and power tooling appropriate to the servicing of LPG fuel systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ## AURTIL3008 Diagnose and repair LPG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304266A Repair LPG fuel systems and AURT404284A Diagnose LPG fuel system faults  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair Liquefied Petroleum Gas (LPG) fuel systems fitted to vehicles. It involves diagnosing deviations from correct operation, repairing LPG fuel systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the LPG fuel systems of light vehicles, heavy commercial vehicles, and vehicles in the mining, construction and agricultural environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a LPG fuel system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a LPG fuel system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a LPG fuel system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of LPG fuel systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing LPG fuel systems
- dangers of working with gas systems
- operating principles of LPG systems
- application, purpose and operation of LPG fuel systems
- testing procedures for LPG fuel systems
- repair procedures for LPG fuel systems
- post-repair testing procedures for LPG fuel systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- diagnose and repair a range of LPG fuel systems relevant to the qualification being sought
- diagnose and repair LPG fuel systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with LPG fuel system faults relevant to the qualification being sought
- equipment appropriate for the diagnosis and testing of LPG fuel systems
- specifications and workplace instructions

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- tools appropriate for the repair, replacement and adjustment of LPG fuel systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### ***RANGE STATEMENT***

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• LPG fuel system diagnosis and repair methods, processes and equipment</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of LPG fuel systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Diagnostic tests</i></b> may	<ul style="list-style-type: none"> <li>• LPG fuel system component inspection and evaluation</li> <li>• cold-start enrichment inspection</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• cold and hot engine exhaust gas analysis</li> <li>• testing for air leaks</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen).</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• cold-start enrichment operation</li> <li>• exhaust gas analysis.</li> </ul>

## AURTTL3009 Install LPG fuel systems

### Modification History

Release	Comment
Release 1	Replaces AURT304231A Install LPG fuel systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the installation of LPG fuel systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, installation of LPG fuel systems and completion of work finalisation processes including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install LPG fuel systems	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed</li><li>1.2.WHS requirements, including State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3.Procedures and information such as workshop manuals and specifications, and tooling are sourced</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5.Technical and/or calibration requirements for installation of the systems are sourced and support equipment is identified and prepared</li><li>1.6.Warnings in relation to working with LPG fuel systems are observed</li></ul>
2. Carry out installation	<ul style="list-style-type: none"><li>2.1.Methods for the installation are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications</li><li>2.2.Adjustments made during the installation are in accordance with manufacturer/component supplier specifications</li></ul>
3. Prepare vehicle for use or storage	<ul style="list-style-type: none"><li>3.1.Installation documentation is completed</li><li>3.2.Final inspection is made to ensure safety features are in place</li><li>3.3.Final inspection is made to ensure work is to workplace expectations</li><li>3.4.The vehicle is cleaned for use or storage to workplace expectations</li><li>3.5.Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures and workplace policies and procedures
- apply analytical skills for the identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with clients and team members
- apply questioning and active listening skills, e.g. when obtaining information from customers
- apply oral communication skills to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact with other people both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply measurements, calculate material requirements and establish quality checks
- use workplace technology related to the installation of LPG fuel systems, including use of specialist tooling, measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with gas fuel systems
- operating principles of LPG fuel systems
- installation procedures
- test procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting installation in accordance with workplace and manufacturer/component supplier requirements
- interpreting and recording the test results
- installing LPG fuel systems and associated components within workplace timeframes
- vehicle is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements including Australian and Gas Industry Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the installation of LPG fuel systems
- equipment, hand and power tooling appropriate to the installation of LPG fuel systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R training package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

	<p>knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and

<b>RANGE STATEMENT</b>	
	substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting and working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal enterprise quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load and gas leak testing devices
<b>Materials</b>	Materials may include installation kits, spare parts, gas sealants, adhesives and cleaning material
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or

**RANGE STATEMENT**

	instructions related to job/task and telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets and diagrams or sketches</li><li>• safe work procedures related to the installation of LPG fuel systems</li><li>• regulatory/legislative requirements pertaining to automotive industry including Australian Design Rules and Gas Industry Standards</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTIL3010 Install LPG, CNG and LNG electrical control equipment

### Modification History

Release	Comment
Release 1	Replaces AURT304031A Install LPG/CNG electrical control equipment  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect technologies and to include LNG technology

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to install Liquefied Petroleum Gas (LPG), Compressed Natural Gas (CNG) and Liquefied Natural Gas (LNG) electrical control equipment. It involves identification and confirmation of work requirement, preparation for work, installation of LPG, CNG and LNG electrical control equipment, testing of installed equipment and completion of work finalisation processes, including clean-up and documentation.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the LPG, CNG and LNG electrical control equipment of light vehicles, heavy commercial vehicles, and vehicles in the mining, construction and agricultural environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install electrical control equipment	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> relating to LPG, CNG and LNG fuel systems are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate tools and equipment are selected and prepared</p>
2. Carry out installation	<p>2.1. Installation is performed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. <b>Adjustments</b> are made according to workplace procedures and manufacturer and component supplier specifications</p>
3. Conduct post-installation tests and analyse results	<p>3.1. <b>Testing</b> is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.2. Test results are compared with manufacturer and component supplier specifications to indicate compliance or non-compliance</p> <p>3.3. Results are documented according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace and installation documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise to identify installation problems and to suggest possible solutions
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - apply accurate measurements and adjustments
  - interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the installation of LPG, CNG and LNG fuel system electrical control equipment, including the use of specialised tools and equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to installing LPG, CNG and LNG fuel system electrical control equipment
- dangers of working with gas systems
- operating principles of LPG/CNG/LNG control systems and their relationship to the individual gas system and other associated systems
- installation procedures for LPG/CNG/LNG electrical control equipment
- post-installation testing procedures for LPG/CNG/LNG electrical control equipment

-

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- conduct the installation and testing of a range of LPG, CNG or LNG electrical control equipment according to workplace, manufacturer and component supplier requirements
- interpret and record test results
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles that require the fitment of gas system electrical control equipment
- material relevant to installing gas system electrical control equipment
- equipment, hand and power tools appropriate to installing gas

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- system electrical control equipment
- specifications and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace instructions** may include:

- computer-generated instructions
- verbal instructions
- written instructions.

**Job requirements** may include:

- LPG, CNG and LNG fuel system electrical control equipment installation methods, processes and equipment

**Workplace health and safety (WHS) requirements:**

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

**Procedures and information** may include:

- verbal, written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins or memos
- material safety data sheets (MSDS)
- diagrams or sketches
- safe work procedures relating to the installation of LPG, CNG and LNG fuel system electrical control equipment
- regulatory and legislative requirements relating to the automotive industry
- Australian Design Rules
- Engineer's design specifications and instructions
- organisational work specifications and requirements
- instructions issued by authorised workplace or external persons
- Australian standards
- vehicle service requirements and repair manuals.

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Adjustments*** may include:

- integrating the electrical control system into the existing wiring loom
- changes to the wiring loom length and configuration
- changes to the fuel system configuration
- changes to the air intake system configuration.

***Tests*** may include:

- testing for electrical continuity, resistance, shorts to ground, voltage drop
- verifying correct operation of associated vehicle systems
- gas leakage checks.

**Unit Sector(s)**

**Unit sector**

Mechanical Miscellaneous

**Co-requisite units**

Not applicable.

## AURTTL4011 Diagnose complex faults in CNG fuel systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in compressed natural gas (CNG) fuel systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical or electronic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of vehicle CNG fuel systems.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning CNG fuel systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies and discrepancies or <b>faults</b> in CNG fuel systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to CNG fuel systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of CNG fuel systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, fuel, electrical and electronic systems related to CNG fuel systems
- concepts, types, functions, operations and limitations of CNG fuel systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to CNG fuel systems
- testing procedures for CNG fuel systems, including procedures for accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different CNG fuel systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in CNG fuel systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian Standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated CNG fuel system faults
- tools and equipment appropriate for the diagnosis of complex faults in CNG fuel systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults*** may include:

- direct failures in safety systems, electrical systems, fuel delivery system or sequential vapour injection
- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration and adjustment specifications
- component specifications, component assembly, component damage and system modifications
- mechanical and fuel system faults

***Tests*** may include:

- wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes
- liquid and vapour pressure, leakage, operation of all safety components and systems, electrical control systems, exhaust emissions, engine performance, CNG system performance and data interpretation
- on-road CNG fuel efficiency testing
- component test

***Testing equipment*** may include:

- multimeters, scan tools, test lights, pressure and vacuum gauges, water and mercury manometers, electronic leak detectors, engine tune oscilloscopes, four-gas engine analyser and exhaust pressure gauge,
- test lights and test LEDs

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• manufacturer and component supplier testing equipment</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to CNG fuel systems</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical Miscellaneous
<b>Unit sector</b>	Technical – Alternative fuels

Not applicable.

## AURTTL4012 Diagnose complex faults in LNG fuel systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in liquefied natural gas (LNG) fuel systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical or electronic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of vehicle LNG fuel systems.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning LNG fuel systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies and discrepancies or <b>faults</b> in LNG fuel systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected diagnostic processes are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to LNG fuel systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of LNG fuel systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, fuel, electrical and electronic systems related to LNG fuel systems
- concepts, types, functions, operations and limitations of LNG fuel systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to LNG fuel systems
- testing procedures for LNG fuel systems, including procedures for accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different LNG fuel systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in LNG fuel systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian Standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated LNG fuel system faults
- tools and equipment appropriate for the diagnosis of complex faults in LNG fuel systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults*** may include:

- direct failures in safety systems, electrical systems, fuel delivery system or sequential vapour injection
- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration and adjustment specifications
- component specifications, component assembly, component damage and system modifications
- mechanical and fuel system faults

***Tests*** may include:

- wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes
- liquid and vapour pressure, leakage, operation of all safety components and systems, electrical control systems, exhaust emissions, engine performance, LNG system performance and data interpretation
- on-road LNG fuel efficiency testing
- component test

***Testing equipment*** may include:

- multimeters, scan tools, test lights, pressure and vacuum gauges, water and mercury manometers, electronic leak detectors, engine tune oscilloscopes, four-gas engine analyser and exhaust pressure gauge,
- test lights and test LEDs

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• manufacturer and component supplier testing equipment</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to LNG fuel systems</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology</li></ul>

## AURTTL5014 Analyse and evaluate gas fuel system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT477093A Analyse and evaluate gas fuel system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to analyse and evaluate gas fuel systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and record the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning gas fuel systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. The effects of any systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. The most appropriate analytical and evaluative methodology including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tools and material required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Gas fuel system components are prepared for the diagnostic process including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. The selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and the manufacturer/component supplier specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. The most appropriate response option is selected from an analysis of the options, the prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. The selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Material that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support material are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary gas fuel systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, the reporting of work outcomes and the completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities including the planning of analytical processes, the establishment of evaluative (success) criteria, the preparation and layout of the worksite and the obtaining of testing equipment and material to avoid any backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tools, calculators and measuring devices.

#### Required knowledge

- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the theory of diagnosis including concept, design and planning.
- detailed knowledge of the concepts, types, functions, operations and limitations of gas fuel systems.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for recording and reporting diagnostic findings and recommendations.
- general knowledge of personal computer operation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply relevant information.
- Apply safety requirements including the isolation of equipment and the use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Diagnose gas fuel system faults, including one fault from each category listed below:
  - poor engine performance
  - increased emission levels
  - impact of a prior system modification
  - incorrect installation of the gas system
  - caused by an influence from an external system.
- Accurately record and report the diagnostic process and findings and recommended rectification.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, material, work instructions and deadlines.

Access to a realistic requirement and objectives for analysis and evaluation, operational gas fuel systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objectives, research facilities and technical information and a realistic work environment.

**EVIDENCE GUIDE****Method of assessment**

Assessment of this competency is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competency is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Failure analysis and evaluation process**

The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

**System faults**

Gas fuel system faults covered by this unit are to include direct failures in safety systems, electrical systems, fuel delivery system, sequential vapour injection, fuel container, calibration and adjustment specifications, component specifications, component assembly and system modifications.

**System failures**

Gas fuel system failures covered by this unit are to

<b>RANGE STATEMENT</b>	
	include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.
<b>Unit context</b>	Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements.
<b>WHS</b>	WHS requirements, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to regulatory, industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include multimeters, data scanners, test lights, pressure/vacuum gauges, water and mercury manometers, electronic leak detectors, engine tune oscilloscopes, four-gas engine analyser and exhaust pressure gauge, and may include other manufacturer testing equipment.
<b>Tests</b>	Tests to be conducted are to include liquid and vapour pressure, leakage, operation of all safety components and systems, electrical control systems, exhaust emissions, engine performance, gas system performance and data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"><li>• Workplace procedures relating to the use of tools and equipment.</li><li>• Workplace procedures relating to reporting and communication.</li></ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to stability/steering and suspension systems.</li><li>• Australian Design Rules.</li><li>• Gas fuel system regulations.</li><li>• Vehicle industry publications related to emerging gas fuel system technology and technology changes.</li></ul>

## AURTTL5015 Develop and apply gas fuel system modifications

### Modification History

Release	Comment
Release 1	<p>Replaces AURT577120A Develop and apply gas fuel systems modification</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to develop, apply and validate significant modifications to existing gas fuel systems in order to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This includes the preparation and application of specifications and processes complying with safety, legal and commercial obligations.</p>
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the modification requirement	<p>1.1.WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.2.Purpose and objectives of the modification are identified from an analysis of inputs and confirmed with the customer.</p> <p>1.3.Outline options for achieving the required purpose and objectives are identified, framed and presented to the customer prior to proceeding.</p> <p>1.4.Possible legal and safety impacts of the modification are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Develop and validate the modification specification	<p>2.1.Benchmark specifications for the existing gas fuel system are accessed and interpreted.</p> <p>2.2.Criteria to be used in the selection of the modification method and in the evaluation of the outcomes are identified and documented.</p> <p>2.3.Proposed modification method is selected following the identification, consideration and evaluation of the full range of available and relevant options.</p> <p>2.4.Selected option, including material choices and processes, is developed in detail and progressively validated against the established criteria.</p> <p>2.5.Modification specification is documented to industry and enterprise standards.</p>
3. Apply and test the modification specification	<p>3.1.Selected modification method and process is followed in accordance with the established specifications.</p> <p>3.2.Modification is completed using equipment, tooling and materials in accordance with accepted industry standards and practices.</p> <p>3.3.Tests and testing equipment are applied in accordance with regulatory requirements, manufacturer/component supplier specifications and modification specification.</p> <p>3.4.Test results and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes.</p> <p>3.5.Variations necessitated during the modification process or as a result of testing are incorporated into</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>the modification specification.</p> <p>3.6.Information and detail related to the modification is documented and provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Clean up work area and maintain equipment	<p>4.1.Materials that can be reused is collected and stored.</p> <p>4.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>4.3.Waste and scrap is removed following workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand legal and technical information related to contemporary gas fuel systems modifications.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the development and planning of modification processes, preparation and layout of the worksite and the obtaining of tooling, equipment, materials and testing equipment to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate specifications, calibrate and establish testing equipment and evaluate modification results against pre-established criteria.
- establish modification methods and processes which anticipate and allow for risks and avoid or minimise reworking and avoid wastage.
- use the full range of workplace technology related to gas fuel systems modification, including testing equipment, maintenance equipment, tooling, calculators and measuring devices and information management systems.

#### Required knowledge

- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the concepts, types, functions, operations and limitations of gas fuel systems.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.
- general knowledge of personal computer operation.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Modify a significant gas fuel system or sub-system including:
  - selection, development and documenting of success factors and evaluation criteria before undertaking the modification
  - selection, development and validation of the modification methodology, processes and specification
  - application of modification specification, methodology and process
  - the documenting and reporting of the outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to an operational gas fuel system requiring modification, testing equipment as stipulated in the Range Statement, technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Gas fuel systems modifications</b>	<p>Gas fuel systems modifications to be covered by this unit may include those to:</p> <ul style="list-style-type: none"> <li>• enhance engine performance</li> <li>• maintain emissions</li> <li>• meet Australian Design Rules</li> <li>• meet legislative requirements retrospectively.</li> </ul>
<b>Inputs to the modification method and processes</b>	<p>Inputs to the modification method and processes may be obtained from customer requirements, manufacturer/ component supplier specifications, outcomes of diagnostic processes or from regulatory, licensing, intellectual property legislation, safety requirements and Australian Design Rules.</p>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with</li> </ul>

<b>RANGE STATEMENT</b>	
	<p>legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</p> <ul style="list-style-type: none"> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluation criteria</b>	Evaluation criteria, sometimes referred to as success factors, are to be established prior to a modification being undertaken and are to cover safety, functionality, survivability, maintainability, life cycle cost and aesthetics.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Tests and testing equipment</b>	Tests and testing equipment is to include that appropriate to the modification being carried out but it should include computer-based diagnostic systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to gas fuel systems modification.</li> <li>• Australian Design Rules.</li> <li>• Gas fuel vehicle regulations.</li> <li>• Vehicle industry publications related to emerging transmission system technology and technology changes.</li> </ul>

**Unit Sector(s)**

## AURTTM3001 Operate and monitor computer numerical control machines

### Modification History

Release	Comment
Release 2	Replaces AURTTM3001 Operate and monitor computer numerical control machines (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to operate and monitor CNC (computer numerical control) machines. It involves the ability to determine the machining process required, select the appropriate program, and perform machining to specifications and workplace requirements as part of an engine reconditioning process.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Engine components to be machined may include those from light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p> <p>Work is carried out according to award provisions.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to operate a CNC machine	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is sourced, procedures and methods are analysed, and appropriate work options are selected for operating and monitoring CNC machines</p> <p>1.3. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.4. Pre-start checks are undertaken to standard operating procedures</p>
2. Operate a CNC machine	<p>2.1. Computer program is selected and verified according to job instructions</p> <p>2.2. CNC machine is operated safely to product specifications using standard operating procedures</p> <p>2.3. Machine malfunctions are identified and reported</p> <p>2.4. Machining is checked for compliance with specification using standard operating procedures</p>
3. Perform necessary adjustments during machining process	<p>3.1. Tool wear is monitored and, where appropriate, pre-set tools are replaced, tool offsets are identified in computer-controlled program and adjusted, or other corrective action is taken using standard operating procedures</p> <p>3.2. <b>Engine component</b> deviation from specification is reported according to standard operating procedures</p>
4. Clean up work area and maintain equipment	<p>4.1. Final inspection is made to ensure finished work complies with workplace requirements</p> <p>4.2. Engine components and equipment are cleaned for use or storage to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

technical skills to:

- monitor the machine or process for signs of tool wear and take corrective action
- measure to specified tolerances and dimensions

communication skills to:

- follow oral instructions
- report deviations from specifications

literacy skills to:

- read and interpret routine job instructions, specifications, drawings and standard operating procedures
- make pre-start checks
- understand quality procedures

numeracy skills to use mathematical ideas and techniques to:

- calculate time
- assess tolerances
- apply accurate measurements
- calculate material requirements
- establish quality checks

problem-solving skills to:

- identify and avoid planning and scheduling problems
- prevent time and material wastage
- organise work and plan processes

self-management skills to:

- select and use appropriate equipment, materials, processes and procedures
- recognise limitations and seek timely advice
- follow workplace documentation, such as codes of practice and operating procedures

teamwork skills to:

- work with diverse individuals and groups
- apply knowledge of own role to complete activities efficiently to support colleagues' activities and tasks

technology skills to use communication devices and computerised equipment to:

- search and gather supporting material
- follow CNC machine operating procedures

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety

requirements relating to the use of CNC machines

- procedures for accessing computer-controlled programs installed in the machine controller, including:
  - posting appropriate program to the machine
  - selecting tool specified by the program and for the material to be machined
  - selecting appropriate speeds and feeds
- computer-controlled machine operating procedures, including:
  - zeroing the machine axes
  - engaging warm-up procedures, and checking lubricant levels, coolant levels and machine slide ways
  - mounting tool in tool holder
  - setting tool height manually
  - setting machine offset parameters to correct tool number and height
  - setting work piece datum/zero point
  - recording data in machine offsets
  - selecting dry-run mode on CNC controller and single block to test program
- procedures for basic editing of computer program to reflect specific job requirements
- typical machine malfunctions
- tool wear and the effect of wear on product or part specifications
- procedures to be followed once tool wear has been detected
- pre-set tool replacement procedures
- adjustment procedures of tool offsets
- effect of adjustments on machining specifications

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• communicate effectively with others involved in or affected by the work</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• conduct CNC machining of a range of engine components according to workplace, manufacturer and component supplier requirements</li> <li>• produce engine components that comply with workplace requirements.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> </ul>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"><li>• CNC machines appropriate for machining automotive engine components</li><li>• a range of engine components</li><li>• specifications and work instructions.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of CNC machines</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> <li>• working in proximity to others and site visitors</li> </ul> </li> <li>• personal protective equipment (PPE) required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<b>Environmental requirements</b> include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<b>Engine components</b> may include:	<ul style="list-style-type: none"> <li>• engine blocks</li> <li>• engine cylinder heads</li> </ul>

**Range Statement**

	<ul style="list-style-type: none"><li>• engine manifolds.</li></ul>

## AURTTM3002 Repair bearing tunnels and connecting rods in engines

### Modification History

Release	Comment
Release 2	Replaces AURTTM3002 Repair bearing tunnels and connecting rods in engines (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to repair bearing tunnels and connecting rods in engines. It involves determining the machining process required, selecting the appropriate machine, and performing the machining to specifications and workplace requirements in an engine reconditioning process.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to engine components to be machined, which may include those from light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles. Work is carried out according to award provisions.
-------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to line-bore an engine	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is sourced, procedures and methods are analysed, and <b>appropriate tooling options</b> are selected for line boring an engine</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. Engine is <b>measured</b> and <b>calibration</b> requirements for line boring are determined</p> <p>1.6. <b>Engine block or cylinder head is prepared</b> for line boring</p> <p>1.7. <b>Line-boring machine is prepared</b> to accept cylinder engine block or cylinder head</p> <p>1.8. Engine block or cylinder head is positioned and securely clamped</p>
2. Line-bore tunnels	<p>2.1. Tool is <b>set and locked</b> and a test cut is taken</p> <p>2.2. Engine tunnels are line bored at correct <b>speeds and feed rates</b> without causing damage to components or system</p> <p>2.3. Tunnels are checked/measured with instruments to ensure compliance with specifications</p> <p>2.4. Line-boring operations are completed to required specifications and <b>honing allowances</b></p>
3. Prepare tunnels for honing operations	<p>3.1. Line-bored engine block or cylinder head is cleaned of residue and swarf, and cleaned using appropriate cleaning materials</p> <p>3.2. Honing machine is prepared to accept engine block or cylinder head</p> <p>3.3. Engine block or cylinder head is positioned and securely clamped, and required hone stroke is set</p> <p>3.4. Hone stones are selected and speed is set to achieve required finish</p>
4. Hone engine tunnels	<p>4.1. Tunnels are honed at correct speed and rate to required finish without causing damage to components or system</p> <p>4.2. Components are checked/measured with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>instruments to ensure compliance with specifications</p> <p>4.3.Honing operations are completed in line with required bore to journal clearance</p>
5. Prepare connecting rods for repair operations	<p>5.1.Connecting rods are checked for straightness and straightened as necessary</p> <p>5.2.Connecting rod-boring machine is prepared to accept connecting rod</p> <p>5.3.Connecting rod is positioned ready for honing, and securely clamped if machining</p>
6. Repair connecting rod	<p>6.1.Connecting rod little-ends are resized according to workplace requirements</p> <p>6.2.Connecting rod big-ends are resized according to workplace requirements</p> <p>6.3.Connecting rods are repaired without causing damage to components or system</p> <p>6.4.Components are checked/measured with instruments to ensure compliance with specifications</p>
7. Finalise repair process	<p>7.1.Engine block or cylinder head is thoroughly cleaned of residue honing oil</p> <p>7.2.Final inspection is made to ensure finished work complies with workplace requirements</p> <p>7.3.Bright surfaces are treated with a protective coating to prevent rust if engine block or cylinder head is to be stored</p> <p>7.4.Engine block or cylinder head is prepared for further processing or storage</p> <p>7.5.Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - sharpen and shape cutting tools
  - identify worn and damaged cutting tools
  - mount and position cutting tools
  - set machining parameters to achieve job requirements and maximise tool life
  - use appropriate and sufficient clamping/mounting of the work piece
  - use coolant and lubricant correctly
  - check for conformance to specifications
  - measure to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - calculate time
  - assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to:
  - search and gather supporting material
  - take, locate, download and view digital images

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - correct personal protective equipment (PPE) for handling engine blocks, using line-boring and honing machines, and using chemical cleaning and lubricating agents
  - hazards associated with rotating line-boring and honing tools
- types, characteristics and limitations of line-boring and honing machines, including:
  - types and grades of boring tools
  - types and grades of honing stones
- tool sharpening and dressing methods, including:
  - maintaining sharpness of tools throughout boring operations
  - dressing procedures of stones
- line boring methods and procedures, including:
  - setting engine block or cylinder head into line boring machine and aligning to the centre line of the boring bar
  - setting the line boring tool to the correct diameter and locking the boring tool
  - welding and relocating main bearing caps
  - machining top and bottom of bearing caps
  - preparing line borer to accept engine block or cylinder head
  - machining parting faces of the cylinder head camshaft bearing
  - line boring cylinder head camshaft tunnels
  - line boring damaged tunnels to oversize to accept sleeving operation
  - machining parting faces of the cylinder block
  - line boring cylinder block tunnels to accept oversized back bearings
  - line boring tunnels to leave a honing allowance
  - line boring rear main bearing areas and thrust-bearing diameters to original size
  - machining and squaring thrust faces in engine blocks
  - line boring semi-finished camshaft bearings
- line-honing methods and procedures, including:
  - procedures for setting the diameter of the honing stone
  - rotational and oscillating speeds of honing bar
- connecting rod repair methods and procedures, including:
  - removing rod eye bush and measuring rod eye bore
  - checking alignment of connecting rod and straightening the connecting rod
  - boring rod eye for over-sized bush
  - removing cap bolts and nuts and machining parting faces on connecting rod and big-end cap
  - resizing big-end for standard and oversize back bearings
  - fitting new little-end bushes and pin boring little-ends

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques for repairing bearing tunnels and connecting rods appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• line bore and hone a range of multi-cylinder engines according to workplace, manufacturer and component supplier requirements</li> <li>• repair a range of connecting rods according to workplace, manufacturer and component supplier requirements</li> <li>• complete work without damage to tools and equipment or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the</p>

**Evidence Guide**

	<p>assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• multi-cylinder engine blocks and cylinder heads appropriate to the workplace, including in-line multi-cylinder engine blocks, vee-configuration multi-cylinder engine blocks, and overhead camshaft cylinder heads</li> <li>• fixed and portable hand and power tools and equipment appropriate to line boring and honing engine blocks and cylinder heads</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with repairing bearing tunnels and connecting rods</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Appropriate tooling options</b> may include:	<ul style="list-style-type: none"> <li>• grades of tool tips</li> <li>• hand-held and machine-operated hones</li> <li>• types and grades of honing stones</li> <li>• types of boring tools.</li> </ul>
<b>Tooling and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• arbors</li> <li>• clamps</li> <li>• dial bore gauges</li> <li>• dial indicators</li> <li>• inside and outside micrometers.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> </ul> </li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• toxic substances</li> <li>• working in proximity to others and site visitors</li> <li>• PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<i>Measured and calibration</i> may include:	<ul style="list-style-type: none"> <li>• determining sizes of cut and required honing allowances</li> <li>• determining tunnel to journal clearance.</li> </ul>
<i>Engine block or cylinder head is prepared</i> may include:	<ul style="list-style-type: none"> <li>• removing main bearings from engine block</li> <li>• machining bearing cap parting faces</li> <li>• fitting bearing caps to required tensions.</li> </ul>
<i>Line-boring machine is prepared</i> must include:	<ul style="list-style-type: none"> <li>• clamps</li> <li>• jigs</li> <li>• rails.</li> </ul>
<i>Set and locked</i> will include:	<ul style="list-style-type: none"> <li>• setting the tool to the required diameter</li> <li>• locking the tool according to manufacturer specifications.</li> </ul>
<i>Speeds and feed rates</i> will include:	<ul style="list-style-type: none"> <li>• those correct for tunnel material and diameter.</li> </ul>
<i>Honing allowances</i> will include:	<ul style="list-style-type: none"> <li>• those that are dependent on the speed and feed and nose radius of the boring tool.</li> </ul>

## AURTTM3003 Apply metal to rebuild engine components

### Modification History

Release	Comment
Release 2	Replaces AURTTM3003 Apply metal to rebuild engine components (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to use industry-accepted methods to apply metal spray, hard chrome and weld materials to rebuild components. It involves determining repair requirements and rebuilding engine components in an engine reconditioning process.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to engine components to be rebuilt, which may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p> <p>Work is carried out according to award provisions.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake metal building procedures	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is sourced, procedures and methods are analysed, and <b>appropriate tooling options</b> are selected for rebuilding engine components</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. <b>Engine component is prepared</b> for metal application</p>
2. Apply metal to engine components	<p>2.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. Metal application process is used to rebuild damaged <b>engine components</b></p> <p>2.3. <b>Rebuild method</b> is completed in readiness for further repair without causing damage to components or system</p>
3. Perform necessary machining to rebuild component	<p>3.1. Machining is carried out according to workplace procedures and without causing damage to component or system</p> <p>3.2. Component is checked and measured with instruments to ensure compliance with specifications</p> <p>3.3. Machining operations are completed to specifications</p>
4. Finalise rebuild process	<p>4.1. Surfaces of component are finished to manufacturer and component supplier specifications and allowable tolerances</p> <p>4.2. Finishing work is completed without causing damage to the component</p> <p>4.3. Surfaces are protected with a rust prevention solution</p> <p>4.4. Components are prepared for further process or storage</p> <p>4.5. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - identify and rectify weld defects
  - identify worn and damaged cutting and grinding tools
  - mount and position cutting and grinding tools
  - set machining parameters to achieve job requirements and maximise tool life
  - measure to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members with regard to workplace instructions
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - calculate time
  - assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- planning and organising skills to:
  - make good use of time and resources
  - set priorities
  - monitor own performance
- self-management skills to:
  - manage risks and hazards associated with machinery for applying metal, cutting and grinding
  - optimise workflow and productivity

**Required knowledge**

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - personal protective equipment (PPE) for using welding equipment and machines to rebuild engine components
  - hazards associated with welding equipment
- procedures for identifying existing heat treatment processes, including nitriding, tufftriding, and induction hardening
- engine and engine component structures
- specific welding procedures, including:
  - manual metal arc welding (MMAW)
  - gas metal arc welding (GMAW)
  - gas tungsten arc welding (GTAW)
  - flux core
  - metal spraying
  - submerged arc
- procedures for hard chrome application
- repair operations for components, including:
  - crankshaft journals, camshaft journals and lobes, seal areas, crankshaft nose and keyway, and pulley retaining thread damage
  - crankshaft radius treatment, including:
    - shot peening
    - radius rolling
    - deep fillet radius rolling
- Australian standards relevant to engine reconditioning

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques for applying metal appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• rebuild a range of engine components according to workplace, manufacturer and component supplier requirements</li> <li>• complete work without damage to tools and equipment or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources should be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• crankshafts, camshafts, engine cylinder head assemblies, and engine block assemblies</li> </ul>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"><li>• material relevant to rebuilding engine components</li><li>• equipment and hand and power tools appropriate to rebuilding engine components</li><li>• specifications and work instructions.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Information</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with rebuilding engine components</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b><i>Appropriate tooling options</i></b> may include:	<ul style="list-style-type: none"> <li>• grades of tool tips necessary to produce required finish</li> <li>• MMAW, GMAW, GTAW, flux core and metal spraying</li> <li>• types and grades of grinding stones</li> <li>• types of facing tools.</li> </ul>
<b><i>Tools and measuring equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• clamps</li> <li>• dial indicators</li> <li>• hand and power tools</li> <li>• inside and outside micrometers</li> <li>• lifting equipment</li> <li>• welding equipment, such as: <ul style="list-style-type: none"> <li>• roll welders</li> <li>• short arc welding equipment</li> <li>• gas metal arc welders</li> </ul> </li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• gas tungsten arc welders</li> <li>• metal spraying equipment</li> <li>• hard chroming equipment.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> <li>• working in proximity to others and site visitors</li> </ul> </li> <li>• PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<b>Environmental requirements</b> include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<b>Preparing the engine component</b> may include:	<ul style="list-style-type: none"> <li>• cleaning the component using appropriate cleaning methods</li> <li>• fitting and clamping the component.</li> </ul>
<b>Engine components</b> may include:	<ul style="list-style-type: none"> <li>• alloy and cast iron cylinder heads</li> <li>• camshaft lobes and journals</li> <li>• crankshaft and camshaft bearing faces</li> <li>• crankshaft journals and thrust surfaces</li> <li>• piston and connecting rod assemblies.</li> </ul>
<b>Rebuild methods</b> will include:	<ul style="list-style-type: none"> <li>• building up lobes/journals by welding, metal spraying and hard chroming</li> <li>• repairing cast iron cylinder heads</li> <li>• repairing cracks in alloy cylinder heads.</li> </ul>

## AURTTM3004 Assemble engine blocks and sub-assemblies

### Modification History

Release	Comment
Release 2	Replaces AURTTM3004 Assemble engine blocks and sub-assemblies (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to assemble a short engine block and sub-assemblies and check clearances and tolerances.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to a range of engine blocks and sub-assemblies in an engine reconditioning process. Engine cylinder blocks to be assembled may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p> <p>This unit does not cover fitting semi-finished sleeves nor boring and honing cylinders (see AURTTM3009 Fit sleeves and bore and hone engine cylinders).</p> <p>Work is carried out according to award provisions.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to assemble engine block and sub-assemblies	<p>1.1 <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2 <b>Information</b> is sourced, procedures and methods are analysed, and <b>appropriate tooling options</b> are selected for rebuilding engine components</p> <p>1.3 <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4 Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5 <b>Technical information</b> for assembly is sourced, and <b>support equipment</b> and <b>facilities</b> are identified and prepared</p> <p>1.6 <b>Pre-assembly cleaning</b> of <b>engine components</b> is carried out and components are laid out in logical order</p> <p>1.7 <b>Replacement component parts</b> are checked for size and suitability</p>
2. Check clearances and tolerances	<p>2.1. <b>Clearances and tolerances are measured</b> according to workplace requirements</p> <p>2.2. <b>Clearances and tolerances are adjusted</b> without causing damage to components or system according to workplace requirements</p>
3. Assemble engine sub-assemblies	<p>3.1. <b>Engine sub-assemblies are assembled</b> in correct order and without damage, according to workplace requirements, manufacturer and component supplier specifications, established industry guidelines and relevant Australian standards</p> <p>3.2. Relevant measurements of engine sub-assemblies are made</p> <p>3.3. Engine sub-assemblies are adjusted without causing damage to components or systems</p>
4. Assemble engine blocks	<p>4.1. <b>Engine blocks are assembled</b> in correct order and without damage, according to workplace requirements, manufacturer and component supplier specifications, established industry guidelines and relevant Australian standards</p> <p>4.2. Relevant measurements of components are made</p> <p>4.3. Engine blocks are adjusted without causing</p>

ELEMENT	PERFORMANCE CRITERIA
	damage to components or system
5. Finalise assembly process	5.1. Final inspection is made to ensure work is to workplace requirements 5.2. Engine block is prepared for storage to workplace expectations 5.3. Workplace documentation is processed according to workplace procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - clean parts using appropriate solutions and procedures
  - determine size and suitability of replacement components
  - measure to specified tolerances and dimensions
  - use appropriate tools for assembling engine blocks and sub-assemblies
  - perform necessary machining operations for assembling engine blocks and sub-assemblies
- communication skills to:
  - follow oral instructions
  - work as part of a team
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to use mathematical ideas and techniques to:
  - assess tolerances and clearances
  - calculate component dimensions to the required tolerances
- problem-solving skills to:
  - prevent time and material wastage
  - plan and sequence operations
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to search and gather supporting material

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - personal protective equipment (PPE) for handling engine blocks and sub-assemblies and using chemical cleaning agents
  - correct operation of specialised equipment, such as heating torches, ovens and presses

- procedures for handling freezing substances, such as liquid nitrogen
- manual-handling techniques, including:
  - using machinery for lifting engine blocks and engine components
  - using slings, chains and other lifting equipment according to safe work practices
- procedures for clearance testing and adjusting or machining components, including:
  - piston to connecting rod big-end alignment
  - big-end bearing crush with bearing blue
  - piston ring end gap, back clearance and side clearance
  - bearing crush with bearing blue and measuring clearances
  - semi-flanged thrust bearings
  - finished camshaft bearings and measuring clearances
  - camshafts and cam followers
  - camshaft endfloat
  - crankshaft endfloat
  - gear backlash
  - oil pump sealing and pick-up oil piping
- procedures for assembling processes and components, including:
  - reasons for and methods of producing a clean assembly space
  - performing a final wash of components prior to re-assembly
  - welsh plugs and oil gallery plugs
  - piston and connecting rod assemblies
  - big-end bearings
  - piston rings to pistons
  - main bearings and thrust washers
  - semi-flanged thrust bearings
  - crankshafts, including protection measures for crankshaft journals, bearings, rings and bores
  - finished camshaft bearings
  - camshafts and cam followers
  - timing gears
  - chains and tensioners
  - oil pumps, oil squirters and oil pump pick-ups
  - balance shafts
  - fitting ancillary components, including covers and seals, housings, diesel fuel injection pumps, oil coolers, crankshaft pulleys, flywheels and bell-housings
- Australian standards relevant to engine reconditioning

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques for assembling engine blocks and sub-assemblies appropriate to the circumstances</li> <li>• complete the assembly of multi-cylinder blocks, including: <ul style="list-style-type: none"> <li>• measuring and checking against manufacturer and component supplier specifications</li> <li>• carrying out assembly to manufacturer and component supplier requirements without causing damage to components, tools or systems</li> </ul> </li> <li>• complete workplace and equipment records.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• multi-cylinder engines appropriate to the workplace,</li> </ul>

**Evidence Guide**

	<p>including in-line multi-cylinder engine and vee-configuration multi-cylinder engine blocks</p> <ul style="list-style-type: none"> <li>• fixed and portable hand, air and power tools, lifting equipment, torque wrench, measuring equipment and other equipment appropriate to assembling engine blocks and sub-assemblies</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with assembling engines</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Appropriate tooling options</b> may include:	<ul style="list-style-type: none"> <li>• comparator gauges</li> <li>• ring compressors</li> <li>• hand tooling</li> <li>• plasti-gauge</li> <li>• power tooling</li> <li>• torque wrenches.</li> </ul>
<b>Tools and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• clamps</li> <li>• dial indicators</li> <li>• inside and outside micrometers</li> <li>• lifting equipment.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> </ul> </li> </ul>

<b>Range Statement</b>	
	<ul style="list-style-type: none"> <li>• toxic substances</li> <li>• working in proximity to others and site visitors</li> <li>• PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<b><i>Environmental requirements</i></b> include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<b><i>Technical information</i></b> may include:	<ul style="list-style-type: none"> <li>• manufacturer or supplier component specifications.</li> </ul>
<b><i>Support equipment</i></b> includes:	<ul style="list-style-type: none"> <li>• assembly bench</li> <li>• assembly trolleys</li> <li>• engine stands</li> <li>• lifting equipment.</li> </ul>
<b><i>Facilities</i></b> include:	<ul style="list-style-type: none"> <li>• dedicated engine assembly room</li> <li>• dust and gas exhaust units.</li> </ul>
<b><i>Pre-assembly cleaning</i></b> includes:	<ul style="list-style-type: none"> <li>• removing machining residue</li> <li>• ensuring gasket faces are clean and oil and water passageways are clear using tools, such as a rifle brush.</li> </ul>
<b><i>Engine components</i></b> include:	<ul style="list-style-type: none"> <li>• engine blocks, sleeves, crankshafts, camshafts, camshaft followers, piston and connecting rod assemblies, timing chains and gears, oil pumps, oil squirters and coolers</li> <li>• other variables, including ancillary systems and components, such as: <ul style="list-style-type: none"> <li>• cooling systems</li> <li>• exhaust systems</li> <li>• fuel systems.</li> </ul> </li> </ul>
<b><i>Replacement component parts</i></b> may include:	<ul style="list-style-type: none"> <li>• bearing sets</li> <li>• gasket sets</li> <li>• oil pumps</li> <li>• piston rings</li> <li>• pistons</li> <li>• seals</li> <li>• sleeves</li> <li>• timing chains and gears.</li> </ul>
<b><i>Clearances and tolerances that are measured</i></b> include:	<ul style="list-style-type: none"> <li>• back clearance and side clearance</li> <li>• bearing to journal clearances</li> <li>• endfloats</li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• gear backlashes</li> <li>• parent bore to dry sleeve fit</li> <li>• piston ring end-gap</li> <li>• piston to bore clearance</li> <li>• sleeve heights.</li> </ul>
<i>Clearances and tolerances that are adjusted</i> include:	<ul style="list-style-type: none"> <li>• adjusting gear backlash</li> <li>• machining semi-finished thrust bearings</li> <li>• machining piston protrusion and valve pockets</li> <li>• pin-boring connecting rod little-ends.</li> </ul>
<i>Assembling engine sub-assemblies</i> includes:	<ul style="list-style-type: none"> <li>• assembling, aligning and fitting: <ul style="list-style-type: none"> <li>• air brake compressors</li> <li>• oil coolers</li> <li>• oil pumps</li> <li>• pistons.</li> </ul> </li> </ul>
<i>Assembling engine blocks</i> includes:	<ul style="list-style-type: none"> <li>• fitting finished dry interference and slip-fit sleeves, chrome sleeves and wet sleeves</li> <li>• fitting crankshafts, piston assemblies, camshafts, camshaft followers, push rods, oil pumps, timing gears and timing chains</li> <li>• fitting balance weights and timing gears to crankshafts</li> <li>• fitting covers, seals, housings, flywheels and forced air induction assemblies.</li> </ul>

## AURTTM3005 Balance rotating and reciprocating engine components

### Modification History

Release	Comment
Release 2	Replaces AURTTM3005 Balance rotating and reciprocating engine components (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to balance engine rotating and reciprocating components. It includes identifying and confirming work requirements, preparing for work, balancing rotating and reciprocating engine components, and completing work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to a range of engine components in an engine reconditioning process. Engine cylinder blocks to be balanced may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p> <p>Work is carried out according to award provisions.</p>
-------------------------	--

## Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to balance rotating and reciprocating engine components	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is sourced, procedures and methods are analysed, and <b>appropriate tooling options</b> are selected for balancing engine components</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. <b>Preparation for balancing</b> the rotating and reciprocating <b>engine components</b> is performed</p> <p>1.6. Balancing machine is prepared to accept component(s)</p>
2. Balance rotating engine components	<p>2.1. Component is mounted and engaged with machine</p> <p>2.2. <b>Balancing procedures of rotating engine component</b> are carried out to workplace requirements</p> <p>2.3. Rotating engine component is balanced without causing damage to component or system</p>
3. Balance reciprocating engine components	<p>3.1. Component is mounted and engaged with machine</p> <p>3.2. <b>Balancing procedures of reciprocating engine component</b> are carried out to workplace requirements</p> <p>3.3. Reciprocating engine component is balanced without causing damage to component or system</p>
4. Finalise balancing process	<p>4.1. Final inspection is made to ensure work is to workplace requirements</p> <p>4.2. Components are cleaned and/or stored to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - identify worn and damaged machine mountings
  - mount and position components
  - set machining parameters to achieve job requirements and maximise tool life
  - set and measure components to specified tolerances and dimensions
  - use appropriate machines to correct imbalance of components
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - work as part of a team
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - record information for use in calculations
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - assess tolerances
  - apply accurate measurements
  - calculate balancing requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component supplier procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to:
  - search and gather supporting material
  - use interfaces to communicate with computerised controls

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - operating principles of component balancing, including:
    - static and dynamic balance
    - inertia
    - internally and externally balanced engines
    - reciprocating mass
    - rotating mass
    - sources of torsional vibration
    - gas pressure
    - purpose of counterweights, torsional vibration dampeners and balance shafts in balancing
    - difference between in-line engine balance, flat-plane and vee-type engine balance
- balancing procedures and techniques, including:
  - procedures for in-line engines, flat-plane crankshafts and vee-type engines
  - procedures for weight-matching the pistons and rod-ends
  - methods of calculating bob-weight values for vee-type engines, including:
    - rotating mass with oil allowance
    - reciprocating mass
    - effect of vee-angle on the total calculation
  - procedures for mounting bob-weights on crankshafts of vee-type engines
  - procedures for balancing internally balanced engines
  - procedures for balancing externally balanced engines
- procedures for adding and removing metal to the crankshaft, including:
  - drilling to remove weight
  - welding to add weight
  - machining and adding heavy metal

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• communicate effectively with others involved in or affected by the work</li> <li>• select methods and techniques to balance engine components appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• balance a range of crankshafts and components according to workplace, manufacturer and component supplier requirements</li> <li>• balance components within workplace timeframes</li> <li>• present components to customer according to workplace requirements.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to balancing rotating and</li> </ul>

<b>Evidence Guide</b>	
	<p>reciprocating engine components</p> <ul style="list-style-type: none"> <li>• equipment and hand and power tools appropriate to balancing rotating and reciprocating engine components</li> <li>• multi-cylinder engines appropriate to the workplace, including in-line multi-cylinder engine and vee-configuration multi-cylinder engine blocks</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Information</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with balancing engine components</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b><i>Appropriate tooling options</i></b> may include:	<ul style="list-style-type: none"> <li>• comparator gauges and ring compressors</li> <li>• hand tooling</li> <li>• plasti-gauge</li> <li>• power tooling</li> <li>• torque wrenches.</li> </ul>
<b><i>Tools and measuring equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• balancing equipment</li> <li>• balancing weights</li> <li>• scales.</li> </ul>
<b><i>WHS requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> </ul> </li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• working in proximity to others and site visitors</li> <li>• personal protective equipment (PPE) required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<i>Environmental requirements</i> are to include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<i>Preparation for balancing</i> includes:	<ul style="list-style-type: none"> <li>• thoroughly cleaning all components</li> <li>• checking all components to ensure there is no further machining required.</li> </ul>
<i>Engine components to be balanced</i> include:	<ul style="list-style-type: none"> <li>• crankshafts</li> <li>• flywheels</li> <li>• piston and connecting rod assemblies.</li> </ul>
<i>Balancing procedures of rotating engine components</i> include:	<ul style="list-style-type: none"> <li>• using different machines to determine positions where material is to be removed or added</li> <li>• different methods of removing or adding weight to engine components, such as drilling, welding, machining and adding metal slugs.</li> </ul>
<i>Balancing procedures of reciprocating engine components</i> include:	<ul style="list-style-type: none"> <li>• using different scales and associated equipment to measure the weight of the piston and connecting rod assembly.</li> <li>• different methods of removing or adding weight to piston and connecting rod assembly, such as drilling, welding, machining and adding metal slugs.</li> </ul>

## AURTTM3006 Perform advanced machining and blueprinting of engine components

### Modification History

Release	Comment
Release 2	Replaces AURTTM3006 Perform advanced machining and blueprinting of engine components (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit describes the performance outcomes required to compare components to original manufacturer and component supplier specifications and match them in relation to weight, size and capacity.  No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the blueprinting of internal combustion engine components. Engine cylinder blocks to be blueprinted and machined may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.
-------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to blueprint engines	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is sourced, procedures and methods are analysed, and appropriate tooling options are selected for machining and blueprinting engines</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. Measuring and/or calibration requirements for blueprinting and machining are determined</p> <p>1.6. Cylinder block and cylinder head are prepared for blueprinting and machining</p>
2. Measure components	<p>2.1. Information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. Components are measured and clearances and tolerances are calculated</p>
3. Machine components	<p>3.1. Components are adjusted and/or machined to meet manufacturer and component supplier specifications</p> <p>3.2. Blueprinting and machining of components are achieved without causing damage to components or system</p>
4. Finalise blueprinting and machining process	<p>4.1. Blueprinting schedule documentation is completed</p> <p>4.2. Final check is made to ensure finished work complies with workplace requirements</p> <p>4.3. Engine components are prepared for storage according to workplace requirements</p> <p>4.4. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - select and use machines required for blueprinting
  - measure to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component supplier procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
  - technology skills to use communication devices to search and gather supporting material

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - personal protective equipment (PPE) for handling engine blocks and using machines
  - equipment relevant to blueprinting

- procedures for blueprinting cylinder block, including:
  - testing the engine block, including sonic testing and crack testing
  - line boring main tunnels to produce datum/zero point
  - chasing threads to remove debris
  - fitting bearings and checking crush with bearing blue
  - recording sizes of main bearing tunnel with bearings fitted
  - selecting bearings for correct grading and clearances
  - resizing connecting rods and fitting new bolts to ensure centre-to-centre length is correct
  - cross-drilling crankshaft to enhance oil flow
  - grinding crankshaft to suit bearings and to achieve desired clearance and phasing consistency
  - sleeving lifter bores to centreline of camshaft
  - fitting semi-finished camshaft bearings and line boring to ensure crankshaft to camshaft alignment
  - squaring up the deck to the crankshaft tunnel to ensure crankshaft is parallel to block
  - chasing head bolt retaining threads
  - fitting torque plate to bore and hone
  - honing cylinders, matching individual pistons to respective bores
  - dummy assembling to achieve consistent piston height for desired compression ratio and checking rotational clearance
  - setting ring end gap
- procedures to blueprint cylinder heads, including:
  - machining for larger valves
  - operating flow bench
  - porting for improved air flow and to balance combustion chambers
  - calculating capacity of individual combustion chambers and machining combustion chambers to achieve consistency
  - calculating compression ratio
  - selecting camshaft
  - setting valve heights
  - dialling camshaft
  - machining pistons to achieve desired compression ratio
  - setting rocker geometry, including length and sweep
- Australian standards relating to engine reconditioning

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques for machining and blueprinting appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• complete blueprinting of a range of engines to workplace requirements</li> <li>• conduct machining operations according to workplace, manufacturer and component supplier requirements</li> <li>• complete work without damage to tools and equipment or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> </ul>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"> <li>engines appropriate to the workplace, including in-line multi-cylinder engine blocks and vee-configuration multi-cylinder engine blocks</li> <li>fixed and portable hand, air and power tools, and equipment appropriate to blueprinting engines</li> <li>specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with machining and blueprinting engine components</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>

## AURTTM3007 Carry out grinding operations

### Modification History

Release	Comment
Release 2	Replaces AURTTM3007 Carry out grinding operations (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to carry out grinding operations on a range of engine components to specific tolerances. It involves determining engine damage and the required repair action, and preparing and using grinding machines with machine engine components to specifications and workplace requirements.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to determining repair requirements and grinding in an engine reconditioning process. Engine cylinder components to be machined may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to carry out grinding operations	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is sourced, procedures and methods are analysed, and appropriate tooling options are selected for grinding engine components</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. <b>Measuring and calibration requirements</b> for grinding are determined</p>
2. Grind engine components	<p>2.1. Component is measured prior to grinding to determine depth of grind</p> <p>2.2. Component is positioned in grinder and clamped</p> <p>2.3. Grinding is carried out according to workplace procedures and without causing damage to components or system</p> <p>2.4. Component is checked/measured with instruments to ensure compliance with specifications</p> <p>2.5. Grinding operations are completed to specifications</p>
3. Finalise grinding process	<p>3.1. Components are thoroughly cleaned</p> <p>3.2. Final inspection is made to ensure finished work complies with workplace requirements</p> <p>3.3. Engine components are prepared for storage according to workplace requirements</p> <p>3.4. Machined surfaces are treated with a protective coating to prevent rust if component is to be stored</p> <p>3.5. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - select correct grinding wheel for the application
  - identify irregularities in the grinding process
  - set machining parameters to achieve job requirements and maximise tool life
  - use appropriate and sufficient clamping or mounting of the work piece
  - use coolant and lubricant correctly
  - measure to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - calculate time and assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component supplier procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to:
  - search and gather supporting material
  - take, locate, download and view digital images

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - personal protective equipment (PPE) for using grinding machines and chemical cleaning and lubricating agents
  - hazards associated with rotating grinding machines
- manual-handling techniques relating to grinding crankshafts
- types, characteristics and limitations of crankshaft grinding machines, including:
  - hand-held grinding machines for oil hole dressing
  - types and grades of grinding wheels, including grit grades
- dismantling procedures of crankshafts, including:
  - numbering and removing counterweights
  - drive gears
  - oil seal sleeves and dowels
- inspection procedures, including:
  - identifying crankshaft material
  - identifying heat treatment process, including nitriding, tufftriding and induction hardening
  - identifying radius treatment, including deep fillet rolling, radius rolling and shot peening
  - checking alignment of crankshaft in vee-blocks
  - measuring journals against specifications and identifying damaged journals
- testing procedures of crankshaft, including:
  - crack testing coil shot and end shot
  - testing hardness of journals
- procedures for preparing the crankshaft grinding wheel, including:
  - wheel preparation, including selecting wheel to suit radius and journal width of crankshaft
  - dressing procedures of wheel, including:
    - types of diamonds for front and radius dressing
    - procedure for dressing the wheel to suit crankshaft radius
    - procedure for dressing front of wheel
- procedures for big-end grinding, including:
  - setting crankshaft rotation speed according to crankshaft material
  - setting crankshaft grinder wheelhead movement
  - measuring journal diameters and widths during grinding with constant measuring gauge
- procedures for adjusting the crankshaft grinder to suit main bearing journal grinding, including:
  - removing the crankshaft from the grinder
  - setting chuck offsets for main bearings and adjusting counter weights to suit
  - fitting the crankshaft in the correct direction of rotation and ensuring that

- critical surfaces are not damaged by the chuck
- setting datum in relation to rear flange and nose for main bearing grinding
- procedures for main bearing journal grinding, including:
  - setting crankshaft rotation speed according to crankshaft material
  - setting crankshaft grinder wheelhead movement
  - measuring journal diameters and widths during grinding with constant measuring gauge
- procedures for finishing journal grinding, including:
  - chamfering and dressing oil holes
  - finishing journals according to grade of belt and required finish
  - setting up and facing flange ends and seal areas
- final grinding inspections of crankshaft, including journal surface finish, taper, ovality, barrelling, hour-glass, grinding chatter and journal burning
- methods of correcting faults
- procedures for removing crankshaft from grinder and checking crankshaft for straightness in vee-blocks using dial indicator
- Australian standards relating to engine reconditioning

## Evidence Guide

Evidence Guide	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"><li>• observe safety procedures and requirements</li><li>• select methods and techniques for grinding operations appropriate to the circumstances</li><li>• complete preparatory activity in a systematic manner</li><li>• grind a range of engine components according to workplace, manufacturer and component supplier requirements</li><li>• complete work without damage to tools and equipment or injury to persons.</li></ul>

<b>Evidence Guide</b>	
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• crankshafts and camshafts appropriate to the workplace, including in-line multi-cylinder engine blocks and vee-configuration multi-cylinder engine blocks</li> <li>• fixed and portable hand, air and power tools and equipment appropriate to grinding operations</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p>

**Evidence Guide**

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with grinding engine components</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Tools and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• arbors</li> <li>• clamps</li> <li>• dial bore gauges</li> <li>• dial indicators</li> <li>• inside and outside micrometers.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> <li>• working in proximity to others and site visitors</li> </ul> </li> <li>• PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<b>Environmental</b>	<ul style="list-style-type: none"> <li>• clean-up management</li> </ul>

Range Statement	
<i>requirements</i> are to include:	<ul style="list-style-type: none"><li>• dust and noise minimisation</li><li>• waste management.</li></ul>
<i>Measuring and calibration requirements</i> may include:	<ul style="list-style-type: none"><li>• determining journal diameters</li><li>• determining sizes of grind.</li></ul>

## Unit Sector(s)

Competency field	Mechanical Miscellaneous
Sector	Technical - Manufacture

## Custom Content Section

## AURTTM3008 Dismantle and evaluate engine blocks and sub-assemblies

### Modification History

Release	Comment
Release 2	Replaces AURTTM3008 Dismantle and evaluate engine blocks and sub-assemblies (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to dismantle, inspect, evaluate and determine preferred repair action of engine block and sub-assemblies as part of an engine reconditioning process.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to a range of engine blocks and sub-assemblies in an engine reconditioning process.</p> <p>Engine blocks to be dismantled and evaluated may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to dismantle engine block and sub-assemblies	<p>1.1 <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2 <b>Information</b> is accessed, procedures and methods are analysed, and appropriate tooling options are selected for dismantling engines and sub-assemblies</p> <p>1.3 <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4 Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5 Engine is set up for dismantling using appropriate lifting equipment and avoiding fluid spillage</p> <p>1.6 Engine block and <b>sub-assemblies</b> are cleaned in line with appropriate environmental constraints, and <b>positions of auxiliary equipment</b> are recorded</p>
2. Dismantle engine block and sub-assemblies	<p>2.1. Correct information is accessed and interpreted from manufacturer or component supplier specifications</p> <p>2.2. Covers and ancillary components are removed, cleaned and stored without causing damage to components or system according to workshop requirements</p> <p>2.3. Engine blocks and sub-assemblies are dismantled and laid out in a logical order using approved methods, tools and equipment and without causing damage to components or system</p> <p>2.4. Component parts are cleaned using appropriate cleaning agents for the type of material and kept in a logical order in preparation for evaluation</p>
3. Determine repair procedures	<p>3.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>3.2. Engine block and sub-assembly components are inspected, measured and tested against manufacturer and component supplier specifications and tolerances</p> <p>3.3. Inspection, measurement and testing are completed without causing damage to components or system</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4.Engine block and sub-assembly components are evaluated against measurements, tests and inspections made</p> <p>3.5.Repair requirements are identified and reported according to workplace policy and procedures</p> <p>3.6.Workplace documentation is completed and dealt with in line with inspection, measurement and testing outcomes</p>
4. Finalise dismantle and evaluation processes	<p>4.1.Work performed is documented</p> <p>4.2.Final inspection is made to ensure safety features are in place</p> <p>4.3.Engine block and sub-assemblies are prepared for storage according to workplace requirements</p> <p>4.4.Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - dismantle engine blocks without causing damage to components
  - clean parts using appropriate solutions and procedures
  - identify components for re-use or replacement
  - check for abnormal wear and defects
  - check for conformance to specifications
  - measure to specified tolerances and dimensions
  - identify repair procedures
- communication skills to:
  - follow oral instructions
  - work as part of a team
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to use mathematical ideas and techniques to:
  - assess tolerances and clearances
  - apply accurate measurements
  - calculate component dimensions
- problem-solving skills to:
  - prevent time and material wastage
  - plan and sequence operations
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to:
  - search and gather supporting material
  - take, locate, download and view digital images

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - personal protective equipment (PPE) for handling engine blocks and

- sub-assemblies and using chemical cleaning agents
- correct operation of specialised equipment, such as pullers
- manual-handling techniques, including:
  - using machinery for lifting engine blocks and engine components
  - using slings, chains and other lifting equipment according to safe work practices
- dismantling methods and procedures, including:
  - reasons for selecting the chosen tools, techniques and equipment
  - hazards and fluid control measures associated with the removal of engines and engine components, including housekeeping
  - pre-evaluation checks to determine suitability of component to be re-used
  - reasons for checking endfloats before disassembly
  - cleaning solutions and cleaning procedures of components
  - use of pullers, presses and specialised tools, and the application of heat to dismantle components, such as gears, pulleys and dowels
  - procedures for recording the facing directions of pistons, connecting rods, main and big-end caps and positions of removable counterweights and counterweight shafts assemblies
  - precautions to be aware of when removing the connecting rod cap in relation to snap-broken rods
  - removing crankshaft and identifying main bearing caps that have lost register
  - removing dry and wet sleeves
  - dismantling pistons from connecting rods
  - removing camshaft bearings and balance/idler shaft bearings
  - removing welsh plugs and oil gallery plugs
  - removing diesel injection pumps
  - dismantling components that have seized, bent or broken, including seized stud and bolt removal
- measuring, testing and evaluating procedures, including:
  - characteristics of surface finishes and wear patterns as applied to cylinder bores, crankshafts, pistons, gears, cam followers, camshafts, bearings and bushes, block facings, parting faces of connecting rod and main bearing caps
  - crack testing components
  - testing hardness of alloy cylinder blocks, pistons, crankshaft journals and camshaft followers
  - straightness of shafts
  - taper, ovality and wear of:
    - crankshaft and camshaft journals
    - main bearing and connecting rod tunnels
    - cylinder bores in conventional engine blocks and the parent bores of engine blocks with dry sleeves

- camshaft lobe lift
- main bearing tunnels for alignment
- connecting rod alignment and little-end bore size
- cylinder block flatness and deck height
- piston ring land clearance, piston skirt wear and gudgeon pin to piston clearance
- cylinder liner register in both the upper and lower parts of the cylinder block
- oil pump for serviceability
- idler gear hub to bearing clearance
- Australian standards relating to engine reconditioning

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select dismantling and evaluation methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• complete the dismantling and evaluation of a range of engine blocks and sub-assemblies</li> <li>• measure and check work against manufacturer and component supplier specifications</li> <li>• evaluate components according to workplace requirements and specifications</li> <li>• determine required repair procedures</li> <li>• complete the dismantling and evaluation of engine blocks and sub-assembly components within workplace timeframes</li> <li>• complete work without damage to tools and equipment or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> </ul>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• multi-cylinder engine blocks appropriate to the workplace, including those with and without cylinder sleeves</li> <li>• equipment and hand, air and power tools appropriate to dismantling and evaluating engine blocks and sub-assembly components</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with dismantling engine components</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Tools and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• depth micrometers</li> <li>• dial bore gauges</li> <li>• dial indicators</li> <li>• inside and outside micrometers</li> <li>• pullers</li> <li>• other specialised tools.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> <li>• working in proximity to others and site visitors</li> </ul> </li> <li>• PPE required by legislation, regulations, codes of</li> </ul>

Range Statement	
	practice and workplace policies and procedures.
<i>Environmental requirements</i> are to include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<i>Sub-assemblies</i> include:	<ul style="list-style-type: none"> <li>• balance shafts</li> <li>• bearings</li> <li>• belts and pulleys</li> <li>• camshafts</li> <li>• chains</li> <li>• connecting rods</li> <li>• crankshafts</li> <li>• cylinder barrels</li> <li>• cylinder head assemblies</li> <li>• cylinder liners (wet and dry)</li> <li>• gears</li> <li>• idler shafts</li> <li>• oil pumps</li> <li>• pistons</li> <li>• rings.</li> </ul>
<i>Positions of auxiliary equipment</i> may include:	<ul style="list-style-type: none"> <li>• clamps</li> <li>• missing parts</li> <li>• mounting brackets</li> <li>• position of sensors.</li> </ul>

## Unit Sector(s)

Competency field	Mechanical Miscellaneous

## AURTTM3009 Fit sleeves and bore and hone engine cylinders

### Modification History

Release	Comment
Release 2	Replaces AURTTM3009 Fit sleeves and bore and hone engine cylinders (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to fit sleeves to restore engine cylinder blocks and to bore and hone the sleeves to specific tolerances. It involves assessing damage to engine cylinders and determining the required repair action. It requires the ability to fit sleeves as a method of cylinder repair and prepare and use boring and honing machines to machine engine cylinders to specifications and workplace requirements.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to sleeving, reboring and honing in an engine reconditioning process. Engine cylinders to be sleeved, bored and honed may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.
-------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to bore cylinders	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is accessed, procedures and methods are analysed, and appropriate tooling options are selected for fitting sleeves and boring and honing engine blocks</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. <b>Measuring and/or calibration</b> for boring is performed</p> <p>1.6. Engine cylinder block is <b>prepared for boring</b></p> <p>1.7. <b>Reboring machine is prepared</b> to accept cylinder block or barrel</p> <p>1.8. Cylinder block is positioned, securely clamped and limit stop is set</p>
2. Bore cylinders	<p>2.1. Boring operations are performed without causing damage to components or system</p> <p>2.2. Cylinders are checked/measured with instruments to ensure compliance with specifications</p> <p>2.3. Boring operations are completed to required specifications and honing allowances</p>
3. Prepare to sleeve cylinder block	<p>3.1. Tools and equipment for sleeving are selected, checked and prepared for operation</p> <p>3.2. Measuring and/or calibration requirements for sleeving are determined and required sleeve is selected</p> <p>3.3. Engine cylinder block is prepared for sleeving</p>
4. Sleeve engine cylinder blocks	<p>4.1. Sleeving operations are performed without causing damage to components or system</p> <p>4.2. Measuring operations are performed to ensure compliance with specifications</p> <p>4.3. Boring operations are completed to required specifications and honing allowances</p>
5. Prepare cylinders for honing operations	<p>5.1. Tools and equipment for honing are selected, checked and prepared for operation</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.2.Measuring and/or calibration requirements for honing are determined</p> <p>5.3.Bored cylinder is cleaned of residue and swarf, using appropriate cleaning materials for the component</p> <p>5.4.Honing machine is prepared to accept cylinder block or barrel</p> <p>5.5.Cylinder is positioned and securely clamped, and required hone stroke is set</p> <p>5.6.Hone stones are selected and speed is set to achieve required finish and cross hatch</p>
6. Hone cylinders	<p>6.1.Cylinder is honed at correct speed and rate to required finish without causing damage to components or system</p> <p>6.2.Components are checked/measured with instruments to ensure compliance with specifications</p> <p>6.3.Honing operations are completed to specifications, ensuring required piston to bore clearance is achieved</p>
7. Finalise sleeving, boring and honing processes	<p>7.1.Cylinder is thoroughly cleaned of residue honing oil</p> <p>7.2.Final inspection is made to ensure finished work complies with workplace requirements</p> <p>7.3.Machined surfaces are treated with a protective coating to prevent rust if cylinder engine block is to be stored</p> <p>7.4.Engine cylinder block is prepared for storage according to workplace requirements</p> <p>7.5.Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - select correct replacement tip or sharpen tool for material to be bored
  - identify worn and damaged cutting tools
  - mount and position cutting tools
  - set machining parameters to achieve job requirements and maximise tool life
  - use appropriate and sufficient clamping and mounting of the work piece
  - use coolant and lubricant correctly
  - check for conformance to specifications
  - measure to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - calculate time
  - assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component supplier procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to search and gather supporting material

**Required knowledge**

- WHS regulations and requirements, equipment, material and personal safety requirements, including:
  - personal protective equipment (PPE) for handling engine cylinder blocks, using boring and honing machines, and using chemical cleaning and lubricating agents
  - hazards associated with rotating boring and honing tools
- types and application of sleeves, including:
  - dry sleeves, including:
    - interference fit parallel sleeve
    - interference fit flanged sleeves
    - chrome-type finished-to-size dry flanged sleeves
  - wet sleeves, including:
    - flanged
    - stepped
- sleeve fitting procedures, including:
  - fitting interference sleeves, including fitting parallel sleeves to step in parent bore
  - fitting wet sleeves
- types, characteristics and limitations of honing and boring machines, including:
  - types and grades of boring tools
  - types and grades of honing stones
  - hand-held and machine-operated hones
- tool sharpening methods, including:
  - maintaining sharpness of tool throughout boring operations
  - compensation methods for tool wear throughout boring operations
- boring methods and procedures, including:
  - determining required size of bore, including honing allowance
  - preparing the engine cylinder block for boring and setting engine cylinder block into boring machine, including jigs, rails and clamps
  - setting the boring tool to the correct diameter, locking the boring tool and setting the limit stop
  - reasons for taking a test cut
  - speed and feed rates of the boring tool for differing materials, such as alloysil or nicolsil, and for bore diameters
  - methods for setting the speed and feed rate of the boring tool
- honing methods and procedures, including:
  - cleaning the engine cylinder block before and after honing
  - preparing portable and stationary honing machines, setting engine cylinder block into honing machine and setting hone stroke

- setting honing speeds and feed rates to achieve required finish
- methods of measuring bores for taper, ovality and barrelling
- types and application of cleaning, lubricating and protective agents, including:
  - material suitability
  - application of lubricating agents for different speeds and feed rates of boring machines and honing machines
  - hazards associated with chemical cleaning and lubricating agents
- Australian standards relating to engine reconditioning

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select boring and honing methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• fit a range of sleeves to engines according to workplace, manufacturer and component supplier requirements</li> <li>• bore and hone a range of multi-cylinder engines according to workplace, manufacturer and component supplier requirements</li> <li>• complete work without damage to tools and equipment, or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• multi-cylinder engine blocks appropriate to the workplace, including in-line multi-cylinder engine blocks and vee-configuration multi-cylinder engine blocks</li> <li>• fixed and portable hand, air and power tools and equipment appropriate to reboring and honing cylinders and barrels</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with fitting sleeves to engine cylinder blocks and boring and honing engine cylinders</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Tools and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• arbors</li> <li>• clamps</li> <li>• dial bore gauges</li> <li>• dial indicators</li> <li>• inside and outside micrometers</li> <li>• press</li> <li>• pullers.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> </ul> </li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• working in proximity to others and site visitors</li> <li>• PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<i>Environmental requirements</i> are to include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<i>Measuring and/or calibrating</i> may include:	<ul style="list-style-type: none"> <li>• determining piston to bore clearance</li> <li>• determining sizes of cut</li> <li>• determining required honing allowance.</li> </ul>
<i>Preparing for boring</i> may include:	<ul style="list-style-type: none"> <li>• removing main bearings from engine block</li> <li>• fitting a torque plate to engine block.</li> </ul>
<i>Preparing reboring machine</i> must include:	<ul style="list-style-type: none"> <li>• clamps</li> <li>• jigs</li> <li>• rails.</li> </ul>

## AURTTM3010 Heat treat, straighten and reclaim engine components

### Modification History

Release	Comment
Release 2	Replaces AURTTM3010 Heat treat, straighten and reclaim engine components (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to use industry-accepted methods to apply heat treatment and straightening techniques when reclaiming engine components.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to determining repair requirements and reclaiming engine components in an engine reconditioning process. Engine components to be reclaimed may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p>
-------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake heat treatment procedures	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is accessed, procedures and methods are analysed, and appropriate tooling options are selected for reclaiming engine components</p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. Engine component is <b>prepared</b> for heat treatment</p>
2. Heat treat engine components for reclamation	<p>2.1. Engine component specifications are accessed and interpreted from manufacturer and component supplier information to determine heat treatment method</p> <p>2.2. Heat treating methods are used to repair damaged or undersized <b>engine components</b></p> <p>2.3. <b>Reclamation method</b> is completed in readiness for further repair</p> <p>2.4. Work is completed without causing damage to components or system</p> <p>2.5. Components are measured against manufacturer and component supplier specifications and allowable tolerances</p>
3. Straighten engine components for reclamation	<p>3.1. Engine component specifications are accessed and interpreted from manufacturer and component supplier information to determine straightening method</p> <p>3.2. Components are mounted and clamped in straightening equipment</p> <p>3.3. Engine components are straightened using acceptable reconditioning methods to comply with Australian standards</p> <p>3.4. Work is completed without causing damage to components or system</p> <p>3.5. Components are measured against manufacturer and component supplier specifications and allowable tolerances</p>
4. Perform necessary	4.1. Components are machined and finished to

ELEMENT	PERFORMANCE CRITERIA
machining to reclaim components	specifications in readiness for assembly
5. Finalise repair processes	5.1. Surfaces are protected with a rust-prevention solution 5.2. Components are stored to workplace requirements 5.3. Workplace documentation is processed according to workplace procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - prepare heat treatment and engine component straightening tools
  - use workplace technology relating to reclaiming engine components, including specialist reclamation tools and equipment, measuring equipment and computerised technology
  - apply techniques to prevent and rectify distortion
  - sharpen, shape and dress cutting and grinding tools
  - identify worn and damaged cutting and grinding tools
  - mount and position cutting and grinding tools
  - set machining parameters to achieve job requirements and maximise tool life
  - use appropriate and sufficient clamping and mounting of work piece
  - use coolant and lubricant correctly
  - measure to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - calculate time
  - assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component supplier procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- planning and organising skills to:
  - make good use of time and resources

<ul style="list-style-type: none"><li>• set priorities</li><li>• monitor own performance</li><li>• self-management skills to:<ul style="list-style-type: none"><li>• manage risks and hazards associated with:<ul style="list-style-type: none"><li>• applying heat to engine components</li><li>• operating cutting and grinding machinery</li></ul></li><li>• optimise workflow and productivity</li></ul></li></ul>
<b>Required knowledge</b>
<ul style="list-style-type: none"><li>• WHS regulations and requirements, equipment, material and personal safety requirements, including personal protective equipment (PPE) for handling engine components and using specialised equipment, such as:<ul style="list-style-type: none"><li>• heating torches</li><li>• ovens</li><li>• presses</li><li>• straightening tools</li></ul></li><li>• types, characteristics, uses and limitations of reclamation techniques</li><li>• dangers of working with heating equipment</li><li>• effects of heat on different metals and heating procedures</li><li>• component straightening techniques</li><li>• hardening and tempering techniques, including:<ul style="list-style-type: none"><li>• thermal stress relieving to stabilise crankshafts</li><li>• applying tuffride and nitride</li></ul></li><li>• Australian standards relating to engine reconditioning</li></ul>

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• communicate effectively with others involved in or affected by the work</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• reclaim a range of engine components according to workplace, manufacturer and component supplier requirements</li> <li>• complete the reclamation of a range of engine components within workplace timeframes</li> <li>• complete work without damage to tools and equipment or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources should be made available for the</p>

<b>Evidence Guide</b>	
	<p>assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• crankshafts, camshafts, balance shafts and engine cylinder head assemblies</li> <li>• material relevant to reclaiming engine components</li> <li>• equipment and hand and power tools appropriate to reclaiming engine components</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the heat treatment, straightening and reclaiming of engine components</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Tools and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• clamps</li> <li>• dial indicators</li> <li>• hand and power tools</li> <li>• inside and outside micrometers</li> <li>• lifting equipment</li> <li>• magnetic chuck</li> <li>• milling machine</li> <li>• surface grinder</li> <li>• welding equipment.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• individual state or territory regulatory requirements</li> <li>• operational risk assessment and treatments associated with: <ul style="list-style-type: none"> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• toxic substances</li> </ul> </li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• working in proximity to others and site visitors</li> <li>• PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>
<i>Environmental requirements</i> are to include:	<ul style="list-style-type: none"> <li>• clean-up management</li> <li>• dust and noise minimisation</li> <li>• waste management.</li> </ul>
<i>Preparation</i> may include:	<ul style="list-style-type: none"> <li>• cleaning the component using appropriate cleaning methods</li> <li>• fitting and clamping the component.</li> </ul>
<i>Engine components</i> may include:	<ul style="list-style-type: none"> <li>• alloy and cast iron cylinder heads</li> <li>• balance shafts</li> <li>• camshafts</li> <li>• crankshafts</li> <li>• piston and connecting rod assemblies.</li> </ul>
<i>Reclamation methods</i> will include:	<ul style="list-style-type: none"> <li>• hardening and tempering engine components</li> <li>• machining engine components</li> <li>• straightening engine components.</li> </ul>

## AURTTM3011 Recondition engine cylinder heads

### Modification History

Release	Comment
Release 2	Replaces AURTTM3011 Recondition engine cylinder heads (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to recondition engine cylinder heads according to workplace requirements. It involves determining engine cylinder head damage and required repair action, and preparing and using reconditioning machines.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at time of endorsement.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to reconditioning cylinder heads in an engine reconditioning setting. Engine cylinder heads to be reconditioned are to include overhead valve and overhead camshaft and may include those of light vehicles, heavy vehicles, agricultural and plant equipment, recreational vehicles and motorcycles.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

### Pre-Requisites

not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake cylinder head reconditioning	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements, including method, process and equipment</p> <p>1.2. <b>Information</b> is accessed, procedures and methods are analysed, and appropriate tooling options are selected for reconditioning engine <b>cylinder heads</b></p> <p>1.3. <b>Tools and measuring equipment</b> are checked and prepared for operation</p> <p>1.4. Safe operating procedures and <b>workplace health and safety (WHS)</b> and <b>environmental requirements</b> are observed throughout the work</p> <p>1.5. Cylinder head is cleaned</p>
2. Dismantle cylinder head	<p>2.1. Cylinder head component specifications are accessed and interpreted from manufacturer and component supplier information to determine correct dismantling procedure</p> <p>2.2. Cylinder head is dismantled and laid out in a logical order using approved methods, tools and equipment without causing damage to components or systems</p> <p>2.3. Component parts are cleaned using cleaning agents appropriate to the type of material and kept in a logical order in preparation for evaluation</p>
3. Use methods to check/test cylinder head	<p>3.1. Cylinder head is pressure and/or crack tested</p> <p>3.2. Cylinder head and components are <b>inspected, measured and tested</b> against manufacturer and component supplier specifications</p> <p>3.3. Inspection, measurement and testing are completed without causing damage to component or system</p>
4. Recondition component parts	<p>4.1. Components are <b>adjusted and/or machined</b> to meet manufacturer and component supplier specifications</p> <p>4.2. Adjustments and/or machining of components are achieved without causing damage to components or system</p> <p>4.3. Work is carried out according to established industry guidelines</p>
5. Assemble cylinder head	<p>5.1. Cylinder head is assembled without causing damage to components or system</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.2.Assembly is carried out to comply with manufacturer and component supplier specifications, established industry guidelines and Australian standards</p> <p>5.3.Assembly activities are carried out according to industry regulations and guidelines, OHS legislation, and workplace procedures and policies</p>
6. Carry out testing and adjustment procedures	<p>6.1.Testing and adjustment are carried out to comply with manufacturer and component supplier specifications, established industry guidelines and Australian standards</p> <p>6.2.Tests and adjustments are completed without causing damage to components or system</p> <p>6.3.Tests and adjustments are performed using industry-approved procedures and equipment</p>
7. Finalise cylinder head reconditioning	<p>7.1.Work performed is documented</p> <p>7.2.Final inspection is made to ensure surfaces are protected</p> <p>7.3.Engine cylinder head is prepared for storage according to workplace requirements</p> <p>7.4.Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - select correct replacement tip or sharpening tool for material to be machined
  - identify worn and damaged cutting tools, pilots and arbors
  - mount and position cutting tools
  - set machining parameters to achieve job requirements and maximise tool life
  - use appropriate and sufficient clamping or mounting of the work piece
  - check that valve seats conform to specifications and workplace requirements
  - set and measure adjustments to specified tolerances and dimensions
- communication skills to:
  - follow oral instructions
  - report deviations from specifications
  - interact with customers and team members
- literacy skills to:
  - read and interpret routine job instructions, specifications, drawings and standard operating procedures
  - identify and analyse technical information
  - understand quality procedures
- numeracy skills to use mathematical ideas and techniques to:
  - calculate time
  - assess tolerances
  - apply accurate measurements
  - calculate material requirements
  - establish quality checks
- problem-solving skills to:
  - locate, interpret and apply workplace policies and procedures, including manufacturer and component supplier procedures
  - identify and avoid planning and scheduling problems
  - prevent time and material wastage
  - organise work and plan processes
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to use communication devices and computerised equipment to:
  - search and gather supporting material

- take, locate, download and view digital images

### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements, including personal protective equipment (PPE) for handling engine cylinder heads and using specialised equipment, such as:
  - facing machines
  - valve refacers
  - valve spring compressors
  - ovens and presses
- procedures for removing cylinder head from engine block
- dismantling methods and procedures
- cleaning methods and procedures
- procedures for measuring, testing and evaluating cylinder heads, including:
  - testing hardness of aluminium alloy cylinder heads and procedures for re-hardening aluminium alloy cylinder heads
  - visual inspections
  - cylinder head crack testing, including:
    - dye-penetrant testing
    - wet and dry magnetic particle testing
    - vacuum testing
    - pressure testing
  - inspecting valve guides and valve seats
- procedures for measuring, testing and evaluating associated parts, including inspecting camshafts, valves, valve springs, valve spring seats, valve spring retainers, collets and lash caps, rocker arms, rocker shafts and pushrods
- procedures for repairing cylinder heads and associated components, including:
  - heat treating aluminium alloy cylinder heads
  - straightening cylinder heads
  - repairing cracks in cylinder heads
  - welding aluminium alloy and cast iron cylinder heads
  - types of surface finishes for different cylinder head gaskets
  - surfacing cylinder heads, including manifold faces
  - repairing valve guides, valve seats, rocker arms and rocker shafts
  - refacing valves in valve refacer
  - fitting injector tubes and pre-combustion chambers
  - cleaning cylinder heads of residue and swarf
- procedures for assembling cylinder heads, including:
  - refitting welsh plugs and oil gallery plugs, valves, springs, spring seats, retainers, collets lash caps, camshafts, rocker gear, cam followers and associated components

- reasons for setting valve timing before fitting cylinder head to block
- evaluating and setting rocker arm geometry
- preparing cylinder block to accept cylinder head
- fitting head gaskets and cylinder heads to engine blocks
- tightening procedures of cylinder head bolts
- Australian standards relating to engine reconditioning

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select reconditioning methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• conduct reconditioning of a range of cylinder heads according to workplace, manufacturer and component supplier requirements</li> <li>• complete reconditioning of cylinder heads within workplace timeframes</li> <li>• complete work without damage to tools and equipment or injury to persons.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Workplace environment that accurately reflects performance in a real workplace setting. Performance is demonstrated consistently over a period of time and in a suitable range of contexts.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate worksite</li> <li>• cylinder heads appropriate to the workplace,</li> </ul>

<b>Evidence Guide</b>	
	<p>including multi-valve, OHV and OHC cylinder heads</p> <ul style="list-style-type: none"> <li>• fixed and portable hand, air and power tools and equipment appropriate to reconditioning cylinder heads</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure its correct interpretation and application.</p> <p>Assessment must confirm that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Information</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry, including Australian Design Rules</li> <li>• safe work procedures relating to the operation of machinery associated with reconditioning cylinder heads</li> <li>• verbal, written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches.</li> </ul>
<b>Cylinder heads</b> may include:	<ul style="list-style-type: none"> <li>• overhead cam (OHC)</li> <li>• overhead valve (OHV).</li> </ul>
<b>Tools and measuring equipment</b> may include:	<ul style="list-style-type: none"> <li>• arbors</li> <li>• clamps</li> <li>• depth micrometer</li> <li>• dial bore gauge</li> <li>• dial indicator</li> <li>• inside and outside micrometer</li> <li>• inside calliper</li> <li>• shim grinder</li> <li>• snap gauge</li> <li>• surfacing machine</li> <li>• vacuum tester</li> <li>• valve refacing machine</li> <li>• valve spring tester.</li> </ul>

Range Statement	
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>operational risk assessment and treatments associated with:               <ul style="list-style-type: none"> <li>electrical safety</li> <li>machinery movement and operation</li> <li>manual and mechanical lifting and shifting</li> <li>toxic substances</li> <li>working in proximity to others and site visitors</li> </ul> </li> <li>PPE required by legislation, regulations, codes of practice and workplace policies and procedures.</li> </ul>

### Modification History

Release	Comment
Release 1	Replaces AURT212670A Service final drive assemblies Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out testing and servicing of final drive assemblies and associated components in an automotive retail, service and/or repair context.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and analysis of results, servicing of final drive assemblies and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence refers to work associated with servicing final drive assemblies on light and heavy vehicles, outdoor power equipment and motorcycles.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake tests of final drive assemblies and associated components</b>	1.1.Nature and scope of work requirements are identified and confirmed 1.2.Operating principles of gear assemblies are explained and understood 1.3.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.4.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.5.Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures 1.6.Resources required for the testing of final drive assemblies and associated components are sourced and support equipment is identified and prepared 1.7.Warnings in relation to working with final drive assemblies and associated components are observed
<b>2. Test final drive assemblies and analyse results</b>	2.1.System tests are implemented in accordance with workplace procedures and manufacturer/ component supplier specifications 2.2.Inspection results are compared with manufacturer/ component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
<b>3. Prepare to service final drive assemblies and associated components</b>	3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2.Procedures and information required are identified and sourced 3.3.Resources required for servicing final drive assemblies are identified and support equipment is identified and prepared
<b>4. Carry out service</b>	4.1.Service is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 4.2.Adjustments made during the service are in

ELEMENT	PERFORMANCE CRITERIA
	accordance with manufacturer/component supplier specifications
<b>5. Prepare vehicle/ equipment for use or storage</b>	5.1. Service schedule documentation is completed 5.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place 5.3. Final inspection is made to ensure work is to workplace expectations 5.4. Vehicle/equipment is cleaned for use or storage to workplace expectations 5.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for the identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and servicing of final drive assemblies, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- operating principles of final drive assemblies
- identification of application, purpose and operating principles
- inspection procedures
- final drive assembly service procedures
- final drive assembly enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting test results
- conducting the service in accordance with workplace and manufacturer/component supplier requirements
- identification of application, purpose and operating principles
- conducting inspection, servicing and operational testing in accordance with workplace and manufacturer/ component supplier specifications
- equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of final drive assemblies
- equipment, hand and power tooling appropriate to the inspection and servicing of final drive assemblies
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Servicing**

Servicing to include fluids, filters, adjustments and operational testing, visual inspections and documents

<b>RANGE STATEMENT</b>	
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances manual lifting and shifting, machinery movement and operation, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include lubricants, minor parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection and servicing of final drive assemblies</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to test and repair driveline components</b>	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for testing and repairing drivelines are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with drivelines are observed</p>
2. <b>Remove driveline components</b>	<p>2.1.Removal procedure information is accessed and interpreted from technical publications prior to removal of components</p> <p>2.2.System components are removed using hand tooling and specialist equipment without causing damage and stored in an appropriate location</p> <p>2.3.Identified component faults are reported to the customer and discussed for further instructions</p>
3. <b>Refit and adjust driveline components</b>	<p>3.1.Removed components are examined for serviceability prior to commencing the refitting procedures</p> <p>3.2.Serviceable components are refitted according to manufacturer/component supplier specifications and instructions</p> <p>3.3.Fluids and lubricants required during the refitting procedures are used in accordance with WHS and manufacturer/component supplier specifications</p> <p>3.4.Refitted components are adjusted according to manufacturer/component supplier specifications</p>
4. <b>Prepare vehicle/ equipment for use or storage</b>	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure safety requirements are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal and refitting of driveline components, including the use of electronics, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- principles of driveline operation
- principles and construction of constant velocity joints
- construction and operation of FWD driveshafts
- types and layout of service/repair manuals (hard copy and electronic)
- dismantling, assembling and adjusting procedures
- methods of using lubricants and sealants
- methods of fitting circlips

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organization and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the servicing of final drive drivelines and associated components, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled and tracked vehicles
- identification of application, purpose and operating principles
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities

<b>RANGE STATEMENT</b>	
	administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and grease guns
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the servicing of final drive drivelines and associated components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURTTQ4004 Overhaul final drive assemblies

### Modification History

Release	Comment
Release 1	Replaces AURT412645A Overhaul final drive assemblies Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the overhaul of gear, chain and tracked type final drive assemblies.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, testing and analysis of results, overhauling of final drive assemblies and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes light and heavy vehicles, including wheeled and tracked driven, motorcycles and outdoor power equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake the overhaul of final drive assemblies	<p>1.1.Nature and scope of the work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for the testing and overhaul of final drive assemblies are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with gear, chain and tracked type assemblies are observed</p>
2. Test final drive assemblies and analyse result	<p>2.1.Methods for the conduct of the system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is processed in accordance with workplace procedures</p>
3. Carry out the overhaul	<p>3.1.Methods for the conduct of the overhaul are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.All adjustments made during the overhaul are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle/machine for use or storage	<p>4.1.Overhaul schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/machine is cleaned for use or stored to</p>

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the overhaul of final drive assemblies, including the use of measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled and tracked type vehicles and equipment
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of wear evaluation methods
- types and layout of service/repair manuals (hard copy and electronic)
- final drive assembly test procedures
- final drive assembly overhaul procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- interpreting the test results
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of the final drive assembly and associated components within workplace timeframes
- presentation of vehicle/machine to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the overhaul of final drive

<b>EVIDENCE GUIDE</b>	
	<p>assemblies</p> <ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to the overhaul of final drive assemblies</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

**RANGE STATEMENT**

work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the overhaul of final drive assemblies</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTR4001 Diagnose complex faults in engine management systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose complex faults in engine management systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or fuel related by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to and includes system fault and failure diagnosis of engine management systems fitted to motorcycles, light vehicles, heavy commercial vehicles, and vehicles in the mining, construction, agricultural and marine environments.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <i>engine management systems</i> are accessed and interpreted</p> <p>1.3. <i>Workplace health and safety (WHS) requirements</i>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies or discrepancies or <i>faults</i> in engine management systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <i>tests</i> and testing process are identified and selected from the range of available options</p> <p>2.4. <i>Testing equipment</i> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <i>diagnostic processes</i> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to engine management systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of engine management systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems

#### Required knowledge

- concepts and principles of mechanical, fuel, electrical and electronic systems related to engine management systems
- concepts, types, functions, operations and limitations of engine management systems and components
- types, functions, operations and limitations of diagnostic testing equipment related to engine management systems
- testing procedures of engine management systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different engine management systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in engine management systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated engine management system faults

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- tools and equipment appropriate for the diagnosis of complex faults in engine management systems
- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Engine management systems</i></b> may include:	<ul style="list-style-type: none"> <li>• petrol throttle-body injection</li> <li>• petrol port-injection</li> <li>• petrol direct-injection</li> <li>• diesel common rail injection.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• fuel system (fuel pump, fuel delivery, pressure regulation and injector faults)</li> <li>• ignition (no-start, no-run, misfire, erratic operation, lack of power)</li> <li>• intake (leakage, noise, vibration, inadequate control)</li> <li>• exhaust (leakage, pressure, abnormal emissions)</li> <li>• cooling (overcooling, insufficient cooler flow, coolant out of specification, improper cooling fan operation, internal corrosion)</li> <li>• indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications</li> <li>• component specifications, component assembly, component damage and system modifications</li> <li>• indirect engine mechanical faults.</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• component wear analysis, compression, cylinder leakage, engine performance, exhaust gas sampling, flow, oil consumption, pressure, sample collection/processing, specific</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>gravity, temperature and vacuum</li> <li>analysis of diagnostic trouble codes (DTCs) and system live data</li> <li>wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes</li> <li>mechanical systems testing</li> <li>road test</li> <li>engine electrical component test.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>computer-based diagnostic systems</li> <li>scan tools</li> <li>cooling system analysers</li> <li>dial gauges</li> <li>exhaust gas analysers</li> <li>micrometers</li> <li>multimeters</li> <li>oscilloscopes</li> <li>pressure gauges</li> <li>stethoscopes</li> <li>temperature gauges</li> <li>tachometers</li> <li>timing lights</li> <li>vacuum gauges</li> <li>verniers</li> <li>dynamometers</li> <li>manufacturer and component supplier testing equipment.</li> </ul>
<b><i>Diagnostic processes</i></b> may include:	<ul style="list-style-type: none"> <li>analysing manufacturer/component supplier specifications, schematics and operational procedures related to engine management systems</li> <li>component substitution</li> <li>six-step troubleshooting plan</li> <li>discover-investigate-fix methodology.</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to carry out fabrication work on exhaust system/components</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for fabrication are sourced and support equipment is identified and prepared
2. <b>Fabricate exhaust system/components</b>	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Exhaust system/components are fabricated using approved methods and equipment, according to specifications and tolerances relative to manufacturer/component supplier specifications 2.3. Exhaust system/component fabrication is completed without causing damage to any component or system 2.4. Fabrication activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
3. <b>Test exhaust system/component</b>	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Exhaust system/components are tested using approved methods and equipment, according to specifications and tolerances relative to manufacturer/component supplier specifications 3.3. Exhaust system/component testing is completed without causing damage to any component or system 3.4. Testing activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. <b>Prepare equipment</b>	4.1. Work performed is documented

ELEMENT	PERFORMANCE CRITERIA
<b>for delivery to customer</b>	4.2.Final inspection is made to ensure work is to workplace expectations 4.3.Equipment is presented to customer to workplace expectations 4.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to fabrication and testing tooling and equipment, including the use of measuring equipment, welding and forming equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- legislation, including Australian Design Rules
- technical information
- fabrication principles and techniques
- exhaust system/component operating principles
- welding techniques
- enterprise quality procedures
- work organisation and planning

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• conducting the fabrication in accordance with workplace requirements</li> <li>• accurately interpreting test results</li> <li>• equipment is presented to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to fabricating exhaust system/ components</li> <li>• equipment, hand and power tooling appropriate to fabricating exhaust system/components</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p>

**EVIDENCE GUIDE**

	<p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fabrication methods**

Fabrication methods include:

- making of system/components
- pipe bending
- welding of components
- manufacture of flanges
- testing of system

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and

<b>RANGE STATEMENT</b>	
	enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for forming, testing equipment, bending equipment, rollers, cutters, presses, measuring equipment, welding equipment and sealing equipment

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include exhaust components, filters, welding consumables and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the fabrication of exhaust system/components</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTW2001 Carry out soft soldering techniques

### Modification History

Release	Comment
Release 1	Replaces AURV223808A Carry out soft soldering techniques Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the skills and knowledge required to required carry out soft soldering processes, including the preparation of materials and equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit applies to retail, service and repair streams.</p> <p>Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling and lifting equipment procedures and organisation insurance requirements.</p> <p>Work requires individuals to demonstrate some discretion, judgement and problem-solving skills in lifting, safety equipment, soft soldering techniques, environmental issues, repair procedures and vehicle operational requirements.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including job sheets, quality and quantity of materials.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety requirements, including personal protection needs, are observed throughout the work.</p> <p>1.4. Materials for repairs and replacements are selected and inspected for quality.</p> <p>1.5. Correct hand, power tools and safety equipment are selected for safe use.</p> <p>1.6. Products are determined to minimise waste materials.</p> <p>1.7. Procedures are identified for maximising energy efficiency whilst completing the job.</p>
2. Prepare components, tools and equipment for soft soldering	<p>2.1. Preparing components, tools and equipment for soft soldering is completed without causing damage to any vehicle or component.</p> <p>2.2. Correct information is accessed and interpreted from appropriate manufacture specifications.</p> <p>2.3. Materials/components to be joined are cleaned and appropriate flux added.</p> <p>2.4. Soldering equipment is prepared/cleaned and appropriate flux added.</p> <p>2.5. All preparation activities are carried out according to a standard that meets industry regulations/guidelines, workplace health and safety (WHS) legislation, statutory legislation and enterprise procedures/policies.</p>
3. Carry out soft soldering of components/materials	<p>3.1. Soft soldering is completed without causing damage to any vehicle or component.</p> <p>3.2. Correct information is accessed and interpreted from appropriate manufacturer's specifications.</p> <p>3.3. Soldering joint is tested prior to placing into service.</p> <p>3.4. Soldering activities are carried out according to a standard that meets industry regulations/guidelines, WHS legislation, statutory legislation and enterprise policy/procedures.</p>
4. Clean up work area	<p>4.1. Material that can be reused is collected and stored.</p>

ELEMENT	PERFORMANCE CRITERIA
and maintain equipment	<p>4.2.Waste and scrap is removed following workplace procedures.</p> <p>4.3.Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p> <p>4.5.Operator maintenance is completed in accordance with manufacturer specifications and site procedures.</p> <p>4.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- reading and interpreting job specifications
- using tools and equipment safely
- accessing relevant workplace information
- maintaining a clean work environment

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements
- soldering procedures
- fluxes and their application
- types of material that can be soldered
- personal safety requirements
- equipment safety requirements
- planing of soft soldering processes and techniques
- workplace safety policies and procedures
- workplace guidelines regarding acceptable tolerance levels to be considered as per job sheet and manufacturer's specification
- procedures for reporting faults and material defects

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- interpret work order and locate and apply relevant information
- apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- read and interpret communication procedural information from job sheets to prepare for work
- identify materials used in the work process
- follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality
- identify, set up, operate and maintain heating equipment, hand tools, lifting and measuring equipment.

#### Context of, and specific resources for assessment

- The underpinning knowledge and skills may be assessed on or off the job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.
- The competency should be assessed within the context of the qualification being sought.
- Access to vehicle and manufacturer specifications as identified in the Range Statement, standard operating procedures.

**EVIDENCE GUIDE****Method of assessment**

- Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.
- Assessment should be by direct observation of tasks, questioning on underpinning knowledge and achievement of the soft soldering task outcomes.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods include:

- application of soft solder to radiation applications/cooling system repairs and fuel tanks

**Work practices**

Work practices must abide by workplace health and safety requirements, and include:

- WHS legislation
- material safety management systems
- hazardous substances and dangerous goods code
- local safe operating procedures
- Australian Design Rules regulations

**Resources**

Resources may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• hand tools, various fluxes, different types of soft solder</li> <li>• power tools, gas</li> <li>• soldering equipment including electric and flame heated irons, gas fired torches</li> <li>• cleaning components, heating, tinning and/or soldering</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• workplace procedures relating to the use of tools and equipment</li> <li>• work instructions, including:               <ul style="list-style-type: none"> <li>• job sheets</li> <li>• vehicle manufacturer's specifications</li> <li>• enterprise operating procedures</li> <li>• component manufacture specifications</li> <li>• customer requirements</li> </ul> </li> <li>• workplace procedures relating to reporting and communication</li> <li>• manufacturer specifications and operational procedures</li> </ul>

## AURTTW3002 Set, operate and monitor specialist machines

### Modification History

Release	Comment
Release 1	<p>Replaces AURT334972A Set, operate and monitor specialist machines</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence to set, operate and monitor specialist machines used in reconditioning engine and/or vehicle components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>This unit does not cover crankshaft and camshaft grinding (see AURTTM3007 Carry out grinding operations).</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, setting the machine, operating and monitoring machine to produce required result and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence applies to engine and/or vehicle component reconditioning.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for operations	1.1.Nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including any individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals, specifications and tooling are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or calibration requirements for machining are sourced and support equipment is identified and prepared
2. Set machine	2.1.Information is accessed and interpreted from manufacturer/component supplier specifications 2.2.Components are measured and repair action determined 2.3.Machine is set in accordance with defined procedures 2.4.Machines are set without causing damage to any component or system 2.5.Component is positioned and clamped 2.6.Machine is adjusted to meet operational requirements and specifications using appropriate measuring equipment 2.7.Tooling and accessories are selected 2.8.Worn or damaged tooling is identified and changed or sharpened 2.9.Setting activities are carried out according to industry regulations/guidelines, WHS legislation and enterprise procedures/policies
3. Operate and monitor machine	3.1.Information is accessed and interpreted from manufacturer/component supplier specifications 3.2.Machine is operated and monitored without causing damage to any component or system 3.3.Machine is operated in accordance with enterprise procedures 3.4.Components are checked with instruments to ensure compliance to specifications 3.5.Sharpness of tooling is monitored and tooling is

ELEMENT	PERFORMANCE CRITERIA
	<p>sharpened or replaced to meet requirements</p> <p>3.6.Finished product is checked for alignment, tolerance and finish</p> <p>3.7.Machining operations are carried out according to industry regulations/guidelines, WHS legislation and enterprise procedures/policies</p>
4. Prepare component for delivery to customer/storage	<p>4.1.Component is finalised and prepared for delivery in accordance with workplace requirements</p> <p>4.2.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills, e.g. when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including, making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply measurements, calculate material requirements and establish quality checks
- use workplace technology related to setting, operating and monitoring specialist machines, including the use of specialist tooling and equipment, measuring equipment, computerised technology, and of communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- the type, characteristics, uses and limitations of commonly used specialist machines
- techniques for reading and interpreting technical information, including technical drawings
- equipment safety requirements
- machining methods
- Industry codes of practice, including Australian Standards
- tool sharpening methods

**REQUIRED SKILLS AND KNOWLEDGE**

- cleaning/lubricating agents
- manual handling techniques
- measuring techniques
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques which are appropriate to the circumstances
- completing preparatory activity in a systematic manner
- machining of components without damage to tooling, equipment and injury to persons
- setting up, operating and monitoring machine operations for three tasks including, at a minimum:
  - one precision grinding operation, and
  - one milling or boring operation
- machining of components to specified tolerances and finishes following enterprise procedures
- completing machining of components within workplace timeframe
- presentation of components to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to setting, operating and monitoring specialist machines
- equipment, hand and power tooling appropriate to setting, operating and monitoring specialist machines

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

## Range Statement

<b>RANGE STATEMENT</b>
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

<b>RANGE STATEMENT</b>	
<b>Tooling and specialist machines</b>	Tooling and specialist machines may include measuring equipment, safety equipment, hand tooling, power/air tooling, lathes, milling machines, line borers, pin fitting machines, precision grinders, lifting and cleaning equipment
<b>Methods</b>	Methods are to include machine operation, measuring, machine/component set-up, tool sharpening and replacement
<b>WHS</b>	WHS requirements in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, company quality policy and standards and enterprise operations and procedures

<b>RANGE STATEMENT</b>	
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include measuring equipment, safety equipment, hand tooling, power/air tooling, lathes, milling machines, line borers, pin fitting machines, precision grinders, and lifting and cleaning equipment
<b>Material</b>	Material may include lubricant, machine parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the setting, monitoring and operating of specialist machines</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up machinery prior to machining	<ul style="list-style-type: none"><li>1.1.Machinery set-up is completed without causing damage to any components or systems.</li><li>1.2.Correct information is accessed and interpreted from appropriate manufacturer specifications</li><li>1.3.Material to be machined is positioned and clamped.</li><li>1.4.Correct speed and feed is selected to suit materials</li><li>1.5.Personal safety requirements including machine guards are worn and correctly positioned.</li><li>1.6.Setting up of components for machining/cutting is carried out in accordance with industry standards and manufacturer current specifications for methods, equipment used and tolerances relative to the component.</li><li>1.7.All machinery set-up activities are carried out according to industry regulations/guidelines, WHS legislation, statutory legislation and enterprise procedures/policies</li></ul>
2. Machine components	<ul style="list-style-type: none"><li>2.1.Components are machined without causing damage to any components or equipment.</li><li>2.2.Correct information is accessed and interpreted from appropriate manufacturer specifications</li><li>2.3.Component are measured for size and finish</li><li>2.4.Size and finish are compared with specification.</li><li>2.5.Area is cleaned prior to removal from machine</li><li>2.6.Machining/cutting of components is carried out in accordance with vehicle/system manufacturer current specifications for methods, equipment used and tolerances relative to the component being machine/cut.</li><li>2.7.All machining/cutting activities are carried out according to industry regulations/guidelines, WHS legislation, statutory legislation and enterprise procedures/policies</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- Industry Codes of Practice
- Australian Standards
- types of measuring instruments, application and procedures
- machining procedures
- grinding procedures
- facing procedures
- cleaning/lubricating agents
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting measurements in accordance with workplace requirements
- machining work is done within workplace timeframes
- work presentation to customer or for storage in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to carrying out grinding and facing operations
- equipment, hand and power tooling appropriate to carrying out grinding and facing operations
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment

**EVIDENCE GUIDE**

guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Methods

Methods include lathe turning, grinding, cutting, drilling

Methods should be applied under normal operating conditions

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

#### Emergency procedures

Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation

#### Environmental Requirements

Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, lifting equipment, lathes, drills and power hacksaws or cut off saw, grinding equipment, measuring equipment and safety equipment
<b>Materials</b>	Materials may include ferrous and non ferrous materials including alloys, cooling, cleaning and lubricating materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to carrying out machining operations</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• vehicle manufacture specifications</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> </ul>

------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>Work involved includes transmission systems of light vehicles, motorcycles, heavy vehicles road transport, heavy vehicles mobile plant, outdoor power equipment and marine craft.</p> <p>Work requires individuals to demonstrate minimal judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. <b>Prepare to remove and tag transmission components</b>	<ul style="list-style-type: none"><li>1.1. Nature and scope of work requirements are identified and confirmed</li><li>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced</li><li>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5. Dangers associated working with the removal and tagging of transmission components are observed</li></ul>
2. <b>Remove transmission system components</b>	<ul style="list-style-type: none"><li>2.1. Transmission components for removal are identified</li><li>2.2. Methods for the removal and tagging are implemented in accordance with manufacturer/component supplier specifications</li><li>2.3. Components are removed without damage</li><li>2.4. Inspection of components is carried out</li><li>2.5. Report is processed in accordance with workplace procedures</li></ul>
3. <b>Tag transmission components</b>	<ul style="list-style-type: none"><li>3.1. Tagging procedures are identified</li><li>3.2. Resource requirements for tagging are identified and support equipment is identified and prepared</li><li>3.3. Components are tagged without damage</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removing and tagging transmission components, including the use of measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- transmission terminology
- function of each component
- relationship of components to each other
- application of components
- removal procedures
- tagging procedures
- quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identifying, removing and tagging a range of components by their title and application
- conducting the removal and tagging without damage to components or tooling and equipment

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to removing and tagging transmission components
- equipment, hand and power tooling appropriate to removing and tagging transmission components
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Transmission systems</b>	Transmission systems may be manual and/or automatic and/or semi automatic and/or power shift transmissions, driveline components, rear axle/final drive assemblies and multiple speed and overdrive transmissions
<b>Components</b>	Components are to be tagged by title and application
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and

<b>RANGE STATEMENT</b>	
	enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment are may include hand tooling and hand held power tooling
<b>Materials</b>	Materials may include tags and cleaning materials

**RANGE STATEMENT****Communications**

Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers

**Information/documents**

Sources of information/documents may include:

- enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets and Australian Design Rules
- safe work procedures related to removing and tagging transmission components
- organisation work specifications and requirements

**Unit Sector(s)****Unit sector**

Mechanical Miscellaneous

**Co-requisite units**

Not applicable.

Technical - Transmission

## AURTTX2002 Inspect and service transmissions (manual)

### Modification History

Release	Comment
Release 1	<p>Replaces AURT206670A Inspect and service transmissions (manual)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to inspect and service manual transmissions in an automotive retail, service and/or repair context.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied:</p> <ul style="list-style-type: none"><li>• light vehicle, heavy vehicle, outdoor power equipment, mobile plant.</li></ul> <p>The unit includes identification and confirmation of work requirement, preparation for work, inspection, analysis and servicing of manual transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit. This includes an understanding of the level of work to be performed.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake the inspection of manual transmissions</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Methods appropriate to the circumstances are selected and prepared in accordance with standard operating procedures 1.5. Resources required for inspection of manual transmissions are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with manual transmissions are observed
<b>2. Conduct inspection and analyse results</b>	2.1. Inspection is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
<b>3. Prepare to service manual transmissions</b>	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information required are identified and sourced 3.3. Resources required for servicing manual transmissions are identified and support equipment is identified and prepared
<b>4. Carry out service</b>	4.1. Service is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 4.2. Adjustments made during the service are in accordance with manufacturer/component supplier specifications

ELEMENT	PERFORMANCE CRITERIA
<b>5. Prepare equipment for use or storage</b>	<p>5.1. Service schedule documentation is completed</p> <p>5.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3. Final inspection is made to ensure work is to workplace expectations</p> <p>5.4. Equipment is prepared for use or stored to workplace expectations</p> <p>5.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and servicing of manual transmissions, including the use of diagnostic and servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with manual transmissions
- identification of application, purpose and operating principles
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service procedures
- enterprise quality procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques, appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operating principles
- conducting inspection, servicing and operational testing in accordance with workplace and manufacturer/component supplier specifications
- completing service of manual transmissions and associated components within workplace timeframes
- equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and servicing of manual transmissions
- equipment, hand and power tooling appropriate to the inspection and servicing of manual transmissions
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Inspection methods

Inspection methods include visual, aural and functional assessment (including: fluid leakage, selection)

#### Specific requirements

Specific requirements may include:

- manual transmissions, front and/or rear wheel drive configurations
- belt drive transmissions

#### Variables

Other variables may include:

- power take off assemblies,
- multiple forward and reverse gears,
- synchronised and non-synchronised gear selection,
- metal and non-metal gears
- electrical/pneumatic controls
- transverse/longitudinal mounting
- helical, double helical and spur gears
- transaxle, overdrive, transfer case and belt drive speed control

#### Servicing

Servicing to include fluids, filters, adjustments and operational testing, visual inspections and documents

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that

<b>RANGE STATEMENT</b>	
	prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, hazardous substances, electrical safety, machinery movement, manual lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, operating safely in the event of fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include:

- use workplace technology related to the inspection and servicing of automatic transmissions, including the use of diagnostic and servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with transmissions
- fluid dynamics
- drive flow paths
- gear selection mechanisms
- three laws of compound planetary gear sets
- five laws of simple planetary gear sets

**REQUIRED SKILLS AND KNOWLEDGE**

- superior driving member rule

Identification of application, purpose and operating principles

Identification of component parts to include:

- physical fluids
- gases
- heat generated

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to service hydrostatic transmission</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for servicing are sourced and support equipment is identified and prepared
<b>2. Service hydrostatic transmission and/or associated components</b>	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Services to system components are carried out in accordance with manufacturer/component supplier specifications for methods and equipment 2.3. Transmission system service activities are carried out according to industry regulations/guidelines, WHS legislation and enterprise procedures/policies 2.4. Hydrostatic transmission is serviced without causing damage to any component or system 2.5. Workplace documentation is completed and dealt with relevant to service outcomes
<b>3. Prepare vehicle/equipment for customer use</b>	3.1. Service schedule documentation is completed 3.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place 3.3. Final inspection is made to ensure work is to workplace expectations 3.4. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to servicing hydrostatic transmissions, including the use of servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of hydrostatic transmissions and their applications
- types and layout of service/repair manuals (hard copy and electronic)
- servicing procedures
- hydraulic fluids and their application
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the service of a range of transmissions in accordance with workplace and manufacturer/component supplier requirements
- completing servicing of transmission and associated components within workplace timeframes
- vehicle/equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to servicing hydrostatic transmissions
- equipment, hand and power tooling appropriate to servicing hydrostatic transmissions
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Systems and components</b>	<p>Systems and components may include:</p> <ul style="list-style-type: none"> <li>• variable displacement and fixed displacement hydraulic pumps</li> <li>• variable displacement and fixed displacement hydraulic motors</li> <li>• radial piston, axial piston, vane, rotor and gear type pumps and motors</li> <li>• closed and replenishing systems</li> <li>• charge pumps</li> <li>• positive and non-positive displacement hydraulic pumps</li> </ul>
<b>Methods</b>	Methods are to include visual, aural and functional assessment, including fluid leakage
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

<b>RANGE STATEMENT</b>	
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, hydraulic pressure gauges, hydraulic flow meters and dispensing equipment
<b>Materials</b>	Materials may include hydraulic fluids, lubricants, minor spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to servicing hydrostatic transmissions</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>
--	---

**Unit Sector(s)**

<b>Unit sector</b>	Mechanical Miscellaneous

## AURTTX2005 Inspect and service clutch systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect and service clutch systems.</p> <p>The unit involves an inspection of the clutch system to note deviations from correct operation as well as service to ensure the system complies with manufacturer's specifications.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the clutch systems of motorcycles, light vehicles, heavy commercial vehicles, agricultural equipment, mobile plant and other industrial environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and service a clutch system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting and servicing <b>clutch systems</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect a clutch system	<p>2.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service a clutch system	<p>3.1. <b>Service options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service and adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection and servicing of clutch systems
  - technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of clutch systems
- methods of sourcing information relevant to inspecting and servicing clutch inspection procedures for clutch systems
- inspection procedures for clutch systems
- service procedures for clutch systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect and service a range of clutch systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles relevant to the qualification being sought
- tools and equipment appropriate for the inspection and servicing of clutch systems
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• clutch system inspection and servicing methods, processes and equipment.</li> </ul>
<b><i>Clutch systems</i></b> may include:	<ul style="list-style-type: none"> <li>• dry single or multi-plate clutch</li> <li>• wet multi-plate clutch</li> <li>• cable operated clutch</li> <li>• hydraulically-operated clutch</li> <li>• mechanically operated clutch.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection and servicing of clutch systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li><li>• vehicle service requirements and repair manuals.</li></ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"><li>• clutch fluid replacement</li><li>• adjustments and operational testing.</li></ul>
<i>Final inspection</i> may include:	<ul style="list-style-type: none"><li>• final check of vehicle fluid levels</li><li>• checking of clutch system operation during mobile or stationary tests</li><li>• cleaning of vehicle.</li></ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"><li>• vehicle service book</li><li>• job card or work order</li><li>• workplace computerised or written customer records and invoice.</li></ul>

## AURTTX3006 Repair transmissions (hydrostatic)

### Modification History

Release	Comment
Release 1	Replaces AURT308166A Repair transmissions (hydrostatic) Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to carry out the repair, removal and replacement of hydrostatic transmissions for heavy vehicle, plant or outdoor power equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and analysis of systems, removal, repair and replacement of hydrostatic transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to carry out repairs to hydrostatic transmission	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or calibration requirements for repair are sourced and support equipment is identified and prepared
2. Test hydrostatic transmission and analyse results	2.1.Methods for system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
3. Remove, repair and replace hydrostatic transmission	3.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2.Repairs and adjustments to transmission components are carried out in accordance with manufacturer/component supplier specifications for methods and equipment 3.3.Hydrostatic transmission is repaired without causing damage to any component or system 3.4.Workplace documentation is completed and dealt with relevant to repair, remove and replace outcomes 3.5.Transmission system repair and removal/replacement activities are carried out according to industry regulations/ guidelines, WHS legislation, legislation and enterprise procedures/policies
4. Prepare vehicle/ equipment for customer use	4.1.Repair schedule documentation is completed 4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organisational skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to repair, removal and replacement of hydrostatic transmissions and/or associated components, including the use of measuring equipment, electronics, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- identification of application, purpose and operation
- identification of component parts to include, physical, fluid, gases and heat generated
- types and layout of service/repair manuals (hard copy and electronic)
- repair procedures
- component evaluation
- system testing procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- manual handling techniques
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- applying full repair sequence, as per the Range Statement, to a faulty transmission relative to the qualification being sought
- completing repair of transmission and associated components within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of hydrostatic transmissions
- equipment, hand and power tooling appropriate to repair of hydrostatic transmissions
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Hydrostatic transmissions</b>	Hydrostatic transmissions are those with variable and fixed displacement motors and pumps and closed or replenishing systems
<b>Variables</b>	Variables may include radial piston, axial pistons, vane, rotor and gear type pumps and motors
<b>Repair methods and sequence</b>	Repair methods and sequence are to include isolation of fault(s), dismantling of components/parts, inspection and evaluation, repair and replacement of parts, assembly and completion of operational tests and records
<b>Faults</b>	Faults may include excessive internal leaking, abnormal noises and worn components
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

<b>RANGE STATEMENT</b>	
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, hydraulic pressure gauges, hydraulic test bench, hydraulic flow meters, precision measuring equipment, hydraulic lubricants and dispensing equipment
<b>Materials</b>	Materials may include hydraulic fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repairing hydrostatic transmissions and/or associated components</li> <li>• regulatory/legislative requirements pertaining</li> </ul>

**RANGE STATEMENT**

	<p>to automotive industry, including Australian Design Rules</p> <ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURTTX4007 Overhaul clutch assemblies

### Modification History

Release	Comment
Release 1	Replaces AURT406145A Overhaul clutch assemblies Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the overhaul of dry or wet clutch assemblies and/or associated components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, testing of clutch assemblies, analysing test results, overhauling of clutch assemblies and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes all vehicles/machines.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake the overhaul of clutch assemblies	1.1.Nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or adjustment requirements for the testing and overhaul of clutch assemblies are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with clutch assemblies are observed
2. Test clutch assemblies and analyse results	2.1.Methods for the conduct of the tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is forwarded to appropriate persons for action in accordance with workplace procedures
3. Carry out the overhaul of clutch assemblies	3.1.Methods for the conduct of the overhaul are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.All adjustments made during the overhaul are in accordance with manufacturer/component supplier specifications
4. Prepare vehicle/ equipment for use or storage	4.1.Overhaul schedule documentation is completed 4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Vehicle/equipment is cleaned for use or stored to workplace expectations 4.5.Job card is processed in accordance with workplace

ELEMENT	PERFORMANCE CRITERIA
	procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the testing and overhauling of dry and wet clutch assemblies and associated components, including the use of measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled and tracked equipment
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of wear evaluation methods
- clutch assembly test procedures
- clutch assembly overhaul procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- interpreting the test results
- completing overhaul of the clutch and associated components within workplace timeframes
- presentation of the vehicle/machine to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to testing and overhauling dry and

<b>EVIDENCE GUIDE</b>	
	<p>wet clutch assemblies and associated components</p> <ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to testing and overhauling dry and wet clutch assemblies and associated components</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Variables</b>	Variables can include, single, dual and multiple plate clutches, pressure plates, over centre and two stage clutches
<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related the overhaul of dry and wet clutch assemblies and/or associated components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul manual transmission	<p>1.1.Nature and scope of the work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for testing and overhaul are sourced and support equipment is identified and prepared</p>
2. Test manual transmission and analyse results	<p>2.1.Methods for the conduct of the system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is processed in accordance with workplace procedures</p>
3. Overhaul manual transmission	<p>3.1.Information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>3.2.Manual transmissions are overhauled using approved methods and equipment, according to manufacturer/component supplier specifications and tolerances relative to the vehicle/plant manufacturer/component supplier</p> <p>3.3.Manual transmission is overhauled without causing damage to any component or system</p> <p>3.4.Overhauling activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies</p>
4. Prepare transmission for installation	<p>4.1.Overhaul schedule documentation is completed</p> <p>4.2.Inspection is made to ensure gears are able to be accessed</p> <p>4.3.Final inspection is made to ensure work is to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace expectations</p> <p>4.4. Transmission is presented for installation/storage to workplace expectations</p> <p>4.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to overhauling manual transmissions, including the use of measuring equipment, electronics, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of wear evaluation methods
- types and layout of service/repair manuals (hard copy and electronic)
- manual transmission overhaul procedures
- component repair and adjustment procedures
- manual handling procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- transmission must be of multiple speed constant mesh or synchromesh design
- interpreting test results
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of transmission and associated components within workplace timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to overhauling manual

**EVIDENCE GUIDE**

	<p>transmissions</p> <ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to overhauling manual transmissions</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul automatic transmission	<p>1.1.Nature and scope of the work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced</p> <p>1.4.Transmission faults are identified</p> <p>1.5.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6.Technical and/or calibration requirements for overhaul are sourced and support equipment is identified and prepared</p>
2. Dismantle automatic transmission and evaluate parts	<p>2.1.Information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>2.2Automatic transmission is dismantled using approved methods and equipment, according to manufacturer/component supplier procedures</p> <p>2.3Automatic transmission is dismantled without causing damage to any component or system</p> <p>2.4.Transmission parts are cleaned in readiness for evaluation</p> <p>2.5.Parts are checked for serviceability against manufacturer/component supplier specifications</p> <p>2.6.Unserviceable parts are identified and a replacement parts list raised</p>
3. Overhaul automatic transmission	<p>3.1.Information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>3.2Automatic transmission is overhauled using approved methods and equipment, according to specifications and tolerances relative to the component/vehicle/plant manufacturer/component supplier</p> <p>3.3Automatic transmission is overhauled without causing damage to any component or system</p> <p>3.4.Overhauling activities are carried out according to industry regulations/guidelines, WHS legislation and enterprise procedures/policies</p>
4. Conduct	4.1.Methods for the conduct of the test is implemented

ELEMENT	PERFORMANCE CRITERIA
transmission testing	<p>in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Observations are noted during the test</p> <p>4.3.Documentation of observations are completed</p> <p>4.4.Results of test are analysed</p> <p>4.5.Report is processed in accordance with workplace procedures</p>
5. Prepare transmission for installation	<p>5.1.Overhaul schedule documentation is completed</p> <p>5.2.Transmission is cleaned to enterprise requirements</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.Transmission is presented for installation/storage to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to overhauling of automatic transmissions, including the use of measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of wear evaluation methods
- operating principles of constant mesh and/or planetary automatic transmissions
- laws of single and compound planetary gearing
- types and layout of service/repair manuals (hard copy and electronic)
- automatic transmission overhaul procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- automatic transmission test procedures
- automatic transmission dismantling and assembling procedures
- automatic transmission component adjustment procedures
- enterprise quality procedures
- work organisation and planning processes
- manual handling procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- presenting the test results
- conducting the overhaul in accordance with workplace manufacturer/component supplier requirements
- completing overhaul of transmission and associated components within workplace timeframes
- presentation of transmission to customer/stored in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to overhauling automatic

**EVIDENCE GUIDE**

	<p>transmissions</p> <ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to overhauling automatic transmissions</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. **EVIDENCE GUIDE**

	<p>other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Methods

Methods are to include:

- pressure testing, electrical testing (including leakage, short circuits, open circuits)
- visual, aural and functional assessments (including fluid leaks, wear, damage, corrosion)
- dismantling and assembling, testing, adjusting

#### Specific requirements

Specific requirements may include:

- planetary or countershaft (constant mesh) transmission
- conventional, transaxle, 4WD and overdrive type automatic transmissions
- electronically controlled transmissions
- torque converter, continuously variable, lock-up

#### Overhaul methods and sequences

Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulations/codes of

<b>RANGE STATEMENT</b>	
	practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, specialist tooling for disassembly, assembly and adjustment, measuring equipment, lifting equipment, cleaning equipment, testing equipment, including load device and pressure testers, tachometers, multimeters and power tooling
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and

## AURTTX4010 Overhaul transmissions (hydrostatic)

### Modification History

Release	Comment
Release 1	Replaces AURT408145A Overhaul transmissions (hydrostatic) Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to completely dismantle and rebuild a hydrostatic transmission.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of the work requirement, preparation for work, testing and analysis of hydrostatic transmissions, dismantling, assembling, inspection, adjusting and preparation of the hydrostatic transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence applies to hydrostatic transmissions fitted to heavy vehicle, plant and outdoor power equipment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul hydrostatic transmission	1.1.Nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or calibration requirements for testing and overhaul are sourced and support equipment is identified and prepared
2. Test hydrostatic transmission and analyse results	2.1.Methods for the conduct of the system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
3. Overhaul hydrostatic transmission	3.1.Information is accessed and interpreted from manufacturer/component supplier specifications 3.2.Hydrostatic transmissions are overhauled using approved methods and equipment, according to specifications and tolerances relative to the component/vehicle/plant manufacturer/component supplier 3.3.Hydrostatic transmission is overhauled without causing damage to any component or system 3.4.Appropriate workplace documentation is completed and dealt with to overhaul outcomes 3.5.Overhauling activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
4. Prepare transmission	4.1.Overhaul documentation is completed

ELEMENT	PERFORMANCE CRITERIA
for installation/storage	<p>4.2.Final inspection is made to ensure protective guards and safety features are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Transmission is prepared for installation/storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to overhauling hydrostatic transmissions, including the use of electronics, computerised technology and communication devices and reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of wear evaluation methods
- types and layout of service/repair manuals (hard copy and electronic)
- hydrostatic transmission overhaul procedures
- hydrostatic transmission system test procedures
- manual handling techniques

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- interpreting the test results
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of the transmission and associated components within workplace timeframes
- presentation of transmission to customer/storage in compliance with work requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to overhauling hydrostatic

**EVIDENCE GUIDE**

	<p>transmissions</p> <ul style="list-style-type: none"> <li>• equipment, hand and power tooling appropriate to overhauling hydrostatic transmissions</li> <li>• activities covering the mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	<p>Methods include:</p> <ul style="list-style-type: none"> <li>• visual, aural and functional assessment (including excessive wear, corrosion, selection and damage)</li> <li>• system testing under operating conditions</li> </ul>
<b>Specific requirements</b>	<p>Specific requirements:</p> <ul style="list-style-type: none"> <li>• variable displacement and fixed displacement hydraulic pumps</li> <li>• variable displacement and fixed displacement hydraulic motors</li> </ul>
<b>Variables</b>	<p>Other variables may include:</p> <ul style="list-style-type: none"> <li>• radial piston, axial piston, vane, rotor and gear type pumps and motors</li> <li>• closed and replenishing systems</li> </ul>
<b>Overhaul methods and sequences</b>	<p>Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records</p>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulations/codes of</p>

<b>RANGE STATEMENT</b>	
	practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, hydraulic pressure gauges, hydraulic test bench, hydraulic flow meters and precision measuring equipment
<b>Materials</b>	Materials may include hydraulic fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers

**RANGE STATEMENT****Information/documents**

Sources of information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches
- safe work procedures related to overhauling of hydrostatic transmissions
- regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards

## AURTTX4011 Overhaul torque converters

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to overhaul automatic transmission torque converters. It involves diagnosing deviations from correct operation, undertaking overhaul operations on torque converter components and associated systems, and post-overhaul testing procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the automatic transmission torque converters in motorcycle, light vehicle, road transport, mining, construction, agricultural, marine and other industrial environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul torque converter	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Method options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. <b>Support equipment</b> is identified and prepared</p>
2. Dismantle torque converter and evaluate parts	<p>2.1. Information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. <b>Torque converter is dismantled</b> using approved methods and equipment, according to manufacturer and component supplier procedures and without causing damage to components or system</p> <p>2.3. Torque converter parts are cleaned in readiness for evaluation</p> <p>2.4. Parts are checked for serviceability against manufacturer and component supplier specifications</p> <p>2.5. Unserviceable parts are identified and a replacement parts list is raised</p>
3. Carry out overhaul procedures	<p>3.1. Torque converter components are <b>machined, repaired or replaced</b> to manufacturer or component supplier specifications and tolerances using approved methods and equipment</p> <p>3.2. Torque converter is re-assembled to manufacturer or component supplier specifications and tolerances</p>
4. Conduct post-overhaul testing	<p>4.1. <b>Torque converter is tested</b> according to workplace procedures and manufacturer and component supplier specifications</p> <p>4.2. Observations are noted and documented during the test</p> <p>4.3. Results of test are analysed and serviceability of the torque converter is determined</p> <p>4.4. Documentation of the analysis is completed</p>
5. Prepare torque converter for use or storage	<p>5.1. Torque converter is cleaned to workplace requirements</p> <p>5.2. Final inspection is made to ensure work is to workplace expectations and torque converter is presented ready for use or storage</p> <p>5.3. Tools and equipment are checked and stored</p> <p>5.4. Job card is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - communicate with customers to handle enquiries and interpret their needs
- initiative and enterprise skills to adapt to new and emerging technology relating to torque converters
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
  - complete job cards to workplace expectations
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the overhaul of torque converters, including the use of:
  - specialist tooling and equipment
  - measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to overhauling torque converters
- application, purpose and operation of torque converters
- methods for evaluating torque converter wear and damage
- torque converter overhaul procedures
- torque converter test procedures
- torque converter dismantling procedures
- torque converter assembling procedures
- post-overhaul testing procedures for torque converters

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- overhaul a range of torque converters
- conduct overhaul procedures according to workplace, manufacturer and component supplier requirements
- present torque converter in a condition that complies with workplace expectations.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- torque converters to be overhauled relevant to the qualification being sought
- equipment appropriate for the testing of torque converters
- specifications and workplace instructions

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- tools appropriate for the overhaul of torque converters.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• customer needs</li> <li>• overhaul methods, processes and equipment.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal or written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the overhaul of torque converters</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b>Method options</b> may include:	<ul style="list-style-type: none"> <li>• component repair and adjustment</li> <li>• component replacement.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Support equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• cleaning machines</li> <li>• computer numerical controlled (CNC) or manual cut lathe</li> <li>• welding rigs.</li> </ul>
<b><i>Dismantling the torque converter</i></b> may include:	<ul style="list-style-type: none"> <li>• cutting open the torque converter</li> <li>• cleaning</li> <li>• hub, piston, turbine and stator removal.</li> </ul>
<b><i>Machining, repairing or replacing torque converter components</i></b> may include:	<ul style="list-style-type: none"> <li>• hub bearing surface area machining</li> <li>• front cover machining for bonding</li> <li>• piston preparation and machining for bonding</li> <li>• machining edge for relief for "O" stack height</li> <li>• stator dismantling and assembly</li> <li>• piston bonding</li> <li>• piston and turbine preparation and assembly</li> <li>• height check</li> <li>• hub welding</li> <li>• balancing procedures.</li> </ul>
<b><i>Testing the torque converter</i></b> may include:	<ul style="list-style-type: none"> <li>• hub leak checking</li> <li>• end play clearance checking</li> <li>• pressure testing.</li> </ul>

## AURTTY3001 Repair chassis, frame and associated components

### Modification History

Release	Comment
Release 1	<p>Replaces AURV328366A Repair chassis/frame and associated components</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to inspect/replace, repair and align chassis/frame and/or components applicable to vehicles with separate frame construction.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, the inspection, repair, replacement and alignment of chassis/frame and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine the job requirements, including method, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Material for repair is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Inspect to determine repairs	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Written inspection report is prepared during inspection.</p> <p>2.3. Inspection is completed without causing damage to any component or system.</p> <p>2.4. Inspection activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p> <p>2.5. Results of inspection are documented/processed in accordance with enterprise requirements.</p>
3. Replace or repair chassis/frame and associated components	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Repair and replacement of chassis/frame and associated components are carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances relative to the vehicle.</p> <p>3.3. Replacement and repairs to components are achieved without causing damage to any component or system.</p> <p>3.4. Workplace documentation is completed and dealt with relevant to replacement or repair outcomes.</p> <p>3.5. All repair activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
4. Align chassis/frame components	<p>4.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.2.Alignment of chassis/frame and associated components is carried out in accordance with vehicle manufacturer/ component supplier specifications and tolerances relative to the vehicle.</p> <p>4.3.Alignment is achieved without causing damage to any component or system.</p> <p>4.4.Workplace documentation is completed and dealt with relevant to chassis alignment outcomes.</p> <p>4.5.All repair activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
5. Clear up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored.</p> <p>5.2.Waste and scrap is removed following workplace and environmental procedure.</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>5.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for repair of chassis/frame and associated components
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to repair of chassis/frame and associated components, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- manufacturer/component supplier/company policies
- technical information
- inspection and measuring procedures
- repair/replacement procedures
- alignment procedures
- welding techniques
- manual handling techniques
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- inspecting, replacing/repairing and aligning of a range of chassis/frame components to workplace and manufacturer/component supplier requirements
- completing workplace/equipment documentation.

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to repair of chassis/frame and associated components
- equipment, hand and power tooling appropriate to repair of chassis/frame and associated components
- activities covering mandatory task requirements
- specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Chassis/frame and associated components</b>	Chassis/frame and associated components include chassis, body, wheels, body panels, accessories and body frames.
<b>Repair methods</b>	Repair methods are to include: <ul style="list-style-type: none"> <li>• visual, aural and functional assessments (including damage, wear and breakage)</li> <li>• application of the principles, angles and geometry of vehicle wheel and chassis alignment</li> <li>• measuring</li> <li>• welding and framing.</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency

<b>RANGE STATEMENT</b>	
	shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, measuring equipment, pressing equipment, heating equipment, welding equipment which may include arc, oxy acetylene, MIG, TIG, chassis aligning equipment, specialist tooling for removal/alignment, lifting equipment and wheel alignment equipment.
<b>Materials</b>	Materials may include welding consumables, spare parts and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repair of chassis/frame and associated components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian</li> </ul>

**RANGE STATEMENT**

	<p>Design Rules</p> <ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards.</li></ul>

## AURTTZ2001 Inspect and service emission control systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT204670A Inspect and service emission control systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to service emission control systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and servicing of emission control systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied:</p> <ul style="list-style-type: none"><li>• light vehicle and/or heavy vehicles and/or plant and equipment and/or marine equipment and/or motorcycles</li><li>• emission control systems associated with engine management systems are dealt with in another unit of competency.</li></ul> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>Job card is processed in accordance with workplace procedures.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake a service on an emission control system</b>	1.1.The nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as appropriate to tasks 1.5.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.6.Technical and/or calibration requirements for service are sourced and support equipment is identified and prepared
<b>2. Service emission control systems</b>	2.1.Testing equipment is selected 2.2.Tests are performed and results analysed in accordance with manufacturer/component supplier specifications 2.3.Emission control system servicing is carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies 2.4.Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.5.Emission control systems service is completed without causing damage to any component or system
<b>3. Prepare vehicle/equipment for delivery to customer</b>	3.1.Service schedule documentation is completed 3.2.Final inspection is made to ensure safety features are in place 3.3.Final inspection is made to ensure work is to workplace expectations 3.4.Vehicle/equipment is presented to workplace expectations 3.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to inspection and servicing of emission control systems, including the use of diagnostic and servicing tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- National Environment Protection Measures for Diesel Vehicles as applicable to tasks
- identification of motor vehicle emissions and their effects on the environment
- identification of application, purpose and operating principles
- principles of emission control and the reduction of HC, NO<sub>x</sub>, CO, CO<sub>2</sub>, particulates and smog

**REQUIRED SKILLS AND KNOWLEDGE**

- types and of emission systems and components
- legislation
- techniques for the interpretation of technical information, graphic symbols and diagrams
- types and layout of service/repair manuals (hard copy and electronic)
- testing procedures
- servicing procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting test results
- identification of application, purpose and operating principles
- conducting inspection, servicing and operational testing in accordance with workplace and manufacturer/component supplier specifications
- completing work within the agreed timeframe
- vehicle/equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to inspection and servicing of emission control systems
- equipment, hand and power tooling appropriate to inspection and servicing of emission control systems
- activities covering mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines

**EVIDENCE GUIDE**

of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Inspection methods</b>	<p>Inspection methods include:</p> <ul style="list-style-type: none"> <li>• road testing and dynamometer testing, exhaust gas testing</li> <li>• visual, aural and functional assessments (including: damage, corrosion, air leaks, wear, testing of electrical circuits)</li> <li>• measurements</li> <li>• electronic system tests</li> </ul>
<b>Specific requirements</b>	<p>Specific requirements: may include sensing and control systems, including carbon canisters, mechanical devices, catalytic converters, electronic sensors, EGR values</p>
<b>Servicing</b>	<p>Servicing to include fluids, filters, adjustments and operational testing, visual inspections and documents</p>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices</p>
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation,</p>

<b>RANGE STATEMENT</b>	
	manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, pollution protection and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory Authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, testing equipment, including exhaust gas analysers and hand held meters, power tooling, specialist tooling for testing, removal or adjustment, and dynamometers
<b>Materials</b>	Materials may include spare parts, lubricants, fluids, filters and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to inspecting and</li> </ul>

## AURTTZ2002 Repair exhaust system components

### Modification History

Release	Comment
Release 1	Replaces AURT205166A Repair exhaust system components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to repair and replace exhaust system/components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>This unit of competence applies to light vehicles and/or heavy vehicles and/or motorcycles and/or plant and equipment.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, removal, repair and replacement of faulty exhaust/components and work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<b>1. Prepare to undertake repairs to exhaust system/components</b>	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4. National Environment Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work (applicable to heavy vehicle diesel engine exhaust systems) 1.5. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.6. Technical requirements for repairs are sourced and support equipment is identified and prepared
<b>2. Remove, repair and replace faulty exhaust system/components</b>	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Repairs and/or replacements to faulty exhaust system/components are carried out in accordance with manufacturer/component supplier specifications 2.3. Faulty exhaust system/component repair is completed without causing damage to any component or system 2.4. Removal/replacement operations are completed within established industry guidelines 2.5. Exhaust system/component removal/replacement activities are carried out according to industry regulations/ guidelines, WHS legislation, legislation and enterprise procedures/policies
<b>3. Prepare vehicle/ equipment for use or storage</b>	3.1. Repair schedule documentation is completed 3.2. Final inspection is made to ensure protective guards and safety features are in place 3.3. Final inspection is made to ensure work is to workplace expectations 3.4. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal, repair and replacement of faulty exhaust system/components, including the use of diagnostic and specialised tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- National Environment Protection Measure for Diesel Vehicles as applicable to tasks
- identification of application, purpose and operation
- identification of system/component parts to include physical, fluid, gases and heat generation
- types and layout of service/repair manuals (hard copy and electronic)

**REQUIRED SKILLS AND KNOWLEDGE**

- techniques for identification of exhaust system/component faults
- exhaust system/component repair procedures and techniques
- enterprise quality procedures
- work organisation and planning processes
- Australian Design Rules for noise pollution, gas emissions (catalytic converters)

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- application of the full repair sequence to an exhaust system as per the Range Statement relative to the qualification being sought
- conducting repair in accordance with workplace and manufacturer/component supplier requirements and specifications
- equipment is presented to customer in compliance with workplace requirements

#### Context of, and specific resources for assessment

Application of competence is to be assessed in workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the removal, repair and replacement of faulty exhaust system/components
- equipment, hand and power tooling appropriate to the removal, repair and replacement of faulty exhaust system/components
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Repair methods

Repair methods include:

- checking, comparing, removal/replacement, welding (OAW, GMAW/GTAW)
- repacking mufflers with replaceable baffles
- decoking exhaust components to unblock
- service spark arrester

#### Specific requirements

Specific requirements may include systems, including catalytic converters, replaceable baffles

#### Variables

Other variables may include:

- does not apply to outdoor power equipment where the exhaust system is one single component/unit

#### Repair methods and sequence

Repair methods and sequence are to include isolation of fault(s), dismantling, inspection and evaluation, replacement of system/components parts, assembly and completion of operational tests and documents

#### Faults

Faults to include rusted and chaffed pipe work

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices

<b>RANGE STATEMENT</b>	
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, lifting equipment, welding equipment, specialist tooling for removal/replacement, testing equipment, cutting equipment and decibel meters
<b>Materials</b>	Materials may include spare parts, welding consumables, filters and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to repairing exhaust systems</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules and Environment Protection Regulations (Diesel Fuels)/National Environment Protection Measure for Diesel Vehicles Guidelines</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURVEN2001 Apply environmental regulations and best practice in the body repair industry

### Modification History

Release	Comment
Release 1	Replaces AURV271403A Apply environmental regulations and best practice in the body repair industry Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge required to apply environmental regulations and best practice to avoid potential hazards during the preparation of vehicle bodies for repair.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>Work involves the normal activities of a body repair shop, including removal and repair of metal and plastic panels and body components, and preparation of panels for painting.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply environmental regulations	<p>1.1.Reasons for ethical environmental practice in a body repair workshop are identified.</p> <p>1.2.Environmental responsibilities of staff in a body repair workshop are identified.</p> <p>1.3.Penalties for individual breaches of the legislation are identified.</p> <p>1.4.Waste is minimised, waste material, including sludge and solids is sorted and stored in bins for recycling or disposal.</p> <p>1.5.Packaging on goods received is sorted and reused or disposed of to recycling.</p>
2. Identify and avoid hazards to stormwater	<p>2.1.No waste water or contaminants are allowed to enter the stormwater system.</p> <p>2.2.Surface cleaning and preparation is undertaken in an impervious paved area and does not contaminate stormwater.</p> <p>2.3.Parts and components containing environmentally hazardous material are stored undercover in a sealed and bunded or drained treatment area.</p> <p>2.4.Paint, thinners/reducers are reused, recycled or stored in a bunded or drained area for collection by an approved disposal agent.</p> <p>2.5.Spill kit is located and used as needed to prevent stormwater contamination.</p> <p>2.6.Spills are cleaned up immediately and the workplace is kept clean to prevent stormwater pollution.</p>
3. Identify and avoid hazards to air quality	<p>3.1.Paint is mixed in a well-ventilated room.</p> <p>3.2.Abrasive sanding is undertaken in an enclosed booth or chamber.</p> <p>3.3.Clean-up of guns and spraying equipment is conducted in an environmentally safe manner.</p> <p>3.4.Hazards of airborne particles are identified, minimised and contained.</p> <p>3.5.Hazards of gases and fumes are identified, minimised and contained.</p>
4. Identify and avoid noise hazards	<p>4.1.Noise generating activities are minimised and carried out within approved operating hours.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to environmental procedures from legislation, regulations, policies, guidelines and workplace practices in a body repair workshop.
- communicate ideas and information to enable work undertaken is in accordance with environmental best practice, coordination of work with other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation of equipment and materials and selection of worksite to avoid environmental contamination, backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to minimise wastage, optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work
- use planning and checking techniques to avoid wastage and environmental contamination
- use the workplace technology related to environmental protection equipment

#### Required knowledge

A working knowledge of:

- relevant aspects of environmental legislation and its implications to work being undertaken
- characteristics and potential environmental impact of products used in the body repair process
- philosophy of prevent, reduce, reuse, recycle
- procedures for reporting machinery faults and material defects
- internal reporting procedures for significant environmental damage occurring in the workplace

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Apply safe handling requirements for equipment, products and material, including use of personal protective equipment.</li> <li>• Apply environmental regulations and best practice.</li> <li>• Identify materials used in the vehicle body repair process and assess their environmental impact.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain production output and product quality.</li> </ul> </li> <li>• Conduct operator maintenance on tooling and equipment to ensure environmental efficiency.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> <li>• Use of a spill kit.</li> </ul>

Release	Comment
Release 1	Replaces AURV371481A Implement and monitor environmental regulations and best practice in the body repair industry Performance Criteria updated to reflect sustainability

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to apply and monitor environmental regulations and sustainability best practice whilst undertaking repair of vehicle bodies in a manner that ensures protection of the environment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work involves the theory, knowledge and application of skills related to environmental regulations and sustainability best practice in the automotive body repair industry.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply and monitor environment regulations	<p>1.1.Reasons for <i>ethical environmental practice</i> in an automotive workplace are identified</p> <p>1.2.Environmental responsibilities and penalties for individual breaches of legislation and regulations are identified</p> <p>1.3.<i>Documents and procedures</i> relevant to environmental safety and <i>hazards</i> are applied</p> <p>1.4.Waste is minimised, waste materials, including sludge, solids and other wastes are sorted and stored in bins for recycling or disposal</p> <p>1.5.Packaging of goods is sorted and reused, disposed or recycled</p> <p>1.6.<i>Safety equipment and other material</i> necessary to support environmentally sound practices are identified and sourced</p>
2. Monitor and avoid contamination to water systems and land	<p>2.1.Wastewater and <i>contaminants</i> are identified and prevented from entering water systems or contaminating land</p> <p>2.2.Surface cleaning and preparation is undertaken in an impervious paved area and does not contaminate water systems or land</p> <p>2.3.Parts and components containing hazardous materials are drained and stored in a sealed container</p> <p>2.4.Liquid wastes are put into storage or recycling containers and placed in an undercover bunded area</p> <p>2.5.Paints, thinners are reduced, reused, recycled or stored in a bunded drained area for collection by an approved disposal agent</p> <p>2.6.Spill kit is located and used to prevent water or land contamination</p> <p>2.7.Spills are cleaned immediately and workplace is kept clean to prevent unintentional water or land contamination</p> <p>2.8.Hands are cleaned over drains connected to an oil/water separator or drums for collection of liquid waste</p>
3. Monitor and avoid hazards to air quality	<p>3.1.Spray painting is conducted in an approved spray booth</p> <p>3.2.Paint is mixed in a well-ventilated room</p> <p>3.3.Abrasive sanding is undertaken in an enclosed booth or chamber</p> <p>3.4.Welding is conducted in a well ventilated area</p> <p>3.5.All CFCs, HCFCs and blends from air conditioning systems are recovered for recycling or approved disposal during servicing or decommissioning</p> <p>3.6.Spray booth is maintained to ensure it is operating</p>

	<p>according to manufacturer and component supplier specifications</p> <p>3.7.Spray guns and equipment is cleaned in an environmentally safe manner</p> <p>3.8.Hazardous airborne particles are monitored, prevented, reduced and contained</p> <p>3.9.Hazardous gases and fumes are monitored, prevented, reduced and contained</p>
4. Monitor and avoid noise hazards	<p>4.1.Hazardous noise activities are monitored, prevented, reduced and contained</p> <p>4.2.Hazardous noise activities are carried out within approved operating hours and regulations</p>
5. Monitor and apply sustainability best practice	<p>5.1.<b><i>Sustainability best practice</i></b> is monitored and applied to minimise waste and potential damage to the environment according to workplace policies and procedures</p> <p>5.2.Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are monitored and applied</p> <p>5.3.Environmental damage and breaches of environmental regulations are monitored and recorded</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- technical skills to:
  - collect, organise and interpret technical information related to recognising automotive body repair workplace situations that are potentially harmful to the environment
  - use spill kits
- communication skills to:
  - follow oral instructions
  - communicate ideas and information (verbal and written) as they relate to environmental regulations and sustainability best practice for an automotive body repair workplace
- initiative and enterprise to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand automotive mechanical workplace environmental procedures
  - read and apply environmental regulations for an automotive workplace
  - record environmental damage and breaches of environmental regulations
- numeracy skills to interpret instruments, gauges and measuring equipment
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental contamination and wastage
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - identify processes which contribute to improvements for sustainability best practice
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to work with others and in a team by cooperating with team members
- technology skills to use workplace environmental safety-related technology to assist with clean and safe work practices.

#### Required knowledge

- aspects of environmental regulations and its implications for work being undertaken in an

## REQUIRED SKILLS AND KNOWLEDGE

- automotive workplace
- characteristics and potential environmental impact of products, equipment and machinery used in the automotive body repair workplace
- philosophy of prevention, reuse, reduce, recycle
- procedures for use of spill kit
- effects of pollution and methods to minimise it
- actions to be undertaken in case of significant environmental threat in the automotive body repair workplace
- monitoring and recording procedures for environmental damage and breaches of environmental regulations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- Monitor and apply environmental regulations and sustainability best practice as they apply in an automotive body repair workplace
- Identify materials used in an automotive body repair workplace and assess their potential environmental impact
- Monitor and record environmental damage and breaches to environmental regulations.

#### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- access to environmental legislation, regulations and best practice models
- access to an automotive workplace or simulated environment that accurately reflects automotive workshop working conditions
- access to workplace documents and reference images
- access to personal protective equipment of the type intended to

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	
	be used in response to an environmental incident or accident.
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Ethical environmental practice</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• legislative obligations</li> <li>• environmental legislation</li> <li>• health regulations</li> <li>• hazardous materials handling procedures</li> <li>• organisation insurance requirements</li> <li>• discretion, judgement and problem-solving skills in undertaking environmentally sound work practices</li> </ul>
<p><b><i>Documents and procedures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• hazardous substances register</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures</li> </ul>
<p><b><i>Hazards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices</li> </ul>
<p><b><i>Safety equipment and other material</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> <li>• waste bags</li> <li>• waste segregation systems</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Contaminants*** may include:

- solid or liquid wastes
- oil, fuel and grease
- hydrocarbon based degreasing agents and solvents
- acids
- alkaline wastes
- paint, lacquer, varnish
- glues and adhesive compounds
- household chemicals and pesticides

***Sustainability best practice*** may include:

- recycling waste
- energy conservation practices
- natural resources (water, etc.) conservation practices
- reusing
- environmental (green) purchasing practices
- noise minimisation

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and manage compliance with environmental regulations	<p>1.1.Reasons for ethical environmental practice in a body repair workshop are identified.</p> <p>1.2.Environmental responsibilities of employers and staff in a body repair workshop are identified.</p> <p>1.3.Penalties for enterprise and employee breaches of legislation are identified.</p> <p>1.4.Waste products are minimised and facilities provided for waste materials to be stored in bins for recycling or disposal.</p> <p>1.5.Collection and recycling arrangements are sourced and implemented for liquids, sludge, solids and other waste.</p> <p>1.6.Suppliers with minimal excess packaging on goods received are sourced and packaging on goods received is sorted and disposed of.</p> <p>1.7.Waste and energy conservation strategies are identified and implemented.</p>
2. Manage potential hazards to stormwater system to avoid contamination	<p>2.1.Systems are in place to ensure waste water does not enter stormwater system.</p> <p>2.2.All drains are identified on a worksite map or directly indicating where they flow.</p> <p>2.3.Trade waste permits are in place.</p> <p>2.4.Impervious paved, undercover and bunded or drained treatment area(s) are provided and used for surface cleaning and preparation.</p> <p>2.5.Undercover and bunded or drained area(s) are provided and used for storage of parts and components containing environmentally hazardous material.</p> <p>2.6.Clearly identifiable storage or recycling containers are provided for liquid wastes.</p> <p>2.7.Oil separator and pits are cleaned and maintained regularly as per manufacturer/component supplier specifications.</p> <p>2.8.Spill kit is provided and used as needed to prevent stormwater contamination by staff trained in its use.</p> <p>2.9.Workplace is kept clean to prevent unintentional stormwater pollution.</p>
3. Manage potential hazards to air quality	<p>3.1.Compliant spray booth is provided and maintained with all spray painting conducted in it.</p>

ELEMENT	PERFORMANCE CRITERIA
to avoid contamination	<p>3.2.A well-ventilated room attached to spray booth is provided for paint mixing.</p> <p>3.3.An enclosed booth or chamber is provided for all abrasive sanding to be undertaken in.</p> <p>3.4.A well-ventilated area is provided for welding activities.</p> <p>3.5.All CFCs, HCFCs and blends from air conditioning systems are recovered for recycling or approved disposal during servicing or decommissioning.</p> <p>3.6.Clean up of spray guns and spraying equipment is conducted in an environmentally safe manner.</p> <p>3.7.Hazards of gases and fumes are identified, minimised and contained.</p>
4. Minimisation of noise hazards is planned and managed	<p>4.1.Noise generating activities are minimised and carried out within approved operating hours.</p> <p>4.2.Fixed machinery is fitted with silencers or surrounded by noise containment material.</p>
5. Manage systems	<p>5.1.An environmental policy and contingency plan suitable to the needs of business is developed and implemented.</p> <p>5.2.Waste to landfill is calculated and possible savings through reuse and recycling are calculated.</p> <p>5.3.Payback period on environmental equipment is calculated.</p> <p>5.4.Staff adherence to environmental responsibilities is managed.</p> <p>5.5.Environmental records are accurately and legibly maintained and stored securely in a form accessible for reporting procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to environmental procedures from legislation, regulations, policies, guidelines, standards and workplace best

## REQUIRED SKILLS AND KNOWLEDGE

practice in a body repair business

- communicate ideas and information to enable work undertaken is in accordance with environmental best practice. support from stakeholders is actively sought for implementing suitable innovation and continuous improvement
- plan and organise activities, including preparation of equipment and materials, recycling and waste management system and selection of worksite to avoid environmental contamination, backtracking, workflow interruptions or wastage
- promote work with others and in a team by recognising dependencies and using cooperative approaches to minimise wastage, optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for work and calculate wastage rates of various methods
- use planning, checking and inspection techniques to avoid environmental contamination and wastage
- use workplace technology related to environmental protection and recycling equipment

### Required knowledge

A working knowledge of:

- aspects of environmental legislation and its relationship with WHS, financial and risk management
- requirements for trade waste permits
- spill clean-up procedures
- characteristics and potential environmental impact of products used in the body repair process
- philosophy of sustainability through prevention, reuse, reduce, recycle
- procedures for rectifying machinery faults and material defects
- action to be taken in case of significant environmental threat in the workplace
- reporting procedures for significant environmental damage occurring in the workplace
- cleaner production and eco-efficient strategies to avoid production of waste

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Plan and manage safe handling requirements for equipment, products and materials, including use of personal protective equipment.
- Plan and manage environmental protection procedures in business.
- Identify materials used in the repair process and assess and manage their environmental impact.
- Ensure that effective recycling processes are in place.
- Plan and manage work instructions, operating procedures and inspection processes to:
  - minimise risk of injury to self and others
  - maintain a clean workplace
  - prevent damage and wastage of goods, equipment and products
  - dispose of waste in accordance with legislative requirements and best practice
  - maintain production output and product quality.
- Report significant environmental damage or spills.
- Plan and manage maintenance of spray booth and spray equipment to ensure environmental efficiency.
- Manage effective planning and team work related to environmental best practice.
- Develop/implement or audit an existing business environmental policy which covers at a minimum: waste, recycling, hazards to stormwater, air quality, noise, energy minimisation and costs.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

- Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.
- Access to a body repair workshop with damaged vehicles, metal and plastic panels/components repair equipment and fillers, spray booth, various spray guns, paint mixing equipment, recycling bins, banded or drained preparation are and/or wash bays, quick break degreasing agents

## EVIDENCE GUIDE

	<p>liquid, sludge and solid wastes.</p> <ul style="list-style-type: none"> <li>• Access to: <ul style="list-style-type: none"> <li>• water based, acrylic, two pack paints and thinners/reducers.</li> </ul> </li> <li>• Access to a bunded or drained system, recycling systems, oil/water separator and trade waste in a body repair workshop.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.</li> <li>• Assessment should be by direct observation of tasks and questioning on underpinning knowledge.</li> <li>• Assessment should be conducted over time and should be in conjunction with assessment of other units of competence.</li> <li>• Assessment of this competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a component authority.</li> <li>• Assessment must confirm inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Automotive body repair workshop</b>	<p>Automotive body repair workshop includes:</p> <ul style="list-style-type: none"> <li>• panel removal, repair and replacement</li> <li>• panel surface cleaning and paint application.</li> </ul>
<b>WHS</b>	<p>WHS requirements include legislation, material safety data sheets, hazardous substances and dangerous goods code and safe operating procedures.</p>
<b>Legislative requirements</b>	<p>Work is carried out in accordance with legislative obligations, environmental legislation, WHS regulations, manual handling procedures and organisation insurance requirements.</p>
<b>Tooling and equipment</b>	<p>Tooling and equipment are to include spill kits, recycling bins and drums, spray gun washers, bunded/drained wash bays, spray booths, vacuum/air extraction equipment, oil/water separator, waste water management systems, quick break degreasing compounds and silt traps.</p>
<b>Resources</b>	<p>Resources may include pressure washing and facilities for the use of recycled water and containment facilities for hazardous substances.</p>
<b>Materials</b>	<p>Materials may include materials data safety sheets, manufacturer/component supplier specifications, environmental records, costings of equipment and waste removal, and may include staff environmental induction materials.</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices. Face masks are available for rubbing back and painting.</p>
<b>Information and procedures</b>	<p>Information and procedures may include:</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Work instructions are used to determine the job requirements, including job sheets, recovery methods and costing information.</li><li>1.2. Job specifications are read and interpreted.</li><li>1.3. WHS requirements, including personal protection needs, are observed throughout the work.</li><li>1.4. Vehicle to be rescued is identified.</li><li>1.5. Hand, power tooling and safety equipment are identified and checked for safe use.</li><li>1.6. Procedures are determined to minimise waste material/ components.</li><li>1.7. Procedures are identified for maximising energy efficiency while completing the job.</li></ul>
2. Survey accident scene and decide vehicle rescue method	<ul style="list-style-type: none"><li>2.1. Details are obtained by visual surveillance of rescue scene.</li><li>2.2. Details are obtained from appropriate persons.</li><li>2.3. All areas of surveillance are conducted within legal parameters and enterprise guidelines.</li><li>2.4. Work is completed without causing damage to any component or system.</li><li>2.5. All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</li></ul>
3. Prepare rescue cost details	<ul style="list-style-type: none"><li>3.1. Information is accessed from sources to enable preparation of costing details.</li><li>3.2. Options for vehicle recovery are considered.</li><li>3.3. Costing of rescue operation is carried out using approved methods in accordance with legislative requirements and enterprise guidelines.</li><li>3.4. Costing is forwarded for processing/invoicing/filing.</li><li>3.5. All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for vehicle rescue method and cost implications
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to determination of vehicle rescue method and cost, including the use of specialist tooling, measuring equipment and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- legislation
- industry practices
- technical information
- manufacturer/component supplier/company policies
- pick up/loading procedures
- towing procedures
- costing procedures
- work organisation and planning processes
- enterprise quality procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- determining vehicle rescue method
- detailing accurate rescue costing.

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to determination of vehicle rescue method and cost
- equipment, hand and power tooling appropriate to determination of vehicle rescue method and cost
- activities covering mandatory task requirements
- specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Details</b>	Detail to be obtained and considered includes location details (e.g., in ditch, traffic hazards) type of load, size and type of vehicle to be rescued and type of tow (accident roster or general tow).
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include torch, watch, work light, calculator and communication equipment.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to determination of vehicle rescue method and cost</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards.</li></ul>

## AURVGA3002 Recover vehicles

### Modification History

Release	Comment
Release 1	Replaces AURV328961A Recover vehicle Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the competence required to recover a vehicle by transporting and towing.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	The unit includes identification and confirmation of work requirement, preparation for work, selecting the recovery method, preparing the recovery vehicle and the vehicle to be recovered, operating the recovery vehicle, cleaning up the recovery worksite and completion of work finalisation processes, including clean-up and documentation.  Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine the job requirements, including job sheets, recovery types, vehicles preparation and recovery procedures.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including personal protection needs, are observed throughout the work.</p> <p>1.4. Vehicle and method of recovery are identified.</p> <p>1.5. Hand, power tooling and safety equipment are identified and checked for safe use.</p> <p>1.6. Procedures are determined to minimise waste material/ components.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Ascertain type of recovery	<p>2.1. Details are obtained by visual surveillance of recovery scene.</p> <p>2.2. Information is obtained from officials at scene.</p> <p>2.3. Hazards are recognised and included in requirements for recovery.</p> <p>2.4. All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
3. Prepare vehicle to be recovered for tow/lift	<p>3.1. Vehicle is prepared for tow/lift using recognised enterprise guidelines and legislative requirements.</p> <p>3.2. Vehicle is prepared for recovery without causing damage to any component or system.</p> <p>3.3. All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
4. Prepare recovery vehicle for tow/lift	<p>4.1. Recovery vehicle is prepared using recognised enterprise guidelines and legislative requirements.</p> <p>4.2. Recovery vehicle is prepared without causing damage to any component or system.</p> <p>4.3. All activities are carried out according to industry regulations/guidelines, WHS legislation, statutory requirements and enterprise procedures/policies.</p>
5. Operate recovery vehicle	<p>5.1. Vehicle/equipment is operated using recognised industry guidelines and legislative requirements.</p> <p>5.2. Lifting and loading procedures are followed.</p> <p>5.3. Vehicle is operated without causing damage to any</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>component or system.</p> <p>5.4.Recovered vehicle is safely conveyed to agreed destination.</p> <p>5.5.All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
6. Clean up recovery worksite	<p>6.1.Area of recovery and its near vicinity is cleared of debris and dangerous objects/hazardous materials.</p> <p>6.2.Worksite is cleaned without causing damage to any component or system.</p> <p>6.3.Clean-up procedures are completed within recognised enterprise guidelines and legislative requirements.</p>
7. Clean up work vehicle and maintain equipment	<p>7.1.Material that can be reused is collected and stored.</p> <p>7.2.Waste and scrap is removed following workplace procedure.</p> <p>7.3.Equipment and work vehicle are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>7.4.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>7.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>7.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for recovery type, preparation of vehicles, recovery procedure and worksite clean-up requirements
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to recovery of vehicles, including the use of specialist recovery equipment, measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- environmental regulations
- technical information
- hazard identification and management procedures
- pick up/loading procedures
- manufacturer/component supplier recommended towing procedures and techniques
- manual handling procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying pick up/loading procedures
- applying vehicle protection methods
- completing transporting and towing procedures
- completing area rehabilitation
- completing workplace/equipment documentation.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to recovery of vehicles
- equipment, hand and power tooling appropriate to recovery of vehicles
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

**EVIDENCE GUIDE**

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Recovery</b>	Recovery may be for damaged/broken down vehicle or transportation of vehicle
<b>Recovery vehicle</b>	Recovery vehicle may include tow truck, tilt tray, trailer, dolly wheels, low loader.
<b>Recovery methods</b>	Recovery methods are to include: <ul style="list-style-type: none"> <li>• preparation for lifting, loading and towing</li> <li>• lifting, loading, towing, securing, cleaning up recovery area (e.g. broken glass, debris).</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid

<b>RANGE STATEMENT</b>	
	requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, chains, slings, ropes, safety equipment, towing bar, jack, shovel, broom, remote lights, signs, torch, watch, work light, air lines and fittings, reduction blocks, and communication equipment.
<b>Materials</b>	Materials may include gloves, industry-specific stationery and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to street directory, verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to recovery of vehicles</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to laws, regulations and codes of practice work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements and establish quality checks
- use workplace technology related to the application of legal requirements for vehicle dismantlers, including the use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS cleaning materials, equipment, material and personal safety requirements
- legal requirements for vehicle dismantlers
- consumer legislation
- industry codes of practice
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Methods

Methods include:

- advising customers on components/parts
- removing components from vehicles
- advising customers on warranties/replacements

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to:

- operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors

#### Emergency procedures

Emergency procedures related to this unit are to include, but are not limited to:

- emergency shutdown and stopping of

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine work requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Material for work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the work.</p>
2. Clean vehicle/ component/equipment for delivery	<p>2.1. Vehicle/component/equipment is cleaned in the prescribed manner, to industry standard and secured in preparation for customer pick up.</p> <p>2.2. Cleaning is completed without causing damage to component or system.</p> <p>2.3. Cleaning operations are carried out according to industry standards/regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Deliver/hand-over vehicle/equipment/ component to customer	<p>3.1. Checklist and repair quotation is used to ensure operation of vehicle/component/equipment systems.</p> <p>3.2. Service, operating and warranty requirements are explained to customer.</p> <p>3.3. Safety features are explained to the customer.</p> <p>3.4. Final inspection is completed prior to hand-over.</p> <p>3.5. Operations are carried out according to industry standards/ regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace and environmental procedure.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified in accordance with workplace requirements.</p> <p>4.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for preparing vehicle/ component/equipment for customer use
- identifying safety and warranty information
- identifying service/repair information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- explaining work outcomes to customers
- listening and following verbal instructions
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- use workplace technology related to the preparation of vehicle/component/equipment for customer use, including the use of computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS cleaning materials, equipment, material and personal safety requirements
- environmental requirements for the disposal of substances
- cleaning agents
- technical information
- vehicle safety requirements
- vehicle/component systems operation
- cleaning procedures
- pre-delivery/inspection procedures
- testing procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle protection methods
- applying pre-delivery/inspection procedures
- applying cleaning procedures
- applying testing procedures.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated automotive worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the preparation of vehicle/component/equipment for customer use
  - equipment, hand and power tooling appropriate to the preparation of vehicle/component/equipment for customer use
  - activities covering mandatory task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of

**EVIDENCE GUIDE**

	<p>underpinning knowledge.</p> <ul style="list-style-type: none"><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</li><li>• Assessment may be applied under project-related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### **Vehicles, components and equipment**

Vehicles, components and equipment may include:

- vessels, including life jackets, flares and rescue equipment
- bicycles, including helmets
- trailers
- outdoor power equipment
- other components/assemblies/accessories

#### **Preparation methods**

Preparation methods are to include:

- manual or machine assisted cleaning
- visual inspection and testing
- checklists for systems operation
- written and verbal communication

#### **WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances

#### **Personal protective equipment**

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### **Safe operating procedures**

Safe operating procedures are to include, but are not limited to:

- operational risk assessment and treatments associated with vehicular movement, toxic

<b>RANGE STATEMENT</b>	
	substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal company quality policies and standards</li> <li>• enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering Acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• testing equipment</li> <li>• car washes</li> <li>• chemical baths</li> <li>• hot washes</li> <li>• high-pressure cleaners</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• polishes</li> <li>• paint protection agents</li> <li>• glass cleaners</li> <li>• chrome cleaners</li> <li>• upholstery cleaners</li> </ul>

**RANGE STATEMENT****Communications**

Communications are to include, but are not limited to:

- verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers

**Information/documents**

Sources of information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches
- safe work procedures related to the preparation of a vehicle/component/equipment for customer use
- regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian standards

## AURVTA3002 Remove and replace supplementary restraint systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURV327164A Remove and replace supplementary restraint systems (SRS)</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to remove and replace units/assemblies, such as air bags located in steering wheel assemblies, dash panelling, doors and other locations.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, the deactivation and removal of systems, the replacement and recommissioning of systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit covers removal and replacement of supplementary restraint systems located in steering wheel assemblies, dash panelling, doors and other locations.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Work instructions are used to determine the job requirements, including method, materials and equipment.</li><li>1.2. Job specifications are read and interpreted.</li><li>1.3. WHS requirements, including personal protection needs are observed throughout the work.</li><li>1.4. Material for removal and replacement is selected.</li><li>1.5. Equipment and tooling are identified and checked for safe and effective operation.</li><li>1.6. Procedures are determined to minimise waste material.</li><li>1.7. Procedures are identified for maximising energy efficiency while completing the job.</li></ul>
2. Deactivate and remove supplementary restraint systems	<ul style="list-style-type: none"><li>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</li><li>2.2. The supplementary restraint system is deactivated and removed using approved methods, tooling and equipment.</li><li>2.3. The system is deactivated and removed without causing damage to any component or system.</li><li>2.4. Deactivation and removal activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</li><li>2.5. System/components are tagged and stored to manufacturer/ component supplier and workplace standards.</li></ul>
3. Replace and recommission supplementary restraint systems	<ul style="list-style-type: none"><li>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</li><li>3.2. Supplementary restraint systems are replaced and recommissioned using approved methods, tooling and equipment.</li><li>3.3. Replacement and recommissioning are completed without causing damage to any component or system.</li><li>3.4. Replacement and recommissioning activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</li><li>3.5. Workplace/equipment documentation is completed and processed to enterprise/manufacturer/component supplier requirements.</li></ul>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace and environmental procedure.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for deactivation, removing, replacing and recommissioning supplementary restraint systems
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal and replacement of supplementary restraint systems, including the use of specialist tooling, measuring equipment and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- deactivation and recommissioning procedures for supplementary restraint systems
- removal and replacement procedures for supplementary restraint systems
- use of tooling and equipment
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- deactivation, removal, replacement and recommissioning of not less than two supplementary restraint systems, of which one is to be steering wheel based (for those utilising *Steering and Suspension* descriptors, one system which is steering wheel based is sufficient)
- completing workplace/equipment documentation.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to removal and replacement of supplementary restraint systems
- equipment, hand and power tooling appropriate to removal and replacement of supplementary restraint systems
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and

**EVIDENCE GUIDE**

	<p>accuracy of performance together with application of underpinning knowledge.</p> <ul style="list-style-type: none"><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</li><li>• Assessment may be applied under project related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Critical precautions

Critical precautions include:

- manufacturer/component supplier procedures which must be applied, as poor working practices are likely to damage the electronic system ECU and/or other components.

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, SRS deactivation, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.

#### Emergency procedures

Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.

#### Environmental requirements

Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, electrical test meters, and special equipment for removal and replacement of systems.
<b>Materials</b>	Materials may include system consumables and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to removal and replacement of supplementary restraint systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards.</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including job sheets and inspection procedures.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including personal protection needs, are observed throughout the work.</p> <p>1.4. Vehicle to be inspected is identified.</p> <p>1.5. Procedures are determined to minimise inspection time.</p>
2. Inspect vehicle paint, trim and accessories	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Inspection is carried out and recommendations prepared.</p> <p>2.3. Initial report of findings is completed in approved enterprise format.</p> <p>2.4. Inspection is achieved without causing damage to any component or system.</p> <p>2.5. All activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
3. Prepare a written damage repair report	<p>3.1. Written damage inspection report is prepared with sufficient information to enable preparation of repair estimate/quote, including repair option.</p> <p>3.2. Damage inspection report is appropriate to type of damage sustained.</p> <p>3.3. Damage report refers to repair requirements identified, including in-house and sublet requirements.</p> <p>3.4. Damage report is prepared and presented according to industry and enterprise guidelines/requirements.</p>
4. Clean up work area and maintain equipment	<p>4.1. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.2. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.3. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.4. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for inspection of paint, trim and accessory damage to determine and recommend repair procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to inspecting damage and recommending repair procedures, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- technical information
- manufacturer/component supplier/company policies
- inspection, damage assessment and test procedures
- repair procedures
- written communications and report writing relevant to application work organisation and planning processes
- enterprise quality processes.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• inspecting a range of vehicles with paint, trim and accessory damage and recommending repair procedure</li> <li>• preparing a written repair report.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite.</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards.</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• materials relevant to inspecting damage and recommending repair procedures</li> <li>• equipment, hand and power tooling appropriate to inspecting damage and recommending repair procedures</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also</p>

## EVIDENCE GUIDE

reinforce the integration of key competencies.

Assessment must satisfy the endorsed assessment.

Assessment may be applied under project related conditions and require evidence of process.

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Vehicles</b>	Vehicles may be any type or range.
<b>Resource requirements</b>	Resource requirements include enterprise specific tooling and equipment used for inspection and determining repair procedures.
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include enterprise specific tooling and equipment, including lighting systems, used for inspecting and determining repair procedures.
<b>Materials</b>	Materials may include solvents and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches.</li> <li>• Safe work procedures related to inspecting damage and recommending repair procedures.</li> <li>• Regulatory/legislative requirements pertaining to vehicle painting and finishing.</li> <li>• Engineer's design specifications and instructions.</li> <li>• Organisation work specifications and requirements.</li> <li>• Instructions issued by authorised enterprise or external persons.</li> <li>• Australian Standards.</li> </ul>

## AURVTA3004 Inspect vehicle systems and determine preferred repair action

### Modification History

Release	Comment
Release 1	Replaces AURT365130A Inspect vehicle systems and determine preferred repair action Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out an inspection of vehicle systems and determine repair and/or replacement methods.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit of competence should be contextualised to the qualification to which it is being applied.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed</li><li>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5.Technical and/or calibration requirements for vehicle systems are sourced and support equipment is identified and prepared</li><li>1.6.Warnings in relation to working with vehicle systems are observed</li></ul>
2. Conduct inspection	<ul style="list-style-type: none"><li>2.1.Methods for inspection implemented in accordance with workplace procedures and manufacturer/component supplier specifications</li><li>2.2.Observations are noted during inspection</li><li>2.3.Documentation of observations are completed</li></ul>
3. Analyse inspection results	<ul style="list-style-type: none"><li>3.1.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</li><li>3.2.Results are documented with evidence and supporting information</li><li>3.3.Preferred repair action is selected following analysis of options</li><li>3.4.Report, including repair recommendations, is prepared and forwarded to persons for action in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the determination of repair action, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with vehicles and equipment
- operating principles vehicle systems and their relationship to each other
- inspection procedures
- repair and replacement procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection of a range of vehicle systems in accordance with workplace requirements
- interpreting inspection results
- analysing repair options and selecting the most appropriate option
- completing report, including repair recommendations
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the determination of repair action
- equipment, hand and power tooling appropriate to the determination of repair action
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy

**EVIDENCE GUIDE**

of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Methods

Methods are to include:

- inspection and testing
- fault finding using aural, visual and operational assessments for defects
- repair option analysis
- report writing

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors

#### Emergency procedures

Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation

#### Environmental requirements

Environmental requirements are to include but are not limited to waste management, noise, dust and

RANGE STATEMENT	
	clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing devices
<b>Materials</b>	Materials may include cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the determination of repair action</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURVTG2001 Repair laminated glass

### Modification History

Release	Comment
Release 1	Replaces AURV233166A Repair laminated glass Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge required to repair chipped or cracked laminated glass.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirements, preparation for work, repairing chipped or cracked laminated glass, and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Material for repair is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Repair chipped or cracked laminated glass	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Laminated glass repairs are carried out in accordance with repair equipment manufacturer/component supplier specifications for methods, equipment and resin used.</p> <p>2.3. Work is completed without causing damage to component or system.</p> <p>2.4. Repair activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>2.5. Workplace documentation is completed and dealt with relevant to repair outcomes.</p>
3. Clean up work area and maintain equipment	<p>3.1. Material that can be reused is collected and stored.</p> <p>3.2. Waste and scrap are removed following workplace and environmental procedures.</p> <p>3.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>3.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>3.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>3.6. Tooling is maintained in accordance with workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for repairing laminated glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to repairing laminated glass, including the use of specialist tooling, measuring equipment and communication devices and the reporting/ documenting of results

#### Required knowledge

Required knowledge includes:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- measuring and testing procedures
- technical information
- manufacturer/component supplier/company policies
- glass repair methods
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle protection methods
- repairing a range of laminated glass.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to repairing laminated glass
  - equipment, hand and power tooling appropriate to repairing laminated glass
  - activities covering mandatory task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• Assessment may be applied under project-related conditions and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for the removal and installation of rubber-glazed windscreens
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to the removal and installation of rubber-glazed windscreens, including the use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- removal and installation procedures
- technical information
- vehicle safety requirements
- manufacturer/component supplier/company policies
- test procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle protection methods
- removing and installing a range of rubber-glazed windscreens.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the removal and installation of rubber-glazed windscreens
  - equipment, hand and power tooling appropriate to the removal and installation of rubber-glazed windscreens
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

**EVIDENCE GUIDE**

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Removal and installation

Removal and installation may involve:

- glass components
- moulding/trims
- mirrors
- sun visors
- aerials
- electrical and mechanical components
- rubbers
- locking strips

#### Windscreens

Windscreens may be in:

- passenger/commercial type vehicles
- recreational equipment
- small commercial
- forestry and marine equipment

#### WHS requirements

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment\
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances.

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are

<b>RANGE STATEMENT</b>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Materials for use are selected appropriate to the application.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove butyl sealed windscreen	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Removal is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>2.3. Removal is completed without causing damage to component or system.</p> <p>2.4. Workplace documentation is completed and dealt with.</p> <p>2.5. Removal activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Install butyl sealed windscreen	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Installation is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>3.3. Installation is completed without causing damage to component or system.</p> <p>3.4. Installation is tested in accordance with manufacturer/ component supplier and workplace requirements.</p> <p>3.5. Workplace documentation is completed and dealt with.</p> <p>3.6. Installation activities are carried out according to</p>

ELEMENT	PERFORMANCE CRITERIA
	industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap are removed following workplace and environmental procedures.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for the removal and installation of butyl glazed windscreens
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal and installation of butyl sealed windows, including the use of measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- removal and installation methods for butyl glazed windscreens
- technical information
- test procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle protection methods
- removing and installing a range of butyl glazed windscreens to manufacturer/component supplier requirements
- completing work within workplace time requirements
- presenting the vehicle to customer expectations
- completing workplace and equipment records.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the removal and installation of butyl sealed windows
  - equipment, hand and power tooling appropriate to the removal and installation of butyl sealed windows
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of AUR12 Automotive Industry Retail, Service and Repair Training Package.

**EVIDENCE GUIDE**

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Windscreens</b>	Windscreens may be those in: <ul style="list-style-type: none"> <li>passenger/commercial type vehicles, recreational equipment, small commercial vehicles, forestry equipment and marine craft</li> </ul>
<b>Removal and installation</b>	Removal and installation are to include: <ul style="list-style-type: none"> <li>glass components, moulding/trim, mirrors, sun visors, aerials, electrical and mechanical components, hot and cold butyl tapes and primers</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous material and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management.</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling, power tooling, cleaning equipment, sealing equipment, lifting equipment, scaffolds and cutting equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• adhesives, solvents and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the removal and installation of butyl sealed windows</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian</li> </ul>

**RANGE STATEMENT**

	<p>Design Rules</p> <ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian standards</li></ul>

## AURVTG2004 Remove and install direct glazed windscreens

### Modification History

Release	Comment
Release 1	<p>Replaces AURV233563A Remove and install direct glazed windscreens</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the skills and knowledge required to remove and install direct glazed windscreens in a variety of applications.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, removal of windscreens, installation of windscreens and their testing and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Materials for use are selected appropriate to the application.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove direct glazed windscreen	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Removal is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>2.3. Removal is completed without causing damage to component or system.</p> <p>2.4. Workplace documentation is completed and dealt with relevant to windscreen removal outcomes.</p> <p>2.5. Removal activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Install direct glazed windscreen	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Installation is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>3.3. Installation is completed without causing damage to component or system.</p> <p>3.4. Installation is tested in accordance with manufacturer/ component supplier and workplace requirements.</p> <p>3.5. Workplace documentation is completed and dealt with relevant to the installation outcomes.</p> <p>3.6. Installation activities are carried out according to</p>

ELEMENT	PERFORMANCE CRITERIA
	industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace and environmental procedures.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for the removal and installation of direct glazed windscreens
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal and installation of direct glazed windscreens, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- removal and installation methods for direct glazed windscreens
- technical information
- test procedures
- culture adhesive types and cure performance techniques and standards
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle protection methods
- removing and installing a range of direct glazed windscreens to manufacturer/component supplier; requirements
- completing work within workplace time requirements
- presenting the vehicle to customer expectations
- completing workplace and equipment records.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the removal and installation of direct glazed windscreens
  - equipment, hand and power tooling appropriate to the removal and installation of direct glazed windscreens
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of AUR12 Automotive Industry Retail, Service and Repair Training Package.

**EVIDENCE GUIDE**

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Windscreens

Windscreen may be in:

- passenger/commercial type vehicles, plant and agricultural equipment, recreational vehicles, mining equipment, forestry equipment and marine craft

#### Removal and installation

Removal and installation are to include:

- glass components, moulding/trims, mirrors, sun visors, aerials, electrical and mechanical components, rubbers, locking strips

#### Methods

Methods are to include:

- urethane bonded windscreen removal methods
- urethane bonded windscreen long and short installation methods
- encapsulated windscreen installation

#### WHS requirements

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous material and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to:

operational risk assessment and treatments associated with vehicular movement, toxic

<b>RANGE STATEMENT</b>

Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for the removal and installation of framed type windscreens
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to the removal and installation of framed type windscreens, including the use of specialist tooling measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- removal and installation methods for framed type windscreens
- technical information
- test procedures
- glass and sealant types and selection processes
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work

## AURVTG2006 Apply window tinting

### Modification History

Release	Comment
Release 1	<p>Replaces AURV233849A Prepare surfaces and apply window tinting</p> <p>Unit code updated to meet policy requirements</p> <p>Minor change to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the skills and knowledge required to prepare various surfaces and apply window tinting material.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, measuring and cutting of tinting materials, preparation of the surface, application of window tint, storage of window tinting materials and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Materials for use are selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Measure and cut tinting material/template	<p>2.1. Information is accessed from manufacturer/component supplier specifications and interpreted.</p> <p>2.2. Measurement, cutting and template production are performed according to accepted industry methods, materials and procedures.</p> <p>2.3. Surfaces are measured, and materials and templates are cut without causing damage to component or system.</p> <p>2.4. Workplace documentation is completed and dealt with relevant to measuring and cutting outcomes.</p> <p>2.5. Measurement, cutting and template production are to be carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Prepare surfaces and apply window tinting material	<p>3.1. Information required for surface preparation and tinting is accessed from manufacturer/component supplier specifications and interpreted.</p> <p>3.2. Surface preparation is carried out using approved methods, materials and equipment, according to the specifications of the tinting material to be applied.</p> <p>3.3. Window tinting material is applied according to manufacturer/component supplier specifications and tolerances.</p> <p>3.4. Tinting applications are inspected and tested in accordance with authorised procedures prior to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>placing into service.</p> <p>3.5.Work is completed without causing damage to component or system.</p> <p>3.6.Surface preparations and tinting applications are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>3.7.Workplace documentation is completed and dealt with relevant to the tinting outcomes.</p>
4. Store window tinting material	<p>4.1.Information relating to storage is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>4.2.Window tinting material is stored without causing damage to component or system.</p> <p>4.3.Storage is carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>4.4.Workplace documentation is completed and dealt with relevant to material storage outcomes.</p>
5. Clean up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored.</p> <p>5.2.Waste and scrap are removed following workplace and environmental procedures.</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>5.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for surface preparation and window tinting material application
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to the preparation of surfaces and the application of window tinting, including the use of measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- the necessary cleaning agents and cleaning procedures
- technical information
- measuring and cutting procedures
- template production procedures and material
- surface preparation procedures
- tinting material storage procedures
- manufacturer/component supplier application methods for tinting materials
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- cleaning of surfaces before and after applying tinting
- measuring and cutting tint templates and materials
- applying tint film to a range of windows/surfaces in accordance with workplace and manufacturer/component supplier requirements.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the preparation of surfaces and the application of window tinting
  - equipment, hand and power tooling appropriate to the preparation of surfaces and the application of window tinting
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of

**EVIDENCE GUIDE**

	<p>underpinning knowledge.</p> <ul style="list-style-type: none"><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</li><li>• Assessment may be applied under project-related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Methods

Methods are to include:

- selection of window tinting film
- measurement and template production
- cutting of the tint film
- application of the tint film

#### WHS requirements

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous material and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to:

- operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors

#### Emergency procedures

Emergency procedures related to this unit are to include, but are not limited to:

- emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>regulations, including Australian standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>cutting and application tooling required in preparation and application of window tinting</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>tinting and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>safe work procedures related to the preparation of surfaces and the application of window tinting</li> <li>regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>engineer's design specifications and instructions</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian standards</li></ul>

## AURVTG2007 Clean glass surfaces

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to prepare and clean glass surfaces to remove visible dirt and grime.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to the cleaning of glass components and windscreens when fitted to an automotive vehicle. The selection of cleaning fluids, cleaning equipment and cleaning techniques is in line with industry standards.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>Work is carried out according to award provisions. Vehicles may include light vehicles, commercial vehicles, heavy vehicles, and agricultural and recreational vehicles.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare glass-cleaning fluids and equipment	<p>1.1. <b>Glass-cleaning</b> fluids and equipment are selected and prepared according to workplace procedures</p> <p>1.2. <b>Personal protective equipment</b> is selected and used</p> <p>1.3. Workplace policies and procedures, including workplace health and safety (WHS) and environmental policies, are located and followed</p>
2. Set up for glass cleaning	<p>2.1. Work areas are cleared to allow set-up and activities to take place according to workplace policies and procedures</p> <p>2.2. Glass-cleaning activities are set up without causing damage to property and equipment</p> <p>2.3. Glass-cleaning fluids and equipment are set up according to workplace policies</p> <p>2.4. Glass-cleaning activities are carried out according to industry standards, <b>WHS</b> and <b>environmental requirements, legislation</b> and workplace policies</p>
3. Carry out glass cleaning	<p>3.1. Glass-cleaning procedures are carried out using approved materials, methods and equipment and according to industry and workplace standards relating to WHS and environmental sustainability</p> <p>3.2. Glass-cleaning fluids are applied without causing damage to vehicle or components</p> <p>3.3. Glass-cleaning fluids are removed using lint-free cloths</p> <p>3.4. Glass surfaces are finished to a streak-free standard</p>
4. Clean up and restore site to original condition	<p>4.1. Final clean-up is conducted to a <b>quality standard</b> without causing damage to vehicle or components</p> <p>4.2. Worksite is cleaned and restored to original condition</p> <p>4.3. Clean-up activities and storage of cleaning fluids are undertaken in line with WHS requirements and environmental legislation</p> <p>4.4. Equipment is cleaned and stored in appropriate storage area after use</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to follow workplace verbal instructions
- initiative and enterprise skills to:
  - adapt practice to suit glass-cleaning products and workplace equipment
  - recognise a workplace problem or potential problem and take action
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, material safety data sheets (MSDS), drawings and other reference documents
  - document cleaning products used
- numeracy skills to measure and calculate cleaning fluid requirements
- planning and organising skills to:
  - plan glass-cleaning job requirements following job specifications
  - ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to refer problems outside area of responsibility to appropriate persons
- self-management skills to:
  - select and use appropriate glass-cleaning products, materials, processes and procedures
  - recognise own limitations and seek advice
  - follow workplace policies and documentation, including codes of practice
- technical skills to use glass-cleaning fluids, materials, and specialist tools and equipment

#### Required knowledge

- different methods of cleaning for various applications
- different cleaning materials and equipment for various applications
- equipment safety requirements for various glass-cleaning activities and contexts
- WHS regulations, requirements, equipment and material relating to glass-cleaning activities, including personal safety requirements
- cleaning material MSDS specifications

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- clean glass surfaces
- observe workplace safety procedures and requirements
- select and apply correct glass-cleaning products and methods
- apply all WHS and safety standards
- observe MSDS information.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- materials relevant to glass-cleaning activities
- tools and equipment relevant for glass-cleaning activities
- specifications and work instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Glass cleaning</i></b> may include:	<ul style="list-style-type: none"> <li>• lint-free cleaning cloths</li> <li>• glass-cleaning fluids</li> <li>• chamois</li> <li>• squeegees</li> <li>• scrapers</li> <li>• chemicals and clean solutions</li> <li>• water hoses.</li> </ul>
<b><i>Personal protective equipment</i></b> :	<ul style="list-style-type: none"> <li>• is that prescribed under legislation, regulations, codes of practice, and workplace policies and practices</li> <li>• may include: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• personal protective clothing</li> <li>• safety footwear</li> <li>• gloves.</li> </ul> </li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• first aid equipment</li> <li>• safe handling of material</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• personal safety</li> <li>• safe use of tools and equipment</li> <li>• use of personal protective clothing</li> <li>• use of fire-fighting equipment</li> <li>• workplace policies</li> <li>• workplace safety.</li> </ul>
<b><i>Environmental requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• waste management</li> <li>• clean-up policy and procedures.</li> </ul>
<b><i>Legislation</i></b> may include:	<ul style="list-style-type: none"> <li>• federal, state or territory, and local authorities administering Acts</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul>
<b><i>Quality standard</i></b> may include:	<ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• Australian standards</li> <li>• workplace quality procedures</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## AURVTG3008 Cut and process flat laminated glass

### Modification History

Release	Comment
Release 1	Replaces AURV333215A Cut and process flat laminated glass Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to measure, mark, cut out and process flat laminated glass for installation into vehicles and equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, fabrication of templates and patterns, measurement, marking out, cutting and processing edges of glass and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Material for work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Fabricate templates and patterns	<p>2.1. Materials are selected to fabricate templates.</p> <p>2.2. Template/pattern is marked out.</p> <p>2.3. Template/pattern is fabricated.</p>
3. Measure, mark and cut out glass	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Glass is measured, marked and cut out according to measurements and legislation using template and/or pattern.</p> <p>3.3. Work is completed without causing damage to any component or system.</p>
4. Process edges of glass	<p>4.1. Arris and bevels to edges of glass are completed within established enterprise guidelines.</p> <p>4.2. Workplace documentation is completed and dealt with relevant to glass edge processing outcomes.</p> <p>4.3. All edge processing activities are carried out in accordance with statutory and enterprise policy and procedures for WHS tolerances relative to the vehicle.</p>
5. Clean up work area and maintain equipment	<p>5.1. Material that can be reused is collected and stored.</p> <p>5.2. Waste and scrap are removed following workplace and environmental procedure.</p> <p>5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.4. Unserviceable equipment is tagged and faults</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>identified in accordance with workplace requirements.</p> <p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>5.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for cutting and processing glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to cutting and processing of flat laminated glass, including the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- manufacturer/component supplier/company policies
- glass cutting and processing procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Work methods</b>	Work methods are to include manual and automatic cutting, fabrication of templates/patterns, maintenance and belt replacement on edge processing machine, and sharpening of cutting tooling.
<b>Specific requirements</b>	Specific requirements are to include laminated glass and edge processing equipment.
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, cleaning equipment, repairing equipment, cutting equipment and polishers.
<b>Materials</b>	Materials may include solvents, templates, buffing equipment and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to cutting and processing of flat laminated glass</li> <li>• regulatory/legislative requirements pertaining to working with glass</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards.</li> </ul>

## AURVTG3009 Remove and install fixed body glass

### Modification History

Release	Comment
Release 1	Replaces AURV333763A Remove and install fixed body glass Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

<b>Unit descriptor</b>	This unit covers the competence required to remove and install fixed body glass in various applications.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	Work is carried out in accordance with award provisions
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, materials and equipment</p> <p>1.2. Job specifications are read and interpreted</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work</p> <p>1.4. Material for repair is selected</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation</p> <p>1.6. Procedures are determined to minimise waste material</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job</p>
2. Remove fixed body glass	<p>2.1. Removal is completed without causing damage to any component or system</p> <p>2.2. Information is accessed and interpreted from manufacturer/ component supplier specifications</p> <p>2.3. Removal of fixed body glass is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances</p> <p>2.4. Workplace documentation is completed and dealt with relevant to removal outcomes</p> <p>2.5. Removal activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies</p>
3. Install fixed body glass	<p>3.1. Installation is completed without causing damage to any component or system</p> <p>3.2. Information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>3.3. Installation of fixed body glass is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances</p> <p>3.4. Workplace documentation is completed and dealt with relevant to installation outcomes</p> <p>3.5. Installation activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies</p>
4. Clean up work area and maintain	<p>4.1. Material that can be reused is collected and stored</p> <p>4.2. Waste and scrap is removed following workplace and</p>

ELEMENT	PERFORMANCE CRITERIA
equipment	<p>environmental procedures</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures</p> <p>4.6. Tooling is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for removal and installation of fixed body glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements for the work
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- use workplace technology related to:
  - access, interpret and apply technical information
  - use tooling and equipment
  - removal and installation of fixed body glass

#### Required knowledge

Required knowledge of:

- removal and replacement methods
- measuring and testing procedures
- technical information
- equipment safety requirements
- personal safety requirements
- vehicle safety requirements
- manufacturer/component supplier/company policies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- interpreting and communicating operational information
- selecting components/glass/sealants/adhesives/tooling and equipment
- removing and replacing fixed glass components
- adjusting fixed glass components
- safe working practices
- vehicle protection methods.

#### Context of and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job
- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable
- Prescribed outcome must be able to be achieved without direct supervision
- Access to vehicle and manufacturer/component supplier specifications as identified in the Range Statement and standard operating procedures

#### Method of assessment

- Assessment methods must confirm consistency of performance over time and in a range of workplace contexts
- Assessment should be by direct observation of tasks, questioning of underpinning knowledge and achievement of removal and installation outcome
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competence

#### Guidance information for

**EVIDENCE GUIDE****assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods may include urethane, rubber, butyl, bolted and encapsulated installation

**Specific requirements**

Specific requirements are to include electrical system(s), glass components, mouldings/trims, electrical and mechanical components and systems drainage

**Vehicles**

Vehicles may include:

- passenger type
- commercial (small and large)
- plant and agricultural equipment
- recreational
- mining
- forestry
- marine craft
- caravans and motor homes
- outdoor equipment
- recreational boating

**WHS**

WHS practices must abide by State/industry WHS legislation

**Resources**

Resources may include:

- hand tooling, power tooling, cleaning equipment, sealing equipment, lifting equipment, scaffolds, cutting equipment, adhesives, solvents

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus, eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Material for repair is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Location of airbags and supplementary restraint systems that may be affected by work are identified.</p> <p>1.7. Procedures are determined to minimise waste material.</p> <p>1.8. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove movable body glass	<p>2.1. Removal is completed without causing damage to any component or system.</p> <p>2.2. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.3. Removal of movable body glass is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>2.4. Workplace documentation is completed and dealt with relevant to removal outcomes.</p> <p>2.5. Removal activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
3. Install movable body glass	<p>3.1. Installation is completed without causing damage to any component or system.</p> <p>3.2. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.3. Installation of movable body glass is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>3.4. Workplace documentation is completed and dealt with relevant to installation outcomes.</p> <p>3.5. Installation activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace and environmental procedures.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for removal and installation of movable body glass
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements for the work
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- use workplace technology related to:
  - access, interpret and apply technical information
  - use tooling and equipment
- removal and installation of movable body glass

#### Required knowledge

A working knowledge of:

- removal and replacement methods
- measuring and testing procedures
- technical information
- equipment safety requirements
- personal safety requirements
- vehicle safety requirements
- manufacturer/component supplier/company policies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- interpreting and communicating operational information
- selecting components/glass/sealants/adhesives/tooling and equipment
- removing and replacing movable glass components
- adjusting movable glass components
- safe working practices, including precautions for working near airbags and supplementary restraint systems
- vehicle protection methods.

#### Context of, and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job.
- Access to vehicle and manufacturer/component supplier specifications as identified in the Range Statement and standard operating procedures.
- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- Prescribed outcome must be able to be achieved without direct supervision.

#### Method of assessment

- Assessment methods must confirm consistency of performance over time and in a range of workplace contexts.
- Assessment should be by direct observation of tasks, questioning of underpinning knowledge and achievement of removal and installation outcome.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competence.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

#### Guidance information for assessment

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	Methods are to include bolted, rubber and adhesive installation methods.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including dust and fume collection, breathing apparatus and eye and ear personal protection needs are observed throughout the work.</p> <p>1.4. Material for installation is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Measure, mark out and fabricate template	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Suitable materials are selected and template is fabricated to shape and size.</p> <p>2.3. Templates are completed without causing damage to any component or system.</p> <p>2.4. Fabricating and measuring activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
3. Mark out, cut panels/trim and prepare cut edges	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Template is used to mark out areas to be cut.</p> <p>3.3. Panels/trim are cut using approved methods and equipment in accordance with specifications.</p> <p>3.4. Panels/trim are prepared in readiness for installing window.</p> <p>3.5. Panels are reinforced to comply with manufacturer/ component supplier requirements.</p> <p>3.6. Work is completed without causing damage to any component or system.</p> <p>3.7. Marking out, cutting and preparation activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Install window	<p>4.1.Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>4.2.Window is installed to specification.</p> <p>4.3.Installed window is checked for operation and leak tested.</p> <p>4.4.Installation is achieved without causing damage to any component or system.</p> <p>4.5.All installation and checking is performed according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
5. Clean up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored.</p> <p>5.2.Waste and scrap are removed following workplace and environmental procedures.</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>5.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for installing windows
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to installation of side windows, including the use of specialist tooling, measuring equipment and communication devices and the reporting/ recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- enterprise/manufacturer/component supplier policies
- technical information
- marking out procedures
- measuring procedures
- cutting procedures (panels and trim)
- window installation procedures
- panel reinforcing methods
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- applying vehicle protection methods
- preparing and installing a range of side windows with a minimum of one requiring panel reinforcement
- completing workplace records.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to installation of side windows
- equipment, hand and power tooling appropriate to installation of side windows
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project related conditions and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Installation methods</b>	Installation methods are to include measuring, marking out, cutting, preparing cut edges, reinforcing cut panels, installing side windows, leak testing installed side window and sealing, testing operation and cleaning.
<b>Side windows</b>	Side windows may be installed in vehicles, trailers, outdoor equipment, caravans, agricultural equipment and recreational boating.
<b>WHS</b>	WHS requirements are to be in accordance with

<b>RANGE STATEMENT</b>	
	legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, measuring equipment, marking out equipment, cutting equipment, vehicle protection equipment and templates.

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include template materials, rubber sections, adhesives and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to installation of side windows</li><li>• regulatory/legislative requirements pertaining to working with glass</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards.</li></ul>

## AURVTG3012 Remove and install heavy vehicle rubber and urethane glazed windscreens

### Modification History

Release	Comment
Release 1	<p>Replaces AURV334163A Remove and install rubber and urethane (heavy vehicle) glazed windscreens</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit covers the competence required to remove and install rubber and/or urethane glazed windscreens in trucks, buses and coaches.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, removal and installation of windscreens and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit covers rubber and urethane glazed windscreen removal and installation in buses, coaches, passenger/commercial type vehicles and trucks.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Material for work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove rubber/urethane glazed windscreen	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Tooling and equipment for removal and screen support are selected and used.</p> <p>2.3. Removal is carried out in accordance with vehicle manufacturer/component supplier specifications and tolerances.</p> <p>2.4. Removal is completed without causing damage to any component or system.</p> <p>2.5. Removal activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p> <p>2.6. Workplace documentation is completed and dealt with relevant to removal outcomes.</p>
3. Install rubber/urethane glazed windscreen	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Tooling and equipment for installation and screen support are selected and used.</p> <p>3.3. Installation is carried out in accordance with vehicle manufacturer/component supplier and tolerances.</p> <p>3.4. Drying times are adhered to according to job requirements and manufacturer/component supplier specifications.</p> <p>3.5. Installation is completed without causing damage to any component or system.</p> <p>3.6. Installation activities are carried out according to industry regulations/guidelines, WHS legislation,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and enterprise procedures/policies.</p> <p>3.7.Workplace documentation is completed and dealt with relevant to installation outcomes.</p>
<p>4. Clean up work area and maintain equipment</p>	<p>4.1.Material that can be reused is collected and stored.</p> <p>4.2.Waste and scrap is removed following workplace and environmental procedures.</p> <p>4.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for removal and installation of rubber and urethane glazed windscreens in trucks, busses and coaches
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal and installation of rubber and methane glazed windscreens, including the use of specialist tooling, measuring equipment and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- removal and installation procedures, including cut out, windscreen support, drying times and finishing techniques
- technical information
- manufacturer/component supplier/company policies
- test procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• removing and installing a range of rubber/urethane glazed windscreens</li> <li>• completing workplace records.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite.</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards.</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• materials relevant to removal and installation of rubber and urethane glazed windscreens</li> <li>• equipment, hand and power tooling appropriate to removal and installation of rubber and methane glazed windscreens</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package.</li> <li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</li> <li>• Assessment must be by direct observation of tasks, with</li> </ul>

## EVIDENCE GUIDE

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project related conditions and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Installation

Installation may involve/require glass components, moulding/trim, mirrors, sun visors, aerials, electrical and mechanical components, rubbers and locking strips.

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials,

<b>RANGE STATEMENT</b>	
	use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, cleaning equipment, sealing equipment, lifting and supporting equipment, scaffolds and cutting equipment.
<b>Materials</b>	Materials may include adhesives, solvents, parts, moulding/trim, rubbers, locking strips and cleaning materials.

## **RANGE STATEMENT**

### **Communications**

Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.

### **Information/documents**

Sources of information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches
- safe work procedures related to removal and installation of rubber and urethane glazed windscreens
- regulatory/legislative requirements pertaining to working with glass
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. WHS requirements, including personal protection and specific needs when working at heights, are observed throughout the work.</p> <p>1.4. Material for work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove vehicle windscreen	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Tooling and equipment for removal and screen support are selected and used.</p> <p>2.3. Work height safety harnesses/equipment and procedures are adopted.</p> <p>2.4. Removal is carried out in accordance with vehicle manufacturer/component supplier and tolerances.</p> <p>2.5. Removal is completed without causing damage to any component or system.</p> <p>2.6. Removal activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p> <p>2.7. Workplace documentation is completed and dealt with relevant to removal outcomes.</p>
3. Install vehicle windscreen	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Type of glass for application is selected and used.</p> <p>3.3. Equipment for cutting windscreens from flat laminated glass is selected and used.</p> <p>3.4. Tooling and equipment for installation and screen support are selected and used.</p> <p>3.5. Work height safety harnesses/equipment and procedures are adopted.</p> <p>3.6. Installation is carried out in accordance with vehicle</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer/component supplier tolerances.</p> <p>3.7.Installation is completed without causing damage to any component or system.</p> <p>3.8.Drying times adhered to according to job requirements and manufacturer/component supplier specifications.</p> <p>3.9.Installation activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p> <p>3.10. Workplace documentation is completed and dealt with relevant to installation outcomes.</p>
4. Clean up work area and maintain equipment	<p>4.1.Material that can be reused is collected and stored.</p> <p>4.2.Waste and scrap is removed following workplace and environmental procedures.</p> <p>4.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for removal and installation of rubber/urethane glazed windscreens in "large" mining and agricultural vehicles
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and materials to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal and installation of windscreens, including the use of specialist tooling, measuring equipment and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- equipment safety requirements, including safety harnesses
- types of glass, including special acoustic glass
- manufacturer/component supplier/company policy and procedures
- windscreen attachment methods, including frames, clamps and special rubber sections
- removal and installation procedures, including working at heights and support of heavy windscreens
- test procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- removing and installing a minimum of two different "large" vehicle windscreens
- completing workplace records.

#### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to removal and installation of windscreens
- equipment, hand and power tooling appropriate to removal and installation of windscreens
- activities covering mandatory task requirements
- specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project related conditions and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Removal and installation methods**

Removal and installation methods are to include frames, clamps, special rubber sections and glazed windscreen, cutting windscreens from flat laminated glass, and installing.

**Installation**

Installing may require/involve glass components, moulding/trim, mirrors, sun visors, aerials, electrical and mechanical components, rubbers, locking strips.

**WHS**

WHS requirements are to be in accordance with

<b>RANGE STATEMENT</b>	
	legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, cleaning equipment, sealing equipment, lifting and supporting equipment, safety harnesses, scaffolds and cutting equipment.

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include adhesives, solvents, installation consumables and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to removal and installation of windscreens</li><li>• regulatory/legislative requirements pertaining to working with glass</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards.</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare hand tools	<p>1.1. <b><i>Vehicle body repair hand tools</i></b> are selected to meet <b><i>workplace requirements</i></b></p> <p>1.2. Tools are prepared for use according to manufacturer and component supplier specifications</p> <p>1.3. <b><i>Workplace Health and Safety (WHS) requirements</i></b> are identified and applied</p>
2. Correct use of hand tools	<p>2.1. Tools are used to produce outcomes according to <b><i>job requirements</i></b></p> <p>2.2. Tools are used in a safe manner to prevent injury to self and others</p> <p>2.3. Tools are used in a manner that does not cause damage to other workplace equipment</p>
3. Service and maintain hand tools	<p>3.1. Tools are checked against manufacturer and component supplier recommendation to ensure safe operation</p> <p>3.2. Service and <b><i>maintenance operations</i></b> are carried out according to industry, workplace and WHS requirements</p> <p>3.3. Tools and equipment are checked and faulty items are identified and tagged</p>
4. Store and secure hand tools	<p>4.1. Tools and equipment are checked, cleaned and stored according to workplace expectations</p> <p>4.2. Service schedule documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal instructions
  - communicate information related to the use of tools and equipment
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to:
  - read and follow vehicle body repair instruction
  - read and apply operating procedures
- numeracy skills to correctly interpret metric and imperial measurement systems
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow workplace body repair procedures
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person
  - identifying tool and equipment defects
- self-management skills to:
  - locate and identify appropriate vehicle body repair tools
  - recognise own limitations and seek advice
  - follow basic workplace documentation, such as manufacturer specification, industry codes of practice and workplace procedures
- technical skills to select, use, maintain and store vehicle body repair hand tools
- technology skills to use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements related to using vehicle body repair hand tools
- hazards and control measures associated with using vehicle body repair hand tools
- application and operation of vehicle body repair hand tools
- methods of identifying faults in vehicle body repair hand tools, including common faults and defects
- maintenance and storage procedures of vehicle body repair hand tools

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select appropriate vehicle body repair hand tools
- carry out a minimum of three vehicle body service or repair tasks using body repair hand tools
- maintain and store vehicle body repair hand tools.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- follow WHS requirements
- applying environmental policy.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- panel repair toolkit
- materials used for body repair activities
- specialised panel repair hand tools
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Vehicle body repair hand tools</i></b> may include:	<ul style="list-style-type: none"> <li>• hacksaws</li> <li>• hammers</li> <li>• dollies</li> <li>• screwdrivers</li> <li>• files</li> <li>• punches</li> <li>• specialist tooling for component removal and adjustment.</li> </ul>
<b><i>Workplace requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace reporting and recording procedures</li> <li>• safe work procedures</li> <li>• quality policies and procedures</li> <li>• sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications</li> <li>• work instruction</li> <li>• industry code of practice.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• marking-out</li> <li>• required finish, size or shape.</li> </ul>
<b><i>Maintenance operations</i></b> may include:	<ul style="list-style-type: none"> <li>• routine maintenance to specialised tools</li> <li>• minor repairs to tools and equipment</li> <li>• performing equipment calibration</li> <li>• sharpening of hand tools</li> <li>• documenting and tagging faulty equipment.</li> </ul>

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove and tag vehicle body components	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed.</li><li>1.2.Workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work.</li><li>1.3.Procedures and information, such as workshop manuals, specifications and tooling, are sourced.</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared.</li><li>1.5.Dangers associated working with removal and tagging of vehicle body components are observed.</li></ul>
2. Remove vehicle body system components	<ul style="list-style-type: none"><li>2.1.Vehicle body components for removal are identified.</li><li>2.2.Methods for conduct of removal and tagging are implemented in accordance with manufacturer/component supplier/component supplier specifications.</li><li>2.3.Components are removed without damage.</li><li>2.4.Inspection of components is carried out.</li><li>2.5.Report is processed action in accordance with workplace procedures.</li></ul>
3. Tag vehicle body components	<ul style="list-style-type: none"><li>3.1.Tagging procedures are identified.</li><li>3.2.Resource requirements for tagging are identified and support equipment is identified and prepared.</li><li>3.3.Components are tagged without damage.</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removing and tagging vehicle body components, including use of measuring equipment, use of communication devices and reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- vehicle body terminology
- function of each component
- relationship of body components to each other
- application of body components
- removal procedures
- tagging procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- quality procedures
- organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identifying, removing and tagging a range of components by their title and application
- conducting removal and tagging without damage to components or tooling and equipment.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to removing and tagging vehicle body components
  - equipment, hand and power tooling appropriate to removing and tagging vehicle body components
  - activities covering mandatory task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce integration of key competencies.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project-related conditions and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li> </ul>
<b>Guidance information for assessment</b>	

**Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Methods**

Methods include:

- tagging by title and application

**WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• handling of material</li> <li>• use of firefighting equipment</li> <li>• enterprise first aid</li> <li>• hazard control and hazardous material and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors</li> </ul>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering applicable acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling and hand-held power tooling</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>• tags and cleaning materials</li></ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"><li>• verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li></ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders and industry/workplace codes of practice</li><li>• material safety data sheets (MSDS)</li><li>• Australian Design Rules.</li><li>• safe work procedures related to removing and tagging vehicle body components</li><li>• organisation work specifications and requirements</li></ul>

## AURVTN2002 Carry out panel repairs

### Modification History

Release	Comment
Release 1	Replaces AURV225908A Carry out panel repairs Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge required to carry out panel repairs to pre-paint condition. Repairs of body panels in this unit are limited to small repairs to accident damage, including dents.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirements, preparation for work, completion of panel repairs, application of fillers, application of protective coatings, and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including quality, material, equipment and quantities.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including breathing protection, personal protection needs, are observed throughout the work.</p> <p>1.4. Material for application is selected and inspected for quality.</p> <p>1.5. Hand and power tooling are identified and checked for safe use.</p> <p>1.6. Products are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing job.</p>
2. Carry out panel repairs	<p>2.1. Information is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>2.2. Components are repaired using approved methods and equipment in accordance with manufacturer/component supplier specifications.</p> <p>2.3. Where repair of components includes disturbance to electrical, mechanical, air conditioning systems or trim, authorised assistance is sought where required.</p> <p>2.4. Repairs are carried out to pre-paint condition.</p> <p>2.5. Repair activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Carry out repairs using body fillers	<p>3.1. Information is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>3.2. Components are repaired using approved methods and equipment in accordance with manufacturer/component supplier specifications.</p> <p>3.3. Repairs are carried out to pre-paint condition.</p> <p>3.4. Repair activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
4. Clean up work area and Maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace procedures.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable conditions in accordance with</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to body repairs and work orders, plans and safety procedures for panel repairs
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work
- use workplace technology related to completing small repairs to panels, including use of specialist tooling, measuring equipment, use of communication devices and reporting/ documenting of results

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- types of body fillers and applications
- types of adhesives
- types of abrasives
- equipment maintenance procedures
- basic body filler repair procedure
- basic panel beating
- workplace guidelines regarding tolerance levels
- procedures for reporting faults and material defects
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- reading and interpreting job sheets and filler material safety data sheets to prepare for work
- identifying and selecting material used in the work process
- identifying, setting up, operating and maintaining panel repair equipment and procedures to complete the following:
  - small panel repairs
  - application of fillers
  - application of protective coatings.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to completing small repairs to panels
  - equipment, hand and power tooling appropriate to completing small repairs to panels
  - activities covering mandatory task requirements
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

**Guidance information for assessment****Range Statement****RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Repairs**

Repairs of body panels in this unit are limited to small repairs to accident damage, including dents

<b>RANGE STATEMENT</b>	
<b>Repair methods</b>	<p>Repair methods are to include:</p> <ul style="list-style-type: none"> <li>• panel and trim removal</li> <li>• heating, welding, filling and finishing</li> <li>• preparation of panels to pre-paint condition</li> </ul>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:</p> <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tooling and equipment</li> <li>• workplace environment and safety</li> <li>• handling of material</li> <li>• use of firefighting equipment</li> <li>• enterprise first aid</li> <li>• hazard control and hazardous material and substances</li> </ul>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices</p>
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors</li> </ul>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal company quality policies and standards</li> <li>• enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering applicable Acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand and power tooling</li> <li>• vehicle protection</li> <li>• templates</li> <li>• welding and heating equipment</li> <li>• specialist tooling and lifting equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• fillers, adhesives, abrasives, primers and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to completing small repairs to panels</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• workplace specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.5. Procedures are determined to minimise waste material.</p> <p>1.6. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Clean components prior to repairs and/or storage	<p>2.1. Cleaning agents are used according to cleaning agent manufacturer/component supplier instructions.</p> <p>2.2. Components of vehicle are cleaned to facilitate inspection, assessment, replacement, repair and/or storage.</p> <p>2.3. Cleaning of components is achieved without causing damage to component or system.</p> <p>2.4. Cleaning activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>2.5. Used cleaning agents and waste material are safely disposed of according to statutory and enterprise requirements.</p>
3. Remove, tag and store components	<p>3.1. Information is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>3.2. Components are removed, tagged and stored in accordance with manufacturer/component supplier specifications and enterprise procedures, to prevent injury to self and others or damage to components.</p> <p>3.3. Components are removed, tagged and stored without causing damage to component or system.</p> <p>3.4. Removal and storage activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>3.5. Report on additional parts required to complete repair (not listed on quotation) is completed in</p>

ELEMENT	PERFORMANCE CRITERIA
	accordance with enterprise policy.
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace procedure.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for removing, cleaning and storing vehicle units and components
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work
- use workplace technology related to pre-repair operations, including use of measuring equipment, use of communication devices and reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- use and handling of cleaning agents
- technical information
- removal and storage procedures
- component tagging methods
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- applying vehicle protection methods
- removing, cleaning, tagging and storing of a range of component parts
- completing workplace records.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to pre-repair operations
  - equipment, hand and power tooling appropriate to pre-repair operations
  - activities covering mandatory task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it

**EVIDENCE GUIDE**

	<p>must also reinforce integration of key competencies.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Cleaning and removal

Cleaning and removal may include:

- vehicle underbody, vehicle paint-work, glass, bright-work, plastics, rubber engine components, trim brake system components, suspension and final drive components
- wiring looms and vehicle electrics (special attention should be paid to safe disconnection of electrical components and their storage)

#### Methods

Methods may include:

- dismantling
- manual washing, machine assisted washing, use of protective coverings

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to:

- conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety,

<b>RANGE STATEMENT</b>	
	<p>machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors</p>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>

## AURVTN2004 Remove, replace and realign bolt-on panels, sections and fittings

### Modification History

Release	Comment
Release 1	<p>Replaces AURV226864A Remove, replace and realign bolt-on panels, sections and fittings</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit of competency covers the skills and knowledge required to remove and replace bolt-on vehicle body panels, body sections, and fittings.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirements, preparation for work, removal, replacement and realignment of bolt-on panels, and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including dust and fume collection, breathing apparatus and eye and ear personal protection needs, are observed throughout the work.</p> <p>1.4. Material for work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing job.</p>
2. Remove bolt-on body panels, panel sections and ancillary fittings	<p>2.1. Information is accessed and interpreted from manufacturer/ \component supplier specifications.</p> <p>2.2. Removal of body panels, panel sections and ancillary fittings is completed without causing damage to component or system.</p> <p>2.3. Where there is a potential disturbance to electrical, mechanical, electronic or other systems, assistance is sought, if required.</p> <p>2.4. Removal activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>2.5. Removed parts are tagged and stored to workplace requirements.</p>
3. Replace and realign bolt-on body panels, panel sections and ancillary fittings	<p>3.1. Information is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>3.2. Replacement components and ancillary fittings meet specifications for dimensions, material and functional capability.</p> <p>3.3. Components and ancillary fittings are replaced and realigned using approved methods, material and equipment.</p> <p>3.4. Sealant is selected and applied according to product manufacturer/component supplier specification for type, method of application and thickness.</p> <p>3.5. Where there has been a disturbance to electrical,</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>mechanical, electronic or other systems, assistance is sought, if required.</p> <p>3.6.Replacement and realignment of vehicle body panels, panel sections and ancillary fittings are completed without causing damage to component or system.</p> <p>3.7.Replacement and realignment activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
4. Clean up work area and maintain equipment	<p>4.1.Material that can be reused is collected and stored.</p> <p>4.2.Waste and scrap is removed following workplace and environmental procedure.</p> <p>4.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for removing, replacing and aligning bolt-on vehicle body panels, panel sections and ancillary fittings
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of the worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal, replacement and realignment of bolt-on panels and fittings, including use of measuring equipment, use of communication devices and reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- protection procedures for electrical/electronic systems and equipment
- material handling and storage/material safety data sheets (MSDS)
- use of tooling and equipment
- manual handling techniques
- sealant selection and application
- removal, replacement and alignment procedures for bolt-on body panels sections and fittings
- removal, replacement and realignment procedures for bolt-on ancillaries
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- completing removal, replacement and realigning operations , at a minimum, to cover:
  - a full front-end, including radiator support and skirt hardware
  - a full door assembly
  - an interior hood lining (or equivalent)
  - tagging and storing parts
  - completing workplace records.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to the removal, replacement and realignment of bolt-on panels, sections and fittings
  - equipment, hand and power tooling appropriate to the removal, replacement and realignment of bolt-on panels and fittings
  - activities covering mandatory task requirements
  - specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### **Bolt-on panels, sections and fittings**

Bolt-on panels, sections and fittings are interior and exterior components, including:

- guards, doors, bonnets, boot covers, bumper bars, lamps/lights, door trims, seats and door hardware

#### **Work methods**

Work methods are to include:

- removal and replacement/refitting
- measuring and alignment
- headlight aiming
- tagging and storing of parts

Work methods may include heating

#### **WHS**

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances

#### **Personal protective equipment**

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### **Safe operating procedures**

Safe operating procedures are to include, but are not limited to:

- conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety,

<b>RANGE STATEMENT</b>	
	<p>machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors</p>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal company quality policies and standards</li> <li>• enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering applicable Acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling, power tooling, and equipment, oxy heating equipment, templates and lifting equipment and sealing equipment</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• bolts, spare parts, adhesives and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>

**RANGE STATEMENT****Information/documents**

Sources of information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, MSDS, diagrams or sketches
- safe work procedures related to removal, replacement and realignment of bolt-on panels and fittings
- regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian standards

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Material for the work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove protector mouldings, transfers and decals	<p>2.1. Information is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>2.2. Work is completed without causing damage to component, system or protector mouldings, transfers and decals.</p> <p>2.3. Removal activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Prepare for replacement/ fitting of protector mouldings, transfers and decals	<p>3.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2. Protector mouldings, transfers and decals to be fitted are within specifications for dimensions, material and functional capability.</p> <p>3.3. Adhesives are selected according to the product manufacturer/component supplier specification for type, method, application and thickness.</p> <p>3.4. Work is completed without causing damage to component, system or protector mouldings or transfers and decals.</p> <p>3.5. Reusable moulds, decals and attachment clips/components are inspected and cleaned in preparation for refitting.</p>
4. Replace/fit protector mouldings, transfers and decals	<p>4.1. Information is accessed and interpreted from manufacturer/component supplier specifications.</p> <p>4.2. Protector mouldings, transfers and decals are replaced and fitted using approved methods, material</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>and equipment.</p> <p>4.3. Adhesives are applied according to the product manufacturer/component supplier specifications for type, method, application and thickness.</p> <p>4.4. Work is completed without causing damage to component, system or protector mouldings, transfers and decals.</p> <p>4.5. Replacement/refitting activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
5. Clean up work area and maintain equipment	<p>5.1. Material that can be reused is collected and stored</p> <p>5.2. Waste and scrap is removed following workplace and environmental procedures.</p> <p>5.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>5.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for removing and replacing/fitting protector mouldings, transfers and decals
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removal and replacement/ refitting of protector mouldings, transfers and decals, including use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- types of mouldings, transfers and decals
- methods for fitting mouldings, transfers and decals
- fastening methods (adhesives and mechanical methods)
- use of tooling and equipment
- removal procedures
- replacement/fitting procedures and preparation
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- completing removal and replacement operations covering a minimum of three components, including:
  - a double-sided tape moulding, and
  - an anti-scruff or door frame tape
- replacing/refitting protector mouldings, transfers and decals.

##### Context of, and specific resources for assessment

- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to the removal and replacement/fitting of protector mouldings, transfers and decals
  - equipment, hand and power tooling appropriate to the removal and replacement/fitting of protector mouldings, transfers and decals
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related

**EVIDENCE GUIDE**

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including methods, materials and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Materials for the work are selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove mechanical units/assemblies	<p>2.1. Mechanical units/assemblies are removed using approved methods, tooling and equipment.</p> <p>2.2. Assistance from licensed persons is sought in relation to air conditioning and LPG/NGV system/components removal.</p> <p>2.3. Removal is completed without causing damage to component or system.</p> <p>2.4. Removal activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Replace mechanical units/assemblies	<p>3.1. Mechanical units/assemblies are replaced using approved methods, tooling and equipment.</p> <p>3.2. Assistance from licensed persons must be sought in relation to the recommissioning of air conditioning and LPG/NGV system/components.</p> <p>3.3. Replacement is completed without causing damage to component or system.</p> <p>3.4. Replacement activities are carried out according to industry regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored.</p> <p>4.2. Waste and scrap is removed following workplace and environmental procedures.</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and workplace procedures.</p> <p>4.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for removing and replacing mechanical units/assemblies
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal and replacement of mechanical units/assemblies, including the use of specialist tooling, measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- types, characteristics, functions and engineering specifications of mechanical units/assemblies
- types and layout of service/repair manuals (hard copy and electronic)
- removal and replacement procedures for mechanical units/assemblies
- use of tooling and equipment
- manual handling techniques
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- removing and replacing a minimum of two mechanical units/assemblies to workplace and manufacturer/component supplier requirements
- completing workplace records.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to the removal and replacement of mechanical units/assemblies
  - equipment, hand and power tooling appropriate to the removal and replacement of mechanical units/assemblies
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

**EVIDENCE GUIDE**

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Units/assemblies

Units/assemblies may include:

- suspension, final drives, engines and others related to the vehicle types.

#### Methods

Methods are to include:

- non-technical inspection, pre-cleaning, isolation of assembly, removal/replacement and refitting of assemblies

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to:

- operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors

#### Emergency procedures

Emergency procedures related to this unit are to

<b>RANGE STATEMENT</b>	
	<p>include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal company quality policies and standards</li> <li>• enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering Acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling, jacking, support and lifting equipment and special equipment for removal and replacement</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts, lubricants, fluids and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications,</li> </ul>

**RANGE STATEMENT**

	<p>work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</p> <ul style="list-style-type: none"><li>• safe work procedures related to the removal and replacement of mechanical units/assemblies</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian standards</li></ul>

## AURVTN2007 Remove salvageable components

### Modification History

Release	Comment
Release 1	Replaces AURV228662A Remove salvageable components Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the skills and knowledge required to inspect and remove salvageable components from the vehicle and present for sale.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirements, preparation for work, inspection, removal and cleaning of salvageable components, preparation of components for sale, and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine job requirements, including job sheets, removal procedures and manufacturer/component supplier specifications.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work.</p> <p>1.4. Components to be removed are identified.</p> <p>1.5. Hand, power tooling and safety equipment are identified and checked for safe use.</p> <p>1.6. Procedures are determined to minimise waste materials/ components.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the job.</p>
2. Remove salvageable components, clean and present for sale	<p>2.1. Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2. Salvageable components are removed from vehicle according to enterprise/manufacturer/component supplier procedures.</p> <p>2.3. Components are cleaned and prepared for sale.</p> <p>2.4. Activities are carried out according to industry regulations/ guidelines, WHS requirements, legislation and enterprise procedures/policies.</p>
3. Clean up work area and maintain equipment	<p>3.1. Material that can be reused is collected and stored.</p> <p>3.2. Waste and scrap is removed following workplace procedure.</p> <p>3.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>3.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>3.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>3.6. Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for removing components, cleaning and presenting for sale
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete removal of components required for the work
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use workplace technology related to removing salvageable components from vehicles, including the use of specialist tooling and equipment and communication devices and the reporting/documenting of results
- 

#### Required knowledge

Required knowledge includes:

- WHS cleaning materials, equipment, material and personal safety requirements
- vehicle safety requirements
- types and layout of service/repair manuals (hard copy and electronic)
- industry codes of practice removal methods
- inspection procedures
- sales preparation procedures
- cleaning methods, material and equipment
- manual handling methods
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- removing and cleaning of a range of components without causing damage or injury to tooling, equipment and persons
- preparing the components for sale.

#### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian Standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - material relevant to removing salvageable components from vehicles
  - equipment, hand and power tooling appropriate to removing salvageable components from vehicles
  - activities covering mandatory task requirements
  - specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <ul style="list-style-type: none"> <li>• Assessment may be applied under project-related conditions and require evidence of process.</li> <li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. Work instructions are used to determine work requirements, including method, material and equipment.</p> <p>1.2. Job specifications are read and interpreted.</p> <p>1.3. Workplace health and safety (WHS) requirements, including personal protection needs are observed throughout the work.</p> <p>1.4. Material for work is selected.</p> <p>1.5. Equipment and tooling are identified and checked for safe and effective operation.</p> <p>1.6. Procedures are determined to minimise waste material.</p> <p>1.7. Procedures are identified for maximising energy efficiency while completing the work.</p>
2. Wash/clean vehicle body exterior	<p>2.1. Tooling and equipment are selected and used according to workplace methods and customer requirements.</p> <p>2.2. Cleaning and protection agents are selected and used according to vehicle finish type, workplace methods and product manufacturer/component supplier recommended applications.</p> <p>2.3. Vehicle body exterior is washed and cleaned according to workplace/customer and product manufacturer/component supplier prescribed methods and procedures.</p> <p>2.4. Washing/cleaning is completed without causing damage to component or system.</p> <p>2.5. Vehicle body exterior is washed and cleaned according to industry standards/regulations/guidelines, WHS requirements, legislation and enterprise procedures/ policies.</p> <p>2.6. Cleaning and protection agents are stored according to manufacturer/component supplier recommendations and regulatory requirements.</p>
3. Wash/clean door jambs, boot and bonnet surrounds and inner sill panels	<p>3.1. Tooling and equipment are selected and used according to workplace methods and customer requirements.</p> <p>3.2. Cleaning/protection agents are selected and used according to vehicle finish type, workplace methods and product manufacturer/component supplier recommended applications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3.Vehicle body door/boot cavities are washed and cleaned according to workplace/customer and product manufacturer/component supplier prescribed methods and procedures.</p> <p>3.4.Washing/cleaning is completed without causing damage to component or system.</p> <p>3.5.Vehicle door jambs, boot and bonnet surrounds and inner sills are washed and cleaned according to industry standards/regulations/guidelines, WHS requirements, legislation and enterprise procedures/policies.</p> <p>3.6.Cleaning/protection agents are stored according to manufacturer/component supplier recommendations and regulatory requirements.</p>
4. Clean up work area and maintain equipment	<p>4.1.Material that can be reused is collected and stored.</p> <p>4.2.Waste material is removed following workplace and environmental procedure.</p> <p>4.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>4.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements.</p> <p>4.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.</p> <p>4.6.Tooling is maintained in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- collect, organise and understand information related to work orders, plans and safety procedures for washing a vehicle
- identifying safety precautions
- identifying recommended washing and body protection agents applications and procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers and customers, and the reporting of work outcomes and problems
- reading and interpreting product labels and directions
- listening and following verbal instructions
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and wastage
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work, including measuring and mixing cleaning and protection fluids
- use workplace technology related to the washing/cleaning of vehicle bodies, including the use of measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

Required knowledge includes:

- WHS regulations/requirements, equipment, material and personal safety requirements
- environmental requirements for storage, handling and disposal of substances
- material safety data sheets
- cleaning/body protection agents and their recommended applications
- washing and cleaning procedures for vehicle body exterior, door jambs, boot and bonnet surrounds and inner sill panels
- work organisation and planning processes

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- selecting and using appropriate material and equipment
- washing and cleaning a range of vehicle body exteriors, door jambs, boot and bonnet surrounds and inner sill panels.

##### Context of, and specific resources for assessment

- Application of competence is to be assessed in the workplace or simulated worksite.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with regulatory requirements, including Australian standards.
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials relevant to the washing/cleaning of vehicle bodies
  - equipment, hand and power tooling appropriate to the washing/cleaning of vehicle bodies
  - activities covering mandatory task requirements
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

**EVIDENCE GUIDE**

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project-related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Vehicle body and door cavities

Vehicle body and door cavities are to include:

- body exterior
- door jambs
- boot and bonnet surrounds
- inner sill panels

#### Methods

Methods are to include:

- manual or machine assisted washing

#### WHS

WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include:

- protective clothing and equipment
- use of tooling and equipment
- workplace environment and safety
- handling of material
- use of firefighting equipment
- enterprise first aid
- hazard control and hazardous material and substances

#### Personal protective equipment

Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices

#### Safe operating procedures

Safe operating procedures are to include, but are not limited to:

- operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors

<b>RANGE STATEMENT</b>	
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment</li> <li>• extinguishing fires</li> <li>• enterprise first aid requirements</li> <li>• worksite evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
