

**Australian Government**

# **AUR12 Automotive Industry Retail, Service and Repair Training Package**

**Release: 2.1**

## CONTENTS

AUR12 Automotive Industry Retail, Service and Repair Training Package .....	20
Preliminary Information .....	26
Overview .....	190
Qualifications Framework .....	198
Assessment Guidelines .....	226
Competency Standards .....	238
Supporting Text Block .....	243
AUR10112 Certificate I in Automotive Vocational Preparation .....	244
AUR20112 Certificate II in Automotive Administration .....	252
AUR20212 Certificate II in Automotive Air Conditioning Technology .....	258
AUR20312 Certificate II in Bicycle Mechanical Technology .....	265
AUR20412 Certificate II in Automotive Electrical Technology .....	273
AUR20512 Certificate II in Automotive Servicing Technology .....	281
AUR20612 Certificate II in Marine Mechanical Technology .....	288
AUR20712 Certificate II in Automotive Vocational Preparation .....	296
AUR20812 Certificate II in Outdoor Power Equipment Technology .....	308
AUR20912 Certificate II in Automotive Body Repair Technology .....	314
AUR21012 Certificate II in Motorsport Technology .....	323
AUR21112 Certificate II in Automotive Sales .....	332
AUR21212 Certificate II in Automotive Underbody Technology .....	339
AUR21312 Certificate II in Automotive Braking System Technology .....	346
AUR21412 Certificate II in Automotive Cooling System Technology .....	352
AUR21512 Certificate II in Automotive Cylinder Head Reconditioning .....	359
AUR21612 Certificate II in Automotive Driveline System Technology .....	365
AUR21712 Certificate II in Automotive Exhaust System Technology .....	371
AUR21812 Certificate II in Automotive Steering and Suspension System Technology .....	378
AUR21913 Certificate II in Automotive Tyre Servicing Technology .....	384
AUR30112 Certificate III in Automotive Administration .....	392
AUR30212 Certificate III in Bicycle Workshop Operations .....	399
AUR30312 Certificate III in Automotive Electrical Technology .....	407
AUR30412 Certificate III in Agricultural Mechanical Technology .....	418
AUR30612 Certificate III in Light Vehicle Mechanical Technology .....	427
AUR30713 Certificate III in Outdoor Power Equipment Technology .....	437
AUR30812 Certificate III in Motorcycle Mechanical Technology .....	446
AUR30912 Certificate III in Motorsport Technology .....	454
AUR31012 Certificate III in Automotive Sales .....	468
AUR31212 Certificate III in Mobile Plant Technology .....	476
AUR31312 Certificate III in Automotive Engine Reconditioning .....	485
AUR31412 Certificate III in Automotive Diesel Fuel Technology .....	492
AUR31512 Certificate III in Automotive Diesel Engine Technology .....	499
AUR31612 Certificate III in Automotive Drivetrain Technology .....	507
AUR31712 Certificate III in Forklift Technology .....	515
AUR31812 Certificate III in Heavy Commercial Trailer Technology .....	526
AUR31912 Certificate III in Elevating Work Platform Technology .....	534
AUR32012 Certificate III in Automotive Alternative Fuel Technology .....	544
AUR32112 Certificate III in Automotive Body Repair Technology .....	552
AUR32212 Certificate III in Automotive Glazing Technology .....	562
AUR32312 Certificate III in Automotive and Marine Trimming Technology .....	570
AUR32412 Certificate III in Automotive Refinishing Technology .....	577

AUR32512 Certificate III in Automotive Underbody Technology .....	584
AUR40112 Certificate IV in Automotive Management.....	593
AUR40212 Certificate IV in Automotive Mechanical Diagnosis .....	599
AUR40312 Certificate IV in Motorsport Technology.....	609
AUR40412 Certificate IV in Automotive Performance Enhancement.....	617
AUR40612 Certificate IV in Automotive Electrical Technology .....	625
AUR40712 Certificate IV in Automotive Body Repair Technology.....	634
AUR40812 Certificate IV in Automotive Mechanical Overhauling.....	640
AUR50112 Diploma of Automotive Management.....	647
AUR50212 Diploma of Automotive Technology.....	654
AUR50312 Diploma of Motorsport Technology.....	663
AURSS00004 Automotive CNG Installation, Service and Repair Skill Set .....	670
AURSS00005 Automotive CNG Service and Repair Skill Set.....	673
AURSS00006 Automotive Electrical Skill Set for Light Vehicle Technicians .....	675
AURSS00007 Automotive LNG Installation, Service and Repair Skill Set.....	678
AURSS00008 Automotive LNG Service and Repair Skill Set .....	680
AURSS00009 Automotive LPG Installation, Service and Repair Skill Set.....	683
AURSS00010 Automotive LPG Service and Repair Skill Set.....	686
AURSS00011 Battery Electric Vehicle Diagnosis and Repair Skill Set .....	689
AURSS00012 Battery Electric Vehicle Inspection and Servicing Skill Set .....	692
AURSS00013 Heavy Commercial Vehicle Skill Set for Light Vehicle Technicians .....	694
AURSS00014 Hybrid Electric Vehicle Inspection and Servicing Skill Set.....	697
AURSS00015 Mobile Plant Skill Set for Agricultural Equipment Technicians .....	700
AURSS00016 Mobile Plant Skill Set for Heavy Commercial Vehicle Technicians .....	703
AURSS00017 Mobile Plant Skill Set for Light Vehicle Technicians.....	706
AURSS00018 Vehicle Air Conditioning Install and Overhaul Skill Set.....	709
AURSS00019 Vehicle Air Conditioning Installation Skill Set.....	711
AURSS00020 Vehicle Air Conditioning Overhaul Skill Set .....	713
AURSS00021 Vehicle Air Conditioning Service, Retrofit, and Repair Skill Set.....	715
AURSS00022 Vehicle Refrigerant Recovery Skill Set.....	717
AURSS00023 Advanced Body Repair Skill Set.....	719
AURSS00024 Advanced Body Repair Welding Skill Set.....	721
AURSS00025 Advanced Vehicle Refinishing Skill Set .....	723
AURAAA2001 Work in an automotive administration environment.....	725
AURAAA4002 Determine retail rates for work .....	734
AURACA2001 Establish relations with customers.....	741
AURACA3002 Establish customer requirements of a complex nature .....	749
AURACA3003 Build customer relations.....	757
AURAEA1001 Identify environmental requirements in an automotive workplace.....	765
AURAEA2002 Apply environmental and sustainability best practice in an automotive workplace .....	774
AURAEA3003 Monitor environmental and sustainability best practice in the automotive mechanical industry.....	783
AURAEA4004 Manage environmental compliance in an automotive workplace .....	793
AURAF2001 Use numbers in an automotive workplace.....	802
AURAF2002 Read in an automotive workplace.....	811
AURAF2003 Communicate effectively in an automotive workplace .....	817
AURAF2004 Solve routine problems in an automotive workplace .....	826
AURAF2005 Write routine texts in an automotive workplace .....	834
AURAF3008 Read and apply automotive repair instructions .....	841
AURAF5006 Prepare technical reports.....	849
AURAF5007 Develop and document specifications and procedures.....	856
AURAKA2001 Use information technology systems .....	864

AURAKA3002 Adapt work processes to new technologies .....	871
AURALA3001 Determine legal aspects of an automotive service and repair contract ....	877
AURAMA2001 Work effectively with others .....	884
AURAMA2002 Communicate business information .....	893
AURAMA3003 Conduct information sessions .....	901
AURAMA3004 Maintain business image .....	906
AURAMA4005 Manage complex customer issues .....	913
AURAMA5006 Contribute to business improvement .....	921
AURANN4001 Prepare a vehicle repair quotation .....	928
AURAQA2001 Contribute to quality work outcomes .....	936
AURAQA3002 Inspect technical quality of work .....	943
AURAQA3003 Maintain quality systems .....	951
AURASA1001 Apply automotive workplace safety fundamentals .....	958
AURASA2002 Apply safe working practices in an automotive workplace .....	965
AURATA2001 Identify basic automotive faults using troubleshooting processes .....	974
AURATA2002 Read and interpret engineering drawings .....	982
AURATA2003 Produce drawings from design concepts .....	990
AURATA3004 Provide technical guidance .....	997
AURATA3005 Estimate complex jobs .....	1004
AURBCA2001 Work in a retail bicycle environment .....	1012
AURBCA2002 Select and adjust bicycle to fit rider .....	1022
AURBSA3001 Conduct cycling proficiency training .....	1030
AURBTA1001 Remove and tag bicycle components .....	1042
AURBTA1002 Adjust bicycles .....	1051
AURBTA2003 Assemble bicycles .....	1059
AURBTA2004 Assemble box bicycles for retail sale .....	1068
AURBTA3005 Restore bicycles .....	1078
AURBTA3006 Identify and select components for custom bicycles .....	1087
AURBTA3007 Provide mechanical support to cycling events .....	1097
AURBTB2001 Service and repair bicycle mechanical braking systems .....	1109
AURBTB2002 Service bicycle hydraulic braking systems .....	1119
AURBTB3003 Repair bicycle hydraulic braking systems .....	1128
AURBTD2001 Service bicycle steering systems .....	1138
AURBTD2002 Service bicycle suspension systems .....	1147
AURBTD3003 Repair and overhaul bicycle steering systems .....	1156
AURBTD3004 Repair and overhaul bicycle suspension systems .....	1166
AURBTJ2001 Remove, repair and fit bicycle tyres .....	1175
AURBTJ2002 Service bicycle wheels and hubs .....	1184
AURBTJ3003 Design and build bicycle wheels .....	1194
AURBTJ3004 Repair and overhaul bicycle wheels and hubs .....	1204
AURBTK2001 Use and maintain specialised bicycle repair tools .....	1215
AURBTQ2001 Service bicycle drivetrain systems .....	1231
AURBTQ3002 Repair bicycle drivetrain systems .....	1240
AURBTR3001 Service electric power assist bicycles .....	1250
AURBTV2001 Fit and adjust bicycle accessories .....	1259
AURBTY3001 Service and repair bicycle frames .....	1268
AURBTY4002 Design and build bicycle frames .....	1278
AURBTY4003 Assess carbon fibre frames for repair .....	1289
AURETA5001 Analyse and evaluate electrical and electronic faults in electric over-hydraulic systems .....	1299
AURETA5002 Analyse and evaluate electrical and electronic faults in safety systems ..	1310
AURETA5003 Analyse and evaluate electrical and electronic faults in monitoring and protection systems .....	1321

AURETA5004 Analyse and evaluate electrical and electronic faults in convenience and entertainment systems .....	1332
AURETA5005 Analyse and evaluate electrical and electronic faults in theft-deterrent systems.....	1343
AURETA5006 Analyse and evaluate electrical and electronic faults in climate-control systems.....	1352
AURETB3001 Repair electric braking systems .....	1363
AURETB5002 Analyse and evaluate electrical and electronic faults in braking systems.....	1373
AURETD3001 Service and repair electronically controlled steering systems.....	1383
AURETD5002 Analyse and evaluate electrical and electronic faults in stability, steering and suspension systems.....	1394
AURETE5001 Analyse and evaluate electrical and electronic faults in engine management systems.....	1405
AURETH3001 Depower battery electric vehicles.....	1416
AURETH3002 Service and maintain battery electric vehicles .....	1424
AURETH4003 Test and repair high voltage battery systems in battery electric vehicles.....	1434
AURETH4004 Diagnose and repair traction motor speed control device in battery electric vehicles .....	1444
AURETH4005 Diagnose and repair high voltage traction motors in battery electric vehicles .....	1453
AURETH4006 Diagnose and repair auxiliary motors and associated components in battery electric vehicles.....	1461
AURETH4007 Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles.....	1470
AURETH4008 Diagnose and repair high voltage cabin heating and cooling systems in battery electric vehicles.....	1481
AURETH4009 Diagnose and repair DC to DC converters in battery electric vehicles ..	1490
AURETH4010 Test high voltage batteries in hybrid electric vehicles .....	1499
AURETH4011 De activate and reinitialise power supply in hybrid electric vehicles.....	1508
AURETH4012 Service and maintain electrical components in hybrid electric vehicles ..	1517
AURETH4014 Diagnose complex faults in battery electric and hybrid electric vehicle systems.....	1526
AURETH5013 Analyse and evaluate electrical and electronic faults in electric and hybrid vehicle systems .....	1534
AURETK1001 Identify, select and use low voltage electrical test equipment .....	1545
AURETK2002 Use and maintain automotive electrical test equipment .....	1554
AURETR1001 Remove and tag automotive electrical system components.....	1563
AURETR1002 Test, service and maintain battery storage systems .....	1571
AURETR1003 Apply automotive electrical system fundamentals.....	1580
AURETR2005 Install, test and repair electrical security systems and components .....	1590
AURETR2006 Carry out soldering of electrical wiring and circuits .....	1601
AURETR2007 Demonstrate knowledge of automotive electrical circuits and wiring systems.....	1610
AURETR2008 Remove and replace electrical units and assemblies.....	1618
AURETR2009 Install, test and repair vehicle lighting and wiring systems .....	1629
AURETR2010 Fabricate, test and repair wiring harnesses and looms.....	1639
AURETR2011 Install and test basic ancillary electrical components .....	1650
AURETR2012 Test and repair basic electrical circuits .....	1660
AURETR2013 Inspect and service charging systems .....	1671
AURETR2014 Inspect and service starting systems.....	1682
AURETR2015 Inspect and service batteries .....	1693
AURETR2016 Read and apply vehicle wiring schematics and drawings .....	1703
AURETR2035 Demonstrate knowledge of petrol and diesel engine operation.....	1712

AURETR2042 Remove, refit and test electrical componentry for operation following body repair activities.....	1721
AURETR3017 Overhaul charging system alternators .....	1729
AURETR3018 Overhaul starting motors.....	1740
AURETR3019 Inspect, service and repair AC electric motor drive systems .....	1751
AURETR3020 Repair electronic systems.....	1760
AURETR3021 Inspect, service and repair electronic management, monitoring and tracking systems .....	1771
AURETR3022 Diagnose and repair vehicle dynamic control systems.....	1781
AURETR3023 Diagnose and repair electronic spark ignition engine management systems .....	1792
AURETR3024 Diagnose and repair electronic compression ignition engine management systems.....	1804
AURETR3025 Test, charge and replace batteries.....	1816
AURETR3026 Remove, replace and program electrical and electronic units and assemblies .....	1826
AURETR3027 Install ancillary electronic control unit systems and components .....	1837
AURETR3028 Diagnose and repair instruments and warning systems .....	1849
AURETR3029 Diagnose and repair charging systems .....	1860
AURETR3030 Diagnose and repair starting systems.....	1872
AURETR3031 Diagnose and repair ignition systems .....	1883
AURETR3032 Repair electrical systems.....	1894
AURETR3036 Service and repair electronically controlled suspension systems .....	1905
AURETR3043 Service and repair electronic body management systems.....	1916
AURETR3044 Service and repair electronic drive management systems .....	1926
AURETR4004 Diagnose complex electrical and electronic faults in vehicle convenience and entertainment systems.....	1936
AURETR4037 Diagnose complex electrical and electronic faults in light vehicle safety systems.....	1944
AURETR4038 Diagnose complex faults in motorcycle electrical and electronic systems .....	1952
AURETR4039 Diagnose complex electrical and electronic faults in light vehicle theft deterrent systems .....	1960
AURETR4040 Diagnose complex electrical and electronic faults in vehicle monitoring and protection systems.....	1968
AURETR5033 Develop and apply electronic systems modification.....	1976
AURETR5034 Develop and apply electrical systems modification.....	1986
AURETU2001 Install air conditioning systems.....	1995
AURETU2002 Recover vehicle refrigerants .....	2005
AURETU2003 Service air conditioning and HVAC systems .....	2014
AURETU3004 Diagnose and repair air conditioning and HVAC systems .....	2027
AURETU3005 Retrofit and modify air conditioning and HVAC systems .....	2041
AURETU4006 Diagnose complex faults in air conditioning and HVAC systems .....	2055
AURETU4007 Overhaul air conditioning system components.....	2063
AURETX5001 Analyse and evaluate electrical and electronic faults in transmission and driveline systems .....	2074
AURHTA1001 Carry out heavy vehicle pre-repair operations .....	2085
AURHTA2003 Remove and replace heavy commercial vehicle ancillary components and accessories.....	2093
AURHTA3002 Service and repair trailers in excess of 4.5 tonnes.....	2102
AURHTB3001 Repair air braking systems .....	2114
AURHTB3002 Diagnose and repair heavy vehicle hydraulic braking systems.....	2122
AURHTB3007 Diagnose and repair heavy vehicle electronic braking systems .....	2131
AURHTB4003 Overhaul braking system components (heavy) .....	2140
AURHTB4004 Overhaul air braking systems and components .....	2150

AURHTB4006 Diagnose complex faults in heavy commercial vehicle braking systems	2159
AURHTB5005 Analyse and evaluate heavy vehicle braking system faults	2167
AURHTD2001 Inspect and service heavy commercial vehicle suspension systems	2178
AURHTD3002 Repair steering systems (heavy vehicle)	2186
AURHTD3003 Repair suspension systems (heavy vehicle)	2196
AURHTD3004 Carry out wheel alignment operations (heavy vehicle)	2206
AURHTD4006 Diagnose complex faults in heavy commercial vehicle steering and suspension systems	2215
AURHTD5005 Analyse and evaluate heavy vehicle steering and suspension system faults	2223
AURHTE2001 Remove and install heavy vehicle engine assemblies	2233
AURHTE3002 Repair engines and associated engine components (heavy vehicle)	2242
AURHTE4003 Diagnose complex faults in heavy vehicle diesel engines	2252
AURHTE5004 Analyse and evaluate heavy vehicle engine and fuel system faults	2260
AURHTF2001 Inspect heavy commercial vehicle fuel systems and components	2271
AURHTJ1001 Inspect heavy commercial vehicle wheels and tyres	2278
AURHTJ2002 Select heavy vehicle tyres and rims for specific applications	2286
AURHTJ2003 Remove, inspect, and refit heavy vehicle wheel assemblies	2293
AURHTJ2004 Demount, inspect, repair and mount agricultural equipment tyres and tubes	2302
AURHTJ2006 Remove, inspect, repair and fit tyres and tubes (heavy)	2312
AURHTJ3005 Identify and apply pneumatic wheeled traction performance enhancement systems (heavy vehicle)	2321
AURHTL4001 Inspect, repair and diagnose alternative fuel systems for heavy vehicle engines	2330
AURHTQ2001 Inspect heavy commercial vehicle driveline components	2340
AURHTQ3002 Repair final drive assemblies (heavy vehicle)	2347
AURHTQ3003 Repair final drive - driveline (heavy vehicle)	2355
AURHTR3005 Diagnose and repair heavy trailer electronically controlled roll stability systems	2364
AURHTX3001 Repair transmissions - manual (heavy vehicle)	2373
AURHTX3002 Inspect, test and replace transmissions - automatic (heavy vehicle)	2383
AURHTX3003 Repair transmissions - automatic (heavy vehicle)	2393
AURHTX3004 Diagnose and repair heavy vehicle clutch systems	2403
AURHTX4006 Diagnose complex faults in heavy commercial vehicle transmission and driveline systems	2412
AURHTX5005 Analyse and evaluate heavy vehicle transmission system faults	2420
AURHTY2001 Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes	2430
AURHTY3002 Diagnose and repair mechanical connections of heavy vehicles and trailers over 4.5 tonnes	2438
AURHTZ3001 Diagnose and repair heavy vehicle emission control systems	2447
AURJTA1001 Perform minor adjustments to motorcycles	2456
AURJTA1002 Remove and replace motorcycle components and accessories	2465
AURJTA5003 Analyse and evaluate motorcycle engine and transmission system faults	2474
AURJTB3001 Diagnose and repair motorcycle braking systems	2485
AURJTB5002 Analyse and evaluate motorcycle braking system faults	2494
AURJTD2001 Inspect and service motorcycle suspension systems	2505
AURJTD2002 Inspect and service motorcycle steering systems	2513
AURJTD3003 Diagnose and repair motorcycle suspension systems	2521
AURJTD3004 Diagnose and repair motorcycle steering systems	2531
AURJTD4005 Diagnose complex faults in motorcycle steering and suspension systems	2540
AURJTD5006 Analyse and evaluate motorcycle steering, suspension and frame system faults	2548

AURJTE3001 Diagnose and repair motorcycle engines.....	2559
AURJTE4002 Diagnose complex faults in motorcycle engine and transmission systems.....	2568
AURJTJ2001 Remove, inspect and fit motorcycle wheel assemblies.....	2576
AURJTQ2001 Inspect and service motorcycle driveline systems .....	2584
AURJTQ3002 Diagnose and repair motorcycle driveline systems .....	2592
AURJTR5001 Analyse and evaluate motorcycle electrical and electronic system faults.....	2601
AURJTX3001 Diagnose and repair motorcycle clutch systems.....	2612
AURJTX3002 Diagnose and repair motorcycle manual transmissions .....	2621
AURJTX3003 Diagnose and repair motorcycle automatic transmissions .....	2630
AURJTY3001 Repair and align motorcycle frames .....	2639
AURKTA3001 Synchronise plant and equipment.....	2649
AURKTA3002 Inspect, service and repair harvesting equipment.....	2657
AURKTA3003 Inspect, service and repair crop planting and seeding equipment.....	2667
AURKTA3004 Inspect, service and repair spraying and spreading equipment .....	2676
AURKTA3005 Inspect, service and repair tracked type drive and support systems .....	2686
AURKTA4009 Diagnose complex faults in mobile plant hydraulic systems.....	2697
AURKTA5006 Analyse and evaluate tracked mobile plant transmission, steering and braking systems faults.....	2705
AURKTA5007 Analyse and evaluate mobile plant hydraulic system faults .....	2716
AURKTB3001 Diagnose and repair mobile plant braking systems.....	2727
AURKTB4003 Diagnose complex faults in mobile plant braking systems.....	2737
AURKTB5002 Analyse and evaluate wheeled mobile plant braking system faults.....	2745
AURKTD3001 Diagnose and repair mobile plant suspension systems .....	2756
AURKTD3002 Diagnose and repair mobile plant steering systems.....	2765
AURKTD4005 Diagnose complex faults in mobile plant steering and suspension systems.....	2774
AURKTD5003 Analyse and evaluate wheeled mobile plant steering and suspension system faults .....	2782
AURKTD5004 Analyse and evaluate tracked mobile plant undercarriage and suspension system faults .....	2793
AURKTE5001 Analyse and evaluate mobile plant engine and fuel system faults.....	2804
AURKTQ3001 Diagnose and repair mobile plant final drive assemblies .....	2815
AURKTR3001 Diagnose and repair electric-over-hydraulic control systems.....	2824
AURKTX3001 Diagnose and repair powershift transmissions .....	2833
AURKTX4003 Diagnose complex faults in mobile plant transmission systems.....	2842
AURKTX5002 Analyse and evaluate wheeled mobile plant transmission system faults .....	2850
AURLLD3001 Determine compliance of steering and suspension modifications .....	2861
AURLTA1001 Apply automotive mechanical system fundamentals .....	2870
AURLTB3003 Diagnose and repair light vehicle hydraulic braking systems .....	2879
AURLTB4001 Overhaul braking system components (light).....	2888
AURLTB4004 Diagnose complex faults in light vehicle braking systems .....	2898
AURLTB5002 Analyse and evaluate light vehicle braking system faults .....	2906
AURLTD3001 Select and install performance enhanced suspension system products .....	2917
AURLTD3002 Service and rectify faults in lift assisted suspension systems.....	2927
AURLTD3003 Reset steering system alignment adjustments to customer specifications.....	2938
AURLTD3004 Repair steering systems (light vehicle) .....	2949
AURLTD3005 Repair suspension systems (light vehicle).....	2960
AURLTD3006 Carry out wheel alignment operations (light vehicle).....	2971
AURLTD4009 Diagnose complex faults in light vehicle steering and suspension systems.....	2981
AURLTD5007 Analyse and evaluate light vehicle steering and suspension system faults.....	2990
AURLTE2001 Remove and install light vehicle engine assemblies.....	3002
AURLTE3002 Repair engines and associated engine components (light vehicle).....	3011
AURLTE4004 Diagnose complex faults in light vehicle petrol engines .....	3022
AURLTE4005 Diagnose complex faults in light vehicle diesel engines .....	3030

AURLTE5003 Analyse and evaluate light vehicle engine and fuel system faults.....	3038
AURLTF3001 Diagnose and repair mechanical fuel injection systems .....	3050
AURLTJ2001 Select tyres and rims for specific applications (light) .....	3059
AURLTJ2002 Remove, inspect, repair and fit tyres and tubes (light).....	3069
AURLTJ2003 Remove, inspect, and refit light vehicle wheel assemblies.....	3079
AURLTJ3004 Provide advice on the effects of wheel and tyre combinations .....	3087
AURLTQ3001 Repair final drive assemblies (light vehicle).....	3096
AURLTQ3002 Repair final drive - driveline (light vehicle) .....	3106
AURLTQ5003 Analyse and evaluate light vehicle driveline system faults .....	3117
AURLTX3001 Repair transmissions - manual (light vehicle) .....	3129
AURLTX3002 Repair transmissions - automatic (light vehicle).....	3141
AURLTX3003 Diagnose and repair light vehicle clutch systems.....	3151
AURLTX4004 Diagnose complex faults in light vehicle transmission and driveline systems.....	3160
AURLTZ3001 Diagnose and repair light vehicle emission control systems .....	3168
AURMBA2001 Transport a light competition vehicle and support equipment.....	3177
AURMBA3002 Load and unload a competition vehicle and support equipment .....	3186
AURMCA5001 Manage motorsport team media liaison.....	3196
AURMCA5002 Manage motorsport team promotional partnerships and marketing ...	3206
AURMDA2001 Develop and update motorsport industry knowledge.....	3216
AURMDA2002 Assist with motorsport officiating duties.....	3226
AURMDA3004 Recover a motorsport vehicle .....	3235
AURMDA3005 Act as a marshal in a motorsport event.....	3247
AURMDA3006 Communicate using flags and signals in a motorsport event.....	3257
AURMDA3007 Act as a steward in a motorsport event.....	3267
AURMGA2001 Set up and dismantle temporary work location and equipment.....	3278
AURMGA4002 Manage personal presentation and development .....	3289
AURMKA4001 Manage motorsport data .....	3298
AURMLA2001 Comply with motorsport rules and regulations when officiating .....	3309
AURMLA3002 Monitor compliance with motorsport rules and regulations.....	3320
AURMLA3003 Inspect motorsport vehicles and equipment for compliance.....	3332
AURMMA2001 Operate in a motorsport environment.....	3344
AURMMA3007 Follow motorsport event and team safety requirements.....	3356
AURMMA3008 Coordinate operations of a motorsport team .....	3366
AURMMA4002 Manage the preparation of a competition vehicle.....	3375
AURMMA5003 Manage motorsport operations.....	3387
AURMMA5004 Manage motorsport team development.....	3397
AURMMA5005 Manage team pit lane and service area operations .....	3407
AURMMA5006 Prepare and implement race strategies .....	3416
AURMSA2001 Follow motorsport safety and risk management procedures .....	3424
AURMSA3002 Implement and monitor safety and risk management in a motorsport environment.....	3434
AURMTA2001 Prepare and service a light competition vehicle .....	3445
AURMTA3002 Assemble and prepare a competition vehicle.....	3456
AURMTA3004 Perform competition vehicle preparation procedures at an event .....	3469
AURMTA3005 Perform pit lane and service area operations .....	3480
AURMTA3006 Perform torquing and fastening.....	3491
AURMTA3007 Conduct non-destructive testing .....	3501
AURMTA3009 Collect and log motorsport data.....	3511
AURMTA5003 Determine material suitability for competition vehicle components .....	3522
AURMTA5008 Apply aerodynamic and vehicle dynamic principles and effects to competition vehicles .....	3532
AURMTD4001 Test suspension dampers using a dynamometer.....	3543
AURMTD4002 Prepare competition vehicle suspension.....	3553

AURMTE4001 Test engines using a dynamometer.....	3565
AURMTF4001 Analyse and repair complex performance carburetted fuel systems.....	3575
AURMTF4002 Analyse and repair performance fuel injection systems.....	3588
AURMTJ4001 Select and prepare tyres and wheels for motorsport applications .....	3600
AURMTQ4001 Analyse and repair complex performance driveline systems.....	3611
AURMTS3001 Construct hose and pipe assemblies for competition vehicles.....	3623
AURNTA3001 Inspect, service and repair lift truck mast assemblies .....	3633
AURPTA1001 Carry out pre-repair operations to outdoor power equipment.....	3643
AURPTA1002 Perform minor adjustments to outdoor power equipment .....	3651
AURPTA2003 Service and repair rotary cutting systems .....	3660
AURPTA2004 Service and repair drum cutting systems .....	3671
AURPTA2005 Service and repair chainsaw cutting systems.....	3682
AURPTA2006 Service line trimming systems and components.....	3694
AURPTA2007 Service and repair post-boring systems.....	3705
AURPTA2008 Service and repair post-hole digging systems .....	3716
AURPTA2009 Service and repair reciprocating cutting systems .....	3727
AURPTA2010 Service pumping systems.....	3738
AURPTA3011 Repair pumping systems .....	3749
AURPTE2002 Service engines and engine components (outdoor power equipment) ....	3760
AURPTE3003 Repair engines and engine components (outdoor power equipment).....	3770
AURPTE4004 Overhaul engines and engine components (outdoor power equipment).3780	
AURPTR2002 Test and service outdoor electric powered equipment.....	3791
AURPTR3001 Test and service 240V portable generators.....	3802
AURREA2001 Apply environmental and sustainability best practice in a marine workplace .....	3813
AURREA3002 Monitor environmental and sustainability best practice in the marine mechanical industry.....	3823
AURREA4004 Manage environmental compliance in a marine workplace .....	3833
AURRGA3001 Launch and recover a vessel using a trailer.....	3843
AURRGA3002 Launch and recover a vessel from crane, gantry and forklift .....	3854
AURRGA3003 Moor a motor-driven vessel.....	3866
AURRTA2001 Service deck, hull and cabin equipment.....	3878
AURRTA3002 Carry out hull repairs.....	3888
AURRTA3003 Winterise vessel and engine systems .....	3898
AURRTA3004 Recommission vessel systems .....	3909
AURRTA3005 Repair deck, hull and cabin equipment .....	3919
AURRTA3006 Water test a vessel .....	3930
AURRTA5007 Analyse and evaluate light marine hydraulic system faults .....	3942
AURRTA5008 Analyse and evaluate light marine hull performance and stability system faults .....	3952
AURRTD3001 Diagnose and repair marine steering systems .....	3962
AURRTE1001 Prepare outboard engines for wet-run testing.....	3973
AURRTE2002 Service outboard engines and components.....	3981
AURRTE2003 Service inboard engines and components .....	3991
AURRTE3005 Diagnose and repair marine electrical systems and components .....	4001
AURRTE3006 Diagnose and repair outboard engines and components .....	4011
AURRTE3007 Diagnose and repair inboard engines and components .....	4023
AURRTE3008 Install marine engines, controls and instruments .....	4035
AURRTE3009 Recommission marine engine systems .....	4046
AURRTE3010 Water test engines in tanks .....	4056
AURRTE4011 Overhaul two and four cycle outboard engines .....	4065
AURRTE5012 Analyse and evaluate light marine engine and powerhead system faults	4077
AURRTQ2001 Service inboard propeller drive systems .....	4088

AURRTQ2002 Service jet drive propulsion systems .....	4098
AURRTQ3003 Install inboard propeller drive systems .....	4108
AURRTQ3004 Diagnose and repair inboard propeller drive systems.....	4118
AURRTQ3005 Install jet drive propulsion systems .....	4129
AURRTQ3006 Diagnose and repair jet drive propulsion systems.....	4139
AURRTR1001 Inspect, service and maintain marine battery storage systems .....	4150
AURRTR3002 Install marine electronic systems and components.....	4159
AURRTR3003 Test, diagnose and repair marine electronic systems and components ..	4170
AURRTR3004 Install marine electrical systems and components.....	4182
AURRTX2001 Service marine outboard and stern drive transmissions .....	4192
AURRTX2002 Service marine inboard transmissions .....	4202
AURRTX3003 Diagnose and repair marine outboard and stern drive transmissions ...	4212
AURRTX3004 Diagnose and repair marine inboard transmissions .....	4223
AURRTX5005 Analyse and evaluate light marine transmission system faults .....	4234
AURSAA2001 Process customer complaints.....	4244
AURSAA2002 Maintain customer aftermarket relations.....	4251
AURSBA2001 Carry out warehousing procedures .....	4260
AURSBA3002 Apply automotive parts interpretation process .....	4267
AURSCA2001 Select automotive parts and products.....	4275
AURSCA2002 Present stock and sales area.....	4284
AURSCA2003 Apply sales procedures.....	4291
AURSCA2004 Carry out cash, credit and funds transfers .....	4299
AURSCA2005 Sell products .....	4306
AURSCA2006 Promote products and services.....	4313
AURSCA3007 Determine used motor vehicle stock requirements .....	4320
AURSCA3008 Wholesale used motor vehicle stock .....	4327
AURSCA3009 Provide vehicle technology information .....	4333
AURSCA3010 Appraise and purchase used motor vehicles to supplement stock for sale	4342
AURSCP2001 Provide information to customers on automotive refinishing products ..	4349
AURSLA2001 Apply legal requirements relating to product sale .....	4357
AURTEA4001 Manage environmental compliance in the mechanical repair industry .	4364
AURTGA3001 Drive and manoeuvre trailers.....	4374
AURTNA5001 Estimate and calculate costs to repair, maintain or modify a vehicle ....	4384
AURTTA1001 Remove and tag steering, suspension and brake system components ....	4394
AURTTA1002 Carry out workshop practice activities .....	4403
AURTTA1003 Use and maintain basic measuring devices.....	4411
AURTTA2004 Carry out servicing operations.....	4420
AURTTA2005 Select and use bearings, seals, gaskets, sealants and adhesives.....	4430
AURTTA2006 Service hydraulic systems .....	4441
AURTTA2007 Inspect, service and repair pneumatic systems.....	4452
AURTTA2008 Produce patterns and templates.....	4463
AURTTA2009 Carry out pre-repair operations (mechanical) .....	4471
AURTTA2010 Service and repair trailers up to 4.5 tonnes.....	4482
AURTTA3011 Install hydraulic systems to specified applications .....	4495
AURTTA3012 Manufacture and install fluid power hose assemblies .....	4505
AURTTA3013 Repair hydraulic systems .....	4514
AURTTA3014 Assemble and install pneumatic systems and components.....	4525
AURTTA3015 Prepare engineering drawings .....	4535
AURTTA3017 Carry out vehicle safety and roadworthy inspections.....	4543
AURTTA3018 Carry out diagnostic procedures.....	4553
AURTTA3019 Carry out advanced diagnostic procedures .....	4562
AURTTA3020 Apply heat-induction processes.....	4572
AURTTA4021 Carry out diagnosis of complex system faults.....	4582

AURTTA4025 Diagnose complex faults in vehicle integrated stability control systems	4592
AURTTA4026 Diagnose complex faults in vehicle electric-over-hydraulic systems	4600
AURTTA5022 Develop and apply mechanical system modifications	4608
AURTTA5023 Develop and apply hydraulic system modifications	4617
AURTTA5024 Develop and apply pneumatic system modifications	4626
AURTTB2001 Inspect and service braking systems	4635
AURTTB2002 Attach friction materials and radius grind	4647
AURTTB2003 Machine brake drums and brake disc rotors	4659
AURTTB2004 Inspect and service air braking systems	4668
AURTTB3005 Assemble and fit braking systems and components	4679
AURTTB3006 Inspect, service and repair auxiliary braking systems	4690
AURTTC2001 Inspect and service cooling systems	4701
AURTTC2002 Carry out radiator repairs	4712
AURTTC3003 Diagnose and repair cooling systems	4722
AURTTD2001 Inspect steering systems	4731
AURTTD2002 Inspect and service steering systems	4743
AURTTD2003 Inspect suspension systems	4755
AURTTD2004 Inspect and service suspension systems	4766
AURTTD4005 Overhaul steering system components	4777
AURTTE1003 Remove and tag engine system components	4788
AURTTE2004 Inspect and service engines	4797
AURTTE3001 Apply knowledge of engine science	4808
AURTTE4005 Overhaul engines and associated engine components	4815
AURTTF2001 Service petrol fuel systems	4827
AURTTF2002 Service diesel fuel injection systems	4836
AURTTF3004 Repair diesel fuel injection systems	4846
AURTTF3005 Inspect and repair engine forced induction systems	4856
AURTTF3006 Diagnose and repair petrol carburettor systems	4866
AURTTF4003 Overhaul diesel fuel injection systems	4875
AURTTF4007 Overhaul petrol fuel system components	4886
AURTTJ2001 Balance wheels and tyres	4896
AURTTJ2002 Remove and refit wheel hubs and associated brake components	4906
AURTTK2001 Use and maintain measuring equipment in an automotive workplace	4916
AURTTK2002 Use and maintain workplace tools and equipment	4925
AURTTL3001 Service CNG fuel systems	4934
AURTTL3002 Diagnose and repair CNG fuel systems	4943
AURTTL3003 Install CNG fuel systems	4952
AURTTL3004 Service LNG fuel systems	4960
AURTTL3005 Diagnose and repair LNG fuel systems	4969
AURTTL3006 Install LNG fuel systems	4978
AURTTL3007 Service LPG fuel systems	4986
AURTTL3008 Diagnose and repair LPG fuel systems	4995
AURTTL3009 Install LPG fuel systems	5004
AURTTL3010 Install LPG, CNG and LNG electrical control equipment	5012
AURTTL4011 Diagnose complex faults in CNG fuel systems	5021
AURTTL4012 Diagnose complex faults in LNG fuel systems	5029
AURTTL4013 Diagnose complex faults in LPG fuel systems	5037
AURTTL5014 Analyse and evaluate gas fuel system faults	5045
AURTTL5015 Develop and apply gas fuel system modifications	5054
AURTTM3001 Operate and monitor computer numerical control machines	5063
AURTTM3002 Repair bearing tunnels and connecting rods in engines	5072
AURTTM3003 Apply metal to rebuild engine components	5083
AURTTM3004 Assemble engine blocks and sub-assemblies	5094

AURTTM3005 Balance rotating and reciprocating engine components .....	5105
AURTTM3006 Perform advanced machining and blue printing of engine components .....	5114
AURTTM3007 Carry out grinding operations .....	5123
AURTTM3008 Dismantle and evaluate engine blocks and sub-assemblies .....	5134
AURTTM3009 Fit sleeves and bore and hone engine cylinders .....	5145
AURTTM3010 Heat treat, straighten and reclaim engine components.....	5156
AURTTM3011 Recondition engine cylinder heads .....	5166
AURTTQ2001 Service final drive assemblies .....	5177
AURTTQ2002 Remove and refit driveline components .....	5188
AURTTQ2003 Service final drive (driveline).....	5198
AURTTQ4004 Overhaul final drive assemblies .....	5209
AURTTT4001 Diagnose complex faults in engine management systems.....	5220
AURTTT2001 Fabricate exhaust system and components .....	5229
AURTTW2001 Carry out soft soldering techniques .....	5240
AURTTW3002 Set, operate and monitor specialist machines .....	5249
AURTTW3003 Carry out machining operations .....	5260
AURTTX1001 Remove and tag transmission system components .....	5269
AURTTX2002 Inspect and service transmissions (manual) .....	5278
AURTTX2003 Inspect and service transmissions (automatic) .....	5289
AURTTX2004 Service transmissions (hydrostatic).....	5300
AURTTX2005 Inspect and service clutch systems .....	5310
AURTTX3006 Repair transmissions (hydrostatic) .....	5318
AURTTX4007 Overhaul clutch assemblies.....	5329
AURTTX4008 Overhaul transmissions (manual) .....	5340
AURTTX4009 Overhaul transmissions (automatic) .....	5353
AURTTX4010 Overhaul transmissions (hydrostatic) .....	5366
AURTTX4011 Overhaul torque converters .....	5377
AURTTY3001 Repair chassis, frame and associated components.....	5387
AURTTZ2001 Inspect and service emission control systems .....	5397
AURTTZ2002 Repair exhaust system components .....	5408
AURVEN2001 Apply environmental regulations and best practice in the body repair industry .....	5419
AURVEN3002 Monitor environmental and sustainability best practice in the automotive body repair industry .....	5427
AURVEN4003 Plan and manage compliance with environmental regulations in the body repair industry.....	5437
AURVGA3001 Determine vehicle rescue method and costs .....	5446
AURVGA3002 Recover vehicles .....	5455
AURVLN2001 Apply legal requirements for vehicle dismantlers .....	5465
AURVTA2001 Prepare vehicle, components and equipment for customer use .....	5474
AURVTA3002 Remove and replace supplementary restraint systems.....	5486
AURVTA3003 Inspect paint, trim and accessories and recommend repair procedures .....	5496
AURVTA3004 Inspect vehicle systems and determine preferred repair action.....	5505
AURVTG2001 Repair laminated glass .....	5514
AURVTG2002 Remove and install rubber glazed windscreens .....	5523
AURVTG2003 Remove and install butyl sealed windscreens.....	5533
AURVTG2004 Remove and install direct glazed windscreens .....	5543
AURVTG2005 Remove and install framed type windscreens .....	5553
AURVTG2006 Apply window tinting .....	5563
AURVTG2007 Clean glass surfaces.....	5573
AURVTG3008 Cut and process flat laminated glass.....	5581
AURVTG3009 Remove and install fixed body glass .....	5591
AURVTG3010 Remove and install movable body glass .....	5599

AURVTG3011 Install side windows.....	5607
AURVTG3012 Remove and install heavy vehicle rubber and urethane glazed windscreens.....	5617
AURVTG3013 Remove and install large vehicle windscreens.....	5627
AURVTK2001 Use and maintain vehicle body repair hand tools.....	5637
AURVTN1001 Remove and tag vehicle body system components.....	5645
AURVTN2002 Carry out panel repairs .....	5654
AURVTN2003 Carry out pre-repair vehicle body operations.....	5664
AURVTN2004 Remove, replace and realign bolt-on panels, sections and fittings.....	5674
AURVTN2005 Remove and fit protector mouldings, transfers and decals.....	5685
AURVTN2006 Remove and replace mechanical units and assemblies .....	5695
AURVTN2007 Remove salvageable components .....	5705
AURVTN2008 Clean vehicle body and door cavities .....	5714
AURVTN2009 Clean vehicle engine and engine compartment .....	5725
AURVTN2010 Clean vehicle underbody .....	5737
AURVTN2011 Remove and install rear vision mirrors.....	5748
AURVTN2030 Service air compressors and air lines.....	5758
AURVTN2033 Service, repair and replace air compressors and components.....	5768
AURVTN2037 Disassemble and test vehicle units and components .....	5779
AURVTN3012 Install vehicle sunroofs .....	5789
AURVTN3013 Carry out paint-less dent repairs .....	5800
AURVTN3014 Repair body panels by beating and split repair.....	5809
AURVTN3015 Repair body panels using metal finishing techniques .....	5820
AURVTN3016 Repair body panels incorporating filler.....	5831
AURVTN3017 Repair body panels and thermoplastic components .....	5841
AURVTN3018 Repair and replace structural damage by welding.....	5851
AURVTN3019 Repair and replace structural damage by riveting.....	5861
AURVTN3020 Replace major welded panels.....	5871
AURVTN3021 Repair body components using lead wiping .....	5881
AURVTN3022 Repair vehicle body misalignment .....	5891
AURVTN3023 Remove and replace adhesive bonded panels and structures .....	5901
AURVTN3024 Install vehicle body component seals.....	5911
AURVTN3025 Repair corroded panels and components .....	5921
AURVTN3026 Repair aluminium body panels (finishing).....	5931
AURVTN3027 Repair aluminium body panels (filling) .....	5942
AURVTN3028 Identify and repair high strength steel components .....	5952
AURVTN3029 Set up and operate universal measuring systems .....	5963
AURVTN3031 Conduct major sectional repairs .....	5973
AURVTN3035 Apply original equipment manufacturer repair procedures .....	5985
AURVTN4032 Determine vehicle damage and recommended repair procedures .....	5993
AURVTN5034 Evaluate and select bodywork materials, equipment and processes.....	6001
AURVTP2001 Apply paint removal methods .....	6008
AURVTP2002 Carry out masking procedures.....	6018
AURVTP2003 Prepare spray painting materials and equipment.....	6028
AURVTP2004 Apply fundamental colour matching techniques .....	6040
AURVTP2005 Apply rust prevention and sound deadening materials .....	6050
AURVTP2006 Prepare vehicle components for paint repairs .....	6061
AURVTP2007 Apply paint touch-up techniques.....	6072
AURVTP2008 Clean and polish vehicle exterior paint .....	6084
AURVTP2009 Apply vehicle body film wrapping.....	6095
AURVTP2026 Carry out basic airbrush application techniques.....	6104
AURVTP2027 Carry out custom graphics design and layout techniques.....	6116
AURVTP3010 Prepare spray booths and paint drying equipment .....	6129

AURVTP3011 Apply solid acrylic enamel refinishing materials using two component systems.....	6137
AURVTP3012 Apply air dry and polyurethane enamel refinishing materials .....	6148
AURVTP3013 Prepare substrate for refinishing .....	6159
AURVTP3014 Apply multi-layer and clear over-base colour matching techniques .....	6170
AURVTP3015 Apply solid colour matching techniques .....	6179
AURVTP3016 Carry out paint rectification and touch-up work for solids using two component systems .....	6189
AURVTP3017 Carry out paint rectification and touch-up work for clear over base using two component systems.....	6199
AURVTP3018 Carry out paint rectification for multi-layer and pearl using two component system.....	6209
AURVTP3019 Prepare and paint plastic components.....	6219
AURVTP3020 Carry out denibbing, buffing and polishing .....	6229
AURVTP3021 Restore vehicle exterior paint.....	6238
AURVTP3022 Carry out custom painting techniques.....	6248
AURVTP3023 Mix and apply clear over-base refinishing materials in two-component systems.....	6260
AURVTP3024 Mix and apply clear over-base multi-layer pearl refinishing materials .....	6272
AURVTP3025 Mix and apply water-based refinishing materials.....	6284
AURVTS2006 Carry out fabrication of components.....	6296
AURVTS3001 Carry out wood working operations for fabrication .....	6306
AURVTS3002 Repair plugs, moulds, frames and flooring using wood materials .....	6316
AURVTS3003 Fabricate composite material components.....	6327
AURVTS3004 Repair fibreglass and composite material components .....	6338
AURVTS3005 Fabricate vehicle body panels and components .....	6349
AURVTT2001 Carry out sewing repairs and alterations .....	6359
AURVTT2002 Carry out trim repairs and alterations.....	6370
AURVTT2003 Remove and replace vehicle interior trim components.....	6381
AURVTT2004 Trim vehicle components .....	6390
AURVTT2005 Select and apply trim and fabric materials .....	6402
AURVTT2006 Select and apply trim and fabric adhesives.....	6412
AURVTT2007 Clean and finish plastic trim and fittings .....	6423
AURVTT2008 Clean and finish vehicle interior trim and seats .....	6434
AURVTT2009 Remove and replace seats and internal fittings .....	6445
AURVTT3010 Remove and replace vehicle head lining.....	6455
AURVTT3011 Repair seat frames .....	6464
AURVTT3012 Carry out sewing operations .....	6475
AURVTT3013 Fabricate loose and fitted covers .....	6486
AURVTT3014 Fabricate marine covers.....	6496
AURVTT3015 Fabricate canvas products .....	6506
AURVTT3016 Fabricate frame structures .....	6516
AURVTT3017 Fabricate and install floor coverings.....	6526
AURVTT3018 Fabricate and install soft tops hoods .....	6536
AURVTT3019 Fabricate and install canopies and curtains .....	6546
AURVTT3020 Select and use leather in trimming .....	6556
AURVTT3021 Select and use adhesives.....	6567
AURVTW2001 Remove, replace, fit and test components and accessories .....	6576
AURVTW2001 Carry out manual metal arc welding procedures.....	6587
AURVTW2002 Carry out brazing procedures .....	6598
AURVTW2003 Carry out gas metal arc welding procedures.....	6607
AURVTW2004 Carry out gas tungsten arc welding procedures .....	6615
AURVTW2005 Carry out spot welding procedures.....	6625

AURVTW2007 Conduct oxy-acetylene, thermal heating and cutting .....	6635
AURVTW2008 Carry out oxy acetylene welding, thermal cutting and thermal heating procedures .....	6644
AURVTW3006 Carry out thermoplastic welding procedures.....	6652
AUMABA002 Operate load shifting equipment.....	6662
Assessment Requirements for AUMABA002 Operate load shifting equipment .....	6666
AUMAMM001 Influence and lead work groups in an automotive manufacturing workplace .....	6668

## Disclaimer

This work is the result of wide consultations with Australian industry participants. It is a collaborative view and does not necessarily represent the view of Department of Industry or any specific body. For the sake of brevity it may omit factors which could be pertinent in particular cases.

While care has been taken in the preparation of this Training Package, Department of Industry and the original developer do not warrant that any licensing or registration requirements specified here are either complete or up-to-date for your State or Territory. Department of Industry and the original developer do not accept any liability for any damage or loss (including indirect and consequential loss) incurred by any person as a result of relying on the information contained in this Training Package.

The Commonwealth, through the Department of Industry, does not accept any liability to any person for the information or advice (or the use of such information or advice) which is provided in this material or incorporated into it by reference. The information is provided on the basis that all persons accessing this material undertake responsibility for assessing the relevance and accuracy of its content. No liability is accepted for any information or services which may appear in any other format. No responsibility is taken for any information or services which may appear on any linked websites.

Release Date: January 2015

## Preliminary Information

### Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

### Check the version number before commencing training or assessment

This Training Package is Version 2.1 – check whether this is the latest version by going to the National Training Information Service ([www.ntis.gov.au](http://www.ntis.gov.au)) and locating information about the Training Package. Alternatively, contact Auto Skills Australia [Website](http://www.autoskillsaustralia.com.au) (<http://www.autoskillsaustralia.com.au>) to confirm the latest version number.

### Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Package's national code (which remains the same during its period of endorsement).

### Explanation of the review date

The review date (shown on the title page and in the footer of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

### Version modification history

The version details of this endorsed Training Package are in the table below. The latest information is at the top of the table.

Version	Release Date	Comments
Version 2	2014	New Release

### Summary of AQF qualifications in Automotive Industry Retail, Service and Repair Training Package

Code	Title
AUR10112	Certificate I in Automotive Vocational Preparation

## Summary of Units of Competency in Automotive Industry Retail, Service and Repair Training Package and their Pre-Requisite Requirements

Unit code	Unit title	Pre-requisites
<b>Common - Administration</b>		
AURAAA2001	Work in an automotive administration environment	
AURAAA4002	Determine retail rates for work	
<b>Common – Sales and Marketing</b>		
AURACA2001	Establish relations with customers	
AURACA3002	Establish customer requirements of a complex nature	
AURACA3003	Build customer relations	
<b>Common - Environment</b>		
AURAEA1001	Identify environmental requirements in an automotive workplace	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry	
AURAEA4004	Manage environmental compliance in an automotive workplace	
<b>Common - Foundation Skills</b>		
AURAF2001	Use numbers in an automotive workplace	
AURAF2002	Read in an automotive workplace	
AURAF2003	Communicate effectively in an automotive workplace	
AURAF2004	Solve routine problems in an automotive workplace	
AURAF2005	Write routine texts in an automotive workplace	
AURAF3008	Read and apply automotive repair instructions	
AURAF5006	Prepare technical reports	

Unit code	Unit title	Pre-requisites
AURAF5007	Develop and document specifications and procedures	
<b>Common - Information Technology</b>		
AURAKA2001	Use information technology systems	
AURAKA3002	Adapt work processes to new technologies	
<b>Common - Regulatory or Legal</b>		
AURALA3001	Determine legal aspects of an automotive service and repair contract	
<b>Common - Management, Leadership and Supervision</b>		
AURAMA2001	Work effectively with others	
AURAMA2002	Communicate business information	
AURAMA3003	Conduct information sessions	
AURAMA3004	Maintain business image	
AURAMA4005	Manage complex customer issues	
AURAMA5006	Contribute to business improvement	
<b>Common - Loss Assessment or Repair Quoting - Body</b>		
AURANN4001	Prepare a vehicle repair quotation	
<b>Common - Quality</b>		
AURAQA2001	Contribute to quality work outcomes	
AURAQA3002	Inspect technical quality of work	
AURAQA3003	Maintain quality systems	
<b>Common - Health and Safety</b>		
AURASA1001	Apply automotive workplace safety fundamentals	
AURASA2002	Apply safe working practices in an automotive workplace	
<b>Common - Technical</b>		

Unit code	Unit title	Pre-requisites
AURATA2001	Identify basic automotive faults using troubleshooting processes	
AURATA2002	Read and interpret engineering drawings	
AURATA2003	Produce drawings from design concepts	
AURATA3004	Provide technical guidance	
AURATA3005	Estimate complex jobs	
<b>Bicycle - Sales and Marketing</b>		
AURBCA2001	Work in a retail bicycle environment	
AURBCA2002	Select and adjust bicycle to fit rider	
<b>Bicycle - Health and Safety</b>		
AURBSA3001	Conduct cycling proficiency training	
<b>Bicycle - Technical</b>		
AURBTA1001	Remove and tag bicycle components	
AURBTA1002	Adjust bicycles	
AURBTA2003	Assemble bicycles	
AURBTA2004	Assemble box bicycles for retail sale	
AURBTA3005	Restore bicycles	
AURBTA3006	Identify and select components for custom bicycles	
AURBTA3007	Provide mechanical support to cycling events	
<b>Bicycle - Technical - Brakes</b>		
AURBTB2001	Service and repair bicycle mechanical braking systems	
AURBTB2002	Service bicycle hydraulic braking systems	
AURBTB3003	Repair bicycle hydraulic braking systems	
<b>Bicycle - Technical - Steering and Suspension</b>		

Unit code	Unit title	Pre-requisites
AURBTD2001	Service bicycle steering systems	
AURBTD2002	Service bicycle suspension systems	
AURBTD3003	Repair and overhaul bicycle steering systems	
AURBTD3004	Repair and overhaul bicycle suspension systems	
<b>Bicycle - Technical - Wheels and Tyres</b>		
AURBTJ2001	Remove, repair and fit bicycle tyres	
AURBTJ2002	Service bicycle wheels and hubs	
AURBTJ3003	Design and build bicycle wheels	
AURBTJ3004	Repair and overhaul bicycle wheels and hubs	
<b>Bicycle - Technical - Tools and Equipment</b>		
AURBTK2001	Use and maintain specialised bicycle repair tools	
<b>Bicycle - Technical - Driveline and Final Drives</b>		
AURBTQ2001	Service bicycle drivetrain systems	
AURBTQ3002	Repair bicycle drivetrain systems	
<b>Bicycle - Technical - Electrical and Electronic</b>		
AURBTR3001	Service electric power assist bicycles	
<b>Bicycle - Technical - Accessories</b>		
AURBTV2001	Fit and adjust bicycle accessories	
<b>Bicycle - Technical - Chassis and Frame</b>		
AURBTY3001	Service and repair bicycle frames	
AURBTY4002	Design and build bicycle frames	
AURBTY4003	Assess carbon fibre frames for repair	
<b>Electrical - Technical</b>		
AURETA5001	Analyse and evaluate electrical and electronic faults in	

Unit code	Unit title	Pre-requisites
	electric over-hydraulic systems	
AURETA5002	Analyse and evaluate electrical and electronic faults in safety systems	
AURETA5003	Analyse and evaluate electrical and electronic faults in monitoring and protection systems	
AURETA5004	Analyse and evaluate electrical and electronic faults in convenience and entertainment systems	
AURETA5005	Analyse and evaluate electrical and electronic faults in theft-deterrent systems	
AURETA5006	Analyse and evaluate electrical and electronic faults in climate-control systems	
<b>Electrical - Technical - Brakes</b>		
AURETB3001	Repair electric braking systems	
AURETB5002	Analyse and evaluate electrical and electronic faults in braking systems	
<b>Electrical - Technical - Steering and Suspension</b>		
AURETD3001	Service and repair electronically controlled steering systems	
AURETD5002	Analyse and evaluate electrical and electronic faults in stability, steering and suspension systems	
<b>Electrical - Technical - Engines</b>		
AURETE5001	Analyse and evaluate electrical and electronic faults in engine management systems	
<b>Electrical - Technical - Hybrid Vehicle and Battery Electric Vehicle</b>		
AURETH3001	Depower battery electric vehicles	
AURETH3002	Service and maintain battery electric vehicles	AURETH3001
AURETH4003	Test and repair high voltage battery systems in battery electric vehicles	AURETH3001
AURETH4004	Diagnose and repair traction motor speed control device in battery electric vehicles	AURETH3001

Unit code	Unit title	Pre-requisites
AURETH4005	Diagnose and repair high voltage traction motors in battery electric vehicles	AURETH3001
AURETH4006	Diagnose and repair auxiliary motors and associated components in battery electric vehicles	AURETH3001
AURETH4007	Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles	AURETH3001
AURETH4008	Diagnose and repair high voltage cabin heating and cooling systems in battery electric vehicles	AURETH3001
AURETH4009	Diagnose and repair DC to DC converters in battery electric vehicles	AURETH3001 AURETR3025
AURETH4010	Test high voltage batteries in hybrid electric vehicles	AURETR3025
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles	
AURETH4012	Service and maintain electrical components in hybrid electric vehicles	AURETH4011
AURETH4014	Diagnose complex faults in battery electric and hybrid electric vehicle systems	
AURETH5013	Analyse and evaluate electrical and electronic faults in electric and hybrid vehicle systems	
<b>Electrical - Technical - Tools and Equipment</b>		
AURETK1001	Identify, select and use low voltage electrical test equipment	
AURETK2002	Use and maintain automotive electrical test equipment	
<b>Electrical - Technical - Electrical and Electronic</b>		
AURETR1001	Remove and tag automotive electrical system components	
AURETR1002	Test, service and maintain battery storage systems	
AURETR1003	Apply automotive electrical system fundamentals	
AURETR2005	Install, test and repair electrical security systems and components	
AURETR2006	Carry out soldering of electrical wiring and circuits	

Unit code	Unit title	Pre-requisites
AURETR2007	Demonstrate knowledge of automotive electrical circuits and wiring systems	
AURETR2008	Remove and replace electrical units and assemblies	
AURETR2009	Install, test and repair vehicle lighting and wiring systems	
AURETR2010	Fabricate, test and repair wiring harnesses and looms	
AURETR2011	Install and test basic ancillary electrical components	
AURETR2012	Test and repair basic electrical circuits	
AURETR2013	Inspect and service charging systems	
AURETR2014	Inspect and service starting systems	
AURETR2015	Inspect and service batteries	
AURETR2016	Read and apply vehicle wiring schematics and drawings	
AURETR2035	Demonstrate knowledge of petrol and diesel engine operation	
AURETR2042	Remove, refit and test electrical componentry for operation following body repair activities	
AURETR3017	Overhaul charging system alternators	
AURETR3018	Overhaul starting motors	
AURETR3019	Inspect, service and repair AC electric motor drive systems	
AURETR3020	Repair electronic systems	
AURETR3021	Inspect, service and repair electronic management, monitoring and tracking systems	
AURETR3022	Diagnose and repair vehicle dynamic control systems	
AURETR3023	Diagnose and repair electronic spark ignition engine management systems	
AURETR3024	Diagnose and repair electronic compression ignition engine management systems	
AURETR3025	Test, charge and replace batteries	

Unit code	Unit title	Pre-requisites
AURETR3026	Remove, replace and program electrical and electronic units and assemblies	
AURETR3027	Install ancillary electronic control unit systems and components	
AURETR3028	Diagnose and repair instruments and warning systems	
AURETR3029	Diagnose and repair charging systems	
AURETR3030	Diagnose and repair starting systems	
AURETR3031	Diagnose and repair ignition systems	
AURETR3032	Repair electrical systems	
AURETR3036	Service and repair electronically controlled suspension systems	
AURETR3043	Service and repair electronic body management systems	
AURETR3044	Service and repair electronic drive management systems	
AURETR4004	Diagnose complex electrical and electronic faults in vehicle convenience and entertainment systems	
AURETR4037	Diagnose complex electrical and electronic faults in light vehicle safety systems	
AURETR4038	Diagnose complex faults in motorcycle electrical and electronic systems	
AURETR4039	Diagnose complex electrical and electronic faults in light vehicle theft deterrent systems	
AURETR4040	Diagnose complex electrical and electronic faults in vehicle monitoring and protection systems	
AURETR5033	Develop and apply electronic systems modification	
AURETR5034	Develop and apply electrical systems modification	
<b>Electrical - Technical - Air Conditioning and HVAC</b>		
AURETU2001	Install air conditioning systems	
AURETU2002	Recover vehicle refrigerants	

Unit code	Unit title	Pre-requisites
AURETU2003	Service air conditioning and HVAC systems	
AURETU3004	Diagnose and repair air conditioning and HVAC systems	
AURETU3005	Retrofit and modify air conditioning and HVAC systems	
AURETU4006	Diagnose complex faults in air conditioning and HVAC systems	
AURETU4007	Overhaul air conditioning system components	
<b>Electrical - Technical - Transmission</b>		
AURETX5001	Analyse and evaluate electrical and electronic faults in transmission and driveline systems	
<b>Mechanical - Heavy Vehicle - Technical</b>		
AURHTA1001	Carry out heavy vehicle pre-repair operations	
AURHTA2003	Remove and replace heavy commercial vehicle ancillary components and accessories	
AURHTA3002	Service and repair trailers in excess of 4.5 tonnes	
<b>Mechanical - Heavy Vehicle - Technical - Brakes</b>		
AURHTB3001	Repair air braking systems	
AURHTB3002	Diagnose and repair heavy vehicle hydraulic braking systems	
AURHTB3007	Diagnose and repair heavy vehicle electronic braking systems	
AURHTB4003	Overhaul braking system components (heavy)	
AURHTB4004	Overhaul air braking systems and components	
AURHTB4006	Diagnose complex faults in heavy commercial vehicle braking systems	
AURHTB5005	Analyse and evaluate heavy vehicle braking system faults	
<b>Mechanical - Heavy Vehicle - Technical - Steering and Suspension</b>		
AURHTD2001	Inspect and service heavy commercial vehicle suspension	

Unit code	Unit title	Pre-requisites
	systems	
AURHTD3002	Repair steering systems (heavy vehicle)	
AURHTD3003	Repair suspension systems (heavy vehicle)	
AURHTD3004	Carry out wheel alignment operations (heavy vehicle)	
AURHTD4006	Diagnose complex faults in heavy commercial vehicle steering and suspension systems	
AURHTD5005	Analyse and evaluate heavy vehicle steering and suspension system faults	
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>		
AURHTE2001	Remove and install heavy vehicle engine assemblies	
AURHTE3002	Repair engines and associated engine components (heavy vehicle)	
AURHTE4003	Diagnose complex faults in heavy vehicle diesel engines	
AURHTE5004	Analyse and evaluate heavy vehicle engine and fuel system faults	
<b>Mechanical - Heavy Vehicle - Technical - Fuel Systems</b>		
AURHTF2001	Inspect heavy commercial vehicle fuel systems and components	
<b>Mechanical - Heavy Vehicle - Technical - Wheels and Tyres</b>		
AURHTJ1001	Inspect heavy commercial vehicle wheels and tyres	
AURHTJ2002	Select heavy vehicle tyres and rims for specific applications	
AURHTJ2003	Remove, inspect and refit heavy vehicle wheel assemblies	
AURHTJ2004	Demount, inspect, repair and mount agricultural equipment tyres and tubes	
AURHTJ2006	Remove, inspect, repair and fit tyres and tubes (heavy)	
AURHTJ3005	Identify and apply pneumatic wheeled traction performance enhancement systems (heavy vehicle)	

Unit code	Unit title	Pre-requisites
<b>Mechanical - Heavy Vehicle - Technical - Alternative Fuels</b>		
AURHTL4001	Inspect, repair and diagnose alternative fuel systems for heavy vehicle engines	
<b>Mechanical - Heavy Vehicle - Technical - Driveline and Final Drives</b>		
AURHTQ2001	Inspect heavy commercial vehicle driveline components	
AURHTQ3002	Repair final drive assemblies (heavy vehicle)	
AURHTQ3003	Repair final drive – driveline (heavy vehicle)	
<b>Mechanical - Heavy Vehicle - Technical - Electrical and Electronic</b>		
AURHTR3005	Diagnose and repair heavy trailer electronically controlled roll stability systems	
<b>Mechanical - Heavy Vehicle - Technical - Transmission</b>		
AURHTX3001	Repair transmissions – manual (heavy vehicle)	
AURHTX3002	Inspect, test and replace transmissions - automatic (heavy vehicle)	
AURHTX3003	Repair transmissions - automatic (heavy vehicle)	
AURHTX3004	Diagnose and repair heavy vehicle clutch systems	
AURHTX4006	Diagnose complex faults in heavy commercial vehicle transmission and driveline systems	
AURHTX5005	Analyse and evaluate heavy vehicle transmission system faults	
<b>Mechanical - Heavy Vehicle - Technical - Chassis and Frame</b>		
AURHTY2001	Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes	
AURHTY3002	Diagnose and repair mechanical connections of heavy vehicles and trailers over 4.5 tonnes	
<b>Mechanical - Heavy Vehicle - Technical - Emission and Exhaust</b>		
AURHTZ3001	Diagnose and repair heavy vehicle emission control systems	

Unit code	Unit title	Pre-requisites
<b>Mechanical - Motorcycle - Technical</b>		
AURJTA1001	Perform minor adjustments to motorcycles	
AURJTA1002	Remove and replace motorcycle components and accessories	
AURJTA5003	Analyse and evaluate motorcycle engine and transmission system faults	
<b>Mechanical - Motorcycle - Technical - Brakes</b>		
AURJTB3001	Diagnose and repair motorcycle braking systems	
AURJTB5002	Analyse and evaluate motorcycle braking system faults	
<b>Mechanical - Motorcycle - Technical - Steering and Suspension</b>		
AURJTD2001	Inspect and service motorcycle suspension systems	
AURJTD2002	Inspect and service motorcycle steering systems	
AURJTD3003	Diagnose and repair motorcycle suspension systems	
AURJTD3004	Diagnose and repair motorcycle steering systems	
AURJTD4005	Diagnose complex faults in motorcycle steering and suspension systems	
AURJTD5006	Analyse and evaluate motorcycle steering, suspension and frame system faults	
<b>Mechanical - Motorcycle - Technical - Engines</b>		
AURJTE3001	Diagnose and repair motorcycle engines	
AURJTE4002	Diagnose complex faults in motorcycle engine and transmission systems	
<b>Mechanical - Motorcycle - Technical - Wheels and Tyres</b>		
AURJTJ2001	Remove, inspect and fit motorcycle wheel assemblies	
<b>Mechanical - Motorcycle - Technical - Driveline and Final Drives</b>		
AURJTD2001	Inspect and service motorcycle driveline systems	

Unit code	Unit title	Pre-requisites
AURJTQ3002	Diagnose and repair motorcycle driveline systems	
<b>Mechanical - Motorcycle - Technical - Electrical and Electronic</b>		
AURJTR5001	Analyse and evaluate motorcycle electrical and electronic system faults	
<b>Mechanical - Motorcycle - Technical - Transmission</b>		
AURJTX3001	Diagnose and repair motorcycle clutch systems	
AURJTX3002	Diagnose and repair motorcycle manual transmissions	
AURJTX3003	Diagnose and repair motorcycle automatic transmissions	
<b>Mechanical - Motorcycle - Technical - Chassis and Frame</b>		
AURJTY3001	Repair and align motorcycle frames	
<b>Mechanical - Mobile Plant - Technical</b>		
AURKTA3001	Synchronise plant and equipment	
AURKTA3002	Inspect, service and repair harvesting equipment	
AURKTA3003	Inspect, service and repair crop planting and seeding equipment	
AURKTA3004	Inspect, service and repair spraying and spreading equipment	
AURKTA3005	Inspect, service and repair tracked type drive and support systems	
AURKTA4009	Diagnose complex faults in mobile plant hydraulic systems	
AURKTA5006	Analyse and evaluate tracked mobile plant transmission, steering and braking systems faults	
AURKTA5007	Analyse and evaluate mobile plant hydraulic system faults	
<b>Mechanical - Mobile Plant - Technical - Brakes-</b>		
AURKTB3001	Diagnose and repair mobile plant braking systems	
AURKTB4003	Diagnose complex faults in mobile plant braking systems	

Unit code	Unit title	Pre-requisites
AURKTB5002	Analyse and evaluate wheeled mobile plant braking system faults	
<b>Mechanical - Mobile Plant - Technical - Steering and Suspension</b>		
AURKTD3001	Diagnose and repair mobile plant suspension systems	
AURKTD3002	Diagnose and repair mobile plant steering systems	
AURKTD4005	Diagnose complex faults in mobile plant steering and suspension systems	
AURKTD5003	Analyse and evaluate wheeled mobile plant steering and suspension system faults	
AURKTD5004	Analyse and evaluate tracked mobile plant undercarriage and suspension system faults	
<b>Mechanical - Mobile Plant - Technical - Engines</b>		
AURKTE5001	Analyse and evaluate mobile plant engine and fuel system faults	
<b>Mechanical - Mobile Plant - Technical - Driveline and Drive Trains</b>		
AURKTQ3001	Diagnose and repair mobile plant final drive assemblies	
<b>Mechanical - Mobile Plant - Technical - Electrical and Electronic</b>		
AURKTR3001	Diagnose and repair electric-over-hydraulic control systems	
<b>Mechanical - Mobile Plant - Technical - Transmission</b>		
AURKTX3001	Diagnose and repair powershift transmissions	
AURKTX4003	Diagnose complex faults in mobile plant transmission systems	
AURKTX5002	Analyse and evaluate wheeled mobile plant transmission system faults	
<b>Mechanical - Light Vehicle - Regulatory or Legal - Steering and Suspension</b>		
AURLLD3001	Determine compliance of steering and suspension modifications	
<b>Mechanical - Light Vehicle - Technical</b>		

Unit code	Unit title	Pre-requisites
AURLTA1001	Apply automotive mechanical system fundamentals	
<b>Mechanical - Light Vehicle - Technical - Brakes</b>		
AURLTB3003	Diagnose and repair light vehicle hydraulic braking systems	
AURLTB4001	Overhaul braking system components (light)	
AURLTB4004	Diagnose complex faults in light vehicle braking systems	
AURLTB5002	Analyse and evaluate light vehicle braking system faults	
<b>Mechanical - Light Vehicle - Technical - Steering and Suspension</b>		
AURLTD3001	Select and install performance enhanced suspension system products	
AURLTD3002	Service and rectify faults in lift assisted suspension systems	
AURLTD3003	Reset steering system alignment adjustments to customer specifications	
AURLTD3004	Repair steering systems (light vehicle)	
AURLTD3005	Repair suspension systems (light vehicle)	
AURLTD3006	Carry out wheel alignment operations (light vehicle)	
AURLTD4009	Diagnose complex faults in light vehicle steering and suspension systems	
AURLTD5007	Analyse and evaluate light vehicle steering and suspension system faults	
<b>Mechanical - Light Vehicle - Technical - Engines</b>		
AURLTE2001	Remove and install light vehicle engine assemblies	
AURLTE3002	Repair engines and associated engine components (light vehicle)	
AURLTE4004	Diagnose complex faults in light vehicle petrol engines	
AURLTE4005	Diagnose complex faults in light vehicle diesel engines	
AURLTE5003	Analyse and evaluate light vehicle engine and fuel system faults	

Unit code	Unit title	Pre-requisites
<b>Mechanical - Light Vehicle - Technical - Fuel Systems</b>		
AURLTF3001	Diagnose and repair mechanical fuel injection systems	
<b>Mechanical - Light Vehicle - Technical - Wheels and Tyres</b>		
AURLTJ2001	Select tyres and rims for specific applications (light)	
AURLTJ2002	Remove, inspect, repair and fit tyres and tubes (light)	
AURLTJ2003	Remove, inspect and refit light vehicle wheel assemblies	
AURLTJ3004	Provide advice on the effects of wheel and tyre combinations	
<b>Mechanical - Light Vehicle - Technical - Driveline and Final Drives</b>		
AURLTQ3001	Repair final drive assemblies (light vehicle)	
AURLTQ3002	Repair final drive – driveline (light vehicle)	
AURLTQ5003	Analyse and evaluate light vehicle driveline system faults	
<b>Mechanical - Light Vehicle - Technical - Transmission</b>		
AURLTX3001	Repair transmissions - manual (light vehicle)	
AURLTX3002	Repair transmissions - automatic (light vehicle)	
AURLTX3003	Diagnose and repair light vehicle clutch systems	
AURLTX4004	Diagnose complex faults in light vehicle transmission and driveline systems	
<b>Mechanical - Light Vehicle - Technical - Emission and Exhaust</b>		
AURLTZ3001	Diagnose and repair light vehicle emission control systems	
<b>Motorsport - Support and Logistics</b>		
AURMBA2001	Transport a light competition vehicle and support equipment	
AURMBA3002	Load and unload a competition vehicle and support equipment	
<b>Motorsport - Sales and Marketing</b>		

Unit code	Unit title	Pre-requisites
AURMCA5001	Manage motorsport team media liaison	
AURMCA5002	Manage motorsport team promotional partnerships and marketing	
<b>Motorsport - Officiating</b>		
AURMDA2001	Develop and update motorsport industry knowledge	
AURMDA2002	Assist with motorsport officiating duties	
AURMDA3004	Recover a motorsport vehicle	
AURMDA3005	Act as a marshal in a motorsport event	
AURMDA3006	Communicate using flags and signals in a motorsport event	
AURMDA3007	Act as a steward in a motorsport event	
<b>Motorsport</b>		
AURMGA2001	Set up and dismantle temporary work location and equipment	
AURMGA4002	Manage personal presentation and development	
<b>Motorsport - Information Technology</b>		
AURMKA4001	Manage motorsport data	AURETR2012 AURMTA3009 MEM30012A
<b>Motorsport - Regulatory or Legal</b>		
AURMLA2001	Comply with motorsport rules and regulations when officiating	
AURMLA3002	Monitor compliance with motorsport rules and regulations	
AURMLA3003	Inspect motorsport vehicles and equipment for compliance	
<b>Motorsport - Management, Leadership and Supervision</b>		
AURMMA2001	Operate in a motorsport environment	
AURMMA3007	Follow motorsport event and team safety requirements	

Unit code	Unit title	Pre-requisites
AURMMA3008	Coordinate operations of a motorsport team	
AURMMA4002	Manage the preparation of a competition vehicle	
AURMMA5003	Manage motorsport operations	
AURMMA5004	Manage motorsport team development	
AURMMA5005	Manage team pit lane and service area operations	AURMTA3005
AURMMA5006	Prepare and implement race strategies	
<b>Motorsport - Health and Safety</b>		
AURMSA2001	Follow motorsport safety and risk management procedures	
AURMSA3002	Implement and monitor safety and risk management in a motorsport environment

AURMTS3001	Construct hose and pipe assemblies for competition vehicles	
<b>Mechanical - Lifting Equipment - Technical</b>		
AURNTA3001	Inspect, service and repair lift truck mast assemblies	
<b>Outdoor Power Equipment - Technical</b>		
AURPTA1001	Carry out pre-repair operations to outdoor power equipment	
AURPTA1002	Perform minor adjustments to outdoor power equipment	
AURPTA2003	Service and repair rotary cutting systems	
AURPTA2004	Service and repair drum cutting systems	

Unit code	Unit title	Pre-requisites
AURPTA2005	Service and repair chainsaw cutting systems	
AURPTA2006	Service line trimming systems and components	
AURPTA2007	Service and repair post-boring systems	
AURPTA2008	Service and repair post-hole digging systems	
AURPTA2009	Service and repair reciprocating cutting systems	
AURPTA2010	Service pumping systems	
AURPTA3011	Repair pumping systems	
<b>Outdoor Power Equipment - Technical - Engines</b>		
AURPTE2002	Service engines and engine components (outdoor power equipment)	
AURPTE3003	Repair engines and engine components (outdoor power equipment)	
AURPTE4004	Overhaul engines and engine components (outdoor power equipment)	
<b>Outdoor Power Equipment - Technical - Electrical and Electronic</b>		
AURPTR2002	Test and service outdoor electric powered equipment	
AURPTR3001	Test and service 240V portable generators	
<b>Marine - Environment</b>		
AURREA2001	Apply environmental and sustainability best practice in a marine workplace	
AURREA3002	Monitor environmental and sustainability best practice in the marine mechanical industry	
AURREA4004	Manage environmental compliance in a marine workplace	
<b>Marine</b>		
AURRGA3001	Launch and recover a vessel using a trailer	
AURRGA3002	Launch and recover a vessel from crane, gantry and forklift	

Unit code	Unit title	Pre-requisites
AURRGA3003	Moor a motor-driven vessel	
<b>Marine - Technical</b>		
AURRTA2001	Service deck, hull and cabin equipment	
AURRTA3002	Carry out hull repairs	
AURRTA3003	Winterise vessel and engine systems	
AURRTA3004	Recommission vessel systems	
AURRTA3005	Repair deck, hull and cabin equipment	
AURRTA3006	Water test a vessel	
AURRTA5007	Analyse and evaluate light marine hydraulic system faults	
AURRTA5008	Analyse and evaluate light marine hull performance and stability system faults	
<b>Marine - Technical - Steering and Suspension</b>		
AURRTD3001	Diagnose and repair marine steering systems	
<b>Marine - Technical - Engines</b>		
AURRTE1001	Prepare outboard engines for wet-run testing	
AURRTE2002	Service outboard engines and components	
AURRTE2003	Service inboard engines and components	
AURRTE3005	Diagnose and repair marine electrical systems and components	
AURRTE3006	Diagnose and repair outboard engines and components	
AURRTE3007	Diagnose and repair inboard engines and components	
AURRTE3008	Install marine engines, controls and instruments	
AURRTE3009	Recommission marine engine systems	
AURRTE3010	Water test engines in tanks	
AURRTE4011	Overhaul two and four cycle outboard engines	

Unit code	Unit title	Pre-requisites
AURRTE5012	Analyse and evaluate light marine engine and powerhead system faults	
<b>Marine - Technical - Driveline and Final Drives</b>		
AURRTQ2001	Service inboard propeller drive systems	
AURRTQ2002	Service jet drive propulsion systems	
AURRTQ3003	Install inboard propeller drive systems	
AURRTQ3004	Diagnose and repair inboard propeller drive systems	
AURRTQ3005	Install jet drive propulsion systems	
AURRTQ3006	Diagnose and repair jet drive propulsion systems	
<b>Marine - Technical - Electrical and Electronic</b>		
AURRTR1001	Inspect, service and maintain marine battery storage systems	
AURRTR3002	Install marine electronic systems and components	
AURRTR3003	Test, diagnose and repair marine electronic systems and components	
AURRTR3004	Install marine electrical systems and components	
<b>Marine - Technical - Transmission</b>		
AURRTX2001	Service marine outboard and stern drive transmissions	
AURRTX2002	Service marine inboard transmissions	
AURRTX3003	Diagnose and repair marine outboard and stern drive transmissions	
AURRTX3004	Diagnose and repair marine inboard transmissions	
AURRTX5005	Analyse and evaluate light marine transmission system faults	
<b>Sales and Parts, Administration and Management - Administration</b>		
AURSAA2001	Process customer complaints	

Unit code	Unit title	Pre-requisites
AURSAA2002	Maintain customer aftermarket relations	
<b>Sales and Parts, Administration and Management - Support and Logistics</b>		
AURSBA2001	Carry out warehousing procedures	
AURSBA3002	Apply automotive parts interpretation process	
<b>Sales and Parts, Administration and Management - Sales and Marketing</b>		
AURSCA2001	Select automotive parts and products	
AURSCA2002	Present stock and sales area	
AURSCA2003	Apply sales procedures	
AURSCA2004	Carry out cash, credit and funds transfers	
AURSCA2005	Sell products	
AURSCA2006	Promote products and services	
AURSCA3007	Determine used motor vehicle stock requirements	
AURSCA3008	Wholesale used motor vehicle stock	
AURSCA3009	Provide vehicle technology information	
AURSCA3010	Appraise and purchase used motor vehicles to supplement stock for sale	
<b>Sales and Parts, Administration and Management - Sales and Marketing - Paint</b>		
AURSCP2001	Provide information to customers on automotive refinishing products	
<b>Sales and Parts, Administration and Management - Regulatory and Legal</b>		
AURSLA2001	Apply legal requirements relating to product sales	
<b>Mechanical Miscellaneous - Environment</b>		
AURTEA4001	Manage environmental compliance in the mechanical repair industry	
<b>Mechanical Miscellaneous</b>		

Unit code	Unit title	Pre-requisites
AURTGA3001	Drive and manoeuvre trailers	
<b>Mechanical Miscellaneous - Loss Assessment or Repair Quoting</b>		
AURTNA5001	Estimate and calculate costs to repair, maintain or modify a vehicle	
<b>Mechanical Miscellaneous - Technical</b>		
AURTTA1001	Remove and tag steering, suspension and brake system components	
AURTTA1002	Carry out workshop practice activities	
AURTTA1003	Use and maintain basic measuring devices	
AURTTA2004	Carry out servicing operations	
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives	
AURTTA2006	Service hydraulic systems	
AURTTA2007	Inspect, service and repair pneumatic systems	
AURTTA2008	Produce patterns and templates	
AURTTA2009	Carry out pre-repair operations (mechanical)	
AURTTA2010	Service and repair trailers up to 4.5 tonnes	
AURTTA3011	Install hydraulic systems to specified applications	
AURTTA3012	Manufacture and install fluid power hose assemblies	
AURTTA3013	Repair hydraulic systems	
AURTTA3014	Assemble and install pneumatic systems and components	
AURTTA3015	Prepare engineering drawings	
AURTTA3017	Carry out vehicle safety and roadworthy inspections	
AURTTA3018	Carry out diagnostic procedures	
AURTTA3019	Carry out advanced diagnostic procedures	

Unit code	Unit title	Pre-requisites
AURTTA3020	Apply heat-induction processes	
AURTTA4021	Carry out diagnosis of complex system faults	
AURTTA4025	Diagnose complex faults in vehicle integrated stability control systems	
AURTTA4026	Diagnose complex faults in vehicle electric-over-hydraulic systems	
AURTTA5022	Develop and apply mechanical system modifications	
AURTTA5023	Develop and apply hydraulic system modifications	
AURTTA5024	Develop and apply pneumatic system modifications	
<b>Mechanical Miscellaneous - Technical - Brakes</b>		
AURTTB2001	Inspect and service braking systems	
AURTTB2002	Attach friction materials and radius grind	
AURTTB2003	Machine brake drums and brake disc rotors	
AURTTB2004	Inspect and service air braking systems	
AURTTB3005	Assemble and fit braking systems and components	
AURTTB3006	Inspect, service and repair auxiliary braking systems	
<b>Mechanical Miscellaneous - Technical - Cooling Systems</b>		
AURTTC2001	Inspect and service cooling systems	
AURTTC2002	Carry out radiator repairs	
AURTTC3003	Diagnose and repair cooling systems	
<b>Mechanical Miscellaneous - Technical - Steering and Suspension</b>		
AURTTD2001	Inspect steering systems	
AURTTD2002	Inspect and service steering systems	
AURTTD2003	Inspect suspension systems	
AURTTD2004	Inspect and service suspension systems	

Unit code	Unit title	Pre-requisites
AURTTD4005	Overhaul steering system components	
<b>Mechanical Miscellaneous - Technical - Engines</b>		
AURTTE1003	Remove and tag engine system components	
AURTTE2004	Inspect and service engines	
AURTTE3001	Apply knowledge of engine science	
AURTTE4005	Overhaul engines and associated engine components	
<b>Mechanical Miscellaneous - Technical - Fuel Systems</b>		
AURTTTF2001	Service petrol fuel systems	
AURTTTF2002	Service diesel fuel injection systems	
AURTTTF3004	Repair diesel fuel injection systems	
AURTTTF3005	Inspect and repair engine forced induction systems	
AURTTTF3006	Diagnose and repair petrol carburettor systems	
AURTTTF4003	Overhaul diesel fuel injection systems	
AURTTTF4007	Overhaul petrol fuel system components	
<b>Mechanical Miscellaneous - Technical - Wheels and Tyres</b>		
AURTTJ2001	Balance wheels and tyres	
AURTTJ2002	Remove and refit wheel hubs and associated brake components	
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>		
AURTTK2001	Use and maintain measuring equipment in an automotive workplace	
AURTTK2002	Use and maintain workplace tools and equipment	
<b>Mechanical Miscellaneous - Technical - Alternative Fuels</b>		
AURTTL3001	Service CNG fuel systems	
AURTTL3002	Diagnose and repair CNG fuel systems	

Unit code	Unit title	Pre-requisites
AURTTL3003	Install CNG fuel systems	
AURTTL3004	Service LNG fuel systems	
AURTTL3005	Diagnose and repair LNG fuel systems	
AURTTL3006	Install LNG fuel systems	
AURTTL3007	Service LPG fuel systems	
AURTTL3008	Diagnose and repair LPG fuel systems	
AURTTL3009	Install LPG fuel systems	
AURTTL3010	Install LPG, CNG and LNG electrical control equipment	
AURTTL4011	Diagnose complex faults in CNG fuel systems	
AURTTL4012	Diagnose complex faults in LNG fuel systems	
AURTTL4013	Diagnose complex faults in LPG fuel systems	
AURTTL5014	Analyse and evaluate gas fuel system faults	
AURTTL5015	Develop and apply gas fuel system modifications	
<b>Mechanical Miscellaneous - Technical - Manufacture</b>		
AURTTM3001	Operate and monitor computer numerical control machines	
AURTTM3002	Repair bearing tunnels and connecting rods in engines	
AURTTM3003	Apply metal to rebuild engine components	
AURTTM3004	Assemble engine blocks and sub-assemblies	
AURTTM3005	Balance rotating and reciprocating engine components	
AURTTM3006	Perform advanced machining and blueprinting of engine components	
AURTTM3007	Carry out grinding operations	
AURTTM3008	Dismantle and evaluate engine blocks and sub-assemblies	
AURTTM3009	Fit sleeves and bore and hone engine cylinders	

Unit code	Unit title	Pre-requisites
AURTTM3010	Heat treat, straighten and reclaim engine components	
AURTTM3011	Recondition engine cylinder heads	
<b>Mechanical Miscellaneous - Technical - Drivelines and Final Drives</b>		
AURTTQ2001	Service final drive assemblies	
AURTTQ2002	Remove and refit driveline components	
AURTTQ2003	Service final drive (driveline)	
AURTTQ4004	Overhaul final drive assemblies	
<b>Mechanical Miscellaneous - Technical - Electrical and Electronic</b>		
AURTTR4001	Diagnose complex faults in engine management systems	
<b>Mechanical Miscellaneous - Technical - Fabrication</b>		
AURTTTS2001	Fabricate exhaust system and components	
<b>Mechanical Miscellaneous - Technical - Welding, Grinding, Machining and Soldering</b>		
AURTTW2001	Carry out soft soldering techniques	
AURTTW3002	Set, operate and monitor specialist machines	
AURTTW3003	Carry out machining operations	
<b>Mechanical Miscellaneous - Technical - Transmission</b>		
AURTTX1001	Remove and tag transmission system components	
AURTTX2002	Inspect and service transmissions (manual)	
AURTTX2003	Inspect and service transmissions (automatic)	
AURTTX2004	Service transmissions (hydrostatic)	
AURTTX2005	Inspect and service clutch systems	
AURTTX3006	Repair transmissions (hydrostatic)	
AURTTX4007	Overhaul clutch assemblies	
AURTTX4008	Overhaul transmissions (manual)	

Unit code	Unit title	Pre-requisites
AURTTX4009	Overhaul transmissions (automatic)	
AURTTX4010	Overhaul transmissions (hydrostatic)	
AURTTX4011	Overhaul torque converters	
<b>Mechanical Miscellaneous - Technical - Chassis and Frame</b>		
AURTTY3001	Repair chassis, frame and associated components	
<b>Mechanical Miscellaneous - Technical - Emission and Exhaust</b>		
AURTTZ2001	Inspect and service emission control systems	
AURTTZ2002	Repair exhaust system components	
<b>Vehicle Body - Environment - Body</b>		
AURVEN2001	Apply environmental regulations and best practice in the body repair industry	
AURVEN3002	Monitor environmental and sustainability best practice in the automotive body repair industry	
AURVEN4003	Plan and manage compliance with environmental regulations in the body repair industry	
<b>Vehicle Body</b>		
AURVGA3001	Determine vehicle rescue method and costs	
AURVGA3002	Recover vehicles	
<b>Vehicle Body - Regulatory or Legal - Body</b>		
AURVLN2001	Apply legal requirements for vehicle dismantlers	
<b>Vehicle Body - Technical</b>		
AURVTA2001	Prepare vehicle, components and equipment for customer use	
AURVTA3002	Remove and replace supplementary restraint systems	
AURVTA3003	Inspect paint, trim and accessories and recommend repair procedures	

Unit code	Unit title	Pre-requisites
AURVTA3004	Inspect vehicle systems and determine preferred repair action	
<b>Vehicle Body - Technical - Glazing</b>		
AURVTG2001	Repair laminated glass	
AURVTG2002	Remove and install rubber glazed windscreens	
AURVTG2003	Remove and install butyl sealed windscreens	
AURVTG2004	Remove and install direct glazed windscreens	
AURVTG2005	Remove and install framed type windscreens	
AURVTG2006	Apply window tinting	
AURVTG2007	Clean glass surfaces	
AURVTG3008	Cut and process flat laminated glass	
AURVTG3009	Remove and install fixed body glass	
AURVTG3010	Remove and install movable body glass	
AURVTG3011	Install side windows	
AURVTG3012	Remove and install heavy vehicle rubber and urethane glazed windscreens	
AURVTG3013	Remove and install large vehicle windscreens	
<b>Vehicle Body - Technical - Tools and Equipment</b>		
AURVTK2001	Use and maintain vehicle body repair hand tools	
<b>Vehicle Body - Technical - Body</b>		
AURVTN1001	Remove and tag vehicle body system components	
AURVTN2002	Carry out panel repairs	
AURVTN2003	Carry out pre-repair vehicle body operations	
AURVTN2004	Remove, replace and realign bolt-on panels, sections and fittings	

Unit code	Unit title	Pre-requisites
AURVTN2005	Remove and fit protector mouldings, transfers and decals	
AURVTN2006	Remove and replace mechanical units and assemblies	
AURVTN2007	Remove salvageable components	
AURVTN2008	Clean vehicle body and door cavities	
AURVTN2009	Clean vehicle engine and engine compartment	
AURVTN2010	Clean vehicle underbody	
AURVTN2011	Remove and install rear vision mirrors	
AURVTN2030	Service air compressors and air lines	
AURVTN2033	Service, repair and replace air compressors and components	
AURVTN2037	Disassemble and test vehicle units and components	
AURVTN3012	Install vehicle sunroofs	
AURVTN3013	Carry out paint-less dent repairs	
AURVTN3014	Repair body panels by beating and split repair	
AURVTN3015	Repair body panels using metal finishing techniques	
AURVTN3016	Repair body panels incorporating filler	
AURVTN3017	Repair body panels and thermoplastic components	
AURVTN3018	Repair and replace structural damage by welding	
AURVTN3019	Repair and replace structural damage by riveting	
AURVTN3020	Replace major welded panels	
AURVTN3021	Repair body components using lead wiping	
AURVTN3022	Repair vehicle body misalignment	
AURVTN3023	Remove and replace adhesive bonded panels and structures	
AURVTN3024	Install vehicle body component seals	
AURVTN3025	Repair corroded panels and components	

Unit code	Unit title	Pre-requisites
AURVTN3026	Repair aluminium body panels (finishing)	
AURVTN3027	Repair aluminium body panels (filling)	
AURVTN3028	Identify and repair high strength steel components	
AURVTN3029	Set up and operate universal measuring systems	
AURVTN3031	Conduct major sectional repairs	
AURVTN3035	Apply original equipment manufacturer repair procedures	
AURVTN4032	Determine vehicle damage and recommended repair procedures	
AURVTN5034	Evaluate and select bodywork materials, equipment and processes	
<b>Vehicle Body - Technical - Paint</b>		
AURVTP2001	Apply paint removal methods	
AURVTP2002	Carry out masking procedures	
AURVTP2003	Prepare spray painting materials and equipment	
AURVTP2004	Apply fundamental colour matching techniques	
AURVTP2005	Apply rust prevention and sound deadening materials	
AURVTP2006	Prepare vehicle components for paint repairs	
AURVTP2007	Apply paint touch-up techniques	
AURVTP2008	Clean and polish vehicle exterior paint	
AURVTP2009	Apply vehicle body film wrapping	
AURVTP2026	Carry out basic airbrush application techniques	
AURVTP2027	Carry out custom graphics design and layout techniques	
AURVTP3010	Prepare spray booths and paint drying equipment	
AURVTP3011	Apply solid acrylic enamel refinishing materials using two component systems	

Unit code	Unit title	Pre-requisites
AURVTP3012	Apply air dry and polyurethane enamel refinishing materials	
AURVTP3013	Prepare substrate for refinishing	
AURVTP3014	Apply multi-layer and clear over-base colour matching techniques	
AURVTP3015	Apply solid colour matching techniques	
AURVTP3016	Carry out paint rectification and touch-up work for solids using two component systems	
AURVTP3017	Carry out paint rectification and touch-up work for clear over base using two component systems	
AURVTP3018	Carry out paint rectification for multi-layer and pearl using two component systems	
AURVTP3019	Prepare and paint plastic components	
AURVTP3020	Carry out denibbing, buffing and polishing	
AURVTP3021	Restore vehicle exterior paint	
AURVTP3022	Carry out custom painting techniques	
AURVTP3023	Mix and apply clear over-base refinishing materials in two-component system	
AURVTP3024	Mix and apply clear over-base multi-layer pearl refinishing materials	
AURVTP3025	Mix and apply water-based refinishing materials	
<b>Vehicle Body - Technical - Fabrication</b>		
AURVTS2006	Carry out fabrication of components	
AURVTS3001	Carry out wood working operations for fabrication	
AURVTS3002	Repair plugs, moulds, frames and flooring using wood materials	
AURVTS3003	Fabricate composite material components	
AURVTS3004	Repair fibreglass and composite material components	

Unit code	Unit title	Pre-requisites
AURVTS3005	Fabricate vehicle body panels and components	
<b>Vehicle Body - Technical - Trimming and Upholstery</b>		
AURVTT2001	Carry out sewing repairs and alterations	
AURVTT2002	Carry out trim repairs and alterations	
AURVTT2003	Remove and replace vehicle interior trim components	
AURVTT2004	Trim vehicle components	
AURVTT2005	Select and apply trim and fabric materials	
AURVTT2006	Select and apply trim and fabric adhesives	
AURVTT2007	Clean and finish plastic trim and fittings	
AURVTT2008	Clean and finish vehicle interior trim and seats	
AURVTT2009	Remove and replace seats and internal fittings	
AURVTT3010	Remove and replace vehicle head lining	
AURVTT3011	Repair seat frames	
AURVTT3012	Carry out sewing operations	
AURVTT3013	Fabricate loose and fitted covers	
AURVTT3014	Fabricate marine covers	
AURVTT3015	Fabricate canvas products	
AURVTT3016	Fabricate frame structures	
AURVTT3017	Fabricate and install floor coverings	
AURVTT3018	Fabricate and install soft top hoods	
AURVTT3019	Fabricate and install canopies and curtains	
AURVTT3020	Select and use leather in trimming	
AURVTT3021	Select and use adhesives	
<b>Vehicle Body - Technical - Accessories</b>		

Unit code	Unit title	Pre-requisites
AURVTW2001	Remove, replace, fit and test components and accessories	
<b>Vehicle Body - Technical - Welding,Grinding, Machining and Soldering</b>		
AURVTW2001	Carry out manual metal arc welding procedures	
AURVTW2002	Carry out brazing procedures	
AURVTW2003	Carry out gas metal arc welding procedures	
AURVTW2004	Carry out gas tungsten arc welding procedures	
AURVTW2005	Carry out spot welding procedures	
AURVTW2007	Conduct oxy-acetylene, thermal heating and cutting	
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures	
AURVTW3006	Carry out thermoplastic welding procedures	

### Imported Units of Competency in the Automotive Industry Retail, Service and Repair Training Package

Unit Code	Unit Title	Prerequisites
<b>AUM Automotive Manufacturing Training Package</b>		
AUMABA002	Operate load shifting equipment	
AUMAMM001	Influence and lead work groups in an auto manufacturing workplace	
AUMGTG001	Install fixed and moveable glass components	
AUMGTS004	Fabricate parts for sub-assemblies	
AUMGTY002	Install components	
<b>AUR Automotive Retail, Service and Repair Training Package</b>		
AURFA009	Carry out research into the automotive industry	
AURETK003	Operate electrical test equipment	
AURETR046	Remove and refit vehicle batteries	

Unit Code	Unit Title	Prerequisites
AURETR047	Recharge vehicle batteries	
AURETR048	Construct and test basic electronic circuits	
AURKKJ001	Manage use of tyre management software	
AURKTJ001	Remove, inspect and fit earthmoving and off-the-road tyres	
AURKTJ002	Remove, inspect and fit earthmoving and off-the-road wheel and rim assemblies	
AURKTJ003	Perform minor repairs to earthmoving and off-the-road tyres	
AURKTJ004	Conduct non-destructive testing of wheel and rim assemblies	
AURKTJ005	Select earthmoving and off-the-road tyres, wheels and rim assemblies for specific applications	
AURKTJ006	Use earthmoving and off-the-road tyre handlers	
AURTTA027	Carry out basic vehicle servicing operations	
AURTTB007	Remove and replace brake assemblies	
AURTTC004	Remove and replace radiators	
AURTTD006	Remove and replace vehicle front suspension springs	
AURTTD007	Remove and replace steering assemblies	
AURTTE006	Remove and replace conventional engine assemblies	
AURTTE007	Dismantle and assemble single cylinder four-stroke petrol engines	
AURTTE008	Dismantle and assemble multi-cylinder four-stroke petrol engines	
AURTTE009	Remove and replace engine cylinder heads	
AURTTJ003	Remove and replace wheel and tyre assemblies	
AURTTX012	Dismantle and assemble conventional manual transmissions	

Unit Code	Unit Title	Prerequisites
AURTTX013	Remove and replace clutch assemblies	
AURVNA003	Review vehicle repair quotations	
AURVNA005	Inspect quality of vehicle repair work	
AURVNA007	Apply automotive mechanical and electrical knowledge to vehicle loss assessments	
AURVNA008	Apply automotive body and paint knowledge to vehicle loss assessments	
AURVNN001	Evaluate vehicle bodywork for damage and identify repair requirements	
AURVNP001	Evaluate vehicle paintwork for damage and identify refinish requirements	
AURVTA005	Clean vehicles	
AURVTP029	Prepare surface and prime repaired body panels	
AURVTW010	Set up and use welding equipment	
<b>BSB07 Business Services Training Package</b>		
BSBCUS301B	Deliver and monitor a service to customers	
BSBCUS501C	Manage quality customer service	
BSBFIA301A	Maintain financial records	
BSBFIA303A	Process accounts payable and receivable	
BSBFIA401A	Prepare financial reports	
BSBFIM501A	Manage budgets and financial plans	
BSBFLM312C	Contribute to team effectiveness	
BSBFRA403B	Manage relationship with franchisor	
BSBWHS501A	Ensure a safe workplace	
BSBHRM505B	Manage remuneration and employee benefits	
BSBINM202A	Handle mail	

Unit Code	Unit Title	Prerequisites
BSBINN301A	Promote innovation in a team environment	
BSBINN502A	Build and sustain an innovative work environment	
BSBITS401B	Maintain business technology	
BSBITU305A	Conduct online transactions	
BSBLED401A	Develop teams and individuals	
BSBMGT502B	Manage people performance	
BSBMGT515A	Manage operational plan	
BSBMKG523A	Design and develop an integrated marketing communication plan	
BSBWHS501A	Ensure a safe workplace	
BSBPRO401A	Develop product knowledge	
BSBPUR402B	Negotiate contracts	
BSBREL402A	Build client relationships and business networks	
BSBRES401A	Analyse and present research information	
BSBRKG304B	Maintain business records	
BSBSLS402A	Identify sales prospects	
BSBSLS403A	Present a sales solution	
BSBSLS404A	Secure prospect commitment	
BSBSLS405A	Support post sale activities	
BSBSMB406A	Manage small business finance	
BSBSMB407A	Manage a small team	
BSBWHS301A	Maintain workplace safety	
BSBWHS401A	Implement and monitor WHS policies, procedures and programs to meet legislative requirements	
BSBWOR202A	Organise and complete daily work activities	

Unit Code	Unit Title	Prerequisites
BSBWOR204A	Use business technology	
BSBWOR301B	Organise personal work priorities and development	
BSBWOR401A	Establish effective workplace relationships	
BSBWOR404B	Develop work priorities	
BSBWOR501B	Manage personal work priorities and professional development	
BSBWOR502B	Ensure team effectiveness	
<b>FNS10 Financial Services Training Package</b>		
FNSASIC302C	Develop, present and negotiate client solutions	
<b>ICA11 Information and Communications Technology Training Package</b>		
ICAWEB201A	Use social media tools for collaboration and engagement	
<b>MEM05 Metal and Engineering Training Package</b>		
MEM05004C	Perform routine oxy acetylene welding	
MEM05006C	Perform brazing and or silver soldering	
MEM05007C	Perform manual heating and thermal cutting	
MEM07005C	Perform general machining	
MEM09002B	Interpret technical drawing	
MEM12023A	Perform engineering measurements	
MEM18001C	Use hand tools	
MEM18002B	Use power tools/hand held operations	
MEM18028B	Maintain engine lubrication systems	
MEM24001B	Perform basic penetrant testing	
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment	
<b>MSF Furnishing Training Package</b>		

Unit Code	Unit Title	Prerequisites
MSFGG2005	Apply basic glass handling	
MSFGG3001	Store and handle glass	
MSFUP3001	Apply traditional foundations to upholstered furniture	
<b>MSA07 Manufacturing Training Package</b>		
MSAENV272B	Participate in environmentally sustainable work practices	
MSAENV472B	Implement and monitor environmentally sustainable work practices	
MSAENV672B	Develop workplace policy and procedures for environmental sustainability	
<b>MSS11 Sustainability Training Package</b>		
MSS403030A	Improve cost factors in work practices	
<b>PSP12 Public Sector Training Package</b>		
PSPTRAN501A	Provide specialist vehicle technical advice	
<b>RII09 Resources and Infrastructure Industry Training Package</b>		
RIICOM201D	Communicate in the workplace	
RIIHAN301D	Operate elevating work platform	
RIIQUA201D	Maintain and monitor site quality standards	
RIIRIS201D	Conduct local risk control	
RIIWHS201D	Work safely and follow WHS policies and procedures	
RIIWHS204D	Work safely at heights	
<b>SIR07 Retail Services Training Package</b>		
SIRXCCS201	Apply point-of-sale handling procedures	
SIRXCCS202	Interact with customers	
SIRXFIN201	Balance and secure point-of-sale terminal	
SIRXICT001A	Operate retail technology	

Unit Code	Unit Title	Prerequisites
SIRXINV001A	Perform stock control procedures	
SIRXINV002A	Maintain and order stock	
SIRXMER201	Merchandise products	
SIRXMER303	Coordinate merchandise presentation	
SIRXRSK001A	Minimise theft	
SIRXWHS302	Maintain store safety	
SITXADM004A	Plan and manage meetings	
<b>TAE10 Training and Education</b>		
TAEDEL301A	Provide work skill instruction	
TAEDEL404A	Mentor in the workplace	
<b>TLI10 Transport and Logistics Training Package</b>		
TLIA2012A	Pick and process orders	
TLIA2013A	Receive goods	
TLIA2020A	Replenish stock	
TLIA3039A	Receive and store stock	

## Mapping of qualifications

### Summary Mapping of AUR12 Release 2 Automotive Industry Retail, Service and Repair Training Package to AUR12 Release 2.1 Automotive Industry Retail, Service and Repair Training Package Qualifications

Key: E = equivalent, N = not equivalent

Code	Qualification Title	Relationship	E/N	Comment
AUR20712	Certificate II in Automotive Vocational Preparation Release 3	AUR20712 Certificate II in Automotive Vocational Preparation Release 2	E	Twenty new imported units added to the elective bank These imported units are from AUR Release2: <ul style="list-style-type: none"> <li>AURAF009</li> </ul>

Code	Qualification Title	Relationship	E/N	Comment

## Overview

### What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing people's skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

### How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Quality Council (NQC).

### How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

### How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

### Who can deliver and assess using Training Packages?

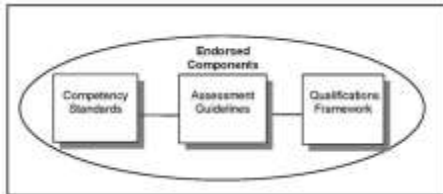

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

### Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

## Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

### **Competency Standards**

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

### **Assessment Guidelines**

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

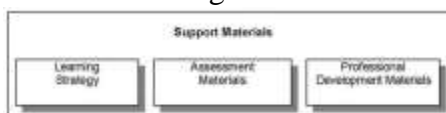

### **Qualifications Framework**

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the 'packaging rules'. The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

### **Training Package Support Materials**

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

## Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

### Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example XYZ08. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

### Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example XYZ10108. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

### Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in AURAAA2001
- the first three characters signify the Training Package – Automotive Industry Retail, Service and Repair Training Package – in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An ‘A’ at the end of the code indicates that this is the original unit of competency. ‘B’, or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

## Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

### **Training Package Titles**

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

### **Qualification Titles**

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words 'in' for Certificates I to IV, and 'of' for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example: AUR10112 Certificate I in Automotive Vocational Preparation.

### **Unit of Competency Titles**

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example: AURFA2001 Use numbers in an automotive workplace

### **Introduction to the AUR12 Automotive Industry Retail, Service and Repair Training Package**

Qualification requirements are such that flexibility occurs whilst providing rigor in the core competencies of a qualification to ensure clear occupational outcomes. Logical qualification pathways for individual industry sectors through to Diploma level have been identified that ensure coverage of advanced levels in technology and management.

Environmental units of competency have been developed to ensure an increase in complexity and responsibility through AQF levels while exposure to key environmental considerations is included in all qualifications.

While every attempt was made to provide consistency in numbers of units across each AQF level within the various sectors, this was simply not possible. Some variation does exist but this is justified following agreement from key stakeholders that the groups of units of competency cover the level and breadth of the occupations that the qualifications serve.

Overall, the number of qualifications is 56, with the number of automotive-specific units of competency being 618. The number of imported units of competency is 97.

Specific VET in Schools and pre-apprenticeship qualifications have been developed in this Training Package, with the focus being on industry ‘taster’ and foundation skills units of competency. It was the strong opinion of industry that there needed to be qualifications for VET in Schools and pre-apprenticeship that had a strong emphasis on providing an understanding of the industry and preparing individuals to successfully transition to work. It was felt that qualifications in the past had focused on credit transfer rather than vocational preparation.

Significant changes have been made to the unit of competency codes. The unit codes now consist of 10 characters; for example AURETH3001. The first three characters signify the Training Package – AUR12 Automotive Industry Retail, Service and Repair Training Package. The fourth character, the industry sector, E – Electrical. The fifth and sixth character identifies the areas, TH – Technical – Hybrid Vehicle and Battery Electric Vehicle. The seventh character, the AQF level of the qualification where the unit of competency first appears, 3 – AQF3. The last three characters identifies the position in the sequence of competencies in the same industry sector, 001 - the first unit in the sequence.

The table below describes the new codes used for the units of competency.

#### Unit of Competency Code Descriptor

Field of Competency		Sector – First Letter		Area – Second Letter	
Common	AURA	Administration	A	Not assigned	A
Bicycle	AURB	Support and Logistics	B	Brakes	B
Electrical	AURE	Sales and Marketing	C	Cooling Systems	C
Manufacturing - Passenger Vehicle	AURF	Officiating	D	Steering and Suspension	D
Manufacturing - Bus, Truck and Trailer	AURG	Environment	E	Engines	E
Mechanical - Heavy Vehicle	AURH	Foundation Skills	F	Fuel systems	F
Mechanical - Motorcycle	AURJ	Not Assigned	G	Glazing	G
Mechanical – Mobile Plant	AURK	Information Technology	K	Hybrid Vehicle and Battery Electric Vehicle	H
Mechanical - Light Vehicle	AURL	Regulatory or Legal	L	Wheels and Tyres	J
Motorsport	AURM	Management, Leadership and Supervision	M	Tools and Equipment	K

Field of Competency		Sector – First Letter		Area – Second Letter	
Mechanical - Lifting Equipment	AURN	Loss Assessment or Repair Quoting	N	Alternative Fuels	L
Outdoor Power Equipment	AURP	Quality	Q	Manufacture	M
Marine	AURR	Health and Safety	S	Body	N
Sales and Parts, Administration and Management	AURS	Technical	T	Paint	P
Mechanical Miscellaneous	AURT			Driveline and Final Drives	Q
Vehicle Body	AURV			Electrical and Electronic	R
				Fabrication	S
				Trimming and Upholstery	T
				Air Conditioning and HVAC	U
				Accessories	V
				Welding, Grinding, Machining and Soldering	W
				Transmission	X
				Chassis and Frame	Y
				Emission and Exhaust	Z

## **Benefits of the Retail, Service and Repair Training Package**

- Focuses on outcomes, not delivery methods.
- Provides a framework for the recognition of employee skills regardless of how those skills were developed.
- Provides transferable, recognised qualifications across industry and states/territories.
- Assists industry to develop job profiles.
- Assists training organisations and employers to design training plans.
- Enables access to New Apprenticeship arrangements in sectors and occupations not previously covered.
- Assists training and assessment providers to develop training resources to achieve nationally recognised outcomes
- Provides clear qualifications pathways
- Aligns to contemporary occupational job roles and titles.

## **Introduction to the Industry**

### **Automotive Industry Retail, Service and Repair**

The Automotive Industry Retail, Service and Repair (RS&R) Training Package is one of three Automotive Industry Training Packages:

1. AUM Automotive Manufacturing Training Package Version 1 (new standards)
2. AUR Automotive Industry Retail, Service and Repair Training Package Version 1 (new standards)
3. AUR12 Automotive Industry Retail, Service and Repair Training Package Version 2.

The automotive industry is crucial to Australia's economy. Australia is only one of thirteen countries with the capability to design, engineer and produce vehicles from start to finish. The Australian vehicle market is also one of the most open and competitive in the world.

The automotive industry encompasses a wide range of activities including:

- Motor Vehicle and Motor Vehicle Parts Manufacturing
- Motor Vehicle and Motor Vehicle Parts Wholesaling
- Automotive Retailing, Servicing and Repair
- Fuel Retailing
- Supply of Aftermarket Equipment
- Vehicle Recycling and Disposal
- Motorsport
- Outdoor Power Equipment
- Agricultural Machinery and Equipment
- Bicycles
- Recreational Boating

Annual turnover in aggregate for the automotive industry is estimated at approximately \$208.1 billion for 2010-11. This is largely comprised of sales and service income. The largest portion of annual turnover is recorded by the Motor Vehicle and Parts Retailing sector at \$61 billion, followed by Motor Vehicle and Parts Wholesaling (\$49.1 billion) and Fuel Retailing (\$37 billion).

Total employment within the automotive industry for the 2011-12 financial year is estimated at 371,590 people. The majority of these people (129,500 or 34.9%) are employed within Automotive Repair and Maintenance. This is followed by Motor Vehicle and Parts Retailing (96,500 or 26%) and Motor Vehicle and Parts Manufacturing (49,500 or 13.3%).

Victoria has the largest number of people employed in the automotive industry (100,000 people) followed by New South Wales (90,000 people) and Queensland (64,750). The ACT and the Northern Territory have the smallest automotive workforces (2,750 and 3,500 people respectively).

This Training Package is aimed at satisfying the training needs of RS&R sector of the automotive industry, including occupational areas covering:

Automotive Retailing, Servicing and Repair

- Fuel Retailing
- Supply of Aftermarket Equipment
- Vehicle Recycling and Disposal
- Motorsport
- Outdoor Power Equipment
- Agricultural Machinery and Equipment
- Bicycles
- Recreational Boating.

This Training Package covers the breadth of the automotive retail service and repair industry and related areas mentioned above.

On average more than 1,000,000 new vehicles have been sold in Australia every year since 2006, with car registrations having increased by over 2,000,000 in the same time period. This is placing immense pressure on the skill requirements of those involved in service, maintenance and repair.

# Qualifications Framework

## Qualifications Framework

### The Australian Qualifications Framework

#### What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*.

[http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF\\_Handbook\\_07.pdf](http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf)

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

#### Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

#### Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

#### AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

#### Certificate I

*Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

*Distinguishing Features of Learning Outcomes*

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

**Certificate II***Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

*Distinguishing Features of Learning Outcomes*

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

**Certificate III***Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

*Distinguishing Features of Learning Outcomes*

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

## **Certificate IV**

### *Characteristics of Learning Outcomes*

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature. Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

### *Distinguishing Features of Learning Outcomes*

- Do the competencies enable an individual with this qualification to:
- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

## **Diploma**

### *Characteristics of Learning Outcomes*

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

*Distinguishing Features of Learning Outcomes*

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

**Advanced Diploma***Characteristics of Learning Outcomes*

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures. The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

*Distinguishing Features of Learning Outcomes*

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

**Vocational Graduate Certificate***Characteristics of competencies or learning outcomes*

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.

- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

#### *Distinguishing features of learning outcomes*

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

### **Vocational Graduate Diploma**

#### *Characteristics of competencies or learning outcomes*

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

#### *Distinguishing features of learning outcomes*

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

### **Vocational Graduate Diploma**

#### *Characteristics of competencies or learning outcomes*

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

#### *Distinguishing features of learning outcomes*

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.
- 

## **Qualifications and Packaging Rules**

### **AUR12 Qualifications**

Qualification requirements from Certificate I to Diploma have been altered, in some cases significantly, however, more importantly, they allow for flexibility while the creation of descriptors within qualifications provide specialisation as appropriate.

While some variation occurs in numbers of units of competency across qualifications, occupational descriptors align with the descriptions provided by the AQF at various levels.

### **VET in Schools**

The delivery and assessment of competence under this package is seen as appropriately designed for VET in Schools and these programs are to be encouraged.

However, due to the requirement to demonstrate competence, it may be difficult for a school to assess and award qualifications within AUR12, except in close partnerships with other RTOs or organisations within the industry. The Certificate I and Certificate II in Automotive Vocational Preparation has been designed to better suit VET in Schools and pre-apprenticeship delivery.

### **Transition Arrangements**

Qualifications achieved from AUR05 will be recognised.

People who have attained units of competency from AUR05, should be granted equivalent units of competency in AUR12, hence, credit towards a full AUR12 qualification may be achievable dependant on competencies attained under the relevant AUR05 qualification. A comprehensive mapping from AUR05 to AUR12 is included in the Training Package.

### **AUR12 Assessment Criteria**

AUR12 has adopted the mandatory Assessment Guidelines, which provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the AQTF 2010. Assessments against units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Additional assessment advice is provided below with regard to simulated workplace environments. Some emphasis has been given to the establishment of partnerships in delivery and assessment to ensure satisfactory demonstration of workplace competence. This section provides an overview of the requirements for assessment when using the AUR12 Training Package, including a summary of the AQTF 2010 requirements, licensing/registration requirements, and assessment pathways.

### **Assessment in the Automotive Industry**

The automotive industry considers skills and knowledge demonstrated in a real workplace environment to be of great importance. While assessment of the units of competency in the AUR12 Training Package can be carried out in a simulated work environment, the industry strongly recommends that assessment of skills acquired is conducted under partnership arrangement in the workplace.

Assessment of competence requires the collection of evidence which should be conducted over a period of time. This assessment approach may include demonstration at the workplace and/or a simulated work environment to ensure that demonstration of competence is valid and reliable. The individual being assessed needs to be aware that the collection of evidence is ongoing and part of planning, conducting and reviewing the assessment process.

### **Simulated Work Environment**

The AUR12 Training Package defines Simulated Work Environment as a model of convenience that is established to resemble the real thing which is for training purposes only. Should it be necessary to conduct competency-based training and/or assessment in a simulated work environment and/or worksite, both the environment and/or worksite must resemble the real circumstances according to the task required to be assessed. These tasks should not be interpreted as being projects that are related to the off-the-job training outcomes rather than skills acquired within any given competency standard.

Units of competency from the AUR12 Training Package should wherever possible be assessed in a work environment. Where this is not possible assessment may occur in a simulated work environment.

A simulated work environment may be required for the following reasons:

the candidate may not have access to a workplace (e.g. Certificate I qualification, which is targeted at VET in Schools)

the workplace may not use the relevant skill, equipment or process conducting assessments may be disruptive or interfere with work requirements, for example, there may be ethical, privacy or confidentiality issues to consider

it may not be appropriate to apply the skills in the workplace due to potential risks, such as work health and safety (WHS) or equipment being damaged.

In order to be valid and reliable, the simulated work environment must closely resemble what occurs in a real work environment. The simulated work environment should involve a range of activities that reflect real work experience.

It is critical that when a simulated work environment is being set up that the assessor is thoroughly familiar with the units of competence as well as experienced in the current circumstances of the work.

In deciding whether a simulation or an assessment environment has been adequately set up, the following questions should be considered. Are there opportunities to:

- test the full range of equipment?
- use up to date equipment and software?
- reflect times and deadlines?
- show the complexity of dealing with multiple tasks?
- involve prioritizing among competing tasks?
- deal with customers, including difficult ones?
- work with others in a team?
- communicate with diverse groups?
- find, discuss and test solutions to problems?
- explore health and safety issues?
- answer practically oriented, applied knowledge questions?
- show the level of written and verbal expression sufficient for the work requirements?

### **Supporting Integrated Training Delivery and Assessment**

As a general principle, the automotive industry supports the integration of units of competency for assessment, where practical, as this reflects real work practices.

An integrated approach to assessment brings together a number of units of competency, which reflect actual workplace requirements. For example, an employee working in an automotive environment would complete a number of interrelated repair/sales and WHS tasks together, not simply one individual task at a time. An integrated assessment activity would be designed to collect evidence for a number of units together rather than designing one assessment activity for each individual element or performance criteria.

Where both training and assessment are required, the industry supports an approach which provides for off-the-job training combined with assessment of the application of skills and knowledge in a real work situation.

The AUR12 Training Package defines on-the-job assessment as that which occurs within the normal operation of the business. The industry considers it important that candidates should have the opportunity to develop competence through structured learning programs which include assessing in the workplace.

It would be expected that where an integrated assessment approach is implemented that several integrated assessments would be necessary to cover the breadth and complexity of the qualification, at Certificate II and above.

The context of the assessment, the role of the candidate and the complexity of the task will influence how many units of competence may be integrated.

### **Benchmarks for Assessment**

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

In the areas of work covered by the AUR12 Training Package, the endorsed units of competency are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by RTOs.

### **Employability Skills**

The definition of employability skills is "skills required not only to gain employment, but also to progress within an enterprise so as to achieve one's potential and contribute successfully to enterprise strategic directions". Employability skills are also sometimes referred to as generic skills, capabilities or key competencies.

The Employability Skills Framework identifies eight Employability Skills:

- communication
- teamwork
- problem solving
- initiative and enterprise
- planning and organising
- self-management
- learning
- technology.

These Employability Skills can be further described for particular occupational and industry contexts by sets of facets. Together these form the Employability Skills Framework below.

### **Employability Skills Framework**

<b>Skill</b>	<b>Facets</b>  Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
<b>Communication</b> that contributes to productive and harmonious relations across employees and customers	<ul style="list-style-type: none"> <li>• listening and understanding</li> <li>• speaking clearly and directly</li> <li>• writing to the needs of the audience</li> <li>• negotiating responsively</li> <li>• reading independently</li> <li>• empathising</li> <li>• using numeracy effectively</li> <li>• understanding the needs of internal and external customers</li> <li>• persuading effectively</li> <li>• establishing and using networks</li> <li>• being assertive</li> <li>• sharing information</li> </ul>

<b>Skill</b>	<b>Facets</b> Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
	<ul style="list-style-type: none"> <li>speaking and writing in languages other than English</li> </ul>
<b>Teamwork</b> that contributes to productive working relationships and outcomes	<ul style="list-style-type: none"> <li>working across different ages irrespective of gender, race, religion or political persuasion</li> <li>working as an individual and as a member of a team</li> <li>knowing how to define a role as part of the team</li> <li>applying teamwork to a range of situations e.g. futures planning and crisis problem solving</li> <li>identifying the strengths of team members</li> <li>coaching and mentoring skills, including giving feedback</li> </ul>
<b>Problem solving</b> that contributes to productive outcomes	<ul style="list-style-type: none"> <li>developing creative, innovative and practical solutions</li> <li>showing independence and initiative in identifying and solving problems</li> <li>solving problems in teams</li> <li>applying a range of strategies to problem solving</li> <li>using mathematics, including budgeting and financial management to solve problems</li> <li>applying problem-solving strategies across a range of areas</li> <li>testing assumptions, taking into account the context of data and circumstances</li> <li>resolving customer concerns in relation to complex project issues</li> </ul>
<b>Initiative and enterprise</b> that contribute to innovative outcomes	<ul style="list-style-type: none"> <li>adapting to new situations</li> <li>developing a strategic, creative and long-term vision</li> <li>being creative</li> <li>identifying opportunities not obvious to others</li> <li>translating ideas into action</li> <li>generating a range of options</li> <li>initiating innovative solutions</li> </ul>
<b>Planning and organising</b> that contribute to long and short-term strategic planning	<ul style="list-style-type: none"> <li>managing time and priorities - setting time lines, coordinating tasks for self and with others</li> <li>being resourceful</li> <li>taking initiative and making decisions</li> <li>adapting resource allocations to cope with contingencies</li> <li>establishing clear project goals and deliverables</li> <li>allocating people and other resources to tasks</li> <li>planning the use of resources, including time management</li> <li>participating in continuous improvement and planning processes</li> <li>developing a vision and a proactive plan to accompany it</li> </ul>

<b>Skill</b>	<b>Facets</b>  Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.
	<ul style="list-style-type: none"> <li>• predicting - weighing up risk, evaluating alternatives and applying evaluation criteria</li> <li>• collecting, analysing and organising information</li> <li>• understanding basic business systems and their relationships</li> </ul>
<b>Self-management</b> that contributes to employee satisfaction and growth	<ul style="list-style-type: none"> <li>• having a personal vision and goals</li> <li>• evaluating and monitoring own performance</li> <li>• having knowledge and confidence in own ideas and visions</li> <li>• articulating own ideas and visions</li> <li>• taking responsibility</li> </ul>
<b>Learning</b> that contributes to ongoing improvement and expansion in employee and company operations and outcomes	<ul style="list-style-type: none"> <li>• managing own learning</li> <li>• contributing to the learning community at the workplace</li> <li>• using a range of mediums to learn - mentoring, peer support and networking, IT and courses</li> <li>• applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work)</li> <li>• having enthusiasm for ongoing learning</li> <li>• being willing to learn in any setting - on and off the job</li> <li>• being open to new ideas and techniques</li> <li>• being prepared to invest time and effort in learning new skills</li> <li>• acknowledging the need to learn in order to accommodate change</li> </ul>
<b>Technology</b> that contributes to the effective carrying out of tasks	<ul style="list-style-type: none"> <li>• having a range of basic IT skills</li> <li>• applying IT as a management tool</li> <li>• using IT to organise data</li> <li>• being willing to learn new IT skills</li> <li>• having the WHS knowledge to apply technology</li> <li>• having the appropriate physical capacity</li> </ul>

### Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view Employability Skills at the qualification level and capture the key aspects or facets of the Employability Skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of Employability Skills in learning and assessment strategies. The following is important information for trainers and assessors about Employability Skills Summaries.

- Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.

- Employability Skills Summaries contain general information about industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.
- The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.
- Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).
- Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.

### **Industry requirements for Employability Skills**

Employability Skills Summaries have been developed for each AUR12 qualification.

### **Environmental Issues**

Underpinning the assessment process is the notion that workplace performance should lead to viable and sustainable enterprises or organisations. This covers profitability, sustainability and observance of good industry practices. These themes have been incorporated into the units of competency and are therefore an essential component of the assessment process.

Many work practices in the automotive industry can have either positive or negative environmental impacts that the assessor should be aware of and incorporate into judgments, when assessing evidence.

For example, negative work practices can include:

- inappropriate WHS clothing and equipment
- inappropriate recycling of materials
- failing to carry out the safe disposal of chemicals, oils, greases, solvents and packaging materials.
- Positive work practices can include:
- installing and using effluent disposal systems
- use of masks, overalls and gloves to protect employees
- installation of exhaust and other systems to reduce air pollutant.

Those being assessed at the higher qualification levels are responsible for the development of processes, strategies, procedures and controls. Those at lower levels have responsibility to act on, observe and report on processes, strategies, procedures and controls.

Questioning strategies can be used during assessment to ascertain whether a candidate is working towards enterprise viability and sustainability and is minimising environmental impacts.

Open-ended questions like those below can assist in making this judgment.

- What are the main environmental issues surrounding your workplace?
- How and why do these environmental issues occur?
- What current work practices can have a negative impact on the environment?
- How do you minimise environmental impacts in your workplace?
- What current work practices have been adopted to limit negative impacts on the environment?
- How are staff informed about what constitutes good environmental practice?

Finally, evidence presented for assessment should indicate the application of good environmental practice in operational tasks and in planning and management. Where this is not obvious, assessors should require further evidence to be submitted that illustrates adherence to environmental principles and practices.

### **Language, Literacy and Numeracy**

Automotive RS&R units of competency have been developed to accommodate varying language, literacy and numeracy capabilities. The required levels of language, literacy and numeracy will be outlined in these standards. Fairness in assessment means that where high levels of language, literacy and numeracy are not integral to successful completion of a work function (i.e. unit of competency); the assessment should provide alternatives for determining a person's competence. For a person with low levels of language, literacy and numeracy, this could include:

- oral questioning rather than written tests or project work
- arranging for a supervisor or colleague to assist in the evidence gathering and even the evidence interview
- the use of signs and gestures rather than words where there exists a language barrier
- less reliance on written work in favour of practical demonstration and references.

In some situations it may be possible to conduct the oral part of an assessment or to assess aspects of knowledge by using a language other than English.

Where there is a requirement for basic language, literacy and numeracy such as in units of competence dealing with chemical use and application, then only the essential requirement for language, literacy and numeracy should be evaluated. For example, a person may be able to read relevant information in an operator's manual that will enable them to operate a particular machine in a safe manner and as required by the unit of competence. However, it would be unfair to expect them to read and understand other written material within the manual that is not relevant to the standard.

Variations in language, literacy and numeracy can result from a range of circumstances such as culture and ethnicity; educational background; and physical, learning or intellectual disabilities.

The assessor's role is not to evaluate the language, literacy and numeracy skills of the individual, but to judge whether they are able to perform the required work function to a workplace standard as defined by the units of competence. Making this judgment will often rely on the development of creative approaches to designing assessment techniques and tools that respect the diversity of language, literacy and numeracy skills in the workplace and training institutions.

### **Work Health and Safety**

In the automotive industry, WHS is an integral part of every work function. This has been reflected in the units of competency for the AUR12 Training Package. When assessing an individual, consideration must be made of the WHS aspects of evidence tendered for assessment.

For example, at the lower qualification levels, the identification of hazards and the use of personal protective equipment are essential requirements. Therefore, evidence for assessment should indicate that an individual not only performs the task as required, but also uses appropriate safety equipment and clothing and is capable of identifying hazards. While the wearing of appropriate personal protective equipment can be assessed by observation and demonstration, the identification of hazards may require use of written or oral questioning strategies.

Open-ended questions like those below can assist in this process:

- What things could possibly cause harm to workers in your workplace?
- What do you do when you see something that looks dangerous and may harm someone?
- How do you make sure you protect yourself from hazards in the workplace?
- What protective equipment do you use and when?

At the higher qualification levels there is a strong focus on not only identifying hazards, but also on assessing and controlling risks (adverse outcomes associated with hazards). These risks range from death, injury and illness, to financial loss and prosecution. Risk management covers facilities and equipment, planning, training, labour organisation and work procedures. Evidence for assessment at the higher levels should include documentation of WHS risk assessment and management. This should be found in a range of areas, including reports, business plans, WHS audits, training programs for staff, forms detailing compliance with legislation, and enterprise policies and procedures.

Questioning strategies at the higher qualifications levels should also focus on risk assessment and management. Questions such as:

- How do you assess risks associated with workplace operations?
- What actions have you undertaken in relation to hazards identified in the workplace?
- How do you ensure that staff members employed in the workplace observe WHS guidelines?
- Can you show me the WHS policies and procedures for your enterprise?

Where an individual cannot provide evidence, an assessor may need to provide additional time for that evidence to be prepared or obtained.

The automotive industry defined how to package units of competence into the qualifications in this Training Package.

### **Qualification Pathways**

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package. For more information about qualifications and pathways contact [ASA email info@autoskillsaustralia.com.au](mailto:info@autoskillsaustralia.com.au)

## Skill Sets

### Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

### Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording 'these competencies meet *[insert skill set title or identified industry area]* need' on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2010 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment. [http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF\\_Handbook\\_07.pdf](http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf)

### Skill Sets in this Training Package

This section provides information on Skill Sets within this Training Package, with the following important disclaimer: Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Where this section is blank, nationally recognised Skill Sets have yet to be identified in this industry.

The Skill Sets within this Training Package are as follows:

- AURSS0004 Automotive CNG Installation Service and Repair Skill Set
- AURSS0005 Automotive CNG Service and Repair Skill Set
- AURSS0006 Automotive Electrical Skill Set for Light Vehicle Technicians
- AURSS0007 Automotive LNG Installation, Service and Repair Skill Set
- AURSS0008 Automotive LNG Service and Repair Skill Set
- AURSS0009 Automotive LPG Installation, Service and Repair Skill Set
- AURSS0010 Automotive LPG Service and Repair Skill Set
- AURSS0011 Battery Electric Vehicle Diagnosis and Repair Skill Set
- AURSS0012 Battery Electric Vehicle Inspection and Servicing Skill Set
- AURSS0013 Heavy Commercial Vehicle Skill Set for Light Vehicle Technicians
- AURSS0014 Hybrid Electric Vehicle Inspection and Servicing Skill Set
- AURSS0015 Mobile Plant Skill Set for Agricultural Equipment Technicians
- AURSS0016 Mobile Plant Skill Set for Heavy Commercial Vehicle Technicians
- AURSS0017 Mobile Plant Skill Set for Light Vehicle Technicians
- AURSS0018 Vehicle Air Conditioning Install and Overhaul Skill Set
- AURSS0019 Vehicle Air Conditioning Installation Skill Set
- AURSS0020 Vehicle Air Conditioning Overhaul Skill Set
- AURSS0021 Vehicle Air Conditioning Service, Retrofit and Repair Skill Set
- AURSS0022 Vehicle Refrigerant Recovery Skill Set
- AURSS0023 Advanced Body Repair Recovery Skill Set
- AURSS0024 Advanced Body Repair Welding Skill Set
- AURSS0025 Advanced Vehicle Refinishing Skill Set

Pathways Information, Licensing/Regulatory Information, Target Group and Suggested Words for Statement of Attainment are included in each Skill Set within this Training Package.

\*Note: The Vehicle Refrigerant Recovery Skill Set can be undertaken as part of a qualification or as a stand alone skill set.

# Assessment Guidelines

## Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the *Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration*. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

## Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing and registration requirements; and assessment pathways.

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:

- benchmarks for assessment
- 
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF

## Benchmarks for Assessment

The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

## Principles of Assessment

All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:

- validity
- reliability
- flexibility
- fairness
- sufficiency

These principles must be addressed in the:

- design, establishment and management of the assessment system for this Training Package
- development of assessment tools, and
- the conduct of assessment.

### *Validity*

Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:

- (a) assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance
- (b) assessment of knowledge and skills must be integrated with their practical application
- (c) judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency

### *Reliability*

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

### *Flexibility*

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

### *Fairness*

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

### *Sufficiency*

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough *appropriate* evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

## **Rules of Evidence**

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.

#### *Valid*

Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

#### *Sufficient*

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

#### *Current*

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

#### *Authentic*

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate's own work.

### **Assessment Requirements of the Australian Quality Training Framework**

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 *Essential Standards for Registration*.

The AQTF 2010 *Essential Standards for Initial and Continuing Registration* can be downloaded from <[www.training.com.au](http://www.training.com.au)>.

The following points summarise the assessment requirements.

#### **Registration of Training Organisations**

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

#### **Quality Training and Assessment**

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1.

#### **Assessor Competency Requirements**

Each person involved in training and assessment must be competent for the functions they perform. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*, Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 *Users' Guide to the Essential Standards for Registration* – Appendix 2.

### **Assessment Requirements**

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

### **Assessment Strategies**

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

### **National Recognition**

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

### **Access and Equity and Client Outcomes**

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

### **Monitoring Assessments**

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

### **Recording Assessment Outcomes**

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

### **Issuing AQF qualifications and Statement of Attainment**

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current *AQF Implementation Handbook* and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF and the edition of the *AQF Implementation Handbook*—available on the AQF Council website <[www.aqf.edu.au](http://www.aqf.edu.au)>

### **Licensing/Registration Requirements**

This section provides information on licensing/registration requirements for this Training Package, with the following important disclaimer.

The developers of this Training Package consider that no licensing or registration requirements apply to RTOs, assessors or candidates with respect to this Training Package. Contact the relevant State or Territory Department(s) to check if there are any licensing or registration requirements with which you must comply.

Licensing may be applicable to assessors, RTOs and candidates in specific occupations. However, where the AUR12 Training Package may direct licensing, the regulation process is separate. There are no general licensing issues. However, specific licenses may be required in some occupations. Licensing occurs in NSW, in most areas covered by the package, while in QLD and WA, licensing is being introduced. Licensing in these jurisdictions is compatible with the RS&R Training Package.

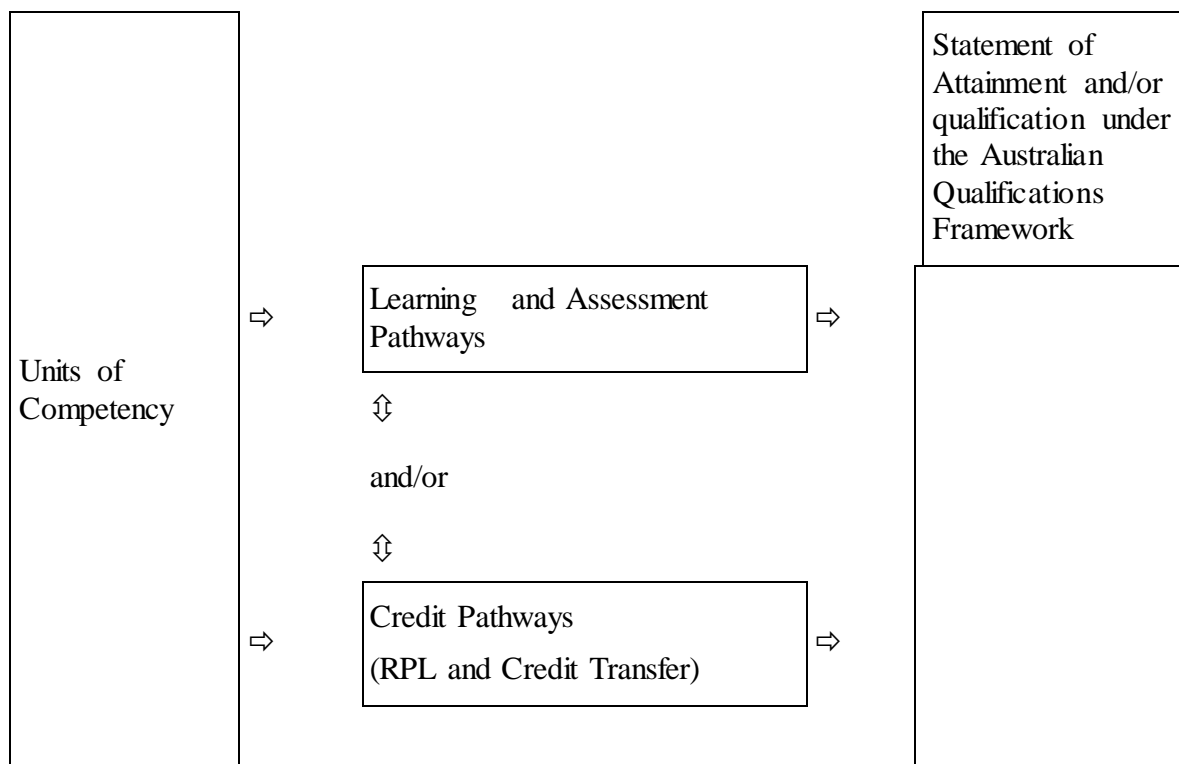

Contact the relevant State or Territory Department(s) to check if the licensing/registration requirements described below still apply, and to check if there are any others with which you must comply. For further information contact [Licence Recognition](http://www.licencerecognition.gov.au/authorities.aspx) (<http://www.licencerecognition.gov.au/authorities.aspx>)

## Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, or a recognition pathway, or a combination of the two as illustrated in the following diagram.

Each of these assessment pathways leads to full recognition of competencies held – the critical issue is that the candidate is competent, not how the competency was acquired. Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package, the AQTF and, where relevant, the Australian Qualifications Framework.

### **Learning and Assessment Pathways**

Usually, learning and assessment are integrated, with evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process. Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

### **Credit Pathways**

*Credit* is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were acquired, provided that the learning is relevant to the unit of competency outcomes.

### **Recognition of Prior Learning**

Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of Recognition of Prior Learning (RPL) provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;

- people returning to the workplace; and
- people with disabilities or injuries requiring a change in career.
- 

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.

Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:

- questioning (oral or written)
- consideration of a portfolio and review of contents
- consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification component
- mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
- observation of performance, and
- participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

### **Credit Transfer**

*Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.*

This process involves education institutions:

- mapping, comparing and evaluating the extent to which the defined *learning outcomes and assessment requirements* of the individual *components of one qualification* are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification
- making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
- setting out the agreed credit outcomes in a documented arrangement or agreement, and
- publicising the arrangement/agreement and credit available.

### Combination of Pathways

Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

### Assessor Requirements

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

### Assessor Competencies

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

- 1.4 Training and assessment are conducted by trainers and assessors who:
- a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and
  - b) have the relevant vocational competencies at least to the level being delivered or assessed, and
  - c) can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and
  - d) continue to develop their Vocational Education and Training (VET) knowledge and

skills as well as their industry currency and trainer/assessor competence.

\* See AQTF 2010 *Users' Guide to the Essential Standards for Registration* – Appendix 2

## **Designing Assessment Tools**

This section provides an overview on the use and development of assessment tools.

### **Use of Assessment Tools**

Assessment tools provide a means of collecting the evidence that assessors use in making judgements about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

### **Using Prepared Assessment Tools**

If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register <[www.ntis.gov.au](http://www.ntis.gov.au)>.

### **Developing Assessment Tools**

When developing their own assessment tools, assessors must ensure that the tools:

- are benchmarked against the relevant unit or units of competency;
- are reviewed as part of the validation of assessment strategies required under the AQTF; and
- meet the assessment requirements expressed in the AQTF 2010 *Essential Standards for Initial and Continuing Registration*.

A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

## **Language, Literacy and Numeracy**

The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

## **Conducting Assessment**

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

## Mandatory Assessment Requirements

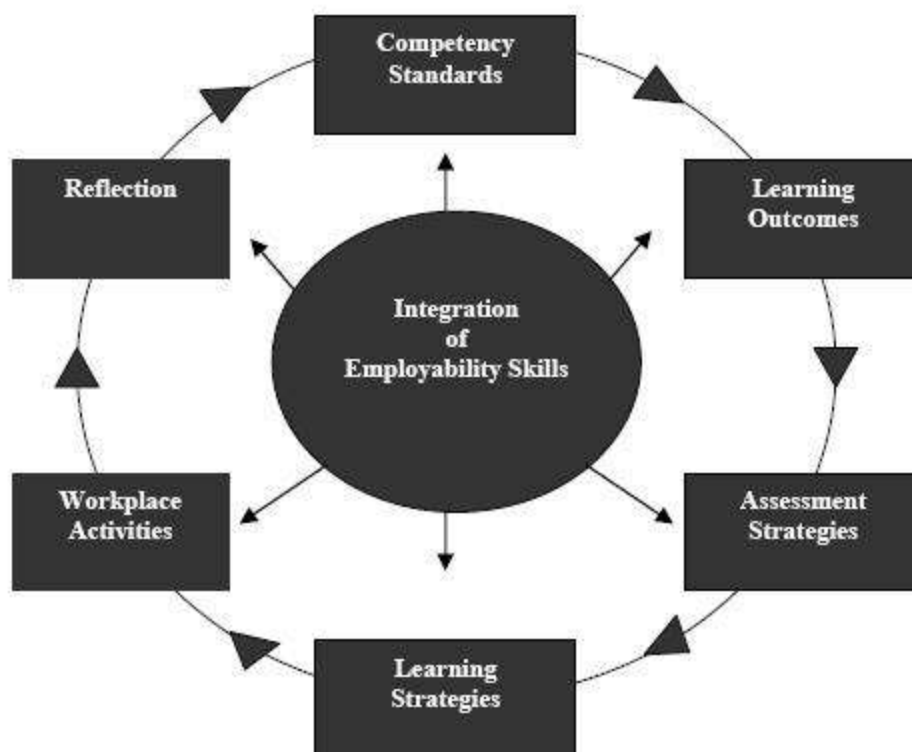

Assessments must meet the criteria set out in the AQTF 2010 *Essential Standards for Initial and Continuing Registration*. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 *Essential Standards for Initial and Continuing Registration* are as follows:

### 1.5 Assessment, including Recognition of Prior Learning (RPL):

- a) meets the requirements of the relevant Training Package or accredited course
- b) is conducted in accordance with the principles of assessment and the rules of evidence
- c) meets workplace and, where relevant, regulatory requirements
- d) is systematically validated.

## Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such, they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

The National Quality Council has endorsed a model for assessing and reporting Employability Skills, which contains further suggestions about good practice strategies in teaching, assessing, learning and reporting Employability Skills. The model is available from <http://www.training.com.au/>.

The endorsed approach includes learners downloading qualification specific Employability Skills Summaries for Training Package qualifications from an online repository at <http://employabilityskills.training.com.au>

For more information on Employability Skills in Auto Skills Australia Training Packages go to the Auto Skills Australia website at ASA website.

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from <http://employabilityskills.training.com.au> "

### **Access and Equity**

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

### **Reasonable Adjustments**

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability. Under the Disability Standards for Education 2005, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While 'reasonable adjustment' and 'unjustifiable hardship' are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. Go to <http://www.deewr.gov.au/tpdh/Pages/home.aspx>.

### **Further Sources of Information**

*The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.*

For general information and resources go to <http://www.training.com.au/>

The National Register is an electronic database providing comprehensive information about RTOs, Training Packages and accredited courses - <[www.ntis.gov.au](http://www.ntis.gov.au)>

The Training Package Development Handbook site provides National Quality Council policy for the development of Training Packages. The site also provides guidance material for the application of that policy, and other useful information and links.

<http://www.deewr.gov.au/Skills/Overview/Policy/TPDH/Pages/main.aspx>

### **Assessment Resources**

Registered training organisations (RTOs) are at the forefront of vocational education and training (VET) in Australia. They translate the needs of industry into relevant, quality, client-focussed training and assessment.

RTOs should strive for innovation in VET teaching and learning practices and develop highly flexible approaches to assessment which take cognisance of specific needs of learners, in order to improve delivery and outcomes of training.

Resources can be purchased or accessed from:

- TVET Australia – provides an integrated service to enable users of the national training system to identify and acquire training materials, identify copyright requirements and enter licenses for use of that material consistent with the scope and direction of the NQC.

<http://www.productservices.tvetaustralia.com.au/>

## **Competency Standards**

### **What is competency?**

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

### **Contextualisation of Units of Competency by RTOs**

Registered Training Organisations (RTOs) may contextualise units of competency in this endorsed Training Package to reflect required local outcomes. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this Training Package must be within the bounds of the following advice:

- RTOs must not remove or add to the number and content of elements and performance criteria.
- RTOs can include specific industry terminology in the range statement.
- Any amendments and additions to the range statement made by RTOs must not diminish the breadth of application of the competency, or reduce its portability.
- RTOs may add detail to the evidence guide in areas such as the critical aspects of evidence or required resources and infrastructure—but only where these expand the breadth of the competency and do not limit its use.

### **Components of Units of Competency**

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

#### **Unit Title**

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

**Unit Descriptor**

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

**Employability Skills**

This sub-section contains a statement that the unit contains Employability skills.

**Pre-requisite Units (optional)**

If there are any units of competency that must be completed before the unit, these will be listed.

**Application of the Unit**

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

**Competency Field (Optional)**

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

**Sector (optional)**

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

**Elements of Competency**

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

**Performance Criteria**

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

**Required Skills and Knowledge**

The essential skills and knowledge are either identified separately or combined. *Knowledge* identifies what a person needs to know to perform the work in an informed and effective manner. *Skills* describe the application of knowledge to situations where understanding is converted into a workplace outcome.

**Range Statement**

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

### **Evidence Guide**

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment;
- relationships with the assessment of any other units of competency;
- suitable methodologies for conducting assessment including the potential for workplace simulation;
- resource implications, for example access to particular equipment, infrastructure or situations;
- how consistency in performance can be assessed over time, various contexts and with a range of evidence; and
- the required underpinning knowledge and skills
- 

### **Employability Skills in Units of Competency**

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

### **How Employability Skills relate to the Key Competencies**

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

#### **Employability Skills    Mayer Key Competencies**

Communication                      Communicating ideas and information

Teamwork                              Working with others and in teams

Problem solving	Solving problems Using mathematical ideas and techniques
-----------------	---

Initiative and enterprise

Planning and organising	Collecting, analysing and organising information Planning and organising activities
-------------------------	--

Self-management

Learning

Technology	Using technology
------------	------------------

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

### **Explicitly embedding Employability Skills in units of competency**

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

### **Sample unit of competency components showing Employability Skills**

The following table shows the sequence of a unit of competency, and each cell contains text taken from a range of units. It provides examples of where and how various Employability Skills could be embedded in each component.

Please note that in the example, the bracketed Employability Skills are provided for clarification only and would not be present in units of competency within this Training Package.

<b>Unit Title</b>	Give formal presentations and take part in meetings <b>(Communication)</b>
-------------------	--

<b>Unit Descriptor</b>	This unit covers the skills and knowledge required to promote the use and implementation of innovative work practices to effect change. <b>(Initiative and enterprise)</b>
<b>Element</b>	Proactively resolve issues. (problem solving)
<b>Performance Criteria</b>	Information is organised in a format suitable for analysis and dissemination in accordance with organisational requirements. <b>(Planning and organising)</b>
<b>Range Statement</b>	Software applications may include email, internet, word processing, spreadsheet, database or accounting packages. (technology)
<b>Required Skills and Knowledge</b>	<p>Modify activities depending on differing workplace contexts, risk situations and environments. <b>(Learning)</b></p> <p>Work collaboratively with others during a fire emergency. (teamwork)</p> <p>Instructions, procedures and other information relevant the maintenance of vessel and port security. <b>(Communication)</b></p> <p>Evidence of having worked constructively with a wide range of community groups and stakeholders to solve problems and adapt or design new solutions to meet identified needs in crime prevention. In particular, evidence must be obtained on the ability to:</p> <ul style="list-style-type: none"> <li>• assess response options to identified crime-prevention needs and determine the optimal action to be implemented</li> <li>• in consultation with relevant others, design an initiative to address identified issues. <b>(Initiative and enterprise).</b></li> </ul>
<b>Evidence Guide</b>	

### **Employability Skills Summaries and units of competency**

An Employability Skills Summary exists for each qualification. Summaries include broad advice on industry expectations with regard to Employability Skills at the qualification level. Summaries should be used by trainers and assessors to assist in identifying the Employability Skills requirements contained within units of competency.

## **Supporting Text Block**

## AUR10112 Certificate I in Automotive Vocational Preparation

### Modification History

Release	Comment
Release 1	Replaces AUR10105 Certificate I in Automotive

## Description

This qualification is an introductory qualification to the automotive retail, service and repair industries and an entry to further training in several sectors. It is designed for application in a highly supervised context, such as VET in schools or other equivalent introduction or induction to industry environments. The range of technical skills and knowledge is limited.

### Job roles and employment outcomes

The Certificate I in Automotive Vocational Preparation offers entry-level training for those working or seeking to work in any of the automotive sectors covered by this Training Package such as:

- Bicycle
- Automotive Electrical
- Outdoor Power Equipment
- Light vehicle
- Vehicle Body and Paint - Detailing
- Motorcycle
- Marine
- Heavy Vehicle

They may undertake a range of simple tasks under close supervision. The qualification targets introductory employment, such as induction or probationary periods for automotive retail, service and repair employment. It may also be suitable for a cadetship, or part time and casual employment positions where a full range of skills are not required.

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways from the qualification

Further training pathways from this qualification include any Certificate II qualification within the AUR12 Automotive Industry Retail, Service and Repair Training Package or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the Automotive retail service and repair industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>Gathering, conveying, receiving and understanding verbal and written information and workplace instructions</li> <li>Communicating with clients, colleagues and others</li> <li>Understanding relevant industry definitions, terminology, symbols, abbreviations and language</li> <li>Recording relevant information using standard workplace documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>Working with colleagues and supervisors to prioritise and action tasks</li> <li>Providing assistance to other team members</li> <li>Relating to people from diverse social, cultural and ethnic backgrounds and with varying physical and mental abilities</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>Solving routine problems related to hazards in the workplace, while under direct supervision</li> <li>Examining tools and equipment prior to use for damage, missing components or other defects</li> <li>Identifying typical faults and problems and taking necessary remedial action</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>Raising workplace health and safety (WHS) issues with the appropriate person</li> <li>Responding to change and workplace challenges</li> <li>Maximising use of resources by recycling, re-using or using appropriate disposal methods</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>Planning own work schedule to ensure tasks are completed on time</li> <li>Selecting and using appropriate materials, tools and equipment</li> <li>Sequencing tasks using time management techniques</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>Behaving in ways that contribute to an effective and safe working environment</li> <li>Identifying own roles and responsibilities</li> <li>Completing daily work activities</li> <li>Cleaning up work area</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>Listening to ideas and opinions of other members of the team</li> <li>Identifying own learning needs and seeking skill development</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the Employability Skills as identified by the Automotive retail service and repair industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	as required <ul style="list-style-type: none"><li>• Being open to learning new ideas and techniques</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• Using computers and relevant software</li><li>• Using and operating a range of tools and equipment correctly and safely</li><li>• Applying measurements and calculations using appropriate equipment and formulas as required</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **8 units** of competency, consisting of:

- **5 core units**

plus

- **3 elective units** of which:
  - up to **3** elective units may be chosen from the elective groups listed below.
  - up to **2** elective units may be chosen from this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit Code	Unit Title
<b>Common - Environment</b>	
AURAEA1001	Identify environmental requirements in an automotive workplace
<b>Common - Health and Safety</b>	
AURASA1001	Apply automotive workplace safety fundamentals
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR1003	Apply automotive electrical system fundamentals
<b>Mechanical - Light Vehicle - Technical</b>	
AURLTA1001	Apply automotive mechanical system fundamentals
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment

### Elective units

Unit Code	Unit Title
<b>Common - Foundation Skills</b>	
AURFA2001	Use numbers in an automotive workplace

Unit Code	Unit Title
AURAF2002	Read in an automotive workplace
<b>Bicycles - Technical</b>	
AURBTA1001	Remove and tag bicycle components
AURBTA1002	Adjust bicycles
<b>Bicycles - Technical - Wheels and Tyres</b>	
AURBTJ2001	Remove, repair and fit bicycle tyres
<b>Electrical - Technical - Tools and Equipment</b>	
AURETK1001	Identify, select and use low voltage electrical test equipment
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR1001	Remove and tag automotive electrical system components
AURETR2006	Carry out soldering of electrical wiring and circuits
<b>Mechanical - Heavy Vehicle - Technical</b>	
AURHTA1001	Carry out heavy vehicle pre-repair operations
AURHTA2003	Remove and replace heavy commercial vehicle ancillary components and accessories
<b>Mechanical - Heavy Vehicle - Technical - Wheels and Tyres</b>	
AURHTJ1001	Inspect heavy commercial vehicle wheels and tyres
<b>Mechanical - Motorcycle - Technical</b>	
AURJTA1001	Perform minor adjustments to motorcycles
AURJTA1002	Remove and replace motorcycle components and accessories
<b>Mechanical - Motorcycle - Wheels and Tyres</b>	
AURJTJ2001	Remove, inspect and fit motorcycle wheel assemblies
<b>Mechanical - Light Vehicle - Technical - Wheels and Tyres</b>	
AURLTJ2003	Remove, inspect, and refit light vehicle wheel assemblies

Unit Code	Unit Title
<b>Outdoor Power Equipment - Technical</b>	
AURPTA1001	Carry out pre-repair operations to outdoor power equipment
AURPTA1002	Perform minor adjustments to outdoor power equipment
AURPTA2006	Service line trimming systems and components
<b>Marine - Technical - Engines</b>	
AURRTE1001	Prepare outboard engines for wet-run testing
<b>Marine - Technical - Driveline and Final Drives</b>	
AURRTQ2001	Service inboard propeller drive systems
<b>Marine - Technical - Electrical and Electronic</b>	
AURRTR1001	Inspect, service and maintain marine battery storage systems
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA1001	Remove and tag steering, suspension and brake system components
AURTTA1002	Carry out workshop practice activities
AURTTA1003	Use and maintain basic measuring devices
AURTTA2009	Carry out pre-repair operations (mechanical)
<b>Mechanical Miscellaneous - Technical - Engines</b>	
AURTTE1003	Remove and tag engine system components
<b>Vehicle Body - Technical - Body</b>	
AURVTN1001	Remove and tag vehicle body system components
AURVTN2008	Clean vehicle body and door cavities
<b>Vehicle Body - Technical - Paint</b>	
AURVTP2006	Prepare vehicle components for paint repairs

## AUR20112 Certificate II in Automotive Administration

### Modification History

Release	Comment
Release 1	Replaces AUR20105 Certificate III in Automotive Administration

## Description

This qualification covers the skills and knowledge required to perform a range of administrative tasks within an automotive retail, service or repair business.

### Job roles and employment outcomes

The Certificate II in Automotive Administration is intended to prepare new employees or recognise and develop existing workers who are performing office and administrative functions in an automotive retail, service or repair business.

Job roles related to this qualification include:

- clerical assistant
- office assistant
- receptionist
- service department receptionist
- on-line receptionist
- data entry assistant

### Application

This qualification is suitable for an Australian traineeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR10112 Certificate I in Automotive Vocational Preparation in this Training Package or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR30112 Certificate III in Automotive Administration or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills required by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Communication</b>	<ul style="list-style-type: none"> <li>• gathering, conveying and receiving verbal and written information</li> <li>• listening and understanding workplace instructions</li> </ul>

## AUR20212 Certificate II in Automotive Air Conditioning Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20705 Certificate II in Automotive Mechanical

## Description

This qualification covers the skills and knowledge required to perform a range of tasks related to servicing and repairing air conditioning components and systems of cars and heavy vehicles within an automotive service and repair business.

### Job roles and employment outcomes

The Certificate II in Automotive Air Conditioning Technology is intended to prepare new employees or recognise and develop existing workers who are performing servicing and repair of air conditioning components/systems of vehicles in an automotive service or repair business.

Job roles related to this qualification include:

- automotive specialist – air conditioning

### Application

This qualification is typically used to develop employees or recognise and develop existing workers who are performing vehicle service and repair functions in an automotive environment.

They would be expected to perform a range of mechanical operations involving known routines, methods and procedures and take some accountability for the quality of outcomes. This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR30612 Certificate III in Automotive Light Vehicle Mechanical Technology, AUR30312 Certificate III in Automotive Electrical Technology or other relevant qualifications.

## Licensing/Regulatory Information

Some jurisdictions may require this qualification for licensing purposes. In addition some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Communication</b>	<ul style="list-style-type: none"> <li>• Understanding and carrying out verbal instructions from supervisors and others</li> <li>• Reading, understanding and completing workplace documentation, forms and records</li> <li>• Sharing work-related information with other team members using industry terminology</li> <li>• Communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>• Contributing positively to the work team environment</li> <li>• Working effectively with others in a socially diverse environment</li> <li>• Respecting and understanding the views of others</li> <li>• Giving, receiving and acting upon feedback</li> <li>• Identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>• Recognising a problem or a potential problem within a vehicle component/system servicing environment</li> <li>• Seeking information and assistance to solve problems outside own area of responsibility</li> <li>• Solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>• Suggesting ideas for workplace improvement to supervisors and team members</li> <li>• Positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>• Taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• Planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>• Prioritising activities to achieve required outcomes</li> <li>• Planning and organising appropriate equipment and materials</li> <li>• Planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• Following workplace safety requirements and other policies and procedures</li> <li>• Completing known delegated tasks on time</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"><li>• Selecting and using appropriate equipment, materials, processes and procedures</li><li>• Asking for advice and assistance when appropriate</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• Identifying personal strengths and weaknesses</li><li>• Acting upon feedback and accepting opportunities to learn to improve work performance</li><li>• Asking questions to gain information and identify sources of information to expand knowledge and understanding</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• Appropriately selecting and using tools and equipment</li><li>• Recognising and reporting faulty equipment</li><li>• Using information and communication technology</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **13 units** of competency, consisting of:

- **7 core units**

plus

- **6 elective units** of which:

- up to **6** elective units may be chosen from the elective units listed below
- up to **3** elective units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

## AUR20312 Certificate II in Bicycle Mechanical Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20311 Certificate II in Bicycles

### Description

This qualification covers the skills and knowledge required to perform a range of routine assembly and servicing tasks within the bicycle industry. It is suitable for entry into the bicycle retail, service and repair sector.

#### Job roles and employment outcomes

The Certificate II in Bicycle Mechanical Technology is intended to prepare new employees or develop existing workers who are performing bicycle service tasks in the bicycle industry.

Job roles related to this qualification include:

- bicycle assembler
- bicycle service technician
- assistant mechanic
- bicycle sales assistant.

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## **Pathways Information**

### **Pathways into the qualification**

Credit will be granted towards this qualification to those who have completed relevant units of competency from AUR10112 Certificate I in Automotive Vocational Preparation in this Training Package or other relevant qualifications.

### **Pathways from the qualification**

Further training pathways from this qualification include AUR30212 Certificate III in Bicycle Mechanical Operations, AUR31012 Certificate III in Automotive Sales, or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the Bicycle Retail, Service and Repair sector for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification
<b>Communication</b>	<ul style="list-style-type: none"> <li>• understanding and carrying out verbal instructions from supervisors and others</li> <li>• reading, understanding and completing workplace documentation, forms and records</li> <li>• sharing work-related information with other team members using industry terminology</li> <li>• communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>

## AUR20412 Certificate II in Automotive Electrical Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20408 Certificate II in Automotive Electrical Technology

### Description

This qualification covers the skills and knowledge required to perform a range of tasks related to installation, assembly and servicing of electrical components/systems of motor vehicles within the automotive electrical installation, service and repair technology sector.

#### Job roles and employment outcomes

The Certificate II in Automotive Electrical Technology is intended to prepare prospective employees and existing workers who undertake service and repair of vehicle electrical components and systems in the automotive electrical industry. Work may include performing component/system fabricating, fitting or modifying operations of automotive aftermarket electrical componentry and installation.

Employment outcomes targeted by this qualification include:

- automotive electrical component installer
- automotive electrical trainee / assistant

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed relevant units of competency from AUR10112 Certificate I in Automotive Vocational Preparation in this Training Package or other relevant qualifications.

#### Pathways from the qualification

Further training pathways from this qualification include AUR30312 Certificate III in Automotive Electrical Technology, or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive, service and repair sector for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification
<b>Communication</b>	<ul style="list-style-type: none"> <li>understanding and carrying out verbal instructions from supervisors and others</li> <li>reading, understanding and completing workplace documentation, forms and records</li> <li>sharing work-related information with other team members using industry terminology</li> <li>communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>contributing positively to the work team environment</li> <li>working effectively with others in a socially diverse environment</li> <li>respecting and understanding the views of others</li> <li>giving, receiving and acting upon feedback</li> <li>identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a problem or a potential problem within a vehicle component or system or with equipment</li> <li>seeking information and assistance to solve problems outside own area of responsibility</li> <li>solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>suggesting ideas for workplace improvement to supervisors and team members</li> <li>positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>prioritising activities to achieve required outcomes</li> <li>planning and organising appropriate equipment and materials</li> <li>planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>following workplace safety requirements and other policies and procedures</li> <li>completing known delegated tasks on time</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• asking for advice and assistance when appropriate</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• identifying personal strengths and weaknesses</li><li>• acting upon feedback and accept opportunities to learn to improve work performance</li><li>• asking questions to gain information and identify sources of information to expand knowledge and understanding</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• appropriately setting up technological equipment</li><li>• recognising and reporting faulty equipment</li><li>• using appropriate tools and equipment</li><li>• applying knowledge of operating principles of vehicle components and systems</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **16 units** of competency, consisting of:

- **10 core units**

plus

- **6 elective units**, of which:
  - up to **6** elective units may be chosen from the elective units listed below
  - up to **3** elective units may be chosen from a Certificate II qualification or above in this Training Package, another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical – Technical – Tools and Equipment</b>	
AURETK2002	Use and maintain automotive electrical test equipment
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2006	Carry out soldering of electrical wiring and circuits
AURETR2007	Demonstrate knowledge of automotive electrical circuits and wiring systems
AURETR2008	Remove and replace electrical units and assemblies
AURETR2009	Install, test and repair vehicle lighting and wiring systems
AURETR2011	Install and test basic ancillary electrical components
AURETR2012	Test and repair basic electrical circuits
AURETR2015	Inspect and service batteries

### Elective units

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common - Foundation Skills</b>	
AURAF2001	Use numbers in an automotive workplace
AURAF2002	Read in an automotive workplace
AURAF2003	Communicate effectively in an automotive workplace
AURAF2005	Write routine texts in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA2001	Work effectively with others
AURAMA2002	Communicate business information
<b>Common - Technical</b>	
AURATA2001	Identify basic automotive faults using troubleshooting processes
AURATA2002	Read and interpret engineering drawings
AURATA2003	Produce drawings from design concepts
<b>Electrical – Technical – Tools and Equipment</b>	
AURETK1001	Identify, select and use low voltage electrical test equipment
<b>Electrical – Technical - Body</b>	
AURETR2042	Remove, refit and test electrical componentry for operation following body repair activities
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR1003	Apply automotive electrical system fundamentals
AURETR2005	Install, test and repair electrical security systems and components
AURETR2010	Fabricate, test and repair wiring harnesses and looms
AURETR2013	Inspect and service charging systems

Unit code	Unit title
AURETR2014	Inspect and service starting systems
AURETR2016	Read and apply vehicle wiring schematics and drawings
AURETR3025	Test, charge and replace batteries
<b>Electrical – Technical - Air Conditioning and HVAC</b>	
AURETU2001	Install air conditioning systems
AURETU2002	Recover vehicle refrigerants
AURETU2003	Service air conditioning and HVAC systems
AURETU3004	Diagnose and repair air conditioning and HVAC systems
AURETU3005	Retrofit and modify air conditioning and HVAC systems
<b>Outdoor Power Equipment – Technical - Electrical and Electronic</b>	
AURPTR2002	Test and service outdoor electric powered equipment
<b>Marine – Technical - Electrical and Electronic</b>	
AURRTR1001	Inspect, service and maintain marine battery storage systems
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2001	Select automotive parts and products
AURSCA2003	Apply sales procedures
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA2004	Carry out servicing operations
AURTTA2008	Produce patterns and templates
AURTTA2009	Carry out pre-repair operations (mechanical)
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous – Technical - Engines</b>	
AURTTE2004	Inspect and service engines
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	

Unit code	Unit title
AURTTK2001	Use and maintain measuring equipment in an automotive workplace
AURTTK2002	Use and maintain workplace tools and equipment
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2003	Remove and replace vehicle interior trim components
AURVTT2004	Trim vehicle components
AURVTT2005	Select and apply trim and fabric materials
AURVTT2006	Select and apply trim and fabric adhesives
<b>Vehicle Body – Technical - Welding, Grinding, Machining and Soldering</b>	
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

## AUR20512 Certificate II in Automotive Servicing Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20505 Certificate II in Automotive Vehicle Servicing

### Description

This qualification covers the skills and knowledge required to perform a range of servicing operations on light vehicles, heavy vehicles and/or motorcycles within an automotive service or repair business.

#### Job roles or employment outcomes

The Certificate II in Automotive Servicing Technology is intended to prepare new employees or recognise and develop existing workers who are performing servicing and maintenance of vehicles in an automotive service or repair business.

Employment outcomes targeted by this qualification include:

- automotive serviceperson.

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

#### Pathways from the qualification

Further training pathways from this qualification include AUR30612 Certificate III in Light Vehicle Mechanical Technology or other relevant qualifications.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Communication</b>	<ul style="list-style-type: none"> <li>• Understanding and carrying out verbal instructions from supervisors and others</li> <li>• Reading, understanding and completing workplace documentation, forms and records</li> <li>• Sharing work-related information with other team members using industry terminology</li> <li>• Communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>• Contributing positively to the work team environment</li> <li>• Working effectively with others in a socially diverse environment</li> <li>• Respecting and understanding the views of others</li> <li>• Giving, receiving and acting upon feedback</li> <li>• Identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>• Recognising a problem or a potential problem within a vehicle component/system servicing environment</li> <li>• Seeking information and assistance to solve problems outside own area of responsibility</li> <li>• Solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>• Suggesting ideas for workplace improvement to supervisors and team members</li> <li>• Positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>• Taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• Planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>• Prioritising activities to achieve required outcomes</li> <li>• Planning and organising appropriate equipment and materials</li> <li>• Planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• Following workplace safety requirements and other policies and procedures</li> <li>• Completing known delegated tasks on time</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

## AUR20612 Certificate II in Marine Mechanical Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20611 Certificate II in Marine

### Description

This qualification covers the skills and knowledge required to perform a limited range of mechanical service tasks within the marine industry. It is suitable for entry into the marine mechanical service and repair sector.

#### Job roles and employment outcomes

The employment outcomes of Certificate II in Marine Mechanical Technology would see an individual working in the marine mechanical service and repair industry.

The marine service technician would be typically involved in tasks involving defined and known routines, methods and procedures and providing solutions to a limited range of predictable problems. Some complex and non-routine activities involving autonomy and judgement in structured and stable contexts may be expected.

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways into the qualification

Credit will be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

#### Pathways from the qualification

Further training pathways from this qualification include AUR30512 Certificate III in Marine Mechanical Technology or other relevant qualifications.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

## Description

This qualification covers the skills and knowledge required to perform a limited range of tasks related to familiarisation and inspection of mechanical and electrical components and systems of cars, heavy vehicles, outdoor power equipment, bicycles, marine craft and motorcycles. This qualification also covers the skills and knowledge required to perform minor maintenance and repair of an automotive vehicle body. The range of technical skills and knowledge is limited.

### Job roles and employment outcomes

The Certificate II in Automotive Vocational Preparation prepares prospective employees to undertake work in the broader automotive industry.

Job roles related to this qualification include:

- trades assistant
- vehicle service assistant
- automotive service assistant
- trainee serviceperson
- automotive trainee.

### Application

This qualification provides individuals with an introduction to the automotive industry as well as some of the basic skills needed. It is an appropriate level for an individual undertaking work experience, or in a probationary period in employment.

The qualification is particularly applicable to school-based studies as an entry-level pathway to employment, and is suitable as an Australian traineeship or apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR12 Training Package Certificate III qualifications or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive retail, service and repair industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>• understanding and carrying out verbal instructions from supervisors and others</li> <li>• reading and understanding workplace documents</li> <li>• completing written workplace documentation, forms, logs and diaries</li> <li>• sharing work-related information with other team members</li> <li>• communicating with people from a range of social, cultural and ethnic backgrounds</li> <li>• seeking and acting on feedback</li> </ul>

<b>Technology</b>	<ul style="list-style-type: none"><li>• appropriately setting up technological equipment</li><li>• using workplace diagnosis technology</li><li>• recognising and reporting faulty equipment</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **12 units of competency, consisting of:**

- **7 core units**
- **plus**
- **5 elective units**, of which:
  - up to **5** elective units may be chosen from the elective units listed below
  - up to **2** elective units may be chosen from a Certificate I or Certificate II qualification in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common – Foundation Skills</b>	
AURAF2003	Communicate effectively in an automotive workplace
AURAF2004	Solve routine problems in an automotive workplace
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR1003	Apply automotive electrical system fundamentals
<b>Mechanical – Light Vehicle – Technical</b>	
AURLTA1001	Apply automotive mechanical system fundamentals
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment

### Elective units

Unit code	Unit title
<b>Common – Foundation Skills</b>	
AURAF2005	Write routine texts in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA2001	Work effectively with others
<b>Common – Quality</b>	
AURAQA2001	Contribute to quality work outcomes
<b>Bicycle – Technical</b>	
AURBTA1001	Remove and tag bicycle components
<b>Bicycle – Technical – Wheels and Tyres</b>	
AURBTJ2001	Remove, repair and fit bicycle tyres
<b>Bicycle – Technical – Tools and Equipment</b>	
AURBTK2001	Use and maintain specialised bicycle repair tools
<b>Bicycle – Technical – Driveline and Final Drives</b>	
AURBTQ2001	Service bicycle drivetrain systems
<b>Bicycle – Technical – Accessories</b>	
AURBTV2001	Fit and adjust bicycle accessories
<b>Electrical – Technical – Tools and Equipment</b>	
AURETK1001	Identify, select and use low voltage electrical test equipment
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR1001	Remove and tag automotive electrical system components
AURETR1002	Test, service and maintain battery storage systems
AURETR2006	Carry out soldering of electrical wiring and circuits
AURETR2009	Install, test and repair vehicle lighting and wiring systems
AURETR2015	Inspect and service batteries

Unit code	Unit title
<b>Mechanical – Heavy Vehicle – Technical – Steering and Suspension</b>	
AURHTD2001	Inspect and service heavy commercial vehicle suspension systems
<b>Mechanical – Heavy Vehicle – Technical – Fuel Systems</b>	
AURHTF2001	Inspect heavy commercial vehicle fuel systems and components
<b>Mechanical – Heavy Vehicle – Technical – Wheels and Tyres</b>	
AURHTJ1001	Inspect heavy commercial vehicle wheels and tyres
<b>Mechanical – Heavy Vehicle – Technical – Driveline and Final Drives</b>	
AURHTQ2001	Inspect heavy commercial vehicle driveline components
<b>Mechanical – Motorcycle – Technical</b>	
AURJTA1001	Perform minor adjustments to motorcycles
AURJTA1002	Remove and replace motorcycle components and accessories
<b>Mechanical – Motorcycle – Technical – Steering and Suspension</b>	
AURJTD2001	Inspect and service motorcycle suspension systems
AURJTD2002	Inspect and service motorcycle steering systems
<b>Mechanical – Motorcycle – Technical – Wheels and Tyres</b>	
AURJTJ2001	Remove, inspect and fit motorcycle wheel assemblies
<b>Mechanical – Light Vehicle – Technical – Wheels and Tyres</b>	
AURLTJ2003	Remove, inspect and refit light vehicle wheel assemblies
<b>Outdoor Power Equipment – Technical</b>	
AURPTA1001	Carry out pre-repair operations to outdoor power equipment
AURPTA1002	Perform minor adjustments to outdoor power equipment
AURPTA2003	Service and repair rotary cutting systems
AURPTA2006	Service line trimming systems and components
<b>Outdoor Power Equipment – Technical – Engines</b>	

Unit code	Unit title
AURPTE2002	Service engines and engine components (outdoor power equipment)
<b>Marine – Technical – Engines</b>	
AURRTE1001	Prepare outboard engines for wet-run testing
AURRTE2002	Service outboard engines and components
<b>Marine – Technical – Driveline and Final Drives</b>	
AURRTQ2001	Service inboard propeller drive systems
AURRTQ2002	Service jet drive propulsion systems
<b>Marine – Technical – Electrical and Electronic</b>	
AURRTR1001	Inspect, service and maintain marine battery storage systems
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA1001	Remove and tag steering, suspension and brake system components
AURTTA1002	Carry out workshop practice activities
AURTTA1003	Use and maintain basic measuring devices
AURTTA2004	Carry out servicing operations
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA2009	Carry out pre-repair operations (mechanical)
<b>Mechanical Miscellaneous – Technical – Engines</b>	
AURTTE1003	Remove and tag engine system components
<b>Mechanical Miscellaneous – Technical – Driveline and Final Drives</b>	
AURTTQ2002	Remove and refit driveline components
<b>Vehicle Body – Technical – Tools and Equipment</b>	
AURVTK2001	Use and maintain vehicle body repair hand tools
<b>Vehicle Body – Technical – Body</b>	
AURVTN2003	Carry out pre-repair vehicle body operations

Unit code	Unit title
<b>Vehicle Body – Technical – Paint</b>	
AURVTP2006	Prepare vehicle components for paint repairs
AURVTP2008	Clean and polish vehicle exterior paint
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2008	Clean and finish vehicle interior trim and seats
<b>Imported Units</b>	
AURAF009	Carry out research into the automotive industry
AURETK003	Operate electrical test equipment
AURETR046	Remove and refit vehicle batteries
AURETR047	Recharge vehicle batteries
AURETR048	Construct and test basic electronic circuits
AURTTA027	Carry out basic vehicle servicing operations
AURTTB007	Remove and replace brake assemblies
AURTTC004	Remove and replace radiators
AURTTD006	Remove and replace vehicle front suspension springs
AURTTD007	Remove and replace steering assemblies
AURTTE006	Remove and replace conventional engine assemblies
AURTTE007	Dismantle and assemble single cylinder four-stroke petrol engines
AURTTE008	Dismantle and assemble multi-cylinder four-stroke petrol engines
AURTTE009	Remove and replace engine cylinder heads
AURTTJ003	Remove and replace wheel and tyre assemblies
AURTTX012	Dismantle and assemble conventional manual transmissions
AURTTX013	Remove and replace clutch assemblies
AURVTA005	Clean vehicles

Unit code	Unit title
AURVTP029	Prepare surface and prime repaired body panels
AURVTW010	Set up and use welding equipment

## AUR20812 Certificate II in Outdoor Power Equipment Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20811 Certificate II in Outdoor Power Equipment

## Description

This qualification covers the skills and knowledge required to perform a limited range of service and repair tasks on outdoor power equipment. It is suitable for entry into the outdoor power equipment service and repair sector.

### Job roles and employment outcomes

The Certificate II in Outdoor Power Equipment Technology is intended to prepare new employees or develop existing workers to perform a limited range of service and repair tasks in the outdoor power equipment industry.

Job outcomes targeted by this qualification include:

- service technicians

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR30712 Certificate III in Outdoor Power Equipment Technology, AUR31012 Certificate III in Automotive Sales, or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the outdoor power equipment industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification
<b>Communication</b>	<ul style="list-style-type: none"> <li>• understanding and carrying out verbal instructions from supervisors and others</li> <li>• reading, understanding and completing workplace documentation, forms and records</li> <li>• sharing work-related information with other team members using industry terminology</li> <li>• communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>• contributing positively to the work team environment</li> <li>• working effectively with others in a socially diverse environment</li> <li>• respecting and understanding the views of others</li> <li>• giving, receiving and acting upon feedback</li> <li>• identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>• recognising a problem or a potential problem within a sales and customer service environment</li> <li>• seeking information and assistance to solve problems outside own area of responsibility</li> <li>• solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>• suggesting ideas for workplace improvement to supervisors and team members</li> <li>• positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>• taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>• prioritising activities to achieve required outcomes</li> <li>• planning and organising appropriate equipment and materials</li> <li>• planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• following workplace safety requirements and other policies and procedures</li> <li>• completing known delegated tasks on time</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the outdoor power equipment industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification</b>
	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• asking for advice and assistance when appropriate</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• identifying personal strengths and weaknesses</li><li>• acting upon feedback and accepting opportunities to learn to improve work performance</li><li>• asking questions to gain information and identify sources of information to expand knowledge and understanding</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• appropriately setting up technological equipment</li><li>• using tools and equipment efficiently and safely</li><li>• recognising and reporting faulty equipment</li><li>• using information and communication technology</li><li>• applying knowledge of outdoor power equipment components and operating principles</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **16 units** of competency, consisting of:

- **8 core units** listed below

plus

- **8 elective units**, of which:
  - up to **8** elective units may be chosen from the elective units listed below
  - up to **3** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace

## AUR20912 Certificate II in Automotive Body Repair Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20905 Certificate II in Automotive Vehicle Body

### Description

This qualification covers the skills and knowledge required to perform a range of basic tasks when repairing and maintaining the automotive body of cars and other vehicles.

#### Job roles and employment outcomes

The Certificate II in Automotive Body Repair Technology prepares new employees or recognises and develops existing workers who perform repair and maintenance operations in an automotive repair facility.

Job roles related to this qualification include:

- vehicle body repair assistant
- vehicle paint-less dent repair assistant
- vehicle painter assistant
- vehicle trimmer assistant
- vehicle glazing assistant
- vehicle dismantler
- vehicle detailer
- vehicle body assembler
- vehicle tinter

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

## **Pathways Information**

### **Pathways into the qualification**

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### **Pathways from the qualification**

Further training pathways from this qualification include any of the four streams in AUR32112 Certificate III in Automotive Body Repair Technology or other relevant qualifications.

## **Licensing/Regulatory Information**

Some jurisdictions require this qualification for licensing purposes. In addition some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills required by industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>gathering, conveying and receiving verbal and written information</li> <li>listening and understanding workplace instructions</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>working with colleagues and supervisors to contribute to organisational goals</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>solving routine problems related to hazards in the workplace, while under direct supervision</li> <li>checking own work to ensure errors are minimal and work flow is maintained</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>raising workplace health and safety (WHS) issues with the WHS officer</li> <li>recognising and responding to circumstances outside of personal competence</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work schedule to ensure tasks are completed on time</li> <li>setting, monitoring and satisfying personal work goals</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>behaving in ways that contribute to an effective and safe work environment</li> <li>identifying own roles and responsibilities</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>listening to ideas and opinions of other members of the team</li> <li>following safety procedures</li> </ul>
<b>Technology</b>	<ul style="list-style-type: none"> <li>operating a range of tools and equipment or specific machinery</li> </ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **13 units** of competency consisting of:

- **5 core units**

plus

- **3 specialist elective units** in **one** of the selected specialist groups relating to occupational streams

plus

- **5 general elective units**, of which:
  - up to **5** elective units may be chosen from the elective units listed below
  - up to **3** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Foundation Skills</b>	
AURAF2002	Read in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA2001	Work effectively with others
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Vehicle Body – Environment – Body</b>	
AURVEN2001	Apply environmental regulations and best practice in the body repair industry

### Specialist elective units

#### Group A: Auto Body Repair

Unit code	Unit title
-----------	------------

Unit code	Unit title
<b>Vehicle Body – Technical – Body</b>	
AURVTN2002	Carry out panel repairs
AURVTN2003	Carry out pre-repair vehicle body operations
AURVTN3016	Repair body panels incorporating filler

**Group B: Paint-Less Dent Repair**

Unit code	Unit title
<b>Vehicle Body – Technical – Body</b>	
AURVTN3013	Carry out paint-less dent repairs
<b>Vehicle Body – Technical – Paint</b>	
AURVTP3020	Carry out denibbing, buffing and polishing
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2003	Remove and replace vehicle interior trim components

**Group C: Automotive Painting**

Unit code	Unit title
<b>Vehicle Body – Technical – Paint</b>	
AURVTP2001	Apply paint removal methods
AURVTP2003	Prepare spray painting materials and equipment
AURVTP2006	Prepare vehicle components for paint repairs

**Group D: Automotive Trimming**

Unit code	Unit title
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2002	Carry out trim repairs and alterations
AURVTT2003	Remove and replace vehicle interior trim components

Unit code	Unit title
AURVTT2004	Trim vehicle components

**Group E: Automotive Glazing**

Unit code	Unit title
<b>Vehicle Body – Technical – Glazing</b>	
AURVTG2002	Remove and install rubber glazed windscreens
AURVTG2004	Remove and install direct glazed windscreens
AURVTG3009	Remove and install fixed body glass

**Group F: Automotive Dismantling**

Unit code	Unit title
<b>Vehicle Body – Regulatory or Legal – Body</b>	
AURVLN2001	Apply legal requirements for vehicle dismantlers
<b>Vehicle Body – Technical – Body</b>	
AURVTN2007	Remove salvageable components
AURVTN2037	Disassemble and test vehicle units and components

**Group G: Automotive Detailing**

Unit code	Unit title
<b>Vehicle Body – Technical</b>	
AURVTA2001	Prepare vehicle, components and equipment for customer use
<b>Vehicle Body – Technical – Body</b>	
AURVTN2008	Clean vehicle body and door cavities
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2008	Clean and finish vehicle interior trim and seats

**Group H: Vehicle Body Assembling**

Unit code	Unit title
<b>Electrical – Technical – Body</b>	
AURETR2042	Remove, refit and test electrical componentry for operation following body repair activities
<b>Vehicle Body – Technical – Body</b>	
AURVTN2004	Remove, replace and realign bolt-on panels, sections and fittings
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2009	Remove and replace seats and internal fittings

**Group I: Vehicle Tinting**

Unit code	Unit title
<b>Vehicle Body – Technical</b>	
AURVTA2001	Prepare vehicle, components and equipment for customer use
<b>Vehicle Body – Technical – Glazing</b>	
AURVTG2006	Apply window tinting
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2003	Remove and replace vehicle interior trim components

**General elective units**

Unit code	Unit title
<b>Common – Foundation Skills</b>	
AURAF2001	Use numbers in an automotive workplace
<b>Electrical – Technical – Hybrid Vehicle and Battery Electric Vehicle</b>	
AURETH3001	Depower battery electric vehicles
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR3025	Test, charge and replace batteries
<b>Mechanical – Light Vehicle – Technical – Wheels and Tyres</b>	

AURLTJ2003	Remove, inspect, and refit light vehicle wheel assemblies
<b>Electrical – Technical – Air Conditioning and HVAC</b>	
AURETU2002	Recover vehicle refrigerants
<b>Vehicle Body – Technical</b>	
AURVTA2001	Prepare vehicle, components and equipment for customer use
<b>Vehicle Body – Technical – Glazing</b>	
AURVTG2001	Repair laminated glass
AURVTG2003	Remove and install butyl sealed windscreens
AURVTG2007	Clean glass surfaces
AURVTG3010	Remove and install movable body glass
AURVTG3011	Install side windows
<b>Vehicle Body – Technical – Tools and Equipment</b>	
AURVTK2001	Use and maintain vehicle body repair hand tools
<b>Vehicle Body – Technical – Body</b>	
AURVTN2004	Remove, replace and realign bolt-on panels, sections and fittings
AURVTN2005	Remove and fit protector mouldings, transfers and decals
AURVTN2009	Clean vehicle engine and engine compartment
AURVTN2010	Clean vehicle underbody
AURVTN2011	Remove and install rear vision mirrors
<b>Vehicle Body – Technical – Paint</b>	
AURVTP2002	Carry out masking procedures
AURVTP2005	Apply rust prevention and sound deadening materials
AURVTT2007	Clean and finish plastic trim and fittings
AURVTP2008	Clean and polish vehicle exterior paint
AURVTP3010	Prepare spray booths and paint drying equipment

AURVTP3013	Prepare substrate for refinishing
AURVTP3019	Prepare and paint plastic components
AURVTP3020	Carry out denibbing, buffing and polishing
AURVTP3021	Restore vehicle exterior paint
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2001	Carry out sewing repairs and alterations
AURVTT2005	Select and apply trim and fabric materials
AURVTT2006	Select and apply trim and fabric adhesives
AURVTT3021	Select and use adhesives
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2007	Conduct oxy-acetylene, thermal heating and cutting

## AUR21012 Certificate II in Motorsport Technology

### Modification History

Release	Comment
Release 1	Replaces AUR21011 Certificate II in Motorsport

## Description

This qualification covers the skills and knowledge required to perform basic mechanical servicing and repairs for motorsport vehicles. It is suitable for entry into the motorsport industry.

### Job roles and employment outcomes

The Certificate II in Motorsport Technology offers training for individuals to perform vehicle servicing in a motorsport environment.

Employment outcomes targeted by this qualification include:

- a junior member or general hand within a race team.

### Application

This qualification is typically used to develop employees or recognise and develop existing workers who are performing vehicle service and repair functions in a motorsport environment. They would be expected to perform a range of mechanical operations involving known routines, methods and procedures and take some accountability for the quality of outcomes. Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship arrangement.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR30912 Certificate III in Motorsport Technology, AUR30612 Certificate III in Light Vehicle Mechanical Technology or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>• understanding and carrying out verbal instructions from supervisors and others</li> <li>• reading and understanding workplace documents</li> <li>• completing written workplace documentation, forms and records</li> <li>• sharing work-related information with other team members</li> <li>• communicating with people from a range of social, cultural and ethnic backgrounds</li> <li>• seeking and acting upon feedback</li> <li>• using industry terminology</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>• contributing positively to the work team environment</li> <li>• working effectively with others in a socially diverse environment</li> <li>• respecting and understanding the views of others</li> <li>• giving and receiving feedback</li> <li>• identifying and describing own role and role of others</li> </ul>
<b>Problem-solving</b>	<ul style="list-style-type: none"> <li>• recognising a problem or a potential problem within a motorsport environment</li> <li>• seeking information and assistance to solve problems outside own area of responsibility</li> <li>• solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>• making adjustments to improve own performance</li> <li>• suggesting ideas for workplace improvement to supervisors and team members</li> <li>• positively adapting to changes in workplace procedures or arrangements</li> <li>• taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• understanding how own job role fits into the wider workplace context</li> <li>• planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>• prioritising activities to achieve required outcomes</li> <li>• planning and organising appropriate equipment and materials</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• following workplace safety requirements and other policies and procedures</li><li>• managing own time</li><li>• completing known delegated tasks on time</li><li>• completing non-routine tasks as requested</li><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• asking for advice and assistance</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• identifying personal strength and weaknesses</li><li>• positively accepting opportunities to learn</li><li>• acting upon feedback to improve work performance</li><li>• asking questions to gain information</li><li>• identifying sources of information to expand knowledge and understanding</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• appropriately selecting and using tools and equipment</li><li>• recognising and reporting faulty equipment</li><li>• using information and communication technology</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **16 units** of competency, consisting of:

- **8 core units** listed below
- plus
- **8 elective units**, of which:
  - up to **8** elective units may be chosen from the elective units listed below
  - up to **3** elective units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

## AUR21112 Certificate II in Automotive Sales

### Modification History

Release	Comment
Release 1	Replaces AUR21105 Certificate II in Automotive Sales

### Description

This qualification covers the skills and knowledge required to perform sales-related tasks in the automotive retail, service or repair industry.

#### Job roles and employment outcomes

The Certificate II in Automotive Sales prepares new employees or recognises and develops existing workers who are performing general sales and marketing functions in an automotive retail, service or repair business.

Job roles related to this qualification include:

- service station attendant or salesperson
- bicycle salesperson
- outdoor equipment salesperson
- sales assistant.

#### Application

This qualification is suitable for an Australian traineeship pathway.

#### Additional qualification advice

The Certificate II in Automotive Sales may be attained as a generic qualification, or when a particular occupational outcome is required. Advice is provided in the qualification on the recommended units of competency for specialisation areas.

## **Pathways Information**

### **Pathways into the qualification**

Credit will be granted towards this qualification to those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### **Pathways from the qualification**

Further training pathways from this qualification include AUR31012 Certificate III in Automotive Sales or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills required by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Communication</b>	<ul style="list-style-type: none"> <li>gathering, conveying and receiving verbal and written information</li> <li>listening and understanding workplace instructions</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>working with colleagues and supervisors to contribute to organisational goals</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>solving routine problems related to hazards in the workplace, while under direct supervision</li> <li>checking own work to ensure errors are minimal and work flow is maintained</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>raising workplace health and safety (WHS) issues with the WHS officer</li> <li>recognising and responding to circumstances outside of personal competence</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work schedule to ensure tasks are completed on time</li> <li>setting, monitoring and satisfying personal work goals</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>behaving in ways that contribute to an effective and safe work environment</li> <li>identifying own roles and responsibilities</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>listening to ideas and opinions of other members of the team</li> <li>following safety procedures</li> </ul>
<b>Technology</b>	<ul style="list-style-type: none"> <li>operating a range of tools and equipment or specific machinery</li> </ul>

## Packaging Rules

### Packaging Rules

To be awarded this qualification, competency must be demonstrated in **12 units** of competency, consisting of:

- **6 core units**

plus

- **3 specialist elective units** in **one** of the selected specialist groups relating to occupational streams

plus

- **3 general elective units**, of which:
  - up to **3** elective units may be chosen from the elective units listed below
  - up to **3** elective units may be chosen from a Certificate II qualification or above in this training package or another endorsed training package or accredited course, provided that the units chosen contribute to the vocational outcome of the qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2002	Present stock and sales area
AURSCA2006	Promote products and services
<b>Sales and Parts, Administration and Management – Regulatory or Legal</b>	
AURSLA2001	Apply legal requirements relating to product sales
<b>Imported Units</b>	
SIRXRSK001A	Minimise theft

### Specialist elective units

#### Group A: Service Station Sales and Service

Unit code	Unit title
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2005	Sell products
<b>Imported Units</b>	
SIRXCCS201	Apply point-of-sale handling procedures
SIRXINV002A	Maintain and order stock
SIRXMER201	Merchandise products
SIRXWHS302	Maintain store safety
TLIA2020A	Replenish stock

**Group B: Bicycle Sales**

Unit code	Unit title
<b>Common – Management, Leadership and Supervision</b>	
AURAMA2001	Work effectively with others
<b>Bicycle – Technical</b>	
AURBTA2004	Assemble box bicycles for retail sale
<b>Bicycle – Technical – Accessories</b>	
AURBTV2001	Fit and adjust bicycle accessories
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2005	Sell products
<b>Imported Units</b>	
SIRXINV002A	Maintain and order stock
SIRXMER201	Merchandise products
SIRXWHS302	Maintain store safety

**Group C: Outdoor Power Equipment Sales**

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA3003	Build customer relations
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2003	Apply sales procedures
<b>Imported Units</b>	
SIRXICT001A	Operate retail technology
SIRXINV001A	Perform stock control procedures
TLIA2013A	Receive goods

**General elective units**

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA3003	Build customer relations
<b>Common – Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common – Foundation Skills</b>	
AURAF2001	Use numbers in an automotive workplace
AURAF2002	Read in an automotive workplace
AURAF2003	Communicate effectively in an automotive workplace
AURAF2004	Solve routine problems in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA3004	Maintain business image

Unit code	Unit title
<b>Common – Quality</b>	
AURAQA2001	Contribute to quality work outcomes
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2003	Apply sales procedures
AURSCA2004	Carry out cash, credit and funds transfers
<b>Imported Units</b>	
BSBITU305A	Conduct online transactions
ICAWEB201A	Use social media tools for collaboration and engagement
SIRXCCS201	Apply point-of-sale handling procedures
SIRXFIN201	Balance and secure point-of-sale terminal

## AUR21212 Certificate II in Automotive Underbody Technology

### Modification History

Release	Comment
Release 1	Replaces AUR20705 Certificate II in Automotive Mechanical

## Description

This qualification covers the skills and knowledge required to perform a range of tasks related to servicing underbody system components of cars and heavy vehicles within an automotive service and repair business.

### Job roles and employment outcomes

The Certificate II in Automotive Underbody Technology is intended to prepare new employees or recognise and develop existing workers who are performing servicing of underbody systems of vehicles in an automotive service or repair business.

Job roles related to this qualification include:

- automotive vehicle serviceperson

### Application

This qualification is typically used to develop employees or recognise and develop existing workers who are performing vehicle service functions in an automotive environment.

They would be expected to perform a range of mechanical operations involving known routines, methods and procedures and take some accountability for the quality of outcomes. This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR30612 Certificate III in Light Vehicle Mechanical Technology, AUR32512 Certificate III in Automotive Underbody Technology or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>Understanding and carrying out verbal instructions from supervisors and others</li> <li>Reading, understanding and completing workplace documentation, forms and records</li> <li>Sharing work-related information with other team members using industry terminology</li> <li>Communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>Contributing positively to the work team environment</li> <li>Working effectively with others in a socially diverse environment</li> <li>Respecting and understanding the views of others</li> <li>Giving, receiving and acting upon feedback</li> <li>Identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>Recognising a problem or a potential problem within a vehicle component/system servicing environment</li> <li>Seeking information and assistance to solve problems outside own area of responsibility</li> <li>Solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>Suggesting ideas for workplace improvement to supervisors and team members</li> <li>Positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>Taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>Planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>Prioritising activities to achieve required outcomes</li> <li>Planning and organising appropriate equipment and materials</li> <li>Planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>Following workplace safety requirements and other policies and procedures</li> <li>Completing known delegated tasks on time</li> <li>Selecting and using appropriate equipment, materials, processes</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	and procedures <ul style="list-style-type: none"><li>• Asking for advice and assistance when appropriate</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• Identifying personal strengths and weaknesses</li><li>• Acting upon feedback and accepting opportunities to learn to improve work performance</li><li>• Asking questions to gain information and identify sources of information to expand knowledge and understanding</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• Appropriately selecting and using tools and equipment</li><li>• Recognising and reporting faulty equipment</li><li>• Using information and communication technology</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **14 units of competency, consisting of:**

- **8 core units**

plus

- **6 elective units**, of which
  - up to **6** elective units may be chosen from the elective units listed below
  - up to **3** elective units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **14 units** of competency, consisting of:

- **8 core units**

plus

- **6 elective units**, of which:

- up to **6** elective units may be chosen from the elective units listed below
- up to **3** elective units may be chosen from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Common – Technical</b>	
AURATA2001	Identify basic automotive faults using troubleshooting processes
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>	
AURTTTC2001	Inspect and service cooling systems
AURTTTC2002	Carry out radiator repairs
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Mechanical Miscellaneous – Technical – Welding, Grinding, Machining and Soldering</b>	
AURTTW2001	Carry out soft soldering techniques
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW3006	Carry out thermoplastic welding procedures

**Elective units**

<b>Unit code</b>	<b>Unit title</b>
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common – Foundation Skills</b>	
AURAF2001	Use numbers in an automotive workplace
AURAF2002	Read in an automotive workplace
AURAF2003	Communicate effectively in an automotive workplace
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
<b>Electrical – Technical – Air Conditioning and HVAC</b>	
AURETU2002	Recover vehicle refrigerants
AURETU2003	Service air conditioning and HVAC systems
AURETU3004	Diagnose and repair air conditioning and HVAC systems
AURETU3005	Retrofit and modify air conditioning and HVAC systems
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA2004	Carry out servicing operations
AURTTA2009	Carry out pre-repair operations (mechanical)
<b>Mechanical Miscellaneous – Technical – Engines</b>	
AURTTE2004	Inspect and service engines
<b>Vehicle Body – Technical - Welding, Grinding, Machining and Soldering</b>	
AURVTW2004	Carry out gas tungsten arc welding procedures
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

## AUR21512 Certificate II in Automotive Cylinder Head Reconditioning

### Modification History

Release	Comment
Release 1	Replaces AUR20705 Certificate II in Automotive Mechanical

## Description

This qualification covers the skills and knowledge required to perform a range of tasks related to servicing and repairing engine cylinder heads of cars and heavy vehicles within an automotive service and repair business.

### Job roles and employment outcomes

The Certificate II in Automotive Cylinder Head Reconditioning is intended to prepare new employees or recognise and develop existing workers who are performing servicing and repair of cylinder heads of vehicles in an automotive service or repair business.

Job roles related to this qualification include:

- automotive engine cylinder head repair specialists
- automotive engine reconditioners

### Application

This qualification is typically used to develop employees or recognise and develop existing workers who are performing vehicle service and repair functions in an automotive environment.

They would be expected to perform a range of mechanical operations involving known routines, methods and procedures and take some accountability for the quality of outcomes. This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR31312 Certificate III in Automotive Engine Reconditioning, AUR30612 Certificate III in Light Vehicle Mechanical Technology or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>Understanding and carrying out verbal instructions from supervisors and others</li> <li>Reading, understanding and completing workplace documentation, forms and records</li> <li>Sharing work-related information with other team members using industry terminology</li> <li>Communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>Contributing positively to the work team environment</li> <li>Working effectively with others in a socially diverse environment</li> <li>Respecting and understanding the views of others</li> <li>Giving, receiving and acting upon feedback</li> <li>Identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>Recognising a problem or a potential problem within a vehicle component/system servicing environment</li> <li>Seeking information and assistance to solve problems outside own area of responsibility</li> <li>Solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>Suggesting ideas for workplace improvement to supervisors and team members</li> <li>Positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>Taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>Planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>Prioritising activities to achieve required outcomes</li> <li>Planning and organising appropriate equipment and materials</li> <li>Planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>Following workplace safety requirements and other policies and procedures</li> <li>Completing known delegated tasks on time</li> <li>Selecting and using appropriate equipment, materials, processes</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

## AUR21913 Certificate II in Automotive Tyre Servicing Technology

### Modification History

Release	Comment
Release 1	Replaces AUR21912 Certificate II in Automotive Tyre Servicing
Release 2	Updated imported elective units: RIICOM201D replaces RIICOM201A RIIWHS201D replaces RIIOHS201A RIIWHS204D replaces RIIOHS204A RIIQUA201D replaces RIIQUA201A RIIRIS201D replaces RIIRIS201B

### Description

This qualification covers the skills and knowledge required to perform a range of tasks related to servicing tyres of motorcycles, light vehicles, heavy vehicles, agricultural vehicles, earthmoving and off-the-road vehicles in an automotive service and repair business. *Job roles and employment outcomes*

The Certificate II in Automotive Tyre Servicing Technology prepares new employees or recognises and develops existing workers who service the following vehicle tyres in an automotive service or repair business:

- light vehicles
- heavy vehicles
- agricultural equipment.

Job roles related to this qualification include:

- automotive tyre fitter and repairer

## Pathways Information

### *Pathways into the qualification*

Credit will be granted towards this qualification to those who have completed AUR10112 Certificate I in Automotive Vocational Preparation or other relevant qualifications.

### *Pathways from the qualification*

Further training pathways from this qualification include AUR30612 Certificate III in Light Vehicle Mechanical Technology, AUR32512 Certificate III in Automotive Underbody Technology and AUR32613 Certificate III in Automotive Tyre Management, or other relevant qualifications

## Licensing/Regulatory Information

### *Licensing considerations*

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive body repair industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working in a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems that need priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise them</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive body repair industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none"><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice and operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

### Packaging Rules

To be awarded this qualification, competency must be demonstrated in **14 units of competency, consisting of:**

- **4 core units**
- **10 elective units**, of which:
  - all units must be chosen in one of the specialist elective unit Groups A to D below, which relate to occupational streams
  - of the remaining units required to make up the elective unit total:
    - up to 7 units may be from the specialised elective or general elective units listed below
    - up to 3 units may be from a Certificate I qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Common – Technical</b>	
AURATA2001	Identify basic automotive faults using troubleshooting processes
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment

### Elective units

Unit code	Unit title
<b>Specialist Elective Units</b>	
<b>Group A: Light Vehicle Tyres</b>	
<b>Mechanical - Light Vehicle – Technical – Wheels and Tyres</b>	
AURLTJ2001	Select tyres and rims for specific applications (light)

Unit code	Unit title
AURLTJ2002	Remove, inspect, repair and fit tyres and tubes (light)
AURLTJ2003	Remove, inspect and refit light vehicle wheel assemblies
<b>Group B: Heavy Vehicle Tyres</b>	
<b>Mechanical - Heavy Vehicle – Technical – Wheels and Tyres</b>	
AURHTJ2002	Select heavy vehicle tyres and rims for specific applications
AURHTJ2003	Remove, inspect and refit heavy vehicle wheel assemblies
AURHTJ2006	Remove, inspect, repair and fit tyres and tubes (heavy)
<b>Group C: Agricultural Tyres</b>	
<b>Mechanical - Heavy Vehicle – Technical – Wheels and Tyres</b>	
AURHTJ2002	Select heavy vehicle tyres and rims for specific applications
AURHTJ2003	Remove, inspect and refit heavy vehicle wheel assemblies
AURHTJ2004	Demount, inspect, repair and mount agricultural equipment tyres and tubes
<b>Group D: Earthmoving and Off-the-Road Tyres</b>	
<b>Mechanical – Mobile Plant – Technical – Wheels and Tyres</b>	
AURKTJ001	Remove, inspect and fit earthmoving and off-the-road tyres
AURKTJ002	Remove, inspect and fit earthmoving and off-the-road wheel and rim assemblies
AURKTJ005	Select earthmoving and off-the-road tyres, wheels and rim assemblies for specific applications
AURKTJ006	Use earthmoving and off-the-road tyre handlers
<b>General Elective Units</b>	
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common – Foundation Skills</b>	

Unit code	Unit title
AURAF2001	Use numbers in an automotive workplace
AURAF2002	Read in an automotive workplace
AURAF2003	Communicate effectively in an automotive workplace
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2015	Inspect and service batteries
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA2004	Carry out servicing operations
<b>Mechanical Miscellaneous – Technical – Brakes</b>	
AURTTB2001	Inspect and service braking systems
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>	
AURTTTC2001	Inspect and service cooling systems
<b>Mechanical Miscellaneous – Technical – Steering and Suspension</b>	
AURTTD2002	Inspect and service steering systems
AURTTD2004	Inspect and service suspension systems
<b>Mechanical Miscellaneous – Technical – Engines</b>	
AURTTE2004	Inspect and service engines
<b>Mechanical Miscellaneous – Technical – Fuel Systems</b>	
AURTTF2001	Service petrol fuel systems
<b>Mechanical Miscellaneous – Technical – Wheels and Tyres</b>	
AURTTJ2001	Balance wheels and tyres
AURTTJ2002	Remove and refit wheel hubs and associated brake components
<b>Mechanical – Mobile Plant – Technical – Wheels and Tyres</b>	
AURKTJ003	Perform minor repairs to earthmoving and off-the-road tyres
<b>Imported Units</b>	

Unit code	Unit title
RIICOM201D	Communicate in the workplace
RIIQUA201D	Maintain and monitor site quality standards
RIIRIS201D	Conduct local risk control
RIIWHS201D	Work safely and follow WHS policies and procedures
RIIWHS204D	Work safely at heights
TLID3011A	Conduct specialised forklift operations
TLILIC2001A	Licence to operate a forklift truck

## AUR30112 Certificate III in Automotive Administration

### Modification History

Release	Comment
Release 1	Replaces AUR30105 Certificate III in Automotive Administration

## Description

### Job roles and employment outcomes

The Certificate III in Automotive Administration is intended to prepare new employees or recognise and develop existing workers who are performing as administrators in the automotive industry.

Job roles related to this qualification include:

- office administration
- sales administration
- warehousing and distribution administration
- bicycle administration
- marine administration
- outdoor power equipment administration
- motorsport administration
- vehicle servicing administration
- vehicle repair administration

### Application

This qualification is suitable for an Australian traineeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR20112 Certificate II in Automotive Administration or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40112 Certificate IV in Automotive Management or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

## AUR30312 Certificate III in Automotive Electrical Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30308 Certificate III in Automotive Electrical Technology

### Description

This qualification covers the skills and knowledge required to service, diagnose and repair electrical systems and components in vehicles in the automotive electrical service and repair industry.

#### Job roles and employment outcomes

The Certificate III in Automotive Electrical Technology prepares new employees or recognises and develops existing workers who service, diagnose and repair vehicle electrical and electronic systems and components.

Job roles related to this qualification include:

- automotive electrician
- automotive electrical technician
- automotive electrical diagnostic technician.

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

### Pathways Information

#### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20412 Certificate II in Automotive Electrical Technology in this Training Package or other relevant qualifications.

#### Pathways from the qualification

Further training pathways from this qualification include AUR40612 Certificate IV in Automotive Electrical Technology or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive, service and repair industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information and ideas with workplace colleagues, including using automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

	<ul style="list-style-type: none"><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice and operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• applying and operating electrical and electronic diagnostic test equipment effectively</li><li>• performance testing components, systems and equipment</li><li>• using a range of workplace tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• applying digital literacy skills when fault finding vehicle systems and components</li><li>• using business technology to collect, analyse and provide information in both written and verbal formats</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **32 units** of competency, consisting of:

- **20 core units**
- plus
- **12 elective units**, of which:
  - up to **12** elective units may be chosen from the elective units listed below
  - up to **6** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical – Technical – Tools and Equipment</b>	
AURETK2002	Use and maintain automotive electrical test equipment
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2006	Carry out soldering of electrical wiring and circuits
AURETR2007	Demonstrate knowledge of automotive electrical circuits and wiring systems
AURETR2009	Install, test and repair vehicle lighting and wiring systems
AURETR2010	Fabricate, test and repair wiring harnesses and looms
AURETR2012	Test and repair basic electrical circuits
AURETR2035	Demonstrate knowledge of petrol and diesel engine operation
AURETR3023	Diagnose and repair electronic spark ignition engine management systems
AURETR3024	Diagnose and repair electronic compression ignition engine management systems
AURETR3025	Test, charge and replace batteries

Unit code	Unit title
AURETR3027	Install ancillary electronic control unit systems and components
AURETR3028	Diagnose and repair instruments and warning systems
AURETR3029	Diagnose and repair charging systems
AURETR3030	Diagnose and repair starting systems
AURETR3031	Diagnose and repair ignition systems
AURETR3032	Repair electrical systems
AURETR3043	Service and repair electronic body management systems
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA3018	Carry out diagnostic procedures

**Elective units**

Unit code	Unit title	Prerequisite
<b>Common – Foundation Skills</b>		
AURFA2003	Communicate effectively in an automotive workplace	
<b>Common – Tools and Equipment</b>		
AURAKA3002	Adapt work processes to new technologies	
<b>Common – Management, Leadership and Supervision</b>		
AURAMA2001	Work effectively with others	
AURAMA2002	Communicate business information	
<b>Common – Quality</b>		
AURAQA3002	Inspect technical quality of work	
AURAQA3003	Maintain quality systems	
<b>Common – Technical</b>		
AURATA3004	Provide technical guidance	

Unit code	Unit title	Prerequisite
AURATA3005	Estimate complex jobs	
<b>Electrical – Technical – Brakes</b>		
AURETB3001	Repair electric braking systems	
<b>Electrical – Technical – Hybrid Vehicle and Battery Electric Vehicle</b>		
AURETH3001	Depower battery electric vehicles	
AURETH3002	Service and maintain battery electric vehicles	AURETH3001
<b>Electrical – Technical – Electrical and Electronic</b>		
AURETR2005	Install, test and repair electrical security systems and components	
AURETR2008	Remove and replace electrical units and assemblies	
AURETR2011	Install and test basic ancillary electrical components	
AURETR2013	Inspect and service charging systems	
AURETR2014	Inspect and service starting systems	
AURETR2015	Inspect and service batteries	
AURETR2016	Read and apply vehicle wiring schematics and drawings	
AURETR2042	Remove, refit and test electrical componentry for operation following body repair activities	
AURETR3017	Overhaul charging system alternators	
AURETR3018	Overhaul starting motors	
AURETR3019	Inspect, service and repair AC electric motor drive systems	
AURETR3021	Inspect, service and repair electronic management, monitoring and tracking systems	
AURETR3022	Diagnose and repair vehicle dynamic control systems	
AURETR3026	Remove, replace and program electrical and electronic units and assemblies	

Unit code	Unit title	Prerequisite
AURETR3036	Service and repair electronically controlled suspension systems	
AURETR3044	Service and repair electronic drive management systems	
<b>Electrical – Technical – Air Conditioning and HVAC</b>		
AURETU2001	Install air conditioning systems	
AURETU2002	Recover vehicle refrigerants	
AURETU2003	Service air conditioning and HVAC systems	
AURETU3004	Diagnose and repair air conditioning and HVAC systems	
AURETU3005	Retrofit and modify air conditioning and HVAC systems	
AURETU4007	Overhaul air conditioning system components	
<b>Mechanical – Heavy Vehicle – Technical – Emission and Exhaust</b>		
AURHTZ3001	Diagnose and repair heavy vehicle emission control systems	
<b>Mechanical – Light Vehicle – Technical – Brakes</b>		
AURLTB3003	Diagnose and repair light vehicle hydraulic braking systems	
<b>Mechanical – Light Vehicle – Technical – Steering and Suspension</b>		
AURLTD3004	Repair steering systems (light vehicle)	
AURLTD3005	Repair suspension systems (light vehicle)	
<b>Mechanical – Light Vehicle – Technical – Engines</b>		
AURLTE2001	Remove and install light vehicle engine assemblies	
AURLTE3002	Repair engines and associated engine components (light vehicle)	
<b>Mechanical – Light Vehicle – Technical – Fuel Systems</b>		
AURLTF3001	Diagnose and repair mechanical fuel injection systems	
<b>Outdoor Power Equipment – Technical – Electrical and Electronic</b>		

Unit code	Unit title	Prerequisite
AURPTR2002	Test and service outdoor electric powered equipment	
<b>Marine – Technical – Engines</b>		
AURRTE3005	Diagnose and repair marine electrical systems and components	
<b>Marine – Technical – Electrical and Electronic</b>		
AURRTR3002	Install marine electronic systems and components	
AURRTR3003	Test, diagnose and repair marine electronic systems and components	
AURRTR3004	Install marine electrical systems and components	
<b>Mechanical Miscellaneous – Technical</b>		
AURTTA2004	Carry out servicing operations	
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives	
AURTTA3017	Carry out vehicle safety and roadworthy inspections	
AURTTA3019	Carry out advanced diagnostic procedures	
AURTTA4021	Carry out diagnosis of complex system faults	
<b>Mechanical Miscellaneous – Technical – Brakes</b>		
AURTTB2001	Inspect and service braking systems	
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>		
AURTTC3003	Diagnose and repair cooling systems	
<b>Mechanical Miscellaneous – Technical – Engines</b>		
AURTTE2004	Inspect and service engines	
<b>Mechanical Miscellaneous – Technical – Fuel Systems</b>		
AURTTF2001	Service petrol fuel systems	
AURTTF3004	Repair diesel fuel injection systems	

Unit code	Unit title	Prerequisite
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>		
AURTTK2002	Use and maintain workplace tools and equipment	
<b>Mechanical Miscellaneous – Technical – Alternative Fuels</b>		
AURTTL3010	Install LPG, CNG and LNG electrical control equipment	
<b>Mechanical Miscellaneous – Technical – Welding, Grinding, Machining and Soldering</b>		
AURTTW2001	Carry out soft soldering techniques	
<b>Mechanical Miscellaneous – Technical – Emission and Exhaust</b>		
AURTTZ2002	Repair exhaust system components	
<b>Vehicle Body – Technical</b>		
AURVTA3002	Remove and replace supplementary restraint systems	
AURVTA3004	Inspect vehicle systems and determine preferred repair action	
<b>Vehicle Body – Technical – Trimming and Upholstery</b>		
AURVTT2003	Remove and replace vehicle interior trim components	
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>		
AURVTW2001	Carry out manual metal arc welding procedures	
AURVTW2002	Carry out brazing procedures	
AURVTW2003	Carry out gas metal arc welding procedures	
AURVTW2004	Carry out gas tungsten arc welding procedures	
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures	
<b>Imported Units</b>		
BSBINN301A	Promote innovation in a team environment	
BSBWHS301A	Maintain workplace safety	
TAEDEL301A	Provide work skill instruction

## AUR30412 Certificate III in Agricultural Mechanical Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30405 Certificate III in Automotive Mechanical Technology

## Description

This qualification covers the skills and knowledge required to perform a broad range of tasks on a variety of agricultural vehicles.

### Job roles and employment outcomes

The Certificate III in Agricultural Mechanical Technology is intended to prepare new employees or recognise and develop existing workers performing mechanical work in the agricultural vehicle and equipment service and repair sector.

Employment outcomes targeted by this qualification include:

- agricultural mechanical technicians

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR20712 Certificate II in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describe own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and take action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing of components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **36 units** of competency, comprising of:

- **24 core units**

plus

- **12 elective units**, of which:

- up to **12** elective units may be chosen from the elective units listed below
- up to **6** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common - Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common - Foundation Skills</b>	
AURAF2003	Communicate effectively in an automotive workplace
<b>Common - Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
AURETR3025	Test, charge and replace batteries
AURETR3029	Diagnose and repair charging systems
AURETR3030	Diagnose and repair starting systems
<b>Mechanical - Heavy Vehicle - Technical - Steering and Suspension</b>	
AURHTD3002	Repair steering systems (heavy vehicle)

Unit code	Unit title
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>	
AURHTE3002	Repair engines and associated engine components (heavy vehicle)
<b>Mechanical - Heavy Vehicle - Technical - Driveline and Final Drives</b>	
AURHTQ3002	Repair final drive assemblies (heavy vehicle)
AURHTQ3003	Repair final drive - driveline (heavy vehicle)
<b>Mechanical - Mobile Plant- Technical - Brakes</b>	
AURKTB3001	Diagnose and repair mobile plant braking systems
<b>Mechanical - Mobile Plant- Technical - Transmission</b>	
AURKTX3001	Diagnose and repair powershift transmissions
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA2004	Carry out servicing operations
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA3013	Repair hydraulic systems
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous - Technical - Brakes</b>	
AURTTB2001	Inspect and service braking systems
<b>Mechanical Miscellaneous - Technical - Cooling Systems</b>	
AURTTC3003	Diagnose and repair cooling systems
<b>Mechanical Miscellaneous - Technical - Engines</b>	
AURTTE2004	Inspect and service engines
<b>Mechanical Miscellaneous - Technical - Fuel Systems</b>	
AURTTF2002	Service diesel fuel injection systems
AURTTF3004	Repair diesel fuel injection systems
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	

Unit code	Unit title
AURTTK2002	Use and maintain workplace tools and equipment

**Elective units**

Unit code	Unit title
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR3024	Diagnose and repair electronic compression ignition engine management systems
<b>Electrical - Technical - Air conditioning and HVAC</b>	
AURETU2003	Service air conditioning and HVAC systems
AURETU3004	Diagnose and repair air conditioning and HVAC systems
AURETU3005	Retrofit and modify air conditioning and HVAC systems
<b>Mechanical - Heavy Vehicle - Technical - Steering and Suspension</b>	
AURHTD3003	Repair suspension systems (heavy vehicle)
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>	
AURHTE2001	Remove and install heavy vehicle engine assemblies
<b>Mechanical - Heavy Vehicle - Technical - Wheels and Tyres</b>	
AURHTJ2003	Remove, inspect and refit heavy vehicle wheel assemblies
<b>Mechanical - Heavy Vehicle - Technical - Transmission</b>	
AURHTX3001	Repair transmissions - manual (heavy vehicle)
AURHTX3004	Diagnose and repair heavy vehicle clutch systems
<b>Mechanical - Heavy Vehicle - Technical - Emission and Exhaust</b>	
AURHTZ3001	Diagnose and repair heavy vehicle emission control systems
<b>Mechanical - Mobile Plant- Technical</b>	
AURKTA3001	Synchronise plant and equipment

Unit code	Unit title
AURKTA3002	Inspect, service and repair harvesting equipment
AURKTA3003	Inspect, service and repair crop planting and seeding equipment
AURKTA3004	Inspect, service and repair spraying and spreading equipment
AURKTA3005	Inspect, service and repair tracked type drive and support systems
<b>Mechanical - Mobile Plant- Technical - Driveline and Final Drives</b>	
AURKTQ3001	Diagnose and repair mobile plant final drive assemblies
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA2006	Service hydraulic systems
AURTTA2007	Inspect, service and repair pneumatic systems
AURTTA3011	Install hydraulic systems to specified applications
AURTTA3012	Manufacture and install fluid power hose assemblies
AURTTA3014	Assemble and install pneumatic systems and components
<b>Mechanical Miscellaneous - Technical - Brakes</b>	
AURTTB2004	Inspect and service air braking systems
<b>Mechanical Miscellaneous - Technical - Steering and Suspension</b>	
AURTTD2002	Inspect and service steering systems
AURTTD2004	Inspect and service suspension systems
<b>Mechanical Miscellaneous - Technical -Fuel Systems</b>	
AURTTF3005	Inspect and repair engine forced induction systems
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	
AURTTK2001	Use and maintain measuring equipment in an automotive workplace
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>	
AURTTQ2001	Service final drive assemblies
AURTTQ2003	Service final drive (driveline)

Unit code	Unit title
<b>Mechanical Miscellaneous - Technical - Transmission</b>	
AURTTX2002	Inspect and service transmissions (manual)
AURTTX2004	Service transmissions (hydrostatic)
AURTTX3006	Repair transmissions (hydrostatic)
<b>Mechanical Miscellaneous - Technical - Emission and Exhaust</b>	
AURTTZ2002	Repair exhaust system components
<b>Vehicle Body - Technical - Welding, Grinding, Machining and Soldering</b>	
AURVTW2001	Carry out manual metal arc welding procedures
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2004	Carry out gas tungsten arc welding procedures
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

<b>Mechanical – Light Vehicle – Technical – Transmission</b>		
AURLTX3001	Repair transmissions – manual (light vehicle)	
AURLTX3002	Repair transmissions – automatic (light vehicle)	
AURLTX3003	Diagnose and repair light vehicle clutch systems	
<b>Mechanical Miscellaneous – Technical</b>		
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives	
AURTTA2009	Carry out pre-repair operations (mechanical)	
AURTTA3017	Carry out vehicle safety and roadworthy inspections	
AURTTA3019	Carry out advanced diagnostic procedures	

Unit code	Unit title	Prerequisites
<b>Mechanical Miscellaneous – Technical – Brakes</b>		
AURTTB2003	Machine brake drums and brake disc rotors	
AURTTB3005	Assemble and fit braking systems and components	
AURTTB3006	Inspect, service and repair auxiliary braking systems	
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>		
AURTTC2001	Inspect and service cooling systems	
<b>Mechanical Miscellaneous – Technical – Steering and Suspension</b>		
AURTTD2002	Inspect and service steering systems	
AURTTD2004	Inspect and service suspension systems	
<b>Mechanical Miscellaneous – Technical – Fuel Systems</b>		
AURTTF2002	Service diesel fuel injection systems	
AURTTF3004	Repair diesel fuel injection systems	
AURTTF3005	Inspect and repair engine forced induction systems	
AURTTF3006	Diagnose and repair petrol carburettor systems	
<b>Mechanical Miscellaneous – Technical – Wheels and Tyres</b>		
AURTTJ2001	Balance wheels and tyres	
<b>Mechanical Miscellaneous – Technical – Measuring Equipment</b>		
AURTTK2001	Use and maintain measuring equipment in an automotive workplace	
<b>Mechanical Miscellaneous – Technical – Alternative Fuels</b>		
AURTTL3007	Service LPG fuel systems	
AURTTL3008	Diagnose and repair LPG fuel systems	
<b>Mechanical Miscellaneous – Technical – Driveline and Final Drives</b>		
AURTTQ2001	Service final drive assemblies	

Unit code	Unit title	Prerequisites
AURTTQ2003	Service final drive (driveline)	
<b>Mechanical Miscellaneous – Technical – Welding, Grinding, Machining and Soldering</b>		
AURTTW2001	Carry out soft soldering techniques	
<b>Mechanical Miscellaneous – Technical – Transmission</b>		
AURTTX2002	Inspect and service transmissions (manual)	
AURTTX2003	Inspect and service transmissions (automatic)	
<b>Mechanical Miscellaneous – Technical – Emission and Exhaust</b>		
AURTTZ2002	Repair exhaust system components	
<b>Vehicle Body – Technical</b>		
AURVTA3004	Inspect vehicle systems and determine preferred repair action	
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>		
AURVTW2001	Carry out manual metal arc welding procedures	
AURVTW2002	Carry out brazing procedures	
AURVTW2003	Carry out gas metal arc welding procedures	
AURVTW2004	Carry out gas tungsten arc welding procedures	
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

## AUR30713 Certificate III in Outdoor Power Equipment Technology

### Modification History

Not applicable.

### Description

This qualification covers the skills and knowledge required to perform a range of service and repair tasks on outdoor power equipment. It is suitable for entry into the outdoor power equipment mechanical service and repair industry.

#### ***Job roles and employment outcomes***

The Certificate III in Outdoor Power Equipment Technology prepares new employees, and develops existing workers, to perform service and repair roles in the outdoor power equipment mechanical service and repair industry.

Job roles related to this qualification include:

- outdoor power equipment technicians
- repair technicians.

The work may also include tasks related to operating a business and/or supervising others.

#### ***Application***

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### *Pathways into the qualification*

Credit will be granted towards this qualification to those who have completed AUR20812 Certificate II in Outdoor Power Equipment Technology in this Training Package, or other relevant qualifications.

### *Pathways from the qualification*

Further training pathways from this qualification include AUR40112 Certificate IV in Automotive Management, AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling, and other relevant qualifications.

## Licensing/Regulatory Information

### *Licensing considerations*

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the outdoor power equipment industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification
<b>Communication</b>	<ul style="list-style-type: none"><li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li><li>completing workplace reports</li><li>using and contributing to workplace procedures</li><li>maintaining workplace records</li><li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li><li>communicating with people who speak languages other than English and in a cross-cultural context</li></ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the outdoor power equipment industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification
	<ul style="list-style-type: none"> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working in a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking appropriate action</li> <li>determining problems that need priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance, as required, to solve problems</li> <li>using a range of problem-solving techniques</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise them</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> <li>recognising limitations and seeking timely advice</li> <li>planning own work requirements, setting own work program, and managing time to ensure tasks are completed on time</li> <li>following workplace documentation, such as codes of practice and operating procedures</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>asking questions to gain information</li> <li>identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li> <li>participating in self-improvement activities</li> <li>participating in development of workplace continuous</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the outdoor power equipment industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification
	improvement strategies • helping others develop competency
<b>Technology</b>	• operating and adjusting outdoor power equipment components, systems and equipment • setting up equipment and work area • selecting and using appropriate tools, equipment and materials • operating diagnostic and test equipment • applying knowledge of operating principles of components and systems • using business technology to collect, analyse and provide information

**Packaging Rules****Packaging Rules**

**To be awarded this qualification, competency must be demonstrated in 36 units of competency, consisting of:**

- **15 core units**
- **21 elective units**, of which:
- **up to 21 units may be chosen from the elective units listed below**
- **up to 6 units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.**

**Core units**

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common - Health and Safety</b>	

Unit code	Unit title
AURASA2002	Apply safe working practices in an automotive workplace
<b>Outdoor Power Equipment - Technical</b>	
AURPTA2003	Service and repair rotary cutting systems
AURPTA2005	Service and repair chainsaw cutting systems
AURPTA2006	Service line trimming systems and components
AURPTA2007	Service and repair post-boring systems
AURPTA2008	Service and repair post-hole digging systems
AURPTA2009	Service and repair reciprocating cutting systems
AURPTA2010	Service pumping systems
AURPTA3011	Repair pumping systems
<b>Outdoor Power Equipment - Technical - Engines</b>	
AURPTE2002	Service engines and engine components (outdoor power equipment)
AURPTE3003	Repair engines and engine components (outdoor power equipment)
AURPTE4004	Overhaul engines and engine components (outdoor power equipment)
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>

## AUR30812 Certificate III in Motorcycle Mechanical Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30405 Certificate III in Automotive Mechanical Technology

## Description

This qualification covers the skills and knowledge required to perform a broad range of tasks on a variety of motorcycles within the automotive service and repair industry.

### Job roles and employment outcomes

The Certificate III in Motorcycle Mechanical Technology prepares new employees or recognises and develops existing workers performing mechanical work in the automotive motorcycle service and repair industry.

Job roles related to this qualification include:

- automotive motorcycle repair technician.

### Application

This qualification is suitable for an Australian apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR20712 Certificate II in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

## AUR30912 Certificate III in Motorsport Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30911 Certificate III in Motorsport
Release 2	Prerequisites updated for AURMKA4001 Two new units added to elective bank: AURLTX3003 AURTTF3005

## Description

This qualification covers the skills and knowledge required to service and repair the mechanical parts, transmission and suspension systems of vehicles within the motorsport sector. It is suitable for entry into the automotive motorsport service and repair sector.

### Job roles and employment outcomes

The Certificate III in Motorsport Technology offers training to service and repair the mechanical components of motorsport vehicles, and to operate sustainably and safely within a motorsport environment.

Employment outcomes targeted by this qualification include:

- a number three mechanic within a V8 Supercar team
- a vehicle service and repair technician within a motorsport race team
- service/pit crew race team member
- an opportunity to branch into different roles within a race team which may include data technician, engine technician, driveline technician, machinist, fabricator or promotional activities.

### Application

This qualification is typically used to develop employees or recognise and develop existing workers who are performing mechanical technology service and repair tasks in the motorsport sector of the automotive industry.

They would be expected to perform a range of skilled operations involving known routines, methods and procedures and take some accountability for the quality of outcomes. Some complex and non-routine activities involving individual responsibility or autonomy and/or collaboration with others may be expected.

Training programs for this qualification are suitable to be undertaken as part of a formal training contract with an employer under an Australian Traineeship arrangement.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR21012 Certificate II in Motorsport Technology, or other relevant qualifications. Credit for this qualification may also include units contained within relevant skill sets.

### Pathways from the qualification

Further training pathways from this qualification include AUR40312 Certificate IV in Motorsport Technology, or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills for this qualification as identified by the motorsport industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information to others (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>communicating ideas and information with workplace colleagues</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions, and responding to requests for information</li> <li>communicating with people who speak languages other than English and in a cross cultural context</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>

<b>Electrical - Technical - Electrical and Electronic</b>		
AURETR3023	Diagnose and repair electronic spark ignition engine management systems	
<b>Mechanical - Light Vehicle - Technical - Steering and Suspension</b>		
AURLTD3006	Carry out wheel alignment operations (light vehicle)	
<b>Motorsport - Support and Logistics</b>		
AURMBA3002	Load and unload a competition vehicle and support equipment	
<b>Motorsport - Officiating</b>		
AURMDA2002	Assist with motorsport officiating duties	
<b>Motorsport - Management, Leadership and Supervision</b>		
AURMMA2001	Operate in a motorsport environment	
AURMMA3007	Follow motorsport event and team safety requirements	
AURMMA3008	Coordinate operations of a motorsport team	

Unit code	Unit title	Prerequisites
<b>Motorsport - Technical</b>		
AURMTA3002	Assemble and prepare a competition vehicle	AURLTD3006 AURMTA3006 AURMTA3007
AURMTA3004	Perform competition vehicle preparation procedures at an event	AURMTA3002
AURMTA3005	Perform pit lane and service area operations	
AURMTA3006	Perform torquing and fastening	
AURMTA3007	Conduct non-destructive testing	
AURMTA3009	Collect and log motorsport data	
<b>Motorsport - Technical - Fabrication</b>		
AURMTS3001	Construct hose and pipe assemblies for competition vehicles	
<b>Mechanical Miscellaneous - Technical</b>		
AURTTA3018	Carry out diagnostic procedures	
<b>Mechanical Miscellaneous - Technical - Brakes</b>		
AURTTB2001	Inspect and service braking systems	
<b>Mechanical Miscellaneous - Technical - Steering and Suspension</b>		
AURTTD2004	Inspect and service suspension systems	
<b>Mechanical Miscellaneous - Technical - Engines</b>		
AURTTE2004	Inspect and service engines	
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>		
AURTTQ2003	Service final drive (driveline)	
<b>Mechanical Miscellaneous - Technical - Transmission</b>		
AURTTX2002	Inspect and service transmissions (manual)	

**Elective units**

Unit code	Unit title	Prerequisites
<b>Common - Health and Safety</b>		
AURASA2002	Apply safe working practices in an automotive workplace	
<b>Common - Technical</b>		
AURATA2002	Read and interpret engineering drawings	
AURATA2003	Produce drawings from design concepts	
<b>Electrical - Technical - Steering and Suspension</b>		
AURETD3001	Service and repair electronically controlled steering systems	
<b>Electrical - Technical - Electrical and Electronic</b>		
AURETR2006	Carry out soldering of electrical wiring and circuits	
AURETR2010	Fabricate, test and repair wiring harnesses and looms	
AURETR2012	Test and repair basic electrical circuits	
AURETR3017	Overhaul charging system alternators	
AURETR3018	Overhaul starting motors	
AURETR3020	Repair electronic systems	
AURETR3022	Diagnose and repair vehicle dynamic control systems	
AURETR3024	Diagnose and repair electronic compression ignition engine management systems	
AURETR3025	Test, charge and replace batteries	
AURETR3026	Remove, replace and program electrical and electronic units and assemblies	
AURETR3028	Diagnose and repair instruments and warning systems	
AURETR3029	Diagnose and repair charging systems	
AURETR3030	Diagnose and repair starting systems	

Unit code	Unit title	Prerequisites
AURETR3031	Diagnose and repair ignition systems	
AURETR3032	Repair electrical systems	
AURETR3036	Service and repair electronically controlled suspension systems	
AURETR3043	Service and repair electronic body management systems	
AURETR3044	Service and repair electronic drive management systems	
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>		
AURHTE3002	Repair engines and associated engine components (heavy vehicle)	
<b>Mechanical - Heavy Vehicle - Technical - Transmission</b>		
AURHTX3004	Diagnose and repair heavy vehicle clutch systems	
<b>Mechanical - Motorcycle - Technical - Steering and Suspension</b>		
AURJTD3003	Diagnose and repair motorcycle suspension systems	
AURJTD3004	Diagnose and repair motorcycle steering systems	
<b>Mechanical - Motorcycle - Technical - Chassis and Frame</b>		
AURJTY3001	Repair and align motorcycle frames	
<b>Mechanical - Light Vehicle - Technical - Brakes</b>		
AURLTB3003	Diagnose and repair light vehicle hydraulic braking systems	
AURLTB4001	Overhaul braking system components (light)	
<b>Mechanical - Light Vehicle - Technical - Steering and Suspension</b>		
AURLTD3004	Repair steering systems (light vehicle)	
AURLTD3005	Repair suspension systems (light vehicle)	
<b>Mechanical - Light Vehicle - Technical - Engines</b>		
AURLTE3002	Repair engines and associated engine components (light vehicle)	

Unit code	Unit title	Prerequisites
<b>Mechanical - Light Vehicle - Technical – Fuel Systems</b>		
AURLTF3001	Diagnose and repair mechanical fuel injection systems	
<b>Mechanical - Light Vehicle - Technical - Wheels and Tyres</b>		
AURLTJ2001	Select tyres and rims for specific applications (light)	
AURLTJ2002	Remove, inspect, repair and fit tyres and tubes (light)	
AURLTJ2003	Remove, inspect and refit light vehicle wheel assemblies	
<b>Mechanical - Light Vehicle - Technical - Driveline and Final Drives</b>		
AURLTQ3001	Repair final drive assemblies (light vehicle)	
AURLTQ3002	Repair final drive - driveline (light vehicle)	
<b>Mechanical - Light Vehicle - Technical - Transmission</b>		
AURLTX3001	Repair transmissions - manual (light vehicle)	
AURLTX3002	Repair transmissions - automatic (light vehicle)	
AURLTX3003	Diagnose and repair light vehicle clutch systems	
<b>Motorsport – Support and Logistics</b>		
AURMBA2001	Transport a light competition vehicle and support equipment	
<b>Motorsport - Officiating</b>		
AURMDA2001	Develop and update motorsport industry knowledge	
AURMDA3004	Recover a motorsport vehicle	
AURMDA3005	Act as a marshal in a motorsport event	
AURMDA3006	Communicate using flags and signals in a motorsport event	
AURMDA3007	Act as a steward in a motorsport event	
<b>Motorsport</b>

## AUR31012 Certificate III in Automotive Sales

### Modification History

Release	Comment
Release 1	Replaces AUR31005 Certificate III in Automotive Sales
Release 2	BSBSLS402A superseded by BSBSLS407A BSBSLS403A superseded by BSBSLS408A Units removed from Specialist Elective Units: BSBSLS404A BSBSLS405A

## Description

This qualification covers the skills and knowledge required to perform sales-related tasks in the automotive retail, service or repair industry.

### Job roles and employment outcomes

The Certificate III in Automotive Sales prepares new employees or recognises and develops existing workers who are performing general sales and marketing functions in an automotive retail, service or repair business.

Job roles related to this qualification include:

- parts interpreter
- vehicle salesperson
- farm machinery salesperson
- motorcycle salesperson.

### Application

This qualification is suitable for an Australian traineeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR21112 Certificate II in Automotive Sales in this Training Package or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40112 Certificate IV in Automotive Management or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills for this qualification as identified by the automotive industry. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information to others, including use of automotive terms</li> <li>collecting, analysing and organising information</li> <li>completing workplace reports</li> <li>communicating ideas and information to workplace colleagues</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>communicating with people who speak languages other than English and in a cross-cultural context</li> <li>interpreting needs of internal and external clients</li> <li>reading and interpreting workplace-related documentation</li> <li>writing to audience needs</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working in a team to provide office administration services</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> <li>rectifying discrepancies or errors in documentation and transactions</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>

## EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills for this qualification as identified by the automotive industry. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• prioritising actions to achieve required outcomes</li> <li>• planning own work requirements</li> <li>• identifying tasks to achieve team goals</li> <li>• allocating resources to workplace tasks and requirements</li> <li>• collecting, analysing and organising workplace data</li> <li>• identifying risk factors and taking action to minimise risk</li> <li>• organising meeting schedules for clients and colleagues and negotiating alternative arrangements</li> <li>• planning for contingencies</li> <li>• planning information and documentation requirements</li> <li>• using and determining required resources</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• selecting and using appropriate equipment, materials, processes and procedures</li> <li>• recognising limitations and seeking timely advice</li> <li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li> <li>• following workplace documentation, such as codes of practice and operating procedures</li> <li>• projecting a professional image when representing the organisation</li> <li>• taking personal responsibility at the appropriate level</li> <li>• working ethically when dealing with financial transactions</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>• asking questions to gain information</li> <li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li> <li>• participating in self-improvement activities</li> <li>• participating in development of workplace continuous improvement strategies</li> <li>• helping others develop competency</li> </ul>
<b>Technology</b>	<ul style="list-style-type: none"> <li>• selecting and using appropriate equipment and materials</li> <li>• using business technology, such as software programs for word processing, spreadsheets, presentations and scheduling</li> </ul>

## Packaging Rules

To be awarded this qualification, competency must be achieved in **20 units** of competency, consisting of:

- **10 core units**

plus

- **6 specialist elective units** in **one** of the selected specialist groups relating to occupational streams

plus

- **4 general elective units**, of which:
  - up to **4** elective units may be chosen from the elective units listed below
  - up to **4** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common – Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common – Foundation Skills</b>	
AURAF2004	Solve routine problems in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA3004	Maintain business image
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Sales and Parts, Administration and Management – Administration</b>	
AURSAA2001	Process customer complaints
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	

Unit code	Unit title
AURSCA2005	Sell products
AURSCA2006	Promote products and services
<b>Sales and Parts, Administration and Management – Regulatory or Legal</b>	
AURSLA2001	Apply legal requirements relating to product sales
<b>Imported Units</b>	
BSBITU305A	Conduct online transactions

### Specialist elective units

#### Group A: Parts Interpreting

Unit code	Unit title
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR3025	Test, charge and replace batteries
<b>Sales and Parts, Administration and Management – Support and Logistics</b>	
AURSBA2001	Carry out warehousing procedures
AURSBA3002	Apply automotive parts interpretation process
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2001	Select automotive parts and products
<b>Imported Units</b>	
BSBPRO401A	Develop product knowledge
BSBWOR204A	Use business technology
SIRXINV002A	Maintain and order stock
SIRXMER201	Merchandise products
TLIA2012A	Pick and process orders

#### Group B: Vehicle, Farm Machinery and Motorcycles Sales

Unit code	Unit title
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	
AURSCA2002	Present stock and sales area
AURSCA2003	Apply sales procedures
AURSCA3007	Determine used motor vehicle stock requirements
AURSCA3008	Wholesale used motor vehicle stock
AURSCA3009	Provide vehicle technology information
<b>Imported Units</b>	
BSBSLS407A	Identify and plan sales prospects
BSBSLS408A	Present, secure and support sales solutions

**General elective units**

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA3003	Build customer relations
<b>Common – Foundation Skills</b>	
AURAF2001	Use numbers in an automotive workplace
AURAF2002	Read in an automotive workplace
AURAF2003	Communicate effectively in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA2002	Communicate business information
AURAMA3003	Conduct information sessions
<b>Common – Quality</b>	
AURAQA2001	Contribute to quality work outcomes
<b>Sales and Parts, Administration and Management – Sales and Marketing</b>	

Unit code	Unit title
AURSCA2001	Select automotive parts and products
AURSCA2002	Present stock and sales area
AURSCA2004	Carry out cash, credit and funds transfers
AURSCA3007	Determine used motor vehicle stock requirements
AURSCA3008	Wholesale used motor vehicle stock
<b>Sales and Parts, Administration and Management – Sales and Marketing – Paint</b>	
AURSCP2001	Provide information to customers on automotive refinishing products
<b>Imported Units</b>	
BSBFIA301A	Maintain financial records
SIRXCCS201	Apply point-of-sale handling procedures
SIRXFIN201	Balance and secure point-of-sale terminal
SIRXICT001A	Operate retail technology
SIRXINV001A	Perform stock control procedures
SIRXMER303	Coordinate merchandise presentation
TAEDEL301A	Provide work skill instruction
TLIA2012A	Pick and process orders
TLIA2020A	Replenish stock

## Custom Content Section

## AUR31212 Certificate III in Mobile Plant Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30405 Certificate III in Automotive Mechanical Technology

### Description

This qualification covers the skills and knowledge required to perform a broad range of tasks on a variety of mobile plant vehicles in the automotive service and repair industry. It is suitable for entry into the mining, construction and agricultural environment.

#### Job roles and employment outcomes

The Certificate III in Mobile Plant Technology prepares new employees or recognises and develops existing workers performing mechanical work in the automotive heavy vehicle service and repair sector.

Job roles related to this qualification include:

- mobile plant technician
- diesel fitter.

#### Application definitely

This qualification is suitable for an Australian apprenticeship pathway.

### Pathways Information

#### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR20712 Certificate II in Automotive Vocational Preparation or other relevant qualifications.

#### Pathways from the qualification

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **36 units** of competency, consisting of:

- **22 core units**

plus

- **14 elective units**, of which:

- up to **14** elective units may be chosen from the elective units listed below
- up to **6** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
AURETR3024	Diagnose and repair electronic compression ignition engine management systems
AURETR3025	Test, charge and replace batteries
AURETR3029	Diagnose and repair charging systems
AURETR3030	Diagnose and repair starting systems
<b>Mechanical – Heavy Vehicle – Technical – Engines</b>	
AURHTE3002	Repair engines and associated engine components (heavy vehicle)
<b>Mechanical – Mobile Plant – Technical</b>	
AURKTA3005	Inspect, service and repair tracked type drive and support systems

Unit code	Unit title
<b>Mechanical – Mobile Plant – Technical – Brakes</b>	
AURKTB3001	Diagnose and repair mobile plant braking systems
<b>Mechanical – Mobile Plant – Technical – Steering and Suspension</b>	
AURKTD3002	Diagnose and repair mobile plant steering systems
<b>Mechanical – Mobile Plant – Technical – Driveline and Final Drives</b>	
AURKTQ3001	Diagnose and repair mobile plant final drive assemblies
<b>Mechanical – Mobile Plant – Technical – Transmission</b>	
AURKTX3001	Diagnose and repair powershift transmissions
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA2004	Carry out servicing operations
AURTTA2006	Service hydraulic systems
AURTTA3013	Repair hydraulic systems
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>	
AURTTC3003	Diagnose and repair cooling systems
<b>Mechanical Miscellaneous – Technical – Fuel Systems</b>	
AURTTF3004	Repair diesel fuel injection systems
AURTTF3005	Inspect and repair engine forced induction systems
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Mechanical Miscellaneous – Technical – Transmission</b>	
AURTTX3006	Repair transmissions (hydrostatic)

### Elective units

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common – Foundation Skills</b>	
AURAF2003	Communicate effectively in an automotive workplace
<b>Common – Technical</b>	
AURATA2002	Read and interpret engineering drawings
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR3032	Repair electrical systems
<b>Electrical – Technical – Air Conditioning and HVAC</b>	
AURETU2003	Service air conditioning and HVAC systems
AURETU3004	Diagnose and repair air conditioning and HVAC systems
AURETU3005	Retrofit and modify air conditioning and HVAC systems
<b>Mechanical – Heavy Vehicle – Technical – Brakes</b>	
AURHTB3001	Repair air braking systems
<b>Mechanical – Heavy Vehicle – Technical – Engines</b>	
AURHTE2001	Remove and install heavy vehicle engine assemblies
<b>Mechanical – Heavy Vehicle – Technical – Wheels and Tyres</b>	
AURHTJ2006	Remove, inspect, repair and fit tyres and tubes (heavy)
<b>Mechanical – Heavy Vehicle – Technical – Driveline and Final Drives</b>	
AURHTQ3003	Repair final drive – driveline (heavy vehicle)
<b>Mechanical – Heavy Vehicle – Technical – Transmission</b>	
AURHTX3002	Inspect, test and replace transmissions - automatic (heavy vehicle)
AURHTX3004	Diagnose and repair heavy vehicle clutch systems
<b>Mechanical – Heavy Vehicle – Technical – Emission and Exhaust</b>	

Unit code	Unit title
AURHTZ3001	Diagnose and repair heavy vehicle emission control systems
<b>Mechanical – Mobile Plant – Technical</b>	
AURKTA3001	Synchronise plant and equipment
<b>Mechanical – Mobile Plant – Technical – Steering and Suspension</b>	
AURKTD3001	Diagnose and repair mobile plant suspension systems
<b>Mechanical – Mobile Plant – Technical – Electrical and Electronic</b>	
AURKTR3001	Diagnose and repair electric-over-hydraulic control systems
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA2007	Inspect, service and repair pneumatic systems
AURTTA3011	Install hydraulic systems to specified applications
AURTTA3012	Manufacture and install fluid power hose assemblies
AURTTA3014	Assemble and install pneumatic systems and components
<b>Mechanical Miscellaneous – Technical – Brakes</b>	
AURTTB2001	Inspect and service braking systems
AURTTB2004	Inspect and service air braking systems
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>	
AURTTC2001	Inspect and service cooling systems
<b>Mechanical Miscellaneous – Technical – Steering and Suspension</b>	
AURTTD2002	Inspect and service steering systems
AURTTD2004	Inspect and service suspension systems
<b>Mechanical Miscellaneous – Technical – Engines</b>	
AURTTE2004	Inspect and service engines
AURTTE4005	Overhaul engines and associated engine components

Unit code	Unit title
<b>Mechanical Miscellaneous – Technical – Fuel Systems</b>	
AURTTTF2002	Service diesel fuel injection systems
AURTTTF4003	Overhaul diesel fuel injection systems
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2001	Use and maintain measuring equipment in an automotive workplace
<b>Mechanical Miscellaneous – Technical – Driveline and Final Drives</b>	
AURTTQ2001	Service final drive assemblies
AURTTQ2003	Service final drive (driveline)
<b>Mechanical Miscellaneous – Technical – Transmission</b>	
AURTTX2002	Inspect and service transmissions (manual)
AURTTX2003	Inspect and service transmissions (automatic)
AURTTX2004	Service transmissions (hydrostatic)
<b>Mechanical Miscellaneous – Technical – Emission and Exhaust</b>	
AURTTZ2002	Repair exhaust system components
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2001	Carry out manual metal arc welding procedures
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2004	Carry out gas tungsten arc welding procedures
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

## AUR31312 Certificate III in Automotive Engine Reconditioning

### Modification History

Release	Comment
Release 1	Replaces AUR31311 Certificate III in Automotive Engine Reconditioning Unit codes updated to meet policy requirements

## Description

This qualification covers the skills and knowledge required to recondition engines in the automotive service and repair sector. It is suitable for entry into the automotive specialist service and repair sector.

### Job roles and employment outcomes

The Certificate III in Automotive Engine Reconditioning is intended to prepare new employees or recognise and develop existing workers who recondition engines.

Job roles related to this qualification include:

- automotive engine reconditioners.

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR21512 Certificate II in Automotive Cylinder Head Reconditioning or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40112 Certificate IV in Automotive Management or other relevant qualifications.

## Licensing/Regulatory Information

Some jurisdictions may require this qualification for licensing purposes. In addition some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and taking action to resolve it</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> <li>undertaking numerical operations, calculations and using formulae (including addition, subtraction, multiplication, division, fractions and decimals, percentages and proportions, simple ratios and averages)</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **28 units** of competency, consisting of:

- **13 core units**

plus

- **15 elective units**, of which:

- up to **15** elective units may be chosen from the elective units listed below
- up to **5** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common- Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common - Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Motorsport - Technical</b>	
AURMTA3007	Conduct non-destructive testing
<b>Miscellaneous Mechanical - Technical - Engines</b>	
AURTTE3001	Apply knowledge of engine science
<b>Miscellaneous Mechanical - Technical - Tools and Equipment</b>	
AURTTK2001	Use and maintain measuring equipment in an automotive workplace
AURTTK2002	Use and maintain workplace tools and equipment
<b>Miscellaneous Mechanical - Technical - Manufacture</b>	
AURTTM3002	Repair bearing tunnels and connecting rods in engines
AURTTM3004	Assemble engine blocks and sub-assemblies
AURTTM3007	Carry out grinding operations

Unit code	Unit title
AURTTM3008	Dismantle and evaluate engine blocks and sub-assemblies
AURTTM3009	Fit sleeves and bore and hone engine cylinders
AURTTM3011	Recondition engine cylinder heads
<b>Miscellaneous Mechanical - Technical - Welding, Grinding, Machining and Soldering</b>	
AURTTW3003	Carry out machining operations

**Elective units**

Unit code	Unit title
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>	
AURHTE3002	Repair engines and associated engine components (heavy vehicle)
<b>Mechanical -Light Vehicle -Technical -Engines</b>	
AURLTE2001	Remove and install light vehicle engine assemblies
AURLTE3002	Repair engines and associated engine components (light vehicle)
<b>Miscellaneous Mechanical -Technical</b>	
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA2009	Carry out pre-repair operations (mechanical)
AURTTA3018	Carry out diagnostic procedures
<b>Miscellaneous Mechanical – Technical -Fuel Systems</b>	
AURTTF3005	Inspect and repair engine forced induction systems
<b>Miscellaneous Mechanical -Technical - Manufacture</b>	
AURTTM3001	Operate and monitor computer numerical control machines
AURTTM3003	Apply metal to rebuild engine components
AURTTM3005	Balance rotating and reciprocating engine components
AURTTM3006	Perform advanced machining and blueprinting of engine components

Unit code	Unit title
AURTTM3010	Heat treat, straighten and reclaim engine components
<b>Miscellaneous Mechanical -Technical - Welding, Grinding, Machining and Soldering</b>	
AURTTW3002	Set, operate and monitor specialist machines
<b>Vehicle Body -Technical - Welding, Grinding, Machining and Soldering</b>	
AURVTW2001	Carry out manual metal arc welding procedures
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2004	Carry out gas tungsten arc welding procedures
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

## AUR31412 Certificate III in Automotive Diesel Fuel Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30611 Certificate III in Automotive Specialist

## Description

This qualification covers the skills and knowledge required to repair diesel fuel systems within the automotive service and repair sector.

### Job roles and employment outcomes

The Certificate III in Automotive Diesel Fuel Technology is intended to prepare new employees or recognise and develop existing workers performing mechanical work in the automotive heavy vehicle service and repair sector.

Employment outcomes targeted by this qualification include:

- automotive heavy vehicle diesel fuel technicians

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR20712 Certificate II in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing of components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **25 units** of competency, consisting of:

- **11 core units**

plus

**all specialist elective units** in **one** of the selected specialist groups relating to occupational streams

plus

- **10-12** general elective units to bring the **total** number of units to **25**, of which:
  - **10-12** elective units may be chosen from the elective units listed below;
  - up to **5** elective units may be chosen from a Certificate II qualification or above in this Training Package, another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common - Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
AURETR3025	Test, charge and replace batteries
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>	
AURTTQ2001	Service final drive assemblies

Unit code	Unit title
AURTTQ2002	Remove and refit driveline components
AURTTQ2003	Service final drive (driveline)
<b>Mechanical Miscellaneous - Technical - Transmission</b>	
AURTTX2002	Inspect and service transmissions (manual)
AURTTX2003	Inspect and service transmissions (automatic)

**Group A: Elective units - Light Vehicle Automatic Drivelines**

Unit code	Unit title
<b>Electrical - Technical - Driveline and Final Drives</b>	
AURETR3044	Service and repair electronic drive management systems
<b>Mechanical - Light Vehicle - Technical - Transmission</b>	
AURLTX3002	Repair transmissions – automatic (light vehicle)
<b>Mechanical Miscellaneous - Technical - Transmission</b>	
AURTTX4009	Overhaul transmissions (automatic)

**Group B: Elective units – Heavy Vehicle Automatic Drivelines**

Unit code	Unit title
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR3044	Service and repair electronic drive management systems
<b>Mechanical - Heavy Vehicle - Technical - Transmission</b>	
AURHTX3003	Repair transmissions - automatic (heavy vehicle)

**Group C: Elective units - Light Vehicle Manual Drivelines**

Unit code	Unit title
-----------	------------

Unit code	Unit title
<b>Mechanical - Light Vehicle - Technical - Driveline and Final Drives</b>	
AURLTQ3001	Repair final drive assemblies (light vehicle)
AURLTQ3002	Repair final drive – driveline (light vehicle)
<b>Mechanical - Light Vehicle – Technical - Transmission</b>	
AURLTX3001	Repair transmissions - manual (light vehicle)
<b>Mechanical Miscellaneous – Technical - Transmission</b>	
AURTTX4008	Overhaul transmissions (manual)

**Group D: Elective units – Heavy Vehicle Manual Drivelines**

Unit code	Unit title
<b>Mechanical - Heavy Vehicle - Technical - Driveline and Final Drives</b>	
AURHTQ3002	Repair final drive assemblies (heavy vehicle)
AURHTQ3003	Repair final drive – driveline (heavy vehicle)
<b>Mechanical - Heavy Vehicle – Technical - Transmission</b>	
AURHTX3001	Repair transmissions – manual (heavy vehicle)
<b>Mechanical Miscellaneous – Technical - Transmission</b>	
AURTTX4008	Overhaul transmissions (manual)

**General elective units**

Unit Code	Unit Title
<b>Mechanical - Heavy Vehicle - Technical - Transmission</b>	
AURHTX3004	Diagnose and repair heavy vehicle clutch systems
<b>Mechanical - Mobile Plant - Technical - Driveline and Final Drives</b>	
AURKTQ3001	Diagnose and repair mobile plant final drive assemblies

Unit Code	Unit Title
<b>Mechanical - Mobile Plant - Technical - Transmission</b>	
AURKTX3001	Diagnose and repair powershift transmissions
<b>Mechanical - Light Vehicle - Technical - Transmission</b>	
AURLTX3003	Diagnose and repair light vehicle clutch systems
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>	
AURTTQ4004	Overhaul final drive assemblies
<b>Mechanical Miscellaneous - Technical - Transmission</b>	
AURTTX3006	Repair transmissions (hydrostatic)
AURTTX4007	Overhaul clutch assemblies
AURTTX4011	Overhaul torque converters

## AUR31712 Certificate III in Forklift Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30611 Certificate III in Automotive Specialist

### Description

This qualification covers the skills and knowledge required to perform a broad range of tasks on a variety of forklift systems in the automotive service and repair industry.

#### Job roles and employment outcomes

The Certificate III in Forklift Technology prepares new employees or recognises and develops existing workers performing mechanical work in the automotive forklift service and repair industry.

Job roles related to this qualification include:

- automotive forklift repair technician
- automotive forklift mechanic.

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

## **Pathways Information**

### **Pathways into the qualification**

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR20712 Certificate II in Automotive Vocational Preparation or other relevant qualifications.

### **Pathways from the qualification**

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information and ideas with workplace colleagues, including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **28 units** of competency, consisting of:

- **18 core units**

plus

- **10 elective units**, of which:
  - up to **10** elective units may be chosen from the elective units listed below
  - up to **5** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
AURETR3025	Test, charge and replace batteries
AURETR3029	Diagnose and repair charging systems
AURETR3030	Diagnose and repair starting systems
<b>Mechanical – Heavy Vehicle – Technical – Brakes</b>	
AURHTB3002	Diagnose and repair heavy vehicle hydraulic braking systems
<b>Mechanical – Heavy Vehicle – Technical – Steering and Suspension</b>	
AURHTD3002	Repair steering systems (heavy vehicle)
<b>Mechanical – Lifting Equipment – Technical</b>	
AURNTA3001	Inspect, service and repair lift truck mast assemblies

Unit code	Unit title
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA2004	Carry out servicing operations
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA2006	Service hydraulic systems
AURTTA3013	Repair hydraulic systems
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous – Technical – Brakes</b>	
AURTTB2001	Inspect and service braking systems
<b>Mechanical Miscellaneous – Technical – Cooling Systems</b>	
AURTTC3003	Diagnose and repair cooling systems
<b>Mechanical Miscellaneous – Technical – Engines</b>	
AURTTE2004	Inspect and service engines
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment

**Elective units**

Unit code	Unit title	Prerequisites
<b>Common – Sales and Marketing</b>		
AURACA2001	Establish relations with customers	
<b>Common – Foundation Skills</b>		
AURAF2003	Communicate effectively in an automotive workplace	
<b>Electrical – Technical – Hybrid Vehicle and Battery Electric Vehicle</b>		
AURETH3001	Depower battery electric vehicles	
AURETH3002	Service and maintain battery electric vehicles	AURETH3001

Unit code	Unit title	Prerequisites
<b>Electrical – Technical – Tools and Equipment</b>		
AURETK2002	Use and maintain automotive electrical test equipment	
<b>Electrical – Technical – Electrical and Electronic</b>		
AURETR2007	Demonstrate knowledge of automotive electrical circuits and wiring systems	
AURETR2010	Fabricate, test and repair wiring harnesses and looms	
AURETR2011	Install and test basic ancillary electrical components	
AURETR3019	Inspect, service and repair AC electric motor drive systems	
AURETR3021	Inspect, service and repair electronic management, monitoring and tracking systems	
AURETR3023	Diagnose and repair electronic spark ignition engine management systems	
AURETR3024	Diagnose and repair electronic compression ignition engine management systems	
AURETR3028	Diagnose and repair instruments and warning systems	
AURETR3031	Diagnose and repair ignition systems	
AURETR3032	Repair electrical systems	
AURETR3044	Service and repair electronic drive management systems	
<b>Electrical – Technical – Air Conditioning and HVAC</b>		
AURETU2003	Service air conditioning and HVAC systems	
AURETU3004	Diagnose and repair air conditioning and HVAC systems	
AURETU3005	Retrofit and modify air conditioning and HVAC systems	
<b>Mechanical – Heavy Vehicle – Technical – Engines</b>		
AURHTE2001	Remove and install heavy vehicle engine assemblies	
AURHTE3002	Repair engines and associated engine components (heavy vehicle)	

Unit code	Unit title	Prerequisites
<b>Mechanical – Heavy Vehicle – Technical – Wheels and Tyres</b>		
AURHTJ2006	Remove, inspect, repair and fit tyres and tubes (heavy)	
<b>Mechanical – Heavy Vehicle – Technical – Driveline and Final Drives</b>		
AURHTQ3002	Repair final drive assemblies (heavy vehicle)	
<b>Mechanical – Heavy Vehicle – Technical – Emission and Exhaust</b>		
AURHTZ3001	Diagnose and repair heavy vehicle emission control systems	
<b>Mechanical – Mobile Plant – Technical – Electrical and Electronic</b>		
AURKTR3001	Diagnose and repair electric-over-hydraulic control systems	
<b>Mechanical – Light Vehicle – Brakes</b>		
AURLTB3003	Diagnose and repair light vehicle hydraulic braking systems	
<b>Mechanical – Light Vehicle – Technical – Steering and Suspension</b>		
AURLTD3004	Repair steering systems (light vehicle)	
AURLTD3005	Repair suspension systems (light vehicle)	
AURLTD3006	Carry out wheel alignment operations (light vehicle)	
<b>Mechanical – Light Vehicle – Technical – Engines</b>		
AURLTE2001	Remove and install light vehicle engine assemblies	
AURLTE3002	Repair engines and associated engine components (light vehicle)	
<b>Mechanical – Light Vehicle – Technical – Wheels and Tyres</b>		
AURLTJ2001	Select tyres and rims for specific applications (light)	
AURLTJ2002	Remove, inspect, repair and fit tyres and tubes (light)	
AURLTJ2003	Remove, inspect, and refit light vehicle wheel assemblies	
<b>Mechanical – Light Vehicle – Technical – Driveline and Final Drives</b>		

Unit code	Unit title	Prerequisites
AURLTQ3001	Repair final drive assemblies (light vehicle)	
<b>Mechanical – Light Vehicle – Technical – Transmission</b>		
AURLTX3002	Repair transmissions – automatic (light vehicle)	
AURLTX3003	Diagnose and repair light vehicle clutch systems	
<b>Mechanical – Light Vehicle – Technical – Emission and Exhaust</b>		
AURLTZ3001	Diagnose and repair light vehicle emission control systems	
<b>Mechanical Miscellaneous – Technical</b>		
AURTTA2009	Carry out pre-repair operations (mechanical)	
AURTTA3011	Install hydraulic systems to specified applications	
AURTTA3012	Manufacture and install fluid power hose assemblies	
AURTTA3017	Carry out vehicle safety and roadworthy inspections	
<b>Mechanical Miscellaneous – Technical – Brakes</b>		
AURTTB2003	Machine brake drums and brake disc rotors	
AURTTB3006	Inspect, service and repair auxiliary braking systems	
<b>Mechanical Miscellaneous – Technical – Steering and Suspension</b>		
AURTTD2002	Inspect and service steering systems	
AURTTD2004	Inspect and service suspension systems	
<b>Mechanical Miscellaneous – Technical – Fuel Systems</b>		
AURTTF2001	Service petrol fuel systems	
AURTTF2002	Service diesel fuel injection systems	
AURTTF3004	Repair diesel fuel injection systems	
AURTTF3005	Inspect and repair engine forced induction systems	
AURTTF3006	Diagnose and repair petrol carburettor systems	

Unit code	Unit title	Prerequisites
<b>Mechanical Miscellaneous – Technical – Wheels and Tyres</b>		
AURTTJ2001	Balance wheels and tyres	
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>		
AURTTK2001	Use and maintain measuring equipment in an automotive workplace	
<b>Mechanical Miscellaneous – Technical – Alternative Fuels</b>		
AURTTL3001	Service CNG fuel systems	
AURTTL3002	Diagnose and repair CNG fuel systems	
AURTTL3007	Service LPG fuel systems	
AURTTL3008	Diagnose and repair LPG fuel systems	
<b>Mechanical Miscellaneous – Technical – Driveline and Final Drives</b>		
AURTTQ2001	Service final drive assemblies	
AURTTQ2003	Service final drive (driveline)	
<b>Mechanical Miscellaneous – Technical – Welding, Grinding, Machining and Soldering</b>		
AURTTW2001	Carry out soft soldering techniques	
<b>Mechanical Miscellaneous – Technical – Transmission</b>		
AURTTX2002	Inspect and service transmissions (manual)	
AURTTX2003	Inspect and service transmissions (automatic)	
AURTTX2004	Service transmissions (hydrostatic)	
AURTTX3006	Repair transmissions (hydrostatic)	
<b>Mechanical Miscellaneous – Technical – Emission and Exhaust</b>		
AURTTZ2002	Repair exhaust system components	
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>		
AURVTW2001	Carry out manual metal arc welding procedures	

Unit code	Unit title	Prerequisites
AURVTW2002	Carry out brazing procedures	
AURVTW2003	Carry out gas metal arc welding procedures	
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures

## AUR31812 Certificate III in Heavy Commercial Trailer Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30611 Certificate III in Automotive Specialist

## Description

This qualification covers the skills and knowledge required to repair trailers and associated systems within the automotive service and repair sector.

### Job roles and employment outcomes

The Certificate III in Heavy Commercial Trailer Technology is intended to prepare new employees or recognise and develop existing workers performing mechanical work in the automotive heavy vehicle service and repair sector.

Employment outcomes targeted by this qualification include:

- heavy commercial trailer technicians

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describe own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and take action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing of components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **32 units** of competency, consisting of:

- **20 core units**

plus

- **12 elective units**, of which:

- up to **12** elective units may be chosen from the elective units listed below
- up to **6** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common - Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
AURETR3025	Test, charge and replace batteries
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>	
AURHTE3002	Repair engines and associated engine components (heavy vehicle)
<b>Mechanical - Heavy Vehicle - Technical - Driveline and Final Drives</b>	
AURHTQ3002	Repair final drive assemblies (heavy vehicle)
AURHTQ3003	Repair final drive - driveline (heavy vehicle)
<b>Mechanical - Light Vehicle - Technical - Brakes</b>	
AURLTB3003	Diagnose and repair light vehicle hydraulic braking systems
<b>Mechanical Miscellaneous - Technical</b>	

Unit code	Unit title
AURTTA2004	Carry out servicing operations
AURTTA2005	Select and use bearings, seals, gaskets, sealants and adhesives
AURTTA2006	Service hydraulic systems
AURTTA3013	Repair hydraulic systems
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous - Technical - Brakes</b>	
AURTTB2001	Inspect and service braking systems
<b>Mechanical Miscellaneous - Technical - Engines</b>	
AURTTE2004	Inspect and service engines
<b>Mechanical Miscellaneous - Technical - Fuel Systems</b>	
AURTTF3004	Repair diesel fuel injection systems
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	
AURTTK2001	Use and maintain measuring equipment in an automotive workplace
AURTTK2002	Use and maintain workplace tools and equipment
<b>Vehicle Body - Technical - Welding, Grinding, Machining and Soldering</b>	
AURVTW2001	Carry out manual metal arc welding procedures
AURVTW2003	Carry out gas metal arc welding procedures

**Elective units**

Unit code	Unit title
<b>Common – Sales and Marketing</b>	
AURACA2001	Establish relations with customers
<b>Common - Foundation Skills</b>	
AURAF2003	Communicate effectively in an automotive workplace

Unit code	Unit title
<b>Electrical - Technical - Hybrid Vehicle and Battery Electric Vehicle</b>	
AURETH3001	Depower battery electric vehicles
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR2005	Install, test and repair electrical security systems and components
AURETR2010	Fabricate, test and repair wiring harnesses and looms
AURETR2011	Install and test basic ancillary electrical components
AURETR3021	Inspect, service and repair electronic management, monitoring and tracking systems
AURETR3024	Diagnose and repair electronic compression ignition engine management systems
AURETR3028	Diagnose and repair instruments and warning systems
AURETR3029	Diagnose and repair charging systems
AURETR3030	Diagnose and repair starting systems
AURETR3031	Diagnose and repair ignition systems
AURETR3032	Repair electrical systems
AURETR3044	Service and repair electronic drive management systems
<b>Mechanical - Heavy Vehicle - Technical - Engines</b>	
AURHTE2001	Remove and install heavy vehicle engine assemblies
<b>Mechanical - Light Vehicle - Technical - Steering and Suspension</b>	
AURLTD3006	Carry out wheel alignment operations (light vehicle)
<b>Mechanical - Light Vehicle - Technical - Engines</b>	
AURLTE2001	Remove and install light vehicle engine assemblies
<b>Mechanical - Light Vehicle - Technical - Wheels and Tyres</b>	
AURLTJ2001	Select tyres and rims for specific applications (light)
AURLTJ2002	Remove, inspect, repair and fit tyres and tubes (light)

Unit code	Unit title
AURLTJ2003	Remove, inspect, and refit light vehicle wheel assemblies
<b>Mechanical - Light Vehicle – Technical - Transmission</b>	
AURLTX3001	Repair transmissions – manual (light vehicle)
AURLTX3002	Repair transmissions – automatic (light vehicle)
AURLTX3003	Diagnose and repair light vehicle clutch systems
<b>Mechanical - Light Vehicle - Technical - Emission and Exhaust</b>	
AURLTZ3001	Diagnose and repair light vehicle emission control systems
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA2009	Carry out pre-repair operations (mechanical)
AURTTA3017	Carry out vehicle safety and roadworthy inspections
AURTTA3019	Carry out advanced diagnostic procedures
<b>Mechanical Miscellaneous – Technical - Brakes</b>	
AURTTB2003	Machine brake drums and brake disc rotors
AURTTB3005	Assemble and fit braking systems and components
AURTTB3006	Inspect, service and repair auxiliary braking systems
<b>Mechanical Miscellaneous - Technical - Cooling System</b>	
AURTTC3003	Diagnose and repair cooling systems
<b>Mechanical Miscellaneous - Technical - Steering and Suspension</b>	
AURTTD2002	Inspect and service steering systems
AURTTD2004	Inspect and service suspension systems
<b>Mechanical Miscellaneous – Technical – Fuel System</b>	
AURTTF2002	Service diesel fuel injection systems
AURTTF3005	Inspect and repair engine forced induction systems
AURTTF3006	Diagnose and repair petrol carburettor systems

Unit code	Unit title
<b>Mechanical Miscellaneous - Technical - Wheels and Tyres</b>	
AURTTJ2001	Balance wheels and tyres
<b>Mechanical Miscellaneous – Technical – Alternative Fuels</b>	
AURTTL3007	Service LPG fuel systems
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>	
AURTTQ2001	Service final drive assemblies
AURTTQ2003	Service final drive (driveline)
<b>Mechanical Miscellaneous - Technical - Welding, Grinding, Machining and Soldering</b>	
AURTTW2001	Carry out soft soldering techniques
<b>Mechanical Miscellaneous - Technical - Transmission</b>	
AURTTX2002	Inspect and service transmissions (manual)
AURTTX2003	Inspect and service transmissions (automatic)
AURTTX2004	Service transmissions (hydrostatic)
AURTTX3006	Repair transmissions (hydrostatic)
<b>Mechanical Miscellaneous - Technical - Emission and Exhaust</b>	
AURTTZ2002	Repair exhaust system components
<b>Vehicle Body - Technical</b>	
AURVTA3004	Inspect vehicle systems and determine preferred repair action
<b>Vehicle Body - Technical - Welding, Grinding, Machining and Soldering</b>	
AURVTW2002	Carry out brazing procedures
AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures
<b>Imported Units</b>	
RIIHAN301D	Operate elevating work platform

## AUR32012 Certificate III in Automotive Alternative Fuel Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30611 Certificate III in Automotive Specialist

## Description

This qualification covers the skills and knowledge required to install and repair alternative fuel systems and associated systems within the automotive service and repair sector.

### Job roles or employment outcomes

The Certificate III in Automotive Alternative Fuel Technology is intended to prepare new employees or recognise and develop existing workers performing mechanical work in the automotive light or heavy vehicle service and repair sector.

Job outcomes targeted by this qualification include:

- automotive light vehicle repair technicians
- automotive heavy vehicle repair technicians

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed AUR20512 Certificate II in Automotive Servicing Technology, AUR20712 Certificate II in Automotive Vocational Preparation or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describe own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and take action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **23 units** of competency, consisting of:

- **11 core units**

plus

- **2 specialist elective units** in **one** of the selected specialist groups relating to occupational streams

plus

- **10 general elective units**, of which:

- up **10** elective units may be chosen from the elective units listed below
- up to **4** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>

## AUR32112 Certificate III in Automotive Body Repair Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30805 Certificate III in Automotive Vehicle Body
Release 2	AUMABA3002 replaced by AUMAGA002 AUMGTY3002 replaced by AUMGTY002
Release 3	Updated imported elective units: RIIWH5204D replaces RIIOHS204A

### Description

This qualification covers the skills and knowledge required to repair and maintain the body of cars, heavy vehicles and other vehicles in the automotive industry.

#### Job roles and employment outcomes

The Certificate III in Automotive Body Repair Technology prepares new employees or recognises and develops existing workers who are repairing, maintaining and re-manufacturing the body of vehicles in the automotive industry.

Job roles related to this qualification include:

- vehicle body repair technician
- vehicle body restoration technician
- heavy vehicle body and chassis repair technician.

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

## **Pathways Information**

### **Pathways into the qualification**

Credit will be granted towards this qualification to those who have completed AUR20912 Certificate II in Automotive Body Repair Technology or other relevant qualifications.

### **Pathways from the qualification**

Further training pathways from this qualification include AUR40712 Certificate IV in Automotive Body Repair Technology or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive body repair industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information and ideas with workplace colleagues, including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **30 units** of competency, consisting of:

- **16 core units**

plus

- **8 specialist elective units** in **one** of the selected specialist groups relating to occupational streams

plus

- **6 general elective units**, of which:
  - up to **6** elective units may be chosen from the elective units listed below
  - up to **5** elective units may be chosen from a Certificate II qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Foundation Skills</b>	
AURFA3008	Read and apply automotive repair instructions
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR3025	Test, charge and replace batteries
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Mechanical Miscellaneous – Technical – Chassis and Frame</b>	
AURTTY3001	Repair chassis, frame and associated components
<b>Vehicle Body – Environment – Body</b>	
AURVEN3002	Monitor environmental and sustainability best practice in the automotive body repair industry
<b>Vehicle Body – Technical – Body</b>	

Unit code	Unit title
AURVTN2003	Carry out pre-repair vehicle body operations
AURVTN2004	Remove, replace and realign bolt-on panels, sections and fittings
AURVTN3016	Repair body panels incorporating filler
AURVTN3020	Replace major welded panels
AURVTN3022	Repair vehicle body misalignment
AURVTN3023	Remove and replace adhesive bonded panels and structures
AURVTN3035	Apply original equipment manufacturer repair procedures
AURVTN4032	Determine vehicle damage and recommended repair procedures
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2007	Conduct oxy-acetylene, thermal heating and cutting

### Specialist elective units

#### Group A: Vehicle Body Repair

Unit code	Unit title
<b>Vehicle Body – Technical</b>	
AURVTA3002	Remove and replace supplementary restraint systems
<b>Vehicle Body – Technical – Body</b>	
AURVTN2002	Carry out panel repairs
AURVTN2005	Remove and fit protector mouldings, transfers and decals
AURVTN3015	Repair body panels using metal finishing techniques
AURVTN3017	Repair body panels and thermoplastic components
AURVTN3018	Repair and replace structural damage by welding
AURVTN3019	Repair and replace structural damage by riveting

Unit code	Unit title
AURVTN3026	Repair aluminium body panels (finishing)
AURVTN3027	Repair aluminium body panels (filling)
AURVTN3028	Identify and repair high strength steel components
AURVTN3029	Set up and operate universal measuring systems
AURVTN3031	Conduct major sectional repairs
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2005	Carry out spot welding procedures

**Group B: Vehicle Body Restoration**

Unit code	Unit title
<b>Mechanical Miscellaneous – Technical – Welding, Grinding, Machining and Soldering</b>	
AURTTW2001	Carry out soft soldering techniques
<b>Vehicle Body – Technical – Body</b>	
AURVTN3015	Repair body panels using metal finishing techniques
AURVTN3021	Repair body components using lead wiping
AURVTN3025	Repair corroded panels and components
<b>Vehicle Body – Technical – Fabrication</b>	
AURVTS2006	Carry out fabrication of components
AURVTS3001	Carry out wood working operations for fabrication
AURVTS3002	Repair plugs, moulds, frames and flooring using wood materials
AURVTS3003	Fabricate composite material components
AURVTS3005	Fabricate vehicle body panels and components
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2004	Carry out gas tungsten arc welding procedures

Unit code	Unit title
<b>Imported Units</b>	
MEM05004C	Perform routine oxy acetylene welding

**Group C: Heavy Vehicle Body and Chassis Repair**

Unit code	Unit title
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA3020	Apply heat-induction processes
<b>Vehicle Body – Technical – Body</b>	
AURVTN3019	Repair and replace structural damage by riveting
AURVTN3026	Repair aluminium body panels (finishing)
AURVTN3029	Set up and operate universal measuring systems
<b>Vehicle Body – Technical – Paint</b>	
AURVTP3013	Prepare substrate for refinishing
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2004	Carry out gas tungsten arc welding procedures
<b>Imported Units</b>	
AUMABA002	Operate load shifting equipment
AUMGTY002	Mount and install assembled components to chassis or frame
MEM24001B	Perform basic penetrant testing
RIIWHS204D	Work safely at heights

**General elective units**

Unit code	Unit title
<b>Common – Foundation Skills</b>	
AURAF2002	Read in an automotive workplace

Unit code	Unit title
AURAF2004	Solve routine problems in an automotive workplace
<b>Common – Management, Leadership and Supervision</b>	
AURAMA2001	Work effectively with others
<b>Electrical – Technical – Hybrid Vehicle and Battery Electric Vehicle</b>	
AURETH3001	Depower battery electric vehicles
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR2042	Remove, refit and test electrical componentry for operation following body repair activities
<b>Vehicle Body – Technical</b>	
AURVTA2001	Prepare vehicle, components and equipment for customer use
<b>Vehicle Body – Technical – Body</b>	
AURVTN2006	Remove and replace mechanical units and assemblies
AURVTN3013	Carry out paint-less dent repairs
<b>Vehicle Body – Technical – Paint</b>	
AURVTP2005	Apply rust prevention and sound deadening materials
<b>Vehicle Body – Technical – Fabrication</b>	
AURVTS3004	Repair fibreglass and composite material components
<b>Vehicle Body – Technical – Trimming and Upholstery</b>	
AURVTT2009	Remove and replace seats and internal fittings
AURVTT3021	Select and use adhesives
<b>Vehicle Body – Technical – Accessories</b>	
AURVTV2001	Remove, replace, fit and test components and accessories
<b>Imported Units</b>	

Unit code	Unit title
MEM18001C	Use hand tools
TAEDEL301A	Provide work skill instruction

Release 3	AUMGTG3001 replaced by AUMGTG001
Release 4	Updated imported units: MSFGG2005 replaces LMFGG2005C MSFGG3001 replaces LMFGG3001C

## Description

This qualification covers the skills and knowledge required to remove, install, repair and manage auto glazing technical operations of cars and other vehicles within the automotive industry.

### Job roles and employment outcomes

The Certificate III in Automotive Glazing Technology is intended to prepare new employees or recognise and develop existing workers who are removing, installing and repairing windscreens and other glass items on vehicles in the automotive industry.

Job roles related to this qualification include:

- automotive glazing technician
- windscreen repair technician

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR20912 Certificate II in Automotive Body Repair Technology or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40712 Certificate IV in Automotive Body Repair Technology or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>explaining the processes used in auto glazing to customers</li> <li>reading and interpreting workplace related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and taking action</li> <li>determining which problems need priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing of components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **30 units** of competency consisting of:

- **18 core units**

plus

- **12 elective units** of which:

- up to **12** elective units may be chosen from the elective units listed below
- up to **5** elective units may be chosen from a Certificate II or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA2002	Apply environmental and sustainability best practice in an automotive workplace
<b>Common - Management, Leadership and Supervision</b>	
AURAMA2001	Work effectively with others
<b>Common - Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Common - Foundation Skills</b>	
AURAF2003	Communicate effectively in an automotive workplace
<b>Common - Sales and Marketing</b>	
AURACA3003	Build customer relations
<b>Mechanical Miscellaneous - Technical - Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Vehicle Body - Technical</b>	
AURVTA2001	Prepare vehicle, components and equipment for customer use
<b>Vehicle Body - Technical - Glazing</b>	
AURVTG2001	Repair laminated glass

Unit code	Unit title
AURVTG2002	Remove and install rubber glazed windscreens
AURVTG2004	Remove and install direct glazed windscreens
AURVTG2007	Clean glass surfaces
AURVTG3009	Remove and install fixed body glass
AURVTG3010	Remove and install movable body glass
AURVTG3012	Remove and install heavy vehicle rubber and urethane glazed windscreens
AURVTG3013	Remove and install large vehicle windscreens
<b>Vehicle Body - Technical – Body</b>	
AURVTN2011	Remove and install rear vision mirrors
<b>Imported Units</b>	
MSFGG2005	Apply basic glass handling
MSFGG3001	Store and handle glass

**Elective units**

Unit code	Unit title
<b>Common - Foundation Skills</b>	
AURAF2002	Read in an automotive workplace
AURAF2004	Solve routine problems in an automotive workplace
<b>Common - Loss Assessment or Repair Quoting - Body</b>	
AURANN4001	Prepare a vehicle repair quotation
<b>Common - Technical</b>	
AURATA3005	Estimate complex jobs
<b>Electrical - Technical - Hybrid Vehicle and Battery Electrical Vehicle</b>	
AURETH3001	Depower battery electric vehicles

Unit code	Unit title
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR3025	Test, charge and replace batteries
<b>Sales and Parts, Administration and Management - Administration</b>	
AURSAA2001	Process customer complaints
<b>Sales and Parts, Administration and Management - Sales and Marketing</b>	
AURSCA2004	Carry out cash, credit and funds transfers
<b>Vehicle Body - Technical - Glazing</b>	
AURVTG2003	Remove and install butyl sealed windscreens
AURVTG2005	Remove and install framed type windscreens
AURVTG3008	Cut and process flat laminated glass
AURVTG3011	Install side windows
<b>Vehicle Body - Technical - Body</b>	
AURVTN3035	Apply original equipment manufacturer repair procedures
<b>Vehicle Body - Technical - Paint</b>	
AURVTP2002	Carry out masking procedures
<b>Vehicle Body - Technical - Trimming and Upholstery</b>	
AURVTT2007	Clean and finish plastic trim and fittings
AURVTT2008	Clean and finish vehicle interior trim and seats
<b>Imported Units</b>	
AUMGTG001	Install fixed and moveable glass components
BSBFLM312C	Contribute to team effectiveness
BSBWHS301A	Maintain workplace safety
BSBWOR301B	Organise personal work priorities and development

Unit code	Unit title
SIRXINV002A	Maintain and order stock
TAEDEL301A	Provide work skill instruction

## AUR32312 Certificate III in Automotive and Marine Trimming Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30805 Certificate III in Automotive Vehicle Body
Release 2	Unit AUMGTS3004 replaced by AUMGTS004
Release 3	Updated imported elective units: MSFUP3001 replaces LMFUP3001B

## Description

This qualification covers the skills and knowledge required in the manufacturing, repair and maintenance of trimming components to a range of motor vehicles, marine craft, recreational, canvas, camping and other vehicles within the automotive industry.

### Job roles and employment outcomes

The Certificate III in Automotive and Marine Trimming Technology will prepare new employees or recognise and develop existing workers who are manufacturing, repairing and maintaining trimming components to a range of motor vehicles, marine, aviation, recreational, canvas, camping and other vehicles within the industry.

Job roles related to this qualification include:

- Motor trimming technician
- Vehicle trimming technician
- Marine trimming technician

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR20912 Certificate II in Automotive Body Repair Technology or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40712 Certificate IV in Automotive Body Repair Technology or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

## AUR32412 Certificate III in Automotive Refinishing Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30805 Certificate III in Automotive Vehicle Body

### Description

This qualification covers the skills and knowledge required to paint, refinish, repair and maintain painted surfaces to a range of automotive vehicles, recreational vehicles and other vehicles within the automotive industry. This qualification may also cover non-automotive which may include industrial machinery and tools.

#### Job roles or employment outcomes

The Certificate III in Automotive Refinishing Technology is intended to prepare new employees or recognise and develop existing workers who are painting and maintaining painted surfaces on a range of vehicles and non-vehicle applications.

Job roles related to this qualification include:

- vehicle refinishing technician
- vehicle refinishing technician, heavy vehicle and industry

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR20912 Certificate II in Automotive Body Repair Technology or other relevant qualifications.

#### Pathways from the qualification

Further training pathways from this qualification include AUR40712 Certificate IV in Automotive Body Repair Technology or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive body repair industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

## AUR32512 Certificate III in Automotive Underbody Technology

### Modification History

Release	Comment
Release 1	Replaces AUR30611 Certificate III in Automotive Specialist

## Description

This qualification covers the skills and knowledge required to perform a broad range of tasks on a variety of underbody systems within the automotive service and repair sector.

### Job roles and employment outcomes

The Certificate III in Automotive Underbody Technology is intended to prepare new employees or recognise and develop existing workers performing mechanical work in the automotive light vehicle service and repair sector.

Job outcomes targeted by this qualification include:

- automotive light vehicle underbody repair technicians.

### Application

This qualification is typically used to develop employees or recognise and develop existing workers who are performing vehicle service and repair functions in an automotive environment.

They would be expected to perform a range of mechanical operations involving known routines, methods and procedures and take some accountability for the quality of outcomes. This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit may be granted towards this qualification by those who have completed:

- AUR21212 Certificate II in Automotive Underbody Technology
- AUR21312 Certificate II in Automotive Braking System Technology
- AUR21612 Certificate II in Automotive Driveline System Technology
- AUR21712 Certificate II in Automotive Exhaust System Technology
- AUR21812 Certificate II in Automotive Steering and Suspension System Technology
- AUR21912 Certificate II in Automotive Tyre Servicing Technology, or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR40212 Certificate IV in Automotive Mechanical Diagnosis, AUR40812 Certificate IV in Automotive Mechanical Overhauling or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Communication</b>	<ul style="list-style-type: none"> <li>• Understanding and carrying out verbal instructions from supervisors and others</li> <li>• Reading, understanding and completing workplace documentation, forms and records</li> <li>• Sharing work-related information with other team members using industry terminology</li> <li>• Communicating with people from a range of social, cultural and ethnic backgrounds</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>• Contributing positively to the work team environment</li> <li>• Working effectively with others in a socially diverse environment</li> <li>• Respecting and understanding the views of others</li> <li>• Giving, receiving and acting upon feedback</li> <li>• Identifying and describing own role and role of others</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>• Recognising a problem or a potential problem within a vehicle component/system servicing environment</li> <li>• Seeking information and assistance to solve problems outside own area of responsibility</li> <li>• Solving problems within own area of responsibility</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>• Suggesting ideas for workplace improvement to supervisors and team members</li> <li>• Positively adapting to changes in workplace procedures and making adjustments to improve own performance</li> <li>• Taking positive action to report hazards or risk situations to supervisors</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• Planning daily work tasks to work safely and manage risks according to workplace procedures</li> <li>• Prioritising activities to achieve required outcomes</li> <li>• Planning and organising appropriate equipment and materials</li> <li>• Planning ahead to anticipate problems with availability of equipment, materials and personnel to assist</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• Following workplace safety requirements and other policies and procedures</li> <li>• Completing known delegated tasks on time</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"><li>• Selecting and using appropriate equipment, materials, processes and procedures</li><li>• Asking for advice and assistance when appropriate</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• Identifying personal strengths and weaknesses</li><li>• Acting upon feedback and accepting opportunities to learn to improve work performance</li><li>• Asking questions to gain information and identify sources of information to expand knowledge and understanding</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• Appropriately selecting and using tools and equipment</li><li>• Recognising and reporting faulty equipment</li><li>• Using information and communication technology</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **28 units** of competency, consisting of:

- **13 core units**

plus

- **15 elective units**, of which:

- up to **15** elective units may be chosen from the elective units listed below
- up to **5** elective units may be chosen from a Certificate II qualification or above in this Training Package, another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for this qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA3003	Monitor environmental and sustainability best practice in the automotive mechanical industry
<b>Common – Health and Safety</b>	
AURASA2002	Apply safe working practices in an automotive workplace
<b>Mechanical –Light Vehicle – Brakes</b>	
AURLTB3003	Diagnose and repair light vehicle hydraulic braking systems
<b>Mechanical –Light Vehicle – Steering and Suspension</b>	
AURLTD3004	Repair steering systems (light vehicle)
AURLTD3005	Repair suspension systems (light vehicle)
<b>Mechanical –Vehicle – Tyres and Wheels</b>	
AURLTJ2001	Select tyres and rims for specific applications (light)
AURLTJ2002	Remove, inspect, repair and fit tyres and tubes (light)
AURLTJ2003	Remove, inspect, and refit light vehicle wheel assemblies
<b>Mechanical –Light Vehicle – Technical - Driveline and Final Drives</b>	
AURLTQ3002	Repair final drive – driveline (light vehicle)

Unit code	Unit title
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA3018	Carry out diagnostic procedures
<b>Mechanical Miscellaneous – Technical – Wheels and Tyres</b>	
AURTTJ2001	Balance wheels and tyres
<b>Mechanical Miscellaneous – Technical – Tools and Equipment</b>	
AURTTK2002	Use and maintain workplace tools and equipment
<b>Mechanical Miscellaneous – Technical – Emission and Exhaust</b>	
AURTTZ2002	Repair exhaust system components

**Elective units**

Unit Code	Unit Title
<b>Common – Foundation Skills</b>	
AURAF2003	Communicate effectively in an automotive workplace
<b>Common – Teamwork, Supervision and Management</b>	
AURAMA2001	Work effectively with others
<b>Electrical – Technical – Steering and Suspension</b>	
AURETD3001	Service and repair electronically controlled steering systems
<b>Electrical – Technical - - Electrical and Electronic</b>	
AURETR2012	Test and repair basic electrical circuits
AURETR3025	Test, charge and replace batteries
AURETR3036	Service and repair electronically controlled suspension systems
<b>Mechanical –Light Vehicle – Regulatory or Legal – Steering and Suspension</b>	
AURLLD3001	Determine compliance of steering and suspension modifications
<b>Mechanical –Light Vehicle – Technical – Steering and Suspension</b>	

AURLTD3003	Reset steering system alignment adjustments to customer specifications
AURLTD3006	Carry out wheel alignment operations (light vehicle)
<b>Mechanical –Light Vehicle – Technical - Wheels and Tyres</b>	
AURLTJ3004	Provide advice on the effects of wheel and tyre combinations
<b>Mechanical –Light Vehicle – Technical - Transmission</b>	
AURLTX3003	Diagnose and repair light vehicle clutch systems
<b>Mechanical Miscellaneous – Technical - Brakes</b>	
AURTTB2001	Inspect and service braking systems
AURTTB2002	Attach friction materials and radius grind
AURTTB2003	Machine brake drums and brake disc rotors
AURTTB3005	Assemble and fit braking systems and components
<b>Mechanical Miscellaneous – Technical – Steering and Suspension</b>	
AURTTD2002	Inspect and service steering systems
AURTTD2004	Inspect and service suspension systems
<b>Mechanical Miscellaneous – Technical – Wheels and Tyres</b>	
AURTTJ2002	Remove and refit wheel hubs and associated brake components
<b>Mechanical Miscellaneous – Technical – Driveline Final Drives</b>	
AURTTQ2003	Service final drive (driveline)
<b>Mechanical Miscellaneous – Technical – Fabrication</b>	
AURTTTS2001	Fabricate exhaust system and components
<b>Mechanical Miscellaneous – Technical - Transmission</b>	
AURTTX2005	Inspect and service clutch systems
<b>Vehicle Body – Technical – Welding, Grinding, Machining and Soldering</b>	
AURVTW2001	Carry out manual metal arc welding procedures
AURVTW2003	Carry out gas metal arc welding procedures

AURVTW2008	Carry out oxy acetylene welding, thermal cutting and thermal heating procedures
------------	---

## AUR40112 Certificate IV in Automotive Management

### Modification History

Release	Comment
Release 1	Replaces AUR40105 Certificate IV in Automotive Management

## Description

This qualification covers the skills and knowledge required to perform management roles in an automotive retail, service and repair environment.

### Job roles and employment outcomes

The Certificate IV in Automotive Management is intended to prepare new employees or recognise and develop existing workers who are performing management roles in the automotive retail, service and repair industry.

Job roles related to this qualification include:

- business manager
- sales manager
- customer service manager
- workplace manager
- parts manager

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification to those who have completed AUR30112 Certificate III in Automotive Administration, AUR31012 Certificate III in Automotive Sales or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification include AUR50112 Diploma of Automotive Management or other relevant qualifications.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>communicating with colleagues and customers to gather information about their needs</li> <li>listening to and following complex oral instructions</li> <li>reading, interpreting, writing and presenting reports</li> <li>writing clear and detailed instructions</li> <li>negotiating effectively</li> <li>reading, interpreting and questioning legal, financial and other business documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>working within own role to support team activities</li> <li>referring queries to colleagues</li> <li>identifying and using the strengths of other team members</li> <li>providing coaching, mentoring and feedback to other team members to develop skills and knowledge related to vehicle loss assessment</li> <li>working with vehicle repairers</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>finding, analysing and interpreting data</li> <li>determining appropriate strategies to complete tasks in a timely and efficient manner</li> <li>diagnosing customer issues and taking action to resolve them</li> <li>applying a range of problem-solving strategies</li> <li>seeking information from various sources to determine causes of problem</li> <li>using numerical skills to calculate costs and prices of vehicle systems and components</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>contributing to the strategic direction of the enterprise</li> <li>identifying learning opportunities to improve work practices</li> <li>evaluating tasks to improve efficiency</li> <li>suggesting improvements to the structure and design of existing systems</li> <li>developing innovative solutions to business challenges</li> <li>identifying business opportunities</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>organising loss assessment information</li> <li>organising resources, equipment and timelines</li> <li>planning for contingencies</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"> <li>• organising work schedules and meetings</li> <li>• developing operational procedures for the business</li> <li>• identifying performance measures for the business</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• evaluating own performance and identifying areas for improvement</li> <li>• managing time to independently complete tasks</li> <li>• planning and reviewing own work</li> <li>• using judgement and discretion with confidential information</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>• participating in professional networks and associations to obtain and maintain knowledge and skills</li> <li>• actively participating in coaching and mentoring sessions to improve standards of service provision</li> <li>• contributing to the learning of team members</li> <li>• seeking assistance and expert advice on financial, legal and/or technical aspects of the job</li> <li>• seeking out and learning new ideas, skills and techniques</li> </ul>
<b>Technology</b>	<ul style="list-style-type: none"> <li>• keeping abreast of latest technology related to automotive management</li> <li>• using business technology to collect, analyse and provide information</li> <li>• applying business technology for communication, planning, financial management and operating the business</li> </ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **10 units** of competency, consisting of:

- **6 core units**

plus

- **4 elective units** of which:

- up to **4** elective units may be chosen from the elective units listed below
- up to **2** elective units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Sales and Marketing</b>	
AURACA3003	Build customer relations
<b>Common - Electrical</b>	
AURAEA4004	Manage environmental compliance in an automotive workplace
<b>Common - Management, Leadership and Supervision</b>	
AURAMA3004	Maintain business image
AURAMA4005	Manage complex customer issues
<b>Imported Units</b>	
BSBSMB407A	Manage a small team
BSBWHS401A	Implement and monitor WHS policies, procedures and programs to meet legislative requirements

### Elective units

Unit code	Unit title
<b>Common - Administration</b>	
AURAAA4002	Determine retail rates for work
<b>Common - Information Technology</b>	

Unit code	Unit title
AURAKA3002	Adapt work processes to new technologies
<b>Common - Regulatory or Legal</b>	
AURALA3001	Determine legal aspects of an automotive service and repair contract
<b>Common - Management, Leadership and Supervision</b>	
AURAMA3003	Conduct information sessions
<b>Common - Quality</b>	
AURAQA3003	Maintain quality systems
<b>Imported Units</b>	
BSBITS401B	Maintain business technology
BSBSMB406A	Manage small business finances
BSBWOR401A	Establish effective workplace relationships
BSBWOR404B	Develop work priorities
FNSASIC302C	Develop, present and negotiate client solutions
TAEDEL404A	Mentor in the workplace

## AUR40212 Certificate IV in Automotive Mechanical Diagnosis

### Modification History

Release	Comment
Release 1	Replaces AUR40208 Certificate IV in Automotive Technology

### Description

This qualification covers the skills and knowledge required to perform advanced diagnostic operations in the automotive retail, service and repair environment.

#### Job roles and employment outcomes

The Certificate IV in Automotive Mechanical Diagnosis provides advanced training for automotive technicians who want to further develop their diagnostic and technical skills. Job roles related to this qualification include:

- automotive lead or master technician
- automotive technical adviser.

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

### Pathways Information

#### Pathways from the qualification

Further training pathways from this qualification include AUR50112 Diploma of Automotive Management, AUR50212 Diploma in Automotive Technology or other relevant qualifications.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

Those undertaking Certificate IV in Automotive Mechanical Diagnosis are required to have completed an automotive mechanical Certificate III qualification or be able to demonstrate equivalent competency.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information and ideas with workplace colleagues, including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> </ul>

## AUR40312 Certificate IV in Motorsport Technology

### Modification History

Release	Comment
Release 1	Replaces AUR40305 Certificate IV in Motorsport
Release 2	Prerequisites updated for AURMKA4001

### Description

This qualification covers the skills and knowledge required to perform the role of team leader and supervisor in a motorsport environment. It includes preparing competition vehicles, coordinating team operations, performing non-destructive testing, and supervising pit lane operations.

#### Job roles and employment outcomes

The Certificate IV in Motorsport Technology provides advanced training for those who perform technical and supervisory roles in motorsport.

Job roles related to this qualification include:

- master technician
- pit crew coordinator.

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways from the qualification

Further training pathways from this qualification include AUR50312 Diploma of Motorsport Technology, AUR50212 Diploma in Automotive Technology or other relevant qualifications.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

Those undertaking Certificate IV in Motorsport Technology are required to have completed the automotive qualification AUR30912 Certificate III in Motorsport Technology or be able to demonstrate equivalent competency.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information and ideas with workplace colleagues, including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> </ul>

## AUR40412 Certificate IV in Automotive Performance Enhancement

### Modification History

Release	Comment
Release 1	Replaces AUR40405 Certificate IV in Automotive Performance Enhancement

### Description

This qualification covers the skills and knowledge required to analyse and repair complex performance driveline systems.

#### Job roles or employment outcomes

The Certificate IV in Automotive Performance Enhancement is intended to provide advanced training for automotive technicians who want to further develop their technical, diagnostic and repair skills.

Job outcomes targeted by this qualification include:

- master technician
- performance vehicle technician

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

### Pathways Information

#### Pathways from the qualification

Further training pathways from this qualification include AUR50212 Diploma of Automotive Technology or other relevant qualifications.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

Those undertaking Certificate IV in Automotive Performance Enhancement are required to have completed an automotive AUR30612 Certificate III in Light Vehicle Mechanical Technology or be able to demonstrate equivalent competency.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describe own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and take action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing of components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **10 units of competency, consisting of:**

- **3 core units** listed below

plus

- **7 elective units**, of which:
  - up to **7** elective units may be chosen from the elective units listed below
  - up to **2** elective units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title	Pre requisites
<b>Motorsport - Technical - Engines</b>		
AURMTE4001	Test engines using a dynamometer	
<b>Motorsport - Technical - Fuel Systems</b>		
AURMTF4002	Analyse and repair performance fuel injection systems	AURETR3023 AURTTF2001
<b>Mechanical Miscellaneous - Technical</b>		
AURTTA4021	Carry out diagnosis of complex system faults	

### Elective units

Unit code	Unit title	Pre requisites
<b>Administration - Foundation Skills</b>		
AURAF5006	Prepare technical reports	
AURAF5007	Develop and document specifications and procedures	
<b>Administration - Management, Leadership and Supervision</b>		
AURAMA5006	Contribute to business improvement	
<b>Electrical - Technical - Electrical and Electronic</b>		

AURETR3023	Diagnose and repair electronic spark ignition engine management systems	
AURETR5033	Develop and apply electronic systems modification	
AURETR5034	Develop and apply electrical systems modification	
<b>Mechanical - Light Vehicle - Technical - Brakes</b>		
AURLTB4001	Overhaul braking system components (light)	
<b>Mechanical - Light Vehicle - Technical – Steering and Suspension</b>		
AURLTD3005	Repair suspension systems (light vehicle)	
<b>Mechanical - Light Vehicle - Technical – Driveline and Final Drives</b>		
AURLTQ3001	Repair final drive assemblies (light vehicle)	
AURLTQ3002	Repair final drive – driveline (light vehicle)	
<b>Motorsport - Technical</b>		
AURMTA3007	Conduct non-destructive testing	
AURMTA5003	Determine material suitability for competition vehicle components	AURMTA3007 MEM30012A
AURMTA5008	Apply aerodynamic and vehicle dynamic principles and effects to competition vehicles	AURMTD4002 AURMTJ4001 MEM30012A
<b>Mechanical - Light Vehicle - Technical – Transmission</b>		
AURLTX3001	Repair transmissions - manual (light vehicle)	
<b>Motorsport - Technical - Steering and Suspension</b>		
AURMTD4001	Test suspension dampers using a dynamometer	MEM30012A
AURMTD4002	Prepare competition vehicle suspension	AURLTD3005 AURTDD2004
<b>Motorsport - Technical - Fuel Systems</b>		
AURMTF4001	Analyse and repair complex performance carburetted fuel systems	AURTTF2001 AURTTF3006
<b>Motorsport - Technical - Wheels and Tyres</b>		

AURMTJ4001	Select and prepare tyres and wheels for motorsport applications	
<b>Motorsport - Technical - Driveline and Final Drives</b>		
AURMTQ4001	Analyse and repair complex performance driveline systems	AURLTQ3001 AURLTQ3002 AURLTX3001 AURMTA3007
<b>Mechanical Miscellaneous - Environment</b>		
AURTEA4001	Manage environmental compliance in the mechanical repair industry	
<b>Mechanical Miscellaneous - Loss Assessment or Repair Quoting</b>		
AURTNA5001	Estimate and calculate costs to repair, maintain or modify a vehicle	
<b>Mechanical Miscellaneous - Technical</b>		
AURTTA5022	Develop and apply mechanical system modifications	
AURTTA5023	Develop and apply hydraulic system modifications	
<b>Mechanical Miscellaneous - Technical - Steering and Suspension</b>		
AURTTD2004	Inspect and service suspension systems	
AURTTD4005	Overhaul steering system components	
<b>Mechanical Miscellaneous - Technical - Engines</b>		
AURTTE4005	Overhaul engines and associated engine components	
<b>Mechanical Miscellaneous - Technical - Fuel Systems</b>		
AURTTF2001	Service petrol fuel systems	
AURTTF3006	Diagnose and repair petrol carburettor systems	
AURTTF4007	Overhaul petrol fuel system components	
<b>Mechanical Miscellaneous - Technical - Alternative Fuels</b>		
AURTTL5015	Develop and apply gas fuel system modifications	
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>		

AURTTQ4004	Overhaul final drive assemblies	
<b>Mechanical Miscellaneous - Technical - Transmission</b>		
AURTTX4007	Overhaul clutch assemblies	
AURTTX4008	Overhaul transmissions (manual)	
AURTTX4009	Overhaul transmissions (automatic)	
<b>Imported Units</b>		
BSBWHS401A	Implement and monitor WHS policies, procedures and programs to meet legislative requirements	
MEM30012A	Apply mathematical techniques in a manufacturing engineering or related environment

## AUR40612 Certificate IV in Automotive Electrical Technology

### Modification History

Release	Comment
Release 1	New qualifications

### Description

This qualification covers the skills and knowledge required to service, diagnose and repair electrical systems and components as a master diagnostic technician on vehicles in the automotive service and repair industry. A range of advanced electrical diagnostic skills and knowledge is necessary and leadership and supervision of others would be expected.

#### Job roles and employment outcomes

The Certificate IV in Automotive Electrical Technology is a post-trade level qualification in the automotive body repair industry.

It is designed for a master diagnostic technician and covers a range of specialised functions in the electrical repair industry.

Job roles related to this qualification include:

- automotive electrical workshop manager or service manager
- automotive workshop technical service adviser
- automotive master diagnostic technician.

#### Application

This qualification is suitable for an Australian apprenticeship pathway.

## **Pathways Information**

### **Pathways into the qualification**

Credit may be granted towards this qualification by those who have completed AUR30312 Certificate III in Automotive Electrical Technology in this Training Package or other relevant qualifications.

### **Pathways from the qualification**

Further training pathways from this qualification include AUR50112 Diploma of Automotive Management or other relevant qualifications.

## **Licensing/Regulatory Information**

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## **Entry Requirements**

### **Entry requirements**

Those undertaking Certificate IV in Automotive Electrical Technology are required to have completed an automotive AUR30312 Certificate III in Automotive Electrical Technology or be able to demonstrate equivalent competency.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>• understanding input from specialist personnel and technical representatives</li> <li>• providing guidance to others and clearly describing faults, problems and repair requirements</li> <li>• negotiating with other team members or supervisors regarding timing and progress of work activities and access to equipment</li> <li>• understanding and interpreting regulations, procedures, instructions and repair manuals</li> <li>• interpreting wiring diagrams and system schematics, and reading drawings relating to repair activities</li> <li>• using computers to obtain technical data and complete documentation</li> <li>• articulating complex ideas clearly</li> <li>• interpreting a range of complex and technical documents</li> <li>• analysing and evaluating records, reports and reference materials</li> <li>• understanding relevant definitions, terminology, symbols and language</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>• performing tasks as an individual while being responsive to supervisors and others</li> <li>• working effectively with others who may be of different ages, gender, race, religion and political persuasions</li> <li>• assisting other team members with tasks and providing advice on work processes and troubleshooting</li> <li>• seeking expert advice where appropriate</li> <li>• supporting team members in developing skills and knowledge</li> <li>• working in own role to support team activities</li> <li>• identifying and using the strengths of other team members</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>• identifying problems in a timely manner and developing practical solutions to problems or faults not fully covered by technical data</li> <li>• responding to emergencies or accidents according to regulatory and organisational requirements</li> <li>• identifying possible solutions for improving environmental and resource-efficient work practices</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

	<ul style="list-style-type: none"> <li>• using mathematical techniques to relate diagnostic/test results to system or component performance and converting values between systems of measurement</li> <li>• finding, analysing and interpreting data that may be incomplete or have discrepancies</li> <li>• diagnosing customer service complaints and taking steps to improve the service</li> <li>• applying a range of problem-solving strategies</li> <li>• seeking information from various sources to determine the cause of the problem</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>• adapting to new situations that arise as a consequence of regulatory changes, revised technical data, practices and procedures</li> <li>• varying work practices and behaviour as a result of performance feedback from peers and supervisors</li> <li>• adapting competencies to the performance of a wide range of repair tasks</li> <li>• contributing to a process of continuous improvement and a willingness to support and participate in the effective introduction of new work practices</li> <li>• identifying learning opportunities to improve work practices</li> <li>• evaluating tasks to improve efficiency</li> <li>• promoting environmental and resource-efficient work practices</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>• clarifying task objectives and required outcomes through discussion with supervisors and other team members</li> <li>• collecting, analysing and organising information relating to assigned repair tasks and confirming the purpose and required work outcomes</li> <li>• identifying and organising equipment and material or resource requirements</li> <li>• planning for contingencies</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>• accepting responsibility for managing individual workload to meet target completion times or fit in with team milestones</li> <li>• evaluating own performance and identifying areas for improvement</li> <li>• managing time to independently complete tasks</li> <li>• planning and reviewing own work</li> <li>• using judgement and discretion with confidential information</li> </ul>
<b>Learning</b>	<ul style="list-style-type: none"> <li>• taking advantage of learning opportunities that arise internally and externally</li> <li>• adapting competencies to accommodate new ideas and techniques</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

	<ul style="list-style-type: none"><li>• using feedback from supervisors and peers to identify ways in which competence can be improved</li><li>• participating in professional networks and associations to obtain and maintain skills and knowledge</li><li>• seeking out and learning new ideas, skills and techniques</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using computers and microfiche to obtain technical and repair data</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **10 units** of competency, consisting of:

- **1 core unit**

plus

- **9 elective units**, of which:

- up to **9** elective units may be chosen from the elective units listed below
- up to **3** elective units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA4021	Carry out diagnosis of complex system faults

### Elective units

Unit code	Unit title	Prerequisite
<b>Common – Foundation Skills</b>		
AURAF5006	Prepare technical reports	
AURAF5007	Develop and document specifications and procedures	
<b>Common – Information Technology</b>		
AURAKA3002	Adapt work processes to new technologies	
<b>Common – Loss Assessment or Repair Quoting</b>		
AURANN4001	Prepare a vehicle repair quotation	
<b>Common – Quality</b>		
AURAQA3002	Inspect technical quality of work	
AURAQA3003	Maintain quality systems	
<b>Common – Technical</b>		

AURATA3004	Provide technical guidance	
AURATA3005	Estimate complex jobs	
<b>Electrical – Technical – Brakes</b>		
AURETB3001	Repair electric braking systems	
<b>Electrical – Technical – Hybrid Vehicle and Battery Electric Vehicle</b>		
AURETH3001	Depower battery electric vehicles	
AURETH3002	Service and maintain battery electric vehicles	AURETH3001
AURETH4003	Test and repair high voltage battery systems in battery electric vehicles	AURETH3001
AURETH4004	Diagnose and repair traction motor speed control device in battery electric vehicles	AURETH3001
AURETH4005	Diagnose and repair high voltage traction motors in battery electric vehicles	AURETH3001
AURETH4006	Diagnose and repair auxiliary motors and associated components in battery electric vehicles	AURETH3001
AURETH4007	Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles	AURETH3001
AURETH4008	Diagnose and repair high voltage cabin heating and cooling systems in battery electric vehicles	AURETH3001
AURETH4009	Diagnose and repair DC to DC converters in battery electric vehicles	AURETH3001 AURETR3025
AURETH4010	Test high voltage batteries in hybrid electric vehicles	AURETR3025
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles	
AURETH4012	Service and maintain electrical components in hybrid electric vehicles	AURETH4011
AURETH4014	Diagnose complex faults in battery electric and hybrid electric vehicle systems	
<b>Electrical – Technical – Electrical and Electronic</b>		
AURETR2035	Demonstrate knowledge of petrol and diesel engine	

	operation	
AURETR3025	Test, charge and replace batteries	
AURETR4004	Diagnose complex electrical and electronic faults in vehicle convenience and entertainment systems	
AURETR4037	Diagnose complex electrical and electronic faults in light vehicle safety systems	
AURETR4038	Diagnose complex faults in motorcycle electrical and electronic systems	
AURETR4039	Diagnose complex electrical and electronic faults in light vehicle theft deterrent systems	
AURETR4040	Diagnose complex electrical and electronic faults in vehicle monitoring and protection systems	
AURETR5033	Develop and apply electronic systems modification	
AURETR5034	Develop and apply electrical systems modification	
<b>Electrical – Technical – Air Conditioning and HVAC</b>		
AURETU3004	Diagnose and repair air conditioning and HVAC systems	
AURETU3005	Retrofit and modify air conditioning and HVAC systems	
AURETU4006	Diagnose complex faults in air conditioning and HVAC systems	
AURETU4007	Overhaul air conditioning system components	
<b>Mechanical Miscellaneous – Environment</b>		
AURTEA4001	Manage environmental compliance in the mechanical repair industry	
<b>Mechanical Miscellaneous – Loss Assessment or Repair Quoting</b>		
AURTNA5001	Estimate and calculate costs to repair, maintain or modify a vehicle	
<b>Mechanical Miscellaneous – Technical</b>		
AURTTA4026	Diagnose complex faults in vehicle electric-over-hydraulic systems	

AURTTA3017	Carry out vehicle safety and roadworthy inspections	
<b>Mechanical Miscellaneous – Technical – Alternative Fuels</b>		
AURTTL3010	Install LPG, CNG and LNG electrical control equipment	
<b>Imported Units</b>		
BSBLED401A	Develop teams and individuals	
BSBINN301A	Promote innovation in a team environment	
BSBWHS401A	Implement and monitor WHS policies, procedures and programs to meet legislative requirements	
BSBWOR301B	Organise personal work priorities and development	
TAEDEL301A	Provide work skill instruction	
TAEDEL404A	Mentor in the workplace

## AUR40712 Certificate IV in Automotive Body Repair Technology

### Modification History

Release	Comment
Release 1	New qualification
Release 2	Unit AUMAMM3001 replaced by AUMAMM001
Release 3	Updated imported units: AURNVA005 replaces AURNVA4005 AURVNA003 replaces AURVNA4003 AURVNA007 replaces AURVNA4007 AURVNA008 replaces AURVNA4008 AURVNN001 replaces AURVNN4001 AURVNP001 replaces AURVNP4001

### Description

This qualification covers the skills and knowledge to become a Master Technician within the automotive body repair and refinishing sector. The range of technical skills and knowledge is proficient and leadership and supervision of others is expected.

#### Job roles and employment outcomes

This qualification is a post-trade level qualification in the automotive body repair industry. It is designed for a Master Technician covering a range of specialised functions in the body repair industry.

- workshop manager or master technician
- workplace loss assessor adviser and or estimator
- workplace technical adviser for panel and paint
- group and team leader
- workplace supervisor
- customer service, internal and external

### Application

This qualification is suitable for an Australian apprenticeship pathway.

## Pathways Information

### Pathways from the qualification

Further training pathways from this qualification include AUR50112 Diploma of Automotive Management, or other relevant qualifications related to leadership and supervision.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

Those undertaking Certificate IV in Automotive Body Repair Technology are required to have completed an automotive Certificate III in one of the following disciplines, or be able to demonstrate equivalent competency.

- AUR32112 Certificate III in Automotive Body Repair Technology
- AUR32212 Certificate III in Automotive Glazing Technology
- AUR32312 Certificate III in Automotive and Marine Trimming Technology
- AUR32412 Certificate III in Automotive Refinishing Technology

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>communicating with colleagues and customers to gather information about their needs</li> <li>listening to and following complex oral instructions</li> <li>reading, interpreting, writing and presenting reports</li> <li>writing clear and detailed instructions</li> <li>negotiating effectively</li> <li>reading, interpreting and questioning legal, financial and other business documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>working within own role to support team activities</li> <li>referring queries to colleagues</li> <li>identifying and using the strengths of other team members</li> <li>providing coaching, mentoring and feedback to other team members to develop skills and knowledge related to vehicle loss assessment</li> <li>working with vehicle repairers</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>finding, analysing and interpreting data</li> <li>determining appropriate strategies to complete tasks in a timely and efficient manner</li> <li>diagnosing customer issues and taking action to resolve them</li> <li>applying a range of problem-solving strategies</li> <li>seeking information from various sources to determine causes of problem</li> <li>using numerical skills to calculate costs and prices of vehicle systems and components</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>contributing to the strategic direction of the enterprise</li> <li>identifying learning opportunities to improve work practices</li> <li>evaluating tasks to improve efficiency</li> <li>suggesting improvements to the structure and design of existing systems</li> <li>developing innovative solutions to business challenges</li> <li>identifying business opportunities</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>organising loss assessment information</li> <li>organising resources, equipment and timelines</li> <li>planning for contingencies</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the employability skills as identified by the automotive industry for this qualification. The employability skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"><li>• organising work schedules and meetings</li><li>• developing operational procedures for the business</li><li>• identifying performance measures for the business</li></ul>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• evaluating own performance and identifying areas for improvement</li><li>• managing time to independently complete tasks</li><li>• planning and reviewing own work</li><li>• using judgement and discretion with confidential information</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• participating in professional networks and associations to obtain and maintain knowledge and skills</li><li>• actively participating in coaching and mentoring sessions to improve standards of service provision</li><li>• contributing to the learning of team members</li><li>• seeking assistance and expert advice on financial, legal and/or technical aspects of the job</li><li>• seeking out and learning new ideas, skills and techniques</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• keeping abreast of latest technology related to panel, paint, mechanical and electrical vehicle repair</li><li>• using business technology to collect, analyse and provide information</li><li>• applying business technology for communication, planning, financial management and operating the business</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **10 units** of competency, consisting of:

- **6 core units**

plus

- **4 elective units**, of which:

- up to **4** elective units may be chosen from the elective units listed below.
- up to **2** elective units may be chosen from a Certificate III qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA4004	Manage environmental compliance in an automotive workplace
<b>Common - Management, Leadership and Supervision</b>	
AURAMA4005	Manage complex customer issues
<b>Common - Loss Assessment or Repair Quoting - Body</b>	
AURANN4001	Prepare a vehicle repair quotation
<b>Vehicle Body - Technical - Body</b>	
AURVTN3035	Apply original equipment manufacturer repair procedures
AURVTN4032	Determine vehicle damage and recommended repair procedures
<b>Imported Units</b>	
AURVNA005	Inspect quality of vehicle repair work

### Elective units

Unit code	Unit title
<b>Electrical - Technical - Hybrid Vehicle and Battery Electric Vehicle</b>	
AURETH3001	Depower battery electric vehicles

Unit code	Unit title
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles
<b>Vehicle Body - Technical</b>	
AURVTA3002	Remove and replace supplementary restraint systems
AURVTA3004	Inspect vehicle systems and determine preferred repair action
<b>Imported Units</b>	
AUMAMM001	Influence and lead work groups in an auto manufacturing environment
AURVNA003	Review vehicle repair quotations
AURVNA007	Apply automotive mechanical and electrical knowledge to vehicle loss assessments
AURVNA008	Apply automotive body and paint knowledge to vehicle loss assessments
AURVNN001	Evaluate vehicle bodywork for damage and identify repair requirements
AURVNP001	Evaluate vehicle paintwork for damage and identify refinish requirements
BSBREL402A	Build client relationships and business networks
BSBRKG304B	Maintain business records
BSBWHS401A	Implement and monitor WHS policies, procedures and programs to meet legislative requirements
BSBWOR401A	Establish effective workplace relationships
MSS403030A	Improve cost factors in work practices
PSPTRAN501A	Provide specialist vehicle technical advice
TAEDEL404A	Mentor in the workplace
TLIL4005A	Apply conflict/grievance resolution strategies

## AUR40812 Certificate IV in Automotive Mechanical Overhauling

### Modification History

Release	Comment
Release 1	Replaces AUR40208 Certificate IV in Automotive Technology

### Description

This qualification covers the skills and knowledge required to perform advanced troubleshooting and repair operations in an automotive retail, service and repair environment.

#### Job roles and employment outcomes

The Certificate IV in Automotive Mechanical Overhauling is intended to provide advanced training for automotive technicians who want to further develop their repair and technical skills.

Employment outcomes targeted by this qualification include:

- automotive lead/master technician

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways from the qualification

Further training pathways from this qualification include AUR50112 Diploma of Automotive Management and AUR50212 Diploma in Automotive Technology or other relevant qualifications.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

Those undertaking Certificate IV in Automotive Mechanical Overhauling are required to have completed an automotive mechanical Certificate III qualification or be able to demonstrate equivalent competency.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describe own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and take action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• operating diagnostic and test equipment</li><li>• performance testing of components, systems and equipment</li><li>• using tools and equipment efficiently and safely</li><li>• storing and caring for components, parts, tools, test equipment and support equipment</li><li>• using business technology to collect, analyse and provide information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **10 units** of competency, consisting of:

- **1 core unit**

plus

- **9 elective units**; of which:

- up to **9** elective units may be chosen from the elective units listed below
- up to **2** elective units may be chosen from a Certificate IV qualification or above in this Training Package, another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Mechanical Miscellaneous - Technical</b>	
AURTTA4021	Carry out diagnosis of complex system faults

### Elective units

Unit Code	Unit Title
<b>Electrical - Technical - Electrical and Electronic</b>	
AURETR3017	Overhaul charging system alternators
AURETR3018	Overhaul starting motors
<b>Electrical - Technical – Air Conditioning and HVAC</b>	
AURETU4007	Overhaul air conditioning system components
<b>Mechanical - Heavy Vehicle - Technical - Brakes</b>	
AURHTB4003	Overhaul braking system components (heavy)
AURHTB4004	Overhaul air braking systems and components
<b>Mechanical - Heavy Vehicle - Steering and Suspension</b>	
AURHTD3004	Carry out wheel alignment operations (heavy vehicle)

<b>Mechanical - Light Vehicle - Technical - Brakes</b>	
AURLTB4001	Overhaul braking system components (light)
<b>Mechanical - Light Vehicle - Technical - Steering and Suspension</b>	
AURLTD3006	Carry out wheel alignment operations (light vehicle)
<b>Motorsport - Technical</b>	
AURMTA3007	Conduct non-destructive testing
<b>Motorsport - Technical - Engines</b>	
AURMTE4001	Test engines using a dynamometer
<b>Outdoor Power Equipment - Technical - Engines</b>	
AURPTE4004	Overhaul engines and engine components (outdoor power equipment)
<b>Marine - Technical - Engines</b>	
AURRTE4011	Overhaul two and four cycle outboard engines
<b>Mechanical Miscellaneous – Technical – Steering and Suspension</b>	
AURTTD4005	Overhaul steering system components
<b>Mechanical Miscellaneous - Technical - Engines</b>	
AURTTE4005	Overhaul engines and associated engine components
<b>Mechanical Miscellaneous - Technical - Fuel Systems</b>	
AURTTF4003	Overhaul diesel fuel injection systems
AURTTF4007	Overhaul petrol fuel system components
<b>Mechanical Miscellaneous - Technical - Manufacture</b>	
AURTTM3001	Operate and monitor computer numerical control machines
AURTTM3002	Repair bearing tunnels and connecting rods in engines
AURTTM3003	Apply metal to rebuild engine components
AURTTM3004	Assemble engine blocks and sub-assemblies
AURTTM3005	Balance rotating and reciprocating engine components

AURTTM3006	Perform advanced machining and blueprinting of engine components
AURTTM3007	Carry out grinding operations
AURTTM3008	Dismantle and evaluate engine blocks and sub-assemblies
AURTTM3009	Fit sleeves and bore and hone engine cylinders
AURTTM3010	Heat treat, straighten and reclaim engine components
AURTTM3011	Recondition engine cylinder heads
<b>Mechanical Miscellaneous - Technical - Driveline and Final Drives</b>	
AURTTQ4004	Overhaul final drive assemblies
<b>Mechanical Miscellaneous - Technical - Welding, Grinding, Machining and Soldering</b>	
AURTTW3003	Carry out machining operations
<b>Mechanical Miscellaneous - Technical - Transmission</b>	
AURTTX4007	Overhaul clutch assemblies
AURTTX4008	Overhaul transmissions (manual)
AURTTX4009	Overhaul transmissions (automatic)
AURTTX4010	Overhaul transmissions (hydrostatic)

## AUR50112 Diploma of Automotive Management

### Modification History

Release	Comment
Release 1	Replaces AUR50105 Diploma of Automotive Management
Release 2	BSBHRM402A superseded by BSBHRM405A
Release 3	BSBCUS501A superseded by BSBCUS501C
Release 4	Updated imported units: BSBHRM505B replaces BSBHRM505A

## Description

This qualification covers the skills and knowledge required to undertake leadership and management roles within the automotive industry. It is suitable for entry into senior management roles in all sectors of the automotive industry.

### Job roles and employment outcomes

The Diploma of Automotive Business Management is intended to prepare new employees or recognise and develop existing workers who are performing management roles in the automotive industry.

Job outcomes targeted by this qualification include:

- business manager
- automotive directorship
- dealer principal
- operations manager
- sales manager
- area manager
- marketing manager
- retail manager
- parts manager
- purchasing manager
- automotive service manager
- automotive aftermarket manager
- automotive retail sales manager
- automotive warehouse manager
- automotive repair manager

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways into the qualification

Credit will be granted towards this qualification by those who have completed AUR40112 Certificate IV in Automotive Management or other relevant qualifications.

### Pathways from the qualification

Further training pathways from this qualification may lead to a relevant Advanced Diploma qualification.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements, depending on the work context. Local regulations should be checked for details.

## Entry Requirements

This qualification may be accessed by direct entry.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills for this qualification as identified by the automotive industry. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>Communicating with business contacts to promote the goals and objectives of the business</li> <li>Obtaining feedback from colleagues and clients</li> <li>Interpreting and completing business documentation</li> <li>Advising stakeholders of the outcome</li> <li>Communicating information about tasks, processes and events</li> <li>Communicating business and legal requirements, including workplace health and safety (WHS) responsibilities</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>Leading, planning and supervising the performance of team members</li> <li>Developing team cohesion and fostering innovative work practices</li> <li>Supporting, respecting and understanding the views of others</li> <li>Identifying own role and responsibility within a team</li> <li>Undertaking appropriate and effective communication with team members</li> <li>Building and maintaining networks and relationships</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>Accessing and assessing information for accuracy and relevance</li> <li>Evaluating and modifying as required</li> <li>Checking and making required adjustments</li> <li>Using knowledge to solve problems</li> <li>Using a wide range of strategies and techniques to solve problems</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>Identifying networking opportunities and developing operational strategies to ensure the viability of the business</li> <li>Instigating new or different work practices to improve productivity or service delivery</li> <li>Supporting a continuous improvement environment</li> <li>Identifying issues requiring action and recommending action</li> <li>Making adjustments to improve workplace processes and procedures</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>Allocating work to meet time and budget constraints</li> <li>Developing plans and schedules</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the Employability Skills for this qualification as identified by the automotive industry. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"><li>• Planning for and organising resources</li></ul>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• Prioritising tasks</li><li>• Operating within appropriate time constraints and work standards</li><li>• Demonstrating consistent performance</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• Participating in professional networks and associations to obtain and maintain personal knowledge and skills</li><li>• Systematically identifying learning and development needs</li><li>• Identifying sources of information to expand knowledge and understanding</li><li>• Recognising limits of own professional expertise and consulting specialists as necessary</li><li>• Accessing manufacturer's manuals/specifications to expand knowledge</li></ul>
<b>Technology</b>	<ul style="list-style-type: none"><li>• Using business technology to access, organise and monitor information</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **12 units** of competency, consisting of:

- **6 core units**

plus

- **6 elective units** of which:

- up to **6** elective units may be chosen from the elective units listed below
- up to **2** elective units may be chosen from a Certificate IV qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common - Environment</b>	
AURAEA4004	Manage environmental compliance in an automotive workplace
<b>Common - Management, Leadership and Supervision</b>	
AURAMA4005	Manage complex customer issues
AURAMA5006	Contribute to business improvement
<b>Imported Units</b>	
BSBFIM501A	Manage budgets and financial plans
BSBMGT502B	Manage people performance
BSBWHS501A	Ensure a safe workplace

### Elective units

Unit code	Unit title
<b>Common - Administration</b>	
AURAAA4002	Determine retail rates of work
<b>Imported Units</b>	
BSBCUS501C	Manage quality customer service

BSBFIA401A	Prepare financial reports
BSBFRA403B	Manage relationship with franchisor
BSBHRM405A	Support the recruitment, selection and induction of staff
BSBHRM505B	Manage remuneration and employee benefits
BSBINN502A	Build and sustain an innovative work environment
BSBLED401A	Develop teams and individuals
BSBMGT515A	Manage operational plan
BSBMKG523A	Design and develop an integrated marketing communication plan
BSBPUR402B	Negotiate contracts
BSBWOR501B	Manage personal work priorities and professional development
BSBWOR502B	Ensure team effectiveness
SITXADM004A	Plan and manage meetings
TLIA4005A	Check and evaluate records and documentation
TLIA5058A	Manage facility and inventory requirements

## AUR50212 Diploma of Automotive Technology

### Modification History

Release	Comment
Release 1	Replaces AUR50205 Diploma of Automotive Technology

### Description

This qualification covers the skills and knowledge required to diagnose, analyse, evaluate, design and modify automotive electrical and mechanical systems. It is suitable for those working in the automotive service and repair industry at the forefront of the implementation of new technologies.

#### Job roles and employment outcomes

The Diploma of Automotive Technology prepares new employees or recognises and develops existing workers who are performing advanced diagnosis and design tasks in the automotive industry.

Job roles related to this qualification include:

- advanced diagnostic technician
- automotive system designer.

#### Application

This qualification is suitable for an Australian Apprenticeship pathway.

### Pathways Information

#### Pathways from the qualification

Further training pathways from this qualification may lead to a relevant Advanced Diploma qualification.

### Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

Those undertaking the Diploma of Automotive Technology are required to have completed AUR40212 Certificate IV in Automotive Mechanical Diagnosis or AUR40812 Certificate IV in Automotive Mechanical Overhauling or be able to demonstrate equivalent competency.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace verbal and non-verbal information and ideas with workplace colleagues, including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace-related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describing own role and role of others</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or potential problem and taking action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>
<b>Self-management</b>	<ul style="list-style-type: none"> <li>selecting and using appropriate equipment, materials, processes and procedures</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
	<ul style="list-style-type: none"><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice and operating procedures</li></ul>
<b>Learning</b>	<ul style="list-style-type: none"><li>• asking questions to gain information</li><li>• identifying sources of information, assistance and expert knowledge to expand knowledge, skills and understanding</li><li>• participating in self-improvement activities</li><li>• participating in development of workplace continuous improvement strategies</li><li>• helping others develop competency</li></ul>

## Packaging Rules

To be awarded this qualification, competency must be demonstrated in **12 units** of competency, consisting of:

- **1 core unit**

plus

- **11 elective units**, of which:
  - up to **11** elective units may be chosen from the elective units listed below
  - up to **2** elective units may be chosen from a Certificate IV qualification or above in this Training Package or another endorsed Training Package or accredited course, provided that the units chosen contribute to the vocational outcome of this qualification and do not duplicate the outcome of another unit chosen for the qualification.

### Core units

Unit code	Unit title
<b>Common – Foundation Skills</b>	
AURAF5007	Develop and document specifications and procedures

### Elective units

Unit code	Unit title
<b>Common – Foundation Skills</b>	
AURAF5006	Prepare technical reports
<b>Electrical – Technical</b>	
AURETA5001	Analyse and evaluate electrical and electronic faults in electric over-hydraulic systems
AURETA5002	Analyse and evaluate electrical and electronic faults in safety systems
AURETA5003	Analyse and evaluate electrical and electronic faults in monitoring and protection systems
AURETA5004	Analyse and evaluate electrical and electronic faults in convenience and entertainment systems
AURETA5005	Analyse and evaluate electrical and electronic faults in theft-deterrent systems

AURETA5006	Analyse and evaluate electrical and electronic faults in climate-control systems
<b>Electrical – Technical – Brakes</b>	
AURETB5002	Analyse and evaluate electrical and electronic faults in braking systems
<b>Electrical – Technical – Steering and Suspension</b>	
AURETD5002	Analyse and evaluate electrical and electronic faults in stability, steering and suspension systems
<b>Electrical – Technical – Engines</b>	
AURETE5001	Analyse and evaluate electrical and electronic faults in engine management systems
<b>Electrical – Technical – Hybrid Vehicle and Battery Electric Vehicle</b>	
AURETH5013	Analyse and evaluate electrical and electronic faults in electric and hybrid vehicle systems
<b>Electrical – Technical – Electrical and Electronic</b>	
AURETR5033	Develop and apply electronic systems modification
AURETR5034	Develop and apply electrical systems modification
<b>Electrical – Technical – Transmission</b>	
AURETX5001	Analyse and evaluate electrical and electronic faults in transmission and driveline systems
<b>Mechanical – Heavy Vehicle – Technical – Brakes</b>	
AURHTB5005	Analyse and evaluate heavy vehicle braking system faults
<b>Mechanical – Heavy Vehicle – Technical – Steering and Suspension</b>	
AURHTD5005	Analyse and evaluate heavy vehicle steering and suspension system faults
<b>Mechanical – Heavy Vehicle – Technical – Engines</b>	
AURHTE5004	Analyse and evaluate heavy vehicle engine and fuel system faults
<b>Mechanical – Heavy Vehicle – Technical – Transmission</b>	
AURHTX5005	Analyse and evaluate heavy vehicle transmission system faults

<b>Mechanical – Motorcycle – Technical</b>	
AURJTA5003	Analyse and evaluate motorcycle engine and transmission system faults
<b>Mechanical – Motorcycle – Technical – Brakes</b>	
AURJTB5002	Analyse and evaluate motorcycle braking system faults
<b>Mechanical – Motorcycle – Technical – Steering and Suspension</b>	
AURJTD5006	Analyse and evaluate motorcycle steering, suspension and frame system faults
<b>Mechanical – Motorcycle – Technical – Electrical and Electronic</b>	
AURJTR5001	Analyse and evaluate motorcycle electrical and electronic system faults
<b>Mechanical – Plant and Heavy Equipment – Technical</b>	
AURKTA5006	Analyse and evaluate tracked mobile plant transmission, steering and braking systems faults
AURKTA5007	Analyse and evaluate mobile plant hydraulic system faults
<b>Mechanical – Mobile Plant – Technical – Brakes</b>	
AURKTB5002	Analyse and evaluate wheeled mobile plant braking system faults
<b>Mechanical – Mobile Plant – Technical – Steering and Suspension</b>	
AURKTD5003	Analyse and evaluate wheeled mobile plant steering and suspension system faults
AURKTD5004	Analyse and evaluate tracked mobile plant undercarriage and suspension system faults
<b>Mechanical – Mobile Plant – Technical – Engines</b>	
AURKTE5001	Analyse and evaluate mobile plant engine and fuel system faults
<b>Mechanical – Mobile Plant – Technical – Transmission</b>	
AURKTX5002	Analyse and evaluate wheeled mobile plant transmission system faults
<b>Mechanical – Light Vehicle – Technical – Brakes</b>	
AURLTB5002	Analyse and evaluate light vehicle braking system faults
<b>Mechanical – Light Vehicle – Technical – Steering and Suspension</b>	

AURLTD5007	Analyse and evaluate light vehicle steering and suspension system faults
<b>Mechanical – Light Vehicle – Technical – Engines</b>	
AURLTE5003	Analyse and evaluate light vehicle engine and fuel system faults
<b>Mechanical – Light Vehicle – Technical – Driveline and Final Drives</b>	
AURLTQ5003	Analyse and evaluate light vehicle driveline system faults
<b>Marine – Technical</b>	
AURRTA5007	Analyse and evaluate light marine hydraulic system faults
AURRTA5008	Analyse and evaluate light marine hull performance and stability system faults
<b>Marine – Technical – Engines</b>	
AURRTE5012	Analyse and evaluate light marine engine and powerhead system faults
<b>Marine – Technical – Transmission</b>	
AURRTX5005	Analyse and evaluate light marine transmission system faults
<b>Mechanical Miscellaneous – Loss Assessment or Repair Quoting</b>	
AURTNA5001	Estimate and calculate costs to repair, maintain or modify a vehicle
<b>Mechanical Miscellaneous – Technical</b>	
AURTTA5022	Develop and apply mechanical system modifications
AURTTA5023	Develop and apply hydraulic system modifications
AURTTA5024	Develop and apply pneumatic system modifications
<b>Mechanical Miscellaneous – Technical – Alternative Fuels</b>	
AURTTL5014	Analyse and evaluate gas fuel system faults
AURTTL5015	Develop and apply gas fuel system modifications
<b>Vehicle Body – Technical – Body</b>	
AURVTN5034	Evaluate and select bodywork materials, equipment and processes
<b>Imported Units</b>	

MSAENV472B	Implement and monitor environmentally sustainable work practices
MSAENV672B	Develop workplace policy and procedures for environmental sustainability

## AUR50312 Diploma of Motorsport Technology

### Modification History

Release	Comment
Release 1	Replaces AUR50305 Diploma of Motorsport
Release 2	Pre Requisites added to: AURMMA5005 AURMT5003 AURMTA5008

## Description

This qualification covers the skills and knowledge required to manage motorsport operational or technical teams. It is suitable for those working within the motorsport industry in a management role.

### Job roles and employment outcomes

The Diploma of Motorsport Technology is intended to develop new employees or recognise and develop existing workers who are working in management roles in the motorsport sector in the automotive industry.

Job outcomes targeted by this qualification include:

- advanced diagnostic technician
- motorsport team manager
- motorsport design technician.

### Application

This qualification is suitable for an Australian Apprenticeship pathway.

## Pathways Information

### Pathways from the qualification

Further training pathways from this qualification may lead to a relevant Advanced Diploma.

## Licensing/Regulatory Information

There are no specific licences that relate to this qualification. However, some units in this qualification may have licensing or regulatory requirements. Local regulations should be checked for details.

## Entry Requirements

Entrants to this qualification are required to have completed AUR40312 Certificate IV in Motorsport Technology or be able to demonstrate equivalent competence.

## Employability Skills Summary

### EMPLOYABILITY SKILLS QUALIFICATION SUMMARY

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

Employability Skill	Industry/enterprise requirements for this qualification include:
<b>Communication</b>	<ul style="list-style-type: none"> <li>clearly communicating workplace information and ideas with workplace colleagues (verbal and non-verbal), including use of automotive terms</li> <li>completing workplace reports</li> <li>using and contributing to workplace procedures</li> <li>maintaining workplace records</li> <li>communicating with colleagues and clients to handle verbal enquiries, such as clarifying instructions and responding to requests for information</li> <li>interpreting the needs of customers</li> <li>reading and interpreting workplace related documentation</li> </ul>
<b>Teamwork</b>	<ul style="list-style-type: none"> <li>identifying and describe own role and role of others</li> <li>working within a team</li> <li>working with diverse individuals and groups</li> <li>applying knowledge of own role to complete activities efficiently to support team activities and tasks</li> </ul>
<b>Problem solving</b>	<ul style="list-style-type: none"> <li>recognising a workplace problem or a potential problem and take action</li> <li>determining problems needing priority action</li> <li>referring problems outside area of responsibility to appropriate person and suggesting possible causes</li> <li>seeking information and assistance as required to solve problems</li> <li>using a range of problem-solving techniques</li> <li>taking action to resolve concerns</li> <li>developing practical responses to common breakdowns in workplace systems and procedures</li> </ul>
<b>Initiative and enterprise</b>	<ul style="list-style-type: none"> <li>adapting to new and emerging situations in the workplace</li> <li>being proactive and creative in responding to workplace problems, changes and challenges</li> </ul>
<b>Planning and organising</b>	<ul style="list-style-type: none"> <li>planning own work requirements and prioritising actions to achieve required outcomes and ensure tasks are completed on time</li> <li>identifying risk factors and taking action to minimise risk</li> </ul>

**EMPLOYABILITY SKILLS QUALIFICATION SUMMARY**

The following table contains a summary of the Employability Skills as identified by the automotive industry for this qualification. The Employability Skills facets described here are broad industry requirements that may vary depending on qualification packaging options.

<b>Employability Skill</b>	<b>Industry/enterprise requirements for this qualification include:</b>
<b>Self-management</b>	<ul style="list-style-type: none"><li>• selecting and using appropriate equipment, materials, processes and procedures</li><li>• recognising limitations and seeking timely advice</li><li>• planning own work requirements, setting own work program and managing time to ensure tasks are completed on time</li><li>• following workplace documentation, such as codes of practice or operating procedures</li></ul>

## AURSS00004 Automotive CNG Installation, Service and Repair Skill Set

### Modification History

Release	Comment
Release 1	New skill set

### Description

Not applicable.

## Pathways Information

The skill set may be undertaken in addition to or as part of:

- AUR30312 Certificate III in Automotive Electrical Technology
- AUR30412 Certificate III in Agricultural Mechanical Technology
- AUR30612 Certificate III in Light Vehicle Mechanical Technology
- AUR31112 Certificate III in Heavy Commercial Vehicle Mechanical Technology
- AUR31212 Certificate III in Mobile Plant Technology
- AUR31712 Certificate III in Forklift Technology, or
- AUR31912 Certificate III in Elevating Work Platform Technology.
- 

## Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **3 units of competency** must be completed.

Units	
AURTTL3001	Service CNG fuel systems
AURTTL3002	Diagnose and repair CNG fuel systems
AURTTL3003	Install CNG fuel systems

## Target Group

The skill set targets mechanics and automotive electricians who require the skills and knowledge to install, service and repair CNG systems and components in an automotive workplace.

This is a skill set covering the fundamental safety requirements for installation, service and repair of automotive CNG systems in the automotive retail, service and repair industry.

## **Suggested words for Statement of Attainment**

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of mechanics and automotive electricians required to install, service and repair automotive CNG systems. The units are drawn from endorsed Training Packages, and provide the skills and knowledge required by persons installing, servicing and repairing automotive CNG systems.

## AURSS00006 Automotive Electrical Skill Set for Light Vehicle Technicians

### Modification History

Release	Comment
Release 1	New skill set

### Description

Not applicable.

## Pathways Information

The skill set may be undertaken in addition to or as part of AUR30612 Certificate III in Light Vehicle Mechanical Technology qualification.

## Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **11 units of competency** must be completed.

Units	
AURETK2002	Use and maintain automotive electrical test equipment
AURETR2006	Carry out soldering of electrical wiring and circuits
AURETR2007	Demonstrate knowledge of automotive electrical circuits and wiring systems
AURETR2009	Install, test and repair vehicle lighting and wiring systems
AURETR2010	Fabricate, test and repair wiring harnesses and looms
AURETR2011	Install and test basic ancillary electrical components
AURETR2016	Read and apply vehicle wiring schematics and drawings
AURETR3024	Diagnose and repair electronic compression ignition engine management systems
AURETR3028	Diagnose and repair instruments and warning systems
AURETR3032	Repair electrical systems
AURETR3043	Service and repair electronic body management systems

## Target Group

The skill set targets light vehicle mechanical technicians who require the skills and knowledge to enable them to diagnose and repair electrical faults in contemporary vehicles within an automotive workplace.

This is a skill set covering the requirements for light vehicle mechanical technicians to gain the required skills and knowledge to diagnose and repair electrical faults in contemporary vehicles within the automotive retail, service and repair industry.

## Suggested words for Statement of Attainment

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive light vehicle mechanical technicians that would be required to diagnose and repair electrical faults in contemporary vehicles within the Automotive industry. The units are drawn from endorsed Training Packages, and provide the skills and knowledge required by light vehicle mechanical technicians diagnosing and repairing electrical faults in contemporary vehicles within the Automotive industry.

# AURSS00011 Battery Electric Vehicle Diagnosis and Repair Skill Set

## Modification History

Release	Comment
Release 1	Replaces AUR05 Battery Electric Vehicle Diagnosis and Repair Skill Set Pathways Information updated Target Group updated Licensing statement updated
Release 2	Skill Set Requirements updated to include prerequisite units

## Description

Not applicable.

## Pathways Information

The skill set may be undertaken in addition to AUR30612 Certificate III in Light Vehicle Mechanical Technology, AUR30312 Certificate III in Automotive Electrical Technology, or as part of AUR40612 Certificate IV in Automotive Electrical Technology and AUR40212 Certificate IV in Automotive Mechanical Diagnosis.

## Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **7 units of competency** must be completed.

Units	
AURETH3001	Depower battery electric vehicles
AURETH4004	Diagnose and repair traction motor speed control device in battery electric vehicles
AURETH4005	Diagnose and repair high voltage traction motors in battery electric vehicles
AURETH4006	Diagnose and repair auxiliary motors and associated components in battery electric vehicles
AURETH4008	Diagnose and repair high voltage cabin heating and cooling systems in battery electric vehicles
AURETH4009	Diagnose and repair DC to DC converters in battery electric vehicles
AURETR3025	Test, charge and replace batteries

## Target Group

The skill set targets mechanics and automotive electricians who require the skills and knowledge to diagnose and repair battery electric vehicle (BEV) systems and components in an automotive workplace.

This is a skill set covering the requirements for diagnosing and repairing BEVs in the automotive retail, service and repair industry.

## **Suggested words for Statement of Attainment**

These competencies from AUR12 Automotive Retail, Service and Repair Training Package meet the needs of mechanics and automotive electricians required to diagnose and repair battery electric vehicle systems and components. The units are drawn from endorsed Training Packages, and provide the skills and knowledge required by persons who diagnose, maintain and repair battery electric vehicles.

### Pathways Information

The skill set may be undertaken in addition to AUR30612 Certificate III in Light Vehicle Mechanical Technology, AUR30312 Certificate III in Automotive Electrical Technology, or as part of AUR40612 Certificate IV in Automotive Electrical Technology and AUR40212 Certificate IV in Automotive Mechanical Diagnosis.

### Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **4 units of competency** must be completed.

Units	
AURETH3001	Depower battery electric vehicles
AURETH3002	Service and maintain battery electric vehicles
AURETH4003	Test and repair high voltage battery systems in battery electric vehicles
AURETH4007	Diagnose and repair system instrumentation and safety interlocks in battery electric vehicles

## Target Group

The skill set targets mechanics and automotive electricians who require the skills and knowledge to inspect and service BEV systems and components in an automotive workplace. This is a skill set covering the fundamental safety requirements for inspecting and servicing battery electric vehicles (BEVs) in the automotive retail, service and repair industry.

## Suggested words for Statement of Attainment

These competencies from AUR12 Automotive Retail, Service and Repair Training Package meet the needs of mechanics and automotive electricians required to inspect and service battery electric vehicles. The units are drawn from endorsed Training Packages, and provide the skills and knowledge required by persons inspecting and servicing battery electric vehicles.

## Pathways Information

The skill set may be undertaken in addition to or as part of AUR30612 Certificate III in Light Vehicle Mechanical Technology.

## Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this skill set. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **12 units of competency** must be completed.

Units	
AURETR3022	Diagnose and repair vehicle dynamic control systems
AURETR3024	Diagnose and repair electronic compression ignition engine management systems
AURHTB3001	Repair air braking systems
AURHTD3002	Repair steering systems (heavy vehicle)
AURHTD3003	Repair suspension systems (heavy vehicle)
AURHTE3002	Repair engines and associated engine components (heavy vehicle)
AURHTQ3003	Repair final drive – driveline (heavy vehicle)
AURHTX3001	Repair transmissions – manual (heavy vehicle)
AURHTZ3001	Diagnose and repair heavy vehicle emission control systems
AURTTA2006	Service hydraulic systems
AURTTF2002	Service diesel fuel injection systems
AURTTF3005	Inspect and repair engine forced induction systems

## **Target Group**

The skill set targets and automotive Light Vehicle Technicians who require the skills and knowledge to diagnose and repair heavy commercial vehicles in the Road Transport industry. This is a skill set covering the fundamental requirements for Light Vehicle technicians to diagnose and repair heavy commercial vehicles in the Road Transport industry.

## **Suggested words for Statement of Attainment**

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive Light Vehicle technicians required to diagnose and repair Heavy Commercial Vehicles. The units are drawn from endorsed Training Packages, and provide the skills and knowledge required by Light Vehicle technicians diagnosing and repairing Heavy Commercial Vehicles.

- AUR31112 Certificate III in Heavy Commercial Vehicle Mechanical Technology
- AUR31212 Certificate III in Mobile Plant Technology
- AUR31712 Certificate III in Forklift Technology

## Licensing/Regulatory Information

This skill set also involves licencing, legislative, regulatory or certification requirements. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **2 units of competency** must be completed.

Units	
AURETU2001	Install air conditioning systems
AURETU4007	Overhaul air conditioning system components

## Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to install and overhaul automotive air conditioning system components in an automotive workplace.

This is a skill set covering the requirements for installation and overhaul of vehicle air conditioning system components in the automotive retail, service and repair industry.

## Suggested words for Statement of Attainment

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive mechanical and electrical technicians required to install and overhaul automotive air conditioning system components. These units are drawn from the Nationally endorsed Training Packages, and provide the skills and knowledge required by persons installing and overhauling automotive air conditioning system components.

- AUR30412 Certificate III in Agricultural Mechanical Technology
- AUR30612 Certificate III in Light Vehicle Mechanical Technology
- AUR31112 Certificate III in Heavy Commercial Vehicle Mechanical Technology
- AUR31212 Certificate III in Mobile Plant Technology
- AUR31712 Certificate III in Forklift Technology

## Licensing/Regulatory Information

This skill set involves licensing, legislative, regulatory or certification requirements. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

## Skill Set Requirements

A total of **3 units of competency** must be completed.

Units	
AURETU2003	Service air conditioning and HVAC systems
AURETU3004	Diagnose and repair air conditioning and HVAC systems
AURETU3005	Retrofit and modify air conditioning and HVAC systems

## Target Group

The skill set targets automotive mechanical and electrical technicians who require the skills and knowledge to service, retrofit, modify, diagnose and repair automotive air conditioning and HVAC systems in an automotive workplace.

This is a skill set covering the requirements for servicing, retrofitting and modification, diagnosis and repairs to vehicle air conditioning and HVAC systems in the automotive retail, service and repair industry.

## Suggested words for Statement of Attainment

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive mechanical and electrical technicians required to service, retrofit, modify, diagnose and repair automotive air conditioning and HVAC systems. The units are drawn from Nationally endorsed Training Packages, and provide the skills and knowledge required by persons to service, retrofit, modify, diagnose and repair automotive air conditioning and HVAC systems.

## AURSS00022 Vehicle Refrigerant Recovery Skill Set

### Modification History

Release	Comment
Release 1	New skill set

### Description

Not applicable.

### Pathways Information

The skill set may be undertaken in addition to or as part of an automotive qualification or as a stand alone skill set.

### Licensing/Regulatory Information

This skill set involves licensing, legislative, regulatory or certification requirements. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

### Skill Set Requirements

A total of **1 unit of competency** must be completed.

Units	
AURETU2002	Recover vehicle refrigerants

## Target Group

This skill set targets persons working in a automotive parts dismantlers / parts recycler's workplace or those working in the automotive industry that require the skills and knowledge to recover vehicle refrigerants from end of life vehicle's in an automotive workplace environment.

This is a skill set covering the requirements for recovering vehicle air conditioning refrigerants in the automotive retail, service and repair industry.

## Suggested words for Statement of Attainment

This competency from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of those employed within an automotive parts dismantlers / parts recyclers, vehicle wrecking yard. The units are drawn from Nationally endorsed Training Packages, and provide the skills and knowledge required by persons recovering vehicle air conditioning refrigerants.

## AURSS00023 Advanced Body Repair Skill Set

### Modification History

Release 1	New skill set
-----------	---------------

### Description

Not applicable.

### Pathways Information

The skill set may be undertaken in addition to, or as part of:

- AUR32112 Certificate III in Automotive Body Repair Technology

### Licensing/Regulatory Information

This skill set also involves licencing, legislative, regulatory or certification requirements. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

### Skill Set Requirements

A total of 6 **units of competency** must be completed.

Units	
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles
AURVTA3002	Remove and replace supplementary restraint systems
AURVTN3023	Remove and replace adhesive bonded panels and structures
AURVTN3028	Identify and repair high strength steel components
AURVTN3029	Set up and operate universal measuring systems
AURVTN3035	Apply original equipment manufacturer repair procedures

## Target Group

The skill set targets automotive body repair technicians who require the skills and knowledge to conduct advanced body repairs.

This is a skill set covering the fundamental requirements for body repair technicians to conduct advanced body repairs.

## Suggested words for Statement of Attainment

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive body repair technicians required to conduct advanced repairs. These units are drawn from the Nationally endorsed Training Packages, and provide the skills and knowledge required by automotive body repair technicians.

## Custom Content Section

Not applicable.

## AURSS00024 Advanced Body Repair Welding Skill Set

### Modification History

Not applicable.

### Description

Not applicable.

### Pathways Information

The skill set may be undertaken in addition to, or as part of:

- AUR32112 Certificate III in Automotive Body Repair Technology.

### Licensing/Regulatory Information

This skill set also involves licencing, legislative, regulatory or certification requirements. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

### Skill Set Requirements

A total of 3 **units of competency** must be completed.

Units	
AURTTA3020	Apply heat-induction processes
AURVTW2003	Carry out gas metal arc welding procedures
AURVTW2005	Carry out spot welding procedures

### Target Group

The skill set targets automotive body repair technicians who require the skills and knowledge to conduct advanced body repairs.

This is a skill set covering the fundamental requirements for body repair technicians to conduct advanced body repair welding.

## **Suggested words for Statement of Attainment**

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive body repair technicians required to conduct advanced welding. These units are drawn from the Nationally endorsed Training Packages, and provide the skills and knowledge required by persons installing and overhauling body repair technicians.

## AURSS00025 Advanced Vehicle Refinishing Skill Set

### Modification History

Not applicable.

### Description

Not applicable.

### Pathways Information

The skill set may be undertaken in addition to, or as part of:

- AUR32412 Certificate III in Automotive Refinishing Technology

### Licensing/Regulatory Information

This skill set also involves licencing, legislative, regulatory or certification requirements. Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

### Skill Set Requirements

A total of **5 units of competency** must be completed.

Units	
AURETH4011	Deactivate and reinitialise power supply in hybrid electric vehicles
AURVTN3035	Apply original equipment manufacturer repair procedures
AURVTP3018	Carry out paint rectification for multi-layer and pearl using two component systems
AURVTP3024	Mix and apply clear over-base multi-layer pearl refinishing materials
AURVTP3025	Mix and apply water-based refinishing materials

## Target Group

The skill set targets automotive refinishing technicians.

This is a skill set covering the fundamental requirements for automotive refinishing technicians to conduct advanced refinishing activities.

## Suggested words for Statement of Attainment

These competencies from AUR12 Automotive Industry Retail, Service and Repair Training Package meet the needs of automotive refinishing technicians required to conduct advanced refinishing activities. These units are drawn from the Nationally endorsed Training Packages, and provide the skills and knowledge required by automotive refinishing technicians.

## AURAAA2001 Work in an automotive administration environment

### Modification History

Release	Comment
Release 1	Replaces AURA254280A Operate in an automotive administration environment Unit code updated to meet policy requirements. Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence to operate in an automotive administration environment. It includes determining a career path, meeting business expectations and employment requirements, managing daily work activities and contributing to the effective working of the team.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive business environment
-------------------------	---

### Licensing/Regulatory Information

Not applicable

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine potential career path and develop individual goals	1.1. Workplace health and safety (WHS) requirements, including personal protection needs, are observed throughout the work 1.2. Structure of the relevant automotive sector, including roles and functions of industry/association bodies, is identified 1.3. Personal skills are assessed to identify strengths and weaknesses 1.4. Business expectations are researched 1.5. Personal expectations are identified and goals determined 1.6. Potential career paths in automotive are researched and matched with personal goals 1.7. Training needs are identified and incorporated into career planning
2. Meet automotive administration employment requirements	2.1. Business organisational structure and individual roles and responsibilities are identified 2.2. Obligations to employers and others, including confidentiality requirements are complied with 2.3. Lines of communication and authority are identified and complied with 2.4. Work practices comply with legislation, regulations, codes of practice and team expectations, policies and procedures
3. Manage daily work activities	3.1. Own work role and responsibilities are identified and complied with 3.2. Lines of communication with supervisors, peers and external persons are identified and utilised 3.3. Individual tasks are identified, prioritised and completed within designated timeframes and business standards according to work schedule 3.4. Assistance is sought from appropriate persons when difficulties arise in achieving allocated tasks 3.5. Changes are made to workload or work priorities where unforeseen circumstances or developments occur 3.6. Own work is monitored and adjusted according to feedback obtained from supervisors and comparison with established business and workplace standards 3.7. Personal workspace is kept in a well organised and in a safe condition in accordance with workplace standards 3.8. Potentially discriminating and/or hazardous practices and policies are identified and reported to appropriate team persons

ELEMENT	PERFORMANCE CRITERIA
4. Contribute to a productive team environment	<ul style="list-style-type: none"><li>4.1.Information and knowledge relevant to work is shared with team members to ensure designated work goals are met</li><li>4.2.Personal work objectives are identified and prioritised in accordance with team requirements</li><li>4.3.Constructive feedback received from other team persons is encouraged, acknowledged and acted upon</li><li>4.4.Variations in the quality of components and/or work practices from team standards are detected and reported to appropriate team persons in accordance with team procedures</li><li>4.5.Assistance is actively sought from or provided to other persons when difficulties arise</li><li>4.6.Communication techniques are used to gather and understand relevant instructions</li><li>4.7.Signs of potential interpersonal conflict are identified, constructively acted upon and/or referred to a supervisor where appropriate</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to automotive administration, including roles and responsibilities, WHS requirements and potential career paths
- communicate ideas and information to enable articulation of personal goals and career choices, and information to team members in the workplace
- plan and organise activities, including equipment and resources to avoid backtracking, workflow interruptions or wastage
- work with others and in a team using cooperative approaches to optimise work practices and contribute to a productive team environment
- use mathematical ideas and techniques to interpret work instructions and complete specified tasks
- use problem-solving techniques to develop solutions to unpredicted situations, clarify work instructions where necessary, and resolve conflict
- use workplace technology related to measurement, including tools, equipment, calculators and measuring devices

#### Required knowledge

- structure of relevant sector of automotive industry
- roles of the industry associations and regulatory bodies
- roles and responsibilities of trainees
- source of information related to contract to train, including NAC and RTO
- authority and communication lines within automotive businesses
- work ethic and business expectations, including personal attitudes needed
- appropriate automotive terminology used to assist work performance
- goal setting methods and techniques
- communication principles and techniques
- conflict resolution principles and techniques

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret and apply business requirements
- Correctly apply and use safety equipment and personal protective equipment
- Follow task instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage to equipment or documents
  - achieve required outcomes within business time and quality standards
  - produce a career plan which covers:
    - personal goals and expectations
    - opportunities
    - timeframes and personal development needs
- Work with and around other team members
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment.

##### Context of and specific resources for assessment

- Assessment may occur on the job or in a workplace simulated facility with relevant stationery, office tools and equipment.
- Assessment of this unit of competence may include project related tasks and require portfolios or other forms of indirect evidence of process.
- Access to standard business policies and procedures related to job descriptions, WHS policy, authority and communication lines, as identified in the Range Statement.
- Personal protective equipment and information and procedures as identified in the Range Statement and a work environment.

##### Method of assessment

- Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competence.

##### Guidance information for

**EVIDENCE GUIDE****assessment**

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Business types</b>	Businesses may include but are not limited to those related to mechanical repairers, body repairers, vehicle sales, bicycle workshops, marine repairers, parts and aftermarket sales
<b>Business expectations</b>	<p>Business expectations include standards of:</p> <ul style="list-style-type: none"> <li>• dress, personal presentation, preparedness and personal conduct (including respect for the rights and responsibilities of others)</li> <li>• quality and timeframe of work and the role of excellence and innovation</li> <li>• knowledge of tools and equipment and specific work area functions</li> <li>• commitment, responsibility and preparedness for work, including working flexible hours to meet deadlines</li> <li>• confidentiality and ethical work practices</li> <li>• contribution to the overall effectiveness of the business</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• business policies and procedures relating to use of work areas, authorities and lines of communication</li> <li>• instructions, including worksheets, checklists and plans</li> <li>• procedures relating to reporting and communication</li> <li>• procedures relating to the use of tools and equipment</li> <li>• manufacturer/component supplier specifications and application procedures for materials, tools and equipment</li> <li>• WHS requirements include safety management systems, and safe operating procedures</li> <li>• work is carried out in accordance with legislative obligations, including environmental requirements, relevant health regulations, manual handling procedures and insurance requirements</li> <li>• industry code of ethics</li> <li>• relevant legislation related to trade practices, sale of goods, vehicle registration and privacy</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine fixed costs	<ul style="list-style-type: none"><li>1.1. Identify components of fixed costs</li><li>1.2. Use historical records and business knowledge to estimate fixed costs for next period</li><li>1.3. Calculate administrative and business operation overhead costs</li><li>1.4. Allocate proportion of fixed cost to be included in labour rate</li></ul>
2. Determine labour rate	<ul style="list-style-type: none"><li>2.1. Identify cost components of labour rate</li><li>2.2. Using historical records identify average chargeable hours of each category of staff</li><li>2.3. Calculate subcontractor cost component of jobs</li><li>2.4. Calculate applicable hourly retail rate for labour, including provision for fixed costs</li></ul>
3. Determine variable cost	<ul style="list-style-type: none"><li>3.1. Identify components of variable cost for job</li><li>3.2. Estimate and record materials required for the job</li><li>3.3. Use accounting records and details of job undertaken to calculate variable cost</li></ul>
4. Determine retail price of goods for resale	<ul style="list-style-type: none"><li>4.1. Research local market price for items</li><li>4.2. Estimate turnover volume of items</li><li>4.3. Calculate margins and mark-ups for each category of goods</li><li>4.4. Calculate effect of various discounts, loss leaders and specials on items based on retail price, volume and overall business flow-on</li><li>4.5. Calculate effect of high pricing strategy on some items</li><li>4.6. Monitor effects of price changes on business levels and profitability</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to determining retail rates
- communicate ideas and information to establish appropriate retail rates for work
- plan and organise activities to comply with requirements for determining business retail rates
- work with others and in a team to allocate charges
- use mathematical ideas and techniques to support the business operation
- solve problems to establish business
- use workplace technology to optimise performance

#### Required knowledge

- basic mathematical concepts, addition, subtraction, percentages and fractions

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>Calculate cost for a range of retail service and repair jobs, including fixed, variable and component pricing.</li> <li>Determine effect of price changes on overall business profitability.</li> <li>Gathering cost estimates from external service providers and documenting quotations.</li> </ul>
<b>Context of and specific resources for assessment</b>	<ul style="list-style-type: none"> <li>Accounts payable and cash disbursement records, payroll records, equipment cost and asset register, pricing impact charts, stock turnover records, calculator or computer.</li> </ul>
<b>Method of assessment</b>	<p>Practical assessments:</p> <ul style="list-style-type: none"> <li>determine hourly charge-out rate for classes of labour using proportion of fixed, variable and labour cost</li> <li>determine on-cost for parts and components</li> <li>determine effect of change in price on business profitability.</li> </ul>

Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish contact with customer	<ul style="list-style-type: none"><li>1.1.A welcoming customer environment is maintained</li><li>1.2.Customer is greeted warmly according to enterprise policies and procedures</li><li>1.3.An effective service environment is created through verbal and non-verbal presentation according to enterprise policies and procedures</li></ul>
2. Clarify specific needs of a customer	<ul style="list-style-type: none"><li>2.1.Customer needs are determined through questioning and active listening</li><li>2.2.Customer needs are accurately assessed against the products/services of the enterprise</li><li>2.3.Customer details are documented clearly and accurately in required format</li></ul>
3. Provide information and advice	<ul style="list-style-type: none"><li>3.1.Features and benefits of products/services provided by the enterprise are described/recommended to meet customer needs</li><li>3.2.Information to satisfy customer needs is provided</li><li>3.3.Alternative sources of information/advice are discussed with the customer</li><li>3.4.Alternatives are followed up</li></ul>
4. Follow up customer needs	<ul style="list-style-type: none"><li>4.1.Further information is dispatched to customer</li><li>4.2.Gaps in available information are identified and referred to relevant persons for action</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to specific needs of customers being identified
- operational skills and techniques in questioning/listening, resolving conflict, following set routines and procedures, handling difficult or abusive customers and greeting/farewelling techniques
- literacy skills in regard to message-taking in person or by telephone and completing written or computer documents of customer details
- plan and organise activities for implementation of a customer service plan
- work with others and in a team by team members with specific skills being sought to meet customer needs
- use mathematical ideas and techniques for customer timeframes being identified and followed
- establish diagnostic processes in which a logical approach to issues is followed
- use workplace technology related to technical skills in operating enterprise telephone systems and other communication equipment

#### Required knowledge

General knowledge of

- enterprise policies and procedures in regard to:
  - customer service
  - dealing with difficult customers
  - allocated duties/responsibilities
- the range of enterprise merchandise and services, location of telephone extensions and departments/sections
- legislation and statutory requirements, including consumer law, trade practices and fair trading legislation
- industry/workplace codes of practice in relation to customer service

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- consistently applying enterprise policies and procedures and industry codes of practice in regard to customer service
- providing a quality service environment by treating customers in a courteous and professional manner through all stages of the procedure
- using effective questioning/active listening and observation skills to identify customer needs
- communicating effectively with others involved in or affected by the work.

##### Context of and specific resources for assessment

- This unit may be assessed in conjunction with other units that form part of the job role or function.
- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
- Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
- The following should be made available:
  - a workplace or simulated workplace
  - documentation, such as enterprise policy and procedure manuals relating to customer service, enterprise telephone directory, legislation and codes of practice
  - a range of customers with different requirements (real or simulated)
  - a communication system or a range of communication equipment
  - enterprise products/services, features and benefits
  - a qualified workplace assessor.

#### Method of assessment

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by

**EVIDENCE GUIDE**

	customers, team leaders/members or other persons, subject to agreed authentication arrangements.
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Business types</b>	Enterprise may vary in size, type and location, and in the range of merchandise and services provided and in delivery policies
<b>Customers</b>	Customers may be regular or new and may have routine or special requests. They may include persons from a range of social, cultural or ethnic backgrounds and have physical and intellectual abilities. Regardless, all customers are made feel welcome, valued and, at the end of the process, satisfied. Customer contact may be face-to-face, by telephone or electronic means or in writing
<b>Customer service</b>	Customer service may include: <ul style="list-style-type: none"> <li>all enterprise activities, internal and external customers and follow-up in event of delays in service provision</li> </ul>
<b>Customer needs</b>	Customer needs may require information regarding: <ul style="list-style-type: none"> <li>products or services available, quality of products or services, complementary products or services, enterprise facilities and services, and the location of specific items</li> </ul>
<b>Staff</b>	Staff may be full-time, part-time or casual and vary in terms of training, product knowledge and in staffing levels. Staff may be operating in routine or busy trading conditions
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>enterprise policies and procedures relating to customer service, equipment and product manufacturer/component supplier specifications, enterprise operating procedures, industry/workplace codes of practice and customer requirements</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Confirm customer requirements	<p>1.1. Questioning and active listening techniques are used to clarify customer needs</p> <p>1.2. Customer requirements are elicited professionally, courteously, with tact and without presumptions</p> <p>1.3. Customer requirements are fed back accurately and concisely to the customer for confirmation</p> <p>1.4. Customer requirements are documented accurately in language that can be understood by the customer and by staff</p> <p>1.5. Customer requirements are documented in accordance with industry, legal and/or enterprise standards and procedures</p> <p>1.6. Customer acknowledgement and confirmation of the documented requirements are obtained</p>
2. Advise customer of available options	<p>2.1. Viable options to customer needs are generated by the employee</p> <p>2.2. Viable options that conform to industry, legal and/or enterprise policies and procedures are generated by the employee</p> <p>2.3. Suppliers are contacted to research options</p> <p>2.4. Options are explained and discussed with the customer to facilitate customer understanding</p> <p>2.5. Supporting information is made available to the customer, to facilitate customer understanding</p> <p>2.6. Benefits and approximate costs of each option are explained to the customer to facilitate informed decision making</p>
3. Inform customer of costs	<p>3.1. Customer is provided with estimated costs and timeframes of selected option</p> <p>3.2. Costs and timeframes are communicated verbally or in writing, in accordance with enterprise standards and procedures</p> <p>3.3. Sale or service conditions are explained to customer</p>
4. Agree action plan with customer	<p>4.1. Customer's preferred option, including agreed delivery timeframe, is detailed in action plan</p> <p>4.2. Agreed action plan is documented</p> <p>4.3. Customer commitment to agreed action plan is gained, in accordance with enterprise requirements</p> <p>4.4. Assistance with paperwork requiring completion by customer is provided</p> <p>4.5. Customer feedback is sought on services provided</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to collating and analysing customer requirements and information
- communication skills in relation to dealing with customers, difficult customers and managing conflict and negotiation
- literacy skills in regard to message taking in person or by telephone and completing written or computer documents of customer requirements and action plans
- plan and organise activities to select and follow processes/procedures to ensure desired outcome
- work with others and in a team by requesting and using information/assistance from colleagues
- use mathematical ideas and techniques to include numerical skills in relation to calculating/modelling various financial and/or insurance arrangements
- establish diagnostic processes which include operational skills and techniques in customer service and problem-solving skills
- use workplace technology related to technical skills in operating enterprise telephone systems and other communication equipment

#### Required knowledge

Knowledge of:

- industry/enterprise policies and procedures in regard to:
  - customer service
  - customer requirements/needs documentation
  - allocated duties/responsibilities
- the range of enterprise merchandise and services, location of departments/sections and telephone extensions of departments/sections, suppliers, finance and insurance
- legislation and statutory requirements, including workplace health and safety (WHS), consumer law, trade practices and fair trading legislation
- industry/workplace codes of practice in relation to customer service

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- identifying customer requirements professionally, courteously, with tact and without presumptions
- generating and advising customer of viable options to meet customer needs
- calculating and informing customer of detailed costs and timeframes of agreed option
- proposing and gaining agreement by customer to an action plan to satisfy customer needs.

##### Context of and specific resources for assessment

- This unit may be assessed in conjunction with other units that form part of the job role or function.
- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
- Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
- The following should be made available:
  - a workplace or simulated workplace
  - documentation, such as enterprise policy and procedure manuals relating to customer service, enterprise telephone directory, legislation and codes of practice
  - a range of customers with different complex requirements (real or simulated)
  - a communication system or a range of communication equipment
  - real or simulated customer documents or database
  - a qualified workplace assessor.

#### Method of assessment

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover the varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed

**EVIDENCE GUIDE**

authentication arrangements.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Unit scope</b>	Enterprises may vary in size, type and location, in the range of merchandise and services provided and in delivery policies
<b>Customers</b>	Customers may: <ul style="list-style-type: none"> <li>• be regular or new</li> <li>• have special or unusual requests</li> <li>• be from a range of social, cultural or ethnic backgrounds and with different physical and mental abilities</li> </ul>
<b>Staff</b>	Staff may be: <ul style="list-style-type: none"> <li>• full-time, part-time or casual and vary in terms of training, product knowledge and staffing levels</li> <li>• operating in routine or busy trading conditions</li> </ul>
<b>Complex customer requirements</b>	Complex customer requirements may include, but are not limited to: <ul style="list-style-type: none"> <li>• unusual or out of the ordinary problems, requirements of special or high importance customers, complex technical problems, matters involving more than one solution or area of service, needs of customers who have not been happy with some aspect of product or service provided or complex financial or insurance arrangements, such as lease, fleet or warranty extension arrangements</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• enterprise policies and procedures relating to customer service, equipment and product manufacturer/component supplier specifications, enterprise operating procedures, legislative and regulatory requirements, industry/workplace codes of practice and customer requirements</li> </ul>

## AURACA3003 Build customer relations

### Modification History

Release	Comment
Release 1	Replaces AURC362807A Build customer relations Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit of competency covers the competence to establish customer needs, maintain a customer database and ensure appropriate treatment of customers.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied: <ul style="list-style-type: none"><li>• retail, service and repair.</li></ul>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure maintenance of customer database	<ul style="list-style-type: none"><li>1.1.Evidence of maintenance of customer documents is sought regularly from staff responsible to ensure vital data is kept on existing and potential customers</li><li>1.2.Customer data is maintained to ensure database relevance and currency</li><li>1.3.Information on customers and sales and service history is gathered for analysis</li></ul>
2. Establish needs of customer	<ul style="list-style-type: none"><li>2.1.Customer needs are regularly monitored through formal and informal communication channels</li><li>2.2.Current products and services are assessed against customer needs to determine the ability of the enterprise to meet customer needs</li><li>2.3.Trends in customer service needs are documented and reported to appropriate persons periodically for planning purposes</li></ul>
3. Ensure appropriate treatment of customer	<ul style="list-style-type: none"><li>3.1.Service standards are reviewed regularly against outcomes to ensure required standards are met</li><li>3.2.Staff are trained to provide customer service to an appropriate standard to ensure consistent treatment of customers</li><li>3.3.Work activities of staff are reviewed regularly to ensure customer requirements are met</li><li>3.4.Business operations are reviewed to ensure they meet current and projected customer requirements</li><li>3.5.Staff are actively involved in providing information to improve customer service operations and activities</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to collating and analysing customer information to identify needs
- communicate ideas and information to conduct information sessions for staff
- plan and organise activities concerning information for database entries
- work with others and in a team by involving staff in improvements to customer service
- use mathematical ideas and techniques to plan database cells and size
- establish diagnostic processes which identify and recommend improvements to customer service
- use workplace technology related to use of customer database

#### Required knowledge

Knowledge of:

- enterprise policies and procedures in regard to:
  - customer service
  - maintenance of customer databases
  - dealing with difficult customers
  - allocated duties/responsibilities
- the range of enterprise merchandise and services, location of departments/sections and telephone extensions of departments/sections
- legislation and statutory requirements, including workplace health and safety (WHS), consumer law, trade practices and fair trading legislation
- industry/workplace codes of practice in relation to customer service

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- maintaining relevant and current customer databases in accordance with enterprise policies and procedures
- monitoring, reviewing and assessing customer needs and trends
- ensuring appropriate treatment of customers.

This unit may be assessed in conjunction with other units that form part of the job role or function.

##### Context of and specific resources for assessment

- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
- Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
- The following should be made available:
  - a workplace or simulated workplace
  - documentation, such as enterprise policy and procedure manuals relating to customer service, enterprise telephone directory, legislation and codes of practice
  - computer, database software, customer information and enterprise policies and procedures
  - a range of customers with different requirements (real or simulated)
  - a communication system or a range of communication equipment
  - real or simulated customer database
  - a qualified workplace assessor.

##### Method of assessment

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons, subject to agreed authentication arrangements.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Enterprises</b>	Enterprises may vary in size, type and location, range of merchandise and services provided and delivery policies
<b>Customers</b>	<p>Customers may:</p> <ul style="list-style-type: none"> <li>• be regular or new</li> <li>• have routine or special requests</li> <li>• be from a range of social, cultural or ethnic backgrounds and physical and intellectual abilities</li> </ul> <p>Regardless, all customers are made feel welcome, valued and, at the end of the process, satisfied. Customer contact may be:</p> <ul style="list-style-type: none"> <li>• face to face, by telephone, or electronic means or in writing</li> </ul>
<b>Customer service</b>	Customer service may include all enterprise activities, internal and external customers and follow-up in event of delays in service provision
<b>Staff</b>	<p>Staff may be:</p> <ul style="list-style-type: none"> <li>• full-time, part-time or casual and vary in terms of training, product knowledge and staffing levels</li> <li>• operating in routine or busy trading conditions</li> </ul>
<b>Customer needs</b>	<p>Customer needs may include:</p> <ul style="list-style-type: none"> <li>• information regarding available products or services, quality of products or services, complementary products or services, enterprise facilities and services or the location of specific items</li> </ul>
<b>Customer databases</b>	<p>Customer databases may include:</p> <ul style="list-style-type: none"> <li>• information on customer name, contact details, purchase history details of products or services, information requests, special needs and customer 'rating' by enterprise</li> </ul>
<b>Policies and procedures</b>	<p>Policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• enterprise policies and procedures relating to customer service, equipment and product manufacturer/component supplier specifications, enterprise operating procedures, legislative and regulatory requirements, industry/workplace codes of practice</li> </ul>

## AURAEA1001 Identify environmental requirements in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURC172003A Identify environmental regulations and best practice in a workplace or business Performance Criteria updated to reflect sustainability

### Unit Descriptor

Unit Descriptor	<p>This unit describes the performance outcomes required to identify environmental requirements and sustainability practices to be aware of potential environmental hazards in an automotive workplace.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work involves the theory, knowledge and the limited application of skills related to fundamental environmental and sustainability issues in an automotive workplace. Performance of work tasks that maintain sustainability and environmental considerations may be applied in the application of the unit.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability Skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Identify environment regulations and practices	1.1.Reasons for <b><i>ethical environmental practice</i></b> in an automotive workshop are identified 1.2.Environmental responsibilities of staff in an automotive workshop are identified 1.3. <b><i>Documents and procedures</i></b> relevant to environmental safety and <b><i>hazards</i></b> are located and reviewed 1.4.Penalties for individual breaches of legislation are identified and determined 1.5. <b><i>Safety equipment and other material</i></b> necessary to support environmentally sound practices are located and identified
2. Identify hazards to stormwater and wastewater drainage system	2.1.Actions are identified in relation to controlling waste water or <b><i>prescribed wastes</i></b> entering either stormwater or wastewater drainage systems 2.2.Storage methods for parts and components containing environmentally hazardous materials are identified 2.3.Recycling and storage procedures for liquid wastes are identified 2.4.Uses of a spill kit are identified and confirmed 2.5.Procedures are identified to keep workplace
3. Identify hazards to air quality	3.1.Hazards of airborne particles and methods to minimise and contain them are identified 3.2.Hazards of gases and fumes and methods to minimise and contain them are identified
4. Identify noise hazards	4.1.Effects of noise creating activities and methods to minimise these are identified
5. Identify sustainability practices	5.1. <b><i>Sustainability practices</i></b> are identified to minimise waste and sort and store items for recycling or disposal 5.2.Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are identified

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate verbal and written ideas and information relating to environmental issues of an automotive workplace
- initiative and enterprise to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - read and interpret workplace environmental procedures
  - read and interpret information in written instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- numeracy skills to measure and calculate length, area and volume
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental contamination and wastage

problem-solving skills to:

- recognise a workplace problem or a potential problem
- refer problems outside area of responsibility to appropriate person and suggest possible causes
- identify processes which contribute to improvements for environmental issues
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - identify and follow workplace documentation, such as environmental codes of practice and operating procedures
- teamwork skills to collaborate and cooperate with other team members
- technical skills to:
  - collect, organise and interpret technical information relating to recognising workplace situations that are potentially harmful to the environment
- technology skills to use workplace environmental safety-related technology to assist with clean and safe work practices

#### Required knowledge

- aspects of environmental legislation and its implications for work being undertaken in an

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
automotive business <ul style="list-style-type: none"><li>• characteristics and potential environmental impact of products used in the automotive industry</li><li>• philosophy of prevention, reuse, reduce, recycle</li><li>• procedures for use of spill kit</li><li>• effects of pollution and mitigation methods</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- demonstrate knowledge of environmental regulations and best practice as they would apply in an automotive workplace or business
- identify materials used in an automotive business and assess their environmental impact
- identify sustainability practices in an automotive workplace.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- access to environmental legislation, regulations and best practice models
- access to an automotive workplace or simulated environment that accurately reflects automotive workshop working conditions
- access to workplace documents and reference images
- access to personal protective and environmental protection equipment of the type intended to be used in response to an

<b>EVIDENCE GUIDE</b>	
	environmental incident or accident.
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Ethical environmental practice</i></b> may include:	<ul style="list-style-type: none"> <li>• conformance to legislative guidelines and obligations</li> <li>• hazardous materials handling best practice applications</li> <li>• organisation insurance requirements</li> <li>• discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</li> </ul>
<b><i>Documents and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• environmental legislation</li> <li>• material safety data sheets (MSDS)</li> <li>• hazardous substances register</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures.</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices.</li> </ul>
<b><i>Safety equipment and other material</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> <li>• waste bags</li> <li>• waste segregation systems.</li> </ul>
<b><i>Prescribed wastes</i></b> may include:	<ul style="list-style-type: none"> <li>• solid or liquid wastes</li> <li>• oil, fuel and grease</li> <li>• hydrocarbon based degreasing agents and solvents</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"> <li>• acids</li> <li>• alkaline wastes</li> <li>• paint, lacquer, varnish</li> <li>• glues and adhesive compounds</li> <li>• household chemicals and pesticides.</li> </ul>
<i>Sustainability practices</i> may include:	<ul style="list-style-type: none"> <li>• recycling waste</li> <li>• energy conservation practices</li> <li>• natural resources (water, etc.) conservation practices</li> <li>• reusing</li> <li>• environmental (green) purchasing practices</li> <li>• noise minimisation.</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and apply environment regulations	<p>1.1.Reasons for <i>ethical environmental practice</i> in an automotive workplace are identified</p> <p>1.2.Environmental responsibilities and penalties for individual breaches of legislation and regulations are identified</p> <p>1.3.<i>Documents and procedures</i> relevant to environmental safety and <i>hazards</i> are applied</p> <p>1.4.<i>Safety equipment and other material</i> necessary to support environmentally sound practices are identified and sourced</p>
2. Identify and avoid contamination to water systems and land	<p>2.1.Wastewater and <i>contaminants</i> are identified and prevented from entering water systems or contaminating land</p> <p>2.2.Parts and components containing hazardous materials are drained and stored in a sealed container</p> <p>2.3.Liquid wastes are put into storage or recycling containers and placed in an undercover bunded area</p> <p>2.4.Spill kit is located and used to prevent water or land contamination</p> <p>2.5.Spills are cleaned immediately and workplace is kept clean to prevent unintentional water or land contamination</p>
3. Identify and avoid hazards to air quality	<p>3.1.Hazardous airborne particles are identified, prevented, reduced and contained</p> <p>3.2.Hazardous gases and fumes are identified, prevented, reduced and contained</p>
4. Identify and avoid noise hazards	<p>4.1.Hazardous noise activities are identified, prevented, reduced and contained</p> <p>4.2.Hazardous noise activities are carried out within approved operating hours and regulations</p>
5. Identify and apply sustainability best practice	<p>5.1.<i>Sustainability best practice</i> is identified and applied to minimise waste and potential damage to the environment according to workplace policies and procedures</p> <p>5.2.Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are identified and applied</p> <p>5.3.Environmental damage and breaches of environmental regulations are reported</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - communicate verbal and written ideas and information as they relate to environmental regulations and sustainability best practice of an automotive workplace
- initiative and enterprise to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand workplace environmental procedures
  - read and apply environmental regulations for an automotive workplace
- numeracy skills to measure and calculate length, area and volume
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental contamination and wastage
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - identify processes which contribute to improvements for sustainability best practice
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to collaborate and cooperate with other team members
- technical skills to:
  - collect, organise and interpret technical information related to recognising workplace situations that are potentially harmful to the environment
  - use spill kits
- technology skills to use workplace environmental safety-related technology to assist with clean and safe work practices

#### Required knowledge

- effects of pollution and methods to minimise it
- environmental regulations and their implications for work being undertaken in an automotive workplace
- characteristics and potential environmental impact of products, equipment and machinery used

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<p>in the automotive workplace</p> <ul style="list-style-type: none"><li>• philosophy of prevention, reuse, reduce, recycle</li><li>• procedures for use of spill kit</li><li>• reporting procedures for environmental damage and breaches of environmental regulations</li></ul>

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• apply environmental regulations and sustainability best practice in an automotive workplace</li> <li>• identify materials used in an automotive workplace and assess their potential environmental impact</li> <li>• use a spill kit</li> <li>• report environmental damage and breaches of environmental regulations.</li> </ul>
<b>Context of and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• access to environmental legislation, regulations and best practice models</li> <li>• access to an automotive workplace or simulated environment that accurately reflects automotive workshop working conditions</li> <li>• access to workplace documents and reference images</li> <li>• access to personal protective equipment of the type intended to</li> </ul>

EVIDENCE GUIDE	
	be used in response to an environmental incident or accident.
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Ethical environmental practice</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• legislative obligations</li> <li>• environmental legislation</li> <li>• health regulations</li> <li>• hazardous materials handling procedures</li> <li>• organisation insurance requirements</li> <li>• discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</li> </ul>
<p><b><i>Documents and procedures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• hazardous substances register</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures.</li> </ul>
<p><b><i>Hazards</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices.</li> </ul>
<p><b><i>Safety equipment and other material</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> <li>• waste bags</li> <li>• waste segregation systems.</li> </ul>

RANGE STATEMENT	
<i>Contaminants</i> may include:	<ul style="list-style-type: none"> <li>• solid or liquid wastes</li> <li>• oil, fuel and grease</li> <li>• hydrocarbon based degreasing agents and solvents</li> <li>• acids</li> <li>• alkaline wastes</li> <li>• paint, lacquer, varnish</li> <li>• glues and adhesive compounds</li> <li>• household chemicals and pesticides.</li> </ul>
<i>Sustainability best practice</i> may include:	<ul style="list-style-type: none"> <li>• recycling waste</li> <li>• energy conservation practices</li> <li>• natural resources (water, etc.) conservation practices</li> <li>• reusing</li> <li>• environmental (green) purchasing practices</li> <li>• noise minimisation.</li> </ul>

## AURAEA3003 Monitor environmental and sustainability best practice in the automotive mechanical industry

### Modification History

Release	Comment
Release 1	Replaces AURT271781A Implement and monitor environmental regulations in the automotive mechanical industry Performance Criteria updated to reflect sustainability

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to apply and monitor environmental regulations and sustainability best practice whilst undertaking mechanical service or repair of light or heavy vehicles, motorcycles, outdoor power equipment or their components in the automotive mechanical industry.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work involves the theory, knowledge and application of skills related to environmental regulations and sustainability best practice in the automotive mechanical industry.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply and monitor environment regulations	<p>1.1.Reasons for ethical environmental practice in an automotive workplace are identified</p> <p>1.2.Environmental responsibilities and penalties for individual breaches of legislation and regulations are identified</p> <p>1.3.Documents and procedures relevant to environmental safety and hazards are applied</p> <p>1.4.Safety equipment and other material necessary to support environmentally sound practices are identified and sourced</p>
2. Monitor and avoid contamination to water systems and land	<p>2.1.Wastewater and contaminants are identified and prevented from entering water systems or contaminating land</p> <p>2.2.Surface cleaning, engine degreasing and preparation is undertaken in an impervious paved area and does not contaminate water systems or land</p> <p>2.3.Parts and components containing hazardous materials are drained and stored in a sealed container</p> <p>2.4.Liquid wastes are put into storage or recycling containers and placed in an undercover bunded area</p> <p>2.5.Parts washing is undertaken in an approved parts washer that does not cause contamination of water systems or land</p> <p>2.6.Spill kit is located and used to prevent water or land contamination</p> <p>2.7.Drip trays are used under vehicles to minimise spills</p> <p>2.8.Spills are cleaned immediately and workplace is kept clean to prevent unintentional water or land contamination</p> <p>2.9.Hands are cleaned over drains connected to an oil/water separator or drums for collection of liquid waste</p>
3. Monitor and avoid hazards to air quality	<p>3.1.Vehicle exhausts and emissions are minimised and prevented from collection in the workplace</p> <p>3.2.Welding is conducted in a well ventilated area</p> <p>3.3.Hazardous airborne particles are monitored, prevented, reduced and contained</p> <p>3.4.Hazardous gases and fumes are monitored, prevented, reduced and contained</p>
4. Monitor and avoid noise hazards	<p>4.1.Hazardous noise activities are monitored, prevented, reduced and contained</p> <p>4.2.Hazardous noise activities are carried out within approved operating hours and regulations</p>
5. Monitor and apply sustainability best	<p>5.1.Sustainability best practice is monitored and applied to minimise waste and potential damage to the environment</p>

practice	<p>according to workplace policies and procedures</p> <p>5.2.Methods to reduce resource consumption (water, electricity, fossil fuels, chemicals) are monitored and applied</p> <p>5.3.Environmental damage and breaches of environmental regulations are monitored and recorded</p>
----------	--

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - communicate ideas and information (verbal and written) as they relate to environmental regulations and sustainability best practice for an automotive mechanical workplace
- initiative and enterprise to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand automotive mechanical workplace environmental procedures
  - read and apply environmental regulations for an automotive workplace
  - record environmental damage and breaches of environmental regulations
- numeracy skills to:
  - interpret instruments, gauges and other recording equipment
  - measure and calculate length, area and volume
- planning and organising skills to:
  - identify risk factors and actions to minimise risk
  - identify planning, checking and inspection techniques to avoid environmental contamination and wastage
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - identify processes which contribute to improvements for sustainability best practice
- self-management skills to:
  - identify appropriate safety and environmental response equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - teamwork skills to work with others and in a team by cooperating with team members
- technical skills to:
  - collect, organise and interpret technical information related to recognising automotive mechanical workplace situations that are potentially harmful to the environment
  - use spill kits
- technology skills to use workplace environmental safety-related technology to assist with clean and safe work practices

#### Required knowledge

## REQUIRED SKILLS AND KNOWLEDGE

- aspects of environmental regulations and its implications for work being undertaken in an automotive workplace
- characteristics and potential environmental impact of products, equipment and machinery used in the automotive workplace
- philosophy of prevention, reuse, reduce, recycle
- procedures for use of spill kit
- effects of pollution and methods to minimise it
- actions to be undertaken in case of significant environmental threat in the automotive mechanical workplace
- monitoring and recording procedures for environmental damage and breaches of environmental regulations

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• monitor and apply environmental regulations and sustainability best practice as they apply in an automotive mechanical workplace</li> <li>• identify materials used in an automotive mechanical workplace and assess their potential environmental impact</li> <li>• monitor and record environmental damage and breaches to environmental regulations.</li> </ul>
<p><b>Context of and specific resources for assessment</b></p>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• access to environmental legislation, regulations and best practice models</li> <li>• access to an automotive workplace or simulated environment that accurately reflects automotive workshop working conditions</li> <li>• access to workplace documents and reference images</li> <li>• access to personal protective equipment of the type intended to</li> </ul>

## EVIDENCE GUIDE

	be used in response to an environmental incident or accident.
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Ethical environmental practice</i></b> may include:	<ul style="list-style-type: none"> <li>• legislative obligations</li> <li>• environmental legislation</li> <li>• health regulations</li> <li>• hazardous materials handling procedures</li> <li>• organisation insurance requirements</li> <li>• discretion, judgement and problem-solving skills in undertaking environmentally sound work practices.</li> </ul>
<b><i>Documents and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• hazardous substances register</li> <li>• workplace environmental procedures and safety instructions</li> <li>• dangerous goods code safe operating procedures.</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• toxic fumes and substances</li> <li>• flammable materials and fire hazards</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• unsafe lifting practices.</li> </ul>
<b><i>Safety equipment and other material</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE) including: <ul style="list-style-type: none"> <li>• eye protection</li> <li>• hearing protection</li> <li>• gloves</li> <li>• other suitable protective clothing</li> <li>• safety footwear</li> </ul> </li> <li>• spill kit</li> <li>• absorbent materials</li> <li>• drip and catchment trays</li> <li>• waste bags</li> <li>• waste segregation systems</li> </ul>
<b><i>Contaminants</i></b> may include:	<ul style="list-style-type: none"> <li>• solid or liquid wastes</li> <li>• oil, fuel and grease</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"> <li>• hydrocarbon based degreasing agents and solvents</li> <li>• acids</li> <li>• alkaline wastes</li> <li>• paint, lacquer, varnish</li> <li>• glues and adhesive compounds</li> <li>• household chemicals and pesticides.</li> </ul>
<i>Sustainability best practice</i> may include:	<ul style="list-style-type: none"> <li>• recycling waste</li> <li>• energy conservation practices</li> <li>• natural resources (water, etc.) conservation practices</li> <li>• reusing</li> <li>• environmental (green) purchasing practices</li> <li>• noise minimisation.</li> </ul>

## AURAEA4004 Manage environmental compliance in an automotive workplace

### Modification History

Release	Comment
Release 1	<p>Replaces AURC472082A Plan and manage compliance with environmental regulations in a workplace or business</p> <p>Unit code updated to meet policy requirements.</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence to plan and implement management system that ensures the protection of the environment in a workplace or business.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work involves the activities of an automotive business, including the planning and management of the occupations of glazing, accessory fitting, window tinting, trimming, and bicycles.</p> <p>This unit is applicable to qualifications at both the Certificate IV and V level. In recreational boating, vehicle body and some technical areas involving the removal of components containing oils or other fluids, specific environmental units of competency should be used.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills to improve environmental performance by reducing environmental risk and waste.</p> <p>Competence may be demonstrated in any automotive business excluding, body repair, marine and mechanical involving the removal of components containing oils or other fluids.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and manage compliance with environmental regulations	1.1.Reasons for ethical environmental practice in a workplace or business are identified 1.2.Environmental responsibilities of employers and employees in an automotive workplace or business are identified 1.3.Penalties for enterprise and individual breaches of the legislation are identified 1.4.Waste products are minimised and facilities provided for waste materials to be stored in bins for recycling or disposal 1.5.Collection and recycling arrangements are implemented for liquids, sludge, solids and other waste 1.6.Suppliers with minimal excess packaging on goods received are sourced and packaging on goods received is sorted and disposed of appropriately 1.7.Waste and energy conservation strategies are identified and implemented
2. Manage potential hazards to stormwater system to avoid contamination	2.1.Systems are in place to ensure wastewater does not enter the stormwater system 2.2.All drains and flows are identified on a worksite map directly indicating where they flow 2.3.Trade waste permits are in place 2.4.Undercover and bunded or drained areas are provided and used for the storage of all materials containing environmentally hazardous substances 2.5.Spill kit is provided and used to prevent stormwater contamination 2.6.Workplace is kept clean to prevent unintentional stormwater pollution
3. Manage potential hazards to air quality to avoid contamination	3.1.Hazards of airborne particles are identified, minimised and contained 3.2.Hazards of gases and fumes are identified, minimised and contained 3.3.A well-ventilated area is provided for any welding activities
4. Minimisation of noise hazards is planned and managed	4.1.Noise creating activities are minimised and carried out within approved operating hours 4.2.Fixed machinery is fitted with silencers or surrounded by noise containment material
5. Management systems	5.1.An environmental policy and contingency plan suitable to the needs of the business is developed and implemented 5.2.Waste to landfill is calculated and possible savings through

ELEMENT	PERFORMANCE CRITERIA
	<p>reuse and recycling are calculated</p> <p>5.3. Payback period on environmental equipment is calculated</p> <p>5.4. Manage staff adherence to environmental responsibilities</p> <p>5.5. Environmental documents are maintained and stored securely in a form accessible for reporting procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to environmental procedures from legislation, regulations, policies, guidelines, standards and workplace best practices in an automotive business
- communicate ideas and information to ensure all work undertaken is in accordance with environmental best practice, support from stakeholders is actively sought for implementing suitable innovation and continuous improvement
- plan and organise activities including the preparation of equipment and materials recycling and waste management systems and the selection of worksite to avoid environmental contamination, back tracking, workflow interruptions or wastage
- promote work with others and in a team by recognising dependencies and using cooperative approaches to minimise wastage, optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements and estimate material requirements required for the work and calculate wastage rates of various methods
- use planning, checking and inspection techniques to avoid environmental contamination and wastage
- use the workplace technology related to environmental protection and recycling equipment

#### Required knowledge

Knowledge of:

- aspects of environmental legislation and its relationship with workplace health and safety (WHS), finance and risk management
- requirements for trade waste permits
- spill clean-up procedures
- characteristics and potential environmental impact of products used in the business
- philosophy of sustainability through prevention, reuse, reduce and recycle
- procedures for rectifying machinery faults and material defects
- actions to be taken in case of environmental threat in the workplace
- reporting procedures for environmental damage occurring in the workplace
- cleaner production and eco-efficient strategies to avoid the production of waste

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Plan and manage safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Plan and manage environmental protection procedures
- Identify materials used in the business and assess and manage their environmental impact
- Plan and manage work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - maintain a clean workplace
  - prevent damage and wastage of goods, equipment and products
  - dispose of waste in accordance with legislative requirements and best practice
  - maintain production output, and product and service quality
- Report environmental damage or spills
- Plan and manage operator maintenance on equipment to ensure environmental efficiency
- Manage effective planning and teamwork related to environmental best practice
- Develop/implement or audit an existing business environmental policy which covers at a minimum: waste, recycling, hazards to stormwater, air quality, noise, energy minimisation and costs
- Modify activities to cater for variations in workplace context and environment.

##### Context of and specific resources for assessment

- Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines
- The following should be made available:
  - access to an automotive business which includes waste materials of various types, recycling bins, liquid, sludge and solid wastes
  - resources may include pressure washing and facilities for the use of recycled water.

**EVIDENCE GUIDE****Method of assessment**

- Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and should be in conjunction with assessment of other units of competence.
- Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a component authority.
- Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Automotive business</b>	Any automotive business excluding body repair, marine and mechanical involving the removal of components containing oils or other fluids
<b>Work procedures</b>	<p>Work is carried out in accordance with:</p> <ul style="list-style-type: none"> <li>• WHS legislation, material safety data sheets (MSDS), hazardous substances and dangerous goods code and local safe operating procedures</li> <li>• legislative obligations, environmental legislation, health regulations, and manual handling procedures and organisation insurance requirements</li> </ul>
<b>Tools and equipment</b>	<p>Tools and equipment are to include:</p> <ul style="list-style-type: none"> <li>• spill kits, recycling bins and drums</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• environmental legislation, regulations and advice</li> <li>• workplace procedures relating to the use of tools and equipment</li> <li>• work instructions and procedures</li> <li>• worksite environmental policy</li> <li>• workplace procedures relating to reporting and communication</li> <li>• manufacturer/component supplier specifications and operational procedures</li> <li>• local council and waterways regulations</li> <li>• MSDS, environmental documents, manufacturer/component supplier specifications, costing of equipment and waste removal</li> <li>• staff environmental induction material</li> </ul>

## AURFA2001 Use numbers in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURC251677A Use numbers in the workplace Performance Criteria updated to reflect the automotive workplace

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to make simple calculations and numerical estimations relating to vehicle repairs, parts and labour quotations and preparatory calculations for workplace documentation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work requires individuals to demonstrate entry level proficiency with numerically orientated problem-solving skills as they relate to vehicle repairs or workplace administrative documentation in an automotive workplace or setting.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect and organise numerical information	1.1.Relevant <i>examples of numerical information</i> are sourced 1.2.Numerical information is extracted from automotive workplace documents and compared to job requirements 1.3.Automotive mechanical text and related numerical information collected from other sources is checked and identified as relevant to task
2. Interpret and present automotive numerical information	2.1.Procedures are established for the interpretation of numerical information 2.2.Numerical information is identified and interpreted 2.3. <i>Calculations</i> are carried out to establish comparable numerical information 2.4.Calculations are checked for accuracy against numerical information 2.5.Numerical and related information is applied to inspection or repair activity 2.6.Evidence for interpretation of results is presented
3. Prepare and present other workplace numerical and related information	3.1. <i>Information and workplace documents</i> that support automotive workplace administrative functions are sourced 3.2.Quantities/resources required in the workplace are estimated 3.3.The time required to complete the task is estimated 3.4.Settings for equipment and machinery are estimated and adjusted 3.5.Estimates or calculations are documented according to workplace documentation procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information using calculations in reports and repair quotations
- initiative and enterprise to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand written numerical workplace procedures and documents
  - read and follow numerical information on written instructions, specifications, standard operating procedures, manuals, lists, mechanical drawings and other applicable reference documents
- numeracy skills to:
  - use mathematical ideas and techniques to count and measure
  - select and apply mathematical processes, including at a minimum; addition, subtraction, multiplication and division
- planning and organising skills to:
  - plan and organise activities using numbers/calculations in plans and work requirements
  - plan and organise activities relating to the reading of automotive specific text
- problem-solving skills to:
  - identifying suitable mathematical principles to solve numerical problems
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
- self-management skills to:
  - select and use appropriate written materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to work with others and in a team by seeing and conveying information relating to the calculating, planning, sequencing and completion of the task
- technical skills to collect, organise and understand information relating to collating figures, calculation and analysis
- technology skills to:
  - use available workplace technology relating to using numbers in an automotive workplace
  - use workplace technology to assist with information transfer

#### Required knowledge

- knowledge of workplace policies and procedures relating to the collection, storage and application of numerical information
- basic mathematical concepts

**REQUIRED SKILLS AND KNOWLEDGE**

- metric and non-metric systems of measurement as they relate to numerical calculations for vehicle repairs
- calculations including addition, multiplication, subtraction, division and percentages
- calculations involving whole numbers and fractions

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- identify and source relevant technical information
- gather and evaluate mathematical information relating to the problem or job requirement
- devise and implement mathematical and numerical solutions for a minimum of three key vehicle or workplace functions
- demonstrate mathematical and numerical solutions in workplace documentation.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice

The following resources should be made available:

- a workplace or simulated workplace
- documentation, such as workshop manuals, vehicle repair information, enterprise or sample documents, invoices, statements, stock records, job cards, repair quotations, personnel records, time sheets and supply quotations
- equipment for calculations, such as calculators or computers.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Examples of numerical information*** may include:

- manufacturer/component supplier specifications
- vehicle workshop / repair manuals
- equipment / component specifications
- automotive texts
- information sourced from enterprise-specific documents
- equipment or material supply quotations.

***Calculations*** may include:

- using simple mathematical equations with or without assistance of a calculator, relating to automotive oriented data and equipment, involving the use of:
  - counting
  - measurement
  - addition
  - subtraction
  - multiplication
  - division
  - whole numbers
  - fractions
- using metric and non-metric measurement systems
- using measuring devices.

***Information and workplace documents*** may include:

- repair quotations
- numerical invoices
- statements
- stock records
- job cards
- personal records
- time sheets
- computer records,
- supplier invoices or statements.

## AURFA2002 Read in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURC251356A Read in the workplace Performance Criteria updated to reflect the automotive workplace

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to read automotive workplace documents, such as safety procedures and workshop manuals, in order to perform routine tasks in an automotive or workshop setting.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work requires individuals to demonstrate entry-level proficiency to read automotive-specific texts and manuals so that decisions can be made regarding mechanical service and repair requirements.</p> <p>Work applies to the application of technical information gained from reading automotive text and should be contextualised to the service and repair of vehicles in an automotive workplace.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Read text that contains specialist information in a variety of formats	1.1. <b><i>Specialist text</i></b> is understood and correctly applied 1.2. Main points identified while <b><i>reading</i></b> are presented and applied as solutions or ideas 1.3. Meaning of new technical words is determined 1.4. Meaning of key words and phrases is determined 1.5. Text information of relevance to own role and responsibilities is identified and communicated to others as required

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to others relating to automotive-specific text in the workplace
- initiative and enterprise skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand written workplace specialist text relating to automotive service and repair tasks
  - read and follow information in specialist text, including specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- numeracy skills to understand numbers and mathematical units
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
- self-management skills to:
  - select and use appropriate written materials, processes and procedures
  - recognise limitations and seek timely advice
- technology skills to use workplace technology to:
  - read in an automotive workplace
  - assist with accessing and transferring information

#### Required knowledge

- techniques for understanding key ideas in specialist workplace text and documents
- common automotive workplace terminology
- procedures for accessing and reviewing workplace texts and documents

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- read automotive-related or business text and take appropriate action
- read equipment manuals to assist in operation and maintenance schedules
- apply information from written specialist texts
- extract key information and communicate it to others as required.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- written automotive text and repair information
- equipment and materials relevant to task
- workplace-specific documents, such as stock records, job cards, repair quotations, personnel records, time sheets and meeting notes
- operational forms, memos, messages and faxes
- equipment manuals

	<ul style="list-style-type: none"><li>• service bulletins</li><li>• dictionaries and other language aids.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Specialist text*** may include:

- workplace standard operating procedures
- product manufacturer and component supplier specifications
- instructions in vehicle workshop manuals
- service and repair bulletins
- industry codes of practice
- automotive text.

***Reading*** includes:

- reading and understanding text
- reading and interpreting specific business details and documents (e.g. service manuals and work or job orders) for own use and passing on to others
- reading and interpreting internal and external correspondence and taking action
- reading and interpreting manufacturers' installation and fitting instructions for ancillary equipment
- interpreting written text to enable action to be taken.

## AURAF2003 Communicate effectively in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURC270789A Communicate effectively in the workplace Performance Criteria updated to reflect the automotive workplace

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes to communicate in an automotive workplace by oral and written means, including the use of automotive technical terminology and vehicle and component descriptions as they pertain to modern motor vehicles.</p> <p>Work requires individuals to communicate effectively with other persons in an automotive workshop or setting and includes communicating specific technical information.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to day-to-day workplace communications and workplace correspondence relating to vehicle servicing and repair, technical workplace information, as well as general workplace communication procedures and instructions.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for communication activities	<p>1.1. <b>Documents, forms or other relevant sources of technical information</b> are sourced</p> <p>1.2. Items of stationery, documents or instructions appropriate to the method of communication are sourced</p> <p>1.3. Communication procedures are determined to minimise task time</p>
2. Read routine documents	<p>2.1. Purpose of the text is understood and described</p> <p>2.2. Main points or ideas identified by reading are presented and described</p> <p>2.3. Meaning of new technical words are comprehended and applied</p> <p>2.4. Meaning of key words and phrases is identified</p>
3. Write routine texts	<p>3.1. Routine texts of one or more sentences are composed according to workplace requirements</p> <p>3.2. Routine forms are completed according to workplace requirements</p> <p>3.3. Spelling, punctuation and grammar rules are followed</p> <p>3.4. Texts are self-checked for accuracy and presented for progress checks by relevant persons</p>
4. Contribute to workplace communications	<p>4.1. Information is conveyed by appropriate means to ensure <b>effective communication</b> when sending or receiving information</p> <p>4.2. Assistance is provided to colleagues in the workplace to foster common understanding</p> <p>4.3. Requests for information from colleagues are determined and responded to</p>
5. Operate workplace communication systems	<p>5.1. <b>Communication system functions</b> are used according to communication requirements and workplace policy</p> <p>5.2. Communication by telephone is carried out using customer relation practices according to workplace policy and procedures</p> <p>5.3. Communication by computer is carried out according to workplace policy and procedures</p> <p>5.4. Messages are responded to promptly and returned if required</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate ideas and information utilising plain English literacy and communication skills in relation to writing, reading and understanding workplace documents
  - oral communication skills in relation to conveying and receiving workplace information
- initiative and enterprise to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand written workplace procedures
  - read, interpret and follow information on written instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- numeracy skills to understand numbers and mathematical units
- planning and organising skills to:
  - plan and organise activities which communicate standard procedures
  - plan and organise activities to take or leave a telephone message
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
- self-management skills to:
  - select and use appropriate written materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to work with others and in a team by distributing information to team members
- technical skills to collect, organise and understand information relating to technical automotive workplace information
- technology skills to use relevant workplace technology related to communicating effectively in an automotive workplace by written or oral means

#### Required knowledge

- workplace forms, documents and stationery
- common automotive terminology
- manufacturers repair manuals
- enterprise policies and procedures including:
  - workplace document style, format and layout

**REQUIRED SKILLS AND KNOWLEDGE**

- workplace communication procedures
- workplace documents
- telephone protocols and operating procedures
- worksite reporting procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- write short routine texts using correct spelling, punctuation and grammar
- read, interpret and apply routine texts in the workplace
- interpret and convey workplace information
- apply and demonstrate workplace procedures for incoming and outgoing telephone calls
- maintain workplace communications, including documents.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice

The following resources should be made available:

- a workplace or simulated workplace
- documentation, such as enterprise sample policies and procedures manuals relating to workplace communication procedures
- workplace documents, telephone protocols and operating procedures
- enterprise or sample stationery, documents and forms

EVIDENCE GUIDE	
	<ul style="list-style-type: none"><li>• access to workplace or similar communication systems.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## AURFA2004 Solve routine problems in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURC252327A Identify, clarify and resolve problems Performance Criteria updated to reflect the automotive workplace

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to identify and clarify the nature of routine problems commonly encountered in an automotive workplace as they relate to automotive vehicle repair. It involves deciding on the best solution, implementing and evaluating solutions and assisting others to identify and resolve problems.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the process implemented when addressing a problem in relation to vehicle or equipment repair. This unit has application throughout all sectors of the automotive industry and can be applied to resource, equipment, job function, workplace environment or process related problems.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and clarify nature of the problem	1.1.Signs of <b>problems</b> are identified or anticipated 1.2. <b>Information and evidence</b> is gathered from a variety of sources 1.3.Detailed analysis of the information is prepared, listing all options 1.4.Relevant and irrelevant components of the problem are distinguished within the available timeframe
2. Determine criteria for optimal solution and implement solution	2.1.Range of possible <b>solution methods</b> are defined 2.2.Options and strategies are identified or devised 2.3.Strengths and weaknesses of each option and strategy are considered against determined criteria 2.4.The optimal solution is determined 2.5.An implementation strategy is prepared and presented to designated persons for approval 2.6.The chosen solution is implemented within available timeframe
3. Evaluate and report on effectiveness of solutions and outcomes	3.1.Criteria are established to determine if chosen solutions resolve the problem 3.2.The chosen solution is evaluated against the determined criteria 3.3.Follow-up procedures are implemented by investigating things that have gone wrong and developing <b>contingency arrangements</b> 3.4.The effectiveness of the solution is reported to the workgroup or designated persons
4. Assist others to identify, clarify and resolve problems in the workplace	4.1.Others are assisted to anticipate or identify the indicators of a problem 4.2.Others are assisted to investigate the problem 4.3.Others are assisted to devise and evaluate alternative options and strategies 4.4.Others are assisted to implement the chosen solution

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information relating to reading and understanding workplace documents
- initiative and enterprise to identify sources of information, assistance and expert knowledge to assist with problem solving
- literacy skills to:
  - understand written workplace procedures and documents
  - read and follow information in written instructions, specifications, standard operating procedures, charts and other applicable reference documents
- numeracy skills to use mathematical ideas and techniques where required for solution options
- planning and organising skills to plan and organise activities for a plan of action developed to solve problems
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - adopt strategic approaches to routine problem solving
  - establish diagnostic processes that use basic analytical and problem-solving skills relating to identifying, evaluating and resolving work-related problems
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
- self-management skills to:
  - select and use appropriate written materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to work with others and in a team by using basic communication and teamwork skills to assist others to solve problems
- technical skills to collect, organise and understand information relating to collating information to define problems
- technology skills to use workplace technology for research and to report on effectiveness

#### Required knowledge

- workplace policies and work procedures in relation to problem identification and problem solving
- problem identification, evaluation and reporting procedures
- problem identification, evaluation and reporting practices and strategies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- communicate effectively with others involved in or affected by the work
- identify indicators of problems or potential problems
- gather and evaluate information relating to the problem
- devise solutions
- implement solutions as they relate to mechanical or electrical faults or problems in an automotive workplace.

#### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- documentation, such as workplace or sample policies and procedures, vehicle workshop or repair manuals related to work procedures and problem solving
- vehicles with mechanical or electrical faults or problems requiring resolution.

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Problems</i></b> may include:	<ul style="list-style-type: none"> <li>• problems relating to normal work activities within the responsibility of the individual or workgroup</li> <li>• problems that arise relating to additional or non-standard work activities</li> <li>• problems caused by internal or external changes in work conditions or the environment.</li> </ul>
<b><i>Information and evidence</i></b> may include:	<ul style="list-style-type: none"> <li>• equipment or product manufacturer and component supplier specifications</li> <li>• workplace policies and procedures</li> <li>• customer requirements</li> <li>• repair quotations</li> <li>• legislation and regulations</li> <li>• industry and workplace codes of practice.</li> </ul>
<b><i>Solution methods</i></b> may include:	<ul style="list-style-type: none"> <li>• personal problem solving</li> <li>• mathematical problem solving</li> <li>• root cause analysis</li> <li>• brainstorming</li> <li>• lateral thinking</li> <li>• trial and error</li> <li>• substitution.</li> </ul>
<b><i>Contingency arrangements</i></b> may include:	<ul style="list-style-type: none"> <li>• technical evaluation</li> <li>• physical evaluation</li> <li>• formulating or revising plans</li> <li>• strategy development</li> <li>• evaluating procedures</li> <li>• time management</li> <li>• communication strategies.</li> </ul>

## AURFA2005 Write routine texts in an automotive workplace

### Modification History

Release	Comment
Release 1	<p>Replaces AURC251179A Write routine texts in the workplace and complete automotive documentation</p> <p>Unit code updated to meet policy requirements.</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence to write routine texts, ensuring correct grammar and punctuation are used, and to complete standard automotive forms.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied.</p> <ul style="list-style-type: none"><li>• retail, service and repair administration/sales.</li></ul> <p>Methods include:</p> <ul style="list-style-type: none"><li>• documenting details of a telephone message</li><li>• completing and lodging various forms.</li></ul> <p>Specific requirements include:</p> <ul style="list-style-type: none"><li>• information on routine operational matters</li><li>• writing to persons who are familiar with subject matter</li><li>• using correct grammar/punctuation.</li></ul>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Write routine texts	<ul style="list-style-type: none"><li>1.1.A text of one or two sentences is documented</li><li>1.2.A factual statement of one or two sentences is composed</li><li>1.3.Spelling, punctuation and grammar are accurate</li><li>1.4.Information is self-checked and presented for frequent progress checks by designated officer</li></ul>
2. Complete industry form	<ul style="list-style-type: none"><li>2.1.Identify correct form for purpose</li><li>2.2.Collect information for completion of form</li><li>2.3.Complete relevant sections of form</li><li>2.4.Organise for other sections of form to be completed by relevant persons</li><li>2.5.Gather supporting documentation or information</li><li>2.6.Determine signatory requirements and complete</li></ul>
3. Lodge form	<ul style="list-style-type: none"><li>3.1.Determine body for lodging form, due date and method of lodgement</li><li>3.2.Copy form and store in accordance with enterprise procedure</li><li>3.3.Lodge form with body with necessary supporting documents or payments</li></ul>
4. Follow up	<ul style="list-style-type: none"><li>4.1.Follow-up dates for action are noted in accordance with company procedure</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to writing routine texts and completing automotive forms in the workplace
- communicate ideas and information related to writing routine texts and completing automotive forms in the workplace
- plan and organise activities related to writing routine texts and completing automotive forms in the workplace
- work with others and in a team by seeking and conveying information related to the planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- utilise processes that identify methods to gather information and resolve questions related to writing routine texts and completing automotive forms in the workplace
- use workplace technology related to writing routine texts, completing automotive forms, sourcing information and lodgement of forms in the workplace
- 

#### Required knowledge

- written communication techniques
- routine enterprise texts/stationery
- enterprise policies and procedures for preparing written texts
- sources of information required on standard forms
- purpose of forms

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- writing short routine texts using correct grammar and punctuation
- use of correct form for the requirement
- correct completion of all aspects of the form
- correct lodgement procedure.

##### Context of and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job.
- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- Prescribed outcome must be able to be achieved without direct supervision.
- The following should be made available:
  - forms from government departments or agencies
  - car hire agreements
  - writing equipment and materials
  - enterprise-specific documents (e.g. time cards, leave application forms and requisitions)
  - telephones, faxes, email and internet
  - dictionaries and other written language aids.

#### Method of assessment

Practical assessments:

- complete routine business texts
- use correct grammar and punctuation
- identification and completion of form.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Forms</b>	Forms may include: <ul style="list-style-type: none"> <li>vehicle registration, change of ownership, insurance policies or car hire agreements</li> </ul>
<b>Lodgement</b>	Lodgement may be by: <ul style="list-style-type: none"> <li>post, hand, electronically or facsimile</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>information related to forms and requirements from government departments or agencies</li> <li>information related to completion and supporting documentation from government department or agencies</li> <li>information related to: <ul style="list-style-type: none"> <li>car hire agreements</li> <li>manufacturer/component supplier specifications</li> <li>enterprise operating procedures</li> <li>product manufacturer/component supplier specifications</li> <li>customer requirements</li> <li>industry/workplace codes of practice</li> </ul> </li> </ul>

## AURAF3008 Read and apply automotive repair instructions

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to source, read and apply workplace instructions in an automotive repair environment.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to the automotive repair industry and relates to all sectors in that environment. It involves the application of skills and knowledge to follow worksheets and work orders at a technician level.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and obtain repair instructions	1.1.Repair instructions are sourced and read 1.2. <b><i>Recommended repair procedures</i></b> are identified and relevant <b><i>information</i></b> is located and applied
2. Initiate work order for repairs	2.1.Repair instructions are followed 2.2.Equipment and material requirements are identified and checked for correct operation 2.3.Repair procedures are initiated where required according to original equipment manufacturer (OEM) recommended repair procedure and <b><i>workplace requirements</i></b>
3. Conduct work	3.1.Repairs are carried out in line with <b><i>instructions</i></b> and without causing damage to workplace property, vehicles, systems or components 3.2.Completed work is checked for compliance with worksheets, work orders and OEM specifications; and finalised to workplace quality standard

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow recommended repair procedure
  - follow workplace verbal instructions
- initiative and enterprise skills to recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, worksheets, work orders and OEM repair procedures
  - read and follow industry and workplace quality standards and procedures
  - document required repair procedures and parts
- numeracy skills to interpret and calculate OEM repair measurements
- planning and organising skills to:
  - plan repair requirements and follow job repair specification
  - identify risk factors and take action to minimise them
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate repair equipment, materials, processes and procedures
  - follow workplace policies and documentation, including industry codes of practice and procedures
  - respond positively to changing work requirements
- technical skills to use workplace tools relating to repair procedures, including:
  - specialist tools and equipment
  - measuring equipment
- technology skills to:
  - operate body repair and repair equipment
  - use technology to collect and provide information on repair processes

#### Required knowledge

- techniques for reading and interpreting regulations and technical documentation, such as worksheets and work orders, component specification sheets, workplace policies and procedures, and environmental regulations
- workplace health and safety (WHS) regulations and requirements relating to automotive repairs

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes for work required
- OEM-recommended repair procedures and quality processes
- workplace quality processes relating to automotive repairs

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- read and correctly interpret work sheets and work orders
- maintain working knowledge of repair systems and practices
- work and communicate effectively and positively with others
- apply, within scope of own role, the requirements of the job or work role to:
  - achieve work quality goals
  - effectively apply problem-solving techniques
- read worksheets and work orders
- establish correct work processes and material requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- worksheets
- work orders
- vehicle specification sheets
- vehicle repair requirements

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• vehicle job cards</li><li>• OEM-recommended repair procedures.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Recommended repair procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• OEM specifications</li> <li>• repair sequence</li> <li>• specialist equipment.</li> </ul>
<b><i>Information</i></b> may include:	<ul style="list-style-type: none"> <li>• award provisions</li> <li>• customer requirements</li> <li>• industry codes of practice</li> <li>• OEM repair procedures</li> <li>• symbols, codes, legends and diagrammatic representations</li> <li>• workplace manuals</li> <li>• workplace operating procedures</li> <li>• worksheets and work orders.</li> </ul>
<b><i>Workplace requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• access and equity principles and practices</li> <li>• environmental management: waste disposal, recycling and re-use guidelines</li> <li>• emergency and evacuation procedures</li> <li>• equipment use procedures</li> <li>• legal obligations</li> <li>• maintenance and storage procedures</li> <li>• WHS requirements</li> <li>• workplace and site guidelines</li> <li>• policies and procedures relating to own role and responsibility</li> <li>• quality guidelines</li> <li>• quality and continuous improvement processes</li> <li>• recording and reporting guidelines.</li> </ul>
<b><i>Instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• worksheets</li> <li>• work orders</li> <li>• OEM-recommended repair procedures</li> <li>• industry and workplace quality standards.</li> </ul>

## AURAF A5006 Prepare technical reports

### Modification History

Release	Comment
Release 1	Replaces AURT577520A Prepare technical reports Unit code updated to meet policy requirements. Licensing statement added to unit descriptor Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to identify and analyse requirements, to plan and conduct research, to evaluate information and findings, and to develop, document and present technical reports.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	A technical report is one that researches, analyses and reports on the specifications and/or effectiveness of existing or proposed technical systems, componentry, materials and/or processes.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the reporting requirement	<p>1.1.Purpose or objective of the report is identified, clearly defined and confirmed with the customer or sponsor.</p> <p>1.2.Project timeframe and outline plan of the main activities are prepared and confirmed with key parties.</p> <p>1.3.Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures.</p>
2. Plan the research effort	<p>2.1.Scope and nature of the information requirements are identified.</p> <p>2.2.All possible sources of the required information are researched and identified.</p> <p>2.3.A systematic research or information collection plan is designed to optimise the process.</p> <p>2.4.Resources are obtained and scheduled to service the research requirements.</p>
3. Conduct research	<p>3.1.Research is undertaken effectively in accordance with the plan.</p> <p>3.2.Experiments and tests to support the research effort are conducted in a manner which ensures the demonstrable integrity of the outcomes or findings.</p> <p>3.3.Research findings are logged, documented and stored to maintain traceability.</p> <p>3.4.Preliminary analysis is conducted to identify requirements for variations or additions to the research plan.</p>
4. Analyse the information	<p>4.1.Information is sorted, documented and prepared for the analytical process.</p> <p>4.2.Information and data is manipulated to enable reasonable comparisons and judgements.</p> <p>4.3.Clarification by way of expert advice and opinion is sought.</p> <p>4.4.Conclusions and findings reached are logical and based on objective analysis of the available data.</p>
5. Prepare and present the report	<p>5.1.Report clearly defines the objectives, process, findings and further actions.</p> <p>5.2.Report addresses and satisfies the stated objective and timeframe.</p> <p>5.3.Report and associated presentation materials are of a standard and quality for the intended audience.</p> <p>5.4.Reader comprehension of the report is aided by use of executive summaries and attachments.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.5. Protocols, conventions and legal requirements related to acknowledgements and intellectual property are applied.</p> <p>5.6. Information management requirements, including documenting and repository actions are satisfied in accordance with enterprise procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, collect, organise and understand technical information related to the subject area, developmental activities, testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to ensure the completeness, clarity and comprehension of the technical report by the target audience.
- plan and organise the research and writing effort to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise research and writing.
- use mathematical ideas and techniques to incorporate calculation, measurements, calibration and test requirements into research and validation activities.
- establish processes which anticipate and allow for risks, cater for both direct and indirect causes, avoid or minimise reworking and avoid wastage in the research and report preparation activities.
- use the workplace technology related to document preparation, including computing systems and information management systems, calculators and measuring devices.

#### Required knowledge

- technical writing and presentation techniques.
- enterprise (or equivalent) technical procedure formats, content rules, preparation and management techniques.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Locate, interpret and apply information.
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment.
- Identify and itemise steps and stages covering confirmation of objective, research planning and conduct and report preparation.
- Complete a significant technical report covering:
  - detailed research of the topic area
  - a full analysis of the research outcomes
  - conclusions and recommendations clearly supported by the facts
  - satisfaction of legal, regulatory or intellectual property law requirements.
- Modify activities to cater for variations in research findings.
- Work effectively with others.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated activity.

Access to a significant technical research and reporting requirement, information sources and a working environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include acceptance of the final outcome/report by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other projects.

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, safety management systems, hazardous substances and dangerous goods codes and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, environmental legislation, health regulations, authorised handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem-solving skills.</li> </ul>
<b>Workplace environment</b>	<p>Work may involve individual and team related activities.</p> <p>Work may be carried out in a commercial, workshop, laboratory or research establishment.</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.</p>
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>Workplace procedures relating to reporting and communication.</li> <li>Vehicle industry publications related to emerging system technology and technology changes.</li> <li>Professional publications.</li> <li>Automotive research collections and access facilities.</li> <li>Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>Manufacturer/component supplier specifications, schematics and operational procedures related to systems.</li> <li>Australian Standards.</li> <li>Australian Design Rules.</li> <li>Vehicle industry regulations.</li> </ul>

## AURAF5007 Develop and document specifications and procedures

### Modification History

Release	Comment
Release 1	<p>Replaces AURT577620A Develop and document specifications and procedures</p> <p>Unit code updated to meet policy requirements.</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse requirements and to develop and document technical specifications and procedures providing concise and unambiguous direction and guidance for workplace activities.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit covers the work involved in the research for and writing of specifications and procedures for the workplace.</p> <p>Work requires individuals to demonstrate conceptual ability, discretion, judgement and problem-solving skills.</p> <p>Work may involve individual and team related activities and will normally relate to the standard forms of activity performed in the enterprise and industry.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements	<ul style="list-style-type: none"><li>1.1.Information required for technical specifications and procedures is identified and assembled.</li><li>1.2.Specifications and procedures requirements and formats are established and confirmed, where necessary.</li><li>1.3.Requirements for information entry, storage, output and quality of document production are identified in accordance with enterprise procedures.</li><li>1.4.Specifications and procedures document design is appropriate for efficient entry of information and satisfies appearance and presentation requirements for the purpose of the document.</li><li>1.5.Range of functions incorporated in the document design reflects the nominated requirements.</li></ul>
2. Prepare specifications	<ul style="list-style-type: none"><li>2.1.Technical information for use in the specification is collected, tested and validated or confirmed before use.</li><li>2.2.Authoritative sources and references are identified and used in the preparation and presentation of the specification.</li><li>2.3.Specifications are written in a format, to ensure requirements can be met.</li><li>2.4.Specifications are written in a manner that is clear and understood in the workplace.</li><li>2.5.Specification documentation satisfies enterprise and industry standards.</li></ul>
3. Prepare technical procedures	<ul style="list-style-type: none"><li>3.1.Activities and tasks are identified, analysed and documented.</li><li>3.2.Activities and tasks are sequenced and logically grouped.</li><li>3.3.Procedures are documented to enterprise and industry standards.</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand technical information related to the specifications and procedures, testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to ensure the completeness, clarity and comprehension of the specifications and procedures by the target audience.
- plan and organise to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to incorporate measurements, calibration and test requirements into specifications and procedures.
- establish processes which anticipate and allow for risks, cater for both direct and indirect causes, avoid or minimise reworking and avoid wastage in the preparation and content of procedures.
- use the workplace technology related to document preparation, including calculators and measuring devices, computing systems and information management systems.

#### Required knowledge

- technical writing and presentation techniques.
- enterprise (or equivalent) technical procedure formats, content rules, preparation and management techniques.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Locate, interpret and apply information.
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment.
- Identify and itemise steps and stages in procedures.
- Complete a significant operational procedure, incorporating safety obligations, and covering:
  - a full analysis of the topic area
  - a step-by-step operational procedure
  - supporting documents to the procedure.
- Complete or review and update a specification for a significant system or sub-system covering:
  - system/sub-system description
  - components
  - materials
  - construction
  - circuitry
  - related information sources
  - legal, regulatory or intellectual property law requirements.
- Modify products to cater for variations in workplace cultures and environment.
- Work effectively with others.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility.

Access to systems requiring specification, activities requiring procedural coverage, related, technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not

**EVIDENCE GUIDE**

	<p>only to be satisfied under the particular circumstances, but is able to be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## AURAKA2001 Use information technology systems

### Modification History

Release	Comment
Release 1	Replaces AURA254180A Operate information technology systems Unit code updated to meet policy requirements. Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit of competency covers the competence involved in the use and application of enterprise information technology systems.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	--

### Application of the Unit

Application of the unit	This unit requires knowledge of the hardware and software in use, and the ability to enter, retrieve and use information.  This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied:  retail, service and repair.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use enterprise information technology systems	<p>1.1. Knowledge of enterprise information technology systems is accurately demonstrated and conveyed to other staff members</p> <p>1.2. Hardware is accurately identified and operated according to manufacturer/component supplier instructions and enterprise procedures</p> <p>1.3. Software, including databases, menus and electronic data interchange (EDI), is accurately identified and used according to manufacturer/component supplier instructions and enterprise procedures</p> <p>1.4. Application and uses of available software is accurately identified and used according to enterprise procedures</p> <p>1.5. Data is transmitted according to EDI procedures</p> <p>1.6. Keyboard skills are used accurately to enter information according to enterprise policies</p> <p>1.7. Back-up procedures are regularly performed according to enterprise procedures</p>
2. Edit/update information	<p>2.1. Information to be edited/updated is correctly identified according to enterprise procedures</p> <p>2.2. Information on system is accurately edited/updated according to enterprise procedures</p>
3. Solve problems	<p>3.1. Equipment/hardware/software faults are identified and rectified where possible or expert assistance sought without delay</p> <p>3.2. Maintenance programs for hardware and software systems are monitored and implemented according to manufacturer/component supplier specifications and enterprise procedures</p> <p>3.3. Routine problems are handled using appropriate problem-solving techniques and referred to appropriate persons</p> <p>3.4. Assistance is positively and actively provided to staff as problems arise</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- plain English literacy skills in regard to interpreting documentation and completing reports or documents
- information is provided according to enterprise policies and procedures
- back up procedures are planned for data
- involve staff in dealing with information technology issues
- enterprise version control procedures are followed
- establish diagnostic processes which develop problem-solving skills related to hardware and software problems
- technical skills in the operation of enterprise information technology hardware and software and the use, application and operation of databases, menus and EDI

#### Required knowledge

- operational knowledge of enterprise policies and procedures in regard to use of enterprise information technology systems, including:
  - use and maintenance of hardware and software systems
  - solutions to problems/breakdowns
  - operation of equipment
- operational knowledge of legislation for WHS, including use of screen-based equipment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies the ability to transfer the competence to changing circumstances and to respond to unusual circumstances in critical aspects of:

- consistently applying enterprise policies and procedures in regard to information technology systems, including resolution of systems faults and accessing/entering information on enterprise systems
- following requirements of legislation.

##### Context of and specific resources for assessment

- This unit should be assessed in conjunction with other units that form part of the job role or function.
- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
- Evidence is best gathered using products, processes and procedures of the individual workplace context as the means by which the candidate achieves industry competencies.
- The following are required:
  - a workplace or simulated workplace
  - documentation, such as enterprise policies and procedures manuals relating to information technology systems, legislation requirements, industry codes of practice, and hardware and software manuals
  - information technology systems
  - a qualified workplace assessor.

#### Method of assessment

It is preferable that assessment reflects a process rather than an event and that it occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Enterprise</b>	Enterprises may vary in size, type and location and in their range of products and services
<b>Information technology systems</b>	Information technology systems used may be centrally based, location-based or networked. Communications may be by network or by the internet
<b>Software</b>	Types of software may include: <ul style="list-style-type: none"> <li>• menus, databases or EDI</li> </ul>
<b>System problems</b>	System problems: <ul style="list-style-type: none"> <li>• may relate to hardware faults, breakdowns, software faults or staff abilities/training</li> <li>• may be solved by routine procedures, manufacturer/component supplier recommendations, lateral thinking or referral to a specialist/expert</li> </ul>
<b>Staff</b>	<ul style="list-style-type: none"> <li>• Staff may be full time, part time or casual and vary in terms of staff training, in staffing levels, e.g. staff shortages and in the range of responsibilities for information technology systems.</li> <li>• Staff may be operating in routine or busy trading conditions</li> </ul>
<b>Information</b>	Information to be entered may include: <ul style="list-style-type: none"> <li>• staffing information, customer details/records, including names, addresses and profiles, stock records, stock transfers, orders and delivery details</li> </ul>
<b>Equipment</b>	Equipment may include: <ul style="list-style-type: none"> <li>• a range of personal computers and computer terminals, which may be stand-alone or networked</li> <li>• information technology equipment such as scanning equipment, bar-coding equipment, point of sale terminals and pricing equipment</li> </ul>

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate the nature of the new technology	<ul style="list-style-type: none"><li>1.1.Training/information sessions are attended, to gain a full understanding of new technology</li><li>1.2.Technical sources are consulted to gain a full understanding of new technology</li><li>1.3.New technologies are analysed to determine their importance and value to the enterprise</li><li>1.4.Impact of new technologies on existing processes is analysed</li><li>1.5.Information about additional materials and equipment required to adopt the technology is communicated to staff</li></ul>
2. Modify existing work processes and procedures	<ul style="list-style-type: none"><li>2.1.Processes are modified to incorporate new technologies</li><li>2.2.Impact on workflow and productivity is minimised through effective planning and communication with staff</li><li>2.3.Staff are provided with training/information in the use of new technologies</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to adapting work processes to new technologies
- communicate ideas and information to supervisors related to adapting work processes to new technologies
- plan and organise activities adapting work processes to new technologies
- work with others and in a team by seeing and conveying information related to the planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish diagnostic processes which adapts work processes to new technologies
- use the workplace technology related to adapting work processes to new technologies

#### Required knowledge

Knowledge of:

- enterprise existing activity, processes and procedures relevant to application
- cost-benefit analysis principles
- analytical skills, processes and procedures
- planning, communication and management skills, processes and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- investigating the nature of new technologies and modifying existing work processes and procedures to incorporate new technologies into the workplace.

##### Context of and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job.
- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- Prescribed outcome must be able to be achieved without direct supervision.
- The following should be made available:
  - technical information, hand tooling, specialised tooling and equipment.

#### Method of assessment

Practical assessments:

- research and adapt a process to a previously unknown technology
- train staff in use of a new technology
- compare costs and benefits of a current process and one which incorporates a new technology
- make a recommendation as to whether a given technology should be introduced to the workplace, taking into consideration the value to the enterprise of the change
- plan and implement the introduction of a new technology into the workplace, with provision to minimise the impact on workflow and productivity.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	<p>Methods include:</p> <ul style="list-style-type: none"> <li>• analysis of existing work practices</li> <li>• planning</li> <li>• communication</li> <li>• research</li> </ul>
<b>Processes which may be modified</b>	<p>Processes which may be modified could include:</p> <ul style="list-style-type: none"> <li>• work/repair sequence</li> <li>• WHS practices</li> <li>• administration and/or documentation</li> <li>• stock control</li> </ul>
<b>New technologies</b>	<p>New technologies which could be incorporated into the workplace include:</p> <ul style="list-style-type: none"> <li>• new equipment or tooling, base materials or automotive systems</li> </ul>
<b>Unit context</b>	<p>Workplace example:</p> <ul style="list-style-type: none"> <li>• a body repair involving a multi-layer paint system is encountered for the first time in the workshop. The technician contacts the paint supplier to gather information on the paint system. Other persons might also need to be contacted to gain an understanding of how to effect the repair, such as the paint manufacturer or industry contacts who may have encountered such a paint system before and/or employer bodies. Because normal 'blending' is not possible, alternative methods for colour matching need to be determined after gathering information</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• manufacturer/component supplier specifications</li> <li>• technical journals, including workshop</li> <li>• manuals, tune-up manuals</li> <li>• enterprise operating procedures</li> <li>• customer requirements</li> <li>• industry codes of practice</li> <li>• legislation</li> </ul>

**RANGE STATEMENT****WHS requirements**

WHS requirements may include:

- state/territory WHS legislation
- award provisions

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Comply with service and repair contract and agreement legislation	1.1. Identify and comply with the rights and legal obligations of parties involved in a valid service and repair contract 1.2. Identify and comply with the legal liabilities of a repairer who performs service or repair work without a valid contract 1.3. Prepare draft documents that would form a valid contract for service and repair work in the automotive industry 1.4. Implement procedures to advise customers of the nature of the contract they are entering into requesting service and repair work to be undertaken 1.5. Implement procedures for staff to follow to ensure valid contracts are in place for all stages of work undertaken 1.6. Implement procedures to minimise liability or customer claims in relationship to bailment 1.7. Identify which regulatory bodies have authority to inspect the premises and the procedures for this to occur
2. Establish warranties in accordance with legal requirements and company policy	2.1. Ensure customer statutory rights have been protected 2.2. Ensure warranty documents have regard for fair trading principles 2.3. Ensure warranty interpretation is in accordance with company policy
3. Enforce contract in accordance with legal requirements and company policy	3.1. Develop company policy on payment terms for services rendered 3.2. Identify and observe different forms of liens and their applicability of the automotive industry 3.3. Identify and observe the legal rights and obligations of an automotive business in respect of the disposal or sale of uncollected vehicles or goods 3.4. Outline the legal procedure that should be followed for recovery of payment when a customer is in default of payment
4. Dispute resolution in the automotive industry	4.1. Implement procedures to minimise disputes with customers 4.2. Maintain necessary records to support positions in disputes with customers 4.3. Identify external sources of assistance in dispute resolution 4.4. Monitor customer disputes and resolutions to implement procedures for avoidance strategies

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to legal and ethical business dealings
- communicate ideas and information to customers and supervisors related to legal and ethical business dealings
- plan and organise activities related to legal and ethical business dealings
- work with others and in a team by observing and conveying information related to planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish and utilise processes that identify appropriate methods related to legal and ethical business dealings
- use workplace technology related to legal and ethical business dealings

#### Required knowledge

- legal and ethical requirements related to contracts
- warranty rights and responsibilities of suppliers and repairers
- components of a valid contract
- written communication and report writing skills procedures
- oral communication skills procedures
- assessing vehicle damage and recommended repair methods
- dispute resolution techniques

## Evidence Guide

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to determination of work roles	<p>1.1. Work roles for each group or team member are identified based on information and instructions about objectives, performance requirements and procedures</p> <p>1.2. Contributions are made to assist in the determination of the roles and responsibilities for the successful completion of work activities</p>
2. Contribute to planning of activities	<p>2.1. Suggestions and information are provided to contribute to the planning of work activities and associated procedures</p>
3. Organise and accept responsibility for own workload	<p>3.1. Priorities and deadlines are established and documented in consultation with others</p> <p>3.2. Work activities are planned and progress of work is communicated to others whose personal work plans and timeframes may be affected</p> <p>3.3. Work is completed to the standard expected in the workplace in accordance with guidelines, directions and instructions</p> <p>3.4. Variations and difficulties affecting work requirements are identified through regular reviews and action is taken to report these issues to appropriate persons</p> <p>3.5. Additional support to improve work is communicated clearly to appropriate persons</p>
4. Maintain enterprise dress and grooming standards	<p>4.1. Enterprise and/or industry dress standards and requirements are maintained</p> <p>4.2. Enterprise and/or industry grooming standards are maintained</p>
5. Work with others	<p>5.1. Forms of communication appropriate to the work activities are used</p> <p>5.2. Assistance in the completion of activities is requested</p> <p>5.3. Support is provided to colleagues to ensure designated team goals are achieved</p> <p>5.4. Contributions to the achievement of a required outcome are made</p> <p>5.5. Work is undertaken in accordance with procedures on an individual and shared basis</p> <p>5.6. Problems are discussed and resolved where possible through agreed and accepted processes</p> <p>5.7. Suggestions for improvements to process are made and discussed within the team</p>
6. Participate in identifying	<p>6.1. Competencies for the workplace are identified</p>

ELEMENT	PERFORMANCE CRITERIA
and meeting own development needs	<p>6.2.Organisational structure, career paths and development opportunities are identified</p> <p>6.3.Steps are taken, in consultation with appropriate persons, to identify own learning needs through assessment and planning for future work requirements</p> <p>6.4.Opportunities to learn and develop required competencies are undertaken, including establishing networks and working relationships with others</p>
7. Work effectively and responsibly	<p>7.1.Notification of shift/work availability or non-attendance for shift/work is given without undue delay and according to enterprise policies and procedures</p> <p>7.2.Staff rosters are interpreted</p> <p>7.3.Non-discriminatory attitudes are displayed when interacting with customers, staff and management</p> <p>7.4.Non-discriminatory language is used consistently</p> <p>7.5.Awards/enterprise agreements are identified and interpreted</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information to follow routine procedures and directions
- communicate ideas and information to plain English literacy and communication skills in relation to reading and understanding workplace documents
- plan and organise activities to carry out routine tasks with limited supervision
- work with others and in a team by informing supervisor of issues which will affect timeframes and goals
- use mathematical ideas and techniques to estimate requirements of tasks
- establish diagnostic processes which use basic analytical, problem-solving, negotiation and conflict management skills in relation to working with others
- use workplace technology related to documenting work progress on computers/information systems

#### Required knowledge

General knowledge of:

- enterprise work procedures
- group dynamics and the impact of working effectively with others on individual and group performance
- enterprise work systems, equipment, management and facility operating systems
- enterprise policies and procedures and legislative requirements in regard to:
  - workplace ethics
  - work availability or non-attendance
  - staff rosters
  - dress and grooming
  - discriminatory behaviour
  - harassment
  - equal opportunity
  - staff counselling and disciplinary procedures
- industry awards or enterprise/ workplace agreements

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- organising and accepting responsibility for own workload
- following the designated work plan for the job
- contributing to collective planning, cooperative work and effective outcomes
- cooperating with others to complete work-oriented activities
- participating in identifying and meeting own development needs
- consistently applying enterprise and/or industry standards of dress and grooming
- consistently and responsibly applying enterprise policies and procedures in regard to workplace ethics, including interpretation of staff rosters, notification of availability for work and allocated duties/job description
- consistently applying enterprise policies and procedures and legislative requirements regarding non-discriminatory language and attitudes
- knowing own rights and responsibilities regarding awards/enterprise agreements.

##### Context of and specific resources for assessment

- This unit may be assessed in conjunction with other units that form part of the job role or function.
- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
- Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
- The following should be made available:
  - a workplace or simulated workplace
  - documentation, such as enterprise or sample policies and procedures manuals related to ethics, employee and employer rights and responsibilities, dress and grooming,

<b>EVIDENCE GUIDE</b>	
	<p>discrimination, job descriptions and organisation charts</p> <ul style="list-style-type: none"><li>• legislation, such as equal employment opportunity, equal opportunity and anti-discrimination</li><li>• enterprise or sample awards and/or enterprise/ workplace agreements</li><li>• a qualified workplace assessor.</li></ul>
<b>Method of assessment</b>	<p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons, subject to agreed authentication arrangements.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Business types</b>	Enterprise may vary in size, type and location, the range of work activities conducted, hours of operation and the number and type of staff
<b>Staff</b>	Staff may: <ul style="list-style-type: none"> <li>• be full-time, part-time or casual and vary in terms of staff training and in staffing levels</li> <li>• be operating in routine or busy trading and may include persons from a range of social, cultural or ethnic backgrounds and physical and mental abilities</li> <li>• work in teams or groups of varying size and structure</li> </ul>
<b>Staff activities</b>	Activities may include: <ul style="list-style-type: none"> <li>• normal or routine work requirements or non-routine work requirements</li> </ul>
<b>Communication</b>	Communication may include: <ul style="list-style-type: none"> <li>• face to face, telephone, written or electronic means</li> </ul>
<b>Legislative requirements</b>	Legislative requirements may include: <ul style="list-style-type: none"> <li>• legislation or regulations in relation to WHS, equal opportunity, anti-discrimination, consumer law, trade practices and fair trading, industrial relations, and industry codes of practice</li> <li>• awards/agreements may include state/territory and federal industry awards and enterprise or workplace agreements</li> </ul>
<b>Policies and procedures</b>	Enterprise policies and procedures may relate to: <ul style="list-style-type: none"> <li>• organisational structure, work roles and responsibilities, career paths, work standards, dress and grooming standards, work objectives and performance requirements</li> </ul>

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Communicate information orally	1.1.The purpose of oral communication is clarified with either the speaker or the listeners 1.2.A suitable oral communication style is selected to match the communication purpose and audience 1.3.Oral information given to others is delivered clearly, succinctly and unambiguously 1.4.Where oral information has been given to others, the received information is checked with the listeners to ensure it has been received and understood 1.5.Oral information received from others is listened to carefully and intently 1.6.Where oral information has been received from others, its meaning is checked with the speaker to ensure it has been received and understood 1.7.Where an oral communication has been received inaccurately, it is repeated and/or clarified with further detail
2. Communicate information in writing	2.1.The purpose of the written communication is clarified with either the writer or the reader 2.2.A suitable written communication style is selected to match the communication purpose and audience 2.3.Written information given to others is delivered clearly, succinctly and unambiguously 2.4.Where written information has been provided to others, the received information is checked with the readers to ensure it has been received and understood 2.5.Written information received from others is read carefully and intently 2.6.Where written information has been received from another, it is checked with the writer to ensure it has been read and understood 2.7.Where a written communication has been read inaccurately, further detail is sought to clarify the message
3. Achieve meeting outcomes	3.1.Purpose of a meeting is clarified with those participating 3.2.When a meeting is chaired, it is well-planned with a clear agenda, time and place of meeting, and the meeting is conducted efficiently in accordance with official law and procedures of meetings and constitution or requirements of the organisation concerned 3.3.Outcomes of a meeting are documented and official minutes of the meeting are promptly provided to all participants

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4.Required action flowing from decisions reached at a meeting is documented</p> <p>3.5.Persons responsible for implementing action from decisions at a meeting are promptly notified and details of the required action confirmed in writing</p> <p>3.6.Follow-up action is taken to ensure all decisions of a meeting are acted upon</p>
4. Make a presentation	<p>4.1.Purpose of a presentation is identified and clarified with organisers and confirmed with the intended audience</p> <p>4.2.Information to be communicated in a presentation is suitably organised and structured in accordance with company requirements</p> <p>4.3.Resources available for the presentation are discussed with the organisers and suitable media selected for use in the presentation</p> <p>4.4.Presentation aids, such as overhead projector transparencies, handouts, speech notes and demonstrations, are organised and prepared in advance, in accordance with recognised standards of good practice</p> <p>4.5.Resources such as projectors, microphones and amplifiers are checked prior to the presentation to ensure they are functioning properly</p> <p>4.6.Presentation is made as planned with attention to the reactions and feedback provided by the audience</p> <p>4.7.Outcomes of the presentation are evaluated and acted upon in accordance with company procedures</p>
5. Negotiate a solution	<p>5.1.Preparation is made for the negotiation in accordance with company procedures, including consideration of subject matter, significance of outcomes for parties involved, facts, issues and options, and perceived positions of the parties involved</p> <p>5.2.A suitable negotiation strategy is selected in accordance with company requirements, including the location, time and approach to be taken</p> <p>5.3.Negotiations are conducted in accordance with planned approach</p> <p>5.4.Negotiation outcomes are reviewed in terms of desired outcomes of both parties and suitable action initiated according to company requirements</p> <p>5.5.Follow-up action to the negotiations is carried out, including discussions with other parties</p> <p>5.6.Outcomes of the negotiation are documented in accordance</p>

ELEMENT	PERFORMANCE CRITERIA
	with company requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to the communication of business information to customers, supervisors and other staff or relevant persons
- communicate ideas and information to plain English speaking and communication skills in relation to oral communications with customers, supervisors and other staff both informally and in making formal presentations
- writing skills to allow effective written communications in the workplace
- effective listening and interpersonal skills to enable effective communication in meetings and negotiations
- plan and organise activities to plan a presentation and an approach for the negotiation of an issue
- work with others and in a team by communicating with and involve team members in presentations
- use mathematical ideas and techniques to ensure meetings and presentations meet planned timeframes
- establish diagnostic processes which negotiate a solution to an issue
- use the workplace technology related to ensure the use of business technology to make a presentation

#### Required knowledge

Knowledge of:

- common automotive and enterprise terminology
- the activities, procedures and policies of the enterprise
- the requirements for oral communication
- conventions and requirements for written communications
- preparation, conduct of and follow-up from meetings
- preparing for and conducting a presentation
- negotiating techniques and their application

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- conducting oral communication in the workplace
- communicating in writing
- achieving meeting outcomes
- conducting presentations
- negotiating issues in the workplace.

##### Context of and specific resources for assessment

- This unit may be assessed in conjunction with other units that form part of a job role or function.
- Elements of competence contain both knowledge and practical components. Knowledge components may be assessed off the job. Practical components should be assessed on the job or in a simulated work environment.
- Evidence is best gathered using the products, processes and procedures of the individual workplace as the means by which the candidate achieves industry competencies.
- The following should be made available:
  - a workplace or simulated workplace
  - documentation, such as enterprise or sample policies and procedures related to work processes
  - real or simulated business information to be communicated
  - access to communication partners
  - a qualified workplace assessor.

#### Method of assessment

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Customers</b>	<p>Customers may be:</p> <ul style="list-style-type: none"> <li>• internal or external</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• work may be undertaken at any enterprise involved in the automotive industry</li> <li>• communication will occur within and between work groups and external to the enterprise at all levels</li> <li>• customer and supplier contact and coordination are a requirement of these operations</li> <li>• work may involve 24 hour operation at workplace or external locations</li> <li>• environment may be internal or external, administrative or industrial and may include movement of persons, equipment, goods, materials and vehicular traffic</li> <li>• the employee may work under general supervision, but may have some leadership/supervisory responsibilities</li> <li>• judgement and discretion in conducting workplace communication is required</li> <li>• conditions of service, legislation and industrial agreements may include workplace agreements and awards</li> <li>• WHS, including federal and state/territory legislation</li> <li>• consultative processes may include: <ul style="list-style-type: none"> <li>• other staff and supervisors</li> <li>• management</li> <li>• employee representatives</li> <li>• customers</li> </ul> </li> <li>• communications may be face to face, in writing, by telephone or other electronic means and may be formal or informal</li> <li>• documenting and reporting of information is in accordance with enterprise procedures and policies</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• operation manuals</li> <li>• quality or enterprise work specifications and procedures</li> <li>• manufacturer/customer requirements/issues</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• workplace operating procedures and policies</li><li>• material safety data sheets</li><li>• personal and work area work procedures and practices</li><li>• federal/state/territory legislation and codes of practice relating to the industry, dangerous and hazardous goods, environmental protection and WHS</li><li>• enterprise communications, management and inventory systems</li><li>• conditions of service and workplace agreements</li><li>• enterprise quality assurance procedures</li><li>• emergency procedures</li></ul>

## AURAMA3003 Conduct information sessions

### Modification History

Release	Comment
Release 1	Replaces AURC359350A Conduct information sessions Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit of competency covers the competence required to present technical and other information in structured sessions.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	--

### Application of the Unit

Application of the unit	This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied: <ul style="list-style-type: none"><li>• retail, service and repair.</li></ul>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
1. Prepare for session	1.1. Specific need to be met by the information session is confirmed 1.2. Arrangements are made for the time, place and duration of the session 1.3. Equipment, tooling and/or other resources required are organised to be available 1.4. Information is planned to be presented in a logical sequence
2. Present session	2.1. Participants are made aware of the reason for the session and relevance of information being presented 2.2. Information is presented clearly, with demonstration
3. Follow up outcomes of session	3.1. Participants are encouraged to raise questions on any aspect of the information session 3.2. Participant reactions to the session are sought and feedback is used to guide future presentation 3.3. Actions required as a result of the session are carried out

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to a presentation
- communicate ideas and information to conducting an information session
- plan and organise activities for an information session
- work with others and in a team by involving team members in the information session
- use mathematical ideas and techniques to ensure times are allocated and followed in the information session
- establish diagnostic processes which analyse issues raised and recommend solutions during the information session
- use workplace technology related to conducting information session

#### Required knowledge

Knowledge of:

- adult learning principles
- effective presentation techniques
- information session planning procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- presentation of technical and other information in structured sessions.

#### Context of and specific resources for assessment

- The underpinning knowledge and skills may be assessed on or off the job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be achieved without direct supervision.
- The following should be made available:
  - a workplace or simulated workplace
  - situations requiring information sessions
  - group of persons for the presentation
  - equipment, information, materials, and tooling
  - a qualified workplace assessor
  - technical training information.

#### Method of assessment

Practical assessments:

- plan and conduct information sessions on a range of topics, and include demonstration.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Maintain physical appearance of the workplace	1.1.Cleanliness and tidiness of the workplace is maintained in accordance with industry and/or enterprise standards of workplace health and safety (WHS) 1.2.Workplace is free of rubbish and waste in accordance with industry, WHS and enterprise requirements 1.3.Standards of cleanliness are communicated to staff in accordance with enterprise procedures 1.4.Customer reception area is maintained to enterprise standards 1.5.Defined areas for specific tasks are created and maintained to enterprise requirements 1.6.Facilities and equipment maintenance is planned and regularly carried out 1.7.Enterprise image and signage is displayed consistently throughout the organisation
2. Maintain enterprise dress and grooming standards	2.1.Expectations regarding dress and grooming are communicated to staff on a regular basis 2.2.Standards are updated as needs arise according to enterprise requirements 2.3.Dress and grooming of staff are monitored to ensure standards are met 2.4.Breaches of standards are identified and corrected
3. Implement waste disposal processes	3.1.Waste disposal is monitored to ensure compliance with environmental, WHS, industry and enterprise requirements 3.2.Recycling opportunities are identified and implemented in accordance with environmental legislative, industry and enterprise standards 3.3.Environment Protection Authority documents are maintained
4. Promote products and services provided by the business	4.1.Promotional activities are implemented as planned according to enterprise policies and industry and legal requirements 4.2.Products/services are sold to highest quality level according to enterprise policies, manufacturer/component supplier specifications, industry and legal requirements 4.3.Sales promotions/campaigns are actively supported

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to enterprise expectations
- communicate ideas and information to ensure staff are advised of enterprise requirements
- plan and organise activities for waste disposal processes
- work with others and in a team by using a team approach to maintain workplace appearance
- use mathematical ideas and techniques to budgets associated with sales campaigns
- establish diagnostic processes to resolve environmental issues
- use the workplace technology related to promote products and services

#### Required knowledge

Knowledge of:

- WHS requirements within the state/territory of operation
- industry and enterprise standards and requirements regarding physical appearance of the workplace, dress and grooming
- industry and enterprise standards regarding waste disposal processes
- enterprise standards regarding promotion of services and products
- environmental protection authority regulations and guidelines
- advertising codes and requirements for ethical advertising practices
- legal obligations and requirements

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- maintaining staff dress and grooming standards
- maintaining the physical appearance of the workplace
- implementing waste disposal processes
- promoting business products and services.

##### Context of and specific resources for assessment

- The underpinning knowledge and skills may be assessed on or off the job.
- The assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.
- The following should be made available:
  - a workplace or simulated workplace
  - enterprise or equivalent policy and procedures
  - enterprise stationery, forms/business documents
  - a qualified workplace assessor.

#### Method of assessment

Practical assessments:

- address staff breaches of dress and grooming standards
- complete Environmental Protection Authority (EPA) paperwork
- maintain the physical appearance of the worksite
- maintain enterprise dress and grooming standard
- implement waste disposal processes
- promote products and services provided by the business.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	Methods include: <ul style="list-style-type: none"> <li>written and verbal communication</li> </ul>
<b>Defined areas for specific tasks</b>	Defined areas for specific tasks may include: <ul style="list-style-type: none"> <li>lunchrooms</li> <li>work areas for specific tasks (e.g. paint, electrical, transmission and wheel alignment)</li> <li>warehouse areas</li> <li>office/administration areas</li> <li>workshop bays</li> </ul>
<b>Waste</b>	Waste may include: <ul style="list-style-type: none"> <li>materials</li> <li>products</li> <li>parts</li> <li>consumables</li> </ul>
<b>Corrective actions</b>	Corrective action to breaches of dress and grooming standards may include: <ul style="list-style-type: none"> <li>individual or group staff counselling, notices or memos</li> </ul>

## AURAMA4005 Manage complex customer issues

### Modification History

Release	Comment
Release 1	Replaces AURC463238B Manage complex customer issues Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to resolve complex customer complaints or issues.</p> <p>It requires the ability to communicate effectively and make an informed judgement.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who are required to manage and resolve complex customer issues in an automotive environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Examine the nature of the issue	1.1. Ascertain all facts relating to the issue 1.2. Use effective communication to understand customer feelings and opinions 1.3. Determine enterprise and/or supplier policies relating to the issue
2. Exercise judgement to resolve the issue	2.1. Determine implications of the issue for the customer and organisation 2.2. Analyse and negotiate options for resolution with the customer in accordance with legislative requirements and enterprise policies 2.3. Refer matters for which a solution cannot be negotiated to management
3. Document issue and outcome	3.1. Report outcome of the issue to management 3.2. Incorporate issue and outcome into customer feedback system

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology to manage, resolve and record customer issue
- communication skills to the level required to listen effectively to a customer complaint, negotiate effectively to resolve the issue and communicate effectively with the supervisor and other workers, and to relate to people from a range of social, cultural and ethnic backgrounds, and of varying physical and mental abilities
- literacy skills to the level required to identify and understand information related to the issue, the enterprise procedures to resolve issues, and to prepare a report on the issue and outcome
- numeracy skills to the level required to undertake any calculations related to the complex issue management
- problem-solving skills to the level required to undertake diagnostic processes that lead to a solution to the complex customer complaint
- team skills to the level required to seek advice from others to lead to a solution to the complex customer issues

#### Required knowledge

Required knowledge includes:

- negotiation and problem-solving strategies
- industry codes of conduct
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to resolving complex customer complaints
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to resolving complex customer complaints

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- understand and follow enterprise procedures to resolve customer complaints
- use a planned approach to resolve the complaint
- determine the facts and implications of the issue for both the customer and the organisation
- resolve the customer complaint to the satisfaction of both the customer and the enterprise
- document the resolved issue according to workplace procedures.

##### Context of and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - details of a range of complex customer complaints
  - workplace procedures related to customer service
  - legislation and codes of practice
  - computer hardware and software, calculators and general office equipment.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Complex issues

Complex issues may include:

- cost issues
- warranty issues
- policy matters
- commercial decisions taken
- code of practice adherence
- work standards
- time taken or time expected to repair
- selection of parts

#### Options for resolution

Options for resolution may include:

- rework
- reduced fee for work completed/agreed
- additional services for free/reduced fee
- referrals to other suppliers

#### Workplace procedures

Workplace procedures may include:

- customers issue resolution process and procedures
- industry and workplace codes of practice
- product manufacturer and component supplier specifications
- industry and workplace codes of practice

#### Legislative requirements

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to the setting of budgets and targets	1.1.Information for budgets and targets is collected within agreed timeframes 1.2.Budget and targets are set to achieve required levels of financial and business performance 1.3.Hourly rate is calculated based on business costs and margins, according to enterprise requirements 1.4.Expenditure requirements are agreed with appropriate persons, and provision is made in targets 1.5.Provision for unplanned costs is included in annual budget
2. Manage income and expenses	2.1.Expenditure and income for jobs is monitored on a regular basis 2.2.Financial information on jobs is collected on a regular basis and compared to budget 2.3.Corrective action for budget discrepancies is implemented 2.4.Invoices are prepared within timeframes according to industry and/or enterprise standards 2.5.Performance against budgets is monitored on a regular basis, and options for corrective action are discussed with management 2.6.Assistance is provided in the resolution of disputed accounts according to industry and/or enterprise standards and procedures for dispute resolution
3. Contribute to planning of business promotions	3.1.Promotional strategies are regularly reviewed with management 3.2.Adjustments to promotional strategies are discussed and agreed with management 3.3.New stock and/or display equipment required to support promotions is identified and arranged in a timely fashion 3.4.Displays are arranged to enhance enterprise image

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to contributing to business improvement
- communicate ideas and information to customers and supervisors related to contributing to business improvement
- plan and organise activities related to contributing to business improvement
- work with others and in a team by seeing and conveying information related to the planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish diagnostic processes which identify methods related to contributing to business improvement
- use the workplace technology related to contributing to business improvement

#### Required knowledge

Knowledge of:

- accounting principles
- how to set a budget
- hourly rate components, based on general industry models/formulas
- responses to a range of budget and target situations in the workplace
- marketing concepts and principles

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- contributing to the budget process, managing expenses in order to maintain levels of profitability within the specific area of responsibility, and contributing to the planning of business promotions.

##### Context of and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job.
- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- Prescribed outcome must be able to be achieved without direct supervision.
- The following should be made available:
  - enterprise stationery, telephone, forms/business documents.

##### Method of assessment

Practical assessments:

- calculate and review hourly rate, based on supplied business costs and margins
- discuss current budget status, based on provided data
- achieve department budgets
- discuss strategy for treatment of debtors and bad debts
- prepare analysis of current enterprise/department promotional strategies and recommendations for adjustments.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## AURANN4001 Prepare a vehicle repair quotation

### Modification History

Release	Comment
Release 1	Replaces AURC465349B Prepare a vehicle repair quotation Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to prepare a written vehicle repair quotation.</p> <p>It requires the ability to use numeracy and literacy skills to identify and document the costs.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who are required to prepare vehicle repair quotations in the vehicle repair and vehicle loss assessing industries. Vehicles may include light vehicles, heavy vehicles, agricultural and plant equipment, recreational boats, recreational vehicles and motorcycles.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information	1.1. Clarify the particular service required 1.2. Locate information sources 1.3. Gather any job cost estimation and calculation details 1.4. Obtain labour unit cost projections 1.5. Identify enterprise quotation elements and procedures
2. Estimate, cost and prepare vehicle repair quotation	2.1. Estimate and cost required parts and materials 2.2. Estimate and cost direct labour and subcontractor services 2.3. Estimate and cost overheads and mark-up percentages in accordance with enterprise procedures 2.4. Note potential quotation variations 2.5. Prepare a legible and accurate quotation using the enterprise approved format 2.6. Verify final costs, calculations and other details with relevant enterprise person
3. Present quotation to customer	3.1. Present verbal and written report to customer 3.2. Gain approval to complete repairs from customer 3.3. Complete documentation and file quotation as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use the internet and other workplace technology related to preparing a vehicle repair quotation
- communication skills to the level required to verify costs with others, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds, and of varying physical and mental abilities
- literacy skills to the level required to undertake costing research and to document and report findings
- numeracy skills to the level required to estimate and calculate labour, materials and on-costs and to validate work costs
- problem-solving skills to the level required to anticipate costing problems and to avoid reworking, wastage, and planning and scheduling problems
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- methods and processes for identifying, apportioning, summarising and validating total costs for work
- components of labour costs
- current assessing and quoting methodologies
- commercial approaches to warehousing and physical distribution and costing
- manufacturer and component supplier specifications and manuals, including costing catalogues
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to calculating vehicle repairs
- organisational policies and procedures, including quality requirements, reporting and recording procedures, related to calculating vehicle repair costs

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- select appropriate methods and techniques
- interpret proposals, specifications and instructions for the work
- obtain information relevant to the determination of costs
- calculate and cost accurately the quantities of parts and materials, the amount of labour and time required to complete the work and overheads for a range of vehicle repair quotes
- document the process and outcomes in accordance with enterprise practice.

#### Context of and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - vehicles requiring repair that can be used for quotations
  - appropriate worksite and costing details
  - manufacturer and component costs, labour rates, commercial and industry information
  - Repair Times manuals
  - equipment, including calculators, computer, internet and software
  - enterprise procedures.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Quotation</b>	<p>Quotation may include:</p> <ul style="list-style-type: none"> <li>• customer details</li> <li>• vehicle details</li> <li>• work to be performed</li> <li>• details of costs, including labour</li> <li>• legible and accurate documentation using the enterprise-approved format</li> </ul>
<b>Overhead costs</b>	<p>Overhead costs may include:</p> <ul style="list-style-type: none"> <li>• rental and leasing costs</li> <li>• utilities</li> <li>• non-production resources</li> <li>• depreciation of plant and equipment</li> <li>• warehousing margins</li> <li>• warehousing costs</li> <li>• insurance and other costs incurred by doing business</li> <li>• material/supply costs, including catalogues, contracts, standing agreements, market rates and warehousing margins</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• Motor Vehicle Insurance and Repair Industry Code of Conduct</li> <li>• verbal, written and graphical instructions</li> <li>• parts listing prices and catalogues</li> <li>• inventory systems</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures for inspection of vehicles for saleable components</li> <li>• engineer's design specifications and instructions</li> <li>• workplace specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> <li>• current driver's licence</li> </ul>

**RANGE STATEMENT****Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- duty of care

**WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures
- road rules
- safe driving policy

**Environmental requirements**

Environmental requirements may include:

- waste management
- noise
- dust
- clean-up management

**Organisational policies and procedures**

Organisational policies and procedures may include:

- financial management policies and procedures
- cost and apportioning overheads policies and procedures
- labour employment costs, including awards and contracts
- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice

## AURAQA2001 Contribute to quality work outcomes

### Modification History

Release	Comment
Release 1	Replaces AURC261314A Contribute to quality work outcomes Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit of competency covers the competence for the individual to be involved in the achievement of quality work outcomes and environmental compliance throughout work activities.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for quality work outcomes	1.1. Quality procedures are identified from worksite/enterprise and team quality requirements 1.2. Performance indicators for individual work are identified and agreed with the appropriate persons 1.3. Work plans and processes which facilitate the achievement of quality work outcomes are adopted
2. Comply with environmental requirements	2.1. Environmental requirements for the work are interpreted and considered as a factor in work planning/preparation 2.2. Environmental monitoring and control procedures are implemented during the work processes 2.3. Environmental incidents and potential problems are identified and responded to or referred to others in accordance with worksite requirements
3. Achieve and maintain quality work outcomes	3.1. Responsibility for monitoring quality of outputs is accepted and changes implemented by the individual, in accordance with worksite procedures 3.2. Performance indicators are monitored, adjusted and agreed to meet changing circumstances 3.3. Loss and damage incidents are minimised by monitoring work processes, reporting incidents and applying local risk control processes 3.4. Procedural improvements and/or recommendations are communicated to relevant persons

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to researching and interpretive skills to locate, interpret and apply operational quality and environmental information
- questioning and active listening skills, e.g. when obtaining information on quality and environmental working practices
- plain English literacy and communication skills in relation to dealing with others involved in the work
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret symbols used for quality and environmental signage
- plan and organise activities to plan performance indicators for individuals
- work with others and in a team by involving team members in recommendations for improvement
- use mathematical ideas and techniques to estimate value of improvements or costs of continuing with present procedures
- establish diagnostic processes which include basic problem-solving skills to assess quality and environmental issues
- use workplace technology related to the use of business technology

#### Required knowledge

General knowledge of

- quality systems in a workplace
- typical loss and damage control systems
- environmental legislative framework and licence provisions
- work planning processes
- workplace health and safety (WHS) regulations/requirements, equipment, material and personal safety requirements
- enterprise quality systems and processes
- worksite environmental procedures and key constraints
- worksite environment control measures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- identifying quality procedures and needs
- identifying individual performance indicators
- monitoring and adjusting performance indicators to meet changing circumstances
- satisfying performance indicators
- applying environmental control systems
- processing recommendations for change
- communicating effectively with others involved in or affected by the work.

#### Context of and specific resources for assessment

- This unit may be assessed in conjunction with other units which form part of a work role
- Assessment of this unit may be completed on the job or in a simulated work environment which reflects a range of quality processes and procedures
- The following should be made available:
  - a workplace or simulated workplace
  - situations requiring quality and environmental working practices
  - worksite or equivalent instructions on quality and environmental working practices
  - hazardous chemicals and/or dangerous goods information
  - materials, tooling and equipment and may include stationery, forms, business documents, job cards, internal memoranda and file notes.

#### Method of assessment

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying work process circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Quality procedures</b>	<p>Quality procedures may be contained in:</p> <ul style="list-style-type: none"> <li>• worksite quality system documentation, work instructions, safe work procedures, product specifications, equipment maintenance schedules, technical procedures and adopted or specifically prepared standards</li> </ul>
<b>Performance indicators</b>	<p>Performance indicators are to account for issues of time, quantity, quality and cost factors and may include:</p> <ul style="list-style-type: none"> <li>• establishing time targets for own work, identifying reasonable criteria for evaluating own work outcomes, identifying measures to avoid wastage, identifying reasonable criteria to judge internal and/or external customer satisfaction and identifying processes to ensure a 'right first time' approach</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements include:</p> <ul style="list-style-type: none"> <li>• state/territory legislation related to WHS and Australian Design Rules</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are those established under law and by the enterprise, and coverage may include:</p> <ul style="list-style-type: none"> <li>• dust control, water quality, wastewater management, chemicals handling, noise/vibration, fuel/oil handling and disposal, waste management and rehabilitation</li> </ul>
<b>Environmental control measures</b>	<p>Environmental control measures may include:</p> <ul style="list-style-type: none"> <li>• chemical management, dust suppression, water treatment, waste water processes, application of materials, compliance with noise/vibration standards and application of waste disposal procedures</li> </ul>
<b>Environmental reports and documents</b>	<p>Environmental reports and documents may include:</p> <ul style="list-style-type: none"> <li>• complaints register and incidental reporting procedures</li> </ul>
<b>Loss and damage incidents</b>	<p>Loss and damage incidents may include:</p> <ul style="list-style-type: none"> <li>• personal injury, loss and damage of plant, equipment and materials</li> </ul>

**RANGE STATEMENT**

<b>Communications</b>	Communications may be: <ul style="list-style-type: none"><li>• verbal, written, by telephone or by other means</li></ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"><li>• manufacturer/component supplier specifications, enterprise operating procedures, supplier directories, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets (MSDS) and HAZCHEM specifications</li></ul>

## AURAQA3002 Inspect technical quality of work

### Modification History

Release	Comment
Release 1	Replaces AURC361230A Inspect technical quality of work Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence to inspect work done by other staff, apply quality standards to work, and protect customer property and interests.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information to carry out inspection	1.1. Workplace health and safety (WHS) requirements, including state/territory regulatory requirements and personal protection needs are observed throughout the work 1.2. Information, such as Australian Design Rules, workshop manuals and specifications, are sourced 1.3. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.4. Technical and/or calibration requirements for inspection are sourced and support equipment is identified and prepared
2. Inspect work	2.1. Work is identified and confirmed for inspection in accordance with worksite procedures 2.2. Inspections are conducted to ensure in-house quality systems and procedures are maintained/followed in accordance with worksite and quality procedures 2.3. Level of observation and inspection conducted is appropriate to the skill/experience of the employee 2.4. Faults identified are brought to the relevant person's attention in accordance with worksite procedures
3. Apply quality standards to work	3.1. Inspections are conducted throughout the course of the work to ensure quality standards are maintained 3.2. Quality standards are applied during work completion to ensure the treatment of customer property meets industry and/or enterprise standards 3.3. Activities are coordinated throughout the workplace in accordance with worksite procedures 3.4. Documents of work quality are maintained according to worksite requirements
4. Achieve quality work outcomes	4.1. Damage to customer property is avoided through ensuring staff adherence to quality procedures and use of protective materials at all stages of the repair/service 4.2. Quality improvements and/or recommendations are communicated in accordance with worksite requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and interpretive skills sufficient to locate, interpret and apply manufacturer procedures, workplace policies and procedures
- analytical skills required for the identification and analysis of technical information
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information of technical quality working practices
- as applied to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interacting effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- such as number and space and techniques, estimation and approximation, for practical purposes
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and the desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- combine the physical and sensory skills needed to operate equipment with understanding of scientific and technological principles needed to explore and adapt systems

#### Required knowledge

Knowledge of:

- quality systems in a workplace
- common automotive terminology
- vehicle safety requirements
- work planning processes
- WHS regulations/requirements, equipment, material and personal safety requirements
- enterprise quality systems and procedures
- worksite environmental control measures
- worksite reporting procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- identifying and assessing hazardous situations and rectifying, or reporting to the relevant persons
- applying WHS policies and procedures
- identifying quality procedures
- inspecting work undertaken by others
- applying quality standards to work
- communicating improvements
- processing recommendations for change.

##### Context of and specific resources for assessment

- This unit will normally need to be assessed as a discrete entity. Performance may involve the application of a range of contributory competencies
- Assessment of this unit must be completed on the job or in a simulated work environment which reflects a range of quality processes and procedures
- The prescribed outcome must be able to be achieved without direct supervision
- The competence should be assessed within the context of the qualification being sought
- The following should be made available:
  - a workplace or simulated workplace
  - situations requiring inspections of technical quality
  - worksite or equivalent instructions on quality working practices and/or standards
  - computer hardware and software, access to electronic communication
  - access to information.

#### Method of assessment

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality

**EVIDENCE GUIDE**

circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Evidence of being able to:

- access, interpret and apply service information
- identify inspection requirements
- use service tooling and equipment
- observe safety procedures and requirements
- provide customer service
- prepare service reports
- communicate with customers orally and in writing
- maintain workplace documents.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Quality procedures</b>	<p>Quality procedures may be:</p> <ul style="list-style-type: none"> <li>contained in worksite quality system documentation, work instructions, safe work procedures, product specifications, equipment maintenance schedules, technical procedures, and adopted or specifically prepared standards</li> </ul>
<b>Quality inspections</b>	<p>Quality inspections may include:</p> <ul style="list-style-type: none"> <li>periodic inspection during the job or observation at completion of the job to ensure all ordered parts have been fitted, components used meet manufacturer/component supplier specifications, invoicing complies with service/repair/parts order and contains sufficient details of labour and/or components used, reported and diagnosed problems have been confirmed as rectified via test procedures and presentation of the vehicle or equipment after service/repair meets manufacturer and enterprise standards</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements may include:</p> <ul style="list-style-type: none"> <li>state/territory WHS legislation, manufacturer/ component supplier specifications and safe operating procedures</li> <li>environmental requirements, manual handling procedures and insurance requirements</li> </ul>
<b>Performance indicators</b>	<p>Performance indicators are to account for:</p> <ul style="list-style-type: none"> <li>issues of time, quantity, quality and cost factors and may include establishing time targets for own work, identifying reasonable criteria for evaluating own work outcomes, identifying measures to avoid wastage, identifying reasonable criteria to judge internal and/or external customer satisfaction and identifying processes to ensure a 'right first time' approach</li> </ul>
<b>Loss and damage incidents</b>	<p>Loss and damage incidents may include:</p> <ul style="list-style-type: none"> <li>personal injury, and loss and damage of plant, equipment and materials</li> </ul>
<b>Communications</b>	<p>Communications may be:</p> <ul style="list-style-type: none"> <li>verbal, written or by telephone or electronic means</li> </ul>

**RANGE STATEMENT****Information/documents**

Information/documents may include:

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct final quality check on completed work/orders	<ul style="list-style-type: none"><li>1.1. Completed work/orders are checked for compliance with supplier, enterprise or customer specifications</li><li>1.2. Level of inspection conducted is appropriate to the size and importance of the job</li><li>1.3. Documentation is authorised in accordance with enterprise requirements</li><li>1.4. Feedback is provided to staff on the quality of their work with equal emphasis on strengths and weaknesses and opportunities for development</li></ul>
2. Report on the quality of processes and work outcomes	<ul style="list-style-type: none"><li>2.1. Documents are kept according to enterprise quality systems on outcomes of quality checks</li><li>2.2. Quality problems are identified according to enterprise performance indicators</li><li>2.3. Information relating to the quality of processes and work outcomes is provided to appropriate persons on a regular basis</li></ul>
3. Implement improvements to work processes	<ul style="list-style-type: none"><li>3.1. Staff input is encouraged to generate possible solutions to quality problems</li><li>3.2. Options for solving quality problems are generated and the costs and benefits of each option are evaluated</li><li>3.3. Recommended solutions to quality problems are discussed with management</li><li>3.4. Improvements to work processes are implemented according to enterprise policies and procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and interpretive skills to locate, interpret and apply quality audit policies and procedures
- investigative and analytical skills required for identification and analysis of quality breaches, incidents or risks, and identification of quality related training needs
- English literacy and communication skills in relation to dealing with customers and team members on worksite quality audit issues
- questioning and active listening skills, for example when obtaining information of worksite operational and quality issues
- written communication skills sufficient to prepare reports, document investigations and maintain worksite quality documents
- plan and organise activities for leadership skills required in organising, implementing and promoting worksite quality systems and measures
- work with others and in a team by seeking advice and assistance from team members
- use mathematical ideas and techniques to document quantities and enterprise sampling procedures
- establish diagnostic processes which analyse problems and recommend solutions
- use the workplace technology related to document and analyse quality problems

#### Required knowledge

Knowledge of:

- quality systems and application techniques in a work environment
- typical loss and damage control systems
- work planning and organisation processes
- workplace health and safety (WHS) regulations/requirements, equipment, material and personal safety requirements at the worksite
- enterprise quality systems and procedures
- worksite information management systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

**EVIDENCE GUIDE**

Guidelines for the Training Package.

**Overview of assessment****Critical aspects for assessment and evidence required to demonstrate competency in this unit**

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- communicating effectively with others involved in or affected by the work
- identifying quality system procedures and needs
- identifying performance indicators
- conducting final quality checks on completed work orders
- reporting on the quality of processes and work outcomes
- processing and implementing recommendations for change.

**Context of and specific resources for assessment**

- This unit may be assessed in conjunction with units which form part of the normal job role
- Assessment of this unit must be completed on the job or in a simulated work environment which reflects a range of quality processes and procedures
- The following should be made available:
  - a workplace or simulated workplace
  - situations requiring worksite quality systems maintenance
  - worksite quality policies and procedures
  - worksite quality documents system
  - personnel
  - materials, tooling and equipment
  - a qualified workplace assessor.

**Method of assessment**

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover the varying circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Quality procedures</b>	<p>Quality procedures may:</p> <ul style="list-style-type: none"> <li>be contained in worksite quality system documentation, work instructions, safe work procedures, product specifications, equipment maintenance schedules, technical procedures and adopted or specifically prepared standards</li> </ul>
<b>Performance indicators</b>	<p>Performance indicators are to:</p> <ul style="list-style-type: none"> <li>account for issues of time, quantity, quality and cost factors and may include establishing time targets for own work, identifying reasonable criteria for evaluating own work outcomes, identifying measures to avoid wastage, identifying reasonable criteria to judge internal and/or external customer satisfaction and identifying processes to ensure a 'right first time' approach</li> </ul>
<b>Quality problems</b>	<p>Quality problems may include:</p> <ul style="list-style-type: none"> <li>misdiagnosed faults, jobs requiring rework, jobs which do not meet customer requirements and repairs which do not fix the problem within the allocated timeframe</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements include:</p> <ul style="list-style-type: none"> <li>state/territory legislation related to WHS and Australian Design Rules</li> </ul>
<b>Communication</b>	<p>Communications may be:</p> <ul style="list-style-type: none"> <li>verbal, written or by telephone or other means</li> </ul>
<b>Storage of documents</b>	<p>Documents of information are completed and may be stored:</p> <ul style="list-style-type: none"> <li>manually, electronically or by other means</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>vehicle manufacturer practices, enterprise operating procedures, supplier directories, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets (MSDS) and HAZCHEM, computer software manuals, bookkeeping procedures, taxation laws and regulations</li> </ul>

## AURASA1001 Apply automotive workplace safety fundamentals

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to identify basic safety and emergency procedures that are used to maintain a safe automotive workplace.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work involves the theory and knowledge related to fundamental safety and emergency issues in an automotive workplace.</p> <p>Performance of work tasks that take in to consideration automotive workplace safety and emergency procedures may be applied in the application of the unit.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify basic workplace safety practices and procedures	1.1.Reasons for safe work practice in an automotive workshop are identified and determined 1.2.Responsibilities of staff in an automotive workshop are identified 1.3.Worksite <b><i>policies and procedures</i></b> to achieve a safe working environment are identified 1.4. <b><i>Workplace health and safety (WHS) requirements</i></b> , including personal safety needs, are identified and applied 1.5.Potential unsafe workplace situations are recognised 1.6.Fire and safety <b><i>hazards</i></b> and precautions are identified 1.7.Dangerous goods and substances, including storage and safe handling, are identified
2. Identify emergency procedures	2.1.Location of worksite <b><i>emergency procedures</i></b> is identified and referred to 2.2.Safety alarms are identified 2.3.Fire fighting equipment and appliances are identified 2.4.Qualified persons to be contacted in the event of accident or sickness of customers or staff are identified 2.5.Worksite evacuation procedures are identified and applied

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate basic verbal and written information relating to workplace safety procedures
- initiative and enterprise to participate in self-improvement activities
- literacy skills to:
  - understand basic workplace safety-related procedures
  - read and follow information on written instructions
  - identify and understand information relating to recognising and reporting situations
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow standard safety procedures
- problem-solving skills to:
  - recognise a workplace problem or a potential problem
  - refer problems outside area of responsibility to appropriate person
  - identify, document and report numbers for emergency procedures
- self-management skills to:
  - locate and identify appropriate safety equipment
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as operating and safety procedures
- teamwork skills to work with others and in a team by cooperating with team members
- technical skills to understand technical information relating to recognising and reporting unsafe situations
- technology skills to use workplace safety-related technology to assist with safe work practices

#### Required knowledge

- WHS procedures and requirements, equipment, material and personal safety requirements relating to automotive workplace safety
- location and identification of fire-fighting appliances
- dangerous goods and hazardous chemicals handling and storage practices
- worksite emergency and evacuation procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- communicate safety matters effectively with others in an automotive workplace
- identify WHS requirements in the automotive workplace such as personal protective equipment (PPE)
- identify hazardous situations, and report to the relevant persons
- identify safe handling and storage of dangerous and/or hazardous goods and substances
- follow worksite emergency and evacuation procedures.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- a workplace or simulated workplace containing materials, tools and equipment used for automotive service and repair activities
- worksite or equivalent instructions on safe working practice
- hazardous chemicals and/or dangerous goods information

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• fire-fighting appliances and equipment.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Policies and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• job procedures and work instructions</li> <li>• safe working practices</li> <li>• enterprise operating procedures</li> <li>• hazard policies and procedures</li> <li>• emergency, fire and accident procedures</li> <li>• personal safety procedures</li> <li>• procedure for the use of personal protective clothing and equipment.</li> </ul>
<b><i>WHS requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• worksite documentation for WHS</li> <li>• industry or workplace codes of practice</li> <li>• emergency / incident signage or instructions.</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• sharp cutting tooling and instruments</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• flammable materials and fire hazards</li> <li>• lifting practices</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys</li> <li>• glue guns/burns.</li> </ul>
<b><i>Emergency procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• sickness or accident reporting procedure</li> <li>• fire or workshop evacuation involving staff or customers</li> <li>• environmental incidents</li> <li>• incidents / accidents involving harmful or hazardous substances.</li> </ul>

## AURASA2002 Apply safe working practices in an automotive workplace

### Modification History

Release	Comment
Release 1	Replaces AURC270103A Apply safe working practices Performance Criteria updated to reflect the automotive workplace

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes to apply basic safety and emergency procedures in order to contribute to a safe workplace for staff, customers and others.</p> <p>The unit involves the safety factors related to the use of automotive workplace hand tools and hand-held power tools, fixed equipment, chemicals, as well as vehicles and their use.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the safety and emergency procedures of automotive workplaces.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply basic safety procedures	<p>1.1. Worksite <i>policies and procedures</i> for safety are followed and maintained while performing work tasks</p> <p>1.2. Unsafe situations and <i>hazards</i> in the workplace are recognised and reported according to <i>workplace health and safety (WHS) requirements</i> and regulations</p> <p>1.3. Procedure and reporting guidelines for machinery and equipment breakdowns are identified</p> <p>1.4. Fire and safety hazards are identified and precautions are taken or reported according to workplace policy and procedures</p> <p>1.5. Storage and handling practices for dangerous goods and substances are identified and applied according to workplace policy, procedures and WHS requirements</p> <p>1.6. Workplace policy regarding manual handling practice is identified and followed</p> <p>1.7. Participation in WHS consultative arrangements established by company is exercised</p>
2. Apply emergency procedures	<p>2.1. Worksite policies and <i>emergency procedures</i> regarding illness or accidents are identified and applied</p> <p>2.2. Safety alarms are identified</p> <p>2.3. Fire fighting appliances and equipment are located and identified for emergency use</p> <p>2.4. Qualified persons are identified for contacting in the event of accident or sickness of customers or staff</p> <p>2.5. Accident and incident documentation practices are followed according to worksite accident and injury procedures</p> <p>2.6. Worksite evacuation procedures are identified</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate verbal and written information relating to reporting procedures and unsafe conditions
- initiative and enterprise to:
  - adapt to emerging situations in an automotive workplace
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand workplace safety-related procedures
  - read, interpret and follow information on written instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- numeracy skills to understand numbers and mathematical
- planning and organising skills to:
  - identify risk factors and take action to minimise risk
  - plan and organise activities which implement and follow standard procedures
- problem-solving skills to:
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - establish diagnostic processes which recommend improvements for WHS issues
- self-management skills to:
  - select and use appropriate safety equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - document and report numbers for emergency procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to:
  - work with others and in a team by assisting and cooperating with team members
  - work with diverse individuals and groups
- technical skills to:
  - collect, organise and understand technical information relating to recognising and reporting unsafe situations
- technology skills to use workplace safety-related technology to assist with safe work practices

#### Required knowledge

- implications for WHS of business operations and customer relations
- common automotive workplace safety terminology

**REQUIRED SKILLS AND KNOWLEDGE**

- WHS regulations, requirements, equipment and material and personal safety requirements
- safe manual handling theories and practices
- the location and application of fire fighting appliances in the workplace
- dangerous goods and hazardous chemicals handling processes
- workplace reporting procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- communicate effectively with others involved in or affected by the work
- identify and assess hazardous situations and rectify, or report to the relevant persons
- safely handle and store dangerous and hazardous goods and substances
- apply safe manual handling practices
- identify fire safety equipment and procedures applicable to emergency situations in an automotive workplace
- follow workplace safety, accident, incident and evacuation procedures.

**EVIDENCE GUIDE****Context of and specific resources for assessment**

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following should be made available:

- workplace location or simulated workplace
- worksite or equivalent instructions on safe working practice
- hazardous chemicals and dangerous goods information
- materials, tools and equipment relevant to an automotive workplace
- access to fire fighting appliances and equipment.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Policies and procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• hazard policies and procedures</li> <li>• emergency, fire and accident procedures</li> <li>• personal safety procedures</li> <li>• procedures for the use of personal protective clothing and equipment</li> <li>• use of motor vehicles</li> <li>• resolution procedures</li> <li>• job procedures and work instructions</li> <li>• safe working practices</li> <li>• workplace operating procedures.</li> </ul>
<b><i>Workplace health and safety (WHS)</i></b> requirements:	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• sharp cutting tooling and instruments</li> <li>• electricity and water</li> <li>• toxic substances</li> <li>• damaged packing material or containers</li> <li>• broken or damaged equipment</li> <li>• flammable materials and fire hazards</li> <li>• lifting practices</li> <li>• spillages</li> <li>• waste and debris especially on floors, ladders, trolleys.</li> </ul>
<b><i>Emergency procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• sickness or accident reporting procedure</li> <li>• fire or workshop evacuation involving staff or customers</li> <li>• environmental incidents</li> <li>• incidents and accidents involving harmful or hazardous</li> </ul>

## AURATA2001 Identify basic automotive faults using troubleshooting processes

### Modification History

Release	Comment
Release 1	Replaces AURC252103A Apply basic automotive troubleshooting processes Performance Criteria updated to reflect the automotive workplace

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to conduct troubleshooting processes to identify common automotive faults or problems based on evidence provided by customers.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the identification of basic automotive faults of motorcycles, light vehicles, heavy commercial vehicles, agricultural equipment, mobile plant and other industrial environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify nature of the fault or problem	<ul style="list-style-type: none"><li>1.1. <i>Questioning techniques</i> are applied to determine nature of the customer enquiry</li><li>1.2. <i>Workplace health and safety (WHS) requirements</i> are observed and applied throughout the work</li><li>1.3. Information relating to the <i>fault</i> or problem is gathered, documented and confirmed with customer</li><li>1.4. <i>Troubleshooting process options</i> are researched and those most appropriate to the circumstances are selected</li><li>1.5. Appropriate tools and equipment are selected and prepared</li></ul>
2. Identify fault using troubleshooting processes	<ul style="list-style-type: none"><li>2.1. Automotive system or component relating to the fault or problem is identified</li><li>2.2. Troubleshooting processes are performed according to workplace procedures and without causing damage to components or systems to identify the likely cause of the fault or problem</li><li>2.3. Report is forwarded to persons for action according to workplace procedures</li></ul>
3. Clean up work area and finalise work processes	<ul style="list-style-type: none"><li>3.1. Final inspection is made to ensure work is to workplace expectations</li><li>3.2. Tools and equipment are checked and stored according to workplace expectations</li><li>3.3. Workplace documentation is completed according to workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to:
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during troubleshooting operations
- numeracy skills to assess tolerances and apply accurate measurements
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use tools and equipment relating to troubleshooting processes
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- identification of basic automotive systems
- basic troubleshooting techniques and processes, including:
  - customer questioning skills to identify vehicle system in which fault lies
  - use of simple diagnostic charts
- procedures for reporting and documenting findings

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- identify a range of basic automotive faults
- conduct troubleshooting procedures according to workplace, manufacturer and component supplier requirements
- complete workplace documentation according to workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles and components with basic faults relevant to the qualification being sought
- equipment appropriate for the troubleshooting of basic automotive faults
- specifications and workplace instructions.

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Questioning techniques</i></b> may include:	<ul style="list-style-type: none"> <li>• open and closed questions</li> <li>• funnel, probing and leading questions.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Troubleshooting process options</i></b> may include:	<ul style="list-style-type: none"> <li>• analysis of available information to provide a list of tests to perform</li> <li>• use of diagnostic flowcharts</li> </ul>
<b><i>Fault</i></b> may include:	<ul style="list-style-type: none"> <li>• are basic in their scope</li> <li>• may include: <ul style="list-style-type: none"> <li>• lighting steering, suspension, braking, engine, drivetrain or fuel system faults</li> </ul> </li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Work instructions are used to determine job requirements</li><li>1.2. Job specifications are read and interpreted</li><li>1.3. Product/system/component/item to be manufactured/modified is identified</li><li>1.4. Engineering drawings are selected relevant to information required</li><li>1.5. WHS requirements, including personal protection needs observed throughout the work</li><li>1.6. Correct equipment is identified and checked for safe use</li></ul>
2. Read and interpret engineering drawings	<ul style="list-style-type: none"><li>2.1. Symbols, codes, legends and diagrammatic representations are correctly identified</li><li>2.2. Material specifications/finish and dimensions/tolerances are identified</li><li>2.3. Product/system/component/item represented by the drawing is correctly identified</li></ul>
3. Clean up work area and maintain equipment	<ul style="list-style-type: none"><li>3.1. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</li><li>3.2. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</li><li>3.3. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for viewing engineering drawings
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and obtaining of equipment and drawing versions to avoid backtracking, workflow interruptions or time wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly interpret drawing specifications
- use pre-checking and inspection techniques to anticipate planning and scheduling problems and avoid wastage of time
- use workplace technology related to the reading and interpretation of engineering drawings, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- common automotive terminology, symbols, codes, legends and diagrammatic representations
- ISO standards and/or Australian Design Rules and equipment safety requirements
- design theory and its application to the workplace
- engineering drawing procedures and interpretive techniques
- site reporting procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- reading and interpreting a range of engineering drawings covering both component manufacturing and modification

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the reading and interpretation of engineering drawings
- equipment, hand and power tooling appropriate to the reading and interpretation of engineering drawings
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

**EVIDENCE GUIDE**

	<p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods of identification</b>	Methods are to include identification of symbols, codes, legends and diagrammatic representations
<b>Interpretation</b>	Interpretation of manufacture/modification specifications
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, workplace environment and safety and enterprise first aid
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with site safety, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Resources</b>	Resources may include manual and electronic viewing aids
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and may include site specific instructions, written instructions, plans or instructions related to job/task,

**RANGE STATEMENT**

	telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• schedules/plans/specifications, memos, material safety data sheets, diagrams or sketches</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURATA2003 Produce drawings from design concepts

### Modification History

Release	Comment
Release 1	Replaces AURT225191A Produce drawings from design concepts Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to produce drawings of objects from design concepts.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	Drawings are to include assembly type components which are hand drawn and may include computer-aided drawings.  Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify object to be drawn	1.1.Purpose (and operational characteristics) of object to be drawn are identified 1.2.Production materials and method are identified
2. Establish design requirements and limitations	2.1.Type of drawing to be completed is identified 2.2.Design concept requirements are established and documented identifying dimensions, angles, shapes and finished size 2.3.Drawing conventions and specifications to be noted are identified and selected
3. Quantify and draft initial drawing	3.1.Dimensions are plotted from prototype sketch and documented specifications 3.2.Dimensional points are connected to match drawing view 3.3.Production notes or special requirements are noted 3.4.Drawing conventions and specifications are noted
4. Complete drawing	4.1.Angles, shapes and dimensions are checked against specifications and concept prototype drawing 4.2.Adjustments are made to the drawing within scope of authority 4.3.Drawing is checked for compliance with workplace documentation requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information
- research and interpretive skills to locate, interpret and apply drawing production techniques and procedures
- English literacy and communication skills in relation to dealing with others involved in design work
- questioning and active listening skills, for example when obtaining information of technical quality working practices and drawing production procedures
- apply planning and organising skills to one's own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other people both on a one-to-one basis and in groups, including understanding and responding to the needs of a client and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the production of drawings, including the use of measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- common automotive terminology and vehicle safety requirements
- design and techniques for translating concepts into form
- design standards, including Australian Design Rules
- technical drawing procedures
- detailed site reporting procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting specifications and measurements in two and three dimensional form
- presenting information within production drawings
- completing essential post-activity housekeeping

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the production of drawings
- equipment, hand and power tooling appropriate to the production of drawings
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce

**EVIDENCE GUIDE**

	<p>the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. ## AURATA3004 Provide technical guidance

### Modification History

Release	Comment
Release 1	Replaces AURC359554A Provide technical guidance Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence required to access and interpret technical information, assist staff with service/repair work, provide technical information to staff, and facilitate continuous education.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit of competency applies to the following and should be contextualised to the qualification to which it is being applied:</p> <ul style="list-style-type: none"><li>• retail, service and repair - mechanical/technical.</li></ul>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assist staff with service/repair work	1.1. Technical guidance, appropriate to skill level and need, is provided to staff when determining the repair/service method 1.2. Staff with advanced technical competence are used as a point of reference 1.3. Technical assistance is provided to staff, to identify difficult faults 1.4. Assistance is provided to staff during work completion, to ensure technical requirements are met 1.5. Potential faults are recognised and precautionary steps are taken to prevent them 1.6. Problems arising from the repair procedure are addressed
2. Provide technical information to staff	2.1. Technical information is made available to staff 2.2. Current technical information is communicated to staff on a regular basis 2.3. Staff are shown how to access, interpret and apply technical information 2.4. A range of information sources is accessed through an established network
3. Facilitate continuous education of self and others	3.1. Sharing of information/knowledge is encouraged to continue expansion of personal and team knowledge 3.2. Training and education opportunities are identified, to meet technical and business needs, and to enhance technical skills of self and staff 3.3. Approval to attend courses is sought from management to ensure current and future technical requirements are met

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to providing technical guidance
- communicate ideas and information to customers and supervisors related to providing technical guidance
- plan and organise activities related to providing technical guidance
- work with others and in a team by seeing and conveying information related to the planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish diagnostic processes that identify methods related to providing technical guidance
- use the workplace technology related to providing technical guidance

#### Required knowledge

Knowledge of:

- coaching principles
- sources of technical information
- technical training and education options for staff
- technical and technological developments to the sector of the industry in which one is employed

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- accessing and interpreting technical information, assisting staff with service/repair work, providing technical information to staff, and facilitating continuous education.

#### Context of and specific resources for assessment

- Underpinning knowledge and skills may be assessed on or off the job.
- Assessment of practical skills must take place only after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.
- The prescribed outcome must be able to be achieved without direct supervision.
- The following should be made available:
  - testing equipment and technical information.

#### Method of assessment

Practical assessments:

- effectively communicate with staff
- identify sources of technical information for a range of technical problems
- identify training and education opportunities for self and staff.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	Methods include: <ul style="list-style-type: none"> <li>interpreting technical information and mentoring</li> </ul>
<b>Technical requirements for work completion</b>	Technical requirements for work completion may include: <ul style="list-style-type: none"> <li>manufacturer/component supplier specification</li> <li>organisational quality standards</li> <li>Australian Design Rules</li> <li>industry standards</li> <li>recommended repair procedures</li> <li>precaution notes</li> </ul>
<b>Areas of advanced technical competence (mechanical)</b>	Areas of advanced technical competence (mechanical) may include: <ul style="list-style-type: none"> <li>engine management systems</li> <li>automatic transmission control</li> <li>air conditioning, including climate control</li> <li>advanced braking systems, including heavy vehicle testing</li> <li>LPG service and repair</li> <li>steering alignment (front, rear and 4WS)</li> <li>advanced steering systems</li> <li>preparation of race cars (mechanical)</li> </ul>
<b>Areas of advanced technical competence (body)</b>	Areas of advanced technical competence (body) may include: <ul style="list-style-type: none"> <li>body electronics</li> <li>advanced welding</li> <li>advanced colour matching</li> <li>restoration</li> <li>panel body alignment</li> <li>air-conditioning systems (gas and degas)</li> <li>airbags</li> <li>preparation of race cars (body)</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>in-house literature (electronic or paper-based)</li> <li>experience of others in the organisation</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• other industry contacts (network)</li><li>• spare part representatives</li><li>• insurance assessors</li><li>• industry bodies/associations</li><li>• Australian Design Rules</li><li>• manufacturer/component supplier information</li><li>• technical information may include:<ul style="list-style-type: none"><li>• workshop manuals</li><li>• trade publications</li><li>• manufacturer/component supplier service bulletins and repair procedures</li><li>• manufacturer/component supplier specialised training programs</li></ul></li></ul>
<b>WHS requirements</b>	WHS requirements may include: <ul style="list-style-type: none"><li>• state/territory WHS legislation</li><li>• award provisions</li></ul>

## AURATA3005 Estimate complex jobs

### Modification History

Release	Comment
Release 1	Replaces AURC365722A Estimate complex jobs Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency covers the competence required to estimate the time requirements for complex jobs, source requirements, gather cost estimates from external service providers and document quotations.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit of competency applies to retail, service and repair complex estimation work within the repair sector of the automotive industry.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>Competence may be demonstrated in a workplace environment or simulated workplace.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Estimate time requirements for jobs	<p>1.1. Time estimates for job requirements are calculated based on warranty times, staff estimates, standard service/repair times, specifications, and subcontracted timeframes</p> <p>1.2. Service/repair times are estimated and compared to documented estimate to ensure repair job is viable</p> <p>1.3. Turn-around times for work completed by subcontractor are incorporated into total time estimates</p>
2. Source parts	<p>2.1. Viability of replacement compared to repair is ascertained to meet quality standards and legal requirements</p> <p>2.2. Part requirements are determined to ensure cost constraints are met</p> <p>2.3. Parts and consumables required for the job are ordered</p> <p>2.4. Parts are sourced externally when internal stock is not available to meet customer requirements</p>
3. Identify subcontract testing and/or service/repair work costs for incorporation into the total estimated cost	<p>3.1. Estimate is documented</p> <p>3.2. Service/repair requirements, procedures and costs are documented in a logical order</p> <p>3.3. Service/repair requirements are documented in detail</p> <p>3.4. Estimate is relevant to the identified service/repair requirements</p> <p>3.5. Potential variations are noted on the estimate</p>
4. Estimate total job costs	<p>4.1. External service providers are given a clear outline of the work and time requirements of the job</p> <p>4.2. Job cost estimate is documented and agreed with external service providers</p> <p>4.3. Parts and consumables are costed according to industry and/or enterprise pricing standards</p> <p>4.4. Supplementary estimate is prepared, to gain authorisation from owner for additional service/repairs</p> <p>4.5. Final estimate is documented</p> <p>4.6. Authorisation is gained from customer to commence work and/or undertake supplementary work</p>
5. Report estimations to customer	<p>5.1. Report of findings is completed in the enterprise-approved format</p> <p>5.2. Customer is advised of the estimation</p> <p>5.3. Job card is completed and delivered to appropriate persons</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- analytical skills required for the identification and analysis of technical information
- plain English literacy and communication skills in relation to dealing with customers and team members
- questioning and active listening skills for example when obtaining information from customers
- oral communication skills sufficient to convey information and concepts to customers
- as applied to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interacting effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques such as number and space and techniques, e.g. estimation and approximation, for practical purposes
- apply problem-solving strategies in purposeful ways, both in situations where the problem and the desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- combine the physical and sensory skills needed to operate equipment with understanding of scientific and technological principles needed to explore and adapt systems

#### Required knowledge

Knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- principles of estimating and job costing
- enterprise quality procedures
- work organisation and planning processes
- contract law
- sale-contracting principles
- written communication and report writing skills procedures relevant to application
- oral communication skills procedures relevant to application

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- estimating in accordance with workplace requirements
- estimation is carried out to manufacturer/component supplier requirements
- estimation of the work completed within workplace timeframes
- report presented to customer is in compliance with workplace requirements.

##### Context of and specific resources for assessment

- This unit will normally need to be assessed as a discrete entity. Performance may involve the application of a range of contributory competencies.
- Assessment of this unit must be completed on the job or in a simulated work environment which reflects a range of quality processes and procedures.
- The prescribed outcome must be able to be achieved without direct supervision.
- The competence should be assessed within the context of the qualification being sought.
- The following should be made available:
  - a workplace or simulated workplace
  - enterprise stationery, telephone and forms/business documents
  - repair order, job cards and quotes/estimates
  - computer and software, calculator
  - hand tooling, workshop equipment
  - access to information

**EVIDENCE GUIDE****Method of assessment**

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.

Evidence of being able to:

- access, interpret and apply service information
- identify estimating and job costing procedures
- accurately estimating time required for a job involving sublet work and/or a mix of service/repair disciplines (e.g. mechanical, electrical and body)
- estimate on a wide variety of jobs, including non-routine jobs
- justify a repair job deemed to be 'viable' from a cost perspective
- justify a replacement/repair decision according to quality standards and legal requirements
- use service tooling and equipment
- observe safety procedures and requirements
- provide customer service
- prepare service reports
- communicate with customers orally and in writing
- maintain workplace documents.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Variables</b>	Variables may include: <ul style="list-style-type: none"> <li>• jobs involving subcontracted work</li> <li>• jobs involving a mix of vocations (e.g. mechanical, body and electrical)</li> <li>• non-routine jobs</li> </ul>
<b>Methods</b>	Methods include: <ul style="list-style-type: none"> <li>• written and verbal communication</li> <li>• sourcing of parts</li> <li>• estimating costs</li> <li>• documentation</li> </ul>
<b>Legislative requirements</b>	Legislative requirements may include: <ul style="list-style-type: none"> <li>• state/territory WHS legislation, manufacturer/component supplier specifications and safe operating procedures</li> <li>• environmental requirements, manual handling procedures and insurance requirements</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• manufacturer/component supplier specifications</li> <li>• enterprise operating procedures</li> <li>• customer requirements</li> <li>• industry/workplace codes of practice</li> </ul>

## AURBCA2001 Work in a retail bicycle environment

### Modification History

Release	Comment
Release 1	Replaces AURB254380B Operate in a retail bicycle environment Unit code updated to meet policy requirements. Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to work effectively in a retail bicycle environment.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who work, or are seeking employment, in a bicycle retail environment.  It requires an understanding of the structure of the retail bicycle sector, including industry associations, potential career paths, industry practices and standards, bicycle terminology and developments in technology.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine potential career path and develop individual goals	1.1. Identify structure of retail bicycle sector, including roles and functions of industry/association bodies 1.2. Assess personal skills to identify strengths and weaknesses 1.3. Identify personal expectations and determine goals 1.4. Research potential career paths in the bicycle industry and match with personal goals 1.5. Identify training needs and incorporate into career planning
2. Meet employment requirements	2.1. Identify applicable workplace health and safety (WHS) requirements, including regulatory requirements and personal protection needs 2.2. Identify roles and responsibilities of employees in a bicycle workshop 2.3. Identify and comply with obligations to employers and others, including confidentiality requirements 2.4. Identify lines of communication and authority 2.5. Identify and comply with work practices, including legislation, regulations, codes of practice, team expectations and policies and procedures 2.6. Identify principles and methods of gaining and maintaining health and fitness through cycling
3. Develop and maintain currency in bicycle terminology and general knowledge	3.1. Identify key cycling magazines and other sources of information 3.2. Identify and use key bicycle terminologies 3.3. Research major cycling events and their potential impact on business 3.4. Identify bicycle types and their uses
4. Maintain equipment and work environment	4.1. Maintain personal workspace in a well organised and safe condition in accordance with team and workplace standards 4.2. Maintain workplace equipment in a clean and operational manner 4.3. Perform routine maintenance on workplace equipment 4.4. Identify and report faulty equipment to the appropriate person for repair action

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to carry out work role, including maintaining equipment and operating communications and information technology
- communication skills to the level required to communicate ideas and information to enable articulation of personal goals and career choices and information in the workplace, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to collect, organise and understand information related to the retail bicycle sector, including roles and responsibilities, WHS requirements and potential career paths
- numeracy skills to the level required to interpret work instructions and complete specified tasks using calculators and measuring devices
- problem-solving skills to the level required to develop solutions to unpredicted situations, clarify work instructions and resolve conflict
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle categories and bicycle terminology
- calendar of various Australian and international bicycle events
- structure of the retail bicycle sector
- authority and communication lines within the enterprise
- retail bicycle work ethic and team expectations, including personal attitudes needed
- equipment used by retail bicycle workshops
- workshop layout and organisation
- benefits of cycling in gaining and maintaining health and fitness
- goal setting methods and techniques
- communication principles and techniques
- conflict resolution principles and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to bicycle retail operations
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to bicycle retail operations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- correctly apply and use safety and personal protective equipment
- follow task instructions, operating procedures and inspection processes to:
  - minimise risk of injury to self or others
  - achieve outcomes within time and quality standards
  - produce a career plan which covers:
    - personal goals and expectations
    - opportunities
    - timelines and personal development needs
  - work effectively with others
  - use terminology in communication with customers, suppliers and colleagues
  - ensure workplace equipment is in operational order.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - retail bicycle environment
  - materials relevant to operating in a retail bicycle environment
  - equipment and hand and power tooling appropriate to work operations in a retail bicycle environment
  - computer with internet connection

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• workplace documentation.</li></ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"><li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li><li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Workplace expectations

Workplace expectations include standards of:

- dress, personal presentation, preparedness and personal conduct, including respect for the rights and responsibilities of others
- quality and timeliness of work and the role of excellence and innovation
- knowledge of tooling and equipment and specific work area functions
- commitment, responsibility and preparedness for work, including working flexible hours to meet deadlines
- confidentiality and ethical work practices
- contribution to the overall effectiveness of the business

#### Information/documents

Information/documents may include:

- bicycle racing organisations for road bikes and off-road bikes
- other bicycle organisations and regional event organising organisations
- bicycle websites and periodical publications
- business policies and procedures relating to use of work areas, authorities and lines of communication
- business procedures relating to the use of tooling and equipment
- manufacturer/component supplier specifications and application procedures for materials, tooling and equipment
- Australian Design Rules

#### WHS requirements

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures

**RANGE STATEMENT**

<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements may include:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> <li>• enterprise operations and procedures</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## AURBCA2002 Select and adjust bicycle to fit rider

### Modification History

Release	Comment
Release 1	Replaces AURB254401A Select and adjust bicycle to fit rider Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement updated in unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to select and/or adjust a bicycle to best fit the physical abilities and cycling requirements of the rider.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who advise on the selection and adjustment of a bicycle and/or bicycle components to meet the needs of the rider.</p> <p>It applies to individuals working in a bicycle retail, service and repair environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information about the rider	1.1. Check and confirm customer requirements and cycling preferences 1.2. Assess physical attributes of customer by discussion, observation and measurements, if appropriate 1.3. Identify suitable bicycle types and configurations to match customer requirements 1.4. Discuss features and benefits of selected bicycles with customer
2. Adjust bicycle to fit the rider	2.1. Check that frame size matches rider's physical attributes 2.2. Check and adjust seat setting according to rider and manufacturer specifications 2.3. Check and adjust handlebars and stem settings according to rider and manufacturer specifications 2.4. Check and adjust clipless pedal settings to match rider's needs 2.5. Allow customer to test ride bicycle for riding comfort and efficiency 2.6. Make final adjustments as required

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to adjust bicycle components
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to bicycles, including common industry terminology, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements
- problem-solving skills to the level required to identify non-optimal bicycle fit and make required adjustments
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle terminology
- types and classifications of bicycles
- manufacturer and/or component supplier specifications
- biomechanical principles of cycling
- testing procedures and adjustment methods
- tools and equipment used in bicycle adjustment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to adjusting bicycles
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to adjusting bicycles

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with customer to determine requirements
- recommend bicycle types to suit customer requirements
- identify and assess variables that affect cycling comfort, stability, efficiency and aerodynamics
- complete adjustment of components to optimise cycling comfort, stability, efficiency and aerodynamics.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and components
  - equipment and tools appropriate to adjusting bicycles
  - technical specifications and standards
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions

**EVIDENCE GUIDE**

	<p>(real or simulated) and require evidence of process.</p> <ul style="list-style-type: none"><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Bicycles</b>	<p>Bicycles may include:</p> <ul style="list-style-type: none"> <li>• those with and without gears, and with lever operated brakes</li> <li>• children and adult models of different heights</li> <li>• mountain, road, hybrid, BMX, track and trials models</li> </ul>
<b>Best fit considerations</b>	<p>Best fit considerations may include:</p> <ul style="list-style-type: none"> <li>• comfort</li> <li>• stability</li> <li>• efficiency</li> <li>• aerodynamics</li> <li>• fitness for purpose</li> </ul>
<b>Rider measurements</b>	<p>Rider measurements to be considered may include:</p> <ul style="list-style-type: none"> <li>• height</li> <li>• body shape</li> <li>• length of arms and legs</li> <li>• fitness</li> </ul>
<b>Bicycle adjustments</b>	<p>Bicycle adjustments for best fit may include:</p> <ul style="list-style-type: none"> <li>• frame size</li> <li>• crank length</li> <li>• distance from crank centre or bottom bracket to saddle</li> <li>• saddle angle</li> <li>• seat tube angle and saddle offset</li> <li>• distance from saddle to handlebar</li> <li>• relative height of saddle and handlebar</li> <li>• handlebar width, angle and lever reach</li> <li>• handlebar drop on road style handlebars</li> <li>• clipless pedal tension, and position of pedal and shoe</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• floor stand and workbench</li> </ul>
<b>Testing</b>	<p>Testing is to confirm:</p> <ul style="list-style-type: none"> <li>• safety, comfort and efficiency</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• stable handling, turning and steering</li> <li>• no failure in parts of the bicycle</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to adjusting bicycles</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

## AURBSA3001 Conduct cycling proficiency training

### Modification History

Release	Comment
Release 1	Replaces AURB354601A Conduct cycling proficiency training Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to conduct individual and group instruction in safe cycling techniques.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who deliver cycling training in the community to promote safe and effective cycling in a road environment.</p> <p>It includes bicycle safety principles and bicycle handling skills, road safety skills and traffic awareness. The unit covers risk management processes, instructional methods and planning for trainers.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan an instructional session for teaching cycling proficiency	1.1. Identify safe cycling techniques 1.2. Determine client needs and assess current skill level and experience of client group 1.3. Identify cycling skills to be taught or developed 1.4. Select a suitable site for the instructional session based on client needs and session aims 1.5. Plan appropriate instructional activities and sequence of instruction to facilitate and enhance the learning process 1.6. Access and prepare learning resources, equipment and technological aids to supplement instruction 1.7. Prepare contingency plans to cope with inclement weather and other factors that may affect the session 1.8. Conduct a risk assessment of the instructional activities and location and implement a risk management plan
2. Prepare for instructional session	2.1. Select and prepare equipment and other resources suitable for the instructional activities 2.2. Fit and adjust equipment, where appropriate, to suit the needs of individual clients 2.3. Check all equipment for compliance with safety and road use regulations and good working order 2.4. Ensure first aid and repair kits are suitably stocked 2.5. Arrange protective and safety clothing and equipment for each client, where required 2.6. Brief the clients on the aim of the session, safety practices and appropriate behaviour
3. Conduct drills, activities and games to instruct cycling proficiency	3.1. Select instructional methods to match client readiness, the learning environment, the activity and equipment available 3.2. Allocate sufficient space and resources for the drill, activity and/or game 3.3. Constantly monitor potential hazards and risks during instruction, and implement appropriate risk management processes to avoid hazards 3.4. Deliver clear, relevant and concise information, explanations and demonstrations to ensure drills, activities and games are in accord with best practice principles of cycling activities 3.5. Communicate clearly in a style appropriate to the client 3.6. Use learning resources and materials and technological aids where appropriate to supplement presentations

ELEMENT	PERFORMANCE CRITERIA
	<p>3.7.Observe clients to ensure the drills, activities and games are conducted in the correct manner</p> <p>3.8.Observe client's skill execution and apply correctional techniques where required</p> <p>3.9.Provide constructive feedback and encouragement</p> <p>3.10. Perform demonstrations, where required, with a high level of technical correctness</p> <p>3.11. Maintain group control to ensure a safe and enjoyable learning experience</p>
4. Evaluate and review instruction methods	<p>4.1.Use questioning techniques to monitor client understanding during instruction</p> <p>4.2.Seek client feedback and provide opportunity for clients to comment and ask questions</p> <p>4.3.Implement modifications to the instructional method in response to monitoring and feedback</p> <p>4.4.Identify aspects needing further emphasis and attention for intervention in future sessions</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely control and manoeuvre a bicycle in road traffic, to adjust a bicycle to fit the rider and to operate audiovisual and technical equipment
- communication skills to the level required to ask relevant and appropriate questions, provide clear information and explanations, organise and give demonstrations, use listening skills, engage, motivate and connect with learners, and provide constructive feedback
- literacy skills to the level required to complete and maintain documentation, read and follow learning program/plan, and read and analyse learner information
- interpersonal skills to the level required to maintain appropriate relationships, establish trust, use appropriate body language, maintain humour, demonstrate tolerance, manage a group and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- observation skills to the level required to monitor learner acquisition of new skills, assess learner communication and interaction with others, identify learner concerns, and recognise learner readiness to take on new skills/tasks
- problem-solving skills to the level required to plan and organise activities, identify potential hazards, and modify activities to suit client group
- reflection skills to the level required to identify areas for improvement and maintain personal skill development

#### Required knowledge

Required knowledge includes:

- characteristics and needs of various client groups
- content and requirements of best practice cycling proficiency programs, including safe cycling techniques, traffic rules and road use regulations
- drills, activities and games to develop cycling proficiency
- sources and availability of relevant learning resources and learning materials
- training techniques which enhance learning and when to use them, such as:
  - instruction and explanation
  - questioning
  - practice
  - written information
  - group/pair/team activities
  - individual activities
  - coaching skills
  - demonstration

**REQUIRED SKILLS AND KNOWLEDGE**

- basic learning principles and different learning styles of children and adults
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), road traffic rules and environment, relevant to cycling proficiency training
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to cycling proficiency training

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements, including evaluating whether conditions are suitable to commence the session
- determine the range and type of activities, drills and games required to develop cycling proficiency skills appropriate to the client/group
- conduct activities, drills and games to develop cycling proficiency skills in accordance with accepted industry best practice
- instruct cycling proficiency skills over a minimum of three (3) occasions to different clients
- observe clients and recognise when and how intervention should take place to improve performance
- analyse client's skills and provide constructive feedback
- modify instructional methods and activities in response to observations and feedback
- review own performance and evaluate program outcomes.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - mechanically sound bicycle and helmet for each client
  - personal protective equipment, if needed
  - non-traffic areas and quiet roads
  - learning resources and materials.

**EVIDENCE GUIDE**

<b>Method of assessment</b>	<ul style="list-style-type: none"><li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li><li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Safe cycling techniques

Safe cycling techniques include:

- bicycle safety principles and bicycle handling skills
- cycling skill and confidence
- control techniques in relation to riding on the road
- road safety skills and traffic awareness
- road use regulations and traffic rules
- advanced bike handling and traffic skills
- all-round observation, signalling and manoeuvring
- identifying and responding appropriately to hazards
- safe cycling manoeuvres on busy roads using complex intersections and road features
- adapting to weather conditions
- correct bike set-up, saddle and headset adjustments

#### Best practice principles of cycling proficiency

Best practice examples include:

- AustCycle teacher training program
- National Coaching Accreditation Scheme (NCAS) CycleSkill coach training program
- the codes of behaviour for trainers developed by industry peak bodies, including Cycling Australia, the Amy Gillett Foundation (AGF) and the Bicycle Federation of Australia (BFA)
- overseas programs, such as the National Standard for Cycle Training (UK), CAN-BIKE (Canada) and BikeEd (USA)

#### Client characteristics

Client characteristics may include:

- age, ethnicity, gender and disability
- physical fitness and body type
- cycling experience and skills level
- language, literacy and numeracy levels
- learning styles
- specific needs

#### Safe learning environment

Safe learning environment may include:

- mechanically sound bicycle and helmet
- personal protective equipment and clothing, if needed

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• non-traffic areas and quiet roads</li> <li>• gradual progression to busier roads</li> <li>• suitable maximum group size</li> </ul>
<b>Learning resources and materials</b>	<p>Learning resources and materials may include:</p> <ul style="list-style-type: none"> <li>• CDs and audiotapes</li> <li>• commercially available materials</li> <li>• learning resources produced in languages other than English</li> <li>• organisational learning resources</li> <li>• record/log books</li> <li>• references and texts</li> <li>• videos</li> <li>• handouts for learners</li> <li>• prepared activity sheets</li> <li>• prepared presentations and overheads</li> </ul>
<b>Instructional methods</b>	<p>Instructional methods may include:</p> <ul style="list-style-type: none"> <li>• warm up and introductory activities</li> <li>• practice and repetition of skills</li> <li>• demonstration of skills</li> <li>• break down of complex skills into component parts</li> <li>• identification and correction of faults</li> <li>• constructive feedback</li> <li>• questioning</li> <li>• demonstrate, explain, demonstrate, instruct, critique, test (D.E.D.I.C.T.)</li> <li>• explain, demonstrate, instruct, critique, test (E.D.I.C.T.)</li> <li>• introduce, demonstrate, explain, apply (I.D.E.A.)</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to cycling proficiency training</li> <li>• regulatory/legislative requirements pertaining to road and bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and</p>

<b>RANGE STATEMENT</b>

## AURBTA1001 Remove and tag bicycle components

### Modification History

Release	Comment
Release 1	Replaces AURB100064B Remove and tag bicycle components Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation Licensing statement updated in unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to identify and remove a range of bicycle components and tag by title and application.</p> <p>It requires the ability to understand specifications and use tools and equipment to remove and tag components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake component removal and tagging in a bicycle retail, service and repair environment.</p> <p>It is designed for application in a highly supervised context, such as VET in schools or other equivalent introduction or induction to industry environments.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove and tag bicycle components	<ul style="list-style-type: none"><li>1.1. Identify and confirm the nature and scope of work requirements</li><li>1.2. Observe workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, throughout the work</li><li>1.3. Source equipment and information, such as workshop manuals, specifications and tooling</li><li>1.4. Analyse method options and select those most appropriate to the circumstances</li><li>1.5. Identify and remove/minimise risks associated with removal and tagging of bicycle components</li></ul>
2. Remove bicycle components	<ul style="list-style-type: none"><li>2.1. Identify bicycle components for removal</li><li>2.2. Implement methods for the safe removal and tagging of components in accordance with manufacturer/component supplier specifications</li><li>2.3. Select and use appropriate tools and equipment</li><li>2.4. Remove components without damage</li><li>2.5. Inspect removed components</li><li>2.6. Report on component condition in accordance with standard procedures</li></ul>
3. Tag bicycle components	<ul style="list-style-type: none"><li>3.1. Confirm tagging procedures</li><li>3.2. Identify resource requirements for tagging and prepare support equipment</li><li>3.3. Tag components without damage</li><li>3.4. Remove waste following standard procedures</li><li>3.5. Clean work area and store tools and equipment in accordance with standard procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to remove and tag bicycle components
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor and other workers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, to understand technical information and specifications and to tag components
- numeracy skills to the level required to identify and measure components
- problem-solving skills to the level required to anticipate and/or resolve problems and to avoid or minimise reworking and wastage
- team skills to the level required to work with effectively and cooperatively others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle terminology
- function of each component
- relationship of body components to each other
- removal procedures
- tagging procedures
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to removing and tagging bicycle components
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to removing and tagging bicycle components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- identify and remove a range of components and tag by their title and application
- conduct removal and tagging without damage to components or tooling and equipment.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and components
  - equipment, hand and power tools appropriate to removing components
  - resources for tagging components
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different sizes
- mountain, road, hybrid, BMX, track and trials models

#### Components

Bicycle components may include:

- wheels
- frames
- drivetrain
- steering
- suspension

#### Tagging methods

Tagging methods include:

- tagging by title and application

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling

#### Materials

Materials may include:

- tags and cleaning materials

#### Communication methods

Communication methods may include:

- verbal and visual instructions and fault reporting
- written instructions and plans
- telephones and pagers

#### Information/documents

Information/documents may include:

- enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders, industry/workplace codes of practice and material safety data sheets (MSDS)
- Australian Design Rules
- safe work procedures related to removing and tagging bicycle components
- organisation work specifications and requirements

**RANGE STATEMENT****WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

**Environmental requirements**

Environmental requirements may include:

- waste management
- noise
- dust
- clean-up management

**Quality requirements**

Quality requirements may include:

- regulations, including Australian standards
- internal organisational quality policies and procedures
- enterprise operations and procedures

**Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

## AURBTA1002 Adjust bicycles

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to adjust bicycle components and equipment.</p> <p>The unit involves identifying bicycle components and adjustment requirements, including the use of specialist tools to perform adjustments to bicycles to ensure safe and efficient operation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to the adjustments of bicycle components in the bicycle retail, service and repair environment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i> relating to adjusting <i>bicycles</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are identified and applied</p> <p>1.3. Work areas are cleared to allow set-up and activities to take place according to workplace policies and procedures</p>
2. Inspect bicycle and determine work requirement	<p>2.1. Inspection is carried out to determine adjustment requirements according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection findings are reported according to workplace procedures, including recommendations for necessary <i>adjustments</i></p>
3. Perform adjustments	<p>3.1. Adjustment options are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. <b>Appropriate tools</b>, techniques and materials are selected and prepared</p> <p>3.3. Adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>3.4. Post-adjustment testing is carried out to ensure safe and correct operation of the bicycle</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and bicycle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- literacy skills:
  - reading skills to the level required to understand information related to work instruction, including terminology and workplace procedures
  - writing skills to complete workplace documentation
- numeracy skills to correctly interpret metric and imperial measurement systems
- planning and organising skills to:
  - identify risk factors to minimise them
  - follow workplace procedures
- problem-solving skills to:
  - identify workplace and technical problems
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - identify tools and equipment
  - recognise own limitations and seek advice
  - follow workplace policies and documentation, such as manufacturer specification, industry codes of practice and workplace procedures
- technical skills to:
  - apply technical information related to bicycle componentry and maintenance procedures
  - select and use appropriate tools and equipment
- technology skills to:
  - operate bicycle adjustment tools and equipment
  - use workplace technology to assist with workplace practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- bicycle terminology
- methods of sourcing information relevant to adjusting bicycles
- bicycle inspection procedures
- bicycle adjustment procedures, including the use of tools and equipment
- bicycle post-adjustment testing procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- perform a range of adjustment tasks on a minimum of three different bicycles with real or simulated adjustment requirements according to workplace, manufacturer and component supplier requirements
- complete workplace documentation
- present bicycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- workplace location or simulated workplace
- bicycles and bicycle components
- equipment, hand and power tools and specialised repair tools and equipment appropriate to adjusting bicycles
- specifications and workplace instructions.

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	bicycle inspection and adjustment methods, processes and equipment.
<b>Bicycles</b> may include:	<ul style="list-style-type: none"> <li>• bikes with and without gears, and lever operated brakes</li> <li>• mountain, road, hybrid, BMX, track and time trial models and sizes.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Adjustments</b> may include those to:	<ul style="list-style-type: none"> <li>• brakes</li> <li>• suspension</li> <li>• chain tension</li> <li>• pedals and crank</li> <li>• wheel bearings</li> <li>• seat</li> <li>• handlebars and steering</li> <li>• gears</li> <li>• spokes.</li> </ul>
<b>Appropriate tools</b> may include	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• hand, power and air tools</li> <li>• specialised bicycle repair tools</li> <li>• floor stands, workbench.</li> </ul>

**RANGE STATEMENT**

*Documentation* may include:

- warranty information
- job card or work order
- workplace computerised or written customer records and invoice.

**Unit Sector(s)**

<b>Competency field</b>	Bicycle
<b>Unit sector</b>	Technical

**Custom Content Section**

Not applicable.

## AURBTA2003 Assemble bicycles

### Modification History

Release	Comment
Release 1	<p>Replaces AURB211304B Assemble bicycles</p> <p>Unit code updated to meet policy requirements.</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement updated in unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to assemble bicycles from a semi-assembled state.</p> <p>It requires the ability to understand specifications and use tools and equipment to fit and adjust bicycle components and accessories to Australian standards.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the selection, fitting and adjustment of bicycle components and accessories and final assembly of bicycles in a bicycle retail, service and repair environment.</p> <p>For assembly of new (box) bicycles, <i>AURBTA2004 Assemble box bicycles for retail sale</i>, should be selected.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Check and confirm customer requirements in accordance with workplace procedures</li><li>1.2. Research bicycle assembly requirements and access and check specifications</li><li>1.3. Check tooling and equipment prior to use, for availability and conformity with specifications and safe condition</li><li>1.4. Prepare work area and set up equipment and materials</li></ul>
2. Select/unpack bicycle components	<ul style="list-style-type: none"><li>2.1. Plan unpacking and assembly sequence</li><li>2.2. Remove packing material without causing damage to frame or other components or accessories</li><li>2.3. Determine condition of components by inspection and measurement and compare with specifications and customer use requirements</li><li>2.4. Identify damaged and/or missing frames and components and report/replace according to workshop procedures</li></ul>
3. Fit, test and adjust bicycle components	<ul style="list-style-type: none"><li>3.1. Perform fitting operation for bicycle components according to plan using personal safety equipment and precautions to protect others in the workplace</li><li>3.2. Select and use tooling and equipment in accordance with workplace health and safety (WHS) requirements</li><li>3.3. Check fitted bicycle components, complete adjustments, and prepare unit for delivery</li></ul>
4. Complete work and clean-up	<ul style="list-style-type: none"><li>4.1. Store portable tooling and equipment in approved designated areas</li><li>4.2. Update workplace records, customer file and warranty information as required by enterprise</li><li>4.3. Clean up work area and dispose of packing materials in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to assemble a bicycle, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports, and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine safe assembly and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- component function and application
- material used in accessories and fittings
- classification of accessory and fitting types
- assembly procedures
- testing procedures and adjustment methods
- tools and equipment used in bicycle assembly
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to assembling bicycles
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to assembling bicycles

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- conduct removal, replacement, tensioning and adjustment of a range of components and common accessories in accordance with workplace and manufacturer/component supplier requirements
- complete removal and adjustment of components and accessories within workplace timeframes
- present bicycle for delivery to customer in compliance with workplace requirements and Australian standards.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and components
  - equipment, hand and power tools appropriate to assembling bicycles
  - technical specifications and standards
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

**EVIDENCE GUIDE**

	<p>contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different heights
- mountain, road, hybrid, BMX, track and trials models

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and air tooling

#### Assembly methods

Assembly methods may include:

- fitting and manual adjustments of components and accessories
- measuring, screwing, bonding, clamping, filing, riveting and drilling
- greasing and lubrication
- torque settings

#### Materials

Materials may include:

- tapes
- fitting consumables
- cleaning materials

#### Assembly tasks

Assembly tasks may include:

- basic adjustments and setup of a cycle
- frame alignment and preparation
- headset fitting and adjustment
- brake fitting and adjustment, cable and general hydraulic
- gear fitting and adjustment, including dérailleurs and hub gears, shifters, chain, cassette, chain set and bottom bracket
- wheel fitting and adjustment
- peddles
- saddles

#### Testing

Testing is to confirm:

- safety and efficiency
- stable handling, turning and steering

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• no failure in parts of the bicycle</li> <li>• no loosening or misalignment of seat, handlebars, controls or reflectors</li> <li>• no loss of components or accessories</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to assembling bicycles</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	Environmental requirements may include: <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>

## AURBTA2004 Assemble box bicycles for retail sale

### Modification History

Release	Comment
Release 1	Replaces AURB211305A Assemble box bicycle for retail sale Unit code updated to meet policy requirements. Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to assemble and test a new bicycle for retail sale.</p> <p>It requires the ability to identify bicycle components, interpret manufacturer instructions and specifications, assemble a bicycle and test the assembled bicycle for safe and efficient operation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake assembling and testing of new bicycles in a bicycle retail, service and repair environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the assembly of a new bicycle	1.1. Identify and confirm nature and scope of work requirements 1.2. Identify workplace health and safety (WHS) requirements, including individual state/territory regulatory requirements and personal protection needs, and observe throughout the work 1.3. Source procedures and information, such as workshop manuals and manufacturer specifications 1.4. Check tooling and equipment for availability, conformity with specifications and safe condition 1.5. Prepare work area and set up equipment and materials
2. Assemble new bicycle	2.1. Unpack bicycle components and confirm contents are complete 2.2. Identify damaged and/or missing frames and components and report/replace according to workshop procedures 2.3. Identify methods for bicycle model assembly requirements in accordance with manufacturer/component supplier specifications 2.4. Install components without damage 2.5. Set up moving parts in accordance with manufacturer/component supplier specifications 2.6. Select and use appropriate tools, materials and equipment 2.7. Check fitted bicycle components and make necessary adjustments 2.8. Complete records in accordance with workplace procedures
3. Tag assembled bicycle	3.1. Identify workplace tagging procedures 3.2. Identify and prepare resource requirements and support equipment for tagging 3.3. Tag assembled bicycle without damage 3.4. Clean up work area and dispose of packing materials in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to assemble a new bicycle, test the unit and make adjustments and tag the completed bicycle
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine safe assembly and operation
- problem solving skills to the level required to identify technical and procedural problems to avoid planning, scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle classifications and terminology
- manufacturer and/or component supplier specifications
- component function and application
- installation and assembly procedures
- testing procedures and adjustment methods
- tagging procedures
- tools and equipment used in bicycle assembly
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to assembling a bicycle for retail sale
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to assembling a bicycle for retail sale

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- conduct assembly and tagging without damage to components or tooling and equipment
- assemble a range of bicycles in compliance with Australian standards and workplace requirements.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models
  - equipment, hand and power tools appropriate to assembling bicycles
  - technical specifications and standards
  - tagging equipment.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different heights
- mountain, road, hybrid, BMX, track and trials models

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and air tooling

#### Assembly methods

Assembly methods are to include:

- fitting and manual adjustments of components and accessories
- measuring, screwing, bonding, clamping, filing, riveting and drilling
- greasing and lubrication
- torque settings

#### Materials

Materials may include:

- tags
- tapes
- fitting consumables
- cleaning materials

#### Assembly tasks

Assembly tasks are to include:

- basic adjustments and set-up of a cycle
- headset adjustment
- brake adjustment, including the capabilities to shorten outer cables and to reset the brakes to operating condition, applicable to cable and general hydraulic
- gear adjustment, including dérailleurs and hub gears, shifters and chain
- wheel fitting and adjustment
- pedals
- saddles

#### Testing

Testing is to confirm:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• safety and efficiency</li> <li>• stable handling, turning and steering</li> <li>• no failure in parts of the bicycle</li> <li>• no loosening or misalignment of seat, handlebars, controls or reflectors</li> <li>• no loss of components or accessories</li> </ul>
<b>Tagging</b>	<p>Tagging methods may include:</p> <ul style="list-style-type: none"> <li>• tagging by model, size and application</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• hardcopy and electronic media</li> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to assembling bicycles</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> </ul>

## AURBTA3005 Restore bicycles

### Modification History

Release	Comment
Release 1	Replaces AURB311401A Restore a bicycle Unit code updated to meet policy requirements. Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to restore a used or vintage bicycle to fully functioning or original condition, where possible.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the restoration of a bicycle in a bicycle retail, service and repair environment.</p> <p>It requires the ability to research technical data and use tools and equipment to repair, recondition and replace components to restore a bicycle as close as practicable to its original condition.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and assessing second hand parts for serviceability and suitability.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify requirements	1.1. Check and confirm customer requirements in accordance with workplace procedures 1.2. Research original bicycle components and specifications and access information 1.3. Source suppliers and determine availability of original bicycle parts 1.4. Source second hand parts and assess for suitability and serviceability 1.5. Check tooling and equipment for availability and conformity with specifications and safe condition
2. Inspect bicycle	2.1. Prepare work area and set up equipment and materials 2.2. Inspect bicycle systems and components for faults and worn or damaged components using visual, aural and tactile inspections and measurements 2.3. Compare conditions found with original bicycle specifications and customer requirements 2.4. Identify restoration, replacement and repair options for bicycle components, including outsourcing 2.5. Document and cost restoration items and obtain customer approval in accordance with workplace procedures
3. Restore bicycle	3.1. Select and use tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.2. Dismantle bicycle, inspect and tag components 3.3. Perform restoration operations on components using personal safety equipment and precautions to protect others in the workplace 3.4. Outsource work as required, such as replating and repainting 3.5. Reassemble bicycle and operate restored bicycle through its full range, noting test results, including non-conformity 3.6. Check restored bicycle components, complete adjustments and prepare unit for delivery
4. Complete work and clean up	4.1. Clean and store portable tooling and equipment in approved designated areas 4.2. Complete workplace records, customer file and warranty information as required by enterprise 4.3. Clean up work area and dispose of waste in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to restore a bicycle, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to conduct research and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine safe assembly and operation
- problem-solving skills to the level required to assess bicycle condition and determine repair, replacement and restoration options
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle terminology
- application of mechanical principles
- classification of bicycle systems and identification of system components
- purpose and requirements of bicycle systems and their compatibility with each other
- manufacturer and/or component supplier specifications
- classification of accessories and fittings
- assembly procedures
- testing procedures and adjustment methods
- selection, checking and use of tooling and equipment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to restoring bicycles
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to restoring bicycles

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessors must be satisfied that the candidate can competently and consistently:
- observe safety procedures and requirements
  - communicate effectively with others involved in or affected by the work
  - select methods and techniques appropriate to the circumstances
  - dismantle, inspect and tag bicycle components
  - restore, repair and rebuild a range of bicycle components
  - replace components with appropriate new or serviceable second hand parts
  - reassemble, test and adjust bicycle without damage to components or tooling and equipment
  - present bicycle for delivery to customer in compliance with workplace requirements and Australian standards.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a bicycle for restoration
  - equipment, hand and power tools appropriate to restoring bicycles
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and

	<p>Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different heights
- mountain, road, hybrid, touring, BMX, track and trials models

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench, jigs and air tooling

#### Restoration methods

Restoration methods may include:

- dismantling, inspection and tagging of components
- repair and rebuilding of components, including frame, wheels and rims, gears, brakes, drivetrain, suspension and steering systems
- reassembly of bicycle
- fitting and manual adjustments of repaired and replacement components and accessories
- measuring, screwing, bonding, clamping, filing, riveting and drilling
- replating and repainting
- greasing and lubrication
- torque settings

#### Testing

Testing of the restored bicycle is to confirm:

- safe operation
- stable handling, turning and steering
- no failure in parts of the bicycle
- no loosening or misalignment of seat, handlebars, controls or reflectors
- no loss of components or accessories

#### Information/documents

Information/documents may include:

- hardcopy and electronic media
- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material

**RANGE STATEMENT**

	<p>safety data sheets (MSDS), diagrams or sketches</p> <ul style="list-style-type: none"> <li>• safe work procedures related to restoring bicycles</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

## AURBTA3006 Identify and select components for custom bicycles

### Modification History

Release	Comment
Release 1	<p>Replaces AURB332301A Specify and select components for a custom bicycle</p> <p>Unit code updated to meet policy requirements.</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to calculate measurements and select bicycle components to meet the client's cycling requirements.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who advise on the selection of stock bicycle frames and bicycle components to build a custom bicycle.</p> <p>It applies to individuals working in a bicycle retail, service and repair environment.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information about the client	1.1. Check and confirm customer requirements, including price range and intended use of the unit 1.2. Assess physical attributes and riding style of customer by discussion, observation and measurements 1.3. Discuss features and benefits of various frame materials and designs with customer 1.4. Use sizing cycle, or other methods, to analyse optimum bicycle measurements and set-up
2. Select bicycle frame or specify measurements for custom frame	2.1. Identify suitable frame types and configurations to match customer requirements 2.2. Research bicycle design principles and check available custom builders, stock item suppliers and specifications 2.3. If stock frame preferred, check frame measurements and select frame to match rider's size and intended use 2.4. If custom frame preferred, calculate measurements and decide on frame material and build method
3. Select wheels or specify wheel building requirements	3.1. Determine wheel size to suit frame measurements 3.2. Identify rims, spokes and hub types to suit intended use of unit 3.3. Discuss features and benefits of various wheel designs and components with customer 3.4. Select stock wheels and components or calculate specifications and design for custom wheels
4. Select bicycle components	4.1. Research catalogues and suppliers of bicycle components and discuss options with customer 4.2. Select components to suit bicycle design and intended use within price range
5. Confirm details for custom bicycle	5.1. Specify custom paint requirements, if required 5.2. Prepare parts list and determine availability 5.3. Calculate and document costs and obtain customer approval
6. Prepare bicycle for delivery	6.1. Check the assembled custom bicycle for correct operation and specifications 6.2. Make adjustments, if required, and prepare unit for delivery to the customer

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use bicycle fitting equipment, perform tests and to fit and adjust bicycle components
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to research information related to bicycle design and components and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements, calculate ratios and interpret specifications
- problem-solving skills to the level required to apply bicycle design principles and measurements to specify and select suitable components for a custom bicycle
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle classification and terminology
- application of mechanical principles
- biomechanical principles of cycling
- design requirements of bicycle frames and wheels
- classification and identification of bicycle frames, wheels and components
- purpose and relationships of bicycle frames, wheels, suspension, drivetrain and steering systems
- material used in bicycle frames, wheels and components
- manufacturer and/or component supplier specifications
- testing procedures and adjustment methods
- tools and equipment used in bicycle adjustment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to designing bicycles
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to designing bicycles

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with customer to determine requirements
- identify and assess variables that affect cycling comfort, stability, efficiency and aerodynamics
- apply mechanical principles and measurements to select or design a bicycle frame to meet client and intended use requirements
- select components to complement the bicycle design and to meet client and intended use requirements
- check the custom bicycle operation, make adjustments and prepare for delivery to the customer.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle frames and components
  - fitting equipment (e.g. sizing bicycle, video equipment and measuring equipment)
  - equipment and tools appropriate to adjusting bicycles
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

**EVIDENCE GUIDE**

	<p>contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- mountain, road, hybrid, touring, BMX, track and trials models

#### Bicycle measurements

Bicycle measurements may include:

- fork rake or offset
- fork trail
- head tube length and angle (steering axis)
- wheelbase
- front centre
- bottom bracket drop
- seat tube length and angle
- top tube length
- setback
- stem length
- saddle height

#### Client physical attributes

Client physical attributes to be considered may include:

- height
- body shape and weight distribution
- length of arms and legs
- fitness, injuries and style of cycling

#### Bicycle frames

Bicycle frames may include:

- steel, lugged, brazed or welded
- titanium
- composite material
- lugged, brazed or welded
- carbon fibre
- stock items or custom built

#### Bicycle components

Bicycle components may include:

- wheels, rims, spokes and hubs
- handlebars and headset
- forks and suspension
- saddle and seat post

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• cassette, chain rim, chain and crank</li> <li>• pedals</li> <li>• front and rear derailleur</li> <li>• bottom bracket</li> <li>• brake, brake lever and brake shift</li> <li>• racks, lights and other accessories</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• hardcopy and electronic media</li> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to designing bicycles</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> </ul>

## AURBTA3007 Provide mechanical support to cycling events

### Modification History

Release	Comment
Release 1	<p>Replaces AURB354501A Provide mechanical support to cycling events</p> <p>Unit code updated to meet policy requirements.</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to work effectively as a support mechanic in professional or amateur competitions or organised recreational cycling events.</p> <p>It includes meeting event employment requirements, managing daily work activities and contributing to the effective working of the support team.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who work or volunteer as a bicycle mechanic in organised cycling events.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research types of events and employment opportunities	1.1. Identify structure of the competitive/recreational bicycle sector, including roles and functions of sport, community and industry associations/bodies 1.2. Research major cycling events and employment opportunities 1.3. Assess own skills and identify training needs 1.4. Determine career goals and employment opportunities
2. Meet employment requirements	2.1. Identify roles and responsibilities of mechanics in a bicycle event/competition 2.2. Complete application process 2.3. Identify and comply with obligations to employers and others, including confidentiality requirements 2.4. Identify lines of communication and authority 2.5. Identify and comply with event regulations, team expectations and policies and procedures 2.6. Identify principles and methods of gaining and maintaining personal health and fitness levels appropriate to job role, including rest requirements 2.7. Develop and maintain own technical skills through work experience and practice 2.8. Research developments in bicycle technology and mechanical techniques
3. Prepare for event	3.1. Confirm team arrangements for travel/arrival and ensure all documentation is complete 3.2. Select tool and equipment requirements and check for availability and good condition 3.3. Select and prepare spare parts, wheels and bicycles 3.4. Pack tools and equipment safely for transportation 3.5. Select and prepare personal items to allow for effective rest and hygiene
4. Provide mechanical support	4.1. Identify and follow applicable workplace health and safety (WHS) requirements and event regulations 4.2. Confirm own work role and responsibilities 4.3. Establish lines of communication 4.4. Assemble temporary work station and associated fittings, if required, in accordance with team requirements and event regulations 4.5. Prepare support vehicle, if required, in accordance with team requirements and event regulations

ELEMENT	PERFORMANCE CRITERIA
	<p>4.6. Perform mechanical repairs and adjustments within designated timeframes and to team standards</p> <p>4.7. Use mechanical knowledge to provide functional repairs when optimal solutions are not possible</p> <p>4.8. Obtain client approval before commencing work, where appropriate</p> <p>4.9. Seek assistance from appropriate persons when difficulties arise</p> <p>4.10. Maintain personal workspace in a well organised and safe condition in accordance with team and event standards</p> <p>4.11. Maintain tools and equipment in a clean and operational manner</p> <p>4.12. Manage rest requirements to maintain work standards and output</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to carry out work role, including setting up workstation, using and maintaining tools and equipment and performing repairs and adjustments on bicycles
- communication skills to the level required to communicate effectively regarding work requirements with supervisor, other team members and clients, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to collect, organise and understand information related to organised cycling events, including roles and responsibilities, event regulations and requirements, and potential career paths
- numeracy skills to the level required to interpret technical information and complete specified tasks using calculations and measuring devices
- problem-solving skills to the level required to develop solutions to unpredicted situations, clarify work instructions and resolve conflict
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- cycling event categories
- roles and structure of Australian and international cycling regulatory bodies
- calendar of various Australian and international bicycle events
- roles within support teams and their relationship with one another
- authority and communication lines within support teams
- repair and maintenance techniques for bicycles and components in a race or event environment
- tooling and equipment used by mechanical support teams
- temporary workshop layout and organisation
- principles and methods of gaining and maintaining health and fitness, including nutritional requirements
- communication principles and techniques
- conflict resolution principles and techniques
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to bicycle repairs
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to bicycle repairs

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- perform mechanical support activities in a cycling event for a minimum duration of one (1) day on at least two (2) occasions, including:
  - working to required team/event standards
  - identifying and applying team requirements, controlling body and event category rules and regulations
  - correctly applying safety procedures and using personal protective equipment
  - working effectively with others
  - modifying activities to cater for variations in workplace context and environment
- maintain and apply knowledge of current bicycle technology.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - information relevant to cycling bodies/organisations and events
  - equipment and tooling appropriate to work operations in a cycling event environment
  - computer with internet connection
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Cycling events

Cycling events may include:

- road, track, cross or mountain races/competitions
- community and charity recreational events
- local, national or international events

#### Personal attributes

Personal attributes may include:

- knowledge of tooling and equipment and specific work area functions
- commitment, responsibility and preparedness for work, including working flexible hours to meet deadlines
- confidentiality and ethical work practices
- contribution to the overall effectiveness of the business

#### Setting up a temporary work location

Setting up a temporary work location may involve:

- installation of floor matting
- set-up of tables and benches
- installation of temporary lighting
- erection of temporary fencing
- erection of bicycle storage facilities
- positioning of tooling and equipment, including portable bicycle stands
- positioning of spare parts, components and specialist tools
- installation of computing and communication equipment
- installation of fire fighting and environmental protection equipment (e.g. cleaning agents and disposal containers)
- erection of promotional signage and security barriers

#### Tools and equipment

Tools and equipment may include:

- portable bicycle stand
- general and specialist hand tools
- spare parts
- lubricants
- hydraulic fluid
- tapes
- various nuts, bolts, screws and fasteners

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• pump</li> <li>• compressor</li> <li>• cleaning products and rags</li> <li>• ear protection, eye protection and disposable gloves</li> <li>• first aid kit</li> </ul>
<b>Mechanical repairs</b>	<p>Mechanical repairs may include:</p> <ul style="list-style-type: none"> <li>• racing bicycle preparation</li> <li>• track support</li> <li>• wheel changes and repairs</li> <li>• tyre and tube replacement</li> <li>• repairs to brake, drivetrain, and steering and suspension systems and components</li> <li>• replacement of damaged parts</li> <li>• installation of additional parts, including cycle computers, bar ends and rear racks</li> <li>• bicycle wash</li> <li>• bicycle/body fit adjustments</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• bicycle racing organisations for road bikes and off-road bikes</li> <li>• other bicycle organisations and regional event organising bodies</li> <li>• bicycle websites and periodical publications</li> <li>• racing rules and regulations</li> <li>• event policies and procedures relating to use of work areas, authorities and lines of communication</li> <li>• work procedures relating to the use of tools and equipment</li> <li>• manufacturer/component supplier specifications and application procedures for materials, tools and equipment</li> <li>• Australian Design Rules</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>

**RANGE STATEMENT**

<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements may include:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> <li>• enterprise operations and procedures</li> </ul>
<b>Organisational policies and procedures</b>	<p>Organisational policies and procedures may include:</p> <ul style="list-style-type: none"> <li>• quality policies and procedures, including Australian standards</li> <li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li> <li>• manufacturer specifications and industry codes of practice</li> <li>• safe work procedures</li> <li>• reporting and recording procedures</li> </ul>

## AURBTB2001 Service and repair bicycle mechanical braking systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURB212171A Service and repair bicycle mechanical braking systems</p> <p>Unit code updated to meet policy requirements.</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to inspect, plan and safely service, repair and test bicycle mechanical braking systems and complete documents.</p> <p>It requires the ability to interpret specifications, assess the condition of mechanical braking systems, and to select and use tooling and equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake service and repair of components of mechanical braking systems in a bicycle servicing and repair environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm customer requirements and intended use of the unit in accordance with workplace procedures 1.2. Identify and check bicycle mechanical braking system service and repair requirements and specifications 1.3. Check tooling and equipment for availability, conformity with specifications and safe condition 1.4. Prepare work area and set up equipment and materials
2. Inspect bicycle mechanical braking system	2.1. Inspect bicycle mechanical braking system for faults and worn or damaged components, using visual, aural and tactile inspections, and measurements 2.2. Compare conditions found with bicycle mechanical braking system specifications and customer requirements 2.3. Identify service and repair options for mechanical braking system 2.4. Document and cost service and repair items for customer approval in accordance with workplace procedures 2.5. Obtain customer approval for work to be undertaken
3. Prepare for service and repair of bicycle mechanical braking system	3.1. Plan service and repair sequence and determine availability of tooling and equipment 3.2. Ensure service and repair sequence plan includes post-service testing and checking process 3.3. Prepare list of parts and materials and determine availability 3.4. Identify need for additional persons to assist in repair process and make arrangements 3.5. Select and check tooling and equipment to meet job requirements
4. Service and repair bicycle mechanical braking system	4.1. Perform service and repair operations for bicycle mechanical braking system according to plan 4.2. Use personal safety equipment and take precautions to protect others in the workplace 4.3. Use and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 4.4. Check customer requirements and bicycle braking system specifications in accordance with workplace procedures 4.5. Clear worksite of waste and spills at regular intervals in accordance with workplace procedures
5. Test bicycle mechanical braking system	5.1. Operate bicycle braking system through its full range, noting test results, including non-conformity 5.2. Check bicycle mechanical braking system, complete

ELEMENT	PERFORMANCE CRITERIA
	<p>adjustments and prepare unit for delivery</p> <p>5.3.Clean and store portable tooling and equipment in approved designated areas</p> <p>5.4.Complete workplace records, customer file and warranty information as required by enterprise</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing, repairing and testing of bicycle mechanical braking systems
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports, complete records and interpret technical information and specifications
- numeracy skills to the level required to correctly count and measure to determine mechanical brake system condition and operation
- problem-solving skills to the level required to plan and organise activities and establish diagnostic processes which identify methods of servicing, repairing and testing bicycle mechanical braking systems
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- application of mechanical principles
- classification of bicycle mechanical braking systems and identification of system components
- purpose and requirements of bicycle mechanical braking systems and their relationship to suspension, wheels, drivetrain, frame and steering system
- material used in bicycle mechanical braking systems
- mechanical braking system service, repair and test procedures and techniques
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing and repairing bicycle mechanical braking systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing and repairing bicycle mechanical braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- inspect a range of bicycle mechanical brake systems and components and accurately identify required service and repair options
- service and repair a range of bicycle mechanical brake systems and components to manufacturer/ component supplier specifications
- test bicycle mechanical brake systems to manufacturer/component supplier specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - suitably equipped workplace or simulated workplace
  - area for safe testing of braking systems
  - a range of bicycle mechanical brake systems and components
  - material relevant to servicing and repairing bicycle mechanical braking systems
  - equipment and hand and power tooling appropriate to servicing and repairing bicycle mechanical braking systems
  - specifications and work instructions.

**EVIDENCE GUIDE**

<b>Method of assessment</b>	<ul style="list-style-type: none"><li>• Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</li><li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Mechanical braking system</b>	<p>Mechanical braking system may include:</p> <ul style="list-style-type: none"> <li>• cantilever, disc, internal coaster and drum brakes</li> <li>• composite material brake pads</li> <li>• mechanical linkages</li> <li>• manual adjustment and integrated brake and gear levers</li> </ul>
<b>Servicing and repair methods</b>	<p>Servicing and repair methods are to include:</p> <ul style="list-style-type: none"> <li>• on- and off-site servicing</li> <li>• servicing and manual adjustments of mechanical braking system components</li> <li>• communicating with customers</li> <li>• documenting and reporting on service</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• specific service and repair and general workshop equipment and tooling</li> <li>• floor stands, workbench and air tooling</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications may include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting</li> <li>• site-specific instructions, written instructions and plans or instructions related to job/task</li> <li>• telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to bicycle mechanical braking systems</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on bicycle hydraulic braking system	1.1. Check customer requirements and intended use of the unit being serviced by discussion with customer 1.2. Research bicycle hydraulic braking system service requirements and check specifications 1.3. Determine condition of system by visual, aural and tactile inspections and measurements 1.4. Compare conditions found with bicycle hydraulic braking system specifications and customer use requirements
2. Prepare for service of bicycle hydraulic braking system	2.1. Plan service sequence, including post-service testing and checking process, and determine availability of tooling and equipment 2.2. Prepare material list and determine availability 2.3. Select tooling and equipment to meet job requirements, and check to ensure they are in good working order 2.4. Set up equipment and prepare work area
3. Service and test bicycle hydraulic braking system	3.1. Perform service operations for bicycle hydraulic braking system according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle braking system specifications following service procedures 3.5. Operate bicycle braking system through its full range, noting test results, including non-conformity 3.6. Check bicycle hydraulic braking system, complete adjustments and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Clean up work area and dispose of waste in accordance with workplace procedures 4.3. Update workplace records, customer file and warranty information as required by enterprise 4.4. Prepare accounts and invoices as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to service bicycle hydraulic braking system, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine system condition and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- application of hydraulic principles
- classification of bicycle hydraulic braking systems, identification of system components and their relationship to suspension, wheels, drivetrain, frame and steering
- material used in bicycle hydraulic braking systems
- use of tooling and equipment
- bicycle servicing processes and techniques
- bicycle brake testing techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing bicycle hydraulic braking systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing bicycle hydraulic braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service a range of bicycle hydraulic braking systems to manufacturer/component supplier requirements
- test a range of bicycle hydraulic braking systems to manufacturer/component supplier requirements
- complete servicing records.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and hydraulic brake components
  - equipment, hand and power tools appropriate to servicing bicycle hydraulic brakes
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- children and adult models of different heights
- mountain, road, hybrid, BMX, track and trials models

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and air tooling

#### Servicing operations

Servicing operations are to include:

- master cylinder
- hydraulic lines and mechanical linkages
- cantilever disc and drum brakes
- composite material brake pads
- hydraulic linkages
- manual adjustment
- integrated brake and gear levers

#### Materials

Materials may include:

- braking system parts
- consumables
- cleaning materials

#### Testing

Testing is to confirm:

- safety and efficiency
- stable handling, turning and steering
- no failure in the hydraulic braking system

#### Information/documents

Information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches
- safe work procedures related to bicycle hydraulic braking systems
- regulatory/legislative requirements pertaining to bicycle safety
- engineer's design specifications and instructions

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>

## AURBTB3003 Repair bicycle hydraulic braking systems

### Modification History

Release	Comment
Release 1	Replaces AURB312366B Repair bicycle hydraulic braking systems Unit code updated to meet policy requirements. Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to perform repair operations to bicycle hydraulic braking systems.</p> <p>It requires the ability to understand specifications and use tools and equipment to repair and test bicycle hydraulic brake components and systems.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the inspection, repair and testing of bicycle hydraulic braking systems in a bicycle retail, service and repair environment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect bicycle hydraulic braking system	1.1. Inspect bicycle hydraulic braking system for faults and worn or damaged components 1.2. Determine repairs by visual, aural and tactile inspections and measurements 1.3. Compare conditions found with bicycle hydraulic braking system specifications and customer use requirements 1.4. Identify repair options for hydraulic braking system following workplace procedures 1.5. Document and cost repairs and obtain customer approval for work to be undertaken
2. Prepare for repair of bicycle hydraulic braking system	2.1. Plan repair sequence, including post-repair testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Prepare parts list and determine availability of replacement components 2.4. Identify additional persons to assist in repair process and make arrangements 2.5. Select tooling and equipment to meet job requirements and check to ensure they are in good working order
3. Repair and test bicycle hydraulic braking system	3.1. Perform repair of bicycle hydraulic braking system according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle braking system specifications following repair procedures 3.5. Operate repaired bicycle braking system through its full range, noting test results, including non-conformity 3.6. Check repaired bicycle hydraulic braking system, complete adjustments and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Clean up work area and dispose of waste in accordance with workplace procedures 4.3. Update workplace records, customer file and warranty information as required by enterprise 4.4. Prepare accounts and invoices as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

##### Required skills include:

- technical skills to the level required to safely use tooling and equipment to repair bicycle hydraulic braking system, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine system condition and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

##### Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- application of hydraulic principles
- classification of bicycle hydraulic braking systems, identification of system components and their relationship to suspension, wheels, drivetrain, frame and steering
- material and fluids used in bicycle hydraulic braking systems
- use of tooling and equipment
- brake repair processes and techniques
- bicycle brake testing techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to repairing bicycle hydraulic braking systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to repairing bicycle hydraulic braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair a range of bicycle hydraulic braking systems to manufacturer/component supplier specifications
- test bicycle hydraulic braking systems to manufacturer/component supplier specifications
- complete repair documentation.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and hydraulic brake components
  - equipment, hand and power tools appropriate to repairing bicycle hydraulic brakes
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on bicycle steering system	1.1. Check customer requirements and confirm intended use of the unit being serviced 1.2. Inspect bicycle headset, handlebar and stem for faults and worn or damaged components 1.3. Research bicycle steering system service requirements and check specifications 1.4. Determine condition of system by visual, aural and tactile inspections and measurements 1.5. Compare conditions found with bicycle steering system specifications and customer use requirements
2. Prepare for service of bicycle steering system	2.1. Plan service sequence, including post-service testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Prepare parts list and determine availability of replacement components 2.4. Select tooling and equipment to meet job requirements and check to ensure they are in good working order
3. Service and test bicycle steering system	3.1. Perform service of bicycle steering system according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle steering system specifications following service procedures 3.5. Operate bicycle steering system through its full range, noting test results, including non-conformity 3.6. Check serviced bicycle steering system, complete adjustments, and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Clean up work area and dispose of waste in accordance with workplace procedures 4.3. Update workplace records, customer file and warranty information as required by enterprise 4.4. Prepare accounts and invoices as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to service bicycle steering system, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine system condition and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning, scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- application of mechanical principles
- classification of bicycle steering systems and identification of system components
- purpose and requirements of a bicycle steering system and relationship to suspension, wheels, drivetrain, frame and braking system
- material used in bicycle steering systems
- servicing procedures and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS and environment, relevant to servicing bicycle steering systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing bicycle steering systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service bicycle headsets, handlebars and stems to manufacturer/component supplier specifications
- test bicycle headsets, handlebars and stems.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle steering unit configurations
  - equipment, hand tools appropriate to servicing bicycle headsets, handlebars and stems
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>

1. Gather information on bicycle suspension system	1.1. Check customer requirements and confirm intended use of the unit being serviced 1.2. Inspect bicycle suspension system for faults and worn or damaged components 1.3. Research bicycle suspension system service requirements and check specifications 1.4. Determine condition of system by visual, aural and tactile inspections and measurements 1.5. Compare conditions found with bicycle suspension system specifications and customer use requirements
2. Prepare for service of bicycle suspension system	2.1. Plan service sequence, including post-service testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Prepare materials list and determine availability 2.4. Select tooling and equipment to meet job requirements and check to ensure they are in good working order 2.5. Prepare work area for servicing activity
3. Service and test bicycle suspension system	3.1. Perform service of bicycle suspension system according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle suspension system specifications following service procedures 3.5. Operate bicycle suspension system through its full range, noting test results, including non-conformity 3.6. Check serviced bicycle suspension system, complete adjustments, and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Clean up work area and dispose of waste in accordance with workplace procedures 4.3. Update workplace records, customer file and warranty information as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to service bicycle suspension system, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine system condition and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning, scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- application of mechanical and hydraulic principles
- classification of bicycle suspension systems and identification of system components
- purpose and requirements of bicycle suspension systems and their relationship to wheels, drivetrain and frame
- material used in bicycle suspension systems
- suspension system service procedures and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environmental, relevant to servicing bicycle suspension systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to servicing bicycle suspension systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service a range of bicycle suspension systems to manufacturer/component supplier specifications
- test bicycle suspension systems to manufacturer/ component supplier specifications.

#### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and suspension systems and components
  - equipment, hand and power tools appropriate to servicing bicycle suspension systems
  - technical specifications and standards
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Bicycles</b>	Bicycles may include: <ul style="list-style-type: none"> <li>• children and adult models of different heights</li> <li>• mountain, road, hybrid, BMX, track and trials models</li> </ul>
<b>Suspension systems</b>	Suspension systems may include: <ul style="list-style-type: none"> <li>• elastomer and spring units</li> <li>• mechanical, air and hydraulic systems</li> <li>• hydraulic fluids</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• hand-held power tooling</li> <li>• floor stands and workbench</li> </ul>
<b>Service items</b>	Service items may include: <ul style="list-style-type: none"> <li>• frame and suspension geometry</li> <li>• disassembly and cleaning</li> <li>• suspension bearings</li> <li>• lubricants</li> <li>• suspension compression ratios</li> <li>• elastomer and spring system lubricating oils</li> <li>• seals and fasteners</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• suspension system parts</li> <li>• consumables</li> <li>• cleaning materials</li> </ul>
<b>Testing</b>	Testing is to confirm: <ul style="list-style-type: none"> <li>• safety and efficiency</li> <li>• stable handling, turning and steering</li> <li>• no failure in the suspension system</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material</li> </ul>

**RANGE STATEMENT**

	<p>safety data sheets (MSDS), diagrams or sketches</p> <ul style="list-style-type: none"> <li>• safe work procedures related to bicycle suspension systems</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>

## AURBTD3003 Repair and overhaul bicycle steering systems

### Modification History

Release	Comment
Release 1	Replaces AURB315646A Repair/overhaul bicycle steering systems Unit code updated to meet policy requirements. Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to inspect, plan, and safely repair, overhaul and test bicycle steering systems.</p> <p>It requires the ability to understand specifications and use specialist tools and equipment.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the inspection, repair/overhaul and testing of bicycle headsets, handlebars and stems in a bicycle retail, service and repair environment. It includes installation, replacement and repair or overhaul of these components and cutting and fitting of forks on all bicycle types.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect bicycle steering system	1.1. Inspect bicycle steering system for faults and worn or damaged components 1.2. Determine repairs by visual, aural and tactile inspections and measurements 1.3. Compare conditions found with bicycle steering system specifications and customer use requirements 1.4. Identify repair and replacement options for bicycle steering system following workplace procedures 1.5. Document and cost repairs and replacements and obtain customer approval for work to be undertaken
2. Prepare for repair of bicycle steering system	2.1. Plan repair and overhaul sequence, including post-repair testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Prepare parts list and determine availability of replacement components 2.4. Identify additional persons to assist in repair process and make arrangements 2.5. Select tooling and equipment to meet job requirements and check to ensure they are in good working order
3. Repair, overhaul and test bicycle headsets, handlebars and stems	3.1. Perform repair/overhaul of bicycle steering system according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and use tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle steering system specifications following repair/overhaul procedures 3.5. Operate repaired bicycle steering system through full range, noting test results, including non-conformity 3.6. Check repaired bicycle steering system, complete adjustments and alignments, and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Update workplace records, customer file and warranty information as required by enterprise 4.3. Clean up work area and dispose of waste in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to repair/overhaul a range of bicycle headsets, handlebars, stems and forks, perform tests and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to use diagnostic processes, and identify technical and procedural problems to avoid planning, scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- application of mechanical principles relevant to bicycle steering systems
- classification of bicycle steering systems and identification of system components and their operation
- purpose and requirements of bicycle steering systems and their relationship to suspension, wheels, drivetrain, frame and braking system
- material used in bicycle steering systems
- fork rake and offset
- suitability of fork types to various applications
- steering system repair/overhaul procedures and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environmental, relevant to repair/overhaul of bicycle steering systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to repair/overhaul of bicycle steering systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair and overhaul a range of bicycle steering system configurations to manufacturer/component supplier specifications
- fit new forks to a frame to manufacturer/component supplier specifications
- test bicycle steering systems to manufacturer/ component supplier specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle steering configurations
  - equipment, hand and power tools appropriate to repairing steering systems
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to repair/overhaul a range of bicycle suspension systems, perform tests and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to use diagnostic processes, and identify technical and procedural problems to avoid planning, scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- classification of bicycle suspension systems and identification of system components and their functions
- purpose and requirements of bicycle suspension systems and their relationship to wheels, drivetrain and frame
- application of mechanical and hydraulic principles as they relate to bicycle suspension systems
- materials used in bicycle suspension systems
- repair/overhaul procedures for suspension systems
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environmental, relevant to repair/overhaul of bicycle suspension systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to repair/overhaul of bicycle suspension systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

## AURBTJ2001 Remove, repair and fit bicycle tyres

### Modification History

Release	Comment
Release 1	Replaces AURB218168B Remove, repair and fit bicycle tyres Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to remove, repair and fit bicycle tyres and complete documents.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the removal, repair and fitting of bicycle tyres in a bicycle retail, service and repair environment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on bicycle tyre	1.1. Check customer requirements in accordance with workplace procedures 1.2. Confirm intended use of tyre by discussions with customer 1.3. Research bicycle tyre fitting requirements and access and check specifications 1.4. Check tooling and equipment prior to use for conformity with specifications and safe condition 1.5. Determine condition of tyre by visual and tactile inspections and pressure measurement 1.6. Compare conditions found with bicycle tyre specifications and customer use requirements 1.7. Cost repairs and additional work and gain customer approval
2. Prepare for removal, repair and fitting of a bicycle tyre and tube	2.1. Plan removal, repair and fitting sequence and determine availability of tooling and equipment 2.2. Ensure plan includes post-fitting testing and checking process 2.3. Select tooling and equipment to meet job requirements and set up work area
3. Remove fit, and test bicycle tyre and tube	3.1. Perform removal, repair and fitting operation for bicycle tyre and tube according to plan 3.2. Select, use and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.3. Perform fitting and repair operations using personal safety equipment and precautions to protect others in the workplace 3.4. Check customer requirements and bicycle tyre and tube specifications following fitting procedures 3.5. Check fitted bicycle tyre and tube, complete pressure adjustments and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Update workplace records, customer file and warranty information as required by enterprise 4.3. Prepare accounts and invoices as required by enterprise 4.4. Clean up work area and dispose of packing materials in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to remove, repair and fit bicycle tyres
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to count and measure accurately
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- classification of tyres and tubes and fitting types
- purpose and requirements of bicycle tyres and tubes and their relationship to wheels, steering systems, suspension, drivetrain, frame and braking system
- application of mechanical and pneumatic principles
- material used in bicycle tyres and tubes
- removal, repair and fitting procedures and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to removal, repair and fitting of bicycle tyres
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to removal, repair and fitting of bicycle tyres

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- remove, inspect, repair and fit a range of bicycle tyres to different rim configurations to manufacturer/component supplier specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle tyres and rim configurations
  - equipment, hand and power tools appropriate to removal, repair and fitting of bicycle tyres
  - technical specifications and standards
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.

<b>EVIDENCE GUIDE</b>	
	<ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different heights
- mountain, road, hybrid, BMX, track and trials models

#### Tyres

Tyres may include:

- road
- track
- heavy duty
- tubed
- tubeless
- solid tyres

#### Rims

Rims may include:

- steel
- aluminium
- deep dish
- aero
- composite material
- disc type rims

#### Tooling and equipment

Tooling and equipment may include:

- specific tyre removing, repairing, fitting and general workshop equipment tooling
- specific testing equipment and pneumatic inflation equipment
- floor stands, workbench and air tooling

#### Materials

Materials may include:

- spare parts
- adhesives and cleaning agents
- plastic, rubber and cloth rim tapes
- cleaning materials

#### Information/documents

Information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material

**RANGE STATEMENT**

	<p>safety data sheets (MSDS), diagrams or sketches</p> <ul style="list-style-type: none"> <li>• safe work procedures related to removal, repair and fitting of bicycle tyres</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect bicycle wheel and hub	1.1. Check customer requirements and intended use of the unit in accordance with workplace procedures 1.2. Research bicycle wheel and hub service requirements and check specifications 1.3. Inspect bicycle wheel and hub for faults and worn or damaged components by visual, aural and tactile inspections and measurements 1.4. Compare conditions found with bicycle wheel and hub specifications and customer use requirements 1.5. Identify service options for bicycle wheel and hub in accordance with workplace procedures
2. Prepare for service of bicycle wheel and hub	2.1. Plan service sequence, including post-service testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Select tooling, equipment and materials to meet job requirements and check for good working order 2.4. Set up work area
3. Remove bicycle wheel, service hub and refit wheel	3.1. Remove bicycle wheel and perform service operations according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and use tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and perform bicycle wheel service prior to refitting 3.5. Operate serviced bicycle wheel and hub through full range, noting test results, including non-conformity 3.6. Check serviced bicycle wheel and hub, complete adjustments and alignments, and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Update workplace records, customer file and warranty information as required by enterprise 4.3. Clean up work area and dispose of waste in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to remove and refit a range of bicycle wheels and service hubs, perform tests and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning, scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- classification of bicycle wheels and hubs and identification of system components
- purpose and requirements of a bicycle wheel as a suspension, steering and braking component
- purpose and requirements of a bicycle wheel hub and their relationship to suspension, wheels, drivetrain, frame and braking
- materials and processes used in torque measurement and adjustment of wheels
- wheel removal and refitting procedures and techniques
- material used in bicycle wheel hubs
- wheel hub servicing procedures and techniques
- use of tooling and equipment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environmental, relevant to removal, refitting and servicing of bicycle wheels and hubs
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to removal, refitting and

**REQUIRED SKILLS AND KNOWLEDGE**

servicing of bicycle wheels and hubs

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- remove and refit a range of bicycle wheel configurations to manufacturer/component supplier specifications
- identify wear or faults in bicycle wheel hubs
- service bicycle wheel hubs to manufacturer/component supplier specifications
- test bicycle wheels and hubs to manufacturer/component supplier specifications
- present bicycle for delivery to customer in compliance with workplace requirements.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle frames, wheels and hubs
  - equipment, hand and power tools appropriate to removing and refitting wheels and servicing hubs
  - technical specifications and standards
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</li><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different heights
- mountain, road, hybrid, BMX, track and trials models

#### Wheels and associated components

Wheels and associated components may include:

- spoked, disk and tri-spoked wheels
- conventional, clincher, tubular, aero, deep dished and composite material wheel rims
- quick release, Allen head and nut wheel fasteners
- vertical and horizontal frame lugs

#### Bicycle wheel hubs

Bicycle wheel hubs may include:

- disk, drum and coaster, and internal foot brake hubs
- loose ball, cage and roller bearings
- hub lubricants

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and wheel jigs

#### Materials

Materials may include:

- a range of bicycle wheels and hubs
- parts suitable for use in wheels and hubs
- lubricants
- cleaning materials

#### Testing

Testing is to confirm:

- safety and efficiency
- stable handling, turning and steering
- no failure in parts of the bicycle

#### Information/documents

Information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on bicycle wheel	1.1. Check customer requirements and confirm intended use of the unit being designed following workplace procedures 1.2. Research bicycle wheel design requirements and check specifications 1.3. Confirm bicycle wheel design and specifications with customer 1.4. Check tooling and equipment prior to use for conformity with specifications and safe condition
2. Prepare for building of bicycle wheel	2.1. Plan build sequence, including post-build checking process 2.2. Determine availability of tooling and equipment to meet job requirements 2.3. Prepare material list and determine availability 2.4. Prepare tooling and equipment and check to ensure they are in good working order 2.5. Prepare work area and materials
3. Build bicycle wheel	3.1. Perform build operations for bicycle wheel according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and use tools and equipment safely 3.4. Check customer requirements and bicycle wheel specifications following build procedures
4. Test bicycle wheel and complete work	4.1. Operate built bicycle wheel through full range, noting test results, including non-conformity 4.2. Check built bicycle wheel, complete adjustments and prepare unit for delivery 4.3. Store portable tooling and equipment in approved designated areas 4.4. Clean work area and dispose of waste following workplace procedures 4.5. Update workplace records, customer file and warranty information as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to design and build a range of bicycle wheels, perform tests and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications related to various types of bicycle wheels, their components and spoke patterns
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to establish diagnostic processes which identify potential faults in wheel design, and identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- application of mechanical principles
- classification of bicycle wheels and identification of components
- purpose and requirements of bicycle wheels and their relationship to suspension, drivetrain, frame and steering systems
- material used in bicycle wheels
- design requirements of bicycle wheels
- use of tooling and equipment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including workplace health and safety (WHS), personal safety and environment, relevant to designing and building bicycle wheels
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to designing and building bicycle wheels

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- design and build a range of bicycle wheels to specification
- complete workplace records.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle wheels and components
  - equipment, hand and power tools appropriate to building wheels
  - technical specifications and standards
  - workplace documentation.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.
- Assessment may be applied under project-related conditions

**EVIDENCE GUIDE**

	<p>(real or simulated) and require evidence of process.</p> <ul style="list-style-type: none"><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Wheels and components

Bicycle wheels and components may include:

- steel, aluminium, deep dish, aero, composite material and disc type rims
- high flange, low flange and integrated brake hubs
- metal and composite hub material
- steel, aluminium and composite spoke material
- straight gauge, double butted and bladed spokes
- spoke nipples
- spoke lacing patterns
- types of adhesives and surface coatings

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and wheel jigs

#### Materials

Materials may include:

- a range of wheel components, including rims, spokes and hubs and cleaning materials

#### Wheel design and build considerations

Wheel design and build considerations may include:

- the principles and materials used in wheel building
- hubs, spoke and rim selection
- lacing a 32 hole 3 cross spoke pattern
- other spoke patterns and variations
- disc and non-disc brake specific patterns
- factory wheel set designs and technology
- tying and soldering spokes
- calculating spoke lengths
- building a 3 or 4 cross wheel in symmetrical or asymmetrical patterns
- truing and tensioning a wheel
- wheel design and symmetry
- wheel dynamics and loading

#### Information/documents

Information/documents may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to designing and building bicycle wheels</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>

**RANGE STATEMENT****Quality requirements**

Quality requirements may include:

- regulations, including Australian standards
- internal organisational quality policies and procedures
- enterprise operations and procedures

**Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice
- safe work procedures
- reporting and recording procedures

## AURBTJ3004 Repair and overhaul bicycle wheels and hubs

### Modification History

Release	Comment
Release 1	Replaces AURB318267A Repair/overhaul bicycle wheels and hubs Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to repair a range of bicycle wheels with different hub, spoke and rim configurations.</p> <p>It requires the ability to understand specifications and use tools and equipment to inspect, repair/overhaul and test bicycle wheels and hubs.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the inspection, repair and testing of bicycle wheels and hubs in a bicycle retail, service and repair environment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect bicycle wheel and hub	1.1. Check customer requirements and intended use of the unit in accordance with workplace procedures 1.2. Inspect bicycle wheel and hub for faults and worn or damaged components 1.3. Determine repairs by visual, aural and tactile inspections and measurements 1.4. Compare conditions found with bicycle wheel and hub specifications and customer use requirements 1.5. Identify repair options for bicycle wheel and hub in accordance with workplace procedures 1.6. Document and cost repairs and obtain customer approval for work to be undertaken
2. Prepare for repair/overhaul of bicycle wheel and hub	2.1. Plan repair/overhaul sequence, including post-repair testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Prepare parts list and determine availability of replacement components 2.4. Identify additional persons to assist in repair process and confirm availability 2.5. Select tooling and equipment to meet job requirements and check for good working order
3. Repair/overhaul and test bicycle wheel and hub	3.1. Repair/overhaul bicycle wheel and hub according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle, maintain and use tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle wheel and hub specifications following repair/overhaul procedures 3.5. Operate repaired bicycle wheel and hub through full range, noting test results, including non-conformity 3.6. Check repaired bicycle wheel and hub, complete adjustments and alignments and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Update workplace records, customer file and warranty information as required by enterprise 4.3. Clean up work area and dispose of waste in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to repair a range of bicycle wheels and hubs, perform tests and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning, scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- application of mechanical principles
- classification of bicycle wheels and identification of components
- purpose and requirements of bicycle wheels and their relationship to suspension, drivetrain, frame and steering systems
- purpose and requirements of a bicycle wheel hub and their relationship to suspension, wheels, drivetrain, frame and braking
- material used in bicycle wheels and hubs
- wheel and hub repair/overhaul procedures and techniques
- use of tooling and equipment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to repair/overhaul of bicycle wheels and hubs
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to repair/overhaul of bicycle wheels and hubs

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- identify wear or faults in bicycle wheels and hubs
- repair a range of different bicycle wheels and hubs to manufacturer/component supplier specifications
- test bicycle wheels and hubs to manufacturer/component supplier specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle wheels, hubs and components
  - equipment, hand and power tools appropriate to repairing wheels and hubs
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycle wheels and hubs

Bicycle wheels and hubs may include:

- spoked, disk and tri-spoked wheels
- steel, aluminium, deep dish, aero, composite material and disc type rims
- quick release, Allen head and nut wheel fasteners
- vertical and horizontal frame lugs
- high flange, low flange and integrated brake hubs
- disk, drum and coaster and internal foot brake hubs
- metal and composite hub material
- loose ball, cage and roller bearings
- steel, aluminium and composite spoke material
- straight gauge, double butted and bladed spokes
- spoke nipples
- spoke lacing patterns

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and wheel jigs

#### Materials

Materials may include:

- a range of bicycle wheels and hubs
- parts suitable for use in wheels and hubs
- lubricants
- cleaning materials

#### Wheel and hub repair methods

Wheel and hub repair methods are to include:

- replacing spokes
- tensioning spokes
- wheel truing
- rebuild/regrease front wheel hub
- rebuild/regrease rear wheel hub

#### Testing

Testing is to confirm:

- safety and efficiency

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• stable handling, turning and steering</li> <li>• no failure in parts of the bicycle</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to repairing bicycle wheels, hubs and components</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

## AURBTK2001 Use and maintain specialised bicycle repair tools

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to select, use and maintain specialised tools used for bicycle service and repair.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the use, service and maintenance of specialised tools in a bicycle workshop.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

### Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select and prepare specialised tools	<p>1.1. <b><i>Specialised bicycle repair tools</i></b> are selected to meet <b><i>workplace requirements</i></b></p> <p>1.2. Tools are prepared for use according to manufacturer and component supplier specifications</p> <p>1.3. <b><i>Workplace Health and Safety (WHS) requirements</i></b> are identified and applied</p>
2. Use specialised tools	<p>2.1. Tools are used to produce outcomes according to job requirements</p> <p>2.2. Tools are used in a safe manner to prevent injury to self and others</p> <p>2.3. Tools are used in a manner that does not cause damage to other workplace equipment</p>
3. Service and maintain specialised tools	<p>3.1. Tools are checked against manufacturer and component supplier recommendation to ensure safe operation</p> <p>3.2. Service and <b><i>maintenance operations</i></b> are carried out according to industry, workplace and WHS requirements</p> <p>3.3. Tools and equipment are checked and faulty items are identified and tagged</p>
4. Store and secure specialised tools	<p>4.1. Tools and equipment are checked, cleaned and stored according to workplace expectations</p> <p>4.2. Service schedule documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal instructions
  - communicate information related to the use of tools and equipment
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to:
  - read and follow bicycle repair instruction
  - read and apply operating procedures
- numeracy skills to correctly interpret metric and imperial measurement systems
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow workplace procedures
- problem-solving skills to:
  - recognise a workplace problem or potential problem
  - refer problems outside area of responsibility to appropriate person
  - identify tool and equipment defects
- self-management skills to:
  - locate and identify appropriate specialised bicycle tools and equipment
  - recognise own limitations and seek advice
  - follow workplace policies and documentation, such as manufacturer specification, industry codes of practice and workplace procedures
- technical skills to select, use, maintain and store specialised bicycle tools
- technology skills to use workplace technology to assist with work practices.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements related to using specialised bicycle tools and equipment
- application and operation of specialised bicycle repair tools
- methods of identifying faults in specialised bicycle repair tools
- maintenance and storage procedures of specialised bicycle repair tools.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select appropriate specialised bicycle repair tools
- carry out a minimum of three bicycle service or repair tasks using specialised bicycle repair tools
- maintain and store specialised bicycle repair tools.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- use workplace practices and procedures
- follow WHS requirements
- applying environmental policy

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice

The following resources must be made available for the assessment of this unit:

- bicycles and bicycle components that require specialised bicycle repair tools
- specialised bicycle repair tools
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant

**EVIDENCE GUIDE**

contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Specialised bicycle repair tools*** may include:

- repair stand

- 

chain tool

- 

spoke wrench

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on bicycle drivetrain system	1.1. Check customer requirements and confirm intended use of the unit being serviced 1.2. Inspect bicycle drivetrain system for faults and worn or damaged components 1.3. Research bicycle drivetrain system service requirements and check specifications 1.4. Determine condition of system by visual, aural and tactile inspections and measurements 1.5. Compare conditions found with bicycle drivetrain system specifications and customer use requirements
2. Prepare for service of bicycle drivetrain system	2.1. Plan service sequence, including post-service testing and checking process 2.2. Determine availability of tooling and equipment 2.3. Prepare parts list and determine availability of replacement components 2.4. Select tooling and equipment to meet job requirements and check to ensure they are in good working order
3. Service and test bicycle drivetrain system	3.1. Perform service of bicycle drivetrain system according to plan 3.2. Use personal safety equipment and precautions to protect others in the workplace 3.3. Handle and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.4. Check customer requirements and bicycle drivetrain system specifications following service procedures 3.5. Operate bicycle drivetrain system through its full range, noting test results, including non-conformity 3.6. Check serviced bicycle drivetrain system, complete adjustments, and prepare unit for delivery
4. Complete work and clean up	4.1. Store portable tooling and equipment in approved designated areas 4.2. Clean up work area and dispose of waste in accordance with workplace procedures 4.3. Update workplace records, customer file and warranty information as required by enterprise 4.4. Prepare accounts and invoices as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to service bicycle drivetrain system, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine system condition and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- application of mechanical principles
- classification of bicycle drivetrain systems and identification of system components
- purpose and requirements of a bicycle drivetrain system and relationship to suspension, wheels, frame and braking system
- material used in bicycle drivetrain systems
- drivetrain lubricants
- drivetrain service procedures and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing bicycle drivetrain systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes related to servicing bicycle drivetrain systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service bicycle drivetrain systems to manufacturer/component supplier specifications
- test bicycle drivetrain systems to manufacturer/component supplier specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and drivetrain components
  - equipment, hand and power tools appropriate to servicing bicycle drivetrains
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to

**EVIDENCE GUIDE**

	<p>ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Bicycles</b>	Bicycles may include: <ul style="list-style-type: none"> <li>• children and adult models of different heights</li> <li>• mountain, road, hybrid, BMX, track and trials models</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling</li> <li>• hand-held power tooling</li> <li>• floor stands, workbench and drivetrain jigs</li> </ul>
<b>Drivetrain systemservicing</b>	Bicycle drivetrain system servicing may include: <ul style="list-style-type: none"> <li>• pedals</li> <li>• cranks</li> <li>• chains and chain wheels</li> <li>• cassette, cartridge and internal hub gear systems</li> <li>• manual mechanical, automatic, electro-mechanical and electric gear changers</li> <li>• integrated brake/gear lever systems</li> <li>• loose ball, needle and roller bearings</li> <li>• cables and cable liners</li> <li>• fixed and freewheel rear sprockets</li> <li>• lubricants and greases</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• drivetrain system parts</li> <li>• consumables</li> <li>• cleaning materials</li> </ul>
<b>Testing</b>	Testing is to confirm: <ul style="list-style-type: none"> <li>• safety and efficiency</li> <li>• stable handling, turning and steering</li> <li>• no failure in the drivetrain system</li> </ul>
<b>Information/documents</b>	Information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• safe work procedures related to bicycle drivetrain systems</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements may include:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• enterprise operations and procedures</li></ul>
<b>Organisational policies and procedures</b>	Organisational policies and procedures may include: <ul style="list-style-type: none"><li>• quality policies and procedures, including Australian standards</li><li>• WHS, sustainability, environment, equal opportunity and anti-discrimination</li><li>• manufacturer specifications and industry codes of practice</li><li>• safe work procedures</li><li>• reporting and recording procedures</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect bicycle drivetrain system	<ul style="list-style-type: none"><li>1.1. Inspect bicycle drivetrain system for faults and worn or damaged components</li><li>1.2. Determine repairs by visual, aural and tactile inspections and measurements</li><li>1.3. Compare conditions found with bicycle drivetrain system specifications and customer use requirements</li><li>1.4. Identify repair options for drivetrain system following workplace procedures</li><li>1.5. Document and cost repairs and obtain customer approval for work to be undertaken</li></ul>
2. Prepare for repair of bicycle drivetrain system	<ul style="list-style-type: none"><li>2.1. Plan repair sequence, including post-repair testing and checking process</li><li>2.2. Determine availability of tooling and equipment</li><li>2.3. Prepare parts list and determine availability of replacement components</li><li>2.4. Identify additional persons to assist in repair process and make arrangements</li><li>2.5. Select tooling and equipment to meet job requirements and check to ensure they are in good working order</li></ul>
3. Repair and test bicycle drivetrain system	<ul style="list-style-type: none"><li>3.1. Perform repair of bicycle drivetrain system according to plan</li><li>3.2. Use personal safety equipment and precautions to protect others in the workplace</li><li>3.3. Handle and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements</li><li>3.4. Check customer requirements and bicycle drivetrain system specifications following repair procedures</li><li>3.5. Operate repaired bicycle drivetrain system through its full range, noting test results, including non-conformity</li><li>3.6. Check repaired bicycle drivetrain system, complete adjustments and alignments, and prepare unit for delivery</li></ul>
4. Complete work and clean up	<ul style="list-style-type: none"><li>4.1. Store portable tooling and equipment in approved designated areas</li><li>4.2. Clean up work area and dispose of waste in accordance with workplace procedures</li><li>4.3. Update workplace records, customer file and warranty information as required by enterprise</li><li>4.4. Prepare accounts and invoices as required by enterprise</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to repair bicycle drivetrain system, test the unit and make adjustments
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine system condition and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- manufacturer and/or component supplier specifications
- application of mechanical and electronic principles
- classification of bicycle drivetrain systems and identification of system components
- purpose and requirements of a bicycle drivetrain system and relationship to suspension, wheels, frame and braking system
- material used in bicycle drivetrain systems
- drivetrain lubricants
- drivetrain repair procedures and techniques
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice regulations, including WHS, personal safety and environment, relevant to repairing bicycle drivetrain systems
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes related to repairing bicycle drivetrain systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- repair a range of bicycle drivetrain systems to manufacturer/component supplier specifications
- test bicycle drivetrain systems to manufacturer/ component supplier specifications
- complete repair documentation.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and drivetrain components
  - equipment, hand and power tools appropriate to repairing bicycle drivetrains
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Bicycles</b>	Bicycles may include: <ul style="list-style-type: none"> <li>• children and adult models of different heights</li> <li>• mountain, road, hybrid, BMX, track and trials models</li> </ul>

## AURBTR3001 Service electric power assist bicycles

### Modification History

Release	Comment
Release 1	Replaces AURB318301A Service electric power assist bicycles Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to perform routine maintenance on electric power assisted bicycle systems and components.</p> <p>It requires the ability to identify maintenance requirements, interpret manufacturer's instructions and specifications, service the additional electric bicycle components, and test the bicycle for safe and efficient operation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake routine maintenance of electric bicycles in a bicycle retail, service and repair environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to maintain bicycle	1.1. Confirm customer requirements and gain approval for work in accordance with workplace procedures 1.2. Identify and source technical information and specifications 1.3. Check tooling and equipment for availability, conformity with specifications and safe condition 1.4. Prepare work area and set up equipment and materials
2. Perform maintenance on bicycle	2.1. Inspect bicycle for faults and worn or damaged components using visual, aural and tactile inspections, and measurements 2.2. Check electrical components, battery condition and motor connectors at plug located on rear stay or front fork 2.3. Compare conditions found with bicycle specifications and customer requirements 2.4. Document any components needing repair additional to routine maintenance, and report to appropriate person or notify customer in accordance with workplace procedures 2.5. Plan maintenance sequence, including post-maintenance testing and checking process 2.6. Select and use tooling and equipment in accordance with workplace health and safety (WHS) requirements 2.7. Perform maintenance operations according to plan and without damage to bicycle components or equipment 2.8. Replace non-serviceable and broken parts in accordance with workplace procedures 2.9. Check bicycle operation in accordance with workplace procedures
3. Prepare bicycle for return to customer	3.1. Clean and prepare bicycle for delivery to customer 3.2. Clean and store portable tooling and equipment in approved designated areas 3.3. Complete workplace records, customer file and warranty information as required by enterprise 3.4. Clean up work area and dispose of waste materials in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment, including a multimeter to maintain an electric power assist bicycle, test the unit and make adjustments and prepare bicycle for delivery to customer
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine safe operation to specifications
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning, scheduling problems and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle terminology
- operating principles of electric bicycles
- understanding of throttle response, power and performance, pedal assist function and throttle function
- manufacturer and/or component supplier specifications
- component function and application
- maintenance procedures
- testing procedures and adjustment methods
- tools and equipment used in bicycle maintenance
- Australian standards applicable to electric power assist bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to bicycle maintenance
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to bicycle maintenance

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques which are appropriate to the circumstances
- complete preparatory activity in a systematic manner
- conduct maintenance operations without damage to components or tooling and equipment
- maintain a power assisted bicycle in compliance with Australian standards and workplace requirements.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - an electric power assist bicycle
  - equipment, hand and power tools appropriate to maintaining electric bicycles
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Electric power assist bicycles

Electric power assist bicycles may include:

- bicycle styled products with both throttle and PAS functions that look and function like a bicycle with or without the motor engaged, and with 200 watts of rated power at the wheel

Newer laws to be implemented within two years will allow for 250 watts and throttle to 6 km/h then PAS

Note: Older styled scooter type products with lead acid batteries and foot platform DO NOT meet current regulations

#### Bicycle components

Electric power assist bicycle components, additional to normal bicycles, may include:

- motor hubs and heavy duty spokes
- electric controllers
- battery and charger

#### Maintenance items

Maintenance items may include:

- battery charging
- controller operation
- wiring
- connectors at motor plug, controller, brake cut outs, throttle and PAS sensor

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- electrical meters
- hand-held power tooling
- floor stands, workbench and air tooling

#### Materials

Materials may include:

- lubricants
- tapes
- fitting consumables
- cleaning materials

#### Testing

Testing is to confirm:

- safety and efficiency

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>proper operation of electric assist</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>hardcopy and electronic media</li> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>safe work procedures related to maintaining electric power assist bicycles</li> <li>regulatory/legislative requirements pertaining to bicycle safety</li> <li>engineer's design specifications and instructions</li> <li>organisation work specifications and requirements</li> <li>instructions issued by authorised enterprise or external persons</li> <li>Australian standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<ul style="list-style-type: none"><li>1.1. Check and confirm customer requirements in accordance with workplace procedures</li><li>1.2. Research bicycle accessory fitting requirements and check specifications and applicable standards</li><li>1.3. Check tooling and equipment prior to use, for availability and conformity with specifications and safe condition</li><li>1.4. Determine condition of accessories by inspection and measurement and compare with bicycle accessory specifications and customer use requirements</li></ul>
2. Remove bicycle accessories	<ul style="list-style-type: none"><li>2.1. Plan removal sequence</li><li>2.2. Remove accessories without causing damage to frame or other components or accessories</li><li>2.3. Process removed accessories for repair or disposal in accordance with workplace procedures</li></ul>
3. Fit, test and adjust bicycle accessories	<ul style="list-style-type: none"><li>3.1. Determine correct positioning of accessories with regard to operational requirements and aesthetics</li><li>3.2. Fit bicycle accessories according to plan using personal safety equipment and precautions to protect others in the workplace</li><li>3.3. Handle and use tooling and equipment in accordance with workplace health and safety (WHS) requirements</li><li>3.4. Operate fitted bicycle accessories through full range, noting test results, including non-conformity</li><li>3.5. Check fitted bicycle accessories, complete adjustments, and prepare unit for delivery</li></ul>
4. Complete work and clean up	<ul style="list-style-type: none"><li>4.1. Store portable tooling and equipment in approved designated areas</li><li>4.2. Update workplace records, customer file and warranty information as required by enterprise</li><li>4.3. Clean up work area and dispose of waste in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to safely use tooling and equipment to remove, replace fit and adjust bicycle accessories
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to prepare reports and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements to determine safe fitting and operation
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- bicycle anatomy and terminology
- classification of accessory and fitting types
- manufacturer and/or component supplier specifications
- purpose and requirements of accessories and fittings and their relationship to safe bicycle use
- type, range and content of component/accessory fitting instructions
- material used in accessories and fittings
- testing procedures and adjustment methods
- use of tooling and equipment
- Australian standards applicable to bicycles
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to removing, replacing, fitting and adjusting bicycle accessories
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to removing, replacing, fitting and adjusting bicycle accessories

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- conduct removal, replacement, fitting and adjustment of a range of common accessories in accordance with workplace and manufacturer/component supplier requirements
- complete removal, replacement, fitting and adjustment of accessories within workplace timeframes
- present bicycle for delivery to customer in compliance with workplace requirements and Australian standards.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle models and accessories
  - equipment, hand and power tools appropriate to removal, replacement, fitting and adjustment of accessories
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and

**EVIDENCE GUIDE**

	<p>Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Bicycles

Bicycles may include:

- those with and without gears, and with lever operated brakes
- children and adult models of different heights
- mountain, road, hybrid, BMX, track and trials models

#### Accessories

Accessories may include:

- battery, solar or dynamo lighting systems
- electronic equipment
- heart rate monitors
- gear changers
- computers
- speedometers and odometers
- child carriers, luggage carriers, bags and attachment frames
- seats
- bicycle carriers
- pedal cleats
- water bottle frames
- tri bars

#### Tooling and equipment

Tooling and equipment may include:

- hand tooling
- hand-held power tooling
- floor stands, workbench and air tooling

#### Materials

Materials may include:

- tapes
- fitting consumables
- cleaning materials

#### Testing

Testing is to confirm:

- safety and efficiency
- stable handling, turning and steering
- no failure in parts of the bicycle
- no loosening or loss of components or accessories

#### Information/documents

Information/documents may include:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to removing, replacing, fitting and adjusting bicycle accessories</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>

**RANGE STATEMENT****Quality requirements**

Quality requirements may include:

- regulations, including Australian standards
- internal organisational quality policies and procedures
- enterprise operations and procedures

**Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice
- safe work procedures
- reporting and recording procedures

## AURBTY3001 Service and repair bicycle frames

### Modification History

Release	Comment
Release 1	Replaces AURB328267A Service and repair bicycle frames Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to inspect, plan and safely service, repair and test bicycle frames.</p> <p>It requires the ability to interpret specifications, assess the condition of the frame, and to select and use tooling and equipment.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake service and repair of a range of bicycle frames in a bicycle servicing and repair environment.</p> <p>The repair of carbon fibre bicycle frames is covered by AURBTY4003 Assess carbon fibre frames for repair.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm customer requirements and intended use of the unit in accordance with workplace procedures 1.2. Identify and check bicycle frame service and repair requirements and specifications 1.3. Check tooling and equipment for availability, conformity with specifications and safe condition 1.4. Prepare work area and set up equipment and materials
2. Inspect bicycle frame	2.1. Inspect bicycle frame for faults, wear or damage using visual, aural and tactile inspections and measurements 2.2. Compare conditions found with bicycle frame specifications and customer requirements 2.3. Identify service and repair options for bicycle frame 2.4. Document and cost service and repair items for customer approval in accordance with workplace procedures 2.5. Obtain customer approval for work to be undertaken
3. Prepare for service and repair of bicycle frame	3.1. Plan service and repair sequence and determine availability of tooling and equipment 3.2. Ensure service and repair sequence plan includes post-service testing and checking process 3.3. Prepare list of parts and materials and determine availability 3.4. Identify need for additional persons to assist in repair process and make arrangements 3.5. Select and check tooling and equipment to meet job requirements
4. Service and repair bicycle frame	4.1. Perform service and repair operations for bicycle frame according to plan 4.2. Use personal safety equipment and take precautions to protect others in the workplace 4.3. Use and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 4.4. Check customer requirements and bicycle frame specifications in accordance with workplace procedures
5. Test bicycle frame	5.1. Operate bicycle through its full range, noting test results, including non-conformity 5.2. Check bicycle frame, complete adjustments and prepare unit for delivery 5.3. Clean and store portable tooling and equipment in approved designated areas 5.4. Complete workplace records, customer file and warranty

ELEMENT	PERFORMANCE CRITERIA
	information as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology related to servicing, repairing and testing of bicycle frames
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, prepare reports, complete records and interpret technical information and specifications
- numeracy skills to the level required to correctly count and measure to determine bicycle frame condition and operation
- problem-solving skills to the level required to plan and organise activities and establish diagnostic processes which identify methods of servicing, repairing and testing bicycle frames
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- purpose and requirements of bicycle frame systems and their relationship to braking, wheels, drivetrain and steering system
- classification of bicycle frames and identification of system components
- material used in bicycle frames
- application of frame design principles
- frame service, repair and testing procedures and techniques
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to servicing and repairing bicycle frames
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes related to servicing and repairing bicycle frames

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- inspect a range of bicycle frames and components and accurately identify required service and repair options
- service and repair a range of bicycle frames to manufacturer/component supplier specifications
- test bicycle frames to manufacturer/component supplier specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle frame configurations
  - material relevant to servicing and repairing bicycle frames
  - equipment and hand and power tooling appropriate to servicing and repairing bicycle frames
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Bicycle frames</b>	<p>Bicycle frames may include:</p> <ul style="list-style-type: none"> <li>• all-terrain, touring, racing, recumbent and BMX bicycles</li> <li>• seat pillars and fasteners</li> <li>• bottom brackets, cartridge, cup, loose and caged bearings</li> <li>• left and right hand thread types</li> <li>• composite material</li> <li>• painted, anodised, natural state and polished surface finishes</li> </ul>
<b>Servicing and repair methods</b>	<p>Servicing and repair methods are to include:</p> <ul style="list-style-type: none"> <li>• on- and off-site servicing</li> <li>• repair, replacement and refinishing of frame components</li> <li>• welding, brazing and bonding processes</li> <li>• communicating with customers</li> <li>• documenting and reporting on service</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>• specific service and repair and general workshop equipment and tooling</li> <li>• welding, brazing and bonding equipment and material</li> <li>• floor stands, workbench and air tooling</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>• spare parts</li> <li>• welding consumables</li> <li>• cleaning materials</li> </ul>
<b>Information/documents</b>	<p>Information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches</li> <li>• safe work procedures related to bicycle frames</li> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>

**RANGE STATEMENT****WHS requirements**

WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
- safety equipment
- first aid equipment
- hazard and risk control
- elimination of hazardous materials and substances
- manual handling, including shifting, lifting and carrying
- emergency procedures

**Legislative requirements**

Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:

- award and enterprise agreements
- industrial relations
- Australian standards
- Australian Design Rules
- confidentiality and privacy
- WHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care

**Environmental requirements**

Environmental requirements may include:

- waste management
- noise
- dust
- clean-up management

**Quality requirements**

Quality requirements may include:

- regulations, including Australian standards
- internal organisational quality policies and procedures
- enterprise operations and procedures

**Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice

## AURBTY4002 Design and build bicycle frames

### Modification History

Release	Comment
Release 1	Replaces AURB428201A Design and build a bicycle frame Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to calculate design specifications and custom build a bicycle frame.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who apply mechanical principles and measurements to design and build a custom bicycle frame.  The unit applies to individuals working in a bicycle retail, service and repair environment.  Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on bicycle frame requirements	1.1. Discuss and confirm customer requirements including intended use of the unit, preferred design, frame materials, construction methods and finish 1.2. Use sizing cycle, observation and measurements to assess physical attributes and riding style of client 1.3. Research bicycle frame design principles and check component suppliers and specifications
2. Design bicycle frame and specify materials and components	2.1. Design a frame to customer measurements and requirements, using a computer-aided design (CAD) program or other means 2.2. Specify frame tubing in terms of diameter and wall thickness to achieve durability and use requirements according to established industry practices 2.3. Prepare parts list and determine availability of parts and materials 2.4. Document and cost custom frame job and obtain customer approval for work to be undertaken 2.5. Place order with suppliers for frame materials, parts and components
3. Prepare for frame building	3.1. Plan frame building sequence and determine availability of tooling and equipment 3.2. Lay out parts and check for damaged and/or missing components 3.3. Select and check tooling and set up jig 3.4. Set up welding, brazing or bonding equipment and materials 3.5. Identify need for additional persons to assist in frame building process and make arrangements
4. Build bicycle frame	4.1. Perform frame building operations according to plan 4.2. Use personal safety equipment and take precautions to protect others in the workplace 4.3. Use and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 4.4. Check angles, measurements and frame alignment throughout the operation and make adjustments as required
5. Paint and/or finish frame	5.1. Prepare frame for painting and finishing 5.2. Prepare and apply paint or finish in accordance with manufacturer recommendations 5.3. Follow appropriate safety precautions, including the use of personal protective equipment and adequate ventilation

ELEMENT	PERFORMANCE CRITERIA
	5.4.Clean up equipment in accordance with environmental procedures
6. Prepare frame for delivery and clean up	6.1.Check the finished bicycle frame and prepare unit for delivery 6.2.Clean and store portable tooling and equipment in approved designated areas 6.3.Clean work area and dispose of waste in accordance with workplace procedures 6.4.Complete workplace records, customer file and warranty information as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use appropriate software, tools and equipment to design and build a bicycle frame
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to research information related to bicycle frame design and components and interpret technical information and specifications
- numeracy skills to the level required to correctly complete tests and measurements, calculate ratios and interpret specifications
- problem-solving skills to the level required to apply bicycle design principles and measurements to specify and select suitable components for a custom bicycle frame and recognise design features that detract from durability
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- purpose and requirements of bicycle frame systems and their relationship to braking, wheels, drivetrain and steering system
- classification of bicycle frames and identification of system components
- materials used in bicycle frames
- application of frame design principles
- causes of frame failures and design alternatives to reduce likelihood of failure
- frame construction procedures and techniques
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to designing and building bicycle frames
- organisational policies and procedures, including quality requirements, reporting and recording procedures, and work organisation and planning processes, related to designing and building bicycle frames

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- communicate effectively with customer to determine requirements
- apply mechanical principles and measurements to design a bicycle frame to meet client requirements
- select frame components, materials and equipment to meet design requirements
- observe safety procedures and requirements
- use appropriate construction procedures and techniques to build a bicycle frame to design specifications.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of bicycle frame parts and components
  - equipment and tools appropriate to constructing bicycle frames
  - BikeCAD or other design tools
  - technical specifications and standards
  - workplace documentation.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and

**EVIDENCE GUIDE**

	<p>include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## AURBTY4003 Assess carbon fibre frames for repair

### Modification History

Release	Comment
Release 1	Replaces AURB428202A Assess carbon fibre frames for repair Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	This unit of competency describes the skills and knowledge required to determine the extent of damage to carbon fibre bicycle frames, carry out simple repairs and facilitate complex repairs.  No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.
-----------------	--

### Application of the Unit

Application of the unit	This unit applies to individuals who undertake the repair of carbon fibre bicycle frames in a bicycle retail, service and repair environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inspect bicycle frame	1.1. Gather bicycle history, including riding incidents and accidents, by discussion with customer 1.2. Inspect bicycle frame for faults, wear or damage using visual, aural and tactile inspections and measurements 1.3. Arrange for non-destructive testing, if required, and where available 1.4. Assess repair or replacement options for bicycle frame 1.5. Document and cost repair for customer approval in accordance with workplace procedures 1.6. Obtain customer approval for work to be undertaken
2. Prepare for repair of bicycle frame	2.1. Plan repair sequence, including post-repair testing and checking process 2.2. Prepare list of parts and materials and determine availability 2.3. Identify need for additional persons to assist in repair process and make arrangements 2.4. Select and check tooling and equipment to meet job requirements 2.5. Prepare work area and set up equipment and materials
3. Repair bicycle frame	3.1. Use personal safety equipment and take precautions to protect others in the workplace 3.2. Use and maintain tooling and equipment in accordance with workplace health and safety (WHS) requirements 3.3. Prepare surface for repair avoiding contamination 3.4. Perform repair operations for bicycle frame according to plan 3.5. Seal the repaired area 3.6. Check bicycle frame specifications and test integrity of repair in accordance with workplace procedures
4. Complete work and clean up	4.1. Clean bicycle frame and prepare unit for delivery 4.2. Clean and store portable tooling and equipment in approved designated areas 4.3. Complete workplace records, customer file and warranty information as required by enterprise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to use workplace technology, tools and equipment related to testing and repairing carbon fibre bicycle frames
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with other workers and customers, to report work outcomes and problems, and to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- literacy skills to the level required to research and interpret technical information and specifications, understand information related to work orders, plans and safety procedures, prepare reports and complete records
- numeracy skills to the level required to correctly read specifications and take measurements to determine bicycle frame condition
- problem-solving skills to the level required to plan and organise activities and establish diagnostic processes which identify methods of testing and repairing carbon fibre bicycle frames
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- carbon fibre structure, properties and characteristics
- repair materials properties and applications
- purpose and requirements of bicycle frame systems and their relationship to braking, wheels, drivetrain and steering system
- classification of bicycle frames and identification of system components
- application of frame design principles
- manufacturing processes of carbon fibre frames
- causes and implications of damage to carbon fibre frames
- carbon fibre repair methods and procedures
- non-destructive testing methods and techniques
- selection, checking and use of tooling and equipment
- manufacturer and/or component supplier specifications
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to repairing carbon fibre bicycle frames
- organisational policies and procedures, including quality requirements, reporting and recording

**REQUIRED SKILLS AND KNOWLEDGE**

procedures, and work organisation and planning processes, related to repairing carbon fibre bicycle frames

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- inspect a range of damaged carbon fibre frames and accurately assess repair options
- complete preparatory activity in a systematic manner
- complete minor repairs to a carbon fibre bicycle frame, including a cracked top tube, seat tube and seat stay.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - a range of damaged carbon fibre bicycle frames
  - material relevant to repairing carbon fibre bicycle frames
  - equipment and hand and power tooling appropriate to repairing carbon fibre bicycle frames
  - specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.
- Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to

**EVIDENCE GUIDE**

	<p>ensure its correct interpretation and application.</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Carbon fibre bicycle frames

Carbon fibre bicycle frames may include:

- all-terrain, touring, racing, recumbent and BMX bicycles
- one piece construction
- tubes joined directly or with lugs

#### Repair assessment

Repair assessment may include:

- bicycle history and cause of damage
- structural importance of, and stresses borne by, damaged area
- frame construction method
- cracks, chips, dents, loose joins and misalignment
- non-destructive testing (X-ray, ultrasonic and acoustic)
- strength and integrity of repair

#### Tooling and equipment

Tooling and equipment may include:

- specific repair and general workshop equipment and tooling
- sanding tools
- floor stands, workbench and frame jig
- special purpose jigs and moulds
- vacuum system
- curing oven

#### Materials

Materials may include:

- carbon fibre fabric and tapes of various grades and weights (FAW)
- unidirectional and woven fabric and braided sock
- epoxy resin of repair qualified type
- shrink tape
- vacuum bag consumables
- suitable sandpaper (aluminium oxide)
- cleaning materials

#### Information/documents

Information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams or sketches
- safe work procedures related to bicycle frames

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• regulatory/legislative requirements pertaining to bicycle safety</li> <li>• manufacturer specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian standards</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• relevant industry codes of practice</li> <li>• duty of care</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> <li>• dust</li> <li>• clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements may include:</p> <ul style="list-style-type: none"> <li>• regulations, including Australian standards</li> <li>• internal organisational quality policies and procedures</li> <li>• enterprise operations and procedures</li> </ul>

**RANGE STATEMENT****Organisational policies and procedures**

Organisational policies and procedures may include:

- quality policies and procedures, including Australian standards
- WHS, sustainability, environment, equal opportunity and anti-discrimination
- manufacturer specifications and industry codes of practice
- safe work procedures
- reporting and recording procedures

## AURETA5001 Analyse and evaluate electrical and electronic faults in electric over-hydraulic systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT575193A Analyse and evaluate electrical and electronic faults in electric over hydraulic systems</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate electric over hydraulic systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning electric over hydraulic systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Electric over hydraulic system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary electric over hydraulic systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of electric over hydraulic systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of concepts, types, functions, operations and limitations of electromechanical and electro-fluid sub-systems within light vehicle, mobile plant, heavy vehicle, light marine electric over hydraulic systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
--------------------------------------

- |  |

| <ul style="list-style-type: none"><li>• general knowledge of personal computer operations.</li></ul> |
|--|

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three different electric over hydraulic systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different electric over hydraulic systems.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, electric over hydraulic systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<b>Method of assessment</b>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to</p>

<b>EVIDENCE GUIDE</b>	
	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Failure analysis and evaluation process

The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

#### Electric over hydraulic systems

Electric over hydraulic systems are characterised as those using solenoids to control hydraulic flow and they may include integrated computer controlled systems. Examples are garbage compactors, crane rams, steering control, excavator bucket control, steering rudder control.

#### Electric over hydraulic system electrical and electronic failures

Electric over hydraulic system electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.

#### Electric over hydraulic system failures

Electric over hydraulic system failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.

#### Unit context

- WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.
- Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.
- Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.

#### Evaluative criteria

Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.

#### Isolation procedures

Equipment isolation procedures are to be to industry and enterprise

<b>RANGE STATEMENT</b>	
	standards and are to include where appropriate the disarming of supplementary restraint systems (SRS) by manufacturer/component supplier specifications.
<b>Testing equipment</b>	Testing equipment is to include analogue and digital multimeters, lab oscilloscopes, data scanners, test lights, test LEDs and pulse generators, and may include other manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to electric over hydraulic systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging electric over hydraulic system technology and technology changes.</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary safety systems, monitoring and testing processes, diagnostic methods and options, and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic mechanical theory covering the concepts and principles of mechanical, and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of safety systems.
- general knowledge of acoustics, human hearing system, radio waves, amplitude modulation, frequency modulation, wavelength, stereo and signal processing and swr.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electronic sub-systems within light vehicle, mobile plant, heavy vehicle and light marine safety systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families, and radio frequency.
- general knowledge of the theory of diagnosis, including concept, design and planning
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li><li>• general knowledge of personal computer operation.</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different electronic safety systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different electronic safety systems.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, operational safety systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to

## EVIDENCE GUIDE

	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Safety systems</b>	Safety systems in this unit are to include fire suppressing, work load detecting, tyre pressure control, speed/load limiting, traction control, seat belt pre-tensioning, roll over protection, object detection, navigation aids, intelligent transport systems, intelligent SRS systems, adaptive cruise control, multi-class Bus systems, active and passive collision avoidance, infrared vision, lighting, windscreen wiper control, depth sounders, emergency distress systems, and CB and marine radio.
<b>Safety systems electrical and electronic failures</b>	Safety systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Safety systems failures</b>	Safety systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based

<b>RANGE STATEMENT</b>	
	criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier specifications.
<b>Testing equipment</b>	Testing equipment may include analogue and digital multimeters, data scanners, test lights, test LEDs, lab oscilloscopes, acoustic analysers and manufacturer/ component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to automotive safety systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to automotive safety system technology and technology changes.</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning monitoring/protection systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Monitoring/protection system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary monitoring/protection systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the types, functions and operations of monitoring/protection systems.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electro-fluid sub-systems within light vehicle, mobile plant, heavy vehicle and light marine monitoring/protection systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families, and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different automotive monitoring/protection systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different automotive monitoring/protection systems.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, operational monitoring/protection systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to

	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Systems monitored</b>	Systems monitored are to include engine, transmission/ driveline, body, auxiliary systems, safety critical systems and shutdown.
<b>Monitoring/protection systems</b>	Monitoring/protection systems are to cover display types, including LCD, VFD, CRT, HUD, reconfigurable systems, electronic analogue display, on-board diagnostics, remote/wireless monitoring systems and multi-class bus systems.
<b>Monitoring/protection systems electrical and electronic failures</b>	Monitoring/protection systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Monitoring/protection systems failures</b>	Monitoring/protection systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.

<b>RANGE STATEMENT</b>	
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier specifications.
<b>Testing equipment</b>	Testing equipment is to include analogue and digital multimeters, lab oscilloscopes, data scanners, test lights and test LEDs, and may include manufacturer/component supplier testing equipment and pulse generators.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to automotive monitoring/protection systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to automotive monitoring/protection system technology and technology changes.</li> </ul>

Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary convenience and entertainment systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic mechanical theory covering the concepts and principles of mechanical, and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the types, functions and operations of convenience and entertainment systems.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electronic sub-systems within convenience and entertainment systems.
- general knowledge of acoustics, human hearing system, radio waves, amplitude modulation, frequency modulation, wavelength, stereo and signal processing and SWR.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, radio frequency, discrete electronic components, logic families, dc motors and solenoids.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning theft deterrent systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Theft deterrent system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstances, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary theft deterrent systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the concepts, types, functions, operations and limitations theft deterrent systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.
- general knowledge of personal computer operation.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three different theft deterrent systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different theft deterrent systems.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<p><b>Context of, and specific resources for assessment</b></p>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, operational theft deterrent systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<p><b>Method of assessment</b></p>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to</p>

## EVIDENCE GUIDE

	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Theft deterrent systems</b>	Theft deterrent systems are to include remote keyless entry (RKE), immobiliser system design, passive entry systems, two-way RKE, fingerprint technologies, rolling codes, transmitter and receiver operation and satellite systems.
<b>Theft deterrent systems electrical and electronic failures</b>	Theft deterrent systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Theft deterrent systems failures</b>	Theft deterrent systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.

<b>RANGE STATEMENT</b>	
<b>Testing equipment</b>	Testing equipment is to include analogue and digital multimeters, lab oscilloscopes, data scanners, test lights, test LEDs, and may include manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to theft deterrent systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to theft deterrent system technology and technology changes.</li> </ul>

## AURETA5006 Analyse and evaluate electrical and electronic faults in climate-control systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT576193A Analyse and evaluate electrical and electronic faults in climate control systems</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate electrical and electronic faults in climate control systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning climate control systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Climate control system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary climate control systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- in depth knowledge of air conditioning and heating principles.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the types, functions and operations of climate control systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, types, functions, operations and limitations of electro mechanical and fluid sub-systems within climate control systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Climate control systems</b>	Climate control systems are systems controlled by digital computer to maintain the in-cabin temperature selected by the operator, independent of the influence of external climatics. It includes air conditioning, heating, blending systems and multi-class bus systems.
<b>Climate control systems electrical and electronic failures</b>	Climate control systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Climate control systems failures</b>	Climate control systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary

<b>RANGE STATEMENT</b>	
	restraint systems (SRS) by manufacturer/ component supplier specifications.
<b>Testing equipment</b>	Testing equipment is to include pressure gauges, charge stations, reclaim units, recycling units, leak detectors, thermometers, flushing equipment, multimeters, data scanners, test lights and test LEDs, and may include lab oscilloscopes and manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to climate control systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to climate control system technology and technology changes.</li> </ul>

## AURETB3001 Repair electric braking systems

### Modification History

Release	Comment
Release 1	Replaces AURE311666A Repair electric braking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to repair electric braking systems and associated components as fitted to vans and trailers.</p> <p>This unit of competency also applies to electric braking controllers fitted to vehicles and plant and equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing of systems and identification of faults/causes, the repair and retesting of systems and associated electric braking system components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, processes and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Test systems/ components and identify faults	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Tests are carried out to determine faults using tooling and techniques 2.3. Tests are completed without causing damage to any component or system 2.4. Faults are identified and preferred repair action determined 2.5. Tests are carried out according to industry regulations/ guidelines, WHS legislation, statutory legislation and enterprise procedures/policies
3. Repair electric braking systems and/or associated components	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Necessary repairs, component replacement and adjustments are carried out using tooling, techniques and materials 3.3. Electric braking system and/or associated component repair is completed without causing damage to any component or system 3.4. Retests are carried out to ensure correct and safe electric braking system service operation 3.5. Repairs/removal, replacement and adjustments are carried out according to industry regulations/guidelines WHS legislation, statutory legislation and enterprise/procedures policies 3.6. Workplace and equipment records are completed in accordance with workplace requirements
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap is removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</p> <p>4.5. Maintenance is completed in accordance with manufacturer/component supplier specifications and workplace procedures</p> <p>4.6. Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for testing and repairing of electric braking systems
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of work site and the obtaining of equipment and materials to avoid any backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to the repair of electrical braking systems, including the use of specialist tooling and measuring equipment, computerised technology, communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of electric braking systems
- construction and operation of electric braking systems/components relevant to application
- types and layout of service/repair manuals (hard copy and electronic)
- pre-repair testing and fault identification procedures
- repair, removal, replacement and adjustment procedures
- post-repair testing procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- testing a range of electric braking systems
- identifying faults and determining repair requirements
- repairing a range of electric braking systems to workplace and manufacturer/component supplier requirements
- retesting electric braking systems prior to returning to service
- completing workplace/equipment documentation.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated automotive site.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the repair of electric braking systems
- equipment, hand and power tooling appropriate to the repair of electric braking systems
- activities covering the mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

**EVIDENCE GUIDE**

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and must reinforce the integration of key competencies
- Assessment may be applied under project related conditions and require evidence of process
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electric braking systems</b>	Electric braking systems may be in light vehicles and plant and equipment fitted with electric van/trailer braking controllers or trailers fitted with electric brakes
<b>Repair methods</b>	Repair methods are to include: <ul style="list-style-type: none"> <li>• visual, aural and functional assessment (including damage and corrosion)</li> <li>• testing under operating conditions</li> <li>• electrical/electronic testing</li> <li>• removal, dismantling, reassembly and refitting</li> <li>• repair and/or replacement of system components</li> <li>• road testing/retesting prior to placing back into service</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and procedures
<b>Safe operating procedures</b>	Safe operating procedures may include, but are not limited to: <ul style="list-style-type: none"> <li>• the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian Standards, company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State and local authorities administering the applicable acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>hand tooling, vehicle lifting equipment and testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment and brake decelerometer</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>spare parts, lubricants, fluids and cleaning materials</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>safe work procedures related to the repair of electric braking systems</li> <li>regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>engineer's design specifications and instructions</li> <li>organisation work specifications and requirements</li> <li>instructions issued by authorised enterprise or external personnel</li> <li>Australian Standards</li> </ul>

## AURETB5002 Analyse and evaluate electrical and electronic faults in braking systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT575493A Analyse and evaluate electrical and electronic faults in braking systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate electrical and electronic faults in braking systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning electrical and electronic braking systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Electrical and electronic braking system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary electrical and electronic braking systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

##### Underpinning knowledge

- basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of braking systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electro-fluid sub-systems within light vehicle, mobile plant, heavy vehicle, transmission/driveline systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
findings and recommendations. <ul style="list-style-type: none"><li>• general knowledge of personal computer operation.</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different braking systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different braking systems.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, operational electrical and electronic braking systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to

<b>EVIDENCE GUIDE</b>	
	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Braking systems</b>	Braking systems to be covered here are to include ABS, engine brakes, electric retarders, electric trailer brakes, brake by wire and multi-class bus systems.
<b>Braking systems electrical and electronic failures</b>	Braking systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Braking systems failures</b>	Braking systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier specifications.

**RANGE STATEMENT**

<b>Testing equipment</b>	Testing equipment is to include analogue and digital multimeters, lab oscilloscopes, data scanners, test lights and test LEDs, and may include pulse generators and manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to braking systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to braking system technology and technology changes.</li> </ul>

## AURETD3001 Service and repair electronically controlled steering systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURE320871A Service and repair electronically controlled steering systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to locate and rectify faults in electronically controlled steering systems. It applies specifically to electrical/electronic control systems and components and does not cover systems which are electronically controlled and operated.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, servicing and adjustment of systems, repair of faults, retesting of systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including quality, material, equipment quantities and service manuals 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal protection needs, are observed throughout the work 1.4. Electronic system protection devices, processes and precautions are identified appropriate to the application 1.5. Equipment and tooling are identified and checked for safety and correct operation 1.6. Procedures are identified to minimise task time
2. Service and adjust electronically controlled steering systems	2.1. Service information is accessed and interpreted prior to commencing servicing procedures 2.2. Current status and previous fault history of electronic steering/suspension system is determined in conjunction with the customer 2.3. Current status of the electronic system is confirmed through a road test program 2.4. Electronic system is serviced in accordance with manufacturer/component supplier specifications and enterprise procedures 2.5. Fluids and lubricants are used in accordance with WHS and manufacturer/component supplier specifications 2.6. Used fluids and lubricants are disposed of according to enterprise and WHS requirements
3. Rectify identified electronically controlled steering system faults	3.1. Road test results are interpreted to verify system fault diagnosis 3.2. Customer is notified of identified fault(s) and agreement is given before work is carried out 3.3. Faulty components are removed and refitted with approved replacement parts in accordance with workplace procedures and customer requirements 3.4. Faulty components are disposed of in accordance with workplace procedures and warranty requirements 3.5. System adjustments are completed for components replaced
4. Test and confirm system faults have been rectified	4.1. Test procedures are carried out to confirm rectification of system faults 4.2. Documentation is completed in accordance with workplace/customer requirements

ELEMENT	PERFORMANCE CRITERIA
	4.3.Outcomes of rectification work is explained to the satisfaction of the customer to enable invoicing documentation to be completed
5. Clean up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored</p> <p>5.2.Waste and scrap is removed following workplace procedures</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures</p> <p>5.4.Serviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>5.5.Maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>5.6.Tooling is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for circuit and component testing, and major repairs/component replacement
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information on electrical circuit/component testing, servicing and replacement procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete tests and measurements to determine electrical circuit/component major repair/replacement requirements
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform electrical testing, and repair/replacement procedures
- problem-solving skills for a range of procedural issues
- use workplace technology related to the service and repair of electronically controlled steering systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, materials and personal safety requirements
- operating principles of electronically controlled steering systems
- construction and operation of electronically controlled steering systems
- relationship to other electronically controlled systems, including shared components (e.g. ECU, sensors) test, diagnosis and fault determination procedures
- types and layout of service/repair manuals (hard copy and electronic)
- service/repair, removal, replacement and adjustment procedures
- post-repair test procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- servicing and adjusting electronic controls of steering systems to manufacturer/component supplier requirements
- determining the repair/replacement requirements to rectify faults
- repairing/rectifying faults in electronic controls of steering systems to manufacturer/component supplier requirements
- testing, inspecting and evaluating steering system/components to manufacturer/component supplier requirements
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the service and repair of electronically controlled steering systems
- equipment, hand and power tooling appropriate to the service and repair of electronically controlled steering systems
- activities covering mandatory task requirements
- specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines

**EVIDENCE GUIDE**

	<p>of AUR12 Automotive Industry RS&amp;R Training Package</p> <ul style="list-style-type: none"><li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li><li>• Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</li><li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electronically controlled steering systems</b>	Electronically controlled steering systems include: <ul style="list-style-type: none"> <li>• electronic control systems in two/four wheel steering systems and fitted to light vehicles and/or heavy commercial vehicles</li> </ul>
<b>Faults</b>	Faults in control systems may include: <ul style="list-style-type: none"> <li>• component malfunction, system adjustment, open, short and grounded circuits</li> </ul>
<b>Service and repair methods</b>	Service and repair methods are to include: <ul style="list-style-type: none"> <li>• diagnosis and determining faults</li> <li>• pre- and post-service/repair testing of system and component operation</li> <li>• service and repair/replacement of system components</li> <li>• service and repair adjustments</li> <li>• removal, dismantling, reassembly and refitting</li> <li>• testing system operations</li> <li>• retrieval and assessment of electronic systems data, including fault codes</li> </ul>
<b>Critical precautions</b>	Critical precautions include: <ul style="list-style-type: none"> <li>• manufacturer/component supplier procedures which must be applied as poor working practices are likely to damage electronic system ECUs and/or other components</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to:

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but may not be limited to:</p> <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	<p>Statutory/regulatory authorities may include:</p> <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering the acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	<p>Tooling and equipment may include:</p> <ul style="list-style-type: none"> <li>hand tooling, testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment, specialised system testers, oscilloscopes, scan tooling and LED test lights</li> </ul>
<b>Materials</b>	<p>Materials may include:</p> <ul style="list-style-type: none"> <li>spare parts, lubricants and fluids and cleaning materials</li> </ul>
<b>Communications</b>	<p>Communications are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>safe work procedures related to the service and repair of electronically controlled steering systems</li> <li>regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning electrical and electronic stability/steering/suspension systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/ component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Electrical and electronic stability/steering/suspension system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/ component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary electrical and electronic stability/steering/suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of stability, steering and suspension systems.
- general knowledge of the types, functions and operations of engine management systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electro-fluid sub-systems within light vehicle, mobile plant, and/or light marine engine management systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li><li>• general knowledge of personal computer operation.</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different stability, steering and suspension systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different stability, steering and suspension systems.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, electrical and electronic stability/steering/suspension systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to

<b>EVIDENCE GUIDE</b>	
	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Systems</b>	Systems are to include traction, stability, steering and suspension systems across the range of vehicle types. Coverage is to include electronic stability systems, vehicle dynamic control, closed loop electronic steering and multi-class bus systems.
<b>Electrical and electronic failures in stability/steering/suspension system</b>	Electrical and electronic failures in stability/steering/ suspension system covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Stability/steering and suspension system failures</b>	Stability/steering and suspension system failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	<ul style="list-style-type: none"> <li>Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.</li> </ul>
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier

<b>RANGE STATEMENT</b>	
	specifications.
<b>Testing equipment</b>	Testing equipment is to include analogue and digital multimeters, lab oscilloscopes, data scanners and test lights, test LEDs and pulse generators, and may include other manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operator and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to stability/steering and suspension systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li> </ul>

## AURETE5001 Analyse and evaluate electrical and electronic faults in engine management systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT575293A Analyse and evaluate electrical and electronic faults in engine management systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate electrical and electronic faults in engine management systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning engine management systems are accessed and interpreted.</p> <p>1.3. National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks.</p> <p>1.4. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.5. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.6. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Engine management system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary tracked, undercarriage and suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of diesel, petrol, lpg and cng engine system operation.
- general knowledge of the types, functions and operations of engine management systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electro-fluid sub-systems within light vehicle, mobile plant, and/or light marine engine management systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families, and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li><li>• national environment protection measures for diesel vehicles as applicable to tasks.</li><li>• general knowledge of personal computer operation.</li></ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three different engine management systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different engine management systems.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, engine management systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<b>Method of assessment</b>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to</p>

<b>EVIDENCE GUIDE</b>	
	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Engine management systems</b>	Engine management systems are characterised as those using a digital computer to manage fuel, ignition, engine speed, performance and engine emissions and also other optional equipment systems.
<b>Coverage</b>	Coverage is to include fuel cell technology/hydrogen, on-line maintenance and remote diagnostics, common rail diesel direct injection, drive by wire, multi-class bus systems and closed loop diesel engine management systems.
<b>Electrical and electronic failures in engine management systems</b>	Electrical and electronic failures in engine management systems covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Engine management system failures</b>	Engine management system failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with National Environment Protection Measures for Diesel Vehicles as applicable to tasks.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier specifications.
<b>Testing equipment</b>	Testing equipment is to include four-gas exhaust gas analyser, compression gauge, feeler gauge, engine tune oscilloscope, analogue and digital analogue and digital multimeters, lab oscilloscopes, data scanners, test lights, test LED's, pulse generators, noid lamps, fuel pressure gauges, vacuum gauge and may include dynamometer and manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include engine compression, valve adjustment and timing, exhaust gas analysis, fuel flow, fuel pressure, wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation, and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to engine management systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging engine management system technology and technology changes.</li> <li>• National Environment Protection Measures for Diesel Vehicles as applicable to tasks.</li> </ul>

## AURETH3001 Depower battery electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH3001 Depower battery electric vehicles (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to depower battery electric vehicles (BEVs). It involves ensuring the vehicle high voltage (HV) supply system is isolated prior to commencing service and repair work.</p> <p>Importance is placed on the application of HV and low voltage (LV) electrical safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the service and repair of HV BEVs in the automotive industry.
-------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

Element	Performance Criteria
1. Prepare for work	<p>1.1.<i>Procedures and information</i> are sourced and work requirements are confirmed</p> <p>1.2.Service method appropriate for the specific circumstances is selected and prepared for</p>
2. Deactivate power control	<p>2.1.<i>Workplace health and safety (WHS) requirements</i> and other relevant information for deactivation are identified</p> <p>2.2.Procedure to deactivate vehicle at main control is followed to commence depowering process</p>
3. Isolate vehicle power supply	<p>3.1.HV power supply connection is located and isolated according to manufacturer instructions, taking <i>appropriate precautions</i> to prevent electric shock to self and others</p> <p>3.2.LV power supply is located and disconnected according to manufacturer instructions and vehicle and workplace safety procedures</p> <p>3.3.Vehicle is stabilised and checked for residual voltage in system</p> <p>3.4.HV power supply connection is secured and retained to prevent re-fit by third party</p> <p>3.5.HV power supply is identified with warning tag or sign to indicate potential hazards</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to use workplace technology and tools to:
  - deactivate BEVs
  - locate and disconnect LV power supply in BEVs
  - locate, isolate and stabilise HV power supply in BEVs
- communication skills to:
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - confirm work requirements and specifications
- literacy skills to interpret technical information and specifications
- self-management skills to:
  - manage risks and hazards associated with HV, BEV electrical systems
  - manage workflow and productivity

### Required knowledge

- WHS requirements, including:
  - safe work practices
  - electrical safety relevant to BEVs
- general principles of operation of HV and LV electrical systems relevant to BEVs
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice relevant to working on BEVs
- workplace policies procedures including quality, reporting and recording procedures relevant to working on BEVs

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• safely deactivate the vehicle and isolate HV and LV power supply</li> <li>• ensure the vehicle is depowered, stabilised and no residual HV power exists.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and LV alternating and direct current (AC/DC) electrical systems. Where simulation is used, an operational BEV must be included in the simulation.</p> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• a BEV</li> <li>• manufacturer specifications for the BEV</li> </ul>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"><li>• testing equipment</li><li>• full range of essential tools and equipment</li><li>• workplace documentation.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the performance criteria is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Procedures and information*** may include:

- Australian standards
- diagrams and sketches
- engineer and manufacturer design specifications and instructions
- industry codes of practice
- manufacturer specifications
- material safety data sheets (MSDS)
- parts catalogues
- verbal, written and graphical instructions issued by authorised internal and external persons
- workplace recording and reporting procedures
- workplace specifications and requirements
- workshop manuals.

***WHS requirements*** may include:

- eliminating of hazardous materials and substances
- first aid equipment
- following emergency procedures
- hazard and risk control
- personal protective equipment (PPE), such as:
  - electrical safety gloves 1000V
  - HV insulating mats (Australian standards rated)
- safety equipment
- techniques for manual handling, including shifting, lifting and carrying.

***Appropriate precautions*** may include:

- analysing task to define risk
- applying electrical safety precautions, such as:
  - “one hand rule”
  - live system warning tags and signs
- depowering the vehicle
- following identified OHS requirements
- isolating the HV battery electrical supply
- stabilising the electrical system.

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service operations	<p>1.1.<b>Information and documents</b> are sourced</p> <p>1.2.<b>Workplace health and safety (WHS) requirements</b> and other <b>appropriate precautions</b> are identified and followed</p> <p>1.3.Service method appropriate for the specific circumstances is selected and prepared for</p> <p>1.4.Tools and testing equipment necessary to conduct the work are assembled</p> <p>1.5.Technical and/or calibration requirements for servicing the BEV are established</p>
2. Test the battery systems	<p>2.1.<b>Tests and checks</b> for electrical efficiency are carried out on battery system using manufacturer specifications and test procedures</p> <p>2.2.Battery fixture and connections are checked to ensure they are secure</p> <p>2.3.Faults with the battery systems are identified and appropriate <b>corrective action</b> is taken</p> <p>2.4.Faults and corrective action are recorded</p>
3. Check the electrical motor	<p>3.1.<b>Electrical motor checks</b> are carried out to confirm condition and efficiency</p> <p>3.2.Problems associated with the performance of the electrical motor are identified</p> <p>3.3.Corrective action required to achieve an optimum motor performance is implemented</p> <p>3.4.Faults and corrective action are recorded</p>
4. Check associated electrical components	<p>4.1.Checks are conducted on the condition and operation of associated electrical components</p> <p>4.2.Problems with the performance of electrical components are identified and corrective action is taken</p> <p>4.3.Faults with associated electrical components are identified and appropriate corrective action is taken</p> <p>4.4.Faults and corrective action are recorded</p>
5. Complete service operations	<p>5.1.Work area is tidied, and tools and equipment are replaced according to <b>workplace requirements</b></p> <p>5.2.Job card or repair order is completed according to workplace requirements</p> <p>5.3.Client report on the outcomes of the service and</p>

ELEMENT	PERFORMANCE CRITERIA
	repair is prepared according to workplace requirements 5.4. Vehicle is prepared for return to the client

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the service and maintenance of BEVs
  - use specialist tools and equipment
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with HV BEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- battery theory, including:
  - battery internal resistance
  - battery types
  - terminal corrosion
  - terminal resistance
- battery pack theory, including:
  - cell failure theory
  - charging characteristics
  - open circuit cells
  - reverse polarisation
  - series cell configuration
  - strapping and layout
- battery charger characteristics and operation
- battery management system (BMS) theory
- components of BEVs and their functions
- WHS requirements relating to:
  - electrical safety

- safe work practices
- power distribution unit (PDU) operation
- principles of electricity, including:
  - alternating current (AC)
  - direct current (DC)
- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and environmental regulations relating to the service and maintenance of BEVs
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the service and maintenance of BEVs

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of components and system is maintained when performing tests</li> <li>• test battery performance and correct deficiencies</li> <li>• check electric motor performance and correct deficiencies</li> <li>• check associated electrical components and correct deficiencies</li> <li>• complete relevant documentation for the service of the BEV.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational BEV must be included in the simulation.</p>

<b>Evidence Guide</b>	
	<p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"><li>• appropriate PPE</li><li>• a BEV</li><li>• manufacturer specifications for the BEV</li><li>• testing equipment</li><li>• full range of essential tools and equipment</li><li>• workplace documentation.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the performance criteria is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Information and documents</b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer and manufacturer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• parts catalogues</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace specifications and requirements</li> <li>• workshop manuals.</li> </ul>
<b>WHS requirements</b> may include:	<ul style="list-style-type: none"> <li>• elimination of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• material safety data sheets (MSDS)</li> <li>• personal protective equipment (PPE) and clothing</li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<b>Appropriate precautions</b> may include:	<ul style="list-style-type: none"> <li>• analysing tasks to define risk</li> <li>• applying electrical safety precautions, such as:             <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• depowering the vehicle</li> <li>• isolating the HV battery supply</li> <li>• using PPE, such as:             <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated).</li> </ul> </li> </ul>
<b>Tests and checks</b> may include:	<ul style="list-style-type: none"> <li>• battery charging interlock</li> <li>• battery cooling system</li> <li>• BMS</li> <li>• inertia safety cut-out switch</li> </ul>

Range Statement	
	<ul style="list-style-type: none"><li>• isolation/cut-off emergency device</li><li>• leakage of electrolyte</li><li>• mounting of batteries</li><li>• on-board battery charging system</li><li>• PDU.</li></ul>
<b>Corrective action</b> may include:	<ul style="list-style-type: none"><li>• tightening connections</li><li>• balancing state of charge</li><li>• replacing cable connections</li><li>• removing and replacing components.</li></ul>
<b>Electrical motor checks</b> may include:	<ul style="list-style-type: none"><li>• connecting scanner or computer interface to check motor operation</li><li>• integrity of mountings.</li></ul>
<b>Workplace requirements</b> may include:	<ul style="list-style-type: none"><li>• industry codes of practice</li><li>• manufacturer specifications</li><li>• quality policies and procedures</li><li>• safe work procedures</li><li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li><li>• workplace recording and reporting procedures.</li></ul>

## AURETH4003 Test and repair high voltage battery systems in battery electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4003 Test and repair high voltage battery systems in battery electric vehicles (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to test and repair high voltage (HV) battery systems in battery electric vehicles (BEVs). It involves working with HV and low voltage (LV) alternating current (AC) and direct current (DC) automotive battery systems and electrical components.</p> <p>Importance is placed on the application of HV electrical safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work involves testing and repairing HV battery systems in BEVs in the automotive industry.
-------------------------	--

### Licensing/Regulatory Information

Refer to Unit Descriptor

## Pre-Requisites

Prerequisite units	AURETH3001 Depower battery electric vehicles AURETR3025 Test, charge and replace batteries
--------------------	---

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	1.1.HV battery <i>repair information</i> is accessed 1.2. <i>Workplace health and safety (WHS) requirements</i> and <i>appropriate precautions</i> are identified and applied 1.3.Repair method most appropriate for the specific circumstances is selected and prepared for 1.4.Tools and <i>testing equipment</i> necessary to conduct the work are assembled 1.5.Technical and/or calibration requirements for repair of the HV battery system are established
2. Test battery system	2.1.HV battery systems is tested for <i>electrical efficiency</i> using manufacturer specifications and <i>test procedures</i> 2.2.Diagnostic equipment is used to retrieve system parameters and information 2.3.Faults with the battery system are identified 2.4.Test results are recorded
3. Repair battery system	3.1.Test results are compared with equipment specifications to decide on <i>appropriate corrective action</i> 3.2.HV battery system components are replaced, repaired or adjusted as required 3.3.Repaired HV battery systems are re-tested for correct operation 3.4.Replacement, repair or adjustment procedures are recorded
4. Complete repair operations	4.1.Work area is tidied, and tools and equipment are replaced according to <i>workplace requirements</i> 4.2.Job card or repair order is completed according to workplace requirements 4.3.Client report is prepared on the outcomes of the repair of the HV battery system, according to workplace requirements 4.4.Vehicle is prepared for return to the client

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to testing and repairing BEV HV battery systems and components
  - use specialist tools and equipment
  - use computerised measuring equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with HV BEV battery systems and components
  - optimise workflow and productivity

### Required knowledge

- components of HV battery systems and their functions
- battery management system (BMS) theory
- battery theory, including:
  - battery internal resistance
  - battery types
  - terminal corrosion
  - terminal resistance
- battery pack theory, including:
  - cell failure theory
  - charging characteristics
  - open circuit cells
  - reverse polarisation
  - series cell configuration

- strapping and layout
- HV battery charger and DC to DC converter characteristics
- WHS requirements relating to:
  - safe work practices
  - electrical safety
- power distribution unit (PDU) theory
- principles of electricity, including AC and DC
- principles of operation of HV battery systems
- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and environmental regulations relating to the repair of HV battery systems
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the repair of HV BEV battery systems

## Evidence Guide

Evidence Guide	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of any component or system is maintained when performing tests</li> <li>• check HV battery system performance against manufacturer's specifications</li> <li>• replace, repair and adjust HV battery system components as required to correct deficiencies</li> <li>• complete relevant documentation for the repair of the HV battery system.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and LV AC/DC electrical systems. 	<p>assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• a BEV</li> <li>• manufacturer specifications for the BEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Repair information*** may include:

- Australian standards
- diagrams and sketches
- engineer or manufacturer design specifications and instructions
- industry codes of practice
- parts catalogues
- verbal, written and graphical instructions issued by authorised internal and external persons
- workplace specifications and requirements.

***WHS requirements*** may include:

- elimination of hazardous materials and substances
- first aid equipment
- following emergency procedures
- hazard and risk control
- material safety data sheets (MSDS)
- personal protective equipment (PPE) and clothing
- safety equipment
- techniques for manual handling, including shifting, lifting and carrying.

***Appropriate precautions*** may include:

- analysing task to define risk
- applying electrical safety precautions, such as:
  - “one hand rule”
  - live system warning tags and signs
- isolating the HV battery supply
- depowering the vehicle
- using PPE, such as:
  - electrical safety gloves 1000V
  - HV insulating mats (Australian standards rated).

***Testing equipment*** may include:

- AC/DC current clamp
- BMS diagnostic equipment
- diagnostic scanner
- insulation or mega ohm tester

Range Statement	
	<ul style="list-style-type: none"> <li>• multimeter CAT 3 1000V</li> <li>• oscilloscope</li> <li>• thermal imaging equipment or non-contact thermometer.</li> </ul>
<i>Electrical efficiency</i> relates to:	<ul style="list-style-type: none"> <li>• charging</li> <li>• discharge rate</li> <li>• holding capacity</li> <li>• temperature</li> <li>• voltage.</li> </ul>
<i>Test procedures</i> may include:	<ul style="list-style-type: none"> <li>• battery charging interlock</li> <li>• battery cooling system</li> <li>• BMS</li> <li>• HV contactors</li> <li>• HV current leakage to vehicle chassis</li> <li>• HV fuse</li> <li>• inertia safety cut-out switch</li> <li>• isolation/cut-off emergency device</li> <li>• leakage of electrolyte</li> <li>• loose cable connections</li> <li>• mounting of batteries</li> <li>• on-board battery charging system</li> <li>• PDU.</li> </ul>
<i>Appropriate corrective action</i> may include:	<ul style="list-style-type: none"> <li>• balancing state of charge</li> <li>• replacing cable connection</li> <li>• replacing system component</li> <li>• replacing the battery</li> <li>• tightening connection.</li> </ul>
<i>Workplace requirements</i> may include:	<ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• manufacturer specifications</li> <li>• quality policies and procedures</li> <li>• safe work procedures</li> <li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li> <li>• workplace recording and reporting procedures.</li> </ul>

## AURETH4004 Diagnose and repair traction motor speed control device in battery electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4004 Diagnose and repair traction motor speed control device in battery electric vehicles (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to repair the traction motor speed control device in battery electric vehicles (BEVs), which may be called a digital motor controller (DMoC) or motor control unit (MCU) in some vehicles. It involves working with high voltage (HV) and low voltage (LV) alternating current (AC) and direct current (DC) automotive electrical components.</p> <p>Importance is placed on the application of HV safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the diagnosis and repair of the traction motor speed control device in BEVs in the automotive industry.
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Prerequisite units	AURETH3001 Depower battery electric vehicles
--------------------	--

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	<p>1.1. <b>Procedures and information</b> relevant to the task are sourced and work requirements confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> and <b>appropriate precautions</b> are identified and applied</p> <p>1.3. Method most appropriate for the specific circumstances is selected and prepared for</p> <p>1.4. Tools and testing equipment necessary to conduct the work are assembled</p> <p>1.5. Technical and/or calibration requirements for testing and repair of the traction motor system are established</p>
2. Diagnose motor control device	<p>2.1. <b>Tests and checks</b> on motor controller cooling system are carried out using manufacturer specifications and test procedures</p> <p>2.2. Motor controller is disconnected using correct procedure</p> <p>2.3. Exposed live HV and LV connections and wiring are labelled with appropriate warning tags or signs</p> <p>2.4. Controller settings and diagnostic information are retrieved using appropriate equipment</p> <p>2.5. Tests and checks on motor controller are carried out to ensure correct operation</p> <p>2.6. Test results are recorded</p>
3. Repair or replace motor controller	<p>3.1. Motor controller test results are compared with manufacturer specifications to decide on <b>appropriate corrective action</b></p> <p>3.2. Motor controller is repaired or replaced as required</p> <p>3.3. Repaired or replacement motor controller is re-tested for correct operation</p> <p>3.4. Motor controller is reconnected using correct procedure</p> <p>3.5. Replacement or repairs carried out are recorded</p>
4. Complete repair operations	<p>4.1. Work area is tidied, and tools and equipment replaced according to <b>workplace requirements</b></p> <p>4.2. Job card is completed according to workplace requirements</p> <p>4.3. Client report is prepared on the outcomes of the service and repair of the motor controller</p>

ELEMENT	PERFORMANCE CRITERIA
	according to workplace requirements 4.4. Vehicle is prepared for return to the client

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to testing and repairing a BEV traction motor speed control device
  - use specialist tools and equipment
  - use computerised measuring and diagnostic equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with HV BEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- components of HV BEVs and their functions
- WHS requirements relating to:
  - safe work practices
  - electrical safety
- principles of electricity, including AC and DC
- principles of operation of motor speed control devices
- repair procedures for motor speed control devices
- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and environmental regulations relating to testing and repairing HV BEV motor speed control devices
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to testing and repairing HV BEV motor speed control devices
