The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of components and system is maintained when performing tests</li> <li>• check the motor control device performance against manufacturer specifications</li> <li>• diagnose and repair or replace motor control device as required to correct deficiencies</li> <li>• complete relevant documentation for the testing and repair of the motor control device.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational BEV must be included in the simulation.</p> <p>The following resources must be made available for the</p>

<b>Evidence Guide</b>	
	<p>assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• a BEV</li> <li>• manufacturer specifications for the BEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer or manufacturer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• parts catalogues</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace specifications and requirements.</li> </ul>
<b><i>WHS requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• elimination of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• material safety data sheets (MSDS)</li> <li>• personal protective equipment (PPE) and clothing</li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<b><i>Appropriate precautions</i></b> may include:	<ul style="list-style-type: none"> <li>• analysing task to define risk</li> <li>• applying electrical safety precautions, such as: <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• isolating the HV battery electrical supply</li> <li>• depowering the vehicle</li> <li>• using PPE, such as: <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated).</li> </ul> </li> </ul>
<b><i>Tests and checks</i></b> may include:	<ul style="list-style-type: none"> <li>• computer interface or communication device to retrieve controller settings and diagnostic information</li> <li>• controller input/output signals and voltages</li> <li>• motor controller cooling system.</li> </ul>
<b><i>Appropriate corrective</i></b>	<ul style="list-style-type: none"> <li>• repairing the motor controller</li> </ul>

Range Statement	
<b><i>action</i></b> may include:	<ul style="list-style-type: none"><li>• replacing the motor controller.</li></ul>
<b><i>Workplace requirements</i></b> may include:	<ul style="list-style-type: none"><li>• industry codes of practice</li><li>• manufacturer specifications</li><li>• quality policies and procedures</li><li>• safe work procedures</li><li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li><li>• workplace recording and reporting procedures.</li></ul>

## AURETH4005 Diagnose and repair high voltage traction motors in battery electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4005 Diagnose and repair high voltage traction motors in battery electric vehicles (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair high voltage (HV) traction motors in battery electric vehicles (BEVs).</p> <p>Importance is placed on the application of HV safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to the diagnosis and repair of HV traction motors in BEVs in the automotive industry.</p> <p>It involves working with HV alternating current (AC) and direct current (DC) automotive electrical components.</p>
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Prerequisite units	AURETH3001 Depower battery electric vehicles
--------------------	--

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	<p>1.1. <b>Procedures and information</b> relevant to the task are sourced and work requirements confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> and <b>appropriate precautions</b> are identified and applied</p> <p>1.3. Repair methods for the specific work requirement are selected and prepared for</p> <p>1.4. Tools and testing equipment necessary to conduct the work are assembled</p> <p>1.5. Technical and/or calibration requirements for diagnosis and repair of the traction motor are established</p>
2. Diagnose traction motor operation	<p>2.1. Traction motor operational <b>tests and checks</b> are carried out using manufacturer specifications and test procedures</p> <p>2.2. Faults with the traction motor are diagnosed and identified</p> <p>2.3. Test results are recorded</p>
3. Repair traction motor	<p>3.1. Traction motor repair information is accessed</p> <p>3.2. Test results are compared with manufacturer specifications to decide on <b>corrective actions</b></p> <p>3.3. Traction motor and components are removed, replaced, repaired and adjusted as required</p> <p>3.4. Traction motor is re-tested for correct operation once repaired</p> <p>3.5. Replacement, repair or adjustment procedures are recorded</p>
4. Complete repair operations	<p>4.1. Work area is tidied, and tools and equipment replaced according to <b>workplace requirements</b></p> <p>4.2. Job card or repair order is completed according to workplace requirements</p> <p>4.3. Client report is prepared on the outcomes of the diagnosis and repair of the traction motor according to workplace requirements</p> <p>4.4. Vehicle is prepared for return to the client</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the repair of BEV traction motors and components
  - use specialist tools and equipment
  - use computerised measuring and diagnostic equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with HV BEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- components of HV BEVs and their functions
- principles of electricity, including AC and DC
- principles of operation of traction motors
- relevant WHS requirements relating to:
  - safe work practices
  - electrical safety
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to the diagnosis and repair of BEV traction motors
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the diagnosis and repair of BEV traction motors

## Evidence Guide

Evidence Guide	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of components and system is maintained when performing tests</li> <li>• check traction motor performance against manufacturer specifications</li> <li>• diagnose and replace, repair or adjust traction motor as required to correct deficiencies</li> <li>• complete relevant documentation for the diagnosis and repair of the traction motor.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and low voltage (LV) AC/DC electrical systems. Where simulation is used, an operational BEV must be included in the simulation.</p>

<b>Evidence Guide</b>	
	<p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• a BEV</li> <li>• manufacturer specifications for the BEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Procedures and information</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer or manufacturer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace specifications and requirements.</li> </ul>
<p><b><i>WHS requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• elimination of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• material safety data sheets (MSDS)</li> <li>• personal protective equipment (PPE) and clothing</li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<p><b><i>Appropriate precautions</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• analysing task to define risk</li> <li>• applying electrical safety precautions, such as: <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• isolating the HV battery electrical supply</li> <li>• depowering the vehicle</li> <li>• using PPE, such as: <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated).</li> </ul> </li> </ul>
<p><b><i>Tests and checks</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• damage to traction motor windings</li> <li>• insulation resistance of traction motor windings</li> <li>• routing and damage of HV cabling</li> <li>• traction motor operation.</li> </ul>
<p><b><i>Corrective actions</i></b> may</p>	<ul style="list-style-type: none"> <li>• replacing cable connections</li> </ul>

Range Statement	
include:	<ul style="list-style-type: none"><li>• replacing system components</li><li>• replacing the traction motor</li><li>• tightening connections.</li></ul>
<i>Workplace requirements</i> may include:	<ul style="list-style-type: none"><li>• industry codes of practice</li><li>• manufacturer specifications</li><li>• quality policies and procedures</li><li>• safe work procedures</li><li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li><li>• workplace recording and reporting procedures.</li></ul>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the diagnosis and repair of HV auxiliary motors and components in BEVs
  - use specialist tools and equipment
  - use computerised measuring equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with BEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- components of BEVs and their functions
- WHS requirements relating to:
  - electrical safety
  - safe work practices
  - principles of electricity, including AC and DC
- principles of operation of BEV auxiliary motors and associated components
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to the diagnosis and repair of BEV auxiliary motors and associated components
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the diagnosis and repair of BEV auxiliary motors and associated components

## Evidence Guide

### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- comply with WHS requirements and safe work practices
- maintain electrical and mechanical integrity of the auxiliary motor and components when performing tests
- ensure that auxiliary motor and components performance comply with manufacturer specifications
- diagnose, replace, repair and adjust auxiliary motor and components to correct deficiencies
- complete relevant documentation for the diagnosis and repair of BEV auxiliary motor and associated components.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

Competency is to be assessed using a BEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational BEV must be included in the

Evidence Guide	
	<p>simulation.</p> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"><li>• appropriate PPE</li><li>• a BEV</li><li>• manufacturer specifications for the BEV</li><li>• testing equipment</li><li>• full range of essential tools and equipment</li><li>• workplace documentation.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Procedures and information</i></b> for repair may include:</p>	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer or manufacturer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• material safety data sheets (MSDS)</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace instructions and requirements.</li> </ul>
<p><b><i>WHS requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• elimination of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• personal protective equipment (PPE) and clothing, such as: <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated)</li> </ul> </li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<p><b><i>Appropriate precautions</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• analysing task to define risk</li> <li>• applying electrical safety precautions, such as: <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• following identified WHS requirements</li> <li>• isolating the HV battery electrical supply</li> <li>• depowering the vehicle</li> <li>• checking system for residual voltage.</li> </ul>
<p><b><i>Testing equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• AC/DC current clamp</li> <li>• battery management system (BMS) diagnostic equipment</li> <li>• diagnostic scanner or computer interface</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	<p>1.1.<i>Procedures and information</i> relevant to the task are sourced and work requirements confirmed</p> <p>1.2.<i>Workplace health and safety (WHS) requirements</i> and <i>appropriate precautions</i> are identified and applied</p> <p>1.3.Repair methods for the specific work requirement are selected and prepared for</p> <p>1.4.Tools and <i>testing equipment</i> necessary to conduct the work are assembled</p> <p>1.5.Technical and/or calibration requirements for diagnosis and repair of the HV system instrumentation and safety interlocks are established</p>
2. Perform diagnosis	<p>2.1.<i>Tests and checks</i> on instrumentation data communication system are carried out using manufacturer specifications and test procedures</p> <p>2.2.Vehicle <i>safety interlocks</i> are tested for correct operation</p> <p>2.3.Motor controller is checked for safe and correct operation</p> <p>2.4.Audible warning system (if applicable) is checked for operation</p> <p>2.5.Battery gauge state of charge (SOC) indicator is tested</p> <p>2.6.Tests and checks on HV contactor are carried out (if applicable) using diagnostic scanner or computer interface</p> <p>2.7.Test results are recorded</p>
3. Repair instrumentation and safety interlocks	<p>3.1.Test results are compared with manufacturer specifications to decide on appropriate <i>corrective actions</i></p> <p>3.2.Components are replaced, repaired and adjusted as required</p> <p>3.3.Repaired and replaced components are re-tested for correct operation</p> <p>3.4.Replacement, repair or adjustment procedures carried out are recorded</p>
4. Complete repair operations	<p>4.1.Work area is tidied, and tools and equipment replaced according to <i>workplace requirements</i></p> <p>4.2.Job card or repair order is completed according to</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>workplace requirements</p> <p>4.3.Client report is prepared on the outcomes of the diagnosis and repair according to workplace requirements</p> <p>4.4.Vehicle is prepared for return to the client</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the diagnosis and repair of HV system instrumentation and safety interlocks in BEVs
  - use specialist tools and equipment
  - use computerised measuring equipment
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to:
  - interpret technical information and specifications
  - report and record actions
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with BEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- components of HV BEVs and their functions
- WHS requirements relating to:
  - electrical safety
  - safe work practices
- principles of electricity, including AC and DC
- principles of operation of HV system instrumentation and safety interlocks
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to the diagnosis and repair of HV system instrumentation and safety interlocks
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the diagnosis and repair of HV system instrumentation and safety interlocks

## Evidence Guide

Evidence Guide	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of the auxiliary motor/component is maintained when performing tests</li> <li>• check the operation of the HV system instrumentation and safety interlocks against manufacturer specifications</li> <li>• diagnose and replace, repair or adjust system components as required to correct deficiencies</li> <li>• complete relevant documentation for the diagnosis and repair of HV system instrumentation and safety interlocks.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational BEV must be included in the</p>

## Evidence Guide

	<p>simulation.</p> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• a BEV</li> <li>• manufacturer specifications for the BEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Procedures and information</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer or manufacturer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• material safety data sheets (MSDS)</li> <li>• parts catalogues</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace instructions and requirements.</li> </ul>
<p><b><i>WHS requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• elimination of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• personal protective equipment (PPE) and clothing</li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<p><b><i>Appropriate precautions</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• analysing task to define risk</li> <li>• applying electrical safety precautions, such as: <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• isolating the HV battery electrical supply</li> <li>• depowering the vehicle</li> <li>• using PPE, such as: <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated).</li> </ul> </li> </ul>
<p><b><i>Testing equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• AC/DC current clamp</li> <li>• battery management system (BMS) diagnostic equipment</li> <li>• diagnostic scanner or computer interface device</li> <li>• multimeter CAT 3 1000V</li> </ul>

	<ul style="list-style-type: none"> <li>• oscilloscope</li> <li>• thermal imaging equipment or non-contact thermometer.</li> </ul>
<b>Tests and checks</b> may include:	<ul style="list-style-type: none"> <li>• battery state of charge</li> <li>• operational tests of safety interlocks</li> <li>• testing instrumentation data communication system using scan tool, such as: <ul style="list-style-type: none"> <li>• CANBUS</li> <li>• Controller Area Network</li> <li>• diagnosis trouble codes (DTC).</li> </ul> </li> </ul>
<b>Safety interlocks</b> may include:	<ul style="list-style-type: none"> <li>• battery charger, including charge cable sensor</li> <li>• fault signals from controller</li> <li>• gear selector inhibitor switch</li> <li>• ignition or power key</li> <li>• inertia or impact sensor</li> <li>• isolation componentry, including HV contactor</li> <li>• motor over temperature control</li> <li>• under voltage protection.</li> </ul>
<b>Corrective actions</b> may include:	<ul style="list-style-type: none"> <li>• balancing state of charge</li> <li>• replacing or adjusting system components or sensors</li> <li>• replacing or repairing cable connections</li> <li>• tightening connections.</li> </ul>
<b>Workplace requirements</b> may include:	<ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• manufacturer specifications</li> <li>• quality policies and procedures</li> <li>• safe work procedures</li> <li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li> <li>• workplace recording and reporting procedures.</li> </ul>

## AURETH4008 Diagnose and repair high voltage cabin heating and cooling systems in battery electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4008 Diagnose and repair high voltage cabin heating and cooling systems in battery electric vehicles (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair high voltage (HV) systems used to heat, ventilate and cool the cabin in battery electric vehicles (BEVs). It involves testing systems for correct operation and replacing some components. It may include removal of refrigerant and replacement of refrigerant as well as performance testing of the system.</p> <p>Importance is placed on the application of HV safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions, in particular if the work involves removal and replacement of refrigerant. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the diagnosis and repair of HV cabin heating, ventilation and air conditioning (HVAC) systems in BEVs in the automotive industry.
-------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Prerequisite units	AURETH3001 Depower battery electric vehicles
--------------------	--

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	<p>1.1.<i>Procedures and information</i> relevant to the task are sourced and work requirements confirmed</p> <p>1.2.<i>Workplace health and safety (WHS) requirements</i> and <i>appropriate precautions</i> are identified and applied</p> <p>1.3.Repair methods for the specific work requirement are selected and prepared for</p> <p>1.4.Tools and <i>testing equipment</i> necessary to conduct the work are assembled</p> <p>1.5.Technical and/or calibration requirements for diagnosis and repair of HV HVAC systems are established</p>
2. Perform diagnosis	<p>2.1.<i>Tests and checks</i> on HVAC adjustment and activation controls are carried out using manufacturer specifications and test procedures</p> <p>2.2.Air conditioning and electric heater systems are tested for correct operation</p> <p>2.3.HVAC contactors are tested for correct operation</p> <p>2.4.Results of diagnosis are recorded</p>
3. Repair HVAC system	<p>3.1.Results are compared with manufacturer specifications to decide on appropriate <i>corrective action</i></p> <p>3.2.Components are removed and replaced as required</p> <p>3.3.Replaced components are re-tested for correct operation</p> <p>3.4.Replacement, repair or adjustment procedures carried out are recorded</p>
4. Complete repair operations	<p>4.1.Work area is tidied, and tools and equipment replaced according to <i>workplace requirements</i></p> <p>4.2.Job card or repair order is completed according to workplace requirements</p> <p>4.3.Client report is prepared on the outcomes of the repair according to workplace requirements</p> <p>4.4.Vehicle is prepared for return to the client</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the diagnosis and repair of HV HVAC systems in BEVs
  - use specialist tools and equipment
  - use computerised measuring equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with BEV electrical and HVAC systems and components
  - optimise workflow and productivity

### Required knowledge

- components of HV BEVs and their functions
- WHS requirements relating to:
  - electrical safety
  - safe work practices
- principles of electricity, including:
  - alternating current (AC)
  - direct current (DC)
- principles of operation of HV HVAC systems
- risks associated when working with refrigerants and non-conductive lubricants and prevention of cross-contamination
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to the diagnosis and repair of BEV HVAC systems
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting

procedures relating to the diagnosis and repair of BEV HVAC systems
---

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of the HVAC components is maintained when performing tests</li> <li>• check the operation of the HV HVAC systems against manufacturer specifications</li> <li>• diagnose and replace, repair or adjust system components as required to correct deficiencies</li> <li>• complete relevant documentation.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using a BEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational BEV must be included in the simulation.</p> <p>The following resources should be made available:</p>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• a BEV</li> <li>• manufacturer specifications for the BEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Procedures and information</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer or manufacturer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• material safety data sheets (MSDS)</li> <li>• parts catalogues</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace specifications and requirements.</li> </ul>
<p><b><i>WHS requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• elimination of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• personal protective equipment (PPE) and clothing</li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<p><b><i>Appropriate precautions</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• analysing task to define risk</li> <li>• applying electrical safety precautions, such as: <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• checking system for residual voltage</li> <li>• depowering the vehicle</li> <li>• isolating the HV battery electrical supply</li> <li>• using PPE, such as: <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated).</li> </ul> </li> </ul>
<p><b><i>Testing equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• AC/DC current clamp</li> <li>• air conditioning system service equipment</li> <li>• battery management system (BMS) diagnostic equipment</li> </ul>

Range Statement	
	<ul style="list-style-type: none"> <li>• insulation or mega ohm tester</li> <li>• multimeter CAT 3 1000V</li> <li>• oscilloscope</li> <li>• refrigerant leak detecting equipment</li> <li>• thermal imaging equipment or non-contact thermometer.</li> </ul>
<b>Tests and checks</b> may include:	<ul style="list-style-type: none"> <li>• operational tests of heating, ventilation and air conditioning</li> <li>• refrigerant leak detecting</li> <li>• testing of contactors.</li> </ul>
<b>Corrective action</b> may include:	<ul style="list-style-type: none"> <li>• removing and replacing control units</li> <li>• removing and replacing heater coolant</li> <li>• removing and replacing heating elements</li> <li>• removing and replacing HVAC components, such as condenser, evaporator, compressor and heater core.</li> </ul>
<b>Workplace requirements</b> may include:	<ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• manufacturer specifications</li> <li>• quality policies and procedures</li> <li>• safe work procedures</li> <li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li> <li>• workplace recording and reporting procedures.</li> </ul>

## AURETH4009 Diagnose and repair DC to DC converters in battery electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4009 Diagnose and repair DC to DC converters in battery electric vehicles (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair high voltage (HV) direct current (DC) to low voltage (LV) DC converters in battery electric vehicles (BEVs). It involves working with LV automotive electrical components as well as HV alternating current (AC) and DC automotive electrical components and battery systems. Work includes testing the converter and relevant accessories and applications for correct operation.</p> <p>Importance is placed on the application of HV safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the diagnosis, repair and replacement of the DC to DC converter in BEVs in the automotive industry.
-------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

<b>Prerequisite units</b>	AURETH3001 Depower battery electric vehicles AURETR3025 Test, charge and replace batteries
---------------------------	---

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	<p>1.1. <b>Procedures and information</b> relevant to the task are sourced and work requirements confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> and <b>appropriate precautions</b> are identified and applied</p> <p>1.3. Repair methods for the specific work requirement are selected and prepared for</p> <p>1.4. Tools and <b>testing equipment</b> necessary to conduct the work are assembled</p> <p>1.5. Technical and/or calibration requirements for diagnosis and repair of the DC to DC converter are established</p>
2. Perform diagnosis	<p>2.1. <b>Tests and checks</b> on DC to DC converter input and output voltage and current are carried out using manufacturer specifications and test procedures</p> <p>2.2. Relevant <b>applications and accessories</b> are tested and checked for correct operation</p> <p>2.3. Test results are recorded</p>
3. Repair DC to DC converter	<p>3.1. Test results are compared with manufacturer specifications to decide on <b>corrective action</b></p> <p>3.2. Components are removed and repaired or replaced as required</p> <p>3.3. Replaced or repaired components are re-tested for correct operation</p> <p>3.4. Replacement, repair or adjustment procedures are recorded on job card or repair order</p>
4. Complete repair operations	<p>4.1. Work area is tidied, and tools and equipment replaced according to <b>workplace requirements</b></p> <p>4.2. Job card or repair order is completed according to workplace requirements</p> <p>4.3. Client report is prepared on the outcomes of the diagnosis and repair according to workplace requirements</p> <p>4.4. Vehicle is prepared for return to the client</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the diagnosis and repair of BEV DC to DC converters
  - use specialist tools and equipment
  - use computerised measuring equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to accurately complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with the diagnosis and repair of BEV DC to DC converters
  - optimise workflow and productivity

### Required knowledge

- components of HV BEVs and their functions
- WHS requirements relating to:
  - safe work practices
  - electrical safety
  - principles of electricity, including AC and DC
- principles of operation of a DC to DC converter
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to the diagnosis and repair of a BEV DC to DC converter
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the diagnosis and repair of a BEV DC to DC converter

## AURETH4010 Test high voltage batteries in hybrid electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4010 Test high voltage batteries in hybrid electric vehicles (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to test high voltage (HV) batteries in hybrid electric vehicles (HEVs). It includes identifying and confirming safety requirements, preparing for work, testing HV batteries, and completing work processes, including clean-up and documentation. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities.</p> <p>Importance is placed on the application of HV electrical safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to testing HV batteries in HEVs, such as cars, trucks, motorcycles, marine applications and wheeled plant or equipment.
-------------------------	--

## Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

<b>Prerequisite units</b>	AURETR3025 Test, charge and replace batteries
---------------------------	---

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Procedures and information</b> are sourced to determine job requirements, including testing method, and minimise task time</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b>, including personal safety needs, are identified and applied</p> <p>1.3. Tools and <b>testing equipment</b> are identified and checked for safe and effective operation</p>
2. Perform HV battery analysis	<p>2.1. Information for battery testing is accessed and correctly followed</p> <p>2.2. Battery tests are performed and results analysed according to product, manufacturer and component supplier specifications</p> <p>2.3. Battery testing procedures are carried out according to safe operating procedures and guidelines</p>
3. Complete service operations	<p>3.1. Work area is tidied, and tools and equipment are replaced according to <b>workplace requirements</b></p> <p>3.2. Job card or repair order is completed according to workplace requirements</p> <p>3.3. Report is prepared on the outcomes of the test of the HV battery system, according to workplace requirements</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to testing HV batteries in HEVs
  - complete tests and measurements to determine serviceability of batteries
  - use specialist tools
  - use computerised measuring and diagnostic equipment
  - report and record results
- literacy skills to collect, organise and understand information relating to work requirements, plans and safety procedures for HV battery testing
- communication skills to:
  - communicate ideas and information to enable confirmation of work requirements and specifications
  - interpret and apply common industry terminology
  - coordinate work with site supervisor, other workers and customers
  - report work outcomes and problems
- problem-solving skills to:
  - interpret technical information and specifications
  - interpret test results
  - identify repair options
- self-management skills to:
  - obtain information on HV battery testing procedures
  - manage risks and hazards associated with low voltage (LV) and HV HEV electrical systems and components
  - obtain equipment and material to avoid backtracking or workflow interruptions
  - use cooperative approaches to optimise workflow and productivity

### Required knowledge

- components of HV HEVs and their functions
- principles of electricity, including:
  - alternating current (AC)
  - direct current (DC)
- relevant WHS requirements relating to:
  - safe work practices
  - electrical safety
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to the testing of HEV HV batteries in the automotive workplace

- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to the testing of HEV HV batteries in the automotive workplace

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• communicate effectively with others involved in or affected by the work</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• test HV batteries in HEVs according to requirements</li> <li>• complete relevant documentation for recording HEV battery test results.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using an HEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational HEV must be included in the simulation.</p> <p>The following resources must be made available for the assessment of this unit:</p>

Evidence Guide	
	<ul style="list-style-type: none"><li>• appropriate PPE</li><li>• an HEV</li><li>• manufacturer specifications for the HEV</li><li>• testing equipment</li><li>• full range of essential tools and equipment</li><li>• workplace documentation.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Procedures and information*** may include:

- Australian standards
- diagrams and sketches
- engineer design specifications and instructions
- industry codes of practice
- original equipment manufacturer (OEM) specifications
- verbal, written and graphical instructions issued by authorised internal and external persons
- workplace specifications and requirements.

***WHS requirements*** may include:

- applying electrical safety precautions, such as:
  - “one hand rule”
  - live system warning tags or signs
- electrical protective equipment, such as:
  - electrical safety gloves 1000V
  - HV insulating mats (Australian standards rated)
- eliminating hazards and hazardous materials and substances
- following emergency procedures, such as:
  - emergency shutdown and stopping of equipment
  - extinguishing fires
  - workplace first aid requirements
  - site evacuation
- personal protective equipment (PPE) and clothing
- workplace environment and safety equipment.

***Testing equipment*** may include:

- AC/DC current clamp
- battery management system (BMS) diagnostic equipment
- diagnostic scanner or computer interface device
- insulated hand tools
- multimeter CAT 3 1000V
- oscilloscope
- thermal imaging equipment or non-contact

Range Statement	
	thermometer.
<b>Workplace requirements</b> may include:	<ul style="list-style-type: none"><li>• industry codes of practice</li><li>• manufacturer specifications</li><li>• quality policies and procedures</li><li>• safe work procedures</li><li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li><li>• workplace recording and reporting procedures.</li></ul>

## Custom Content Section

Not applicable.

## AURETH4011 Deactivate and reinitialise power supply in hybrid electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4011 Deactivate and reinitialise power supply in hybrid electric vehicles (Release 1)  Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to isolate the low voltage (LV) and high voltage (HV) electrical power supply of hybrid electric vehicles (HEVs). It involves calibrating systems that require re-setting once the power supply and system are re-energised.</p> <p>Importance is placed on the application of HV safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to HEVs that have particular requirements for deactivating and reinitialising electrical circuits and equipment, including resetting electrical or electronic HV and LV sub-systems and components.</p> <p>It involves working with HV alternating current (AC) and direct current (DC) automotive electrical components.</p>
-------------------------	---

## Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for repair operations	<p>1.1.<i>Procedures and information</i> relevant to the task are sourced and work requirements confirmed</p> <p>1.2.<i>Workplace health and safety (WHS) requirements</i> and <i>appropriate precautions</i> are identified and applied</p> <p>1.3.Methods for the specific work requirement are selected and prepared for</p> <p>1.4.Tools and <i>testing equipment</i> necessary to conduct the work are assembled</p> <p>1.5.Technical and/or calibration requirements for deactivating and reinitialising the power supply are established</p>
2. Deactivate power supply	<p>2.1.Information relevant for deactivation is followed</p> <p>2.2.Procedure to deactivate vehicle at main control is followed to commence deactivation process</p> <p>2.3.HV power supply connection is located and isolated according to manufacturer instructions, taking appropriate precautions to prevent electric shock to self and others</p> <p>2.4.LV power supply is located and disconnected according to manufacturer instructions and vehicle and workplace safety procedures</p> <p>2.5.Vehicle is stabilised and checked for residual voltage in system</p> <p>2.6.HV power supply connection is secured and retained to prevent re-fit by third party</p> <p>2.7.Vehicle is identified with warning tags or sign to indicate potential hazards</p>
3. Reinitialise power supply	<p>3.1.Information for reinitialising procedure is accessed and followed</p> <p>3.2.LV and HV power supplies are reconnected and activated</p> <p>3.3.Technical and/or calibration requirements are established for reinitialising the power supply</p> <p>3.4.Diagnostic and testing equipment is used to check and recalibrate <i>sub-systems</i> affected by deactivation process</p> <p>3.5.Main power supply and sub-systems are checked for correct operation upon reactivation</p> <p>3.6.<i>Workplace requirements</i> are followed to report</p>

ELEMENT	PERFORMANCE CRITERIA
	and record subsequent faults with the reinitialising process

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the deactivating and reinitialising of LV and HV power supplies and components in HEVs
  - use specialist tools and equipment
  - use computerised measuring and diagnostic equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with LV and HV HEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- components of LV and HV HEVs and their functions
- relevant WHS requirements relating to:
  - safe work practices
  - electrical safety
- principles of electricity, including AC and DC
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice and environmental regulations relating to deactivating and reinitialising HEV power supplies in the automotive workplace
- vehicle-specific electrical requirements
- workplace policies and procedures, including quality, recording and reporting procedures relating to deactivating and reinitialising HEV power supplies in the automotive workplace

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of components and system is maintained when performing tests</li> <li>• check that the deactivation and reinitialisation process is followed and applied according to manufacturer specifications</li> <li>• complete relevant documentation for diagnosed faults encountered when deactivating and reinitialising the HEV power supply.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>Competency is to be assessed using an HEV that uses HV and LV AC/DC electrical systems. Where simulation is used, an operational HEV must be included in the simulation.</p> <p>The following resources must be made available for the</p>

<b>Evidence Guide</b>	
	<p>assessment of this unit:</p> <ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• an HEV</li> <li>• manufacturer specifications for the HEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

Range Statement	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b><i>Procedures and information</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• diagrams and sketches</li> <li>• engineer design specifications and instructions</li> <li>• industry codes of practice</li> <li>• original equipment manufacturer (OEM) specifications</li> <li>• verbal, written and graphical instructions issued by authorised internal and external persons</li> <li>• workplace specifications and requirements.</li> </ul>
<p><b><i>WHS requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• eliminating of hazardous materials and substances</li> <li>• first aid equipment</li> <li>• following emergency procedures</li> <li>• hazard and risk control</li> <li>• material safety data sheets (MSDS)</li> <li>• personal protective equipment (PPE) and clothing</li> <li>• safety equipment</li> <li>• techniques for manual handling, including shifting, lifting and carrying.</li> </ul>
<p><b><i>Appropriate precautions</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• analysing task to define risk</li> <li>• applying electrical safety precautions, such as:             <ul style="list-style-type: none"> <li>• “one hand rule”</li> <li>• live system warning tags or signs</li> </ul> </li> <li>• isolating the LV and HV battery electrical supply</li> <li>• stabilising the vehicle electrical circuits</li> <li>• using PPE, such as:             <ul style="list-style-type: none"> <li>• electrical safety gloves 1000V</li> <li>• HV insulating mats (Australian standards rated).</li> </ul> </li> </ul>

## AURETH4012 Service and maintain electrical components in hybrid electric vehicles

### Modification History

Release	Comment
Release 2	Replaces AURETH4012 Service and maintain electrical components in hybrid electric vehicles (Release 1) Reference to OHS legislation replaced with new WHS legislation

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to service and maintain electrical components of hybrid electric vehicles (HEVs). It involves working with automotive electrical components and electrical systems that support the control and operation of the HEV.</p> <p>Importance is placed on the application of high voltage (HV) and low voltage (LV) electrical safety procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the inspection, service and maintenance of HEVs in the automotive industry.
-------------------------	---

### Licensing/Regulatory Information

Refer to Unit Descriptor.

## Pre-Requisites

Prerequisite units	AURETH4011 Deactivate and reinitialise power supply in hybrid electric vehicles
--------------------	---

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for service operations	<p>1.1. <i>Information and documents</i> are sourced</p> <p>1.2. <i>Workplace health and safety (WHS) requirements</i> and other <i>appropriate precautions</i> are identified and taken</p> <p>1.3. Service method appropriate for the specific circumstances is selected and prepared for</p> <p>1.4. Tools and <i>testing equipment</i> necessary to conduct the work are assembled</p> <p>1.5. Technical and/or calibration requirements for inspection and service of HEV electrical components are established</p>
2. Check associated electrical components	<p>2.1. Information relevant to the inspection and service of HEV components and systems is followed</p> <p>2.2. Checks are conducted on the condition and operation of associated <i>electrical components</i></p> <p>2.3. Problems with the performance of electrical components are identified, and corrective action is taken</p> <p>2.4. Faults and corrective action are recorded</p>
3. Complete service operations	<p>3.1. Work area is tidied, and tools and equipment are replaced according to <i>workplace requirements</i></p> <p>3.2. Job card or repair order is completed according to workplace requirements</p> <p>3.3. Report is prepared on the outcomes of the service and maintenance according to workplace requirements</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- technical skills to:
  - use workplace technology relating to the service and maintenance of HEVs
  - use specialist tools and equipment
  - report and record actions
- communication skills to:
  - confirm work requirements and specifications
  - communicate effectively regarding work requirements with supervisor, other workers and customers
  - report work outcomes and problems
- literacy skills to interpret technical information and specifications
- numeracy skills to complete tests and measurements to determine correct operation
- problem-solving skills to:
  - interpret test results
  - identify repair options
- self-management skills to:
  - manage risks and hazards associated with HV HEV electrical systems and components
  - optimise workflow and productivity

### Required knowledge

- electrical/electronic components of HEVs and their functions
- HEV-specific electrical requirements
- WHS requirements relating to:
  - safe work practices
  - electrical safety
- principles of electricity, including:
  - alternating current (AC)
  - direct current (DC)
- applicable commonwealth, state or territory legislation, regulations, standards, codes of practice and environmental regulations relating to the service and maintenance of HEVs in an automotive workplace
- workplace policies and procedures, including quality, recording and reporting procedures relating to the service and maintenance of HEVs in an automotive workplace

## Evidence Guide

<b>Evidence Guide</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• comply with WHS requirements and safe work practices</li> <li>• ensure electrical and mechanical integrity of any component and system is maintained when performing tests</li> <li>• check associated electrical components and systems of HV HEVs according to manufacturer's specifications</li> <li>• complete relevant documentation for the service and maintenance of the HEV.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice</li> </ul> <p>Competency is to be assessed using an HEV that uses HV and LV AC/DC electrical systems. Where simulation is used an operational HEV must be included in the simulation.</p> <p>The following resources must be made available for the assessment of this unit:</p>

<b>Evidence Guide</b>	
	<ul style="list-style-type: none"> <li>• appropriate PPE</li> <li>• an operational HEV</li> <li>• manufacturer specifications for the HEV</li> <li>• testing equipment</li> <li>• full range of essential tools and equipment</li> <li>• workplace documentation.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Information and documents*** may include:

- Australian standards
- diagrams and sketches
- engineer and manufacturer design specifications and instructions
- industry codes of practice
- original equipment manufacturer (OEM) specifications
- verbal, written and graphical instructions issued by authorised internal and external persons
- workplace specifications and requirements
- workshop manuals and specifications.

***WHS requirements*** may include:

- eliminating hazardous materials and substances
- first aid equipment
- following emergency procedures
- hazard and risk control
- material safety data sheets (MSDS)
- personal protective equipment (PPE) and clothing
- safety equipment
- techniques for manual handling, including shifting, lifting and carrying.

***Appropriate precautions*** may include:

- analysing task to define risk
- applying electrical safety precautions, such as:
  - “one hand rule”
  - live system warning tags or signs
- depowering the vehicle
- isolating the HV battery supply
- using PPE, such as:
  - electrical safety gloves 1000V
  - HV insulating mats (Australian standards rated).

<b>Range Statement</b>	
<b>Testing equipment</b> may include:	<ul style="list-style-type: none"> <li>• AC/DC current clamp</li> <li>• battery management system (BMS) diagnostic equipment</li> <li>• diagnostic scanner or computer interface device</li> <li>• insulated hand tools</li> <li>• multimeter CAT 3 1000V</li> <li>• oscilloscope</li> <li>• thermal imaging equipment or non-contact thermometer.</li> </ul>
<b>Electrical components</b> may include:	<ul style="list-style-type: none"> <li>• air conditioning control system</li> <li>• anti-lock braking system (ABS) and traction control system (TCS)</li> <li>• automatic power windows</li> <li>• auxiliary cooling system for the internal combustion engine (ICE) and HV system</li> <li>• driver information warning display</li> <li>• electric power steering</li> <li>• electronic brake control system</li> <li>• electronic stability control</li> <li>• electronically controlled automatic transmission</li> <li>• headlight aiming control system</li> <li>• ICE control management system</li> <li>• multi-function display units, including sat-nav system</li> <li>• tyre pressure warning system (TPWS).</li> </ul>
<b>Workplace requirements</b> may include:	<ul style="list-style-type: none"> <li>• industry codes of practice</li> <li>• manufacturer specifications</li> <li>• quality policies and procedures</li> <li>• safe work procedures</li> <li>• sustainability, environment, equal opportunity and anti-discrimination policies and procedures</li> <li>• workplace recording and reporting procedures.</li> </ul>

Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in battery electric and hybrid electric vehicle systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical or electronic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of battery electric and hybrid electric vehicle systems of light vehicles, heavy commercial vehicles, and vehicles in the mining, construction and agricultural environments.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <b>battery electric and hybrid electric vehicle systems</b> are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, equipment and system isolation requirements, and personal protection needs are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> with battery electric and hybrid electric vehicle systems are identified and confirmed from direct and/or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace requirements and practices</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to battery electric and hybrid electric vehicle systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of battery electric and hybrid electric vehicle systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of battery electric and hybrid electric vehicle systems
- types, functions and operations of electrical and electronic systems in battery electric and hybrid electric vehicles
- theory of diagnosis, including concept, design and planning
- electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families and radio frequency
- types, functions, operations and limitations of diagnostic testing equipment related to battery electric and hybrid electric vehicle systems
- testing procedures of battery electric and hybrid electric vehicle systems
- methods and processes for documenting and reporting diagnostic findings and recommendations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different battery electric and hybrid electric vehicle systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in battery electric and hybrid electric vehicle systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with real or simulated battery electric and hybrid

## EVIDENCE GUIDE

	<p>electric vehicle systems faults</p> <ul style="list-style-type: none"><li>• tools and equipment appropriate for the diagnosis of complex faults in battery electric and hybrid electric vehicle systems</li><li>• technical reference information and workplace instructions.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Battery electric and hybrid electric vehicle systems*** may include:

- traction control systems
- steering and braking systems
- electronic stability systems
- electric traction motors and control systems
- high voltage/low voltage charging systems
- heating, ventilation, air conditioning and cooling (HVAC) systems
- vehicle dynamic control
- closed loop electronic and multi-class bi-directional universal switch (BUS) systems.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
  - safety management systems, including equipment and system isolation requirements
- hazard control, including control of hazardous materials and toxic substances

***Faults*** may include:

- electrical and electronic failures in battery electric and hybrid electric vehicle systems
- direct faults in input sensors, output actuators, wiring harnesses or computer systems
- calibration and adjustment specifications, component specifications, and component assembly
- component damage and system modifications
- indirect faults caused by the influence of external electrical and electronic systems, which may or may not be faulty in their primary operations.

***Tests*** may include:

- wiring and connector integrity
- operator and specification of input and output devices

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>controlling electronic components and computers</li><li>data interpretation</li><li>readings relating to direct, indirect and intermittent causes.</li></ul>
<i>Testing equipment</i> may include:	<ul style="list-style-type: none"><li>analogue and digital multimeters</li><li>lab oscilloscopes</li><li>scan tools</li><li>on-board diagnostic systems</li><li>test lights and test LEDs</li><li>pulse generators</li><li>manufacturer and component supplier testing equipment.</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>analysing manufacturer and component supplier specifications, schematics and operational procedures relating to battery electric and hybrid electric vehicle systems</li><li>six-step troubleshooting plan</li><li>discover-investigate-fix methodology.</li></ul>

## AURETH5013 Analyse and evaluate electrical and electronic faults in electric and hybrid vehicle systems

### Modification History

Release	Comment
Release 1	Replaces AURT576093A Analyse and evaluate electrical and electronic faults in electric and hybrid vehicle systems  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation  Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate electrical and electronic faults in electric and hybrid vehicle systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies</p>
-------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<ul style="list-style-type: none"><li>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</li><li>1.2. Benchmark specifications for correctly functioning hybrid vehicle systems are accessed and interpreted.</li><li>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</li><li>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</li><li>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</li></ul>
2. Prepare for analysis and evaluation	<ul style="list-style-type: none"><li>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</li><li>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</li><li>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</li><li>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</li><li>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</li><li>2.6. Hybrid vehicle system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</li></ul>
3. Apply the analysis and evaluative methodology	<ul style="list-style-type: none"><li>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</li><li>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</li><li>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</li><li>3.4. Analytical findings and results are evaluated against agreed</li></ul>

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
	<p>criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary hybrid vehicle systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, types, functions, operations and limitations of electric and hybrid vehicle systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance, high-voltage safety requirements, high-voltage battery technology, high-voltage inverter, high-voltage permanent magnet dc motors, high-voltage wire wound field magnet motors, high-voltage single and three-phase ac motors, high-voltage permanent magnet three-phase ac motors, dc stepper motors, series hybrid drive, parallel hybrid drive, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
equipment. <ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li><li>• general knowledge of personal computer operation.</li></ul>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three different hybrid vehicle systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different hybrid vehicle systems.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, operational hybrid vehicle systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to

<b>EVIDENCE GUIDE</b>	
	<p>be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Electric and hybrid vehicle systems</b>	Electric and hybrid vehicle systems are to include petrol/electric hybrid vehicles, series and parallel drive vehicles, industrial floor cleaners, forklifts and golf buggies.
<b>Coverage</b>	Coverage is to include battery technology, motor drive systems, motor controllers, air conditioning systems, electronic protection systems and multi-class bus systems.
<b>Electric and hybrid vehicle systems electrical and electronic failures</b>	Electric and hybrid vehicle systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, including inverters, high-voltage AC and DC motors, high-voltage generators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.
<b>Electric and hybrid vehicle systems failures</b>	Electric and hybrid vehicle systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based

<b>RANGE STATEMENT</b>	
	criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier specifications.
<b>Testing equipment</b>	Testing equipment is to include multimeters, lab oscilloscopes, data scanners, test lights, battery testers and test LEDs, and may include manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include batteries, drive motor, generator, inverter, chargers, motor controller, emissions, wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to electric and hybrid vehicle systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to electric and hybrid vehicle system technology and technology changes.</li> </ul>

## AURETK1001 Identify, select and use low voltage electrical test equipment

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to identify, select and safely use basic low voltage (LV) electrical test equipment for the purpose of testing, diagnosing and rectifying LV electrical conditions and faults in motor vehicles.</p> <p>Work involves identifying and selecting LV electrical test equipment by type and name, applying methods for its safe use, and storing it.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to the identification and use of low voltage test equipment for basic circuit and system testing on light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work is normally carried out under supervision, in defined contexts and within established parameters, with the requirement for only limited decision making by the candidate.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify LV electrical test equipment	<p>1.1.<i>Low voltage electrical test equipment</i> types suitable to task are identified</p> <p>1.2.Function and method of operation of equipment are confirmed prior to use</p> <p>1.3.<i>Workplace health and safety (WHS) requirements</i> and <i>safe operating procedures</i> are identified and applied</p>
2. Select correct equipment for workplace application	<p>2.1.LV electrical test equipment appropriate to task is selected according to <i>workplace requirements</i></p> <p>2.2.Equipment is checked to confirm condition and performance</p>
3. Use electrical test equipment	<p>3.1.Electrical test equipment is used in a safe manner to prevent injury to self and others and damage to vehicle or other workplace equipment</p> <p>3.2.Equipment is connected without causing damage to vehicle or equipment as a result of <i>inappropriate testing procedures</i></p> <p>3.3.Workplace safe operating procedures are followed during the use of test equipment</p> <p>3.4.Test results or readings are interpreted and confirmed according to job or workplace requirements</p>
4. Finalise work processes	<p>4.1.Equipment is cleaned, inspected and checked</p> <p>4.2.Equipment is securely and appropriately stored</p> <p>4.3.Fixed electrical test equipment is isolated where required</p> <p>4.4.Documents are completed according to workplace requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow written and verbal instructions
  - communicate basic information relating to the safe use of LV electrical test equipment
- literacy skills to:
  - read and follow basic vehicle repair information and associated LV electrical test equipment manuals
  - read and follow information on standard operating procedures
- numeracy skills to:
  - interpret numbers as a measure of electrical power or resistance
  - make simple calculations as they relate to electrical power or resistance
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities that implement and follow standard workplace procedures
- problem-solving skills to:
  - recognise a workplace problem or potential problem
  - refer problems outside area of responsibility to appropriate person
  - identify defects and potential problems with LV electrical test equipment
- self-management skills to:
  - locate and identify appropriate electrical test equipment
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as operating procedures
- teamwork skills to work with others and in a team by cooperating with team members
- technical skills to:
  - identify types of LV electrical test equipment
  - select equipment appropriate to the task
  - use equipment safely
  - store equipment according to manufacturer specifications and standard operating procedures
- technology skills to use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material relating to working with low voltage electrical test equipment, including:
  - personal safety requirements

**REQUIRED SKILLS AND KNOWLEDGE**

- low voltage electrical test equipment safety and operating procedures
- basic electrical circuit theory
- equipment selection procedures
- types, characteristics, uses and limitations of low voltage electrical test equipment
- workplace policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- identify low voltage electrical test equipment
- select and safely use personal protective equipment
- select and safely use low voltage electrical test equipment
- interpret and report electrical test results
- use methods appropriate for storage of low voltage electrical test equipment.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- low voltage electrical test equipment of the type required for automotive diagnosis and repair
- WHS and safety equipment, such as personal protective equipment
- functioning vehicle electrical systems and components or vehicles capable of being tested
- specifications and work instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Low voltage electrical test equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• multimeters</li> <li>• test lights and probes</li> <li>• load testers</li> <li>• circuit testers</li> <li>• oscilloscopes</li> <li>• ignition module test equipment</li> <li>• emissions analysers</li> <li>• leak detectors</li> <li>• fuel system analysers.</li> </ul>
<p><b><i>Workplace health and safety requirements:</i></b></p>	<ul style="list-style-type: none"> <li>• are to include those prescribed under regulations, codes of practice, and workplace safety policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• emergency shutdown</li> <li>• use of fire-fighting equipment</li> <li>• first aid training and response</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• site evacuation procedures.</li> </ul> </li> </ul>
<p><b><i>Safe operating procedures</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• being involved in an operational risk assessment associated with vehicle movement</li> <li>• safe use of automotive electrical test equipment</li> <li>• electrical safety</li> <li>• manual and mechanical lifting and shifting</li> <li>• safe handling of material</li> <li>• procedures for working in proximity to others and site visitors</li> <li>• emergency shutdown.</li> </ul>
<p><b><i>Workplace requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• material safety data sheets (MSDS)</li> <li>• workplace work specifications and requirements</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• safe work procedures relating to the use of LV electrical test equipment</li><li>• signage</li><li>• verbal, written and graphical instructions</li><li>• work bulletins and memos</li><li>• work schedules and plans</li><li>• workplace policies and procedures.</li></ul>
<i>Inappropriate testing procedures</i> may include:	<ul style="list-style-type: none"><li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:<ul style="list-style-type: none"><li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li><li>• probing terminal and connectors with inappropriate test probes</li><li>• pushing sharp probes and objects into wiring insulation.</li></ul></li></ul>

## AURETK2002 Use and maintain automotive electrical test equipment

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to select, safely use and maintain automotive electrical test equipment used in an automotive workplace for the purpose of identifying, diagnosing and rectifying electrical and electronic faults in motor vehicles.</p> <p>Work involves identifying and confirming job requirements; preparing for work; selecting, using, servicing, maintaining and storing automotive electrical testing equipment; and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to where equipment used is dedicated to an electrical or electronic diagnosis or repair operation or machine-type function used for electrical system or component repair.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Select equipment suitable to workplace application	<p>1.1. <i>Workplace health and safety (WHS) requirements</i> and appropriate precautions are identified and applied</p> <p>1.2. <i>Electrical test equipment</i> and other suitable equipment is selected for use in the workplace environment according to job and <i>workplace requirements</i></p> <p>1.3. Equipment condition and functionality are confirmed prior to use</p>
2. Use electrical test equipment	<p>2.1. Electrical test equipment is used in a safe manner to prevent injury to self and others</p> <p>2.2. Electrical test equipment is connected to vehicle or equipment without causing damage as a result of <i>inappropriate testing procedures</i></p> <p>2.3. Workplace <i>safe operating procedures</i> are followed during the use of test equipment</p>
3. Service and maintain equipment	<p>3.1. Damaged or faulty equipment is tagged and removed from the workplace for repair or replacement and reported according to workplace <i>maintenance methods</i></p> <p>3.2. Test equipment is inspected, serviced, adjusted and/or maintained in line with manufacturer and component supplier schedule within scope of own responsibility</p> <p>3.3. Servicing and maintenance operations are carried out according to industry regulations and guidelines, WHS requirements and workplace policies and procedures</p>
4. Finalise work processes	<p>4.1. Test equipment is cleaned, inspected and checked</p> <p>4.2. Test equipment is securely and appropriately stored</p> <p>4.3. Fixed electrical test equipment is isolated where required</p> <p>4.4. Documents are completed according to workplace requirements</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- technical skills to:
  - identify types of automotive electrical test equipment
  - select test equipment appropriate to the task
  - use test equipment safely
  - identify and analyse technical information
  - identify test equipment defects
  - store equipment according to manufacturer specifications and standard operating procedures
- communication skills to:
  - follow written and verbal instructions
  - communicate basic information relating to the safe use of electrical test equipment
- literacy skills to:
  - read and follow basic vehicle repair information and electrical test equipment instruction manuals
  - read and follow information on standard operating procedures
- numeracy skills to interpret numbers as a measure of electrical power or resistance
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities that implement and follow standard workplace procedures
- problem-solving skills to:
  - recognise a workplace problem or potential problem
  - refer problems outside area of responsibility to appropriate person
  - identify defects and potential problems with electrical test equipment
- self-management skills to:
  - locate and identify electrical test equipment appropriate to the task
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as operating procedures
- teamwork skills to:
  - work with others and in a team by cooperating with team members
  - apply knowledge of own role to support workplace activities and tasks
- technology skills to use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material relating to automotive electrical test

**REQUIRED SKILLS AND KNOWLEDGE**

equipment, including:

- personal safety requirements
- test equipment safety and operating procedures
- test equipment selection procedures
- basic maintenance procedures for automotive electrical test equipment
- types, characteristics, uses and limitations of automotive electrical test equipment
- work organisation and planning processes relating to automotive electrical test equipment
- workplace policies and procedures relating to diagnosing electrical faults on vehicles

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- select and safely use personal protective equipment
- select and safely use automotive electrical test equipment
- undertake basic maintenance and storage of electrical test equipment within scope of own responsibility.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- vehicles and electrical components that can be used to simulate conditions that require use of electrical test equipment and diagnosis of system condition or fault
- materials and equipment relevant to the use and maintenance of automotive electrical test equipment
- materials and equipment relevant to the secure storage of automotive electrical test equipment
- specifications and work instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

**EVIDENCE GUIDE**

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety requirements:***

- are to include those prescribed under regulations, codes of practice, and workplace safety policies and procedures
- may include
  - personal protective clothing and equipment
  - emergency shutdown
  - use of fire-fighting equipment
  - first aid training and response
  - hazard control, including control of hazardous materials and toxic substances
  - site evacuation procedures.

***Electrical test equipment***  
may include:

- multimeters
- test lights and probes
- logic probes
- scan tools
- load testers
- circuit testers
- oscilloscopes
- computer
- ignition module test equipment
- alternator or starter test bench
- distributor test bench
- emissions analysers
- leak detectors
- fuel system analysers.

***Workplace requirements***  
may include:

- Australian standards
- engineer's design specifications and instructions
- instructions issued by authorised workplace or external persons
- material safety data sheets (MSDS)
- workplace work specifications and requirements
- regulatory and legislative requirements relating to the automotive industry
- safe work procedures relating to the use and maintenance of electrical test equipment

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• signage</li> <li>• verbal, written and graphical instructions</li> <li>• work bulletins and memos</li> <li>• work schedules and plans</li> <li>• workplace policies and procedures.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Safe operating procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• conducting operational risk assessment and treatments associated with vehicle movement</li> <li>• safe use of automotive electrical test equipment</li> <li>• electrical safety</li> <li>• manual and mechanical lifting and shifting</li> <li>• procedures for working in proximity to others and site visitors</li> <li>• safe handling of material.</li> </ul>
<b><i>Maintenance methods</i></b> may include:	<ul style="list-style-type: none"> <li>• routine maintenance to test equipment according to schedules</li> <li>• labelling faulty tools and equipment</li> <li>• performing minor electrical test equipment repairs, adjustments or calibration</li> <li>• documenting or tagging equipment as faulty or out-of-service.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Electrical
<b>Unit sector</b>	Technical – Tools and Equipment

**Custom Content Section**

Not applicable.

## AURETR1001 Remove and tag automotive electrical system components

### Modification History

Release	Comment
Release 1	<p>Replaces AURE100064A Remove and tag automotive electrical system components</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to remove and tag automotive electrical system components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work involved includes electrical systems of light vehicles, motorcycles, heavy vehicles road transport, heavy vehicles mobile plant, outdoor power equipment and marine.</p> <p>Work requires individuals to demonstrate minimal judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove and tag automotive electrical components	<ul style="list-style-type: none"><li>1.1. Nature and scope of work requirements are identified and confirmed</li><li>1.2. WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work</li><li>1.3. Procedures and information such as workshop manuals and specifications, and tooling are sourced</li><li>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</li><li>1.5. Dangers associated working with removal and tagging of automotive electrical system components are observed</li></ul>
2. Remove automotive electrical system components	<ul style="list-style-type: none"><li>2.1. Automotive electrical components for removal are identified</li><li>2.2. Methods for the conduct of removal and tagging are implemented in accordance with manufacturer/component supplier specifications</li><li>2.3. Components are removed without damage</li><li>2.4. Inspection of components is carried out</li><li>2.5. Report is processed in accordance with enterprise procedures</li></ul>
3. Tag automotive electrical components	<ul style="list-style-type: none"><li>3.1. Tagging procedures are identified</li><li>3.2. Resource requirements for tagging are identified and support equipment is identified and prepared</li><li>3.3. Components are tagged without damage</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills, e.g. when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to removing and tagging automotive electrical components, including use of measuring equipment and communication devices, and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- automotive electrical terminology
- function of each component
- relationship of body components to each other
- application of body components
- removal procedures
- tagging procedures
- quality procedures
- organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identifying, removing and tagging a range of components by their title and application
- conducting removal and tagging without damage to components or tooling and equipment.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to removing and tagging automotive electrical components
- equipment, hand and power tooling appropriate to removing and tagging automotive electrical components
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the AUR12 Automotive Industry Retail, Service and Repair Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other units which together form part of the holistic work role.</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	Methods include tagging by title and application
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, and working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to: <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to: <ul style="list-style-type: none"> <li>waste management and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian standards, internal quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• hand tooling and hand held power tooling</li></ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>• tags and cleaning material</li></ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"><li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li></ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• enterprise operating procedures, workshop manuals, supplier data sheets, parts catalogues, customer orders and industry/workplace codes of practice, material safety data sheets (MSDS) and Australian Design Rules</li><li>• safe work procedures related to removing and tagging automotive electrical components</li><li>• organisation work specifications and requirements</li></ul>

## AURETR1002 Test, service and maintain battery storage systems

### Modification History

Release	Comment
Release 1	Replaces AURE118671A Test, service and maintain battery storage systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to inspect, service and maintain battery storage systems in on-site major earth moving and plant equipment.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	--

### Application of the Unit

Application of the unit	Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as site procedures and specifications, and tooling are sourced</p> <p>1.4.Technical requirements for inspection are sourced and support equipment is identified and prepared</p> <p>1.5.Warnings in relation to working with batteries are observed</p>
2. Conduct inspection	<p>2.1.Methods for the conduct of inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/component supplier specifications</p> <p>2.3.Results are documented with evidence and supporting information and recommendations made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Prepare to service and maintain	<p>3.1.WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for servicing and maintenance are identified and support equipment is identified and prepared</p>
4. Carry out service and maintenance	<p>4.1.Methods for the conduct of service and/or maintenance are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments made during service and/or maintenance are in accordance with manufacturer/component supplier specifications</p>
5. Clean up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored</p> <p>5.2.Waste and scrap is removed following workplace procedure</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>5.6.Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- analytical skills for identification and analysis of technical information
- plain English literacy and communication skills in relation to dealing with customers and team members
- questioning and active listening skills for example when obtaining information from customers
- oral communication skills sufficient to convey information and concepts to customers
- as applied to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interacting effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to inspection, servicing and maintenance of battery storage systems, including use of specialist tooling, measuring equipment and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with battery testing equipment
- operating principles and layout of battery storage systems
- inspection procedures
- service and/or maintenance procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- servicing and maintaining battery storage systems in accordance with manufacturer/component supplier and site requirements
- completing inspection in accordance with manufacturer/component supplier requirements
- completing work within workplace timeframes
- completing workplace documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to inspection, servicing and maintenance of battery storage systems
- equipment, hand and power tooling appropriate to inspection, servicing and maintenance of battery storage systems
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of AUR12 Automotive Industry Retail, Service and Repair Training Package.
- Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance together with application of underpinning knowledge.</p> <ul style="list-style-type: none"><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</li><li>• Assessment may be applied under project related conditions and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances.</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting and working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to: <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to: <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• hand tooling</li></ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>• cleaning material</li></ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"><li>• verbal and graphical instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li></ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets (MSDS), diagrams and sketches</li><li>• safe work procedures related to inspection, servicing and maintenance of battery storage systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian standards</li></ul>

Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to apply basic knowledge, skills and understanding of electricity as it relates to the electrical systems, components and technologies found in modern motor vehicles.</p> <p>The unit involves the development of skills and knowledge that relate to the fundamental operating principles of electrical systems, including electrical controls; vehicle electrical systems, such as lighting, charging or control systems for engine management; and body management, including electrical accessories.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to light vehicles (cars, light commercial vehicles) and is based on knowledge of elements of electricity and basic circuit theory as well as the function, location and operation of vehicle electrical circuits, systems and components.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and apply electrical fundamentals	<p>1.1 Suitable and relevant <i>sources of information</i> are located to assist with electrical fundamentals research</p> <p>1.2 <i>Elements of electricity</i> are identified</p> <p>1.3 Elements of electricity are applied to common terminology for automotive electrical circuits, systems and components</p> <p>1.4 Elements of electricity are applied to common electrical calculations for automotive electrical circuits, systems and components</p>
2. Research and identify systems and components	<p>2.1 Component or system to be researched is identified</p> <p>2.2 Suitable and relevant sources of information are located to assist with identification of systems and components</p> <p>2.3 Reference information is researched to ensure sufficient understanding of component or system to assist with identifying how the circuit functions</p> <p>2.4 Potential for unsafe conditions or <i>safety hazards</i> is identified</p> <p>2.5 <i>Workplace health and safety (WHS) requirements</i> are applied</p>
3. Locate systems and components	<p>3.1 Suitable <i>automotive systems or components</i> are sourced to assist with task</p> <p>3.2 Location of system or component is confirmed in relation to modern vehicle configuration</p> <p>3.3 Alternative methods of system or component location are identified in relation to possible light vehicle configuration (where applicable)</p>
4. Determine method of system or component operation	<p>4.1 Appropriate <i>electrical test equipment</i> is identified and applied for the purpose of testing circuit, system or component</p> <p>4.2 System or component is examined and sub-assembly components are identified</p> <p>4.3 Operational principles of circuit, component and system functions are determined and analysed</p> <p>4.4 System or component relationship to light vehicle operation is determined</p> <p>4.5 Potential for unsafe conditions or associated risk factors with system or component operation or testing is identified</p> <p>4.6 Potential <i>common faults</i> with system or component are identified</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow written and verbal instructions
  - communicate ideas and information relating to electrical terminology and procedures verbally and in writing
  - apply questioning and active listening skills, e.g. when obtaining factual information from sources
- initiative and enterprise skills to recognise a workplace problem or potential problem and take action
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand workplace safety procedures
  - read and follow information in written instructions, specifications and other applicable reference documents
- planning and organising skills to:
  - identify risk factors and take action to minimise them
  - plan and organise activities that implement and follow standard procedures
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person
  - use and communicate basic mathematical ideas and techniques that relate to automotive electrical systems and components
- self-management skills to:
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as workplace safe operating procedures
- technical skills to:
  - collect, organise and research technical information relating to:
    - recognising and reporting unsafe situations
    - automotive electrical components and systems identification, location and function
  - collect, organise and apply electrical fundamentals information and concepts
- technology skills to use information technology equipment to assist with research

#### Required knowledge

- basic electrical theory and principles of electricity, including:

**REQUIRED SKILLS AND KNOWLEDGE**

- voltage
- amperage
- circuit resistance
- alternating current (AC)
- direct current (DC)
- range of sources of information available to assist with understanding fundamental elements of electricity as they relate to automotive applications
- range of sources of information available to service, maintain and repair light vehicle electrical systems and components
- industry and workplace practice in relation to working safely in an automotive workplace
- identification, location and function of major components of common automotive:
  - engine electrical systems, including:
    - ignition systems
    - charging systems
    - starting systems
    - engine management systems
- vehicle lighting systems
- vehicle body electrical systems, including:
  - electric door locking systems
  - boot release systems
  - car stereo and sound systems
- wiring harness assembly

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- identify and apply basic electrical terminology and circuit theory
- identify automotive electrical circuits, systems and components
- source relevant technical information
- locate electrical systems and components on modern motor vehicles
- explain the function of at least three major electrical systems of a modern motor vehicle
- demonstrate basic troubleshooting techniques to determine possible causes of electrical faults or problems
- communicate effectively using technical information and terms with others involved in or affected by the work.

##### Context of and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- a workplace or simulated workplace
- technical reference information

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• a range of functioning automotive systems and components</li><li>• functioning light vehicle or vehicles</li><li>• automotive tools and equipment</li><li>• electrical test equipment</li><li>• workplace safety equipment, including personal protective equipment.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Sources of information</i></b> may include:	<ul style="list-style-type: none"> <li>• automotive electrical texts</li> <li>• vehicle workshop manuals</li> <li>• service bulletins</li> <li>• magazine technical articles</li> <li>• written instructions</li> <li>• documented workplace procedures.</li> </ul>
<b><i>Elements of electricity</i></b> may include:	<ul style="list-style-type: none"> <li>• voltage</li> <li>• current</li> <li>• resistance</li> <li>• Ohm's law</li> <li>• conventional circuit theory or circuit types.</li> </ul>
<b><i>Safety hazards</i></b> may include:	<ul style="list-style-type: none"> <li>• electricity and water</li> <li>• electric shock</li> <li>• broken or damaged equipment</li> <li>• flammable materials and fire hazards</li> <li>• lifting practices.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective equipment (PPE)</li> <li>• safe manual handling and lifting</li> <li>• safe use of tools and equipment</li> <li>• industry codes of practice</li> <li>• worksite documentation for WHS.</li> </ul>
<b><i>Automotive systems and components</i></b> may include:	<ul style="list-style-type: none"> <li>• engine electrical systems, including:             <ul style="list-style-type: none"> <li>• ignition systems:                 <ul style="list-style-type: none"> <li>• distributors</li> <li>• coils</li> <li>• spark plugs</li> <li>• high tension leads</li> </ul> </li> <li>• charging systems:                 <ul style="list-style-type: none"> <li>• alternators</li> <li>• generators</li> <li>• voltage regulators</li> </ul> </li> <li>• starting systems:</li> </ul> </li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• starter motors</li> <li>• drives</li> <li>• relays</li> <li>• switches</li> <li>• engine management systems: <ul style="list-style-type: none"> <li>• electronic control unit (ECU)</li> <li>• engine immobilisers</li> <li>• crank angle sensors</li> <li>• mass air flow (MAF) sensors</li> <li>• throttle position sensors (TPS)</li> <li>• knock sensors</li> <li>• oxygen sensors</li> <li>• temperature sensors</li> <li>• variable valve timing (VVT) componentry (electrical)</li> </ul> </li> <li>• vehicle lighting systems: <ul style="list-style-type: none"> <li>• headlight assemblies</li> <li>• globes and bulbs</li> <li>• LEDs</li> <li>• control and tell-tale systems</li> <li>• auxiliary lighting</li> </ul> </li> <li>• vehicle body electrical systems: <ul style="list-style-type: none"> <li>• electric door and central locking systems</li> <li>• boot release systems</li> <li>• car stereo and sound systems</li> <li>• power windows</li> <li>• electric mirrors</li> <li>• electronic seat adjustment with memory</li> <li>• security systems</li> </ul> </li> <li>• wiring harness assembly</li> <li>• batteries</li> <li>• fuses and circuit breakers.</li> </ul>
<p><b><i>Electrical test equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• multimeters</li> <li>• test lamp</li> <li>• AC/DC current clamp</li> <li>• battery diagnostic equipment</li> <li>• digital scanner</li> <li>• computer with vehicle interface software</li> <li>• insulated hand tools</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• oscilloscope</li><li>• thermal imaging equipment or non-contact thermometer.</li></ul>
<i>Common faults</i> may include:	<ul style="list-style-type: none"><li>• failure to achieve ignition or power</li><li>• failure to achieve fuel flow</li><li>• flat batteries</li><li>• loss of engine power</li><li>• system or component malfunction.</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Electrical
<b>Unit sector</b>	Technical – Electrical and Electronic

**Custom Content Section**

Not applicable.

## AURETR2005 Install, test and repair electrical security systems and components

### Modification History

Release	Comment
Release 1	<p>Replaces AURE219431A Install, test and repair electrical security systems/components</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to carry out installation, testing and repair of aftermarket automotive electrical security systems/components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, installation, testing and repair of the systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>This standard can also be applied to installation of security systems in marine applications.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, processes and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Install electrical security system components	2.1. Information is accessed from manufacturer/component supplier specifications and correctly interpreted 2.2. Components, tooling and equipment are identified, selected and prepared in accordance with site procedures 2.3. Security system/components installation procedures are carried out in accordance with site procedures and manufacturer/component supplier specifications 2.4. Legislation, industry guidelines and enterprise policies/procedures are followed 2.5. Undue damage to equipment and surrounds is avoided
3. Repair electrical security systems/components	3.1. Information for repairing electrical systems is accessed from manufacturer/component supplier specifications and correctly interpreted 3.2. Tooling and equipment are identified, selected, and prepared in accordance with site manufacturer/component supplier instructions and site procedures 3.3. Repair work is completed in accordance with site procedures 3.4. Workplace documents are completed in accordance with site requirements
4. Test electrical security systems/components	4.1. Information is accessed from manufacturer/component supplier specifications and correctly interpreted 4.2. All tests are carried out in accordance with manufacturer/component supplier specifications and tolerances 4.3. Testing is completed without causing damage to component or system
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored 5.2. Waste and scrap is removed following workplace procedures 5.3. Equipment and work area are cleaned and inspected for

ELEMENT	PERFORMANCE CRITERIA
	<p>serviceable condition in accordance with workplace procedures</p> <p>5.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</p> <p>5.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>5.6. Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for installation, testing and repairing electrical security systems/components
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications related to security system/component repairs
- questioning and active listening skills, for example when obtaining information of security systems/component procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly calculate times, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform low voltage wiring/lighting system installation, testing and repair functions
- problem-solving skills for a limited range of procedural issues
- use workplace technology related to the installation and repair of automotive security systems/components, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the reporting/ documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- electrical principles and their application to security systems
- range and functions of security system componentry
- precautions to avoid side effects that could occur to ancillary systems due to installation, testing and repair operations
- installation procedures for security system components
- site repair procedures for security system components

**REQUIRED SKILLS AND KNOWLEDGE**

- types of testing and fault finding procedures
- site reporting procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- carrying out installation and repair on a minimum of two systems and/or vehicles
- testing repaired components
- testing low voltage circuitry to determine short, open or earthing faults
- applying quality standards to work
- completing essential work related housekeeping functions.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the installation and repair of automotive security systems/components
- equipment, hand and power tooling appropriate to the installation and repair of automotive security systems/components
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry Retail, Service and Repair

**EVIDENCE GUIDE**

	<p>Training Package</p> <ul style="list-style-type: none"><li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be satisfied under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Aftermarket electrical security systems</b>	<p>Aftermarket electrical security systems may include:</p> <ul style="list-style-type: none"> <li>electrical security systems fitted to automotive or marine applications, automotive central locking systems and automotive engine immobilisers</li> </ul>
<b>Methods</b>	<p>Methods are to include:</p> <ul style="list-style-type: none"> <li>reading/interpreting wiring diagrams, soldering, crimping and installing components and wiring</li> </ul>
<b>Faults</b>	<p>Faults may include:</p> <ul style="list-style-type: none"> <li>inoperative systems, open and short circuits, ground circuits</li> </ul>
<b>Critical precautions</b>	<p>Critical precautions include:</p> <ul style="list-style-type: none"> <li>manufacturer/component supplier procedures must be applied as poor working practices are likely to damage electronic system ECUs and/or other components</li> <li>installation methods and after-market security systems/components selected must be approved and within manufacturer/component supplier specifications to avoid damage and possible liability</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices</p>
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual</li> </ul>

<b>RANGE STATEMENT</b>	
	and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, enterprise quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling, power tooling, specialist tooling for removal, adjustment and testing equipment, including multimeters and test lamp and soldering equipment</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts, soldering consumables and fluids, and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the installation and repair of automotive security systems/components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURETR2006 Carry out soldering of electrical wiring and circuits

### Modification History

Release	Comment
Release 1	<p>Replaces AURE224008A Carry out soldering of electrical wiring/circuits</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to carry out soldering processes appropriate to electrical components/wiring/circuits.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, soldering and testing of joints and completion of work processes, including clean-up and documentation.</p> <p>Work involves the application of solder in electrical/electronic wiring and circuitry applications.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in safety equipment, soldering techniques, environmental issues, repair procedures and vehicle operational requirements.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including job sheets, quality and quantity of material 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal protection needs, are observed throughout the work 1.4. Material for repairs and replacements are selected and inspected for quality 1.5. Correct hand and power tooling and safety equipment are selected and checked for safe use 1.6. Products are determined to minimise waste material 1.7. Procedures are identified for maximising energy efficiency while completing the job
2. Prepare components/wiring/circuits, tooling and equipment for soldering	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Materials/components to be joined are cleaned and solder/flux combinations identified 2.3. Soldering equipment is prepared/cleaned 2.4. Preparation is completed without causing damage to vehicle or component 2.5. Preparation activities are carried out according to a standard that meets industry regulations/guidelines, WHS, legislation and enterprise procedures/policies
3. Carry out soldering of components/wiring/circuits	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Soldering is completed without causing damage to vehicle or component 3.3. Soldering joint is tested prior to placing into service 3.4. Soldering activities are carried out according to a standard that meets industry regulations/guidelines, WHS, legislation and enterprise policy/procedures
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap is removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace 4.5. Operator maintenance is completed in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer/component supplier specifications and site procedures</p> <p>4.6. Tooling is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to soldering of electrical components/wiring, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to soldering of electrical wiring/circuits, including the use of soldering tooling, measuring equipment and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirement, equipment material and personal safety requirements
- fluxes and their application
- types of material, including solder, electrical terminals, wires and circuits
- preparation and soldering procedures
- guidelines regarding acceptable solder tolerance levels to be considered and manufacturer/component supplier specification
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstance in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identifying, setting up, operating and maintaining heating equipment and hand tooling
- achieving soldering outcome and work quality relevant to application.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to soldering of electrical wiring/circuits
- equipment, hand and power tooling appropriate to soldering of electrical wiring/circuits
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also

**EVIDENCE GUIDE**

	<p>reinforce the integration of key competencies</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to: <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to: <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality Requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include:

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>hand tooling and soldering equipment, including electric and gas-fired torches</li></ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"><li>cleaning substances, flux and solder</li></ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"><li>verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li></ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>safe work procedures related to soldering of electrical wiring/circuits</li><li>engineer's design specifications and instructions</li><li>organisation work specifications and requirements</li><li>instructions issued by authorised enterprise or external persons</li><li>Australian Standards</li></ul>

## AURETR2007 Demonstrate knowledge of automotive electrical circuits and wiring systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to demonstrate knowledge of electrical principles that enable structured testing of basic circuits in electrical systems, components and technologies found in motor vehicles.</p> <p>The unit involves applying Ohm's, Watts and Kirchhoff's laws to enable basic structured problem solving to locate a range of common faults in vehicle electrical circuits and wiring systems.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. It involves the application of knowledge of fundamental elements of electricity and vehicle electrical circuit theory and electrical wiring systems.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop knowledge of vehicle electrical circuits and wiring systems	<p>1.1.Relevant <i>sources of information</i> are located to assist with understanding of vehicle electrical circuits and wiring systems</p> <p>1.2.Knowledge of the operating principles of <i>electrical circuits</i> and <i>wiring systems</i> is developed</p>
2. Demonstrate knowledge of vehicle electrical circuits and wiring systems	<p>2.1.Knowledge of the relationship of volts, amps and ohms in a vehicle electrical circuit is applied</p> <p>2.2.Knowledge of circuit components, their function and operation in a vehicle electrical circuit is applied</p> <p>2.3.Knowledge of basic principles for testing and processes for checking a vehicle's electrical circuits and wiring systems is applied</p>
3. Demonstrate knowledge of electrical circuits as applied to vehicle fault identification	<p>3.1.Components of a vehicle's electrical circuit and wiring system are identified</p> <p>3.2.Basic electrical principles are applied to practical inspection and service activities</p> <p>3.3.Knowledge of a vehicle's electrical circuit and wiring system is practically applied when identifying potential faults</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - communicate ideas and information relating to electrical terminology and procedures verbally and in writing
  - apply questioning and active listening skills, e.g. when obtaining factual information from sources
- initiative and enterprise skills to recognise a workplace problem or potential problem and take action
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand workplace safety procedures
  - read and follow information in written instructions, specifications and other applicable reference documents
- numeracy skills to:
  - understand measurement, units of measure, formulae, testing and proportions
- planning and organising skills to:
  - identify risk factors and take action to minimise them
  - plan and organise activities that implement and follow standard procedures
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person
  - use and communicate basic mathematical ideas and techniques that relate to automotive systems and components
- self-management skills to:
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as workplace safe operating procedures
- technical skills to:
  - collect, organise and understand technical information relating to:
    - identifying, locating and determining function of vehicle electrical circuit components and wiring systems
    - recognising and reporting unsafe situations
  - collect, organise and apply knowledge of vehicle electrical circuit and wiring information and concepts

## REQUIRED SKILLS AND KNOWLEDGE

- technology skills to use information technology equipment to assist with research

### Required knowledge

- principles of vehicle electrical circuits and wiring systems
- principles of electricity, including:
  - alternating current (AC)
  - direct current (DC)
  - Ohm's law
  - Watts law
  - Kirchhoff's voltage law
  - Kirchhoff's current law
- range of sources of information available to assist with understanding basic principles and elements of electricity as they relate to automotive applications
- range of sources of information available to service, maintain and repair light vehicles
- industry and workplace practice in relation to working safely in an automotive workplace
- identification, location and function of major components of common automotive:
  - engine electrical systems, including:
    - battery systems
    - ignition systems
    - charging systems
    - starting systems
  - vehicle body electrical systems, including:
    - exterior lighting systems
    - internal lighting systems
    - vehicle access systems
    - wiper and washer systems
    - vehicle entertainment systems
    - wiring harness and loom assembly

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to apply and demonstrate knowledge of:

- location of relevant sources of information on vehicle electrical circuits and wiring systems
- operating principles of electrical circuits and wiring systems
- relationship of volts, amps and ohms in a vehicle electrical circuit
- relationship of current flow and necessary wire gauge
- relationship of voltage dropping across a resistive load and the current flowing in the circuit
- circuit components, their function and operation in a vehicle electrical circuit
- testing principles and processes for checking a vehicle's electrical circuits and wiring systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- technical reference library with various information resources
- a range of functioning vehicle electrical circuits, components

## EVIDENCE GUIDE

	<p>and wiring systems</p> <ul style="list-style-type: none"> <li>• functioning light vehicle or vehicles</li> <li>• automotive tools and electrical test equipment.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Sources of information</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace service information</li> <li>• automotive electrical texts</li> <li>• original equipment manufacturer information</li> <li>• vehicle workshop manuals</li> <li>• service bulletins</li> <li>• magazine technical articles.</li> </ul>
<b><i>Electrical circuits</i></b> may include:	<ul style="list-style-type: none"> <li>• voltage</li> <li>• current</li> <li>• resistance</li> <li>• series circuits</li> <li>• parallel circuits</li> <li>• series and parallel circuits</li> <li>• open circuit to power, signal or ground</li> <li>• short circuit to power, signal or ground</li> <li>• high resistance to power, signal or ground.</li> </ul>
<b><i>Wiring systems</i></b> may include:	<ul style="list-style-type: none"> <li>• common multi-stand conductor</li> <li>• various wire gauges and insulation types</li> <li>• twisted pair (CAN-bus network wiring)</li> <li>• shielded wire (audio speaker wiring).</li> </ul>

## AURETR2008 Remove and replace electrical units and assemblies

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to remove and replace electrical units and assemblies, such as headlights, tail-lights and electrical units and assemblies that do not form an integral part of the vehicle's computer area network databus (CAN-bus) network to facilitate body repair activities or similar.</p> <p>The unit includes identifying and confirming work requirements, preparing for work, removing and replacing electrical units and assemblies, and completing work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p> <p>Assistance from a licensed person must be sought in relation to air conditioning and LPG, CNG and LNG system and components and in recommissioning systems. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	Work applies to electrical units and assemblies that are fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Tools and equipment</b> are identified for effective removal, replacement and testing procedures</p>
2. Remove electrical units and assemblies	<p>2.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. <b>Electrical units and assemblies</b> are removed using approved methods, tools and equipment</p> <p>2.3. Assistance from a licensed person is sought in relation to removing air conditioning and LPG, CNG and LNG systems and components</p> <p>2.4. Removal activities are carried out according to industry and WHS regulations and guidelines, and workplace policies and procedures</p> <p>2.5. Units and assemblies are handled and stored according to manufacturer and component supplier requirements</p>
3. Replace electrical units and assemblies	<p>3.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>3.2. Electrical units and assemblies are replaced using approved methods, tools and equipment</p> <p>3.3. Assistance from a licensed person is sought in relation to replacing air conditioning and LPG, CNG and LNG system and components</p> <p>3.4. Replacement activities are carried out according to industry and WHS regulations and guidelines, and workplace policies and procedures</p>
4. Test electrical units and assemblies	<p>4.1. Carry out testing procedures of replaced electrical unit and assemblies</p> <p>4.2. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>4.3. Components or systems are checked and tested without causing damage as a result of <b>inappropriate testing procedures</b></p> <p>4.4. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>4.5. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary</p>

	repairs or adjustments 4.6. <i>Post-replacement testing</i> is conducted and results are documented according to workplace procedures
5. Clean up work area and maintain equipment	5.1. Material that can be reused is collected and stored according to workplace sustainability practices 5.2. Waste and scrap are removed following workplace procedures 5.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures 5.4. Faulty equipment is identified, tagged and isolated according to workplace procedures 5.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures 5.6. Tools and equipment are maintained according to workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - recognise a workplace problem or potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to:
  - identify and describe own role and role of others
  - work with diverse individuals and groups
  - apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to removing and replacing vehicle electrical units and assemblies, including:
  - specialist tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

- electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - codes of practice
  - personal protection needs
- cable types and sizes and current carrying capacity
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - CAN-bus and databus networks
- technical information, wiring diagrams and graphic symbols relating to electrical units and assemblies
- diagnostic and testing procedures, including:
  - testing procedures for faults located in basic electrical circuits
  - analysis of system operation using basic electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
  - water and moisture ingress

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- remove and replace a minimum of four units and assemblies in line with workplace, manufacturer and component supplier requirements, including:
  - one headlamp or tail lamp assembly
  - one windscreen wiper washer motor assembly
  - one door or window electrical assembly
- complete final functional test to specification
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• material relevant to removing and replacing electrical units and assemblies</li> <li>• equipment, and hand and power tools appropriate to removing and replacing electrical units and assemblies</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• effective unit and assembly removal and replacement techniques</li> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters and ohmmeters</li> <li>• heat-gun or blower</li> <li>• heat shrink sleeving and flexible conduit</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• terminals and connectors</li> <li>• electrical tape.</li> </ul>
<b><i>Electrical units and assemblies</i></b> may include:	<ul style="list-style-type: none"> <li>• basic electrical units and assemblies (non CAN-bus networked), including: <ul style="list-style-type: none"> <li>• headlight assemblies</li> <li>• tail-light assemblies</li> <li>• side rear-view mirrors</li> <li>• windscreen washer and wiper motors</li> <li>• door and window motor assemblies.</li> </ul> </li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• continuity testing</li> <li>• insulation testing</li> <li>• isolating possible faults</li> <li>• replacing blown fuses or circuit breakers</li> <li>• replacing damaged connectors or terminals</li> <li>• visually inspecting and evaluating components.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• open circuits</li> <li>• short circuits</li> <li>• high resistance circuits</li> <li>• damaged insulation</li> <li>• frayed wires</li> <li>• burnt wiring</li> <li>• water and moisture ingress</li> <li>• connector damage</li> <li>• terminal damage</li> <li>• diagnosis trouble codes (DTC) being set.</li> </ul>
<b><i>Post-replacement testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating effectiveness of the replacement action</li> <li>• confirming that reported fault has been rectified</li> <li>• confirming that no other faults are present as a result of the replacement action.</li> </ul>

## AURETR2009 Install, test and repair vehicle lighting and wiring systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURE219331A Install, test and repair low voltage wiring/lighting systems</p> <p>Performance Criteria and Range Statement updated to reflect technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to carry out installation, testing and repair processes to low voltage (LV) vehicle lighting and wiring systems and components.</p> <p>The unit involves identifying and confirming work requirements; preparing for work; installing, testing and repairing LV lighting systems and components; and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to the installation of LV lighting and wiring systems that are fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>This work applies to the installation of a light or heavy vehicle rear lighting wiring harness that would typically be required for a vehicle towing a trailer, caravan or boat or a heavy vehicle trailer. It also includes both normal filament lamps and LED lamps that may be fitted to either the vehicle or the trailer.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS)</b> requirements are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Installation options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. <b>Tools and equipment</b> are identified for effective installation and testing procedures</p>
2. Install and test lighting and wiring systems	<p>2.1. <b>Low voltage lighting and wiring systems</b> are installed according to manufacturer and component supplier specifications without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. Tests are carried out to determine <b>faults</b> using tools and diagnostic techniques</p> <p>2.3. Preferred <b>repair options</b> are determined and carried out</p> <p>2.4. <b>Post-repair testing</b> is carried out according to workplace procedures</p>
3. Prepare vehicle and equipment for delivery to customer after repair is completed	<p>3.1. Final inspection is made to ensure work is to workplace expectations</p> <p>3.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>3.3. Workplace documentation is processed according to workplace procedures</p>
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored</p> <p>4.2. Waste and scrap are removed following workplace procedures</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>4.4. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>4.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p> <p>4.6. Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - recognise a workplace problem or potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to installing and testing vehicle LV lighting and wiring systems and components, including:
  - specialist tools and equipment
  - electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - codes of practice
  - personal protection needs
- wiring harness and loom fabrication techniques
- procedures for removing and replacing wiring harnesses and looms
- soldering procedures and techniques
- cable types and sizes and current carrying capacity
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - computer area network databus (CAN-bus) networks
- techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
- diagnostic and testing procedures, including:
  - testing procedures for LV lighting and wiring installations, including:
    - following manufacturer and component suppliers' test procedures
    - following original equipment manufacturer (OEM) service information
  - analysis of system operation using basic electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - water and moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- read and interpret low voltage lighting wiring diagrams
- install low voltage lighting and wiring systems to specification
- retrofit LED lamps where filament lamps were originally installed
- repair low voltage lighting and wiring to specification
- test low voltage lighting and wiring to determine short circuits, open circuits, and earthing and ground faults
- test lighting wiring harness and looms and locate faults
- perform electrical connections, including crimping and soldering
- remove and replace lighting wiring harness and looms
- conduct installation according to workplace, manufacturer and component supplier requirements
- accurately interpret test results
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the installation of low voltage lighting and wiring systems and components</li> <li>• equipment, and hand and power tools appropriate to: <ul style="list-style-type: none"> <li>• installing low voltage lighting and wiring components</li> <li>• retrofitting LED low voltage lighting and wiring components where filament lamps were originally fitted</li> </ul> </li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters and ohmmeters</li> <li>• insulation testers</li> <li>• crimping tools</li> <li>• soldering iron</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• heat-gun or blower</li> <li>• wire and cabling of various colours and sizes</li> <li>• heat shrink sleeving and flexible conduit</li> <li>• terminals and connectors</li> <li>• electrical tape.</li> </ul>
<b><i>Low voltage lighting and wiring systems</i></b> may include:	<ul style="list-style-type: none"> <li>• basic single wiring: <ul style="list-style-type: none"> <li>• tailer wiring harness</li> <li>• driving lights wiring harness</li> <li>• side clearance lamps</li> <li>• high-mount rear brake lamps</li> <li>• ascent strip LED lamps</li> <li>• filament lamp to LED lamp replacement.</li> </ul> </li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• open circuits</li> <li>• high resistance circuits</li> <li>• short circuits</li> <li>• damaged insulation</li> <li>• frayed wires</li> <li>• burnt wiring</li> <li>• water and moisture ingress</li> <li>• connector damage</li> <li>• terminal damage</li> <li>• diagnosis trouble codes (DTC) being set as a result of LED lamp resistance being lower than original resistive filament lamp load.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• pre- and post-repair testing</li> <li>• identifying and testing components</li> <li>• diagnosing and determining faults</li> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, reassembly and adjustment procedures</li> </ul> </li> <li>• electrical measurements</li> <li>• visual and functional assessments, including for damage and wear.</li> </ul>

**RANGE STATEMENT**

*Post-repair testing* may include:

- validating effectiveness of the repair action
- confirming that reported fault has been rectified
- confirming that no other faults are present as a result of the repair action.

**Unit Sector(s)**

<b>Competency field</b>	Electrical
<b>Unit sector</b>	Technical – Electrical and Electronic

## AURETR2010 Fabricate, test and repair wiring harnesses and looms

### Modification History

Release	Comment
Release 1	<p>Replaces AURE220140A Manufacture and repair wiring harness/looms</p> <p>Performance Criteria and Range Statement updated to reflect technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to fabricate wiring harnesses and looms, check their continuity to specification or drawing, test for functionality, and decide preferred repair action. It also includes the removal, replacement and labelling of wiring harness and loom assemblies that are an integral part of a vehicle's electrical system.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to wiring harnesses and looms fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Tools and equipment</b> are identified for effective fabrication, testing and repair methods</p>
2. Check and test wiring harness and loom assembly	<p>2.1. <b>Wiring harness and looms</b> are visually checked to establish the extent of damage</p> <p>2.2. <b>Options for diagnosing faults</b> are used, using appropriate tools and diagnostic techniques</p> <p>2.3. Components or systems are checked without causing damage to components or systems as a result of <i>inappropriate testing procedures</i></p> <p>2.4. <b>Faults</b> are identified and preferred repair action is determined</p>
3. Remove, replace and label wiring harness and loom	<p>3.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>3.2. Wiring harness and loom are labelled and removed using tools and techniques</p> <p>3.3. Associated components are labelled, removed and tagged for storage</p> <p>3.4. Repaired and fabricated harness and loom are correctly refitted to vehicle and reconnected according to manufacturer and component supplier specifications</p> <p>3.5. Removal, replacement and labelling are completed according to industry regulations and guidelines, and WHS and workplace policies and procedures, and without causing damage to components or systems</p>
4. Repair wiring harness and loom	<p>4.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>4.2. <b>Repair options</b> are carried out using tools, diagnostic techniques and materials</p> <p>4.3. Repairs are carried out according to industry regulations and guidelines, and WHS and workplace policies and procedures</p>
5. Fabricate wiring harness and loom	<p>5.1. Electrical circuit wiring diagrams are accessed and interpreted from manufacturer and component supplier specifications</p> <p>5.2. Harness and loom are fabricated to approved specifications using tools and contemporary fabrication techniques and</p>

	<p>materials</p> <p>5.3.<b><i>Post-repair testing</i></b> of the harness and loom is conducted and results are documented according to workplace policies and procedures</p>
6. Clean up work area and maintain equipment	<p>6.1. Workplace documents are completed according to site requirements</p> <p>6.2. Material that can be reused is collected and stored</p> <p>6.3. Waste and scrap are removed following workplace procedures</p> <p>6.4. Tools, equipment and work area are cleaned, inspected for serviceable condition, and maintained according to workplace procedures</p> <p>6.5. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>6.6. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - recognise a workplace problem or potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to repairing vehicle wiring systems, including:
  - specialist tools and equipment
  - electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - codes of practice
  - personal protection needs
- wiring harness and loom fabrication techniques
- procedures for removing and replacing wiring harness and looms
- soldering procedures and techniques
- cable types and sizes and current carrying capacity
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - databus networks
- techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
- diagnostic and testing procedures, including:
  - testing procedures for wiring harnesses and looms, including resistance and voltage drop and circuit performance checks
  - analysis of system operation using basic electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - water and moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- select and use appropriate materials for fabricating, testing and repairing wiring harnesses and looms
- test wiring of harnesses and looms and locate potential faults
- remove and replace wiring harnesses and looms
- test and repair wiring harnesses and looms to manufacturer specification
- perform electrical connections, including crimping and soldering to manufacturer specification
- perform a terminal retention check following replacement of terminals in a wiring connector
- fabricate wiring harnesses.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment

**EVIDENCE GUIDE**

	<p>of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to the fabrication and repair of wiring harnesses and looms</li> <li>• equipment, and hand and power tools appropriate to fabricating, testing and repairing wiring harnesses and looms</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters and ohmmeters</li> <li>• insulation testers</li> <li>• crimping tools</li> <li>• soldering iron</li> </ul>

<b>RANGE STATEMENT</b>	
	<ul style="list-style-type: none"> <li>• heat-gun or blower</li> <li>• wire and cabling of various colours and sizes</li> <li>• heat shrink sleeving and flexible conduit</li> <li>• terminals and connectors</li> <li>• electrical tape.</li> </ul>
<b>Wiring harness and looms</b> may include:	<ul style="list-style-type: none"> <li>• basic single wiring, for example: <ul style="list-style-type: none"> <li>• tailer harness</li> <li>• driving lights harness</li> </ul> </li> <li>• complex multi-wiring with varying wire gauges</li> <li>• CAN-bus network wiring, including: <ul style="list-style-type: none"> <li>• twisted pair</li> <li>• shielded wiring.</li> </ul> </li> </ul>
<b>Options for diagnosing faults</b> may include:	<ul style="list-style-type: none"> <li>• continuity testing</li> <li>• insulation testing</li> <li>• isolation of faults</li> <li>• visual inspection and evaluation of components.</li> </ul>
<b>Inappropriate testing procedures</b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b>Faults</b> may include:	<ul style="list-style-type: none"> <li>• open circuits</li> <li>• short circuits</li> <li>• damaged insulation</li> <li>• frayed wires</li> <li>• burnt wiring</li> <li>• water and moisture ingress</li> <li>• connector damage</li> <li>• terminal damage</li> <li>• diagnosis trouble codes (DTC) being set.</li> </ul>
<b>Repair options</b> may include:	<ul style="list-style-type: none"> <li>• pre- and post-repair testing</li> <li>• identifying and testing components</li> <li>• diagnosing and determining faults</li> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, reassembly and adjustment procedures</li> </ul> </li> <li>• electrical measurements</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"><li>• peak voltage testing</li><li>• visual and functional assessments, including for damage and wear.</li></ul>
<i>Post-repair testing</i> may include:	<ul style="list-style-type: none"><li>• validating effectiveness of the repair action</li><li>• confirming that reported fault has been rectified</li><li>• confirming that no other faults are present as a result of the repair action.</li></ul>

## AURETR2011 Install and test basic ancillary electrical components

### Modification History

Release	Comment
Release 1	Replaces AURE219531A Install ancillary electrical components Performance Criteria and Range Statement updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to install and test basic vehicle ancillary electrical components that do not require programming procedures to connect and interface them with the vehicle computer area network databus (CAN-bus) network.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to the installation and testing of basic ancillary electrical components that are fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Basic ancillary electrical components include driver interlocks; remote keyless entry and security alarm systems; audio systems; mobile phones; speed alert and navigation systems; reverse parking aids, including audible alerts and cameras; and driver gauges and instruments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Installation options</b> are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. <b>Tools and equipment</b> are identified for effective installation and testing procedures</p>
2. Install and test fitted components	<p>2.1. <b>Basic ancillary electrical equipment</b> is installed and tested according to manufacturer and component supplier specifications without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. Tests are carried out to identify faults using tools and diagnostic techniques</p> <p>2.3. Preferred <b>repair action</b> is determined and carried out</p> <p>2.4. Post-repair testing is carried out according to workplace procedures</p>
3. Prepare vehicle and equipment for delivery to customer after repair is completed	<p>3.1. Final inspection is made to ensure work is to workplace expectations</p> <p>3.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>3.3. Workplace documentation is processed according to workplace procedures</p>
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored</p> <p>4.2. Waste and scrap are removed following workplace procedures</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>4.4. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>4.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p> <p>4.6. Tools and equipment are maintained according to workplace procedure</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - recognise a workplace problem or potential problem and take action
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to installing and testing basic ancillary electrical components in vehicles, including:
  - specialist tools and equipment
  - electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

#### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements,

**REQUIRED SKILLS AND KNOWLEDGE**

including:

- codes of practice
- personal protection needs
- basic ancillary component and systems installation and testing procedures, including resistance and voltage drop and circuit performance checks
- correct cable types and sizes and current carrying capacity
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - CAN-bus networks
- techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
- diagnostic and testing procedures, including:
  - testing procedures for basic ancillary electrical installations, including:
    - following manufacturer and component suppliers' test procedures
    - following original equipment manufacturer (OEM) service information
  - analysis of system operation using basic electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - water and moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- read and interpret vehicle wiring diagrams
- install basic ancillary electrical components to specification
- test basic ancillary electrical components to determine short, open, high resistance between power, signal and ground circuits
- test electrical wiring harnesses and looms and locate possible faults
- conduct installation according to workplace, manufacturer and component supplier requirements
- accurately interpret test results
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment

**EVIDENCE GUIDE**

	<p>of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• materials relevant to the installation of basic ancillary electrical components that could be fitted to a range of vehicles</li> <li>• equipment, and hand and power tools appropriate to installing basic ancillary electrical components</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Installation options</i></b> may include:	<ul style="list-style-type: none"> <li>• OEM and workplace instructions</li> <li>• equipment manufacturer and/or supplier instructions</li> <li>• aftermarket accessory instructions</li> <li>• visual inspection and evaluation of components.</li> </ul>
<b><i>Tools and equipment</i></b> may	<ul style="list-style-type: none"> <li>• hand tools</li> </ul>

**RANGE STATEMENT**

include:

- testing equipment, including multimeters and ohmmeters
- insulation testers
- crimping tools
- soldering iron
- heat-gun or blower
- wire and cabling of various colours and sizes
- heat shrink sleeving and flexible conduit
- terminals and connectors
- electrical tape.

**Basic ancillary electrical equipment** may include:

- driver interlocks
- remote keyless entry
- security alarm systems
- audio systems
- mobile phones
- speed alert systems
- navigation systems
- reverse parking aids, including sensors, audible alerts and cameras
- driver gauges and instruments.

**Inappropriate testing procedures** may include:

- intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:
- back probing terminals and connectors and fuse holders with inappropriate test probes
  - probing terminal and connectors with inappropriate test probes
  - pushing sharp probes and objects into wiring insulation.

**Faults** may include:

- open circuits
- short circuits
- high resistance circuits
- damaged insulation
- frayed wires
- burnt wiring
- connector damage
- terminal damage
- diagnosis trouble codes (DTC) being set.

**Repair options** may include:

- pre- and post-repair testing
- identifying and testing components
- diagnosing and determining faults
- component repair procedures, including:

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• removal, replacement and adjustment procedures</li><li>• dismantle, repair, reassembly and adjustment procedures</li><li>• electrical measurements</li><li>• visual and functional assessments, including for damage and wear.</li></ul>
<i>Post-repair testing</i> may include:	<ul style="list-style-type: none"><li>• validating effectiveness of the repair action</li><li>• confirming that reported fault has been rectified</li><li>• confirming that no other faults are present as a result of the repair action.</li></ul>

**Unit Sector(s)**

## AURETR2012 Test and repair basic electrical circuits

### Modification History

Release	Comment
Release 1	<p>Replaces AURE218708A Carry out repairs to single electrical circuits</p> <p>Performance Criteria and Range Statement updated to reflect technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to test and carry out repairs to basic electrical circuits in an automotive retail, service or repair environment. The unit also involves identifying and confirming work requirements, preparing for work, identifying faults and potential causes, repairing and replacing basic circuit components, and completing work finalisation processes, including clean-up and documentation.</p> <p>It includes replacing fuses, circuit breakers, lamps, switches, terminals and connectors; and basic wiring repairs. It includes the following fault types: open circuits, short circuits and high resistance circuits to power, signal and ground paths.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to testing and repairing basic electrical circuits in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. It applies to circuits in an automotive retail, service or repair environment.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment within the scope of this unit.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1.<i>Workplace instructions</i> are used to determine <i>job requirements</i></p> <p>1.2.<i>Workplace health and safety (WHS) requirements</i> are observed throughout the work</p> <p>1.3.<i>Procedures and information</i> are sourced and interpreted</p> <p>1.4.<i>Tools and equipment</i> are identified for effective testing and repair procedures</p>
2. Test basic electrical circuits and identify faults	<p>2.1.<i>Basic electrical circuits</i> are visually checked to establish the extent of failure or damage, applying knowledge of electrical fundamentals</p> <p>2.2.<i>Options for diagnosing faults</i> are identified and used, using appropriate tools and diagnostic techniques</p> <p>2.3. Inspection and testing are undertaken without causing damage to components or systems as a result of <i>inappropriate testing procedures</i></p> <p>2.4.<i>Faults</i> are identified from test results and causes of faults are determined</p> <p>2.5. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Complete repairs to basic electrical circuits	<p>3.1.<i>Repair options</i> are analysed and those most appropriate are selected</p> <p>3.2. Appropriate tools, repair techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4.<i>Post-repair testing</i> is conducted and results are documented according to workplace procedures</p>
4. Prepare vehicle and equipment for delivery to customer after repair is completed	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and maintain equipment	<p>5.1. Material that can be reused is collected and stored</p> <p>5.2. Waste and scrap are removed following workplace procedures</p>

	<p>5.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>5.4. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>5.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p> <p>5.6. Tools and equipment are maintained according to workplace procedures</p>
--	--

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to apply learning when testing and repairing basic electrical circuits
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document work performed
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- planning and organising skills to ensure tasks are completed within an acceptable time frame
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technical skills to use workplace technology and tools to test and repair basic electrical circuits and components in vehicles, including:
  - specialist tools and equipment
  - electrical measuring equipment
- technology skills to:
  - operate a range of electrical diagnostic test equipment
  - use technology to collect, analyse and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material relating to testing and repairing electrical circuits, including personal safety requirements
- electrical principles, including:
  - current, voltage, resistance and power
  - series circuits
  - parallel circuits

**REQUIRED SKILLS AND KNOWLEDGE**

- series and parallel circuits
- Ohm's law
- basic electrical circuit components, including:
  - cable types and sizes and current carrying capacity
  - circuit protection devices
  - switches
  - relays
  - automotive globes
- techniques for reading and interpreting technical information, including circuit types, diagrams and symbols
- types and operation of electrical testing equipment, including:
  - digital multimeters
  - test lights and probes
- electrical measuring and testing procedures, including:
  - resistance and voltage drop tests
  - open and short circuit tests
  - inspecting for component moisture ingress and connector damage
- repair procedures of electrical circuits, including:
  - wire soldering procedures
  - terminal crimping
  - removal and replacement procedures for basic electrical components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- read and interpret circuit wiring diagrams
- test basic electrical circuits to determine short, open and high resistance between power, signal and ground paths
- demonstrate understanding of the principle of current flow in a simple circuit and voltage drop across a resistive load
- test and repair basic wiring harnesses and looms to manufacturer specifications
- perform electrical connections, including crimping and soldering to manufacturer specification
- perform a terminal retention check following replacement of terminals in a wiring connector
- accurately interpret test results
- present vehicle and equipment in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to testing and repairing basic electrical circuits and components</li> <li>• equipment, and hand and power tools appropriate to testing and repairing basic electrical circuits and components</li> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• testing and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• identifying hazards associated with soldering processes</li> <li>• identifying hazards associated with working with vehicle supplementary restraint systems (SRS).</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• digital multimeters</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• test lights and probes</li> <li>• insulation testers</li> <li>• crimping tools</li> <li>• soldering iron</li> <li>• heat-gun or blower</li> <li>• wire and cabling of various colours and sizes</li> <li>• heat shrink sleeving and flexible conduit</li> <li>• terminals and connectors</li> <li>• electrical tape.</li> </ul>
<b>Basic electrical circuits</b> may include:	<ul style="list-style-type: none"> <li>• basic single wire circuits (non CAN-bus networked circuits)</li> <li>• door ajar switch interior courtesy light</li> <li>• battery B+ to fuse panel</li> <li>• accessory B+ to lighter or accessory socket</li> <li>• heated rear demister</li> <li>• interior lighting</li> <li>• exterior lighting</li> <li>• rear brake lighting</li> <li>• wiper and washer</li> <li>• electric engine cooling fan.</li> </ul>

## AURETR2013 Inspect and service charging systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to inspect and service charging systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>The unit involves testing charging systems, identifying likely faults and potential causes, inspecting abnormal operation, servicing complete assemblies or components of a vehicle's charging system, and carrying out basic charging system test procedures.</p> <p>It also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to charging systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test vehicle charging system	<p>1.1. <i>Workplace instructions</i> are used to determine <i>job requirements</i></p> <p>1.2. <i>Workplace health and safety (WHS) requirements</i> are observed and applied throughout the work</p> <p>1.3. <i>Procedures and information</i> are sourced and interpreted</p> <p>1.4. <i>Tools and equipment</i> are identified for effective inspection and servicing methods</p>
2. Test vehicle charging system	<p>2.1. <i>Charging systems</i> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <i>inappropriate testing procedures</i></p> <p>2.2. <i>Faults</i> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service vehicle charging system	<p>3.1. <i>Service options</i> are analysed and those most appropriate are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications without causing damage to components or systems</p> <p>3.4. <i>Post-service testing</i> is carried out according to workplace procedures</p>
4. Prepare vehicle for delivery to customer	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Service schedule documentation is completed according to workplace procedures</p>
5. Clean up work area and maintain equipment	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and work area are cleaned and inspected according to workplace procedures</p> <p>5.4. Tools and equipment are maintained according to workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures 5.5.Faulty equipment is identified, tagged and isolated according to workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to apply learning when inspecting and servicing vehicle charging systems
- learning skills to identify sources of information, assistance and expert knowledge to expand own skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - document work performed during inspection and servicing operations
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- problem-solving skills to:
  - seek information and assistance as required to solve problems
  - refer problems outside area of responsibility to appropriate person and suggest possible fault causes and problem solutions
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to:
  - operate basic automotive test equipment
  - use tools and equipment relating to servicing charging systems
  - use technology to collect, analyse and provide information

#### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements when working with vehicle while either on a hoist, trolley jack or safety stand, including:
  - codes of practice
  - personal protection needs when working on vehicles in an automotive workshop
- application, purpose and operation of charging systems
- principal types of vehicle charging systems
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams

**REQUIRED SKILLS AND KNOWLEDGE**

- methods of sourcing information relevant to inspecting and servicing charging systems
- inspection procedures, including:
  - servicing procedures for charging systems, including accessing and interpreting service information
  - analysis of system operation using electrical test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
- servicing procedures, including:
  - component identification and electrical testing procedures
  - component and associated system adjustment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- complete preparatory activity in a systematic manner
- inspect and service a range of charging systems
- conduct inspection and service procedures according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements
- complete workplace and equipment documents
- clean up work area and maintain equipment to workplace standards.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with charging faults
- equipment appropriate for the testing of charging systems

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• specifications and workplace instructions</li><li>• tools appropriate for the inspection, servicing and adjustment of vehicle charging systems.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• charging system inspection and servicing methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace first aid equipment</li> <li>• workplace safety policies and procedures</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• personal protective clothing and equipment</li> <li>• use of fire-fighting equipment</li> <li>• safe handling of material</li> <li>• safe use of tools and equipment.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• vehicle service schedules and repair manuals relating to vehicle charging systems</li> <li>• safe work procedures relating to inspecting and servicing vehicle charging systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• vehicle lifting devices</li> <li>• power and air tools</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• electronic testing equipment, including: <ul style="list-style-type: none"> <li>• multimeter</li> <li>• test light</li> <li>• load tester</li> <li>• inductive ammeter.</li> </ul> </li> </ul>
<b><i>Charging systems</i></b> may include:	<ul style="list-style-type: none"> <li>• alternators: <ul style="list-style-type: none"> <li>• electromagnetic</li> <li>• permanent magnets</li> </ul> </li> <li>• generators</li> <li>• internal and external regulation</li> <li>• battery-sensed and machine sensing regulation</li> <li>• 6V,12V and 24V operation</li> <li>• dynastart and mechanical regulation</li> <li>• belt and direct drive, single and multiple belt drive and adjustable tensioning devices</li> <li>• single phase, half-wave rectified and full-wave rectified <ul style="list-style-type: none"> <li>• solar systems, including: <ul style="list-style-type: none"> <li>• single and ganged panels</li> <li>• internal and external regulation</li> <li>• battery sensed and machine sensing regulation</li> <li>• 6V, 12V and 24V operation</li> </ul> </li> </ul> </li> <li>• solid state controlled.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• component malfunction, including: <ul style="list-style-type: none"> <li>• system not charging</li> <li>• alternator drive problems</li> <li>• regulator malfunction</li> </ul> </li> <li>• noisy operation</li> <li>• seized mechanical components</li> <li>• worn mechanical components</li> <li>• overrunning clutch pulley faulty</li> <li>• control circuit faults</li> <li>• open or short circuits to power, ground and reference circuits</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• high circuit resistance</li><li>• diagnosis trouble codes (DTC) being set.</li></ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"><li>• inspection procedures</li><li>• drive belt adjustment</li><li>• diagnose and repair considerations and procedures.</li></ul>
<i>Post-service testing</i> may include:	<ul style="list-style-type: none"><li>• validating effectiveness of the inspection and servicing actions</li><li>• confirming that inspection and service actions have been completed</li><li>• confirming that further diagnosis findings are reported to responsible service personnel.</li></ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"><li>• vehicle service book</li><li>• electronic or handwritten workplace records and invoices.</li></ul>

## AURETR2014 Inspect and service starting systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to inspect and service complete assemblies or components of a vehicle's starting system fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>The unit involves identifying and confirming work requirements, preparing for work, carrying out basic starting system test procedures, identifying likely faults and potential causes, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to starting systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test vehicle starting system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Tools and equipment</b> are identified for effective inspection and servicing methods</p>
2. Test vehicle starting system	<p>2.1. <b>Starting systems</b> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service vehicle starting system	<p>3.1. <b>Service options</b> are analysed and those most appropriate are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications without causing damage to components or systems</p> <p>3.4. <b>Post-service testing</b> is carried out according to workplace procedures</p>
4. Prepare vehicle for delivery to customer	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>
5. Clean up work area and maintain equipment	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and work area are cleaned and inspected according to workplace procedures</p> <p>5.4. Tools and equipment are maintained according to workplace</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures 5.5.Faulty equipment is identified, tagged and isolated according to workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to apply learning when inspecting and servicing vehicle starting systems
- learning skills to identify sources of information, assistance and expert knowledge to expand own skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - document work performed during inspection and servicing operations
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- problem-solving skills to:
  - seek information and assistance as required to solve problems
  - refer problems outside area of responsibility to appropriate person and suggest possible fault causes and problem solutions
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technology skills to:
  - operate basic automotive test equipment
  - use tools and equipment relating to servicing starting systems
  - use technology to collect, analyse and provide information

#### Required knowledge

- WHS regulations and requirements, equipment, material and personal safety requirements when working with vehicle while either on a hoist, trolley jack or safety stand, including:
  - codes of practice
  - personal protection needs when working on vehicles in an automotive workshop
- application, purpose and operation of starting systems
- principal types of starting systems
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams

**REQUIRED SKILLS AND KNOWLEDGE**

- methods of sourcing information relevant to inspecting and servicing starting systems
- inspection procedures, including:
  - servicing procedures for starting systems, including accessing and interpreting service information
  - analysis of system operation using electrical test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
- servicing procedures, including:
  - component identification and electrical testing procedures
  - component and associated system adjustment

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- complete preparatory activity in a systematic manner
- inspect and service a range of starting systems
- conduct inspection and service procedures according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements
- complete workplace and equipment documents
- clean up work area and maintain equipment to workplace standards.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with starting faults relevant to the qualification being sought

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• equipment appropriate for testing starting systems</li><li>• specifications and workplace instructions</li><li>• tools appropriate for inspecting, servicing and adjusting vehicle starting systems.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• starting system inspection and servicing methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace first aid equipment</li> <li>• workplace safety policies and procedures</li> <li>• safe handling of material</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• personal protective clothing and equipment</li> <li>• use of fire-fighting equipment</li> <li>• safe use of tools and equipment.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• vehicle service schedules and repair manuals relating to vehicle starting systems</li> <li>• safe work procedures relating to inspecting and servicing vehicle starting systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• vehicle lifting devices</li> <li>• power and air tools</li> </ul>

RANGE STATEMENT	
	<ul style="list-style-type: none"> <li>• electronic testing equipment, including: <ul style="list-style-type: none"> <li>• multimeter</li> <li>• test light</li> <li>• load tester</li> <li>• inductive ammeter.</li> </ul> </li> </ul>
<i>Starting systems</i> may include:	<ul style="list-style-type: none"> <li>• dynastart</li> <li>• inertia</li> <li>• pre-engaged</li> <li>• axial and coaxial</li> <li>• fixed and remote solenoid</li> <li>• direct drive</li> <li>• gear reduction</li> <li>• protection lockout</li> <li>• inhibitor switch</li> <li>• series-parallel switching</li> <li>• battery isolation switch</li> <li>• single or multiple battery system</li> <li>• permag starter motors.</li> </ul>
<i>Inappropriate testing procedures</i> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<i>Faults</i> may include:	<ul style="list-style-type: none"> <li>• component malfunction, including: <ul style="list-style-type: none"> <li>• low battery voltage</li> <li>• discharged battery</li> <li>• excessive voltage drop</li> </ul> </li> <li>• noisy operation</li> <li>• seized mechanical components</li> <li>• worn mechanical components</li> <li>• failure to engage drive pinion</li> <li>• control circuit faults</li> <li>• open or short circuits to power, ground and reference circuits</li> <li>• high circuit resistance</li> <li>• diagnosis trouble codes (DTC) being set.</li> </ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"> <li>• inspection procedures</li> <li>• control circuit testing</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• solenoid clutch activation</li><li>• cranking circuit voltage drop test.</li></ul>
<i>Post-service testing</i> may include:	<ul style="list-style-type: none"><li>• validating effectiveness of the inspection and servicing actions</li><li>• confirming that inspection and service actions have been completed</li><li>• confirming that further diagnosis findings are reported to responsible service personnel.</li></ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"><li>• vehicle service book</li><li>• electronic or handwritten workplace records and invoices.</li></ul>

## AURETR2015 Inspect and service batteries

### Modification History

Release	Comment
Release 1	Replaces AURE218670A Service, maintain or replace batteries Performance Criteria and Range Statement updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect and service batteries.</p> <p>The unit involves identifying and confirming work requirements, preparing for work, testing batteries, analysing test results, servicing and maintaining batteries, and completing work finalisation processes, including clean-up and documentation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect battery	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b>, including state and territory regulatory requirements, and <b>personal protective equipment (PPE)</b> needs, are observed throughout the work</p> <p>1.3. <b>Safe operating procedures</b> and information are sourced</p> <p>1.4. Technical requirements necessary for inspection are sourced, and tools, <b>equipment</b> and <b>materials</b> are identified and prepared</p>
2. Test battery	<p>2.1. Test methods are implemented according to workplace procedures and manufacturer and component supplier specifications</p> <p>2.2. Test results are compared with manufacturer and component supplier specifications</p> <p>2.3. Results are documented with evidence, and supporting information is recorded</p> <p>2.4. Test results and findings are communicated to the appropriate workshop personnel for replacement or repair action</p>
3. Carry out service and maintenance to battery	<p>3.1. <b>Service and maintenance methods</b> are carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.2. Electrolyte levels are checked and topped up where appropriate according to service and maintenance methods</p> <p>3.3. Battery terminals and connection to vehicle wiring are inspected</p> <p>3.4. Condition is reported to persons responsible for repair action</p> <p>3.5. Batteries and terminals are cleaned according to service and maintenance methods</p>
4. Prepare vehicle and equipment for delivery to customer after service is completed	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and maintain equipment	<p>5.1. Work schedule and job card documentation are completed</p> <p>5.2. Equipment and work area are cleaned and inspected for</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>serviceable condition according to workplace procedures</p> <p>5.3.Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>5.4.Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - communicate basic information relating to battery safety
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - participate in self-improvement activities
  - recognise a workplace problem or potential problem
- literacy skills to:
  - read and interpret technical information relating to recognising and reporting unsafe situations
  - read, understand and follow battery inspection and maintenance information
  - read, understand and follow information on standard operating procedures and repair guidelines
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired battery performance
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities that implement standard workplace procedures
- problem-solving skills to refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - locate technical information
  - recognise limitations and seek timely advice
- teamwork skills to:
  - work with others and in a team by cooperating with team members
  - work with diverse individuals and groups
- technical skills to:
  - select tools and equipment appropriate to inspecting, servicing and maintaining batteries in light and heavy vehicles, mobile plant and mining vehicles
  - use battery servicing and testing tools and equipment safely
  - maintain tools and equipment using appropriate techniques and standard operating procedures
- technology skills to use workplace technology to:

**REQUIRED SKILLS AND KNOWLEDGE**

- assist with work practices
- inspect, service and maintain battery storage systems, including use of specialist tools, measuring equipment and communication devices
- report and document inspection and servicing results

**Required knowledge**

- WHS and environmental regulations, requirements, equipment, material and personal safety requirements to ensure batteries are maintained, handled and disposed of in an environmentally sustainable manner
- battery service and maintenance procedures
- battery testing methods
- dangers of working with battery testing equipment
- operating principles and layout of vehicle battery storage systems
- original equipment manufacturer (OEM) specific procedures for inspecting maintenance-free batteries
- workplace quality procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- inspect, service and maintain battery storage systems in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments according to manufacturer and component supplier and site requirements
- inspect, service and maintain at least three different types of batteries according to manufacturer and site requirements
- complete workplace documents.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace that best reflects a light or heavy vehicle service facility or environment
- material relevant to inspecting, servicing and maintaining

**EVIDENCE GUIDE**

	<p>battery storage systems</p> <ul style="list-style-type: none"><li>• equipment, and hand and power tools appropriate to servicing and maintaining batteries</li><li>• specifications and work instructions.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• safe use of tools and equipment</li> <li>• safe handling of potentially hazardous material and substances</li> <li>• use of fire-fighting equipment</li> <li>• first aid training and response</li> <li>• control of hazards and hazardous materials.</li> </ul>
<b><i>Personal protective equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• safety glasses</li> <li>• protective clothing</li> <li>• gloves.</li> </ul>
<b><i>Safe operating procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• conducting operational risk assessment</li> <li>• treatments associated with vehicle movement</li> <li>• toxic substances</li> <li>• electrical safety</li> <li>• machinery movement and operation</li> <li>• manual and mechanical lifting and shifting</li> <li>• procedures for working in proximity to others and site visitors.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• load testing devices</li> <li>• hydrometer</li> <li>• multimeter.</li> </ul>
<b><i>Materials</i></b> may include:	<ul style="list-style-type: none"> <li>• battery consumables</li> <li>• cleaning materials.</li> </ul>
<b><i>Service and maintenance methods</i></b> may include:	<ul style="list-style-type: none"> <li>• inspecting battery and leads</li> <li>• inspecting battery securing system</li> <li>• cleaning battery and battery compartments</li> <li>• topping battery fluid</li> <li>• testing battery with a hydrometer.</li> </ul>

# AURETR2016 Read and apply vehicle wiring schematics and drawings

## Modification History

Release	Comment
Release 1	New unit of competency

## Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to read and apply information from vehicle wiring schematics and drawings in an automotive retail, service and repair environment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

Application of the unit	<p>Work applies to reading and applying vehicle wiring schematics and drawings applicable to the diagnosis and repair of electrical faults in light and heavy vehicle, plant and equipment, motorcycles and marine craft.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Wiring schematics and drawings</b> that relate to the vehicle being serviced or repaired are sourced</p> <p>1.4. Wiring schematics and drawings are checked to ensure that latest amendments and version are relevant for the vehicle being diagnosed and repaired</p> <p>1.5. Knowledge of electrical fundamentals is applied</p>
2. Read and apply information from vehicle wiring schematics and drawings	<p>2.1. Circuit symbols, wiring codes, legends and diagrammatic representations are correctly identified and interpreted</p> <p>2.2. Information is interpreted and drawings of vehicle wiring schematics are applied to testing and repair procedures</p> <p>2.3. Technical information located in workshop wiring schematics, circuits and drawings is applied to assist when carrying out testing and repair procedures</p>
3. Finalise work and clean up	<p>3.1. Vehicle wiring schematics and drawings and vehicle specifications are stored appropriately to protect from damage and ensure ready access and appropriate version control of information</p> <p>3.2. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>3.3. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>3.4. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p> <p>3.5. Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when reading and applying vehicle wiring schematics and drawings
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- technical skills to use workplace technology to assist in reading and applying vehicle wiring schematics and drawings when diagnosing and repairing vehicles, including:
  - specialist equipment
  - electrical measuring equipment
- technology skills to use tools and equipment to collect, analyse and provide information

#### Required knowledge

- relevant WHS and environmental regulations, standards, codes of practice, and workplace policies and procedures needed to carry out work in a manner that ensures the safety of people,

**REQUIRED SKILLS AND KNOWLEDGE**

- equipment and the environment
- vehicle wiring schematics, service manuals, drawings, circuits or specifications of vehicles, plant, tools, equipment and systems
- procedures for amending and maintaining version control status of appropriate vehicle wiring schematics and drawings, particularly as applied to the vehicle being diagnosed and repaired
- established communication channels and protocols
- quality standards applicable to maintenance of service information
- procedures for recording, reporting and maintaining workplace records and information

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- read and apply circuit wiring schematics and diagrams
- confirm that amendment and version control status is current and is the latest revision of service information for the work being performed
- use sourced information to accurately interpret test results.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- wiring schematics and drawings relevant to testing and repairing basic electrical circuits and components
- equipment, and hand and power tools appropriate to testing and repairing basic electrical circuits and components

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• reading, interpreting and applying vehicle wiring schematics and drawings</li> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Wiring schematics and drawings</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• vehicle wiring schematics</li> <li>• electrical component symbols</li> <li>• electrical operational block schematics</li> <li>• vehicle zoning information tables</li> <li>• electrical component drawings</li> <li>• connector drawings, including connector end view drawings</li> <li>• electrical installation instructions and wiring diagrams</li> <li>• vehicle service requirements and repair manuals.</li> </ul>

## Unit Sector(s)

Competency field	Electrical
Unit sector	Technical – Electrical and Electronic

## Custom Content Section

Not applicable.

## AURETR2035 Demonstrate knowledge of petrol and diesel engine operation

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to demonstrate knowledge of petrol and diesel engine components and systems, as well as of principles of engine operation and performance that enables an automotive electrician to understand engine operation when diagnosing faults in motor vehicles.</p> <p>The unit involves carrying out basic structured problem-solving techniques relating to electrical components and systems.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. Electrical components and systems are integral parts of petrol and diesel engines.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify resources	<ul style="list-style-type: none"><li>1.1. <b><i>Sources of information</i></b> are located to assist with understanding petrol and diesel engine system operation and performance</li><li>1.2. Relevance of information to engine type, and system operation and performance is confirmed</li></ul>
2. Apply knowledge of engine operation	<ul style="list-style-type: none"><li>2.1. Understanding of the operating principles of <b><i>petrol and diesel engine operation</i></b> is developed</li><li>2.2. Knowledge of <b><i>engine components</i></b>, their function and operation in a petrol and diesel engine is applied</li><li>2.3. Knowledge of the <b><i>relationship</i></b> that a four-stroke cycle petrol and diesel engine has with the vehicle's ignition, starting, air and fuel delivery and cooling system is applied</li></ul>
3. Apply fault identification to engine performance	<ul style="list-style-type: none"><li>3.1. Components of petrol and diesel engines are identified</li><li>3.2. Engine principles are applied to vehicle inspection and service activities</li><li>3.3. Basic fault-finding procedures are performed on petrol and diesel engines</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate ideas and information relating to petrol and diesel engine terminology and procedures (verbal and written)
  - clarify workplace instructions and determine job requirements
  - apply questioning and active listening skills to obtain factual information from sources
- initiative and enterprise skills to recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - understand technical information relating to engine operation
  - read and follow information in written instructions, specifications and other reference documents
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person
  - use and communicate basic mathematical ideas and techniques that relate to automotive systems and components
- self-management skills to:
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as workplace safe operating procedures
- technical skills to:
  - collect, organise and understand technical information relating to:
    - recognising and reporting unsafe situations
    - petrol and diesel engine component and system identification, location and function
  - collect, organise and apply knowledge of information and concepts relating to petrol and diesel engine operation
- technology skills to use information technology equipment to assist with research

#### Required knowledge

- classifications of engines, including:
  - internal combustion
  - reciprocating and rotary engines
  - spark ignition and compression ignition engines
  - engine cylinder arrangements
- engine configurations, including:

**REQUIRED SKILLS AND KNOWLEDGE**

- inline engines, vee-type engines and slant cylinder engines
- opposed cylinder engines
- camshaft and valve locations, including:
  - overhead cam (OHC)
  - overhead valve (OHV)
- engine operating principles, including:
  - two-stroke cycles
  - four-stroke cycles
- combustion, including:
  - air-fuel ratios and flame propagation
  - direct and indirect fuel injection
  - detonation and pre-ignition
- engine measurement and performance, including:
  - bore and stroke
  - swept volume and engine volume
  - compression ratio
  - engine efficiency
- torque and horsepower, including brake horsepower
- operation of petrol engines, including:
  - engine components, including cylinder blocks, cylinders, pistons, cylinder heads, combustion chambers, inlet and exhaust manifolds, spark plugs, connecting rods, crankshafts, piston rings, gudgeon pins, camshafts, cams and flywheels
- operation of diesel engines, including:
  - direct and indirect injection
  - swirl chambers
  - pre-combustion chambers

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to apply and demonstrate knowledge of:

- location of relevant sources of information on petrol and diesel engine components, systems and principles of operation
- operating principles of petrol and diesel engine systems and components
- various engine types and layouts in petrol and diesel powered vehicles
- relationship that a four-stroke cycle petrol and diesel engine has with the vehicle's ignition, starting, air and fuel delivery and cooling systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- technical reference library with various information resources
- a range of engine components, systems and assemblies
- a range of petrol and diesel engine types and configurations mounted on an engine stand for ease of viewing
- functioning light vehicle or vehicles

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"><li>• automotive tools and test equipment</li><li>• personal protective equipment and workplace safety equipment.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Sources of information*** may include:

- workplace service information
- automotive engine mechanical texts
- vehicle workshop manuals
- service bulletins
- magazine technical articles.

***Petrol and diesel engine operation*** may include:

- engine construction
- engine types and configuration
- two-stroke and four-stroke
- cycles of engine operation, including:
  - intake stroke
  - compression stroke
  - power stroke
  - exhaust stroke
- firing order
- ignition types, including:
  - spark
  - compression
- engine mounting location, including:
  - front longitudinal
  - front transverse
  - mid transverse
- measurement and performance, including:
  - bore and stroke
  - displacement
  - compression ratio
  - engine efficiency
  - torque versus horsepower.

***Engine components*** may include:

- top of engine, including:
  - timing belt or chain
  - camshaft timing pulley
  - camshaft single and dual
  - rocker arms and shafts

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• intake valves and springs</li> <li>• exhaust valves and springs</li> <li>• cylinder head</li> <li>• front of engine, including: <ul style="list-style-type: none"> <li>• crankshaft</li> <li>• crankshaft timing pulley</li> <li>• crankshaft pulley and balancer</li> </ul> </li> <li>• rear of engine, including: <ul style="list-style-type: none"> <li>• flywheel</li> <li>• starter ring gear</li> </ul> </li> <li>• bottom of engine, including: <ul style="list-style-type: none"> <li>• engine block</li> <li>• crankshaft</li> <li>• crankshaft balance weights</li> <li>• crankshaft main bearing journals</li> <li>• pistons</li> <li>• connecting rods.</li> </ul> </li> </ul>
<b><i>Relationships</i></b> may include:	<ul style="list-style-type: none"> <li>• ignition system: <ul style="list-style-type: none"> <li>• ignition timing</li> <li>• top dead centre (TDC)</li> <li>• electrical sensors</li> <li>• spark plugs</li> <li>• glow plugs</li> <li>• fuel injectors</li> <li>• knock sensors</li> </ul> </li> <li>• starter motor system</li> <li>• charging system</li> <li>• coolant temperature sensor</li> <li>• air intake</li> <li>• fuel delivery</li> <li>• exhaust emission</li> <li>• engine oil lubrication system.</li> </ul>

## AURETR2042 Remove, refit and test electrical componentry for operation following body repair activities

### Modification History

Release	Comment
Release 1	Replaces AURE218764A Remove, refit and test electrical componentry for normal operation following body repair activities Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to test for normal operation electrical componentry which is incidental to body repair activities, such as rear vision mirrors, telephone and radio antennas, central locking systems, air bag sensors, air bag actuators and deployment systems, rain sensors, light sensors, alarm components, batteries and computer control units.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information on electrical componentry in motor vehicles	<p>1.1.Customer requirements are checked following workplace procedures</p> <p>1.2.Work instructions are used to determine job requirements, including method, material and equipment</p> <p>1.3.WHS requirements, including handling of broken glass, dust and fume collection, breathing apparatus and eye and ear personal protection needs are observed throughout the work</p> <p>1.4.Tooling and equipment are checked prior to use, for conformity with specifications and safe use</p> <p>1.5.Condition of system is determined by visual, aural and tactile inspections and measurements</p> <p>1.6.Conditions found are compared with electrical componentry in motor vehicles system specifications and customer use requirements</p> <p>1.7.Correct information is accessed and interpreted from manufacturer/component supplier specifications</p>
2. Plan operations where electrical components are incidental to a body repair activity	<p>2.1.Planned operation sequence and availability of tooling and equipment is determined</p> <p>2.2.Planned operation sequence includes post-service testing and checking procedure</p> <p>2.3.Material list is prepared and availability determined</p> <p>2.4.Tooling and equipment are selected to meet job requirements</p> <p>2.5.Tooling and equipment are regularly checked to ensure they are in good working order</p> <p>2.6.Tooling and equipment are handled in accordance with WHS requirements</p> <p>2.7.Daily maintenance of tooling is performed as specified by enterprise</p>
3. Remove electrical/ electronic operated components	<p>3.1.Removal or relocation of electrically operated componentry is completed without causing damage to component or system</p> <p>3.2.Correct information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>3.3.Electrically operated components are removed using approved methods, tooling and equipment</p> <p>3.4.Removal activities are carried out according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies</p>

ELEMENT	PERFORMANCE CRITERIA
4. Refit and/or test electrically operated componentry involved in body repair activities	<ul style="list-style-type: none"><li>4.1. Customer requirements and electrical componentry specifications are checked following incidental body repair activities</li><li>4.2. Electrically operated units/components are refitted using approved methods, tooling and equipment</li><li>4.3. Electrically operated componentry is operated through its full range after a body repair activity, noting test results, including non-conformity</li><li>4.4. Electrically operated componentry and adjustments are checked and prepared for delivery after a body repair activity</li><li>4.5. Portable tooling and equipment are stored in approved designated areas</li><li>4.6. Workplace documents, customer file and warranty information is updated, as required</li></ul>

## Required Skills and Knowledge

### EQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to working with and testing of electrical componentry following body repair activities
- communicate ideas and information to customers and supervisors related to working with and testing of electrical componentry following body repair activities
- plan and organise activities related to working with and testing of electrical componentry involved in body repair activities
- work with others and in a team by seeing and conveying information related to planning, sequencing and completion of the task
- use mathematical ideas and techniques to count and measure
- establish diagnostic processes which identify methods of solving problems related to working with and testing of electrical componentry following body repair activities
- use workplace technology related to working with and testing of electrical componentry involved in body repair activities

#### Required knowledge

- purpose and requirements of electrical componentry in motor vehicles
- material used in electrical componentry
- use of tooling and equipment
- application of mechanical principles
- classification of electrical componentry in motor vehicles and identification of systems
- electrical terminology
- circuit types and how to test them
- test functions of a multimeter
- use of a LED test lamp
- types and uses of various automotive fuses

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspect of:

- test of electrical componentry in motor vehicles.

#### Context of, and specific resources for assessment

Underpinning knowledge and skills may be assessed on or off the job.

Assessment of practical skills must take place after a period of supervised practice and repetitive experience. If workplace conditions are not available, assessment in simulated workplace conditions is acceptable.

Prescribed outcomes must be able to be achieved without direct supervision.

The following resources should be made available:

- specific service and general workshop equipment and tooling
- enterprise documentation
- vehicles with a range of commonly encountered electrical components
- vehicles fitted with air bags
- job cards
- multimeter.

#### Method of assessment

Practical assessments:

- gather information on technology related to testing of electrical componentry following body repair activities
- plan working with and testing of electrical componentry following body repair activities
- test electrical componentry following body repair activities
- accurately complete job card, including listing of parts and consumables used and labour hours.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Unit scope</b>	<p>This unit of competence applies to, but is not limited to:</p> <ul style="list-style-type: none"> <li>rear window and windscreen demisters, electrically operated windows, central locking, rear vision mirror adjustments and/or heating, telephone and radio antennas, air bag sensors, air bag actuators and deployment systems, rain sensors and light sensors</li> </ul>
<b>Repair methods</b>	<p>Repair methods include</p> <ul style="list-style-type: none"> <li>on-and-off site body repair activity</li> <li>removal, refitting and adjustment of electrical componentry</li> <li>testing for normal operation of electrical componentry following related body repair</li> <li>communicating with customers</li> <li>documenting and reporting on service</li> </ul> <p>Specific requirements may include:</p> <ul style="list-style-type: none"> <li>a range of electrical componentry available for testing</li> <li>removal and refitting of battery, including use of spike protection and memory retention devices</li> </ul>
<b>WHS requirements</b>	<p>WHS practices must abide by:</p> <ul style="list-style-type: none"> <li>state/territory/industry WHS</li> <li>award provisions</li> </ul>
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>manufacturer/component supplier specifications</li> <li>enterprise operating procedures</li> <li>product manufacturer/component supplier specifications</li> <li>customer requirements</li> <li>industry/workplace codes of practice</li> </ul>

## AURETR3017 Overhaul charging system alternators

### Modification History

Release	Comment
Release 1	Replaces AURE319145A Overhaul charging system alternators Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to overhaul automotive charging system alternators, including starting motors and alternators, as fitted to vehicles, plant and equipment, motorcycles and marine equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing of alternators and identification of faults/causes, disassembly, overhaul, reassembly and retesting of alternators and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, processes and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Dismantle alternator and clean individual components/parts	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Alternators are dismantled according to component/vehicle manufacturer/component supplier procedures 2.3. Alternators are dismantled without causing damage to components 2.4. Component parts are cleaned according to unit/vehicle manufacturer/component supplier recommended solvents and procedures 2.5. Work is completed according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies
3. Inspect and test alternator components/parts	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Alternator are inspected and tested according to component/vehicle manufacturer/component supplier specifications 3.3. Alternators component parts are inspected and tested without causing damage to component or system 3.4. Worn, damaged, deteriorated or faulty components/parts are identified 3.5. Part requirements are documented and reported according to enterprise procedures 3.6. Inspection and testing is carried out according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies
4. Overhaul and reassemble alternator and components/parts	4.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 4.2. Alternator parts/components are repaired to manufacturer/component supplier specifications 4.3. Alternator replacement parts are selected and fitted to meet

ELEMENT	PERFORMANCE CRITERIA
	<p>customer requirements</p> <p>4.4.Alternators are reassembled according to unit/vehicle manufacturer/component supplier specifications</p> <p>4.5.Alternators are reassembled without causing damage to components/parts</p> <p>4.6.Alternators are assembled according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies</p> <p>4.7.Alternators are tested according to component/vehicle manufacturer/component supplier specifications</p> <p>4.8.Workplace and equipment documents are completed in accordance with site requirements</p>
5. Clean up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored</p> <p>5.2.Waste and scrap is removed following workplace procedure</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</p> <p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>5.6.Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for the overhaul of automotive alternators
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information of alternator overhaul procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete tests and measurements to determine serviceability of alternator component parts
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform alternator overhaul and component testing and repair/replacement procedures
- problem-solving skills for a range of procedural issues
- use workplace technology related to the overhaul of charging system alternators, the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirement, equipment, material and personal safety requirements
- alternator operating principles
- construction and operation of alternators and components relevant to application
- types and layout of service/repair manuals (hard copy and electronic)
- component cleaning, inspection and testing procedures
- dismantling and assembling/overhaul procedures
- unit assembly test procedures
- work organisation and planning processes

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- cleaning, testing, inspecting and evaluating components of units
- overhauling units, including dismantling and reassembling units to manufacturer/component supplier requirements
- repairing/replacing component parts to manufacturer/component supplier requirements
- testing final product for return to service
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the overhaul of charging system alternators
- equipment, hand and power tooling appropriate to the overhaul of charging system alternators
- activities covering mandatory task requirements

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>• Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&amp;R Training Package</li> <li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li> <li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li> <li>• Assessment may be applied under project related conditions and require evidence of process</li> <li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li> <li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li> <li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li> </ul>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electrical system alternators and components</b>	Electrical system alternators and components may be fitted to vehicles, plant and equipment, motorcycles and marine equipment
<b>Faults</b>	<p>Faults may include:</p> <ul style="list-style-type: none"> <li>alternator not charging, noisy operation, open circuits, short circuits and earthing</li> </ul>
<b>Overhaul methods</b>	<p>Overhaul methods are to include:</p> <ul style="list-style-type: none"> <li>measurements, fault finding with aural, visual and functional assessments (including damage, corrosion, wear, electrical leakage, short circuits and broken circuits), reading/interpreting manufacturer/component supplier information, dismantle, clean, inspect, test and reassemble, fit replacement parts and retest for service</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to:</p> <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular</li> </ul>

<b>RANGE STATEMENT</b>	
	movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling, testing equipment, including diode testers, multimeters, growlers and insulation testers, soldering equipment, power tooling, test benches, measuring equipment, including micrometers and callipers</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts, solder, flux and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include:

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the overhaul of charging system alternators</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURETR3018 Overhaul starting motors

### Modification History

Release	Comment
Release 1	Replaces AURE319245A Overhaul starting motors Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to overhaul automotive starting motor systems and direct current motors fitted to vehicles, plant and equipment, motorcycles and marine equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing of starting motors and identification of faults, causes, disassembly, overhaul, reassembly and retesting of starting motors and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, processes and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Dismantle starting motors and clean individual components/ parts	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Starting motors are dismantled according to component/vehicle manufacturer/component supplier procedures 2.3. Starting motors are dismantled without causing damage to components 2.4. Component parts are cleaned according to unit/vehicle manufacturer/component supplier recommended solvents and procedures 2.5. All work is completed according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies
3. Inspect and test starting motor components/parts	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Starting motors are inspected and tested according to component/vehicle manufacturer/component supplier specifications 3.3. Starting motor component parts are inspected and tested without causing damage to component or system 3.4. Worn, damaged, deteriorated or faulty components/parts are identified 3.5. Part requirements are documented and reported according to enterprise procedures 3.6. Inspection and testing is according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies
4. Overhaul and reassemble starting motors and fit replacement components/parts	4.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 4.2. Parts are repaired to manufacturer/component supplier specifications 4.3. Starting motor replacement parts are selected and fitted to

ELEMENT	PERFORMANCE CRITERIA
	<p>meet customer requirements</p> <p>4.4.Starting motors are assembled according to unit/vehicle manufacturer/component supplier specifications</p> <p>4.5.Starting motors are assembled without causing damage to components/parts</p> <p>4.6.Starting motors are assembled according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies</p> <p>4.7.Assembled motors are tested according to component/vehicle manufacturer/component supplier specifications</p> <p>4.8.Workplace and equipment documents are completed in accordance with site requirements</p>
5. Clean up work area and maintain equipment	<p>5.1.Material that can be reused is collected and stored</p> <p>5.2.Waste and scrap is removed following workplace procedure</p> <p>5.3.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures</p> <p>5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace requirements</p> <p>5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>5.6.Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for the overhaul of automotive starting motors
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information of starting motor overhaul procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete tests and measurements to determine the serviceability of starting motor component parts
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform starting motor overhaul and component testing and repair/replacement procedures
- problem-solving skills for a range of procedural issues
- use workplace technology related to the overhaul of starting motor systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirement, equipment, material and personal safety requirements
- alternator operating principles
- construction and operation of starting system motors and components relevant to application
- types and layout of service/repair manuals (hard copy and electronic)
- component cleaning, inspection and testing procedures
- dismantling and assembling/overhaul procedures
- unit assembly test procedures
- work organisation and planning processes

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- cleaning, testing, inspecting and evaluating components of units
- overhauling units, including dismantling and reassembling units to manufacturer/component supplier requirements
- repairing/replacing component parts to manufacturer/component supplier requirements
- testing final product for return to service
- completing workplace and equipment documentation.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the overhaul of starting system motors
- equipment, hand and power tooling appropriate to the overhaul of starting system motors
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning

**EVIDENCE GUIDE**

	<p>knowledge</p> <ul style="list-style-type: none"><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electrical starting motor and components</b>	Electrical starting motor and components may be heavy or light, low voltage/direct current motors and fitted to vehicles, plant and equipment, motorcycles and marine equipment
<b>Faults</b>	Faults may include: <ul style="list-style-type: none"> <li>starting motor not operating, noisy operation, poling, open circuits, short circuits, earthing</li> </ul>
<b>Overhaul methods</b>	Overhaul methods are to include: <ul style="list-style-type: none"> <li>measurements, fault finding with aural, visual and functional assessments (including damage, corrosion, wear, electrical leakage, short circuits and broken circuits), reading/interpreting manufacturer/component supplier information, dismantle, clean, inspect, test and reassemble, fit replacement parts and retest for service</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing</li> </ul>

<b>RANGE STATEMENT</b>	
	fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>hand tooling, testing equipment, including diode testers, multimeters, growlers, insulation testers, soldering equipment, power tooling, test benches, measuring equipment, including micrometers and callipers</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>spare parts, solder flux and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>safe work procedures related to the overhaul of starting system motors</li> <li>regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>engineer's design specifications and instructions</li> <li>organisation work specifications and requirements</li> <li>instructions issued by authorised enterprise or external persons</li> <li>Australian Standards</li> </ul>

## AURETR3019 Inspect, service and repair AC electric motor drive systems

### Modification History

Release	Comment
Release 1	Replaces AURE319271A Inspect, service and repair AC electric motor drive systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence required to carry out the inspection, service and repair of AC electric motor drive systems. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, inspection and testing, analysis of results and the service and repair of AC electric motor drive systems and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect AC electric motor drive system	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and calibration requirements for inspection and testing are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with AC electric motors are observed
2. Conduct AC motor drive system tests and analyse results	2.1. Methods for AC electric motor drive system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is forwarded to persons for action in accordance with workplace procedures
3. Prepare to service and repair AC electric motor drive systems	3.1. WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information are identified and sourced 3.3. Technical and tool requirements for service and repair of AC electric motor drive systems are identified and support equipment is identified and prepared
4. Carry out service and repair	4.1. Methods for service and repair of AC electric motor drive systems are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 4.2. Adjustments made during the service and repair are in accordance with manufacturer/component supplier specifications
5. Prepare drive system/ vehicle for delivery to	5.1. Service/repairs schedule documentation is completed 5.2. Final inspection is made to ensure protective guards, safety

ELEMENT	PERFORMANCE CRITERIA
customer and storage	<p>features and cowlings are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations</p> <p>5.4.AC electric motor drive system/vehicle is cleaned for delivery to customer or stored to workplace expectations</p> <p>5.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection, service and repair of ac electric motor drive systems, including the use of electronics, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with AC electric motor drive systems
- operating principles of AC electric motor drive systems and their relationship to other components
- types and layout of service/repair manuals (hard copy and electronic)
- inspection/test procedures
- service and repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection, service and repair of motor drive systems in accordance with manufacturer/ component supplier and workplace requirements
- interpreting inspection/test results
- completing service and repair of AC electric motors and associated components within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection, service and repair of AC electric motor drive systems
- equipment, hand and power tooling appropriate to the inspection, service and repair of AC electric motor drive systems
- activities covering mandatory task requirements
- specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines

**EVIDENCE GUIDE**

	<p>of the Automotive Industry RS&amp;R Training Package</p> <ul style="list-style-type: none"><li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>

Release 1	Replaces AURE321066A Repair electronic systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to carry out repairs to electronically controlled systems, including aftermarket accessories, wipers, windows, lighting, turning indicators, hazard lights, door locks and fan blowers.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing of systems and identification of faults/causes, repair and retesting of electronic systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>For minor electrical repairs see AURETR2012 Test and repair basic electrical circuits.</p> <p>For general electrical repairs see AURETR3032 Repair electrical systems.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, process and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Test systems/ components and identify faults	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specification 2.2. Tests are carried out to determine faults using tooling and techniques 2.3. Systems/components are tested without causing damage to component or system 2.4. Faults are identified and preferred repair action determined 2.5. Tests are carried out according to industry regulations/ guidelines, WHS, legislation and enterprise procedures/policies
3. Repair electronic systems	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Repairs, component replacement and adjustments are carried out using tooling, techniques and materials 3.3. Repairs to electronic systems are completed without causing damage to component or system 3.4. Electronic systems are tested and results are documented in accordance with workplace policies and procedures 3.5. Repairs and tests are carried out according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies 3.6. Workplace and equipment documents are completed in accordance with site requirements
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap is removed following workplace procedure 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements 4.5. Operator maintenance is completed in accordance with

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer/component supplier specifications and site procedures</p> <p>4.6.Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for circuit and component testing, and major repairs/component replacement
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information of electronic circuit/component testing, servicing and replacement procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete tests and measurements to determine electronic circuit/component major repair/replacement requirements
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform electronic testing, and repair/replacement procedures
- problem-solving skills for a range of procedural issues
- use workplace technology related to the repair of electronic systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operation of electronic control systems/components
- operation of solid state devices
- types and layout of service/repair manuals (hard copy and electronic)
- procedures for the repair/replacement of electronic systems/components
- testing and diagnosis procedures for electronic system/component faults
- input/output measurement techniques
- work organisation and planning processes

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- testing and identifying faults in electronic systems
- testing inputs and outputs to electronic systems
- repairing/replacing electronic systems/components to site and manufacturer/component supplier requirements
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant repairing electronic systems
- equipment, hand and power tooling appropriate to the repair of electronic systems
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electronically controlled systems</b>	Electronically controlled systems may include: <ul style="list-style-type: none"> <li>accessories, wipers, windows, lighting, turning indicators, hazard lights, door locks, fan blowers and cruise control</li> </ul>
<b>Fittings</b>	Electronically controlled systems may be fitted to light vehicles and/or plant and equipment and/or heavy commercial vehicles
<b>Faults</b>	Faults may include: <ul style="list-style-type: none"> <li>electrical/electronic unit faults, wire repair/replacement, open circuits, short circuits and earthing</li> </ul>
<b>Fault finding methods</b>	Fault finding methods are to include: <ul style="list-style-type: none"> <li>electrical measurements, fault finding using aural, visual and functional assessments for damage, corrosion, wear and electrical defects, reading/interpreting wiring diagrams, diagnosing and determining faults, soldering, crimping, repairing components and wiring and remove/replace components</li> </ul>
<b>Critical precautions</b>	Critical precautions, including manufacturer/component supplier procedures, must be applied as poor working practices are likely to damage electronic system ECUs and/or other components
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances,</li> </ul>

<b>RANGE STATEMENT</b>	
	electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering the acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling, testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment, manufacturer/component supplier diagnostic tooling, oscilloscopes and scan tooling</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts, lubricants and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair of electronic systems</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules, Environment Protection Regulations (Diesel Fuels), National Environment Protection for Diesel Vehicle Guidelines</li> <li>• engineer's design specifications and instructions</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURETR3021 Inspect, service and repair electronic management, monitoring and tracking systems

### Modification History

Release	Comment
Release 1	Replaces AURE321971A Inspect, service and repair electronic management, monitoring and tracking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to carry out inspection, service and repair of electronic monitoring, management and tracking systems in rural and resources industry plant, machinery and equipment. Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	--

### Application of the Unit

Application of the unit	The unit includes identification and confirmation of work requirement, preparation for work, conduct of inspection and identification of servicing/repair requirements, completion of servicing and repair of systems and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake inspection	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for inspection are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with electronic systems are observed</p>
2. Conduct inspection and analyse results	<p>2.1.Methods for the conduct of inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Prepare to service/repair systems	<p>3.1.WHS requirements, including individual state/territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for service are identified and support equipment is identified and prepared</p>
4. Carry out service and repairs to systems	<p>4.1.Methods for the conduct of service and repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.All adjustments made during the service and repair are in accordance with manufacturer/component supplier specifications</p>
5. Prepare equipment for delivery to customer and/or storage	<p>5.1.Service/repairs schedule documentation is completed</p> <p>5.2.Final inspection is made to ensure protective features are in place and work is to workplace expectations</p> <p>5.3.Equipment is cleaned and/or stored to workplaces</p>

ELEMENT	PERFORMANCE CRITERIA
	expectations 5.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- analytical skills for identification and analysis of technical information
- plain English literacy and communication skills in relation to dealing with customers and team members
- questioning and active listening skills for example when obtaining information from customers
- oral communication skills sufficient to convey information and concepts to customers
- plan and organise activities as applied to work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- work with others and in a team by interacting effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection and service/repair of electronic tracking systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- types, characteristics, applications and limitations of electronic management, monitoring and tracking systems
- operating principles of systems and their relationship to each other
- inspection procedures
- service and/or repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting inspection results
- conducting the inspection, service and repair of a range of electronic management systems in accordance with workplace and manufacturer/component supplier requirements
- conducting the inspection, service and repair of at least one electronic monitoring and/or tracking system in accordance with workplace and manufacturer/ component supplier requirements
- completing service and repair of systems within workplace timeframes
- presenting equipment to customer in compliance with workplace requirements.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection and service/repair of electronic management, monitoring and tracking systems
- equipment, hand and power tooling appropriate to the inspection and service/repair of electronic management, monitoring and tracking systems

## EVIDENCE GUIDE

	<ul style="list-style-type: none"> <li>activities covering mandatory task requirements</li> <li>specifications and work instructions.</li> </ul>
<b>Method of assessment</b>	<ul style="list-style-type: none"> <li>Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&amp;R Training Package</li> <li>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li> <li>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li> <li>Assessment may be applied under project related conditions and require evidence of process</li> <li>Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li> <li>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li> <li>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li> </ul>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electronic management, monitoring and tracking systems</b>	Electronic management, monitoring and tracking systems refer to: <ul style="list-style-type: none"> <li>systems which control integration and operation of sub-systems which make up rural and resources industry plant, machinery and equipment</li> </ul>
<b>Rural and resources industries</b>	Rural and resources industries refer to: <ul style="list-style-type: none"> <li>specialist agricultural, mining and civil engineering sectors</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian Standards, internal company</li> </ul>

<b>RANGE STATEMENT</b>	
	quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>internal and external computerised diagnostic systems and tooling, hand tooling, meters, gauges and load testing, pulling and pushing devices</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>repair parts, adhesives and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>safe work procedures related to the inspection and service/repair of electronic management, monitoring and tracking systems</li> <li>regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>engineer's design specifications and instructions</li> <li>organisation work specifications and requirements</li> <li>instructions issued by authorised enterprise or external persons</li> <li>Australian Standards</li> </ul>

## AURETR3022 Diagnose and repair vehicle dynamic control systems

### Modification History

Release	Comment
Release 1	<p>Replaces:</p> <ul style="list-style-type: none"><li>• AURE321671A Service and repair electronically operated stability control systems</li><li>• AURE321571A Service and repair electronically operated traction control systems</li><li>• AURE321471A Service and repair electronically controlled anti-lock braking systems</li></ul> <p>Performance Criteria and Range Statement updated to reflect technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair vehicle dynamic control systems in light and heavy vehicles. It involves diagnosing deviations from correct operation, repairing dynamic control system components and associated systems, and undertaking post-repair testing procedures.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	Work applies to vehicle dynamic control systems fitted to light and heavy vehicles.  Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose vehicle dynamic control systems	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>1.5. <b>Tools and equipment</b> are identified for effective repair methods</p>
2. Diagnose vehicle dynamic control systems	<p>2.1. <b>Vehicle dynamic control systems</b> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair vehicle dynamic control systems	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Prepare vehicle for delivery to customer	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and finalise work processes	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and work area are cleaned and inspected</p>

	<p>according to workplace procedures</p> <p>5.4.Tools and equipment are maintained according to workplace procedures</p> <p>5.5.Faulty equipment is identified, tagged and isolated according to workplace procedures</p>
--	---

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various vehicle dynamic control systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand own skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
  - refer problems outside area of responsibility to appropriate person and suggest possible causes or solutions
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- technical skills to use hand, power and specialised tools relating to the repair of vehicle dynamic control systems
- technology skills to:
  - operate diagnostic and automotive test equipment
  - use technology to collect, analyse and provide information

#### Required knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs when working on vehicles in an automotive workshop
- application, purpose and operation of vehicle dynamic control systems
- principal types of vehicle dynamic control systems, including:
  - electronic braking control module (EBCM):
    - active roll-over protection
    - anti-lock braking
    - brake assist
    - descent control
    - electronic brake force distribution
    - electronic park brake
    - hill start assist
    - stability control
    - traction control
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams
- diagnostic and testing procedures, including:
  - diagnostic procedures for vehicle dynamic control systems, including accessing and interpreting:
    - diagnostic trouble codes
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- select methods and techniques appropriate to the fault being diagnosed
- complete preparatory activity in a systematic manner
- diagnose and repair at least three different faults within vehicle dynamic control systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with various vehicle dynamic control system faults
- equipment appropriate for the testing of vehicle dynamic control systems
- specifications and workplace instructions

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- tools appropriate for repairing, replacing and adjusting vehicle dynamic control systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace first aid equipment</li> <li>• workplace safety policies and procedures</li> <li>• safe work procedures relating to the repair of vehicle under-body systems</li> <li>• safe handling of material</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• personal protective clothing and equipment</li> <li>• use of fire-fighting equipment</li> <li>• safe use of tools and equipment.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to the repair and replacement of instrument and warning systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• obtaining vehicle service history</li> <li>• isolating faults</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>inspecting and evaluating components.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>hand tools</li> <li>vehicle lifting devices</li> <li>power tools</li> <li>specialist tools for removing vehicle trim and assemblies</li> <li>dynamometer</li> <li>electronic testing equipment, including:               <ul style="list-style-type: none"> <li>multimeter</li> <li>oscilloscope</li> <li>scan tools.</li> </ul> </li> </ul>
<b><i>Vehicle dynamic control systems</i></b> may include:	<ul style="list-style-type: none"> <li>anti-lock braking system (ABS) control</li> <li>traction control</li> <li>steering control</li> <li>stability control</li> <li>powertrain management control.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:               <ul style="list-style-type: none"> <li>back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>probing terminal and connectors with inappropriate test probes</li> <li>pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>component malfunction, including:               <ul style="list-style-type: none"> <li>sensor malfunction</li> <li>yaw rate</li> <li>lateral rate</li> <li>steering angle</li> <li>electronic control module (ECM) or unit (ECU)</li> <li>electronic brake control module (EBCM)</li> </ul> </li> <li>CAN-bus network operational faults</li> <li>system and component adjustment</li> <li>open or short circuits to power, ground and reference circuits</li> <li>high circuit resistance</li> <li>diagnosis trouble codes (DTC) being set.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• procedures for removing, replacing and adjusting</li> <li>• procedures for dismantling, repairing, re-assembling and adjusting</li> <li>• fault finding using aural, visual and functional assessments for damage, corrosion, wear and electrical short and open circuits</li> <li>• electrical measurements</li> <li>• diagnosing and determining repair requirements, electronic systems data, including fault codes, sensor, actuator measurement, and control unit input and output signals</li> <li>• reading and interpreting wiring diagrams.</li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating the effectiveness of the repair action</li> <li>• confirming that reported fault has been rectified</li> <li>• confirming that no other faults are present as a result of the repair action.</li> </ul>

## AURETR3023 Diagnose and repair electronic spark ignition engine management systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURE321171A Service and repair electronic spark ignition engine management systems</p> <p>Performance Criteria and Range Statement updated to reflect technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair electronic spark ignition engine management systems.</p> <p>The unit involves diagnosing deviations from correct operation, repairing electronic spark ignition engine management system components and associated systems, and undertaking post-repair testing procedures.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to light and heavy petrol fuelled vehicles; LPG, CNG and LNG fuelled vehicles; motorcycles; outdoor power equipment; and marine environments.</p> <p>Engine management systems are systems where the electronic control unit (ECU) incorporates control over fuel injection and ignition timing control and all other systems relating to engine performance and emissions.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair electronic spark ignition engine management systems	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>1.5. <b>Tools and equipment</b> are identified for effective repair methods</p>
2. Diagnose electronic spark ignition engine management systems	<p>2.1. <b>Electronic spark ignition engine management systems</b> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair electronic spark ignition engine management systems	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Prepare vehicle and equipment for delivery to customer after repair is completed	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and finalise work processes	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and work area are cleaned and inspected</p>

	<p>according to workplace procedures</p> <p>5.4. Tools and equipment are maintained according to workplace procedures</p> <p>5.5. Faulty equipment is identified, tagged and isolated according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various electronic spark ignition engine management systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use hand, power, measuring and specialised tools relating to the repair of electronic spark ignition engine management systems

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements relating to diagnosing and repairing electronic spark ignition engine management systems, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs
- principal types of vehicle electronic spark ignition engine management systems, including:
  - electronic ignition systems: distributor and distributor-less systems
  - coil on plug ignition systems: two and three wire
  - fuel injection, return and non-return systems
  - turbo and supercharger control
  - variable intake
  - variable valve timing
  - drive-by-wire systems
- application, purpose and operation of electronic spark ignition engine management systems, including:
  - misfire detection
  - ignition timing and spark advance
  - electronic control of spark advance
  - dwell period
  - camshaft and crankshaft sensors
  - knock sensors
  - spark plugs
- technical information, graphic symbols and diagrams relating to electronic spark ignition engine management systems
- diagnostic and testing procedures, including:
  - diagnostic procedures for electronic spark ignition engine management systems, including:
    - accessing and interpreting diagnostic trouble codes (DTC)
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- component corrosion
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of electronic spark ignition engine management systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle and equipment in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with electronic spark ignition engine management faults relevant to the qualification being sought
- equipment appropriate for the testing of vehicle electronic spark ignition engine management systems

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- specifications and workplace instructions
- tools appropriate for repairing, replacing and adjusting vehicle electronic spark ignition engine management systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with: <ul style="list-style-type: none"> <li>• high voltage ignition systems</li> <li>• LPG, CNG and LNG fuels</li> <li>• high pressure fuel rail systems and components</li> </ul> </li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to repairing and replacing electronic spark ignition engine management systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters, ohmmeters, voltmeters and tachometers</li> <li>• fuel pressure and flow meter</li> <li>• insulation testers</li> <li>• power tools and air tools</li> <li>• tune scopes</li> <li>• engine analysers</li> <li>• dynamometers</li> <li>• oscilloscope</li> <li>• diagnostic scan tools.</li> </ul>
<b><i>Electronic spark ignition engine management systems</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic ignition systems</li> <li>• direct fire ignition (DFI) systems</li> <li>• coil-on-plug ignition systems</li> <li>• turbo chargers and intercoolers</li> <li>• air intake</li> <li>• exhaust emission control</li> <li>• throttle control.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• engine difficult to start or will not start</li> <li>• engine misfiring</li> <li>• poor engine performance</li> <li>• engine knock</li> <li>• overheating</li> <li>• DTC being set.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• pre- and post-repair testing</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>identifying and testing components</li> <li>diagnosing and determining faults</li> <li>component repair procedures, including: <ul style="list-style-type: none"> <li>removal, replacement and adjustment procedures</li> <li>dismantle, repair, re-assembly and adjustment procedures</li> </ul> </li> <li>electrical measurements</li> <li>peak voltage testing</li> <li>visual and functional assessments, including for damage and wear.</li> </ul>
<i>Post-repair testing</i> may include:	<ul style="list-style-type: none"> <li>validating effectiveness of the repair action</li> <li>confirming that reported fault has been rectified</li> <li>confirming that no other faults are present as a result of the repair action.</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various electronic compression ignition engine management systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use hand, power, measuring and specialised tools relating to the repair of electronic compression ignition engine management systems

## REQUIRED SKILLS AND KNOWLEDGE

- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements relating to diagnosing and repairing electronic compression ignition engine management systems, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs
- dangers of working with high-pressure diesel fuel systems
- principal types of vehicle electronic compression ignition engine management systems, including:
  - direct injection, including:
    - electronic unit injectors (EUI)
    - hydraulic electronic unit injectors (HEUI)
  - indirect injection
  - common rail systems, including:
    - common rail solenoid
    - piezo design
    - amplified systems
- application, purpose and operation of electronic compression ignition engine management systems, including:
  - common rail fuel control system
  - fuel injectors, types and designs
  - glow plugs
  - exhaust gas recirculation (EGR) and positive crankcase ventilation (PCV) system
  - diesel particulate diffuser (DPD) exhaust after-treatment system
  - turbo and super charger and intercooler systems
  - fuel filter, coolers and water trap
- techniques for reading and interpreting technical information, graphic symbols and diagrams
- diagnostic and testing procedures, including:
  - diagnostic procedures for electronic compression ignition engine management systems, including:
    - accessing and interpreting diagnostic trouble codes
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment

REQUIRED SKILLS AND KNOWLEDGE
<ul style="list-style-type: none"><li>• visual, aural and functional assessments, including:<ul style="list-style-type: none"><li>• component damage and wear</li><li>• component corrosion</li></ul></li><li>• repair procedures, including:<ul style="list-style-type: none"><li>• component removal and replacement procedures</li><li>• component and associated system adjustment and recalibration procedures</li></ul></li></ul>

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• demonstrate safe work procedures relating to working with high fuel pressure and high injector voltages on diesel engines</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• diagnose and repair a range of electronic compression ignition engine management systems</li> <li>• conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements</li> <li>• present vehicle and equipment in a condition that complies with workplace requirements.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• vehicles with electronic compression ignition engine management faults relevant to the qualification being sought</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- equipment appropriate for the testing of vehicle electronic compression ignition engine management systems
- specifications and workplace instructions
- tools appropriate for repairing, replacing and adjusting vehicle electronic compression ignition engine management systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high pressure fuel systems</li> <li>• hazards associated with high injector voltage circuits</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to the repair and replacement of electronic compression ignition engine management systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation.</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters, ohmmeters, voltmeters and tachometers</li> <li>• insulation testers</li> <li>• power tools and air tools</li> <li>• fuel pressure and fuel flow gauges</li> <li>• engine analysers</li> <li>• dynamometers</li> <li>• oscilloscopes</li> <li>• diagnostic scan tools.</li> </ul>
<b><i>Electronic compression ignition engine management systems</i></b> may include:	<ul style="list-style-type: none"> <li>• direct injection: <ul style="list-style-type: none"> <li>• electronic unit injectors</li> <li>• hydraulic electronic unit injectors</li> </ul> </li> <li>• indirect injection</li> <li>• common rail systems, including: <ul style="list-style-type: none"> <li>• solenoid</li> <li>• piezo electric</li> <li>• amplified systems.</li> </ul> </li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• engine difficult to start or will not start</li> <li>• engine misfiring</li> <li>• poor engine performance</li> <li>• engine knock</li> <li>• overheating</li> <li>• black or white smoke from exhaust</li> <li>• PCV defective</li> <li>• diesel fuel contamination</li> <li>• blocked or restricted fuel injectors</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• DPD exhaust after treatment system defective or not serviced</li> <li>• diagnosis trouble codes (DTC) being set.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• pre- and post-repair testing</li> <li>• identifying and testing components</li> <li>• diagnosing and determining faults</li> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures</li> </ul> </li> <li>• electrical measurements</li> <li>• fuel pressure testing involving visual and functional assessments, including for damage and wear.</li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating effectiveness of the repair action</li> <li>• confirming that reported fault has been rectified</li> <li>• confirming that no other faults are present as a result of the repair action.</li> </ul>

## AURETR3025 Test, charge and replace batteries

### Modification History

Release	Comment
Release 1	Replaces AURE218676A Test, service and charge batteries (Heavy Vehicle)  Performance Criteria and Range Statement updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to test, charge, jump-start, and remove and replace automotive batteries.</p> <p>The unit involves identifying and confirming work requirements; preparing for work; servicing, testing and charging batteries; and completing work finalisation processes, including clean-up and documentation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to light vehicles, heavy vehicles, motorcycles, mining plant and equipment, outdoor power equipment, and marine craft.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test and inspect battery	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b>, including individual state and territory regulatory requirements and <b>personal protective equipment (PPE)</b> needs, are observed throughout the work</p> <p>1.3. <b>Safe operating procedures</b> and information such as site procedures and specifications are sourced</p> <p>1.4. <b>Technical information</b> is accessed from manufacturer and component supplier specifications and interpreted</p> <p>1.5. <b>Tools, equipment</b> and <b>materials</b> are identified and prepared</p> <p>1.6. Warnings in relation to working with batteries are observed</p>
2. Test and service battery	<p>2.1. <b>Service and maintenance methods</b> are carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>2.2. Electrolyte levels are checked and topped up where appropriate according to service and maintenance methods</p> <p>2.3. Batteries and terminals are cleaned according to site procedures</p> <p>2.4. Battery voltage and load checks are conducted to confirm service repair action</p> <p>2.5. Battery is charged, jump-started or replaced</p>
3. Charge battery	<p>3.1. Technical information for charging is accessed from manufacturer and component supplier specifications and is correctly interpreted</p> <p>3.2. Components, tools and equipment to complete work are identified, selected and prepared according to site procedures</p> <p>3.3. Electrolyte levels are checked and topped up according to site procedures</p> <p>3.4. Batteries are charged according to site procedures and component manufacturer and supplier recommendations</p>
4. Carry out jump-start procedures to vehicle	<p>4.1. Technical information is accessed from manufacturer and component supplier specifications and is correctly interpreted</p> <p>4.2. Battery voltage is identified and vehicle and equipment are confirmed as being appropriate to jump-start procedures</p> <p>4.3. Leads are connected and disconnected in correct sequence and polarity</p> <p>4.4. Work is carried out without causing damage to the vehicles</p>

ELEMENT	PERFORMANCE CRITERIA
	involved and equipment being used
5. Remove and replace battery	5.1.Battery is removed from vehicle according to site procedures, and component manufacturer and supplier recommendations 5.2.Battery is replaced in line with vehicle electrical and physical specifications and measurements 5.3.Correct secure battery fitment is confirmed 5.4.Battery terminals are reconnected and tightened
6. Retest battery	6.1.Test methods are implemented according to workplace procedures and manufacturer and component supplier specifications 6.2.Test results are compared with manufacturer and component supplier specifications 6.3.Results are documented with evidence, and supporting information is recorded
7. Prepare vehicle and equipment for delivery to customer after battery is replaced	7.1.Final inspection is made to ensure work is to workplace expectations 7.2.Vehicle is cleaned to workplace expectations and presented ready for use 7.3.Workplace documentation is processed according to workplace procedures
8. Clean up work area and maintain equipment	8.1.Material that can be reused or recycled is collected and stored according to workplace sustainability practices 8.2.Waste and scrap are removed according to workplace practices 8.3.Tools, equipment and work area are cleaned and inspected according to workplace procedures 8.4.Tools and equipment are maintained according to workplace procedures 8.5.Faulty equipment is identified, tagged and isolated according to workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - communicate basic information relating to battery safety
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - participate in self-improvement activities
  - recognise a workplace problem or potential problem
- literacy skills to:
  - read and follow battery inspection and maintenance information
  - read and follow information on standard operating procedures and repair guidelines
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities that implement and follow standard workplace procedures
- problem-solving skills to refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - locate technical information
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as operating procedures
- teamwork skills to:
  - work with others and in a team by cooperating with team members
  - work with diverse individuals and groups
- technical skills to:
  - understand technical information relating to recognising and reporting unsafe situations
  - select tools and equipment appropriate to inspecting, servicing and maintaining light and heavy vehicle batteries
  - use battery servicing and testing tools and equipment safely
  - maintain tools and equipment using appropriate techniques and standard operating procedures
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

- use workplace technology relating to inspecting, servicing and maintaining battery storage systems, including use of specialist tools, measuring equipment and communication devices
- report and document results

**Required knowledge**

- WHS and environmental regulations, requirements, equipment and material, including personal safety requirements
- battery testing methods
- dangers of working with battery testing equipment
- dangers associated with overcharging batteries
- operating principles and layout of vehicle battery storage systems
- battery inspection procedures
- battery service and maintenance procedures
- workplace quality procedures
- work organisation and planning processes relating to testing, charging and replacing batteries

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- service and charge batteries
- test batteries and battery connections
- jump-start vehicles
- remove and replace vehicle batteries correctly
- accurately interpret inspection and test results
- conduct servicing, removal and replacement according to workplace, manufacturer and component supplier requirements
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- material relevant to servicing, maintaining and replacing batteries, including a range of various battery types
- equipment, and hand and power tools appropriate to servicing, maintaining and replacing batteries
- specifications and work instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>personal protective clothing and equipment</li> <li>safe use of tools and equipment</li> <li>handling of potentially hazardous material and substances</li> <li>use of fire-fighting equipment</li> <li>first aid training and response</li> <li>control of hazards and hazardous materials.</li> </ul>
<b><i>Personal protective equipment</i></b> may include:	<ul style="list-style-type: none"> <li>safety glasses</li> <li>protective clothing</li> <li>gloves.</li> </ul>
<b><i>Safe operating procedures</i></b> may include:	<ul style="list-style-type: none"> <li>conducting operational risk assessments</li> <li>treatments associated with vehicle movement</li> <li>toxic substances</li> <li>electrical safety</li> <li>machinery movement and operation</li> <li>manual and mechanical lifting and shifting</li> <li>procedures for working in proximity to others and site visitors.</li> </ul>
<b><i>Technical information</i></b> may include:	<ul style="list-style-type: none"> <li>battery manufacturer and component supplier recommendations.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>hand tools</li> <li>load testing devices</li> <li>hydrometer</li> <li>multimeter</li> <li>jumper leads</li> <li>booster charger.</li> </ul>
<b><i>Materials</i></b> may include:	<ul style="list-style-type: none"> <li>battery consumables</li> <li>cleaning materials.</li> </ul>
<b><i>Service and maintenance methods</i></b> may include:	<ul style="list-style-type: none"> <li>inspecting battery, terminals and leads</li> <li>inspecting battery securing system</li> <li>cleaning battery and battery compartment or storage area</li> <li>topping up battery fluid</li> <li>testing battery with a hydrometer.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Electrical
<b>Unit sector</b>	Technical – Electrical and Electronic

**Custom Content Section**

Not applicable.

## AURETR3026 Remove, replace and program electrical and electronic units and assemblies

### Modification History

Release	Comment
Release 1	<p>Replaces AURE218664A Remove and replace electrical/electronic units/assemblies</p> <p>Performance Criteria and Range Statement updated to reflect technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove and replace electrical units and assemblies, such as powertrain control modules (PCM), engine and body control modules, as well as other electronic control units that are an integral part of the vehicle's computer area network databus (CAN-bus) network, to facilitate body repair activities or similar.</p> <p>The unit involves identifying and confirming work requirements; preparing for work; and completing work finalisation processes, including clean-up and documentation.</p> <p>Assistance from a licensed person must be sought in relation to air conditioning and LPG/CNG/LNG systems and components, and in recommissioning systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	Work applies to electrical units and assemblies that are fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.  Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Tools and equipment</b> are identified for effective removal, replacement and testing procedures</p>
2. Remove electrical and electronic units and assemblies	<p>2.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. <b>Electrical and electronic units and assemblies</b> are removed using approved methods, tools and equipment</p> <p>2.3. Assistance from a licensed person is sought in relation to air conditioning and LPG/CNG/LNG systems and component removal</p> <p>2.4. Removal activities are carried out according to industry regulations and guidelines, workplace health and safety (WHS) legislation, and workplace policies and procedures</p> <p>2.5. Units and assemblies are handled and stored according to manufacturer and component supplier requirements</p>
3. Replace electrical and electronic units and assemblies	<p>3.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>3.2. Electrical and electronic control units and assemblies are replaced using approved methods, tools and equipment</p> <p>3.3. Assistance from a licensed person is sought in relation to air conditioning and LPG/CNG/LNG systems and component replacement</p> <p>3.4. Replacement activities are carried out according to industry regulations and guidelines, WHS legislation and workplace policies and procedures</p>
4. Test and reprogram electrical and electronic units and assemblies	<p>4.1. Testing procedures on replaced electrical and electronic control unit and assemblies are carried out</p> <p>4.2. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>4.3. Checking and testing are achieved without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>4.4. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>4.5. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>repairs or adjustments</p> <p>4.6. <b>Reprogramming options</b> are analysed and those most appropriate are selected</p> <p>4.7. Component replacement and programming procedures are carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>4.8. <b>Post-repair testing</b> is conducted and results are documented according to workplace procedures and relevant legislation</p>
5. Clean up work area and maintain equipment	<p>5.1. Material that can be reused is collected and stored</p> <p>5.2. Waste and scrap are removed following workplace procedures</p> <p>5.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>5.4. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>5.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p> <p>5.6. Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when replacing electronic units and assemblies in complex automotive electrical systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to removing and replacing vehicle electrical and electronic units and assemblies, including:
  - specialist tools and equipment

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- electrical measuring equipment
- technology skills to:
  - operate a range of electrical and electronic diagnostic test equipment
  - use technology to collect, analyse and provide information

### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs
- procedures for removing, replacing, testing and reprogramming electrical and electronic units and assemblies and post-repair testing
- wiring harness and loom fabrication techniques
- procedures for removing and replacing wiring harnesses and looms
- soldering procedures and techniques
- terminal crimping and connector repair techniques
- cable types and sizes and current carrying capacity
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - CAN-bus and databus networks
- techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
- diagnostic and testing procedures, including:
  - analysis of system operation using electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - water and moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• remove and replace a minimum of four units and assemblies to workplace, manufacturer and component supplier requirements, including: <ul style="list-style-type: none"> <li>• one supplementary restraint system module</li> <li>• one body control module</li> <li>• one engine or powertrain control module</li> </ul> </li> <li>• complete final functional test to specification</li> <li>• present vehicle and equipment in a condition that complies with workplace requirements.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

	<ul style="list-style-type: none"><li>• material relevant to removing and replacing electrical and electronic units and assemblies</li><li>• equipment, and hand and power tools appropriate to removing and replacing electrical and electronic units and assemblies</li><li>• specifications and work instructions.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• effective unit and assembly removal and replacement techniques</li> <li>• reprogramming procedures to enable replaced unit and assembly to communicate with vehicle CAN-bus systems</li> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters and ohmmeters</li> <li>• heat-gun or blower</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• heat shrink sleeving and flexible conduit</li> <li>• terminals and connectors</li> <li>• electrical tape.</li> </ul>
<b><i>Electrical and electronic units and assemblies</i></b> may include:	<ul style="list-style-type: none"> <li>• electrical and electronic units and assemblies integral to the vehicle's CAN-bus network, including: <ul style="list-style-type: none"> <li>• engine control unit (ECU)</li> <li>• engine control module (ECM)</li> <li>• powertrain control module (PCM)</li> <li>• body control module (BCM)</li> <li>• supplementary restraint systems (SRS).</li> </ul> </li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• continuity testing</li> <li>• insulation testing</li> <li>• isolation and repair to located faults</li> <li>• replacement of blown fuses or circuit breakers</li> <li>• replacement of damaged connectors or terminals</li> <li>• visual inspection and evaluation of components.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• open circuits</li> <li>• short circuits</li> <li>• high resistance circuits</li> <li>• damaged insulation</li> <li>• frayed wires</li> <li>• burnt wiring</li> <li>• water and moisture ingress</li> <li>• connector damage</li> <li>• terminal damage</li> <li>• diagnosis trouble codes (DTC) being set.</li> </ul>
<b><i>Reprogramming options</i></b>	<ul style="list-style-type: none"> <li>• service programming system (SPS)</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

may include:	<ul style="list-style-type: none"> <li>• manufacturer programming code and relearn procedures</li> <li>• original equipment manufacturer (OEM) specific programming code.</li> </ul>
<i>Post-repair testing</i> may include:	<ul style="list-style-type: none"> <li>• validating effectiveness of the replacement or repair action</li> <li>• confirming that reported fault has been rectified</li> <li>• confirming that no other faults are present as a result of the replacement and the reprogram or repair action.</li> </ul>

## AURETR3027 Install ancillary electronic control unit systems and components

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to install ancillary electrical equipment systems and components in electronic control units (ECUs).</p> <p>The unit may require service programming code to connect and interface components to the vehicle computer area network databus (CAN-bus) network.</p> <p>The unit includes identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to the installation and testing of ancillary electrical equipment systems and components in ECUs fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Installation options</b> are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. <b>Tools and equipment</b> are identified for effective installation and testing procedures</p>
2. Install and program ancillary electronic components	<p>2.1. <b>Basic ancillary electrical equipment</b> is installed according to manufacturer and component supplier specifications</p> <p>2.2. <b>Programming code</b> is sought from original equipment manufacturer (OEM) to enable installed equipment to communicate with vehicle electrical system</p> <p>2.3. Testing is carried out using tools and diagnostic techniques without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.4. <b>Faults</b> are identified and preferred repair action is determined and carried out</p> <p>2.5. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
3. Prepare vehicle and equipment for delivery to customer	<p>3.1. Final inspection is made to ensure work is to workplace expectations</p> <p>3.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>3.3. Workplace documentation is processed according to workplace procedures</p>
4. Clean up work area and maintain equipment	<p>4.1. Material that can be reused is collected and stored</p> <p>4.2. Waste and scrap are removed following workplace procedures</p> <p>4.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>4.4. Faulty equipment is identified, tagged and isolated according to workplace procedures</p> <p>4.5. Operator maintenance is completed according to manufacturer and component supplier specifications and site procedures</p> <p>4.6. Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when installing and programming various electronic ancillary systems and components
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to installing, testing and service programming ancillary electronic systems, including:
  - specialist tools and equipment

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- measuring equipment
- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - operate service programming systems (SPS)
  - collect, analyse and provide information

### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs
- procedures to install, program and test electronic ancillary component and systems
- wiring harness and loom fabrication techniques
- procedures for removing and replacing wiring harnesses and looms
- various types of wiring systems found in vehicles, including:
  - basic wiring
  - twisted pair
  - shielded wiring
  - CAN-bus networks
  - various OEM databus network configurations
- techniques for reading and interpreting technical information, wiring diagrams and graphic symbols
- diagnostic and testing procedures, including:
  - testing procedures for basic ancillary electrical installations, including:
    - following manufacturer and component suppliers' test procedures
    - following OEM service information
  - analysis of system operation using basic electrical test equipment and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - water and moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - SPS procedures

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- procedures for adjusting components and associated system

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- read and interpret vehicle wiring diagrams
- install electronic ancillary electrical components to specification
- apply programming code processes to enable communication between ancillary component and vehicle system
- test electrical wiring harness and looms to locate possible faults
- conduct installation according to workplace, manufacturer and component supplier requirements
- accurately interpret test results
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

of this unit:

- workplace location or simulated workplace
- materials relevant to the installation of electronic ancillary electrical components that could be fitted to a range of vehicles relevant to the qualification being sought
- equipment, and hand and power tools appropriate to installing basic ancillary electrical components
- specifications and work instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• safe use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams and sketches</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Installation options</i></b> may include:	<ul style="list-style-type: none"> <li>• OEM and workplace instructions</li> <li>• equipment manufacturer and supplier instructions</li> <li>• aftermarket accessory instructions</li> <li>• SPS procedures and OEM intellectual property (IP) code</li> <li>• visual inspection and evaluation of components.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters and ohmmeters</li> <li>• insulation testers</li> <li>• crimping tools</li> <li>• soldering iron</li> <li>• heat-gun or blower</li> <li>• wire and cabling of various colours and sizes</li> <li>• heat shrink sleeving and flexible conduit</li> <li>• terminals and connectors</li> <li>• electrical tape.</li> </ul>
<b><i>Electronic ancillary electrical equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• driver ignition immobiliser interlocks</li> <li>• security alarm and immobiliser systems</li> <li>• infotainment - audio systems</li> <li>• vehicle engine and powertrain performance enhancements</li> <li>• mobile phone interface kits</li> <li>• speed alert and traffic warning systems</li> <li>• integrated navigation systems.</li> </ul>
<b><i>Programming code</i></b> may include:	<ul style="list-style-type: none"> <li>• service programming system</li> <li>• OEM-specific code</li> <li>• ECU flash code or program.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• open circuits</li> <li>• short circuits</li> <li>• damaged insulation</li> <li>• frayed wires</li> <li>• connector damage</li> <li>• terminal damage</li> <li>• diagnosis trouble codes (DTC) being set.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Repair options*** may include:

- pre- and post-repair testing
- identifying and testing components
- diagnosing and determining faults
- component repair procedures, including:
  - removal, replacement and adjustment procedures
  - dismantle, repair, re-assembly and adjustment procedures
- electrical measurements
- visual and functional assessments, including for damage and wear.

***Post-repair testing*** may include:

- validating effectiveness of the repair action
- confirming that reported fault has been rectified
- confirming that no other faults are present as a result of the repair action.

# AURETR3028 Diagnose and repair instruments and warning systems

## Modification History

Release	Comment
Release 1	Replaces AURE318966A Repair instruments and warning systems Performance Criteria and Range Statement updated to reflect technologies

## Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair instruments and warning systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments. It involves diagnosing deviations from correct operation, repairing vehicle instruments and warning system components and associated systems; and undertaking post-repair testing procedures.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

Application of the unit	<p>Work applies to instruments and warning systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair instruments and warning systems	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>1.5. <b>Tools and equipment</b> are identified for effective repair methods</p>
2. Diagnose instruments and warning systems	<p>2.1. <b>Instruments and warning systems</b> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <i>inappropriate testing procedures</i></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair instruments and warning systems	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Prepare vehicle for delivery to customer	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and finalise work processes	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and the work area are cleaned and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>inspected according to workplace procedures</p> <p>5.4.Tools and equipment are maintained according to workplace procedures</p> <p>5.5.Faulty equipment is identified, tagged and isolated according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various instrument and warning systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to repairing instrument and warning systems, including:
  - specialist tools and equipment
  - measuring equipment

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - codes of practice
  - personal protection needs when working on vehicles in an automotive workshop
  - individual state and territory legislation and regulatory requirements, including:
    - LPG/CNG/LNG systems and components
    - air conditioning and HVAC systems and components
- principal types of vehicle instrument and warning systems, including:
  - hazard flashers
  - horns or alarms
  - driver display instruments
  - reversing alert systems
- application, purpose and operation of instruments and warning systems
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams
- diagnostic and testing procedures, including:
  - diagnostic procedures for instruments and warning systems, including:
    - accessing and interpreting diagnostic trouble codes
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component or connector corrosion
    - component water or moisture ingress
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of vehicle instruments and warning systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle or equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with instrument and warning system faults relevant to the qualification being sought
- equipment appropriate for the testing of vehicle instruments and warning systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for repairing, replacing and adjusting vehicle instruments and warning systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace first aid equipment</li> <li>• workplace safety policies and procedures</li> <li>• safe handling of material</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• personal protective clothing and equipment</li> <li>• use of fire-fighting equipment</li> <li>• safe use of tools and equipment.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to repairing and replacing instrument and warning systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• obtaining vehicle service history</li> <li>• isolating faults</li> <li>• inspecting and evaluating components.</li> </ul>
<b><i>Tools and equipment</i></b> may	<ul style="list-style-type: none"> <li>• hand tools</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• vehicle lifting devices</li> <li>• power tools</li> <li>• specialist tools for vehicle trim removal and replacement</li> <li>• dynamometer</li> <li>• electronic testing equipment, including: <ul style="list-style-type: none"> <li>• multimeter</li> <li>• oscilloscope</li> <li>• scan tools.</li> </ul> </li> </ul>
<b><i>Instruments and warning systems</i></b> may include:	<ul style="list-style-type: none"> <li>• driver information instruments and gauges</li> <li>• warning lights and dash lamps</li> <li>• engine shutdown systems</li> <li>• audible reverse warning systems in all types of vehicles, craft and equipment.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:</li> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes <ul style="list-style-type: none"> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• gauge and instrument warning system not working</li> <li>• incorrect gauge and instrument readings</li> <li>• wiring circuit faults, including: <ul style="list-style-type: none"> <li>• open circuit</li> <li>• short circuit</li> <li>• reference circuit</li> <li>• ground earth circuit.</li> </ul> </li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantling, repair, re-assembly and adjustment procedures</li> <li>• fault finding using aural, visual and functional assessments for damage, corrosion, wear and electrical short and open circuits</li> <li>• electrical measurements</li> <li>• diagnosing and determining repair requirements and electronic systems data, including fault codes, sensors, actuator measurement, and control unit input and output signals</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• reading and interpreting wiring diagrams.</li></ul>
<i>Post-repair testing</i> may include:	<ul style="list-style-type: none"><li>• validating effectiveness of repair action</li><li>• confirming that reported fault has been rectified</li><li>• confirming that no other faults are present as a result of repair action.</li></ul>

## AURETR3029 Diagnose and repair charging systems

### Modification History

Release	Comment
Release 1	Replaces AURE319166B Repair charging systems Performance Criteria and Range Statement updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair charging systems. It involves diagnosing deviations from correct operation, repairing charging system components and associated systems, and undertaking post-repair testing procedures.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to vehicles in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose vehicle charging systems	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>1.5. <b>Tools and equipment</b> are identified for effective repair methods</p>
2. Diagnose vehicle charging systems	<p>2.1. <b>Charging systems</b> are tested to isolate faults according to workplace procedures without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair vehicle charging systems	<p>3.1. <b>Repair options</b> are analysed and those most appropriate are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Prepare vehicle for delivery to customer	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and finalise work processes	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and the work area are cleaned and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>inspected according to workplace procedures</p> <p>5.4.Tools and equipment are maintained according to workplace procedures</p> <p>5.5.Faulty equipment is identified, tagged and isolated according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various charging systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand own skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
  - refer problems outside area of responsibility to appropriate person and suggest possible causes or solutions
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use hand, power, measuring and specialised tools relating to the repair of charging systems
- technology skills to:
  - operate diagnostic and automotive test equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements when working with vehicle while either on a hoist, trolley jack or safety stand, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs when working on vehicles in an automotive workshop
- application, purpose and operation of charging systems
- principal types of charging systems, including:
  - star connected stator
  - delta connected stator
  - internally or externally regulated
  - magneto
  - generators
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams
- operating principles of DC and AC motors
- diagnostic and testing procedures, including:
  - diagnostic procedures for charging systems, including:
    - accessing and interpreting diagnostic trouble codes
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- select methods and techniques appropriate to the fault being diagnosed
- complete preparatory activity in a systematic manner
- apply and demonstrate knowledge of DC and AC motors
- diagnose and repair a range of charging systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements
- complete workplace and equipment documents
- clean up work area and maintain equipment to workplace standards.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- a range of alternators, generators and components relevant to

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- the qualification being sought
- vehicles with charging faults relevant to the qualification being sought
- equipment appropriate for the testing of charging systems
- specifications and workplace instructions
- tools appropriate for repairing, replacing and adjusting charging systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• safe work procedures relating to the repair of charging systems</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace first aid equipment</li> <li>• workplace safety policies and procedures</li> <li>• safe handling of material</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• hot surfaces and moving parts and components</li> <li>• personal protective clothing and equipment</li> <li>• use of fire-fighting equipment</li> <li>• safe use of tools and equipment.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace work specifications and requirements</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• safe work procedures relating to repairing and replacing charging systems and components</li> <li>• vehicle service requirements and repair manuals</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams and sketches.</li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• obtaining vehicle service history</li> <li>• isolating faults</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>inspecting and evaluating components.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>hand tools</li> <li>vehicle lifting devices</li> <li>power and air tools</li> <li>specialist tools for removing and replacing charging systems</li> <li>soldering equipment</li> <li>electronic testing equipment, including:               <ul style="list-style-type: none"> <li>multimeter</li> <li>test light</li> <li>load tester</li> <li>inductive ammeter</li> <li>test benches</li> <li>single and ganged panels</li> <li>oscilloscope</li> <li>scan tools.</li> </ul> </li> </ul>
<b><i>Charging systems</i></b> may include:	<ul style="list-style-type: none"> <li>alternators:               <ul style="list-style-type: none"> <li>electromagnetic</li> <li>permanent magnet</li> </ul> </li> <li>generators</li> <li>dynastart, solid state and mechanical regulation</li> <li>belt and/or direct drive, single and multiple belt drives and adjustable tensioning devices</li> <li>single phase, half-wave rectified and full-wave rectified</li> <li>solar systems, including:               <ul style="list-style-type: none"> <li>single and ganged panels</li> <li>internal and external regulation</li> <li>battery sensed and machine sensing regulation</li> <li>6 V, 12 V and 24 V operation</li> </ul> </li> <li>solid state controlled.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:               <ul style="list-style-type: none"> <li>back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>probing terminal and connectors with inappropriate test</li> </ul> </li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. - technical skills to use hand, power, measuring and specialised tools relating to the repair of starting systems
- technology skills to:
  - operate diagnostic and automotive test equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements when working with vehicle while either on a hoist, trolley jack or safety stand, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs when working on vehicles in an automotive workshop
- application, purpose and operation of starting systems
- principal types of starting systems, including:
  - direct drive
  - solenoid pre-engaged, including:
    - reduction
    - spark ignition systems
    - compression ignition systems
  - control circuit, including:
    - key start
    - push button start
    - remote start
- techniques for reading and interpreting automotive technical information, graphic symbols and wiring diagrams
- operating principles of DC and AC motors
- diagnostic and testing procedures, including:
  - diagnostic procedures for starting systems, including:
    - typical starting system faults and their symptoms
    - accessing and interpreting diagnostic trouble codes (DTCs)
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- select methods and techniques appropriate to the fault being diagnosed
- complete preparatory activity in a systematic manner
- apply and demonstrate knowledge of DC and AC motors
- diagnose and repair a range of starting systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements
- clean up work area and maintain equipment to workplace standards.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- a range of starter motors and components relevant to the qualification being sought

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- vehicles with starting faults relevant to the qualification being sought
- equipment appropriate for the testing of starting systems
- specifications and workplace instructions
- tools appropriate for repairing, replacing and adjusting starting systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• safe work procedures relating to the repair of starting systems</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• workplace first aid equipment</li> <li>• workplace safety policies and procedures</li> <li>• safe handling of material</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• hot surfaces and moving parts and components</li> <li>• personal protective clothing and equipment</li> <li>• use of fire-fighting equipment</li> <li>• use of tools and equipment.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• engineer's design specifications and instructions</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• workplace work specifications and requirements</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• safe work procedures relating to repairing and replacing starting systems and components</li> <li>• vehicle service requirements and repair manuals</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams and sketches.</li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• obtaining vehicle service history</li> <li>• isolating faults</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>inspecting and evaluating components.</li> </ul>
<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>hand tools</li> <li>vehicle lifting devices</li> <li>power and air tools</li> <li>specialist tools for removal and replacement</li> <li>soldering equipment</li> <li>electronic testing equipment, including:               <ul style="list-style-type: none"> <li>multimeter</li> <li>test light</li> <li>load tester</li> <li>inductive ammeter</li> <li>test benches</li> <li>oscilloscope</li> <li>scan tools.</li> </ul> </li> </ul>
<b><i>Starting systems</i></b> may include:	<ul style="list-style-type: none"> <li>dynastart</li> <li>inertia</li> <li>pre-engaged</li> <li>axial and coaxial</li> <li>fixed and remote solenoid</li> <li>direct drive</li> <li>gear reduction</li> <li>protection lockout</li> <li>inhibitor switch</li> <li>series-parallel switching</li> <li>battery isolation switch</li> <li>single/multiple battery system</li> <li>permag starter motors</li> <li>DC and AC motors.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:               <ul style="list-style-type: none"> <li>back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>probing terminal and connectors with inappropriate test probes</li> </ul> </li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>pushing sharp probes and objects into wiring insulation.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>component malfunction, including:               <ul style="list-style-type: none"> <li>low battery voltage</li> <li>discharged battery</li> <li>excessive voltage drop</li> <li>noisy operation</li> <li>seized mechanical components</li> <li>worn mechanical components</li> <li>failure to engage drive pinion</li> </ul> </li> <li>control circuit faults</li> <li>open or short circuits to power, ground and reference circuits</li> <li>high circuit resistance</li> <li>DTC being set.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>component repair procedures, including:               <ul style="list-style-type: none"> <li>removal, replacement and adjustment procedures</li> <li>dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>validating effectiveness of the repair action</li> <li>confirming that reported fault has been rectified</li> <li>confirming that no other faults are present as a result of the repair action.</li> </ul>

## AURETR3031 Diagnose and repair ignition systems

### Modification History

Release	Comment
Release 1	Replaces AURE320666B Repair ignition systems Performance Criteria and Range Statement updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair ignition systems. It involves diagnosing deviations from correct operation, repairing ignition system components and associated systems, and undertaking post-repair testing procedures.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to basic ignition and electronic ignition (EI) systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work does not apply to ignition systems associated with engine management systems.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair ignition systems	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>1.5. <b>Tools and equipment</b> are identified for effective repair methods</p>
2. Diagnose ignition systems	<p>2.1. <b>Basic ignition and electronic ignition systems</b> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair ignition systems	<p>3.1. <b>Repair options</b> are analysed and those most appropriate are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Prepare vehicle and equipment for delivery to customer after repair is completed	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>
5. Clean up work area and finalise work processes	<p>5.1. Material that can be reused is collected and stored according to workplace sustainability practices</p> <p>5.2. Waste and scrap are removed according to workplace practices</p> <p>5.3. Tools, equipment and the work area are cleaned and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>inspected according to workplace procedures</p> <p>5.4.Tools and equipment are maintained according to workplace procedures</p> <p>5.5.Faulty equipment is identified, tagged and isolated according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various basic ignition and EI systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
- refer problems outside area of responsibility to appropriate person and suggest possible causes
- seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use hand, power, measuring and specialised tools relating to the repair of ignition systems
- technology skills to:
  - operate diagnostic and test equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - individual state and territory legislation
  - codes of practice
  - personal protection needs
- principal types of vehicle basic ignition and EI systems, including:
  - kettering
  - magneto
  - distributor
  - waste spark
- application, purpose and operation of basic ignition and EI systems, including:
  - ignition coil construction and operation:
    - transformer principles of operation
    - self-induced voltage and condenser effect on output
  - vehicle demands on ignition system
  - ignition switching and triggering, including dwell, firing order, timing, advances, current control and dwell extensions
  - magnetic inductive, hall effect and optical switching
- techniques for reading and interpreting technical information, graphic symbols and diagrams
- diagnostic and testing procedures, including:
  - diagnostic procedures for basic ignition and EI systems, including:
    - accessing and interpreting diagnostic trouble codes (DTCs)
    - diagnostic flow charts
  - analysis of system operation using electrical test equipment, current measurement, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- apply and demonstrate knowledge of ignition system operation, including dwell, current and timing control in all systems
- diagnose and repair a range of vehicle basic ignition and EI systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- a range of ignition system and components relevant to the qualification being sought

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- vehicles with basic ignition and EI faults relevant to the qualification being sought
- equipment appropriate for the testing of vehicle basic ignition and EI systems
- specifications and workplace instructions
- tools appropriate for repairing, replacing and adjusting vehicle basic ignition and EI systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety requirements</b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• hazards associated with high voltage ignition systems</li> <li>• use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to repairing and replacing basic ignition and EI systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b>Options for diagnosing faults</b> may include:	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• testing equipment, including multimeters, ammeters, voltmeters and tachometers</li> <li>• timing light</li> <li>• spark plug testers</li> <li>• insulation testers</li> <li>• power tools and air tools</li> <li>• tune scopes</li> <li>• engine analysers</li> <li>• dynamometers</li> <li>• distributor test bench.</li> </ul>
<b><i>Basic ignition and electronic ignition systems</i></b> may include:	<ul style="list-style-type: none"> <li>• single and dual points</li> <li>• transistor assisted</li> <li>• single and multiple distributors</li> <li>• ballast and non-ballast primary circuits</li> <li>• suppressed and non-suppressed high-tension leads</li> <li>• magneto</li> <li>• capacitor discharge ignition (CDI) systems</li> <li>• transistor controlled ignition (TCI) systems</li> <li>• electronic spark timing (EST) systems</li> <li>• advance mechanisms: mechanical, vacuum, electronic, magnetic pulse, optic and hall effect</li> <li>• spark plug, resistor plug and cap.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• engine difficult to start or will not start</li> <li>• engine misfiring</li> <li>• poor engine performance</li> <li>• engine knock</li> <li>• overheating</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• DTC being set.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• pre- and post-repair testing</li> <li>• identifying and testing components</li> <li>• diagnosing and determining faults</li> <li>• component repair procedures, including:               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures</li> </ul> </li> <li>• electrical measurements</li> <li>• peak voltage testing</li> <li>• visual and functional assessments, including for damage and wear.</li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating effectiveness of the repair action</li> <li>• confirming that reported fault has been rectified</li> <li>• confirming that no other faults are present as a result of the repair action.</li> </ul>

## AURETR3032 Repair electrical systems

### Modification History

Release	Comment
Release 1	Replaces AURE318866A Repair electrical systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to carry out repairs to vehicle/equipment electrical systems, including accessories, wipers, electric windows, lighting, turning indicators, hazard lights, door locks and fan blowers.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing of systems and identification of faults/causes, repair and retesting of electrical systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>For minor electrical repairs see AURETR2012 Test and repair basic electrical circuits.</p> <p>For repairs to electrical marine systems see AURRTE3005 Diagnose and repair marine electrical systems and components.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including method, process and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal safety needs, are observed throughout the work 1.4. Equipment and tooling are identified and checked for safe and effective operation 1.5. Procedures are determined to minimise task time
2. Test systems/ components and identify faults	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Tests are carried out to determine faults using tooling and techniques 2.3. Systems/components are tested without causing damage to component or system 2.4. Faults are identified and preferred repair action determined 2.5. Tests are carried out according to industry regulations/ guidelines, WHS, legislation and enterprise procedures/policies
3. Repair electrical systems	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Repairs, component replacement and adjustments are carried out using tooling, techniques and materials 3.3. Repairs to electrical systems are completed without causing damage to component or system 3.4. Retests are carried out to ensure correct and safe electrical system operation 3.5. Repairs and retests are carried out according to industry regulations/guidelines, WHS, legislation and enterprise procedures/policies 3.6. Workplace and equipment documents are completed in accordance with site requirements
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap is removed following workplace procedures 4.3. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures 4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace requirements

ELEMENT	PERFORMANCE CRITERIA
	<p>4.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>4.6.Tooling and equipment is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for circuit and component testing, and major repairs/component replacement
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information of electrical circuit/component testing, servicing and replacement procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete tests and measurements to determine electrical circuit/component major repair/replacement requirements
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform electrical testing, and repair/replacement procedures
- problem-solving skills for a range of procedural issues
- use workplace technology related to the repair of electrical systems, including use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operation of electrical system/components relevant to application
- motor principles/magnetism
- types and layout of service/repair manuals (hard copy and electronic)
- procedures for the repair/replacement of electrical systems/components
- testing and diagnosis procedures of electrical system/component faults
- wiring repair procedures
- work organisation and planning processes

**REQUIRED SKILLS AND KNOWLEDGE**

- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- testing and identifying open circuits, short circuits and earthing faults in electrical systems
- repairing/replacing electrical systems/components to site and manufacturer/component supplier requirements
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to repairing electrical systems
- equipment and hand and power tooling appropriate to repairing electrical systems
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the Automotive Industry RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

	<p>questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <ul style="list-style-type: none"><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electrical systems</b>	Electrical systems may include: <ul style="list-style-type: none"> <li>accessories, wipers, electric windows, door locks and fan blowers applicable to all equipment, including light, heavy, motorcycles, marine and outdoor power equipment</li> </ul>
<b>Faults</b>	Faults are to include: <ul style="list-style-type: none"> <li>electrical unit faults, wire repair/replacement, open circuits, short circuits and earthing</li> </ul>
<b>Systems</b>	Systems include; electrical systems fitted to all vehicles including motorcycles, marine and outdoor power equipment applicable to electrical measurements
<b>Repair methods</b>	Repair methods include: <ul style="list-style-type: none"> <li>fault finding using aural, visual and functional assessments for damage, corrosion, wear and electrical defects, reading/interpreting wiring diagrams, diagnosing and determining faults, soldering, crimping, repairing components and wiring, remove/replace components, and may include repairing 12/24 V electric motors</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to</li> </ul>

<b>RANGE STATEMENT</b>	
	others and site visitors
<b>Emergency procedures</b>	Emergency procedures are to include, but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling, testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment, manufacturer/component suppliers' diagnostic tooling, oscilloscopes and scan tooling</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts, lubricants, fluids and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair of electrical systems</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURETR3036 Service and repair electronically controlled suspension systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURE320971A Service and repair electronically controlled suspension systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to locate and repair faults in electronically controlled suspension systems, including ride control systems and height control systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, servicing and adjusting of systems, repair of faults, retesting of systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including quality, material, equipment quantities and service manuals 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal protection needs, are observed throughout the work 1.4. Electronic system protection devices, processes and precautions are identified appropriate to the application 1.5. Equipment and tooling are identified and checked for safety and correct operation 1.6. Procedures to minimise task time are identified
2. Service and adjust electronically controlled suspension systems	2.1. Service information is accessed and interpreted prior to commencing servicing procedures 2.2. Current status and previous fault history of electronic suspension system is determined in conjunction with the customer 2.3. Current status of electronic system is confirmed through a road test program 2.4. Electronic system is serviced in accordance with manufacturer/component supplier specifications and enterprise procedures 2.5. Fluids and lubricants are used in accordance with WHS and manufacturer/component supplier specifications 2.6. Used fluids and lubricants are disposed of according to enterprise and WHS requirements
3. Rectify identified electronically controlled suspension system faults	3.1. Road test results are interpreted to verify system fault diagnosis 3.2. Customer is notified of identified faults and agreement is given before work is carried out 3.3. Faulty components are removed and refitted with approved replacement parts in accordance with workplace procedures and customer requirements 3.4. Faulty components are disposed of in accordance with workplace procedures and warranty requirements 3.5. System adjustments are completed for components replaced
4. Test and confirm system faults have been rectified	4.1. Test procedures are carried out to confirm rectification of system faults 4.2. Documentation is completed in accordance with workplace/customer requirements

ELEMENT	PERFORMANCE CRITERIA
	4.3.Outcomes of rectification work are explained to the satisfaction of the customer to enable invoicing documentation to be completed
5. Clean up work area and maintain equipment	5.1.Material that can be reused is collected and stored 5.2.Waste and scrap is removed according to workplace procedures 5.3.Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures 5.4.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures 5.5.Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures 5.6.Tooling is maintained in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for circuit and component testing, and major repairs/component replacement
- technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret technical information and specifications
- research and interpretive skills to locate, interpret and apply operational and safety information
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plain English literacy and communication skills in relation to dealing with others involved in the work
- questioning and active listening skills, for example when obtaining information on electrical circuit/component testing, servicing and replacement procedures
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to complete tests and measurements to determine electrical circuit/component major repair/replacement requirements
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- manipulative and dexterity skills to perform electrical testing, and repair/replacement procedures
- problem-solving skills for a range of procedural issues
- use workplace technology related to the service and repair of electronically controlled suspension systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirement, equipment, material and personal safety requirements
- operating principles of electronically controlled suspension systems
- construction and operation of electronically controlled suspension systems
- relationship to other electronically controlled system(s), including shared components (e.g. ECU, sensors) test, diagnosis and fault determination procedures
- types and layout of service/repair manuals (hard copy and electronic)
- service/repair, removal, replacement and adjustment procedures

**REQUIRED SKILLS AND KNOWLEDGE**

- post-repair test procedures
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- servicing and adjusting electronic suspension systems to manufacturer/component supplier requirements
- determining repair/replacement requirements to rectify faults
- repairing/rectifying faults in electronic suspension systems to manufacturer/component supplier requirements
- testing, inspecting and evaluating suspension system/components to manufacturer/component supplier requirements
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the service and repair of electronically controlled suspension systems
- equipment, hand and power tooling appropriate to the service and repair of electronically controlled suspension systems
- activities covering mandatory task requirements
- specifications and work instructions.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines

**EVIDENCE GUIDE**

	<p>of the Automotive Industry RS&amp;R Training Package</p> <ul style="list-style-type: none"><li>• Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</li><li>• Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</li><li>• Assessment may be applied under project related conditions and require evidence of process</li><li>• Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances</li><li>• It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</li></ul>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electronically controlled suspension systems</b>	Electronically controlled suspension systems include: <ul style="list-style-type: none"> <li>those fitted to light and heavy vehicles and include side control and side height</li> </ul>
<b>Diagnose and determine faults</b>	Methods include: <ul style="list-style-type: none"> <li>diagnosis and determining faults, pre- and-post-service/repair testing of system and component operation, service and repair/replacement of system components, service and repair adjustments, removal, dismantling, reassembly and refitting, testing system operations, retrieval and assessment of electronic systems data, including fault codes</li> </ul>
<b>Faults</b>	Faults may include: <ul style="list-style-type: none"> <li>component malfunction, system adjustment, open and short circuits</li> </ul>
<b>Critical precautions</b>	Critical precautions, including manufacturer/component supplier procedures, must be applied as poor working practices are likely to damage electronic system ECUs and/or other components
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>• federal, state and local authorities administering the acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling, testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment, oscilloscopes, scan tooling and LED test lights</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts, lubricants, fluids and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the service and repair of electronically controlled suspension systems</li> <li>• Regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURETR3043 Service and repair electronic body management systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURE321371A Service and repair electronic body management systems</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to service/repair electronic body management systems and/or associated components which include engine immobilisation, central locking, power windows, electric mirrors, electronic seat adjustment with memory and security systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and diagnosis of faults, servicing, repair and retesting of systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements, including quality, material, equipment quantities and service manuals 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal protection needs, are observed throughout the work 1.4. Electronic system protection devices, processes and precautions are identified appropriate to the application 1.5. Equipment and tooling are identified and checked for safety and correct operation 1.6. Procedures are identified to minimise task time
2. Test control system, diagnose faults and determine service/repair requirements	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Tests are carried out according to manufacturer/component supplier recommended procedures using tooling, equipment and techniques 2.3. Testing is completed without causing damage to component or system 2.4. Test results are used to diagnose system/component faults 2.5. Service/repair requirements are determined 2.6. Testing is carried out according to industry regulations/guidelines WHS and enterprise/procedures policies
3. Service/repair body management systems	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Service/repair requirements are carried out according to manufacturer/component supplier recommended specifications and procedures 3.3. Service/repair is completed without causing damage to component or system 3.4. Electronic systems are tested and results are documented in accordance with workplace policies and procedures 3.5. Service, repair and retesting are carried out according to industry regulations/guidelines, WHS and enterprise/procedures policies 3.6. Workplace and equipment documents are completed in accordance with site requirements
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>4.6. Tooling is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for servicing, repairing and testing electronic body management systems
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the service and repair of electronic body management systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirement, equipment, material and personal safety requirements
- operating principles of electronic body management systems
- construction and operation of electronic body management systems
- types and layout of service/repair manuals (hard copy and electronic)
- relationship to other electronically controlled systems, including shared components (e.g. ECU, sensors)
- testing, diagnosis and fault determination procedures
- servicing/repairing, removal, replacement and adjustment procedures relevant to application
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- testing, inspecting and evaluating electronic body management systems/components
- diagnosing and determining the repair/replacement requirements to rectify faults
- servicing/repairing electronic body management systems to manufacturer/component supplier requirements
- completing the work within agreed time
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the service and repair of electronic body management systems
- equipment, hand and power tooling appropriate to the service and repair of electronic body management systems
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&R Training Package

**EVIDENCE GUIDE**

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies
- Assessment may be applied under project related conditions and require evidence of process
- Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electronic body management systems</b>	Electronic body management systems may control the following functions: <ul style="list-style-type: none"> <li>engine immobilisation, central locking, power windows, electric mirrors, electronic seat adjustment with memory and security systems</li> </ul>
<b>Fittings</b>	Electronic body management systems include those fitted to light vehicles and/or heavy commercial vehicles and/or plant and equipment and/or outdoor power equipment
<b>Functions</b>	Electronic body management may control the following functions: <ul style="list-style-type: none"> <li>engine immobilisation, central locking, power windows, electric mirrors, electronic seat adjustment with memory and security systems</li> </ul>
<b>Service and repair methods</b>	Service and repair methods include: <ul style="list-style-type: none"> <li>identifying, measuring and interpreting inputs and outputs, diagnosis and determining faults, pre- and post-repair testing of system and component operation, service and repair/replacement of system components, service and repair adjustments, removal, dismantling, reassembly and refitting, testing system operations and retrieval and assessment of electronic systems data, including fault codes</li> </ul>
<b>Faults</b>	Faults may include: <ul style="list-style-type: none"> <li>component or system malfunction</li> </ul>
<b>Critical precautions</b>	Critical precautions, including manufacturer/component supplier procedures, must be applied as poor working practices are likely to damage electronic system ECUs and/or other components
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</li> </ul>
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>federal, state/territory and local authorities administering the acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>hand tooling, testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment, specialised system testers, oscilloscope, scan tooling and LED test lights</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>spare parts and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material</li> </ul>

**RANGE STATEMENT**

	<p>safety data sheets, diagrams or sketches</p> <ul style="list-style-type: none"><li>• safe work procedures related to the service and repair of electronic body management systems</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Work instructions are used to determine job requirements including methods, processes and equipment 1.2. Job specifications are read and interpreted 1.3. WHS requirements, including personal protection needs, are observed throughout the work 1.4. Electronic system protection devices, processes and precautions are identified appropriate to the application 1.5. Equipment and tooling are identified and checked for safety and correct operation 1.6. Procedures are identified to minimise task time
2. Test control system, diagnose faults and determine service/repair requirements	2.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2. Tests are carried out according to manufacturer/component supplier recommended procedures using tooling, equipment and techniques 2.3. Testing is completed without causing damage to component or system 2.4. Test results are used to diagnose system/component faults 2.5. Service/repair requirements are determined 2.6. Testing is carried out according to industry regulations/guidelines WHS and enterprise/procedures policies
3. Service/repair drive management systems	3.1. Correct information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Service/repair requirements are carried out according to manufacturer/component supplier recommended specifications and procedures 3.3. Service/repair is completed without causing damage to component or system 3.4. Electronic systems are tested and results are documented in accordance with workplace policies and procedures 3.5. Service, repair and retesting are carried out according to industry regulations/guidelines, WHS and enterprise/procedures policies 3.6. Workplace and equipment documents are completed in accordance with site requirements
4. Clean up work area and maintain equipment	4.1. Material that can be reused is collected and stored 4.2. Waste and scrap are removed following workplace procedures

ELEMENT	PERFORMANCE CRITERIA
	<p>4.3. Equipment and work area are cleaned and inspected for serviceable conditions in accordance with workplace procedures</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures</p> <p>4.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and site procedures</p> <p>4.6. Tooling is maintained in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand information related to work orders, plans and safety procedures for servicing, repairing and testing electronic drive management systems
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including preparation and layout of worksite and obtaining of equipment and material to avoid backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use pre-checking and inspection techniques to anticipate planning and scheduling problems, avoid wastage of time and material
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the service and repair of electronic drive management systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirement, equipment, material and personal safety requirements
- operating principles of electronic drive management systems
- construction and operation of electronic drive management systems
- types and layout of service/repair manuals (hard copy and electronic)
- relationship to other electronically controlled systems, including shared components (e.g. ECU, sensors)
- testing, diagnosis and fault determination procedures
- servicing/repairing, removal, replacement and adjustment procedures relevant to application
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- testing, inspecting and evaluating electronic drive management systems
- diagnosing and determining the repair/replacement requirements to rectify faults
- servicing/repairing electronic drive management systems to manufacturer/component supplier requirements
- completing mandatory service and repair methods listed in the range statement
- completing the work within agreed time
- completing workplace and equipment documents.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the service and repair of electronic drive management systems
- equipment, hand and power tooling appropriate to the service and repair of electronic drive management systems
- activities covering mandatory task requirements
- specifications and work instructions.

**EVIDENCE GUIDE****Method of assessment**

- Assessment must satisfy the endorsed Assessment Guidelines of AUR12 Automotive Industry RS&R Training Package
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies
- Assessment may be applied under project related conditions and require evidence of process
- Assessment must confirm a reasonable inference that competence is able to be under the particular circumstance, and is able to be transferred to other circumstances
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Drivelines</b>	Electronic control automatic transmissions and 4WD drivelines, such as automatic free wheeling hubs, differentials and axle locks
<b>Electronic drive management systems</b>	Electronic drive management systems include: <ul style="list-style-type: none"> <li>electronically controlled automatic transmissions and electronically controlled 4WD drivelines, such as automatic free wheeling hubs, differentials and anti lock braking systems</li> </ul>
<b>Fittings</b>	Electronic drive management systems may be fitted to light vehicles, plant, heavy vehicles and outdoor power equipment
<b>Service and repair methods</b>	Service and repair methods include: <ul style="list-style-type: none"> <li>diagnosis and determining faults, pre- and post-repair testing of system and component operation, service and repair/replacement of system components, service and repair adjustments, removal, dismantling, reassembly and refitting, retrieval and assessment of electronic systems data, including fault codes</li> </ul>
<b>Critical precautions include</b>	Critical precautions include: <ul style="list-style-type: none"> <li>manufacturer/component supplier procedures which must be applied as poor working practices are likely to damage electronic system ECU and/or other components</li> </ul>
<b>WHS requirements</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures, and may include: <ul style="list-style-type: none"> <li>protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to: <ul style="list-style-type: none"> <li>the conduct of operational risk assessment and treatments</li> </ul>

<b>RANGE STATEMENT</b>	
	associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but may not be limited to: <ul style="list-style-type: none"> <li>• emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</li> </ul>
<b>Environmental requirements</b>	Environmental requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• waste management, noise, dust and clean-up management</li> </ul>
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to: <ul style="list-style-type: none"> <li>• regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures</li> </ul>
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include: <ul style="list-style-type: none"> <li>• federal, state/territory and local authorities administering the acts, regulations and codes of practice</li> </ul>
<b>Tooling and equipment</b>	Tooling and equipment may include: <ul style="list-style-type: none"> <li>• hand tooling, testing equipment, including multimeters, power tooling, air tooling, specialist tooling for removal/adjustment and specialist system testers</li> </ul>
<b>Materials</b>	Materials may include: <ul style="list-style-type: none"> <li>• spare parts and cleaning material</li> </ul>
<b>Communications</b>	Communications are to include, but are not limited to: <ul style="list-style-type: none"> <li>• verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers</li> </ul>
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the service and repair of electronic drive management systems</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURETR4004 Diagnose complex electrical and electronic faults in vehicle convenience and entertainment systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in vehicle convenience and entertainment systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical or electronic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of vehicle convenience and entertainment systems of motorcycles, light vehicles, heavy commercial vehicles, and vehicles in the mining, construction, agricultural and marine environments.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <b>vehicle convenience and entertainment systems</b> are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, equipment and system isolation requirements, and personal protection needs are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> with vehicle convenience and entertainment systems are identified and confirmed from direct and/or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace requirements and practices</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to vehicle convenience and entertainment systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of vehicle convenience and entertainment systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of vehicle convenience and entertainment systems
- types, functions and operations of vehicle convenience and entertainment systems
- theory of diagnosis, including concept, design and planning
- electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetics, inductance, discrete electronic components, logic families and radio frequency, discrete electronic components, DC motors and solenoids
- types, functions, operations and limitations of diagnostic testing equipment related to vehicle convenience and entertainment systems
- methods and processes for documenting and reporting diagnostic findings and recommendations

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• interpret workplace instructions and locate and apply information</li> <li>• apply safety requirements, including the use of personal protective equipment</li> <li>• identify and select appropriate diagnosis processes to be performed</li> <li>• complete diagnosis of complex faults on a minimum of three different vehicle convenience and entertainment systems or components with real or simulated faults</li> <li>• document and report outcomes and required actions of diagnosis of complex faults in vehicle convenience and entertainment systems.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• vehicles with real or simulated vehicle convenience and</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

entertainment system faults

- tools and equipment appropriate for the diagnosis of complex faults in vehicle convenience and entertainment systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Vehicle convenience and entertainment systems</i></b> may include:	<ul style="list-style-type: none"> <li>• telematic controls and multimedia or wheels, vehicle acoustics, tilt/trim, winch, voltage reducers, voltage inverters, central locking, power windows, sun roof, seat positioning, mirror positioning, steering wheel positioning, seatbelt positioning and multi-class bi-directional universal switch (BUS) systems</li> <li>• audio and visual units, compact discs, analogue tapes, radios, speaker types, amplifiers, crossovers, balancers and aerials.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• electrical and electronic failures</li> <li>• direct faults in input sensors, output actuators, wiring harnesses or computer systems</li> <li>• indirect faults caused by the influence of external electrical and electronic systems, which may or may not be faulty in their primary operations.</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• wiring and connector integrity</li> <li>• operation and specification of input and output devices</li> <li>• controlling electronic components and computers</li> <li>• sound quality</li> <li>• tests to voltage reducers and voltage inverters</li> <li>• data interpretation and readings relating to direct, indirect and intermittent causes.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• analogue and digital multimeters</li> <li>• lab oscilloscopes</li> <li>• scan tools</li> <li>• test lights and test LEDs</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• manufacturer and component supplier testing equipment.</li> </ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures relating to vehicle convenience and entertainment systems</li> <li>• six-step troubleshooting plan</li> <li>• component replacement</li> <li>• discover-investigate-fix methodology.</li> </ul>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Light vehicle safety systems*** may include:

- fire suppressing
- work load detecting
- tyre pressure control
- speed and load limiting
- traction control
- seatbelt pre-tensioning
- roll-over protection
- object detection
- navigation aids
- intelligent transport systems
- intelligent supplementary restraint systems (SRS)
- adaptive cruise control
- multi-class bi-directional universal switch (BUS) systems
- active and passive collision avoidance
- infra-red vision
- lighting and windscreen wiper control.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
  - safety management systems, including equipment and system isolation requirements
- hazard control, including control of hazardous materials and toxic substances

***Faults*** may include:

- electrical and electronic failures
- direct faults in input sensors, output actuators, wiring harnesses or computer systems
- calibration or adjustment specifications, component specifications and component assembly
- component damage and system modifications

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>indirect faults caused by the influence of electrical and electronic external systems, which may or may not be faulty in their primary operations.</li> </ul>
<b>Tests</b> may include:	<ul style="list-style-type: none"> <li>wiring and connector integrity</li> <li>operator and specification of input and output devices</li> <li>controlling electronic components and computers</li> <li>data interpretation</li> <li>readings relating to direct, indirect and intermittent causes.</li> </ul>
<b>Testing equipment</b> may include:	<ul style="list-style-type: none"> <li>analogue and digital multimeters</li> <li>lab oscilloscopes</li> <li>scan tools</li> <li>test lights and test LEDs</li> <li>pulse generators</li> <li>manufacturer and component supplier testing equipment.</li> </ul>
<b>Diagnostic processes</b> may include:	<ul style="list-style-type: none"> <li>analysing manufacturer and component supplier specifications, schematics and operational procedures relating to light vehicle safety systems</li> <li>six-step troubleshooting plan</li> <li>discover-investigate-fix methodology.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning motorcycle electrical and electronic systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, equipment and system isolation requirements, and personal protection needs are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> with motorcycle electrical and electronic systems are identified and confirmed from direct and/or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace requirements and practices</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to motorcycle electrical and electronic systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of motorcycle electrical and electronic systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance
- types, function, operations and limitations of motorcycle electrical and electronic systems and components
- theory of diagnosis, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment relating to motorcycle electrical and electronic systems
- testing procedures motorcycle electrical and electronic systems, including procedures for accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different motorcycle electrical and electronic systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in motorcycle electrical and electronic systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles with real or simulated electrical and electronic

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

	<p>system faults</p> <ul style="list-style-type: none"> <li>tools and equipment appropriate for the diagnosis of complex faults in motorcycle electrical and electronic systems</li> <li>technical reference information and workplace instructions.</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
  - safety management systems, including equipment and system isolation requirements
- hazard control, including control of hazardous materials and toxic substances

***Faults*** may include:

- lighting, ignition, charging, fuel injection, anti-lock braking system (ABS), engine management and safety lock-out system faults
- component damage and system modifications
- indirect faults caused by the influence of external electrical and electronic systems, which may or may not be faulty in their primary operations.

***Tests*** may include:

- wiring and connector integrity
- operator and specification of input and output devices
- controlling electronic components and computers
- data interpretation
- readings relating to direct, indirect and intermittent causes.

***Testing equipment*** may include:

- vacuum gauges
- engine emission testers
- fuel pressure and flow meters
- injector testers
- magnetic coil condenser testers
- peak voltage meters
- analogue and digital multimeters
- lab oscilloscopes
- scan tools
- test lights and test LEDs

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• manufacturer and component supplier testing equipment.</li> </ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures relating to motorcycle electrical and electronic system faults</li> <li>• six-step troubleshooting plan</li> <li>• discover-investigate-fix methodology.</li> </ul>

## AURETR4039 Diagnose complex electrical and electronic faults in light vehicle theft deterrent systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in light vehicle theft deterrent systems in order to initiate action to service, repair or replace them, or to improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical or electronic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of theft deterrent systems of light vehicles, four wheel drive and light commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning <i>light vehicle theft deterrent systems</i> are accessed and interpreted</p> <p>1.3. <i>Workplace health and safety (WHS) requirements</i>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <i>faults</i> in light vehicle theft deterrent systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <i>tests</i> and testing process are identified and selected from the range of available options</p> <p>2.4. <i>Testing equipment</i> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <i>diagnostic processes</i> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to light vehicle theft deterrent systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of light vehicle theft deterrent systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, electrical and electronic systems related to light vehicle theft deterrent systems
- types, functions, operations and limitations of light vehicle theft deterrent systems
- types, functions, operations and limitations of electromechanical and electronic subsystems in light vehicle theft deterrent systems
- electrical theory and operation of automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance, discrete electronic components, logic families and radio frequency
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to light vehicle theft deterrent systems
- methods and processes for documenting and reporting diagnostic findings and recommendations

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• interpret workplace instructions and locate and apply information</li> <li>• apply safety requirements, including the use of personal protective equipment</li> <li>• identify and select appropriate diagnosis processes to be performed</li> <li>• complete diagnosis of complex faults on a minimum of three different light vehicle theft deterrent systems with real or simulated faults</li> <li>• document and report outcomes and required actions of diagnosis of complex faults in light vehicle theft deterrent systems.</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

deterrent systems faults

- tools and equipment appropriate for the diagnosis of complex faults in light vehicle theft deterrent systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Light vehicle theft deterrent systems</i></b> may include:	<ul style="list-style-type: none"> <li>• remote keyless entry (RKE)</li> <li>• immobiliser system design</li> <li>• passive entry systems</li> <li>• two-way RKE</li> <li>• fingerprint technologies</li> <li>• rolling codes</li> <li>• transmitter and receiver operation</li> <li>• satellite systems.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• electrical and electronic failures</li> <li>• direct faults in input sensors, output actuators, wiring harnesses or computer systems</li> <li>• calibration or adjustment specifications, component specifications and component assembly</li> <li>• component damage and system modifications</li> <li>• indirect faults caused by the influence of electrical and electronic external systems, which may or may not be faulty in their primary operations.</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• wiring and connector integrity</li> <li>• operation and specification of input and output devices</li> <li>• controlling electronic components and computers</li> <li>• data interpretation</li> <li>• readings relating to direct, indirect and intermittent causes.</li> </ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the modification requirement	<p>1.1.WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.2.Purpose and objectives of the modification are identified from an analysis of inputs and confirmed with the customer.</p> <p>1.3.Outline options for achieving the required purpose and objectives are identified, framed and presented to the customer prior to proceeding.</p> <p>1.4.Possible legal and safety impacts of the modification are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Develop and validate the modification specification	<p>2.1.Benchmark specifications for the existing electronic system are accessed and interpreted.</p> <p>2.2.Criteria to be used in the selection of the modification method and in the evaluation of the outcomes are identified and documented.</p> <p>2.3.Proposed modification method is selected following the identification, consideration and evaluation of the full range of available and relevant options.</p> <p>2.4.Selected option, including material choices and processes, is developed in detail and progressively validated against the established criteria.</p> <p>2.5.Modification specification is documented to industry and enterprise standards.</p>
3. Apply and test the modification specification	<p>3.1.Selected modification method and process is followed in accordance with the established specifications.</p> <p>3.2.Modification is completed using equipment, tooling and materials in accordance with accepted industry standards and practices.</p> <p>3.3.Tests and testing equipment are applied in accordance with regulatory requirements, manufacturer/component supplier specifications and modification specification.</p> <p>3.4.Test results and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes.</p> <p>3.5.Variations necessitated during the modification process or as a result of testing are incorporated into the modification specification.</p> <p>3.6.Information and detail related to the modification is documented and provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>

ELEMENT	PERFORMANCE CRITERIA
4. Clean up work area and maintain equipment	<p>4.1. Materials that can be reused is collected and stored.</p> <p>4.2. Testing equipment and support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>4.3. Waste and scrap is removed following workplace procedures.</p> <p>4.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p> <p>4.5. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand legal and technical information related to contemporary automotive electronic systems modifications.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the development and planning of modification processes, preparation and layout of the worksite and the obtaining of tooling, equipment, materials and testing equipment to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate specifications, calibrate and establish testing equipment and evaluate modification results against pre-established criteria.
- establish modification methods and processes which anticipate and allow for risks and avoid or minimise reworking and avoid wastage.
- use the full range of workplace technology related to electronic systems modification, including testing equipment, maintenance equipment, tooling, calculators and measuring devices and information management systems.

#### Required knowledge

- general knowledge of the types, functions, operations and limitations of the main automotive industry electronic systems.
- general knowledge of automotive digital computing systems.
- detailed knowledge of electrical theory and operation covering, laws, theorems, dc and ac voltage and current, resistance, power, capacitance, electrostatics, electromechanics, magnetism, inductance, reactance, time constants, resonance, filtering, discrete semi-conductor electronic components, colour codes, analogue electronics, analogue IC, binary, logic families, digital IC, memory types and functions, microprocessor principles, micro-controller principles, analogue to digital conversion, signal processing, output control and characteristics, automotive digital computers, programming, networked vehicles and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting modification specifications and outcomes.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Modify a significant electronic system or sub-system including:
  - external modification (not within the computer) to a digital computer management system enhancing the system performance
  - external modification (not within the computer) to a digital computer management system, utilising electronic circuit design, development, manufacture, trial, evaluation, improvement and commissioning, enhancing the system performance
  - internal modification (within the computer) to a digital computer management system, utilising electronic circuit design, reprogramming, development, manufacture, trial, evaluation, improvement, and commissioning enhancing the system performance.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

#### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to operational electronic systems requiring modification, testing equipment as stipulated in the Range Statement, technical information and a work environment.

#### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of

**EVIDENCE GUIDE**

	<p>process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Electrical modifications

Electronic modifications to be covered by this unit may include computer controlled systems where the process relates to three categories:

- Modification carried out external to the computer, utilising 'off the shelf' components and modification to wiring circuitry.

#### Example:

- Modification to an electronic engine management system, improving the performance of an ECU controlled engine cooling fan system necessitating changes to relay circuitry.
- Modification carried out external to the computer, utilising electronic circuit design, development, manufacture, trial, evaluation, improvement, and commissioning.

#### Example:

- Development of an electronic control unit to delay engine crank while sounding an alarm warning of impending start of hazardous equipment.
- Modification carried out internally in the computer, utilising electronic circuit design, reprogramming, development, manufacture, trial, evaluation, improvement, and commissioning.

#### Examples are:

- Rectification of an original internal computer design/operating deficiency
- Modification to an electronic engine management computer, to enhance the performance of an engine
- Modification to a computerised system, to disable a function no longer required by customer
- Inputs to the modification method and processes may be obtained from customer requirements, manufacturer/component supplier specifications, outcomes of diagnostic processes or from regulatory, licensing, intellectual property legislation, safety requirements and Australian Design Rules

#### Unit context

- WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances

<b>RANGE STATEMENT</b>	
	<p>and dangerous goods code and safe operating procedures.</p> <ul style="list-style-type: none"> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluation criteria</b>	Evaluation criteria, sometimes referred to as success factors, are to be established prior to a modification being undertaken and are to cover safety, functionality, survivability, maintainability life cycle cost and aesthetics.
<b>Isolation procedures</b>	Equipment isolation procedures are to be to industry and enterprise standards.
<b>Equipment</b>	Equipment is to include that appropriate to the modification being carried out, including electronic work station, desoldering station, electronic variable power supply, simulated vehicle system test facility, multimeters, lab oscilloscopes, logic probe and data scanners, and it should include computer-based diagnostic systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to electronic systems modification.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging electronic technology and technology changes.</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- collect, organise and understand legal and technical information related to contemporary automotive electrical systems modifications.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the development and planning of modification processes, preparation and layout of the worksite and the obtaining of tooling, equipment, materials and testing equipment to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate specifications, calibrate and establish testing equipment and evaluate modification results against pre-established criteria.
- establish modification methods and processes which anticipate and allow for risks and avoid or minimise reworking and avoid wastage.
- use the full range of workplace technology related to electrical systems modification, including testing equipment, maintenance equipment, tooling, calculators and measuring devices and information management systems.

#### Required knowledge

- electrical theory covering voltage, current, resistance, power, magnetism and inductance including semi-conductors and electronic system applications.
- electrical theory covering the concepts and principles of electrical, electronic and pneumatic systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance and radio frequency.
- general knowledge of the types, functions, operation and limitations of the main automotive industry electrical systems.
- general knowledge of automotive digital computing systems.
- detailed knowledge of the types, functions, operation and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting modification specifications and outcomes.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Modify a significant electrical system or sub-system including:
  - the selection, development and documenting of success factors and evaluation criteria before undertaking the modification
  - the selection, development and validation of the modification methodology, processes and specification
  - the application of the modification specification, methodology and process
  - the documenting and reporting of the outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.

Access to operational electrical systems required modification, testing equipment as stipulated in the Range Statement, technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related and require portfolios or other forms of indirect evidence of process. Direct evidence will include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to

**EVIDENCE GUIDE**

	<p>be transferred to other projects.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Electrical modifications</b>	<p>Electrical modifications to be covered by this unit may include those to:</p> <ul style="list-style-type: none"> <li>• vary the performance of DC motors to meet changes in operational requirements</li> <li>• vary the performance of alternators to meet changes in operational requirements</li> <li>• change the electrical sequenced operating order of electric over hydraulic systems</li> <li>• convert vehicle from ground to insulated return.</li> </ul>
<b>Inputs to the modification method and processes</b>	<p>Inputs to the modification method and processes may be obtained from customer requirements, manufacturer/ component supplier specifications, outcomes of diagnostic processes or from regulatory, licensing, intellectual property legislation, safety requirements and Australian Design Rules.</p>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluation criteria</b>	<ul style="list-style-type: none"> <li>• Evaluation criteria, sometimes referred to as success factors, are to be established prior to a modification being undertaken and are to cover safety, functionality, survivability, maintainability, life cycle cost and aesthetics.</li> </ul>
<b>Isolation procedures</b>	<p>Equipment isolation procedures are to be to industry and enterprise standards.</p>
<b>Tests and testing equipment</b>	<p>Tests and testing equipment is to include that to the modification being carried out but it should include computer-based diagnostic systems.</p>
<b>Personal protective</b>	<p>Personal protective equipment is to include that prescribed under</p>

## AURETU2001 Install air conditioning systems

### Modification History

Release	Comment
Release 1	Replaces AURT222631A Install air conditioning systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to install air conditioning systems.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work involved includes installation of air conditioning systems fitted to light vehicles, plant and equipment, heavy vehicles or marine craft (low voltage).</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, installation and charging of the air conditioning systems and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install air conditioning systems	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory/licensing requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as schematic diagrams, manufacturer/component supplier instructions, workshop manuals and specifications, and tooling required, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for air conditioning components are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with air conditioning and refrigerants are observed</p>
2. Install air conditioning systems	<p>2.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications</p> <p>2.2.Fittings/materials are selected</p> <p>2.3.Air conditioning systems are installed using tooling and techniques</p> <p>2.4.Air conditioning system installation is completed without causing damage to any component or system</p> <p>2.5.Installation is tested prior to placing in service and results are documented in accordance with enterprise policies and procedures</p> <p>2.6.Installation is carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies</p>
3. Charge air conditioning system with refrigerant and lubricating oil	<p>3.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications, industry codes of practice and legislation</p> <p>3.2.Charging of the air conditioning system is completed without causing damage to any component or system</p> <p>3.3.System is performance tested using approved methods and equipment</p> <p>3.4.Charging of the system is carried out according to manufacturer/component supplier specifications, industry regulations/guidelines, WHS legislation, legislation and enterprise policies/procedures</p>

ELEMENT	PERFORMANCE CRITERIA
4. Vehicle/equipment is prepared for deliver to customer	<ul style="list-style-type: none"><li>4.1.Installation schedule documentation is completed</li><li>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</li><li>4.3.Final inspection is made to ensure the system is functional, without leaks and work is to workplace expectations</li><li>4.4.Vehicle/equipment is cleaned to workplace expectations</li><li>4.5.Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the installation of air conditioning systems, including the use of specialist tooling, computerised technology and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS legislation and environmental regulations/ requirements, equipment, material and personal safety requirements
- identification of application, purpose and operating principles
- types and layout of service/repair manuals (hard copy and electronic)
- industry codes of practice
- air conditioning installation procedures
- nature and characteristics of refrigerant
- leakage test and performance procedures
- system electrical circuits
- damage that may occur to electronic control units by poor work practices

•

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting installation in accordance with the workplace and manufacturer/component supplier requirements
- completing leak test and performing tests on the system
- accurately interpreting test results
- completing installation within workplace timeframes
- vehicle/equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the installation of air conditioning systems
- equipment, hand and power tooling appropriate to the installation of air conditioning systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Work requirements</b>	<p>Work involved includes installation of air conditioning systems fitted to light vehicles, plant and equipment, heavy vehicles or marine craft (low voltage):</p> <ul style="list-style-type: none"> <li>• refrigerant leak detecting</li> <li>• refrigerant gassing</li> <li>• component and system testing</li> <li>• performance testing</li> <li>• post-installation adjustments and checks</li> </ul>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices</p>
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</p>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</p>
<b>Environmental requirements</b>	<p>Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management</p>
<b>Quality requirements</b>	<p>Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and</p>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, refrigerant leak detecting equipment, refrigerant recovery and/or recycling equipment, thermometers, ram-air fan, refrigerant re-gassing equipment and air conditioning system kits
<b>Materials</b>	Materials may include spare parts, refrigerant, refrigerant oils and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the installation of air conditioning systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURETU2002 Recover vehicle refrigerants

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to recover vehicle refrigerants. It includes identifying refrigerants and removing them into a designated recovery cylinder for correct disposal.</p> <p>Licensing, regulatory requirements apply to this unit. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to the recovery of vehicle refrigerant from automotive air conditioning systems –including heating, ventilation, air conditioning and cooling (HVAC) systems – fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle, outdoor power equipment and marine environments.</p> <p>Work is carried by a vehicle dismantler and automotive parts recycling contractor.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for refrigerant recovery	<p>1.1. <b>Workplace instructions and documentation</b> relevant to the task are sourced and work requirements confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) and environmental requirements</b> and <b>critical precautions</b> are identified and applied</p> <p>1.3. Vehicle air conditioning and HVAC system, including system components and service ports, are identified for decommissioning</p> <p>1.4. <b>Recovery equipment</b> necessary for the work is assembled and checked for operation</p>
2. Operate recovery equipment	<p>2.1. <b>Refrigerant type</b> is <b>identified and documented</b></p> <p>2.2. Recovery equipment is connected to the vehicle</p> <p>2.3. Recovery cylinder is weighed to determine available capacity, and tare weight is set and recorded</p> <p>2.4. Recovery equipment is operated and monitored according to manufacturer instructions</p> <p>2.5. Recovery equipment, including hoses and recovery cylinder, is shut down and disconnected according to manufacturer instructions at completion of the recovery process</p>
3. Complete recovery operations	<p>3.1. Tare weight indicating the quantity of refrigerant recovered is recorded according to regulatory requirements</p> <p>3.2. Vehicle HVAC system is evacuated and decommissioned and the results are recorded according to workplace requirements</p> <p>3.3. Recovery equipment and recovery cylinder are stored according to regulatory and workplace requirements</p> <p>3.4. Tools are inspected, serviced and stored</p> <p>3.5. Filters are inspected, and cleaned or replaced according to manufacturer instructions</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge to expand own skills and knowledge of dangers associated with refrigerants
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
- numeracy skills to:
  - weigh recovery cylinder, refrigerant and the calculation of weights
- planning and organising skills to plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use tools relating to the recovery of vehicle refrigerants from systems, including:
  - specialist tools
  - measuring equipment
- technology skills to operate diagnostic and automotive refrigerant recovery equipment

#### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - codes of practice
  - personal protection needs
- application and purpose of recovery equipment procedures
- recovery procedures, including:
  - types and location of service ports
  - recovery equipment and recovery cylinder operation

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- awareness of environmental requirements associated with refrigerant recovery
- dangers associated with working with refrigerants and lubricants

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety precautions and requirements, in particular the dangers associated with handling refrigerants
- select recovery methods and decommissioning techniques appropriate to the circumstances
- safely operate automotive refrigerant recovery, tools and equipment
- recover and store refrigerants according to workplace licensing and equipment manufacturer requirements
- record relevant details in relation to workplace and licensing requirements
- understand environmental regulations and refrigerant waste disposal procedures.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- automotive vehicle, plant and equipment or a simulated automotive air conditioning system

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- refrigerant
- waste or recovery cylinder
- hose and vehicle couplings
- refrigerant scales
- recovery equipment, including vacuum pump
- refrigerant identifier
- appropriate hand tools
- licensing requirements and Australian standards.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions and documentation</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal instructions</li> <li>• written instructions</li> <li>• safe work procedures relating to the operation of air conditioning systems</li> <li>• decommissioning vehicle air conditioner procedures</li> <li>• operation of recovery equipment</li> <li>• regulatory compliance documentation</li> <li>• refrigerant recovery sheets</li> <li>• workplace auditing records</li> <li>• Australian standards.</li> </ul>
<b><i>Workplace health and safety and environmental requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• personal protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Critical precautions</i></b> may include:	<ul style="list-style-type: none"> <li>• dangers associated with working with refrigerants and lubricants, including: <ul style="list-style-type: none"> <li>• frostbite</li> <li>• carcinogenic properties</li> </ul> </li> <li>• care taken with some flammable refrigerants.</li> </ul>
<b><i>Recovery equipment</i></b> must include:	<ul style="list-style-type: none"> <li>• general hand tools</li> <li>• refrigerant hose and coupler</li> <li>• refrigerant recovery unit</li> <li>• refrigerant scales</li> <li>• designated recovery cylinder</li> <li>• refrigerant identifier.</li> </ul>
<b><i>Refrigerant type</i></b> may include:	<ul style="list-style-type: none"> <li>• chlorofluorocarbon (CFC)</li> <li>• hydrofluorocarbon (HCFC)</li> <li>• refrigerant oils – lubricants, mineral and synthetic.</li> </ul>
<b><i>Identified and documented</i></b>	<ul style="list-style-type: none"> <li>• quantity of refrigerant recovered</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

must include:

- cylinder gross weight
- records kept on ARCTick Form A3.

**Unit Sector(s)**

<b>Competency field</b>	Electrical
<b>Unit sector</b>	Technical – Air Conditioning and HVAC

**Custom Content Section**

Not applicable.

## AURETU2003 Service air conditioning and HVAC systems

### Modification History

Release	Comment
Release 1	Replaces AURT222670A Service air conditioning systems Performance Criteria, Range Statement and Critical Aspects updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to service air conditioning systems □ including heating, ventilation, air conditioning and cooling (HVAC) systems □ that are fitted to a range of vehicles and equipment for passenger convenience and comfort.</p> <p>The unit involves identifying and confirming work requirements, preparing for work, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements apply to this unit. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to automotive air conditioners, including HVAC systems fitted to vehicles in light and heavy vehicle, mining, construction, agricultural, motorcycle and outdoor power equipment environments.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to service an air conditioning and HVAC system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Australian Refrigeration Council (ARC) code of practice is sourced and complied with</p> <p>1.5. <b>Servicing options</b> are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6. <b>Tools and equipment</b> are identified for effective servicing procedures</p> <p>1.7. <b>Critical precautions</b> in relation to working with air conditioning, refrigerant and refrigerant oils are observed</p>
2. Functionally test air conditioning and HVAC system and components and identify faults	<p>2.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. <b>Air conditioning and HVAC systems</b> are performance tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.3. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.4. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p> <p>2.5. Tests are carried out according to industry and WHS regulations and guidelines, and relevant industry codes of practice</p>
3. Service air conditioning and HVAC system	<p>3.1. Service of the system and components is carried out according to manufacturer and component supplier specifications, industry regulations and guidelines, WHS legislation, workplace policies and procedures, and relevant industry codes of practice</p> <p>3.2. Air conditioning system service is completed without causing damage to components or systems</p> <p>3.3. Regulations regarding topping up refrigerant are understood and followed</p>
4. Retest air conditioning and HVAC system	<p>4.1. System is retested to ensure correct and safe performance and operation</p> <p>4.2. <b>Post-service testing</b> is carried out and results are documented according to air conditioning service</p>

ELEMENT	PERFORMANCE CRITERIA
	procedures and relevant industry codes of practice
5. Prepare vehicle and equipment for delivery to customer	<p>5.1. Final inspection is made to ensure vehicle protective guards and safety features are in place and work is to workplace expectations</p> <p>5.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>5.3. Workplace documentation is processed according to workplace procedures</p> <p>5.4. Appropriate <i>decal sticker</i> is placed in engine compartment</p>
6. Clean up work area and maintain equipment	<p>6.1. Material that can be reused is collected and stored in the appropriate designated area and according to workplace sustainability practices</p> <p>6.2. Waste and scrap are removed following workplace procedures and disposed of according to environmental regulations</p> <p>6.3. Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>6.4. Faulty equipment is identified, tagged and isolated according to workplace procedures and WHS regulations</p> <p>6.5. Operator maintenance is completed according to manufacturer and component supplier specifications, site procedures and relevant industry codes of practice</p> <p>6.6. Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when servicing various air conditioning and HVAC systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to:
  - work with diverse individuals and groups
  - apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to servicing air conditioning and HVAC systems, including:

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- specialist tools and equipment
- measuring equipment
- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

### Required knowledge

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - legislation and regulatory requirements
  - ARC code of practice
- principal types of vehicle air conditioning and HVAC systems, including:
  - piston, scroll and rotary vane compressors
  - electric compressors
  - variable displacement compressors
  - clutchless compressors
- application, purpose and operation of air conditioning and HVAC systems, including:
  - climate control
  - multi-zone systems
- techniques for reading and interpreting technical information, graphic symbols and diagrams
- diagnostic and testing procedures, including:
  - diagnostic procedures for air conditioning and HVAC systems, including:
    - accessing and interpreting diagnostic trouble codes
    - diagnostic flow charts
  - analysis of system operation using gauges, temperature probes, electrical test equipment, scan tools and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - vacuum and leaks
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements, in particular the dangers associated with handling refrigerants
- select methods and techniques appropriate to servicing an air conditioning system
- complete preparatory activity in a systematic manner
- identify application, purpose and operating principles of automotive air conditioning and HVAC systems
- conduct inspection, servicing and operational testing according to industry codes of practice and workplace, manufacturer and component supplier specifications
- ensure that the addition of refrigerant to an existing system charge to 'top up' the air conditioning system **is not** carried out
- performance test air conditioning systems
- accurately interpret performance test results
- complete servicing of air conditioning systems and associated components within workplace time frames
- present vehicle and equipment in a condition that complies with workplace requirements
- complete workplace and equipment documents to ARC code of practice requirements
- clean up work area and maintain equipment to workplace standards.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- ARC code of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with air conditioning and HVAC systems relevant to the qualification being sought
- material relevant to servicing air conditioning systems
- equipment appropriate for the testing of vehicle air conditioning and HVAC systems relevant to the qualification being sought, including:
  - manifold and gauge set
  - recovery unit
  - vacuum pump
  - electronic leak detector
  - nitrogen cylinder and regulator
  - digital vacuum gauge (vacrometer)
  - digital multimeter
  - electronic scales
  - oil injector
  - infra-red thermometer (pyrometer)
  - electronic temperature probe
  - valve core removing or replacement tool
  - psychrometer (humidity detector)
  - various refrigerant hoses and couplers
  - diagnostic scan tool
  - specifications and work instructions
  - service procedures for above equipment appropriate for the service and adjustment of vehicle air conditioning and HVAC systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

•

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace instructions*** may include:

- electronic or hard copy instructions
- verbal instructions
- written instructions
- safe work procedures relating to refrigerant recovery and replacement.

***Job requirements*** may include:

- testing and service methods, processes and equipment
- diagnosing faults that may be in addition to normal service procedures and may be detrimental to future performance of the air conditioning and HVAC system.

***Workplace health and safety requirements*** may include:

- material safety data sheets (MSDS)
- first aid kit
- personal protective clothing and equipment
- use of tools and equipment
- safe handling of material
- use of fire-fighting equipment
- workplace safety policies and procedures
- workplace first aid equipment
- hazard control, including control of hazardous materials and toxic substances
- water shower or equivalent.

***Procedures and information*** may include:

- verbal, written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins and memos
- MSDS
- diagrams and sketches
- safe work procedures relating to servicing air conditioning and HVAC systems
- regulatory and legislative requirements relating to automotive industry
- Australian Design Rules
- engineer's design specifications and instructions
- workplace work specifications and requirements
- instructions issued by authorised workplace or external persons

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• Australian standards</li> <li>• ARC code of practice</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<i><b>Servicing options</b></i> may include:	<ul style="list-style-type: none"> <li>• fluid levels: <ul style="list-style-type: none"> <li>• refrigerant</li> <li>• lubricating oils</li> </ul> </li> <li>• filter serviceability: <ul style="list-style-type: none"> <li>• receiver dryer</li> <li>• cabin filter</li> </ul> </li> <li>• O-rings and seals</li> <li>• adjustments and operational testing</li> <li>• visual inspections and documentation.</li> </ul>
<i><b>Tools and equipment:</b></i>	<ul style="list-style-type: none"> <li>• are to include the following specialist tools that are mandatory under the ARC code of practice: <ul style="list-style-type: none"> <li>• manifold and gauge set</li> <li>• recovery unit</li> <li>• vacuum pump</li> <li>• electronic leak detector</li> <li>• electronic scales</li> </ul> </li> <li>• may include: <ul style="list-style-type: none"> <li>• normal hand tools</li> <li>• nitrogen cylinder and regulator</li> <li>• digital vacuum gauge (vacrometer)</li> <li>• oil injector</li> <li>• infra-red thermometer (pyrometer)</li> <li>• electronic temperature probe</li> <li>• valve core removing or replacement tool</li> <li>• psychrometer (humidity detector)</li> <li>• various refrigerant hoses and couplers</li> <li>• digital multimeter</li> <li>• diagnostic scan tool.</li> </ul> </li> </ul>
<i><b>Critical precautions</b></i> may include:	<ul style="list-style-type: none"> <li>• those relating to dangers associated with working with refrigerants and lubricants, including:</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• frostbite (refrigerant boiling point -36.7°C)</li> <li>• carcinogenic oil</li> <li>• care taken with some flammable refrigerants.</li> </ul>
<b><i>Air conditioning and HVAC systems</i></b> may include:	<ul style="list-style-type: none"> <li>• single zone and multi-zone, including:               <ul style="list-style-type: none"> <li>• climate control</li> <li>• electric compressors</li> </ul> </li> <li>• R12 systems</li> <li>• R134a systems</li> <li>• R1234yf systems</li> <li>• high and low pressure switches</li> <li>• pressure relief valves</li> <li>• temperature sensors</li> <li>• sunlight sensors</li> <li>• carbon dioxide sensors</li> <li>• zone temperature sensors.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes:               <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• system containing atmospheric air with moisture</li> <li>• electrical sensor malfunction</li> <li>• dislodged temperature sensor or transfer valve</li> <li>• faulty pressure relief valve</li> <li>• vacuum leak</li> <li>• air flow restriction or blockage</li> <li>• receiver drier blockage</li> <li>• evaporator fan not working</li> <li>• electrical fault</li> <li>• electrical system fault.</li> </ul>
<b><i>Post-service testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating the effectiveness of the service action, including the following checks:</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• ambient temperature</li> <li>• centre vent temperature</li> <li>• condenser and suction line temperature</li> <li>• manifold gauge pressure readings</li> <li>• refrigerant leaks</li> <li>• confirming that reported fault has now been rectified</li> <li>• confirming that no other faults are present as a result of the service action.</li> </ul>
<b><i>Information on decal sticker</i></b> must include:	<ul style="list-style-type: none"> <li>• name of the service organisation</li> <li>• quantity of refrigerant added</li> <li>• refrigerant and oil type</li> <li>• service date</li> <li>• technician's licence number</li> <li>• vehicle odometer reading.</li> </ul>

## AURETU3004 Diagnose and repair air conditioning and HVAC systems

### Modification History

Release	Comment
Release 1	Replaces AURT322666A Repair/retrofit air conditioning systems Performance Criteria, Range Statement and Critical Aspects updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair air conditioning systems including heating, ventilation, air conditioning and cooling (HVAC) systems that are fitted to a range of vehicles and equipment for passenger convenience and comfort.</p> <p>The unit involves diagnosing deviations from correct operation, repairing vehicle air conditioning and HVAC system components and associated systems, and applying post-repair testing procedures.</p> <p>The unit also involves identifying and confirming work requirements; preparing for work; testing systems; identifying faults and causes and appropriate repair; retesting air conditioning and HVAC systems; and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements apply to this unit. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to automotive air conditioners, including HVAC systems fitted to vehicles in light and heavy vehicle, mining, construction, agricultural, motorcycle and outdoor power equipment environments.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair air conditioning and HVAC system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Australian Refrigeration Council (ARC) code of practice is sourced and complied with</p> <p>1.5. <b>Options for diagnosing faults</b> are identified and used, using appropriate tools and diagnostic techniques</p> <p>1.6. <b>Tools and equipment</b> are identified for effective diagnosis and repair methods</p> <p>1.7. <b>Critical precautions</b> in relation to working with air conditioning, refrigerant and refrigerant oils are observed</p>
2. Diagnose air conditioning and HVAC system	<p>2.1. <b>Air conditioning and HVAC systems</b> are tested to isolate faults according to workplace procedures and without causing damage to components or systems as a result of <b>inappropriate testing procedures</b></p> <p>2.2. <b>Faults</b> are identified from test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair air conditioning and HVAC system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools and recognised techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage, according to workplace procedures and manufacturer and component supplier specifications</p>
4. Retest air conditioning and HVAC system	<p>4.1. Retests are carried out to ensure correct and safe air conditioning and HVAC system performance operation</p> <p>4.2. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
5. Prepare vehicle and equipment for delivery to customer after repair is completed	<p>5.1. Final inspection is made to ensure work is to workplace expectations</p> <p>5.2. Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>5.3. Workplace documentation is processed according to</p>

ELEMENT	PERFORMANCE CRITERIA
	workplace procedures 5.4.Appropriate <i>decal sticker</i> is placed in engine compartment
6. Clean up work area and finalise work processes	6.1.Material that can be reused is collected and stored in the appropriate designated area and according to workplace sustainability practices 6.2.Waste and scrap are removed following workplace procedures and disposed of according to environmental regulations 6.3.Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures 6.4.Faulty equipment is identified, tagged and isolated according to workplace procedures and WHS regulations 6.5.Operator maintenance is completed according to manufacturer and component supplier specifications, site procedures and relevant industry codes of practice 6.6.Tools and equipment are maintained according to workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when diagnosing and repairing various air conditioning and HVAC systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - determine the underlying causes of faults
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to repairing air conditioning and HVAC systems, including:
  - specialist tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - legislation relating to automotive air conditioning and HVAC systems
  - ARC code of practice
- principles of operation of automotive air conditioning and HVAC systems, including:
  - piston, scroll and rotary vane compressors
  - electric compressors
  - variable displacement compressors
  - clutchless compressors
- application, purpose and operation of air conditioning and HVAC systems, including:
  - climate control
  - multi-zone systems
- techniques for reading and interpreting technical information, including:
  - refrigerant saturation temperatures in relation to ambient temperatures and changing levels of humidity
  - graphic symbols and diagrams
- diagnostic and testing procedures, including:
  - use of manifold gauges and surface probe thermocouples for complete system analysis
  - diagnostic procedures for air conditioning and HVAC systems, including:
    - accessing and interpreting diagnostic trouble codes (DTC)
    - diagnostic flow charts
  - analysis of system operation using gauges, temperature probes, electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - vacuum and leaks
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements, in particular the dangers associated with handling refrigerants
- select methods and techniques appropriate to diagnosing and repairing an air conditioning system
- complete preparatory activity in a systematic manner
- diagnose and repair a range of vehicle air conditioning and HVAC systems, including:
  - climate control
  - single and multi-zone
  - electric compressors
- apply safe operation of automotive refrigerant tools and equipment
- record relevant details in relation to workplace and licensing requirements of the ARC code of practice
- demonstrate understanding of the environmental regulations and refrigerant waste disposal procedures
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle and equipment in a condition that complies with workplace requirements
- complete workplace and equipment documents to ARC code of practice requirements
- clean up work area and maintain equipment to workplace standards.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- ARC code of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with air conditioning and HVAC faults relevant to the qualification being sought
- equipment appropriate for the diagnosing and repairing a range of vehicle air conditioning and HVAC systems relevant to the qualification being sought, including:
  - manifold and gauge set
  - recovery unit
  - vacuum pump
  - electronic leak detector
  - nitrogen cylinder and regulator
  - digital vacuum gauge (vacrometer)
  - digital multimeter
  - electronic scales
  - oil injector
  - infra-red thermometer (pyrometer)
  - electronic temperature probe
  - valve core removing/replacement tool
  - psychrometer (humidity detector)
  - various refrigerant hoses and couplers
  - diagnostic scan tool
- specifications and workplace instructions
- service procedures for above equipment appropriate for the diagnosis, repair, replacement and adjustment of vehicle air conditioning and HVAC systems.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• electronic or hard copy instructions</li> <li>• verbal instructions</li> <li>• written instructions</li> <li>• safe work procedures relating to refrigerant recovery and replacement.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• first aid kit</li> <li>• personal protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• water shower or equivalent</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• MSDS</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to the diagnosis and repair of air conditioning and HVAC systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• ARC code of practice</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Options for diagnosing faults</i></b> may include:	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation</li> <li>• use and application of air conditioning diagnostic tools.</li> </ul>
<b><i>Tools and equipment:</i></b>	<ul style="list-style-type: none"> <li>• are to include the following specialist tools, which are mandatory under the ARC code of practice:             <ul style="list-style-type: none"> <li>• manifold and gauge set</li> <li>• recovery unit</li> <li>• vacuum pump</li> <li>• electronic leak detector</li> <li>• electronic scales</li> </ul> </li> <li>• may include:             <ul style="list-style-type: none"> <li>• normal hand tools</li> <li>• nitrogen cylinder and regulator</li> <li>• digital vacuum gauge (vacrometer)</li> <li>• oil injector</li> <li>• infra-red thermometer (pyrometer)</li> <li>• electronic temperature probe</li> <li>• valve core removing/replacement tool</li> <li>• psychrometer (humidity detector)</li> <li>• various refrigerant hoses and couplers</li> <li>• digital multimeter</li> <li>• diagnostic scan tool.</li> </ul> </li> </ul>
<b><i>Critical precautions</i></b> may include:	<ul style="list-style-type: none"> <li>• dangers associated with working with refrigerants and lubricants, including:             <ul style="list-style-type: none"> <li>• frostbite (refrigerant boiling point -36.7°C)</li> <li>• carcinogenic oil</li> <li>• care taken with some flammable refrigerants.</li> </ul> </li> </ul>
<b><i>Air conditioning and HVAC systems</i></b> may include:	<ul style="list-style-type: none"> <li>• single zone and multi-zone, including:             <ul style="list-style-type: none"> <li>• climate control</li> <li>• electric compressors</li> </ul> </li> <li>• R12 systems</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• R134a systems</li> <li>• R1234yf systems</li> <li>• high and low pressure switches</li> <li>• pressure relief valve</li> <li>• temperature sensors</li> <li>• sunlight sensors</li> <li>• carbon dioxide sensors</li> <li>• zone temperature sensors.</li> </ul>
<b><i>Inappropriate testing procedures</i></b> may include:	<ul style="list-style-type: none"> <li>• intrusive testing (which must not be performed as it is not a recommended test and repair method), which includes: <ul style="list-style-type: none"> <li>• back probing terminals and connectors and fuse holders with inappropriate test probes</li> <li>• probing terminal and connectors with inappropriate test probes</li> <li>• pushing sharp probes and objects into wiring insulation.</li> </ul> </li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• system containing atmospheric air with moisture</li> <li>• electrical sensor malfunction</li> <li>• dislodged temperature sensor or transfer valve</li> <li>• faulty pressure relief valve</li> <li>• vacuum leak</li> <li>• air flow restriction or blockage</li> <li>• receiver drier blockage</li> <li>• evaporator fan not working</li> <li>• electrical fault</li> <li>• electrical system fault.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating effectiveness of the repair action, including the following checks: <ul style="list-style-type: none"> <li>• ambient temperature</li> <li>• centre vent temperature</li> <li>• condenser and suction line temperature</li> <li>• manifold gauge pressure readings</li> </ul> </li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• refrigerant leaks</li><li>• confirming that reported fault has been rectified</li><li>• confirming that no other faults are present as a result of the repair action.</li></ul>
<b><i>Information on decal sticker</i></b> must include:	<ul style="list-style-type: none"><li>• name of the service organisation</li><li>• quantity of refrigerant added</li><li>• refrigerant and oil type</li><li>• service date</li><li>• technician's licence number</li><li>• vehicle odometer reading.</li></ul>

## AURETU3005 Retrofit and modify air conditioning and HVAC systems

### Modification History

Release	Comment
Release 1	Replaces AURT322666A Repair/retrofit air conditioning systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to retrofit and modify automotive air conditioning systems – including heating, ventilation, air conditioning and cooling (HVAC) systems – that are fitted to a range of vehicles and equipment for passenger convenience and comfort.</p> <p>The unit involves diagnosing deviations from correct operation, the retrofit and modification of vehicle air conditioning and HVAC system components and associated systems, and applying post-modification testing procedures.</p> <p>The unit also involves identifying and confirming work requirements, preparing for work, de-gassing and re-gassing systems, and completing work finalisation processes, including clean-up and documentation.</p> <p>Licensing, legislative, regulatory or certification requirements apply to this unit. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Work applies to automotive air conditioners, including HVAC systems fitted in light and heavy vehicle, mining, construction, agricultural, motorcycle and outdoor power equipment environments.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to retrofit air conditioning and HVAC system	<p>1.1. Nature and <i>scope of work</i> requirements are identified and confirmed</p> <p>1.2. <i>Workplace health and safety (WHS) requirements</i> are observed throughout the work</p> <p>1.3. <i>Procedures and information</i> are sourced and interpreted</p> <p>1.4. Australian Refrigeration Council (ARC) code of practice is sourced and complied with</p> <p>1.5. <i>Retrofit options</i> are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6. Technical and calibration requirements for retrofit are sourced and support equipment is identified and prepared</p> <p>1.7. <i>Tools and equipment</i> are identified for effective retrofit and modification methods</p> <p>1.8. <i>Critical precautions</i> in relation to working with air conditioning, refrigerant and refrigerant oils are observed</p>
2. De-gas and re-gas air conditioning and HVAC system	<p>2.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>2.2. System is de-gassed using approved recovery unit and appropriate refrigerant recovery cylinder for individual refrigerant type</p> <p>2.3. Oil recovered is measured for replacement purposes</p> <p>2.4. System is evacuated according to manufacturer and component supplier specifications and industry codes of practice, including state and territory legislation with reference to ozone depleting substances</p> <p>2.5. System is pressure tested for leaks prior to being re-gassed and performance tested using approved methods and equipment</p> <p>2.6. Recovery and charging of air conditioning system are completed without causing damage to components or systems and in line with requirements for ozone depleting substances, industry regulations and guidelines, WHS legislation, and relevant industry codes of practice</p>
3. Retrofit air conditioning and HVAC system	<p>3.1. Correct information is accessed and interpreted from manufacturer and component supplier specifications</p> <p>3.2. Air conditioning retrofit procedures are determined after performance testing</p> <p>3.3. Retrofit of the system and components is carried out according to manufacturer and component supplier specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4.Modifications are carried out without additional pressures associated with the performance of the system or any loss to system integrity</p> <p>3.5.Retrofit to air conditioning system is completed without causing damage to components or systems and according to industry regulations and guidelines, WHS legislation, and relevant industry codes of practice</p>
4. Performance test air conditioning and HVAC system	<p>4.1.System is performance tested prior to placing into service and results are documented according to workplace policies and procedures</p> <p>4.2.Service schedule documentation is completed</p> <p>4.3.Final inspection is made to ensure protective guards and safety features are in place</p>
5. Retest air conditioning and HVAC systems	<p>5.1.Retests are carried out to ensure correct and safe system performance operation</p> <p>5.2.<b>Post-retrofit testing</b> is carried out according to workplace procedures and relevant legislation</p>
6. Prepare vehicle and equipment for delivery to customer	<p>6.1.Final inspection is made to ensure work is to workplace expectations</p> <p>6.2.Vehicle is cleaned to workplace expectations and presented ready for use</p> <p>6.3.Workplace documentation is processed according to workplace procedures</p> <p>6.4.Appropriate <b>decal sticker</b> is placed in engine compartment</p>
7. Clean up work area and maintain equipment	<p>7.1.Material that can be reused is collected and stored in the appropriate designated area and</p> <p>7.2.Waste and scrap are removed following workplace procedures and disposed of according to environmental regulations</p> <p>7.3.Equipment and work area are cleaned and inspected for serviceable condition according to workplace procedures</p> <p>7.4.Faulty equipment is identified, tagged and isolated according to workplace procedures and WHS regulations</p> <p>7.5.Operator maintenance is completed according to manufacturer and component supplier specifications, site procedures and ARC code of practice</p> <p>7.6.Tools and equipment are maintained according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow verbal and written instructions
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to:
  - apply learning when retrofitting and modifying various air conditioning and HVAC systems
  - recognise a workplace problem or potential problem and take action
- learning skills to identify sources of information, assistance and expert knowledge to expand skills, knowledge and understanding
- literacy skills to:
  - read and follow information in written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document required repairs and parts
- numeracy skills to:
  - test, measure and analyse test equipment results compared to desired system performance
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise them
- problem-solving skills to:
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - follow workplace documentation, such as codes of practice and operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to the retrofit and modification of air conditioning and HVAC systems, including:
  - specialist tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements, including:
  - legislation
  - ARC code of practice
- principles of operation of automotive air conditioning and HVAC systems, including:
  - piston, scroll and rotary vane compressors
  - electric compressors
  - variable displacement compressors
  - clutchless compressors
- application, purpose and operation of air conditioning and HVAC systems, including:
  - climate control
  - multi-zone systems
- technical information relating to air conditioning and HVAC systems, including:
  - refrigerant saturation temperatures in relation to ambient temperatures and changing levels of humidity
  - graphic symbols and diagrams
- diagnostic and testing procedures, including:
  - use of manifold gauges and surface probe thermocouples for complete system analysis
  - diagnostic procedures for air conditioning and HVAC systems, including:
    - accessing and interpreting diagnostic trouble codes
    - diagnostic flow charts
  - analysis of system operation using gauges, temperature probes, electrical test equipment, scan tools, oscilloscopes and other industry-relevant test equipment
  - visual, aural and functional assessments, including:
    - component damage and wear
    - component corrosion
    - vacuum and leaks
- repair procedures, including:
  - component removal and replacement procedures
  - component and associated system adjustment procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements, in particular the dangers associated with handling refrigerants
- select methods and techniques appropriate to the retrofit and modification of an air conditioning system
- conduct performance testing to establish viability of retrofit and modification
- complete preparatory activity in a systematic manner
- apply full retrofit and modify sequence in line with scope of work
- accurately interpret air conditioning performance test results
- conduct refrigerant recovery and evacuation of refrigerant operations according to industry codes of practice and legislation, and charge the system with the appropriate refrigerant and oil type
- complete a retrofit and modification of air conditioning system and associated components within workplace time frames
- present vehicle and equipment in a condition that complies with workplace requirements
- complete workplace and equipment documents to ARC code of practice requirements
- clean up work area and maintain equipment to workplace standards.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice
- ARC code of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- light and heavy vehicles with air conditioning and HVAC systems relevant to the qualification being sought
- material relevant to perform a retrofit and modification of air conditioning systems
- equipment appropriate for the retrofit or modification of light and heavy vehicle air conditioning and HVAC systems, including:
  - manifold and gauge set
  - recovery unit
  - vacuum pump
  - electronic leak detector
  - nitrogen cylinder and regulator
  - digital vacuum gauge (vacrometer)
  - digital multimeter
  - electronic scales
  - oil injector
  - infra-red thermometer (pyrometer)
  - electronic temperature probe
  - valve core removing/replacement tool
  - psychrometer (humidity detector)
  - various refrigerant hoses and couplers
  - diagnostic scan tool
- specifications and work instructions
- service procedures for above equipment appropriate for the retrofit and modification of vehicle air conditioning and HVAC

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Scope of work</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• type of system fitted</li> <li>• refrigerant type</li> <li>• oil type</li> <li>• system variables, including:             <ul style="list-style-type: none"> <li>• refrigerant leak detecting</li> <li>• refrigerant recovery and charging</li> <li>• system evacuation</li> <li>• mechanical removal and replacement of components</li> <li>• system and component testing</li> <li>• performance testing.</li> </ul> </li> </ul>
<p><b><i>Workplace health and safety requirements</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• material safety data sheets (MSDS)</li> <li>• first aid kit</li> <li>• personal protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• safe handling of material</li> <li>• use of fire-fighting equipment</li> <li>• workplace safety policies and procedures</li> <li>• workplace first aid equipment</li> <li>• water shower or equivalent</li> <li>• hazard control, including control of hazardous materials and toxic substances</li> <li>• dangers associated with handling refrigerants and oils.</li> </ul>
<p><b><i>Procedures and information</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins and memos</li> <li>• MSDS</li> <li>• diagrams and sketches</li> <li>• safe work procedures relating to the retrofit and modification to air conditioning and HVAC systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• engineer's design specifications and instructions</li> <li>• workplace work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• ARC code of practice</li> <li>• vehicle service requirements and repair manuals.</li> </ul>
<b><i>Retrofit options</i></b> may include:	<ul style="list-style-type: none"> <li>• change of refrigerant gas from R12 to R134a: <ul style="list-style-type: none"> <li>• receiver dryer filter replacement</li> <li>• change of system fittings for gauge fitment</li> </ul> </li> <li>• change of refrigerant gas from R134a to R1234yf: <ul style="list-style-type: none"> <li>• change of system fittings for gauge fitment.</li> </ul> </li> </ul>
<b><i>Tools and equipment:</i></b>	<ul style="list-style-type: none"> <li>• are to include the following specialist tools, which are mandatory under the ARC code of practice: <ul style="list-style-type: none"> <li>• manifold and gauge set</li> <li>• recovery unit</li> <li>• vacuum pump</li> <li>• electronic leak detector</li> <li>• electronic scales</li> </ul> </li> <li>• may include: <ul style="list-style-type: none"> <li>• normal hand tools</li> <li>• nitrogen cylinder and regulator</li> <li>• digital vacuum gauge (vacrometer)</li> <li>• oil injector</li> <li>• infra-red thermometer (pyrometer)</li> <li>• electronic temperature probe</li> <li>• valve core removing/replacement tool</li> <li>• psychrometer (humidity detector)</li> <li>• various refrigerant hoses and couplers</li> <li>• digital multimeter</li> <li>• diagnostic scan tool.</li> </ul> </li> </ul>
<b><i>Critical precautions</i></b> may include:	<ul style="list-style-type: none"> <li>• dangers associated when working with refrigerants and lubricants, including: <ul style="list-style-type: none"> <li>• frostbite (refrigerant boiling point -36.7°C)</li> </ul> </li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• carcinogenic oil</li> <li>• care taken with some flammable refrigerants.</li> </ul>
<b><i>Post-retrofit testing</i></b> may include:	<ul style="list-style-type: none"> <li>• validating the effectiveness of the retrofit and modification action, including the following checks: <ul style="list-style-type: none"> <li>• ambient temperature</li> <li>• centre vent temperature</li> <li>• condenser and suction line temperature</li> <li>• manifold gauge pressure readings</li> <li>• refrigerant leaks</li> </ul> </li> <li>• confirming that reported faults have been rectified</li> <li>• confirming that no other faults are present as a result of the retrofit and modification action.</li> </ul>
Information on <b><i>decal sticker</i></b> must include:	<ul style="list-style-type: none"> <li>• name of the service organisation</li> <li>• quantity of refrigerant added</li> <li>• refrigerant and oil type</li> <li>• service date</li> <li>• technician's licence number</li> <li>• vehicle odometer reading.</li> </ul>

## AURETU4006 Diagnose complex faults in air conditioning and HVAC systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose complex faults in vehicle air conditioning systems, including heating, ventilation, air conditioning and cooling (HVAC) systems, in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies and includes system fault and failure diagnosis of faults in HVAC systems fitted to light vehicles, heavy commercial vehicles, and vehicles in the mining, construction and agricultural environments.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm work requirement	<ul style="list-style-type: none"><li>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</li><li>1.2. Specifications for correctly functioning vehicle HVAC systems are accessed and interpreted</li><li>1.3. <b>Workplace health and safety (WHS) requirements</b>, equipment and system isolation requirements and personal protection needs are observed and applied throughout the work</li><li>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in vehicle HVAC systems are identified and confirmed from direct or indirect evidence</li><li>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</li></ul>
2. Prepare to perform diagnosis	<ul style="list-style-type: none"><li>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</li><li>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</li><li>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</li><li>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</li><li>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</li></ul>
3. Apply complex diagnostic process	<ul style="list-style-type: none"><li>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</li><li>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</li><li>3.3. Findings are verified, if necessary, by using reliable alternative or optional processes</li><li>3.4. Conclusions are drawn from findings and documented according to workplace requirements</li><li>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to vehicle HVAC systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of vehicle HVAC systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of HVAC systems
- types, functions, operations and limitations of HVAC systems
- diagnostic theory, including concept, design and planning
- electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, magnetics, inductance and discrete electronic components
- types, functions, operations and limitations of diagnostic testing equipment related to vehicle HVAC systems
- testing procedures of vehicle HVAC systems
- methods and processes for documenting and reporting diagnostic findings and recommendations

-

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different vehicle HVAC systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in vehicle HVAC systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles with real or simulated HVAC system faults
- tools and equipment appropriate for the diagnosis of complex faults in vehicle HVAC systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><b><i>Workplace health and safety (WHS) requirements:</i></b></p>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> <li>• safety management systems, including equipment and system isolation requirements</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances</li> </ul>
<p><b><i>Faults</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• indirect faults caused by the influence of external electrical and electronic systems, which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harnesses, computer systems, and calibration or adjustment specifications</li> <li>• component specifications, component assembly, component damage and system modifications</li> <li>• indirect engine mechanical faults.</li> </ul>
<p><b><i>Tests</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• wiring and connector integrity</li> <li>• operation and specification of input and output devices</li> <li>• controlling electronic components and computers</li> <li>• data interpretation and readings relating to direct, indirect and intermittent causes</li> <li>• mechanical systems testing</li> <li>• road tests</li> <li>• engine electrical component tests.</li> </ul>
<p><b><i>Testing equipment</i></b> may include:</p>	<ul style="list-style-type: none"> <li>• pressure gauges</li> <li>• charge stations</li> <li>• reclaim units</li> <li>• recycling units</li> <li>• leak detectors</li> <li>• thermometers</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• flushing equipment</li><li>• scan tools</li><li>• test lights and test LEDs</li><li>• analogue and digital multimeters</li><li>• lab oscilloscopes.</li></ul>
<i><b>Diagnostic processes</b></i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer and component supplier specifications, schematics and operational procedures relating to HVAC systems</li><li>• component substitution</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology.</li></ul>

## AURETU4007 Overhaul air conditioning system components

### Modification History

Release	Comment
Release 1	<p>Replaces AURT322645A Overhaul air conditioning system components</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to overhaul air conditioning system components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, testing and analysis of systems, dismantling, reassembling and retesting of air conditioning system components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes air conditioning components fitted to light vehicles, heavy commercial vehicles and/or plant and equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul air conditioning components	1.1. Nature and scope of the work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory/licensing requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for overhauling air conditioning components are sourced and support equipment is identified and prepared 1.6. Hazards in relation to working with refrigerants are observed 1.7. Awareness of proper decanting and disposal of ozone depleting substances are recognised
2. Test air conditioning systems and analyse results	2.1. Methods for the conduct of the system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. Overhaul air conditioning system components	3.1. Information is accessed and interpreted from manufacturer/component supplier specifications 3.2. Air conditioning system components are dismantled, reassembled and tested to manufacturer/component supplier specifications 3.3. Worn, damaged, deteriorated or faulty components are identified and replaced/repared 3.4. Air conditioning system overhaul is completed without causing damage to any component or system 3.5. System components are tested prior to placing into service and results are documented in accordance with enterprise policies and procedures 3.6. Air conditioning system components are overhauled according to industry regulations/guidelines, WHS

ELEMENT	PERFORMANCE CRITERIA
	legislation, legislation and enterprise procedures/policies
4. Prepare air conditioning components and/or system for service or storage	<ul style="list-style-type: none"><li>4.1. Work schedule documentation is completed</li><li>4.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</li><li>4.3. Final inspection is made to ensure work is to workplace expectations</li><li>4.4. Air conditioning system/components are cleaned and/or stored to workplace expectations</li><li>4.5. Job card is processed in accordance with workplace procedures</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the overhaul of air conditioning systems, including the use of measuring equipment, computerised technology, specialist tooling and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- identification of the application, purpose and operation
- identification of component parts to include physical, fluid, gases and heat generation
- identification of wear evaluation methods
- types and layout of service/repair manuals (hard copy and electronic)
- damage that may occur to electronic control units by the use of poor work practices
- measuring and testing procedures
- nature and characteristics of refrigerant
- component repair/overhauling procedures
- enterprise quality procedures
- work organisation and planning procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of the application, purpose and operation
- application of the full overhaul sequence as per the Range Statement relative to the qualification being sought
- interpreting the test results
- completing overhaul of the system and associated components within workplace timeframes
- presentation of vehicle to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to overhauling air conditioning system components
- equipment, hand and power tooling appropriate to overhauling air conditioning system components
- activities covering the mandatory task requirements
- specifications and work instructions

#### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>Fault finding</b>	Fault finding includes: <ul style="list-style-type: none"> <li>• fault finding with aural, visual and functional assessments (including damage, corrosion, wear, refrigeration leakage)</li> <li>• reading and interpreting manufacturer/component supplier information</li> </ul>
<b>Specific requirements</b>	Specific requirements: <ul style="list-style-type: none"> <li>• compressors</li> <li>• evaporators</li> <li>• condensers</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site

<b>RANGE STATEMENT</b>	
	evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, cleaning equipment, pressure testing equipment, sealing equipment, leak detection equipment, thermometer, evacuation equipment, heating/soldering equipment, refrigerant recovery and/or recycling equipment, and refrigerant regassing equipment
<b>Materials</b>	Materials may include refrigeration oils, refrigerants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to overhauling air conditioning system components</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURETX5001 Analyse and evaluate electrical and electronic faults in transmission and driveline systems

### Modification History

Release	Comment
Release 1	<p>Replaces AURT575393A Analyse and evaluate electrical and electronic faults in transmission/driveline systems</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate electrical and electronic faults in transmission/driveline systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning electrical and electronic transmission/driveline systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including regulatory requirements, equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Electrical and electronic transmission/driveline system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary electrical and electronic transmission/driveline systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems input.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- general knowledge of the types, functions and operations of transmission/driveline systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the concepts, types, functions, operations and limitations of electromechanical and electro-fluid sub-systems within light vehicle, mobile plant, heavy vehicle, transmission/driveline systems.
- detailed knowledge of electrical theory and operation covering automotive digital computers, networked vehicles, voltage, current, resistance, power, capacitance, electrostatics, magnetism, inductance, discrete electronic components, logic families and radio frequency.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.
- general knowledge of personal computer operation.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three different transmission/driveline systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for different transmission/driveline systems.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> <li>• Basic mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.</li> </ul>
<p><b>Context of, and specific resources for assessment</b></p>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, materials, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, operational electrical and electronic transmission/driveline systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<p><b>Method of assessment</b></p>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or</p>

## EVIDENCE GUIDE

	<p>authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Failure analysis and evaluation process

The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

#### Transmission/driveline systems

Transmission/driveline systems to be covered by this unit include clutches, torque converters, mechanical and automatic transmissions, drive and power take-off shafts, and differentials. Coverage is to include mechatronic modules and multi-class bus systems.

#### Transmission/driveline systems electrical and electronic failures

Transmission/driveline systems electrical and electronic failures covered by this unit are to include direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications, component specifications, component assembly, component damage and system modifications.

#### Transmission/driveline systems failures

Transmission/driveline systems failures covered by this unit are to include indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations.

#### Unit context

- WHS requirements include legislation, vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code, and safe operating procedures.
- Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.
- Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.

#### Evaluative criteria

Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are to be judged. They are to include statistically based criteria and may include other measures.

#### Isolation procedures

Equipment isolation procedures are to be to industry and enterprise

<b>RANGE STATEMENT</b>	
	standards and are to include the disarming of supplementary restraint systems (SRS) by manufacturer/ component supplier specifications.
<b>Testing equipment</b>	Testing equipment is to include multimeters, lab oscilloscopes, data scanners, test lights, test LEDs, and may include pulse generators and manufacturer/component supplier testing equipment.
<b>Tests</b>	Tests to be conducted are to include wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to transmission/driveline systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging transmission/driveline system technology and technology changes.</li> </ul>

## AURHTA1001 Carry out heavy vehicle pre-repair operations

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to prepare and clean heavy vehicles and major components by mechanical or chemical means and prepare equipment or components in readiness for either storage or repair.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, cleaning of components, the removal of components, tagging and storage of components and completion of work finalisation processes, including clean-up and documentation.</p> <p>No licencing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	Work applies to heavy vehicles in the road transport, mining, construction and agricultural environments.
--------------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake pre-repair operations	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Method options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate tools and equipment are selected and prepared</p> <p>1.6. Warnings relating to working with <b>cleaning materials</b> are observed</p>
2. Clean equipment or components prior to repair or storage	<p>2.1. Cleaning materials and <b>equipment</b> are used according to workplace procedures and manufacturer and component supplier specifications</p> <p>2.2. Components are cleaned to workplace expectations and without causing damage to components or systems</p> <p>2.3. Used cleaning agents and waste materials are safely disposed of according to industry regulations and guidelines and workplace requirements</p> <p>2.4. Cleaning activities are carried out according to industry regulations and guidelines, workplace health and safety and <b>environmental requirements</b></p>
3. Clean up work area and finalise work processes	<p>3.1. Components are prepared for further repair procedures or treated with rust prevention material when being stored</p> <p>3.2. Components are stored according to workplace procedures, to prevent injury to self and others or damage to components</p> <p>3.3. Tools and equipment are checked and stored according to workplace expectations</p> <p>3.4. Pre-repair operation documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to follow oral and written instructions
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during pre-repair operations
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
- technical skills to use workplace tools and equipment relating to the pre-repair operations of heavy vehicles

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with chemical cleaning agents and cleaning equipment
- cleaning procedures
- environmental considerations related to chemical and cleaning agent use
- storage procedures of cleaned heavy vehicle components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- conduct cleaning and storage operations according to workplace requirements
- complete workplace documentation according to workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles and heavy vehicle components requiring pre-repair operations
- equipment, cleaning agents and material relevant to carrying out pre-repair operations
- hand tools appropriate to carrying out pre-repair operations

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- specifications and work instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace instructions** may include:

- computer-generated instructions
- verbal instructions
- written instructions.

**Workplace health and safety (WHS) requirements:**

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

**Procedures and information** may include:

- safe work **procedures** relating to heavy vehicle pre-repair operations
- verbal, written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins or memos
- material safety data sheets (MSDS)
- diagrams or sketches
- regulatory and legislative requirements relating to the automotive industry
- Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards
- heavy vehicle repair manuals.

**Method options** may include:

- steam cleaning
- high-pressure washing
- manual washing
- the use of protective coverings

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• dismantling.</li> </ul>
<i><b>Cleaning materials</b></i> may include:	<ul style="list-style-type: none"> <li>• cleaning agents</li> <li>• sprays (dewaxing, detergents, degreasers, special purpose agents)</li> <li>• rust prevention material.</li> </ul>
<i><b>Equipment</b></i> may include:	<ul style="list-style-type: none"> <li>• hand tools and equipment</li> <li>• personal and vehicle protection</li> <li>• storage tubs and racks</li> <li>• special equipment (pressure washers, steam cleaners, spray equipment)</li> <li>• power tools</li> <li>• jacks and stands</li> <li>• lifting equipment.</li> </ul>
<i><b>Environmental requirements</b></i> may include:	<ul style="list-style-type: none"> <li>• waste management</li> <li>• chemical and cleaning agent management</li> <li>• control of noise and fumes</li> <li>• clean-up management.</li> </ul>

## AURHTA2003 Remove and replace heavy commercial vehicle ancillary components and accessories

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove, replace and make adjustments to heavy commercial vehicle ancillary components and accessories.</p> <p>It involves the ability to understand equipment specifications and to use tools and equipment to remove, fit and adjust heavy commercial vehicle ancillary components and accessories to required standards.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake the removal, replacement, fitting and adjustment of ancillary components, equipment and accessories in heavy commercial vehicle retail, service and repair environments.</p> <p>Work applies to all types of heavy commercial vehicles and road transport vehicles.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Work requirements</b> are identified and confirmed</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> and other appropriate precautions are identified and taken</p> <p>1.3. Procedures and information, such as workshop manuals, are sourced</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. <b>Tools and equipment</b> required for the task are selected and prepared</p>
2. Remove and inspect ancillary components or accessories	<p>2.1. Ancillary components or accessories for removal are identified</p> <p>2.2. Method for removal is implemented according to manufacturer and component supplier specifications</p> <p>2.3. <b>Ancillary components and accessories</b> are removed without damage</p> <p>2.4. Ancillary components and accessories are inspected</p> <p>2.5. <b>Workplace documentation</b> is compiled according to workplace procedures</p>
3. Fit, test and adjust ancillary components or accessories	<p>3.1. Ancillary components and accessories for fitting are identified</p> <p>3.2. Fitting is implemented according to manufacturer and component supplier specifications</p> <p>3.3. Ancillary components or accessories are adjusted according to manufacturer and component supplier specifications</p> <p>3.4. Post-fitting testing is performed to ensure integrity of work carried out</p> <p>3.5. Further adjustments are made where necessary on conclusion of testing</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate effectively regarding work requirements with supervisor or other workers
  - report work outcomes and problems
- literacy skills to:
  - read information relating to work orders, including common industry terminology, and accessory and component assembly plans and fitting instructions
  - read to the level required to understand work plans and workplace safety procedures
  - prepare written reports
- numeracy skills to correctly interpret metric and imperial systems of measurement
- planning and organising skills to:
  - identify risk factors to minimise risk
  - contribute to activities that implement and follow standard workplace procedures
- problem-solving skills to:
  - identify technical and procedural problems
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to support workplace activities and tasks
- technical skills to:
  - select tools and equipment appropriate to the task
  - use tools and equipment to remove and replace ancillary components and accessories of heavy commercial vehicles
- technology skills to use tools and equipment to assist with work practices

#### Required knowledge

- WHS requirements, including personal safety requirements, relevant to working with heavy commercial vehicles
- types, function, application and operation of tools and equipment used for removing and replacing heavy commercial vehicle ancillary components and accessories
- removal and replacement procedures of heavy commercial vehicle ancillary components and accessories
- testing procedures and adjustment methods relating to heavy commercial vehicle ancillary components and accessories
- workplace documentation policies and procedures

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select removal, replacement, inspection and adjustment methods and techniques appropriate to the circumstances</li> <li>• conduct a minimum of three different removal, replacement and adjustment according to workplace, manufacturer and component supplier instructions or requirements</li> <li>• confirm effectiveness of work relating to component or accessory removal or replacement</li> <li>• complete workplace documentation requirements relevant to tasks.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• operational heavy commercial vehicles and a range of suitable components or accessories</li> <li>• equipment, hand and power tools and specialised heavy commercial vehicle tools and equipment appropriate for the removal and replacement of heavy commercial vehicle</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

components and accessories

- technical specifications and standards.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. ## AURHTA3002 Service and repair trailers in excess of 4.5 tonnes

### Modification History

Release	Comment
Release 1	<p>Replaces AURT337273A Service and repair trailers in excess of 4.5 tonnes</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p>

### Unit Descriptor

Unit descriptor	<p>This unit of competency describes the skills and knowledge required to service and repair load carrying trailers without motive power, with a gross trailer mass rating (GTMR) or an aggregate trailer mass (ATM) over 4.5 tonnes and designed to be hauled by another vehicle.</p> <p>It requires the ability to identify and confirm work requirements, to use technical skills to service, repair and/or maintain trailers over 4.5 tonnes and to complete the work finalisation processes.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>This unit applies to individuals who undertake and document the adjustment, testing, servicing and repair of load carrying trailers in excess of 4.5 tonnes of varying types and in varying environments.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Confirm nature and scope of work to be carried out 1.2. Locate workplace health and safety (WHS) and workplace environmental and sustainable procedures and practices applicable to the work 1.3. Source service procedures and relevant workshop manuals and manufacturer information 1.4. Access and interpret state and territory regulations and requirements 1.5. Check and prepare tools, equipment and materials 1.6. Decide service and/or repair method in accordance with WHS, environmental and industry regulations and guidelines, and enterprise procedures 1.7. Set up work area
2. Adjust trailer to suit individual applications	2.1. Identify trailer application 2.2. Measure to ascertain ride height in preparation for trailer adjustment 2.3. Use methods, equipment and tolerances suitable to the trailer application and in accordance with manufacturer specifications 2.4. Carry out adjustment in accordance with manufacturer and component supplier specifications, and WHS and workplace environmental and sustainable procedures and practices
3. Test, service, repair and/or maintain trailer	3.1. Select appropriate diagnostic test 3.2. Undertake testing of trailer 3.3. Identify service, repair and/or maintenance requirements 3.4. Carry out service, repair and/or maintenance using methods, equipment and tolerances suitable to the trailer application in accordance with manufacturer specifications, WHS, and workplace environmental and sustainable procedures and practices
4. Verify system	4.1. Undertake visual and audible tests 4.2. Repair and eliminate identified issues 4.3. Organise for trailer to be test driven
5. Clean up work area and maintain equipment	5.1. Clean and inspect equipment and tooling according to workplace requirements 5.2. Tag unserviceable equipment and faults identified in accordance with workplace requirements 5.3. Finalise and process work completion documentation, update customer and warranty information and give to

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriate persons, as required</p> <p>5.4.Clean work area, dispose of waste and scrap, and store re-useable material, tools and equipment in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- technical skills to the level required to adjust, service and repair load carrying trailers with a GTMR or ATM of over 4.5 tonnes, including use of workplace computerised technology for the testing, reporting and recording of results
- communication skills to the level required to confirm work requirements and specifications, to communicate effectively regarding work requirements with supervisor, other workers and customers, to relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities, and to report work outcomes and problems
- literacy skills to the level required to understand information related to work orders, including common industry terminology, plans and safety procedures, to interpret technical information and specifications, and to complete workplace documents
- numeracy skills to the level required to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- problem-solving skills to the level required to identify technical and procedural problems to avoid planning and scheduling problems, and time and material wastage
- team skills to the level required to work effectively and cooperatively with others to optimise workflow and productivity

#### Required knowledge

Required knowledge includes:

- types of load carrying trailers with a GTMR or ATM of over 4.5 tonnes
- operating principles and their relationship to each other of braking systems and components, including disc, drum and air braking systems, and their sub-systems
- operating principles of suspension types
- operating principles of steering systems
- operating principles of wheel alignment
- inspection and repair procedures applicable to the trailer type and including 5<sup>th</sup> wheel, king pins, landing gear and coupling, frames and sub-frames
- work organisation and planning processes
- Sub Assembly Registration Number (SARN) system
- Australian Road Transport (ARTSA) - Brake Code of Practice
- service and repair manuals (hard copy and electronic)
- manufacturer and component supplier specifications, including workshop manuals and repair guides related to the servicing and repairing of trailers with a GTMR or ATM of over 4.5 tonnes and their components
- applicable commonwealth, state or territory legislation, regulations, standards and codes of practice, including WHS, personal safety and environment, relevant to the servicing and

**REQUIRED SKILLS AND KNOWLEDGE**

repairing of trailers with a GTMR or ATM of over 4.5 tonnes and including state and territory braking requirements for trailers

- organisational policies and procedures, including quality requirements and reporting and recording procedures, related to servicing and repairing of trailers with a GTMR or ATM of over 4.5 tonnes and their components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select servicing and repair methods and techniques appropriate to the circumstances and trailer type
- complete preparatory activity in a systematic manner
- service and repair a variety of trailer types with a GTMR or ATM of over 4.5 tonnes to regulatory and manufacturer and component supplier requirements
- complete workplace and equipment records and workplace clean-up requirements.

##### Context of, and specific resources for assessment

- The application of competency is to be assessed in the workplace or a simulated environment that reflects as far as possible the actual working environment.
- Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant regulatory requirements, including specified Australian standards.
- Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
- The following resources should be made available:
  - appropriate worksite
  - a range of trailers with a GTMR or ATM of over 4.5 tonnes requiring servicing and/or repairing
  - specifications and work instructions
  - equipment, hand and power tooling appropriate to servicing and repairing trailers with a GTMR or ATM of over 4.5 tonnes
  - relevant information, including manufacturer specifications.

#### Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.
- Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance (over time and in a range of workplace relevant contexts) together with application of Required Skills and Knowledge.</p> <ul style="list-style-type: none"><li>• Assessment methods must be by direct observation of tasks and include questioning on Required Skills and Knowledge to ensure its correct interpretation and application.</li><li>• Assessment may be applied under project-related conditions (real or simulated) and require evidence of process.</li><li>• Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</li><li>• Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</li></ul>
<b>Guidance information for assessment</b>	<p>Assessment processes and techniques must be culturally sensitive and appropriate to the language and literacy capacity of the candidate and the work being performed.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### **Trailers with a GTMR or ATM of over 4.5 tonnes**

Trailers with a GTMR or ATM over 4.5 tonnes may include:

- box trailers (skeleton type)
- heavy goods trailers
- low loaders
- farm trailers
- multiple car carriers
- mobile machinery/equipment
- cane bin trailers
- dolly trailers
- semi-trailers
- timber jinkers
- bus semi-trailers
- dog trailers
- pig trailers
- semi-trailer/B-double/B-triple/AB-triple/road train tail trailers
- B-double lead trailers
- B-triple lead trailers
- B-triple middle trailers
- converter dolly
- low loader dolly
- tandem trailers

#### **Axles**

Axles may include:

- single
- tandem
- tri-axle
- quad-axle
- non-pivoting axles
- pivoting front axles

#### **Servicing, repair and/or maintaining**

Servicing, repair and/or maintaining may include:

- minor adjustments
- operational testing
- replacement of fluids and filters

**RANGE STATEMENT****Verify system**

Verify system may include checking:

- sub-frame
- suspensions components
- axles
- wheel end
- wheels
- 5<sup>th</sup> wheel
- king pins
- landing gear
- coupling

**Tooling and equipment**

Tooling and equipment may include:

- hand tools
- testing equipment, including multimeters
- power tools
- air tools
- specialist tools and equipment
- lubricating equipment
- measuring equipment
- pressure gauges
- vacuum gauges
- manufacturer special stools

**Materials**

Materials may include:

- spare parts
- lubricants
- fluids
- cleaning materials

**Safe operating procedures**

Safe operating procedures may include:

- operational risk assessment and treatments
- toxic substances
- electrical safety
- machinery movement and operation
- manual and mechanical lifting and shifting
- working in proximity to others

**Information/documents**

Information/documents may include:

- verbal, written and graphical instructions issued by authorised internal and external persons
- parts listing prices and catalogues

**RANGE STATEMENT**

	<ul style="list-style-type: none"> <li>• inventory systems</li> <li>• Repair Times manuals</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• engineer's design specifications and instructions</li> <li>• manufacturer specifications</li> <li>• industry standards e.g. Australian Design Rules</li> <li>• Australian Road Transport (ARTSA) - Brake Code of Practice</li> <li>• Australian standards</li> <li>• workplace specifications and requirements</li> <li>• current driver's licence</li> </ul>
<b>Legislative requirements</b>	<p>Legislative requirements are to be in accordance with applicable commonwealth, state or territory legislation, regulations, certification requirements and codes of practice, and may include:</p> <ul style="list-style-type: none"> <li>• award and enterprise agreements</li> <li>• industrial relations</li> <li>• Australian standards</li> <li>• Australian Design Rules</li> <li>• confidentiality and privacy</li> <li>• WHS</li> <li>• the environment</li> <li>• equal opportunity</li> <li>• anti-discrimination</li> <li>• duty of care</li> </ul>
<b>WHS requirements</b>	<p>WHS requirements are to be in accordance with applicable commonwealth, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:</p> <ul style="list-style-type: none"> <li>• personal protective equipment and clothing</li> <li>• safety equipment</li> <li>• first aid equipment</li> <li>• hazard and risk control</li> <li>• elimination of hazardous materials and substances</li> <li>• manual handling, including shifting, lifting and carrying</li> <li>• emergency procedures</li> <li>• road rules</li> <li>• safe driving policy</li> </ul>
<b>Environmental requirements</b>	<p>Environmental requirements may include:</p> <ul style="list-style-type: none"> <li>• waste management</li> <li>• noise</li> </ul>

**RANGE STATEMENT**

	<ul style="list-style-type: none"><li>• dust</li><li>• clean-up management</li></ul>

## AURHTB3001 Repair air braking systems

### Modification History

Release	Comment
Release 1	Replaces AURT311166A Repair air braking systems Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the repair of air braking systems and associated components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing, analysis and repair of air braking systems and associated components and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involves vehicles equipped with air braking systems.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to repair air braking system and associated components	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for repair of air braking systems are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with air braking systems are observed
2. Test air braking systems and analyse results	2.1. Methods for tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Air braking test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is forwarded to persons for action in accordance with workplace procedures
3. Repair air braking system	3.1. Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2. Adjustments made during the repair are in accordance with manufacturer/component supplier specifications
4. Prepare vehicle for use or storage	4.1. Repair schedule documentation is completed 4.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3. Final inspection is made to ensure work is to workplace expectations 4.4. Vehicle is cleaned for use or storage to workplace expectations 4.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the repair of air braking systems, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with air braking systems
- operating principles of air braking systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- test procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- testing air braking system for faults including internal and external air leaks
- interpreting test results
- conducting repair in accordance with workplace and manufacturer/component supplier requirements
- completing repair of air braking systems and associated components within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of air braking systems
- equipment, hand and power tooling appropriate to the repair of air braking systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Components</b>	Components may include compressors, actuators, pressure lines, receivers and valves
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice

**RANGE STATEMENT**

<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, pressure gauges and brake testing devices
<b>Materials</b>	Materials may include spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the repair of air braking systems and associated components</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

**Unit Sector(s)**

<b>Unit sector</b>	Mechanical - Heavy Vehicle
--------------------	----------------------------

**Co-requisite units**

Not applicable.

## AURHTB3002 Diagnose and repair heavy vehicle hydraulic braking systems

### Modification History

Release	Comment
Release 1	Replaces AURT310166A - Repair hydraulic braking systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to modern heavy vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair hydraulic braking systems fitted to heavy vehicles. It involves diagnosing deviations from correct operation, repairing hydraulic braking system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the hydraulic braking systems of heavy vehicles in the road transport, mining, construction and agricultural environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a heavy vehicle hydraulic braking system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a heavy vehicle hydraulic braking system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a heavy vehicle hydraulic braking system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of heavy vehicle hydraulic braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing heavy vehicle hydraulic braking systems
- legislation and regulatory requirements
- dangers of working with heavy vehicle hydraulic braking systems
- application, purpose and operating principles of heavy vehicle hydraulic braking systems
- testing procedures for heavy vehicle hydraulic braking systems
- repair procedures for heavy vehicle hydraulic braking systems
- post-repair testing procedures for heavy vehicle hydraulic braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of heavy vehicle hydraulic braking systems
- diagnose and repair heavy vehicle hydraulic braking systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with hydraulic braking faults relevant to the qualification being sought
- equipment appropriate for the testing of heavy vehicle hydraulic

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

braking systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of heavy vehicle hydraulic braking systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• heavy vehicle braking system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of heavy vehicle hydraulic braking systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• heavy vehicle hydraulic brake service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> may	<ul style="list-style-type: none"> <li>• visual inspection of braking system components</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• measurement of linkage and actuator adjustments</li> <li>• disc rotor thickness, parallelism and run-out measurements</li> <li>• brake drum diameter, out-of-round, and bell-mouthing measurements</li> <li>• brake fluid evaluation</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• poor braking performance</li> <li>• braking system leaks</li> <li>• dragging brakes</li> <li>• excessive braking pedal travel</li> <li>• abnormal braking system noise</li> <li>• worn, damaged or badly-adjusted components.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including: <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• mobile or stationary tests to evaluate braking system performance.</li> </ul>

## AURHTB3007 Diagnose and repair heavy vehicle electronic braking systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair electronically controlled braking systems fitted to heavy vehicles. It involves diagnosing deviations from correct operation, repairing electronic braking system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the electronic braking systems of heavy vehicles in the road transport industry.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a heavy vehicle electronic braking system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Diagnosis options</b> are analysed and those most appropriate to the circumstances are selected and prepared</p>
2. Diagnose a heavy vehicle electronic braking system	<p>2.1. Diagnostic tests are performed according to workplace procedures and without causing damage to components or system</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. <b>Diagnosis findings</b> are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a heavy vehicle electronic braking system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace procedures</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - interpret gauges, diagnostic and test equipment
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to:
  - use workplace tools and equipment relating to the repair of electronic braking systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

- operate diagnostic and test equipment
- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to heavy vehicle electronic braking system
- dangers of working with heavy vehicle electronic braking systems
- legislation and regulatory requirements of heavy vehicle electronic braking systems
- operating principles of heavy vehicle electronic braking systems
- application, purpose and operation of heavy vehicle electronic braking systems
- effects of associated systems on vehicle's electronic braking system
- techniques for reading and interpreting electrical circuit diagrams of electronic braking systems
- testing procedures of heavy vehicle electronic braking systems
- repair procedures of heavy vehicle electronic braking systems
- post-repair testing procedures of heavy vehicle electronic braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of heavy vehicle electronic braking systems
- conduct diagnosis and repair procedures of heavy vehicle electronic braking systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with electronic braking faults relevant to the qualification being sought
- equipment appropriate for the testing of heavy vehicle electronic braking systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of heavy vehicle electronic braking systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• heavy vehicle electronic braking system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of heavy vehicle electronic braking systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• National Environment Protection Measure for Diesel Vehicles (Guidelines)</li> <li>• heavy vehicle service requirements and repair manuals.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Diagnosis options</i></b> may include:	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• steering axle or drive axle brake modulator faults</li> <li>• sensor faults</li> <li>• electronic control unit (ECU) faults.</li> </ul>
<b><i>Diagnosis findings</i></b> may include:	<ul style="list-style-type: none"> <li>• comparison of test results with manufacturer specifications</li> <li>• recommendations for repair, adjustment or replacement of parts.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including:               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• on-board diagnostic system assessment procedures.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical – Brakes

## AURHTB4003 Overhaul braking system components (heavy)

### Modification History

Release	Comment
Release 1	<p>Replaces AURT410145BA Overhaul braking system components (heavy)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out an overhaul to hydraulic, mechanical, vacuum and power assisted, and electric heavy braking system components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, overhauling of braking system components, conducting of serviceability tests on components, preparing brake components for use or storage and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence applies to heavy vehicles, trailers and towable equipment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to overhaul braking system components	1.1.Nature and scope of the work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical and/or calibration requirements for overhaul are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with stored energy as in emergency braking actuators are observed 1.7.Dangers working with brake dust and preventative measures are observed
2. Overhaul braking system components	2.1.Information is accessed and interpreted from manufacturer/component supplier specifications 2.2.Braking system components are overhauled using approved methods, equipment and materials, in accordance with manufacturer/component supplier specifications 2.3.Overhaul of braking system components/sub assemblies is completed without causing damage to any component or system 2.4.All braking systems component overhaul activities are carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies
3. Conduct serviceability tests on components	3.1.Methods for the conduct of the test is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.Observations on the performance of the component is noted during the test 3.3.A determination is made as to the serviceability of the component 3.4.Failed components are tagged for rework 3.5.Documentation of observations are completed
4. Prepare brake components for use or storage	4.1.Inspection is made to ensure safety features are in place 4.2.Final inspection is made to ensure work is to workplace expectations 4.3.Brake component is presented for use or stored to

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.4.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use workplace technology related to the overhaul of heavy vehicle braking systems, including the use of specialist tooling and equipment, measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- health hazards working with brake dust
- hydraulic principles
- operating principles of heavy braking systems and their components, including air compressors
- overhaul procedures
- test procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the overhaul of a range of braking system components in accordance with workplace and manufacturer/component supplier requirements
- interpreting test results
- completing the work within workplace timeframes
- presentation/storage of brake components in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the overhaul of heavy vehicle braking systems
- equipment, hand and power tooling appropriate to the overhaul of heavy vehicle braking systems
- activities covering the mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Actuating mechanisms</b>	Actuating mechanisms may include fluid operated, mechanically operated, power assisted, anti-lock brake systems, computer systems
<b>System components</b>	System components may include disc pads, master cylinders, brake shoes, brake callipers, brake hoses, brake actuators, mechanical devices, and hydraulic and pneumatic valves
<b>Overhaul methods and sequences</b>	Overhaul methods and sequences are to include the complete dismantling of component parts, measuring and evaluation of wear, the replacement, repair, rebuilding or reconditioning of parts comparable to original parts, the assembly of parts, performance of functional testing and the completion of records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental</b>	Environmental requirements are to include but are not limited to

<b>RANGE STATEMENT</b>	
<b>requirements</b>	waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for removal/adjustment, lifting and supporting equipment, brake dust extraction equipment, measuring instruments and overhaul machining equipment
<b>Materials</b>	Materials may include spare parts, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the overhaul of heavy vehicle braking systems</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test air braking systems/ components	<p>1.1.Nature and scope of the work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for testing air braking systems are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with air braking systems are observed</p>
2. Test air braking systems/ components and analyse results	<p>2.1.Methods for the conduct of the air braking systems tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to appropriate persons for action in accordance with workplace procedures</p>
3. Prepare to disassemble and overhaul air braking systems/components	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information required are identified and sourced</p> <p>3.3.Technical and tooling requirements for the disassembly and overhaul are identified and support equipment is identified and prepared</p>
4. Carry out the overhaul and reassembly of air braking systems/ components	<p>4.1.Methods for the conduct of the overhaul and reassembly are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.All adjustments made during the overhaul are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle/ equipment for use or storage	<p>5.1.Overhaul schedule documentation is completed</p> <p>5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Final inspection is made to ensure work is to workplace expectations</p> <p>5.4. Vehicle/equipment is cleaned for use or stored to workplace expectations</p> <p>5.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- the capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to overhauling air braking systems/components, including the use of measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with air braking systems
- operating principles of air braking systems/components and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- air braking systems inspection/service and repair procedures
- air braking systems overhaul procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting of the test results
- conducting the overhaul in accordance with workplace and manufacturer/component supplier requirements
- completing overhaul of a range of air braking systems and associated components within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to overhauling air braking systems/components
- equipment, hand and power tooling appropriate to overhauling air braking systems/components
- activities covering the mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

	<p>performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## AURHTB4006 Diagnose complex faults in heavy commercial vehicle braking systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in heavy commercial vehicle braking systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of braking systems of heavy commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning heavy commercial vehicle braking are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies or discrepancies or <b>faults</b> in heavy commercial vehicle braking systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to heavy commercial vehicle braking systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of heavy commercial vehicle braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to heavy commercial vehicle braking systems
- concepts, types, functions, operations and limitations of heavy commercial vehicle braking systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to heavy commercial vehicle braking systems
- testing procedures for heavy commercial vehicle braking systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different heavy commercial vehicle braking systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults heavy commercial vehicle braking systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated heavy commercial

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

vehicle braking system faults

- tools and equipment appropriate for the diagnosis of complex faults in heavy commercial vehicle braking systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i> may include:</b>	<ul style="list-style-type: none"> <li>• indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harness, computer systems, calibration or adjustment specifications</li> <li>• component specifications, component assembly, component damage and system modifications</li> <li>• indirect mechanical faults</li> </ul>
<b><i>Tests</i> may include:</b>	<ul style="list-style-type: none"> <li>• wiring and connector integrity</li> <li>• operation and specification of input and output devices</li> <li>• controlling electronic components and computers</li> <li>• data interpretation and readings related to direct indirect and intermittent causes</li> <li>• hydraulic systems testing</li> <li>• electrical systems testing</li> <li>• mechanical systems testing</li> <li>• road test</li> </ul>
<b><i>Testing equipment</i> may include:</b>	<ul style="list-style-type: none"> <li>• decelerometer brake test meter</li> <li>• brake fluid tester</li> <li>• ABS sensor tester</li> <li>• analogue and digital multimeters, lab oscilloscopes, scan tools, test lights and test LEDs</li> <li>• pulse generators</li> <li>• manufacturer and component supplier testing equipment</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Diagnostic processes*** may include:

- analysing manufacturer and component supplier specifications, schematics and operational procedures related to heavy commercial vehicle braking systems
- six-step troubleshooting plan
- discover-investigate-fix methodology

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical – Brakes

**Custom Content Section**

Not applicable.

## AURHTB5005 Analyse and evaluate heavy vehicle braking system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT571393A Analyse and evaluate heavy vehicle braking system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate heavy vehicle braking systems in order to initiate action to sustain, vary or enhance performance. It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning heavy vehicle engine systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Heavy vehicle braking system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary heavy vehicle braking systems, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- heavy vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the types, functions, operations and limitations of heavy vehicle foundation braking systems/components.
- detailed knowledge of the types, functions and limitations of friction materials associated with heavy vehicle braking systems.
- detailed knowledge of the types, function, operations and limitations of abs braking systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle air braking (truck and trailer) systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle air braking (multiple trailer) systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle air over

**REQUIRED SKILLS AND KNOWLEDGE**

- hydraulic braking systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle compression braking systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle retardant systems/ components.
- general knowledge of the Australian design rules requirements related to heavy vehicle braking.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three heavy vehicle braking systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for heavy vehicle braking systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, heavy vehicle braking systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Braking systems</b>	Braking systems to be covered in this unit are to include foundation, ABS, ABS with traction control, air brakes (truck and trailer), air brakes (multiple trailer), compression braking, vehicle retardants, and air over hydraulic systems.
<b>Timing and balancing</b>	Brake timing and balancing are covered.
<b>System failures</b>	<ul style="list-style-type: none"> <li>Braking system failures covered by this unit are to include air supply capacity, application and release times, brake balance, brake drum wear, calibration/adjustment specifications, component damage, conductors - piping specifications, contamination, friction material abnormalities, leaks, pump-up times.</li> <li>Braking system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.

**RANGE STATEMENT**

<b>Testing equipment</b>	Testing equipment is to include air gauges, multimeter and Tappley meter, and may include brake timer and electronic stethoscope.
<b>Tests</b>	<ul style="list-style-type: none"> <li>• Tests to be conducted are to include system performance, air supply build-up time, prime mover and trailer application time, park brake application, brake fluid boiling point, rotor and drum wear, pad and lining thickness, brake pedal travel, handbrake mechanism travel, NVH, directional control, ABS operation and performance, sensor/actuator and wiring harness integrity, sampling (collection and processing) and monitoring/analysis of computer-based diagnostic systems.</li> <li>• Tests may also include braking during cornering, brake roller testing, friction material wear rate, disc drum and rotor temperature.</li> </ul>
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to heavy vehicle braking systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging brake system technology and technology changes.</li> </ul>

**Unit Sector(s)**

<b>Unit sector</b>	Mechanical - Heavy Vehicle
--------------------	----------------------------

**Co-requisite units**

Not applicable.

## AURHTD2001 Inspect and service heavy commercial vehicle suspension systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect and service suspension systems and suspension components fitted to heavy commercial vehicles.</p> <p>The unit involves an inspection of the suspension system to note deviations from correct operation as well as service to ensure the system complies with manufacturer's specifications.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to the suspension systems of heavy commercial vehicles.</p> <p>Work does not apply to agricultural, off-the-road (OTR), light vehicle or motorcycle suspension systems.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and service suspension system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting and servicing <b>heavy vehicle suspension systems</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect suspension system	<p>2.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service suspension system	<p>3.1. <b>Service options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service and adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to:
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection and servicing of heavy commercial vehicle suspension systems
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of heavy commercial vehicle suspension systems
- methods of sourcing information relevant to inspecting and servicing heavy commercial vehicle steering systems
- inspection procedures of heavy commercial vehicle suspension systems
- service procedures of heavy commercial vehicle suspension systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect and service a range of heavy commercial vehicle suspension systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy commercial vehicles with suspension systems relevant to the qualification being sought
- tools and equipment appropriate for the inspection and servicing of heavy commercial vehicle suspension systems
- specifications and workplace instructions.

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• heavy commercial vehicle suspension system inspection and service methods, processes and equipment.</li> </ul>
<b>Heavy vehicle suspension systems</b> may include:	<ul style="list-style-type: none"> <li>• airbag, coil spring, leaf spring and torsion bar types</li> <li>• shock absorbers</li> <li>• dead axle, independent and adaptive</li> <li>• gas, hydraulic, pneumatic, mechanical or rubber suspension</li> <li>• lateral and longitudinal arms</li> <li>• ball joints</li> <li>• self-levelling device, ride control, height control.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection and servicing of heavy commercial vehicle suspension systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• heavy commercial vehicle service requirements and repair manuals.</li> </ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"> <li>• lubricant application and replacement</li> <li>• adjustments and operational testing.</li> </ul>
<i>Final inspection</i> may include:	<ul style="list-style-type: none"> <li>• final check of suspension systems and components</li> <li>• checking of suspension system operation during mobile or stationary tests</li> <li>• cleaning of heavy commercial vehicle.</li> </ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"> <li>• heavy commercial vehicle service book</li> <li>• job card or work order</li> <li>• workplace computerised or written records and invoice.</li> </ul>

## AURHTD3002 Repair steering systems (heavy vehicle)

### Modification History

Release	Comment
Release 1	Replaces AURTH315166A Repair steering systems (heavy vehicle) Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out repairs to wheeled and/or tracked type steering systems and associated components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, tests and analysis of results, completion of repairs and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence should be contextualised to the qualification to which it is being applied.</p> <p>Work involved includes wheeled and/or tracked type vehicles and heavy vehicles.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repair of steering system	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or operational requirements for inspecting and repairing steering systems are sourced and support tooling and equipment are identified and prepared</p> <p>1.6.Warnings in relation to working with wheeled and tracked vehicles are observed</p>
2. Conduct test and analyse results	<p>2.1.Methods for steering system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Inspection/test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repairs	<p>3.1.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Adjustments, including wheel bearing adjustments are made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle/equipment for customer and/or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- operating principles of mechanical and hydraulic steering systems and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- dangers of working with wheeled and tracked vehicles
- steering systems testing and adjusting procedures
- steering systems repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting test results
- completing repair to a range of steering systems to manufacturer/component supplier requirements
- completing repairs within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of steering systems
- equipment, hand and power tooling appropriate to the repair of steering systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

**EVIDENCE GUIDE**

	<p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Repair of steering systems and equipment</b>	Repair of steering systems and equipment may include: <ul style="list-style-type: none"> <li>• component and / or system adjustments</li> <li>• ball joints, struts, idler arms, steering boxes, steering columns, steering racks, king pin and steering actuators</li> <li>• electronic controlled steering systems</li> <li>• full power steering, including articulated vehicles</li> <li>• tracked type vehicles</li> </ul>
<b>Methods</b>	Methods are to include: <ul style="list-style-type: none"> <li>• operational testing, electrical testing and hydraulic testing</li> <li>• visual, aural and functional assessments (including: damage, corrosion, wear)</li> <li>• principles, angles and geometry of vehicle wheel alignment</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental</b>	Environmental requirements are to include but are not limited to

<b>RANGE STATEMENT</b>	
<b>requirements</b>	waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, testing equipment and devices, including camber, caster, KPI and toe out on turns measuring systems
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair of steering systems</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repairs to suspension systems and associated components	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or measurement requirements for suspension systems are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with wheeled and tracked vehicles are observed
2. Conduct inspection/test and analysis	2.1. Methods for inspection/test procedures and manufacturer/component supplier specifications 2.2. Inspection/test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is forwarded to persons for action in accordance with workplace procedures
3. Carry out repairs	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information are identified and sourced 3.3. Technical and tool requirements for repair are identified and support equipment is identified and prepared 3.4. Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.5. Adjustments made during the repair are in accordance with manufacturer/component supplier specifications
4. Prepare vehicle for use or storage	4.1. Repair schedule documentation is completed 4.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3. Final inspection is made to ensure work is to workplace expectations 4.4. Vehicle/equipment is cleaned for use or storage to

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with equipment on chassis
- types and layout of service/repair manuals (hard copy and electronic)
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting inspection/test results
- conducting repair of a range of systems in accordance with manufacturer/component supplier and workplace requirements
- completing repairs within workplace timeframes
- vehicle/equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of suspensions systems
- equipment, hand and power tooling appropriate to the repair of suspensions systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

**EVIDENCE GUIDE**

	<p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. ## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Carry out wheel alignment pre-checks	1.1.Information is gained from customer outlining handling characteristics and history 1.2.Nature and scope of work requirements are identified and confirmed 1.3.Procedures and information such as workshop manuals and specifications, and tools required, are sourced 1.4.Vehicle/equipment tests are performed to confirm need for alignment 1.5.Vehicle wheel alignment pre-checks are carried out in accordance with manufacturer/component supplier procedures and workplace requirements
2. Perform vehicle wheel alignment	2.1.Correct information is accessed and interpreted from manufacturer/component supplier specifications 2.2.Wheel alignment measuring equipment is connected to vehicle in accordance with manufacturer/component supplier specifications 2.3.Wheel alignment is completed without causing damage to any component or system 2.4.Corrective adjustments/repairs are carried out in accordance with manufacturer/component supplier specifications 2.5.Vehicle/equipment is tested to confirm accuracy of adjustments according to manufacturer/component supplier specifications and customer requirements 2.6.Wheel alignment testing and adjustment is carried out according to industry regulations/guidelines, WHS legislation, legislation and enterprise procedures/policies 2.7.Workplace documentation is completed and dealt with relevant to alignment outcomes
3. Complete documentation and service history documents	3.1.Service history is updated in accordance with workplace requirements 3.2.Before and after alignment measurements are documented and included in customer documentation 3.3.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- operating principles of steering geometry and wheel alignment
- wheel alignment procedures
- relationships between fault symptoms and component defects
- chassis alignment checks
- wheel alignment system types and their construction
- use of measuring tools and testing equipment
- use of hand tools and specialised equipment
- pre-check procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• conducting the alignment of a range of wheels in accordance with workplace and manufacturer/component supplier requirements</li> <li>• accurately interpreting wheel alignment measurements</li> <li>• completing wheel alignment within workplace timeframes</li> <li>• vehicle/equipment is presented to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to wheel alignment operations</li> <li>• equipment, hand and power tooling appropriate to wheel alignment operations</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Wheel alignment operations</b>	<p>Wheel alignment operations are to include one or more of the following systems:</p> <ul style="list-style-type: none"> <li>• drive axles</li> <li>• two and four wheel steer, tandem steer</li> <li>• single wheel steer</li> <li>• trailer axle</li> <li>• Methods are to include:</li> <li>• chassis/underframe alignment checks</li> <li>• measurement and adjustment</li> <li>• road testing (before and after adjustments)</li> <li>• visual, aural and functional assessment (including: damage, corrosion, wear, measurement)</li> <li>• alignment equipment operation</li> <li>• string lining</li> </ul>
<b>WHS</b>	<p>WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances</p>
<b>Personal protective equipment</b>	<p>Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices</p>
<b>Safe operating procedures</b>	<p>Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors</p>
<b>Emergency procedures</b>	<p>Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation</p>

**RANGE STATEMENT**

<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tools, tyre gauge and/or specialist tools for removal/adjustment, mechanical and/or electronic wheel alignment equipment, measuring equipment, lifting equipment, two head and four head wheel aligner
<b>Materials</b>	Materials may include minor parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to wheel alignment operations</li> <li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURHTD4006 Diagnose complex faults in heavy commercial vehicle steering and suspension systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in heavy commercial vehicle steering and suspension systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of steering and suspension systems of heavy commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning heavy commercial vehicle steering and suspension systems are accessed and interpreted</p> <p>1.3. Workplace health and safety (WHS) requirements, equipment and system isolation requirements, and personal protection needs are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or faults with heavy commercial vehicle steering and suspension systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to diagnose faults	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, tests and testing process are identified and selected from the range of available options</p> <p>2.4. Testing equipment is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected diagnostic processes are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to heavy commercial vehicle steering and suspension systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of heavy commercial vehicle steering and suspension systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles heavy commercial vehicle steering and suspension systems
- types, functions, operations and limitations of heavy commercial vehicle steering and suspension systems and components
- theory of diagnosis, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment relating to heavy commercial vehicle steering and suspension systems
- testing procedures of heavy commercial vehicle steering and suspension systems
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different heavy commercial vehicle steering and suspension systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in heavy commercial vehicle steering and suspension systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated heavy commercial

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- vehicle steering and suspension system faults
- tools and equipment appropriate for the diagnosis of complex faults in heavy commercial vehicle steering and suspension systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• indirect faults caused by the influence of external electrical and electronic systems, which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harnesses and computer systems</li> <li>• component damage and system modifications</li> <li>• incorrect axle alignment.</li> </ul>
<b><i>Tests</i></b> may include:	<ul style="list-style-type: none"> <li>• wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings relating to direct, indirect and intermittent causes</li> <li>• use of a shock absorber dynamometer</li> <li>• axle alignment checks</li> <li>• on-road testing</li> <li>• component testing.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• shock absorber dynamometer</li> <li>• analogue and digital multimeters</li> <li>• lab oscilloscopes</li> <li>• scan tools</li> <li>• test lights and test LEDs</li> <li>• pulse generators</li> <li>• manufacturer and component supplier testing equipment.</li> </ul>
<b><i>Diagnostic processes</i></b> may	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures relating to heavy vehicle</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	steering and suspension systems <ul style="list-style-type: none"><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology.</li></ul>

## AURHTD5005 Analyse and evaluate heavy vehicle steering and suspension system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT571093A Analyse and evaluate heavy vehicle steering and suspension system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate heavy vehicle steering and suspension systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning heavy vehicle steering and suspension systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Heavy vehicle steering and suspension system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary heavy vehicle steering and suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- heavy vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetics and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of steering system theory, including steering angles (camber, castor, king pin inclination, toe-in and toe-out).
- general knowledge of the functions of hydraulic pressure within steering and suspension systems.
- detailed knowledge of the types, functions, operations and limitations of heavy vehicle steering and suspension systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle mechanical steering systems/components
- detailed knowledge of the types and influences of single and multiple trailer operations on heavy vehicle power steering systems/components.

## REQUIRED SKILLS AND KNOWLEDGE

- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three heavy vehicle steering and suspension systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measures.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for heavy vehicle steering and suspension systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, heavy vehicle steering and suspension systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or

<b>EVIDENCE GUIDE</b>	
	<p>authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Steering and suspension systems</b>	Steering and suspension systems to be covered in this unit are to include mechanical, power and split-air suspension.
<b>Steering system failures</b>	Heavy vehicle steering system failures covered by this unit are to include mechanical steering, power steering, tyre wear, driveability, vibration, directional stability, tracking, calibration/adjustment specification, component specifications, component assembly, component damage and system modifications.
<b>Suspension system failures</b>	Heavy vehicle suspension system failures covered by this unit are to include erratic steering, suspension trailer influences, mechanical damage, chassis alignment, component damage and systems modifications.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include tape measure, tyre pressure gauge, string line, adjustable electronic bubble level and laser wheel

<b>RANGE STATEMENT</b>	
	alignment system or equivalent wheel and chassis alignment equipment.
<b>Tests</b>	Tests to be conducted are to include tyre pressures, tyre tread, toe-in, toe-out turns, camber, castor, king pin inclination, king pin wear, steering linkage and bar specification, axle track, average axle track, axle parallelity, chassis alignment, ride height, wheel bearing specification, drag link specifications, turning radius left/right, air bag leveller operation.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and materials.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to heavy vehicle steering and suspension systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li> </ul>

## AURHTE2001 Remove and install heavy vehicle engine assemblies

### Modification History

Release	Comment
Release 1	Replaces AURT201164A Remove and install engine assemblies Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern heavy vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove and install engine assemblies fitted to heavy vehicles. It involves the identification of work requirements, preparation for work, removal of assemblies, installation of engine assemblies and completion of work finalisation processes, including cleaning and documentation, and post-installation testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the removal and installation of engine assemblies of heavy vehicles in the road transport, mining, construction, agricultural and marine environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove heavy vehicle engine assemblies	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to removing heavy vehicle engine assemblies</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Removal options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Warnings in relation to working with lifting and jacking equipment are observed</p>
2. Carry out the removal of heavy vehicle engine assemblies	<p>2.1. Engine assembly is removed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. <b>Observations</b> are noted and documented during the removal of engine assembly</p>
3. Install heavy vehicle engine assemblies	<p>3.1. <b>Installation options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools and equipment are selected and prepared</p> <p>3.3. Engine assembly is installed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Carry out post-installation tests and adjustments	<p>4.1. <b>Post-installation adjustments</b> are carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>4.2. <b>Post-installation tests</b> are carried out according to workplace procedures and manufacturer and component supplier specifications</p>
5. Clean up work area and finalise work processes	<p>5.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>5.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>5.3. Workplace documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret gauges, instruments and measuring equipment
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the removal and installation of heavy vehicle engine assemblies
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with lifting and jacking equipment
- methods of disconnecting related systems, including:
  - air conditioning system
  - cooling system
  - electrical systems
  - exhaust system
  - fuel system
  - power steering system
  - transmission systems, including:
    - automatic transmission

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- manual transmission
- removal procedures for heavy vehicle engine assemblies, including:
  - correct use of lifting and supporting equipment
  - item tagging procedures
  - correct disposal methods of hazardous substances
- installation procedures for heavy vehicle engine assemblies
- post-installation testing and adjustment procedures for heavy vehicle engine assemblies, including:
  - pre-start procedures
  - operational testing and run-in procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- remove and install a range of heavy vehicle engine assemblies according to workplace, manufacturer and component supplier requirements
- present heavy vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles and heavy vehicle engine assemblies
- tools and equipment appropriate for the removal and installation of heavy vehicle engine assemblies
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• removal and installation methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the removal and installation of heavy vehicle engine assemblies</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• heavy vehicle service requirements and repair manuals.</li> </ul>
<b>Removal options</b> may	<ul style="list-style-type: none"> <li>• removal of the engine assembly alone or with the transmission assembly</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>removal with the engine attached to chassis.</li> </ul>
<b><i>Observations</i></b> may include:	<ul style="list-style-type: none"> <li>routing of system components</li> <li>damaged or faulty components</li> <li>components and parts required for engine installation.</li> </ul>
<b><i>Installation options</i></b> may include:	<ul style="list-style-type: none"> <li>installation of the engine assembly alone or with the transmission assembly</li> <li>installation with the engine attached to chassis.</li> </ul>
<b><i>Post-installation adjustments</i></b> may include:	<ul style="list-style-type: none"> <li>throttle adjustments</li> <li>coolant replacement</li> <li>oil replacement</li> <li>tappet adjustment</li> <li>re-tensioning of cylinder head bolts.</li> </ul>
<b><i>Post-installation tests</i></b> may include:	<ul style="list-style-type: none"> <li>stationary and mobile engine performance tests</li> <li>testing of associated systems, including:               <ul style="list-style-type: none"> <li>air conditioning system</li> <li>cooling system</li> <li>power steering system</li> <li>ancillary systems</li> <li>transmission system.</li> </ul> </li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical - Engines

**Custom Content Section**

Not applicable.

## AURHTE3002 Repair engines and associated engine components (heavy vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURTH301166A Repair engines and associated engine components (heavy vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out repair of an engine, and associated engine components on compression ignition engines.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, engine system testing and analysis, repair of engines and associated components and completion of work finalisation processes, including clean-up and documentation.</p> <p>This unit of competence should be contextualised to the qualification to which it is being applied.</p> <p>Engines may include those for, heavy vehicles, mobile plant, agricultural machinery and marine craft.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repair of engines	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.National Environmental Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks</p> <p>1.4.Procedures and information such as workshop manuals and specifications, and tools, are sourced</p> <p>1.5.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6.Technical and/or calibration requirements for engine systems repair are sourced and support equipment is identified and prepared</p> <p>1.7.Warnings in relation to working with engines and associated systems are observed</p>
2. Conduct engine systems tests and analyse results	<p>2.1.Methods for engine systems tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Engine is started and run up to operating temperature and checked for leaks, abnormal noises and pressures</p> <p>2.3.Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.4.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.5.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repair	<p>3.1.Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2.Adjustments made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle/ equipment for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle/equipment is cleaned for use or storage to</p>

ELEMENT	PERFORMANCE CRITERIA
	workplace expectations 4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- National Environmental Protection Measures for Diesel Vehicles as applicable to tasks
- engine construction and operation relevant to application
- types and layout of service/repair manuals (hard copy and electronic)
- engine/component repair procedures
- engine removal and replacement procedures
- measuring and testing procedures
- equipment/component safety requirements
- work organisation and planning processes
- enterprise quality processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- dismantling, evaluating, assembling, adjustment, measuring and testing
- repairing a range of engines and associated components to workplace requirements and specifications
- repairing of engine and associated components completed within workplace guidelines and timeframes

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of engines and associated engine components
- equipment, hand and power tooling appropriate to the repair of engines and associated engine components
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

## EVIDENCE GUIDE

	<p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	--

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Engines</b>	<p>Engines may be:</p> <ul style="list-style-type: none"> <li>four stroke compression ignition engines for heavy vehicle, agricultural machinery, mobile plant and marine craft</li> <li>two stroke compression ignition for heavy vehicle, agricultural machinery, mobile plant, and marine craft</li> </ul>
<b>Repair methods</b>	Repair methods are to include identification of component wear/damage, fluid leakage, removal, dismantling, reassembly, refitting, adjusting and testing
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company

<b>RANGE STATEMENT</b>	
	quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tools, power tools, lifting and jacking equipment, specialist tooling and lubricant dispensing equipment
<b>Materials</b>	Materials may include spare parts, consumables, lubricants and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repairing engines and associated components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules, Environment Protection Regulations (Diesel Fuels), National Environment Protection For Diesel Vehicle Guidelines Engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURHTE4003 Diagnose complex faults in heavy vehicle diesel engines

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose complex faults in heavy vehicle diesel engines systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical, electronic or mechanical by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	--

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to and includes system fault and failure diagnosis of diesel engines in the road transport, mining, construction and agricultural environments.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning heavy vehicle diesel engines systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies or discrepancies or <b>faults</b> in heavy vehicle diesel engines systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to heavy vehicle diesel engine systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of heavy vehicle diesel engine systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to heavy vehicle diesel engine systems
- concepts, types, function, operations and limitations of heavy vehicle diesel engines, including:
  - fuel, ignition, intake, exhaust, lubrication, cooling and engine mounting systems/components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to heavy vehicle diesel engine systems
- testing procedures for heavy vehicle diesel engine systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different heavy vehicle diesel engines systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults heavy vehicle diesel engine systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated heavy vehicle diesel

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

engine system faults

- tools and equipment appropriate for the diagnosis of complex faults in heavy vehicle diesel engine systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults may include:***

- engine (poor performance, excessive oil consumption, engine stoppages)
- fuel (contamination, flow, pressure, leakage)
- ignition (no-start, no-run, misfire, erratic operation, lack of power, charging)
- intake (leakage, noise, vibration, inadequate control)
- exhaust (pressure, abnormal emissions)
- lubrication (pressure, flow, leakage, abnormal engine wear, inadequate filtration, sludge formation, excessive deposits, overheating)
- cooling (overcooling, insufficient cooler flow, coolant out of specification, lack of air flow, internal corrosion)
- mounting (noise, vibration, hardness, clutch shudder, erratic transmission control)
- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- component specifications, component assembly, component damage and system modifications
- indirect engine mechanical faults.

***Tests may include:***

- component wear analysis, compression, cylinder leakage, engine performance, exhaust gas sampling, flow, oil consumption, pressure, sample collection and processing, specific gravity, temperature and vacuum.
- mechanical systems testing

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>road test.</li> </ul>
<b><i>Testing equipment</i></b> may include:	<ul style="list-style-type: none"> <li>bore gauges, compression gauges, cooling system analyser, dial gauges, exhaust gas analysers, micrometers, multimeter, oscilloscope, pressure gauges, stethoscope, telescopic gauges, temperature gauges, tachometer, timing lights, vacuum gauges, verniers, and may include anemometer, barometer, hygrometer, specific gravity gauge</li> <li>manufacturer and component supplier testing equipment</li> </ul>
<b><i>Diagnostic processes</i></b> may include:	<ul style="list-style-type: none"> <li>analysing manufacturer and component supplier specifications, schematics and operational procedures related to heavy vehicle diesel engines</li> <li>component substitution</li> <li>six-step troubleshooting plan</li> <li>discover-investigate-fix methodology.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical – Engines

**Custom Content Section**

Not applicable.

## AURHTE5004 Analyse and evaluate heavy vehicle engine and fuel system faults

### Modification History

Release	Comment
Release 1	Replaces AURT571293A Analyse and evaluate heavy vehicle engine and fuel system faults Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to analyse and evaluate heavy vehicle engine and fuel systems in order to initiate action to sustain, vary or enhance performance.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.  The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning heavy vehicle engine and fuel systems are accessed and interpreted.</p> <p>1.3. National Environment Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work as applicable to tasks.</p> <p>1.4. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.5. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.6. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.5. Heavy vehicle engine and fuel system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstances, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary heavy vehicle engine and fuel systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- National Environment Protection Measures for Diesel Vehicles.
- heavy vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the types, functions, operations and limitations of heavy vehicle engines.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle fuel systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle engine electrical systems/ components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle intake systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle exhaust systems/components.

## **REQUIRED SKILLS AND KNOWLEDGE**

- detailed knowledge of the types, function, operations and limitations of heavy vehicle lubrication systems/ components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle cooling systems/components.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three heavy vehicle engine and fuel systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for heavy vehicle engine and fuel systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, heavy vehicle engine and fuel systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

## **EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	<ul style="list-style-type: none"> <li>The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.</li> </ul>
<b>Engine and fuel systems</b>	<ul style="list-style-type: none"> <li>Engine and fuel systems to be covered in this unit are to include the engine, computer controlled management systems, closed loop diesel engine management systems and related fuel, electrical, intake, exhaust, lubrication and cooling systems.</li> </ul>
<b>Engine and fuel system failures</b>	<ul style="list-style-type: none"> <li>Engine and fuel system failures covered by this unit are to include engine management, engine performance (response, fuel consumption, power), charging, contamination, damaged components, emissions, forced induction, fuel pressure/supply, lighting leaks, operating temperature, overheating, sensors, starting.</li> <li>Engine and fuel system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with National Environment Protection Measures for Diesel Vehicles.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.

**RANGE STATEMENT**

<b>Testing equipment</b>	Testing equipment is to include compression gauges, computerised diagnostic system, cooling system analyser, dynamometer, manometer, multimeter, pressure gauges, pyrometer, refractometer, temperature gauges, vacuum gauges and may include anemometer, barometer, hygrometer, specific gravity gauge.
<b>Tests</b>	Tests to be conducted are to include component wear analysis, compression, cylinder leakage, engine performance, exhaust gas sampling, flow, oil consumption, pressure, sample collection/processing, specific gravity, temperature, vacuum, boost pressures.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to heavy vehicle engine and fuel systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li> </ul>

**Unit Sector(s)**

<b>Unit sector</b>	Mechanical - Heavy Vehicle

## AURHTF2001 Inspect heavy commercial vehicle fuel systems and components

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect heavy commercial vehicle fuel systems and components for the purpose of establishing safe operating conditions and making any repair or maintenance recommendations.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the fuel systems and components of heavy commercial vehicles and may include inspecting fuel systems and components on or off the vehicle.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for inspection	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting heavy commercial vehicle fuel systems</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> relating to heavy commercial vehicles are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect fuel systems and components to determine condition	<p>2.1. Work area is checked to ensure safe working conditions</p> <p>2.2. <b>Fuel systems and components</b> are inspected according to workplace or manufacturer requirements and without causing damage to components or systems</p> <p>2.3. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.4. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Clean up work area and finalise work processes	<p>3.1. Tools and equipment are checked and stored according to workplace expectations</p> <p>3.2. <b>Documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection operations
- numeracy skills to perform simple measurements and assess tolerances
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection of heavy commercial vehicle fuel systems and components
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- workplace safety procedures related to heavy commercial vehicle movements and pedestrian traffic
- operating principles of heavy commercial vehicle fuel systems
- methods of sourcing information relevant to inspecting heavy commercial vehicle fuel systems
- inspection procedures of heavy commercial vehicle fuel systems and components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect a range of heavy commercial vehicle fuel systems and components according to workplace, manufacturer and component supplier requirements
- record results of inspection according to workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy commercial vehicle fuel systems and components relevant to the qualification being sought
- tools and equipment appropriate for the inspection of heavy commercial vehicle fuel systems and components
- specifications and workplace instructions.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• heavy commercial vehicle fuel systems and component inspection methods, processes and equipment</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection of heavy commercial vehicle fuel systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• heavy commercial vehicle inspection requirements and repair manuals.</li> </ul>
<b>Fuel systems and</b>	<ul style="list-style-type: none"> <li>• fuel tanks and fittings</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>components</i></b> may include:	<ul style="list-style-type: none"><li>• fuel lines</li><li>• fuel filters</li><li>• fuel pumps</li><li>• fuel injectors</li><li>• water separators.</li></ul>

## AURHTJ1001 Inspect heavy commercial vehicle wheels and tyres

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect heavy commercial vehicle wheels and tyres for the purpose of establishing safe operating conditions and making any repair or maintenance recommendations.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to heavy commercial vehicle wheels and tyre assemblies and vehicles and may include inspecting wheels and tyre assemblies on or off the vehicle.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for inspection	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting heavy commercial vehicles wheels and tyres</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> relating to heavy commercial vehicle wheels and tyre assemblies are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect wheels and tyre assemblies to determine condition	<p>2.1. Work area is checked to ensure safe working conditions</p> <p>2.2. <b>Wheels and wheel attachments, tyre condition</b> and inflation fittings are inspected according to workplace or manufacturer requirements and without causing damage to components or systems</p> <p>2.3. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.4. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Clean up work area and finalise work processes	<p>3.1. Tools and equipment are checked and stored according to workplace expectations</p> <p>3.2. <b>Documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection operations
- numeracy skills to interpret numerical information printed on tyres
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection of heavy commercial vehicle wheels and tyres
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with tyres and air pressure
- dangers associated with split and multi-piece wheel rims
- workplace safety procedures related to heavy commercial vehicle movements and pedestrian traffic
- vehicle wheel and tyre terminology, including types of rim and tyre construction and tyre coding
- inspection procedures of heavy commercial vehicle wheels and tyre assemblies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect a range of heavy commercial vehicle wheels and tyres according to workplace, manufacturer and component supplier requirements
- record results of inspection according to workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy commercial vehicle wheel and tyre assemblies relevant to the qualification being sought
- tools and equipment appropriate for the inspection of heavy commercial vehicle tyres and wheel assemblies
- specifications and work instructions.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• heavy commercial vehicle wheels and tyre assembly inspection methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• <b>workplace</b> procedures related to the identification and fitting of tyres and rims for specific heavy applications</li> <li>• tyre manufacturer technical information</li> <li>• vehicle and equipment operator manuals</li> <li>• charts, tables, graphics, work bulletins</li> <li>• vehicle workshop manuals</li> <li>• Australian Standards for heavy commercial vehicle rims and tyres</li> <li>• Australian Design Rules as they relate to heavy commercial vehicle rims and tyres.</li> </ul>
<b><i>Wheels and wheel attachments</i></b> may include:	<ul style="list-style-type: none"> <li>• single and dual configurations</li> <li>• wheel nuts</li> <li>• wheel caps or trims</li> <li>• axle and bearing fittings</li> <li>• one-piece rims</li> <li>• split rims and attachments</li> <li>• locking rings.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Tyre condition*** may include:

- tread depth
- tread wear patterns
- flat spots
- cuts and damage
- sidewall condition
- separation
- delamination
- under-inflation
- over-inflation
- deformation
- penetrations.

***Documentation*** may include:

- job card or work order
- workplace computerised or written customer records and invoice.

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical – Wheels and Tyres

**Custom Content Section**

Not applicable.

## AURHTJ2002 Select heavy vehicle tyres and rims for specific applications

### Modification History

Release	Comment
Release 1	<p>Replaces AURT317968A Identify and fit tyres and rims for specific applications (heavy) and AURT217985A Fit tyres and rims for specific applications (heavy)</p> <p>Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern heavy vehicle technologies</p>

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to select heavy vehicle tyres and rims to suit specific applications. It involves identifying and confirming work requirements, preparing for work, selecting tyres and rims and completing work finalisation processes.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the heavy vehicle tyres and rims of heavy vehicles in the road transport, mining, construction, agricultural and other industrial environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to select tyres and rims for specific applications	1.1.Workplace instructions are used to determine job requirements 1.2.Workplace Health and Safety (WHS) requirements are observed and applied throughout the work 1.3.Procedures and information for selecting tyres and rims are sourced
2. Select tyre and rims for specific applications	2.1.Information required for selecting heavy vehicle tyres and rims is accessed from manufacturer and component supplier specifications and correctly interpreted 2.2.Tyre and rim options are analysed to identify technical compliance and economic benefits 2.3.Selection procedures are carried out according to legislation, industry and workplace policies 2.4.Selected products are those which most closely meet customer requirements

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - ask questions to clarify instructions or procedures
  - report inspection results
- learning skills to identify sources of information and assistance
- literacy skills to:
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - document repairs and parts required
  - complete job card
- numeracy skills to interpret numerical information printed on tyres
- problem-solving skills to:
  - recognise limitations and seek timely advice
  - seek information and assistance as required to solve problems

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to heavy vehicle tyres and rims
- Australian Design Rules relating to heavy vehicle tyres and rims
- heavy vehicle tyre and rim terminology and codes
- heavy vehicle tread patterns, rim and tyre types and their applications

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- access and interpret information required for selecting tyres and rims
- select a range of heavy vehicle tyres and rims for heavy vehicle according to workplace, manufacturer and component supplier requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with tyres and rims relevant to the qualification being sought
- equipment and material suitable for sourcing information related to selecting heavy vehicle tyres and rims
- workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace instructions**  
may include:

- computer-generated instructions
- verbal instructions
- written instructions.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Procedures and information***  
may include:

- verbal or written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets, diagrams or sketches
- regulatory and legislative requirements pertaining to automotive industry, including Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards
- heavy vehicle service requirements and repair manuals.

## AURHTJ2003 Remove, inspect, and refit heavy vehicle wheel assemblies

### Modification History

Release	Comment
Release 1	Replaces AURT217665A - Remove, fit and inspect wheel assemblies  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern heavy vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove, inspect and fit wheel assemblies fitted to heavy vehicles. It involves diagnosing deviations from correct operation, removal, inspection and fitting procedures of wheel assemblies.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the wheel assemblies of heavy vehicles in the road transport, mining, construction and agricultural environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove wheel assembly	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements relating to removing heavy vehicle wheel assemblies</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Removal options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate tools and equipment are selected and prepared</p>
2. Remove and inspect wheel assembly	<p>2.1. Wheel assembly is removed according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. <b>Inspection of wheel assembly</b>, mounting points and fittings for damage and wear is carried out</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Fit wheel assembly	<p>3.1. <b>Fitting options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools and equipment are selected and prepared</p> <p>3.3. Wheel assembly is fitted according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>3.4. Wheel operation is checked for correct assembly, run-out and alignment according to workplace procedures and manufacturer and component supplier specifications</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to interpret gauges, instruments and measuring equipment
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the removal, inspection and fitting of heavy vehicle wheel assemblies
- technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with heavy vehicle wheel assemblies
- lifting and supporting procedures for heavy vehicles
- types and applications of wheels and rims, including:
  - cast-spoke wheels
  - disc wheels, including:
    - stud-piloted wheels
    - hub-piloted wheels
  - single-piece tyre-to-rim assemblies
  - two-piece tyre-to-rim assemblies
  - three-piece tyre-to-rim assemblies
- removal, inspection and fitting procedures of heavy vehicle wheel assemblies
- post-fitting procedures and checks of heavy vehicle wheel assemblies

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- remove, inspect and fit a range of heavy vehicle wheel assemblies
- remove, inspect and fit heavy vehicle wheel assemblies according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles and heavy vehicle wheel assemblies
- tools and equipment appropriate for the removal, inspection and fitting of heavy vehicle wheel assemblies
- specifications and workplace instructions.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace instructions** may include:

- computer-generated instructions
- verbal instructions
- written instructions.

**Workplace health and safety (WHS) requirements:**

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

**Procedures and information** may include:

- safe work procedures relating to the removal, inspection and fitting of heavy vehicle wheel assemblies
- verbal, written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins or memos
- material safety data sheets (MSDS)
- diagrams or sketches
- regulatory and legislative requirements relating to the automotive industry
- Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards
- heavy vehicle service requirements and repair manuals

**Removal options** may include:

- front wheel removal
- rear wheel removal
- dual wheel removal
- removal of other systems to gain access to wheel

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Inspection of wheel assembly</i></b> may include:	<ul style="list-style-type: none"><li>• tyre condition</li><li>• rim condition</li><li>• wheel bearing condition</li></ul>
<b><i>Fitting options</i></b> may include:	<ul style="list-style-type: none"><li>• manual handling or motor-assisted handling of wheel assemblies</li><li>• manual or power-tool tightening of wheel nuts</li></ul>
<b><i>Final inspection</i></b> may include:	<ul style="list-style-type: none"><li>• wheel assembly run-out and alignment testing</li><li>• correct operation is ensured of vehicle systems affected by the removal and fitting of wheel assemblies</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical – Wheels and Tyres

**Custom Content Section**

Not applicable.

## AURHTJ2004 Demount, inspect, repair and mount agricultural equipment tyres and tubes

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to perform repair operations to tyres and tubes fitted to agricultural equipment. It involves demounting agricultural equipment tyres and tubes from wheel rims, inspecting the tyre and rim to assess condition, performing minor tyre and tube repairs and remounting tyres and tubes to rims.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the tyres and tubes of agricultural equipment and machinery.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Not applicable.

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to demount, repair and mount tyres and tubes	<p>1.1. <b>Workplace instructions</b> are used to determine job requirements for the demounting, repair and mounting of <b>agricultural equipment tyres and tubes</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. Wheel type, rim type and mounting system is identified and <b>procedures and information</b> are sourced and interpreted</p> <p>1.4. Wheel assembly is visually inspected to assess immediate threat to health and safety according to legislation, manufacturer and site procedures</p> <p>1.5. Appropriate <b>tools and equipment</b> are selected and prepared</p>
2. Demount tyre from rim	<p>2.1. Tyre is demounted from rim according to workplace procedures and manufacturer and component supplier specifications</p> <p>2.2. Demounting of the tyre from the rim is completed without causing damage to any components</p>
3. Inspect tyre, tube and rim	<p>3.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.2. Inspection results are compared with manufacturer and component supplier specifications to indicate compliance or non-compliance</p> <p>3.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs</p>
4. Repair and mount tyres and tubes	<p>4.1. Repair is carried out according to manufacturer and component supplier and workplace procedures</p> <p>4.2. Tyre is mounted to rim according to manufacturer and component supplier and workplace procedures and without causing damage to components</p> <p>4.3. Wheel assembly is checked to confirm component compatibility, serviceability and correct assembly prior to inflating according to manufacturer and site procedures</p> <p>4.4. Tyre is inflated according to manufacturer and component supplier and workplace procedures</p> <p>4.5. <b>Post-repair testing</b> is carried out according to manufacturer and component supplier and workplace procedures</p>
5. Clean up work area and finalise work processes	<p>5.1. Final inspection is made to ensure work is to workplace expectations and wheel is presented ready for use</p> <p>5.2. Tools and equipment are checked and stored according to workplace expectations</p>

	5.3. Workplace documentation is completed according to workplace procedures
--	---

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to interpret gauges, instruments and measuring equipment
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the removal, inspection and fitting of agricultural equipment tyre assemblies
- technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- hazard identification procedures and risk control methods
- types and classifications of agricultural equipment wheels and rims
- inspection procedures of agricultural equipment tyre assemblies
- tyre deflation methods of agricultural equipment tyres and rims
- demounting procedures of agricultural equipment wheel assemblies, including:
  - safety lock rim
  - rim or hub mounted multi piece rim
  - one piece wheel/rim
- repair procedures of agricultural equipment tyre and tubes
- mounting procedures of agricultural equipment tyre assemblies
- inflation procedures of agricultural equipment tyre assemblies
- post-mounting inspection procedures of agricultural equipment tyre assemblies

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• demount and mount a range of agricultural equipment tyres according to workplace and manufacturer and component supplier requirements</li> <li>• present wheel in a condition that complies with workplace requirements.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• a range of agricultural equipment tyre assemblies</li> <li>• equipment appropriate for the demounting, repair and mounting of agricultural equipment tyre assemblies</li> <li>• specifications and workplace instructions.</li> </ul>
<b>Method of assessment</b>	Assessment must satisfy the endorsed Assessment Guidelines of

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Agricultural equipment tyres and tubes</i></b> may include:	<ul style="list-style-type: none"> <li>• deep lug tyres</li> <li>• radial tractor tyres</li> <li>• bias ply tractor tyres.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection, removal, repair and fitting of agricultural tyres</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• agricultural equipment tyre service requirements and repair manuals</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• lifting equipment</li> <li>• hand tools, power tools</li> <li>• jacks and support stands</li> <li>• tyre handling equipment.</li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• visual inspection of wheel assemblies</li> <li>• monitoring of tyre pressure</li> <li>• leak detection methods.</li> </ul>

## AURHTJ2006 Remove, inspect, repair and fit tyres and tubes (heavy)

### Modification History

Release	Comment
Release 1	<p>Replaces AURT217966A Remove, inspect, repair and fit tyres and tubes (heavy)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to remove and refit heavy vehicle tyres and tubes from rims, inspect tyres and tubes to assess serviceability and carry out tyre and tube repairs.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, removal, repair and fitting of heavy tyres and tubes and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes all single or dual wheel heavy vehicles other than those requiring wheel ballast.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove, repair and fit heavy tyres and tubes	1.1.Nature and scope of work requirements are identified and confirmed 1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3.Procedures and information such as workshop manuals and specifications, and tooling required, are sourced 1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5.Technical requirements for repair and fitting of tyres and tubes are sourced and support equipment is identified and prepared 1.6.Warnings in relation to working with rims, tyres and tubes are observed
2. Conduct inspection and analyse results	2.1.Methods for the inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3.Results are documented with evidence and supporting information and recommendation(s) made 2.4.Report is processed in accordance with workplace procedures
3. Carry out removal, repair and refit	3.1.Methods for the removal, repair and refit are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2.Adjustments made during the removal, repair and refit are in accordance with manufacturer/component supplier specifications
4. Prepare equipment for use or storage	4.1.Repair schedule documentation is completed 4.2.Final inspection is made to ensure safety features are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Equipment is cleaned for use or storage to workplace expectations 4.5.Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- Apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the removal, repair and fitting of heavy tyres and tubes, including the use of measuring equipment, computerised technology, specialist tooling and communication devices and the reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with tyre and tube repair equipment
- operating principles of tyre and tube repair equipment and their relationship to each other
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting inspection results
- conducting the removal, repair and refit of tyres and tubes in accordance with workplace and manufacturer/component supplier requirements
- completing removal, repair and refit of wheels, tyres and tubes and associated components within workplace timeframes
- equipment is presented to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the removal, repair and fitting of heavy tyres and tubes
- equipment, hand and power tooling appropriate to the removal, repair and fitting of heavy tyres and tubes
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, breaker devices, gauges, jacks, hoists and pressure testing devices

**RANGE STATEMENT****Communications**

Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers

**Information/documents**

Sources of information/documents may include:

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches
- safe work procedures related to the removal, repair and fitting of heavy tyres and tubes
- regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules
- engineer's design specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised enterprise or external persons
- Australian Standards

**Unit Sector(s)****Unit sector**

Mechanical - Heavy Vehicle

**Co-requisite units**

Not applicable.

**Competency field****Competency field**

Technical - Wheels and Tyres

## AURHTJ3005 Identify and apply pneumatic wheeled traction performance enhancement systems (heavy vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURT309627A Identify and apply pneumatic wheeled traction performance enhancement systems (heavy vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to identify and apply pneumatic wheeled traction performance enhancement techniques, such as ballasting, chains, inflation and tread patterns.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work involved includes heavy vehicle mobile equipment that requires improved traction techniques.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to identify traction performance enhancement systems	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are understood</p> <p>1.3. Procedures and information such as workshop manuals and specifications are sourced</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. Technical requirements for wheeled traction are sourced and support equipment is identified and prepared</p> <p>1.6. Warnings in relation to working with wheeled vehicles are observed</p>
2. Prepare to apply a traction performance enhancement system	<p>2.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>2.2. Procedures and information are identified and sourced</p> <p>2.3. Technical and tool requirements for traction performance enhancement are identified and support equipment is identified and prepared</p>
3. Carry out traction performance enhancement procedures	<p>3.1. Methods for implementing traction performance enhancement are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>3.2. Wheel adjustments made during the traction enhancement are in accordance with manufacturer/ component supplier specifications</p>
4. Prepare vehicle for use or storage	<p>4.1. Vehicle modification schedule documentation is completed</p> <p>4.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>4.3. Final inspection is made to ensure work is to workplace expectations</p> <p>4.4. Vehicle is cleaned for use or storage to workplace expectations</p> <p>4.5. Job card is completed and delivered to appropriate persons</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the application of traction performance enhancement techniques, including the use of specialist tooling, measuring equipment and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled vehicles and equipment
- operating principles of traction performance enhancement systems and their relationship to each other
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:</p> <ul style="list-style-type: none"> <li>• observing safety procedures and requirements</li> <li>• communicating effectively with others involved in or affected by the work</li> <li>• selecting methods and techniques appropriate to the circumstances</li> <li>• completing preparatory activity in a systematic manner</li> <li>• interpreting traction performance enhancement requirements</li> <li>• applying the technique/system in accordance with workplace and manufacturer/component supplier requirements</li> <li>• completing process within workplace timeframes</li> <li>• vehicle presentation to customer in compliance with workplace requirements</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Application of competence is to be assessed in the workplace or simulated worksite</p> <p>Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints</p> <p>Assessment is to comply with regulatory requirements, including Australian Standards</p> <p>The following resources should be made available:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• material relevant to application of traction performance enhancement techniques</li> <li>• equipment, hand and power tooling appropriate to application of traction performance enhancement techniques</li> <li>• activities covering mandatory task requirements</li> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of</p>

## EVIDENCE GUIDE

	<p>performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	---

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Traction performance enhancement techniques</b>	Traction performance enhancement techniques and systems may include ballasting, chains, inflation and tread pattern variations
<b>Traction techniques</b>	Traction techniques need to be varied in accordance with terrain, soil condition and load
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations

<b>RANGE STATEMENT</b>	
<b>authorities</b>	and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters and gauges
<b>Materials</b>	Materials may include ballast material, air supply and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the application of traction performance enhancement techniques</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURHTL4001 Inspect, repair and diagnose alternative fuel systems for heavy vehicle engines

### Modification History

Release	Comment
Release 1	<p>Replaces AURTH404584A Inspect, repair and diagnose alternative fuel systems for heavy vehicle engines</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to inspect, repair and diagnose and analyse alternative fuel systems in heavy vehicle engines.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of the work requirement, preparation for work, inspection, repair and diagnosis of alternative fuel systems for heavy vehicle engines and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes all alternative fuel systems used for heavy vehicle engines.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and repair alternative fuel systems in heavy vehicle engines	<ul style="list-style-type: none"><li>1.1.Nature and scope of work requirements are identified and confirmed.</li><li>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work.</li><li>1.3.Procedures and information such as workshop manuals and specifications, and tools, are sourced.</li><li>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared.</li><li>1.5.Technical and/or calibration requirements for the inspection of alternative fuel system for heavy vehicle engines are sourced and support equipment is identified and prepared.</li><li>1.6.Warnings in relation to working with alternative fuel systems are observed.</li></ul>
2. Inspect alternative fuel systems in heavy vehicle engines	<ul style="list-style-type: none"><li>2.1.Methods for system inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications.</li><li>2.2.Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance.</li><li>2.3.Results are documented with evidence and supporting information and recommendation(s) made.</li><li>2.4.Report is processed in accordance with workplace procedures.</li></ul>
3. Repair alternative fuel systems in heavy vehicle engines	<ul style="list-style-type: none"><li>3.1.Methods for repairs are implemented in accordance with workplace procedures and manufacturer/component supplier specifications.</li><li>3.2.Adjustments made during repairs are in accordance with manufacturer/component supplier specifications.</li><li>3.3.Technical and/or calibration requirements for the repair of alternative fuel system for heavy vehicle engines are sourced and support equipment is identified and prepared.</li></ul>
4. Prepare to undertake the diagnosis of alternative fuel systems for heavy vehicle engines	<ul style="list-style-type: none"><li>4.1.Nature and scope of the work requirements are identified and confirmed.</li><li>4.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work.</li><li>4.3.Procedures and information such as workshop manuals, specifications and tooling, are sourced.</li><li>4.4.Method options are analysed and those most appropriate to</li></ul>

ELEMENT	PERFORMANCE CRITERIA
	<p>the circumstances are selected and prepared.</p> <p>4.5. Technical and/or calibration requirements for the diagnosis of alternative fuel systems are sourced and support equipment is identified and prepared.</p> <p>4.6. Warnings in relation to working with alternative fuel systems are observed.</p>
<p>5. Conduct alternative fuel systems for heavy vehicle engines diagnosis and analyse results</p>	<p>5.1. Methods for the conduct of the diagnosis are implemented in accordance with workplace procedures and manufacturer/component supplier specifications.</p> <p>5.2. Alternative fuel system test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance.</p> <p>5.3. Results are documented with evidence and supporting information and recommendations(s) made.</p> <p>5.4. Report is processed in accordance with workplace procedures.</p>
<p>6. Prepare the vehicle for use or storage</p>	<p>6.1. Report documentation completed.</p> <p>6.2. Final inspection is made to ensure safety features are in place.</p> <p>6.3. Final inspection is made to ensure work is to workplace expectations.</p> <p>6.4. Vehicle is cleaned for use or stored to workplace expectations.</p> <p>6.5. Job card is processed in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the inspection, repair and diagnosis of alternative fuel systems, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and reporting/documenting of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements.
- dangers of working with alternative fuel systems on heavy vehicle engines
- operating principles of alternative fuel systems on heavy vehicle engines
- range of common gas system faults and their causes, symptoms and effects
- diagnosis procedures
- test procedures.
- enterprise quality procedures
- work organisation and planning processes
- Australian Gas Industry Standards for automotive

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting the diagnosis in accordance with workplace and manufacturer/component supplier requirements
- interpreting and documenting the test results
- completing the inspection ,repair and diagnosis of alternative fuel systems within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian and Gas Industry Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to the inspection, repair and diagnosis of alternative fuel systems
- equipment, hand and power tooling appropriate to the inspection, repair and diagnosis of alternative fuel system for heavy vehicle engines
- activities covering the mandatory task requirements
- specifications and work instructions.

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.

## EVIDENCE GUIDE

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.</p> <p>Assessment may be applied under project related conditions (real or simulated) and require evidence of process.</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p> <p>It is preferable assessment reflects a process rather than an event and occurs over a period of time to cover the varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other appropriate persons subject to agreed authentication arrangements.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	--

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Repair methods and sequence</b>	Repair methods and sequence are to include isolation of fault(s); dismantling, inspection and evaluation; replacement of component parts; assembly and completion of operational tests and records.
<b>Faults</b>	Faults to be diagnosed may include poor engine performance, abnormal consumption, engine malfunction and fuel leaks.
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulations/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to the conduct of operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory</b>	Statutory/regulatory authorities may include Federal,

RANGE STATEMENT	
<b>authorities</b>	State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, leak testing devices and decanting equipment.
<b>Materials</b>	Materials may include spare parts and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the inspection, repair and diagnosis of alternative fuel system for heavy vehicle engines</li><li>• regulatory/legislative requirements pertaining to the automotive industry, including Australian Design Rules, gas industry standards and Australian Standards</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li></ul>

## AURHTQ2001 Inspect heavy commercial vehicle driveline components

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect heavy commercial vehicle driveline components for the purpose of establishing safe operating conditions and making any repair or maintenance recommendations.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the driveline components of heavy commercial vehicles and may include inspecting driveline components on or off the vehicle.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for inspection	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting heavy commercial vehicle driveline components</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> relating to heavy commercial vehicles are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect driveline components to determine condition	<p>2.1. Work area is checked to ensure safe working conditions</p> <p>2.2. <b>Driveline components</b> are inspected according to workplace or manufacturer requirements and without causing damage to components or systems</p> <p>2.3. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.4. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Clean up work area and finalise work processes	<p>3.1. Tools and equipment are checked and stored according to workplace expectations</p> <p>3.2. <b>Documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection operations
- numeracy skills to perform simple measurements and assess tolerances
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection of heavy commercial vehicle driveline components
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- workplace safety procedures related to heavy commercial vehicle movements and pedestrian traffic
- operating principles of heavy commercial vehicle driveline systems and components
- methods of sourcing information relevant to inspecting heavy commercial vehicle driveline systems and components
- inspection procedures of heavy commercial vehicle driveline components

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect a range of heavy commercial vehicle driveline components according to workplace, manufacturer and component supplier requirements
- record results of inspection according to workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy commercial vehicles with driveline components relevant to the qualification being sought
- tools and equipment appropriate for the inspection of heavy commercial vehicle driveline components
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• heavy commercial vehicle driveline component inspection methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection of heavy commercial vehicle driveline components</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• heavy commercial vehicle inspection requirements and repair manuals.</li> </ul>
<b><i>Driveline components</i></b> may	<ul style="list-style-type: none"> <li>• universal joints, constant velocity joints and centre bearings</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"><li>• drive-shafts, half-shafts and prop-shafts</li><li>• yokes and flanges.</li></ul>
<i>Documentation</i> may include:	<ul style="list-style-type: none"><li>• job card or work order</li><li>• workplace computerised or written customer records and invoice.</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repairs to final drive assemblies	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for final drive assembly repair are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with final drive assemblies are observed</p>
2. Conduct final drive assembly tests and analyse results	<p>2.1.Methods for test on final drive assembly are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.3.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.4.Report is forwarded to persons for action in accordance with workplace procedures</p>
3. Carry out repairs	<p>3.1.Methods for repairs are implemented in accordance with workplace procedures and manufacture/component supplier specifications</p> <p>3.2.Adjustments made during the repair are in accordance with manufacturer/component supplier specifications</p>
4. Prepare vehicle for use or storage	<p>4.1.Repair schedule documentation is completed</p> <p>4.2.Final inspection is made to ensure protective guards, safety features are in place</p> <p>4.3.Final inspection is made to ensure work is to workplace expectations</p> <p>4.4.Vehicle is cleaned for use or storage to workplace expectations</p> <p>4.5.Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with wheeled and tracked vehicles and equipment
- the identification of application, purpose and operation
- types and layout of service/repair manuals (hard copy and electronic)
- inspection and test procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- identification of application, purpose and operation
- application of full repair sequence as per the Range Statement to a final drive assembly relative to the qualification being sought
- interpreting test results
- repair of final drive assembly and associated components completed within workplace timeframes
- vehicle presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the repair of final drive assemblies
- equipment, hand and power tools appropriate to the repair of final drive assemblies
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

**EVIDENCE GUIDE**

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Variables</b>	Variables may include bevel, spiral bevel and hypoid gearing
<b>Repair methods and sequence</b>	Repair methods and sequence are to include isolation of fault(s), dismantling, inspection and evaluation, replacement of components parts, assembly and completion of operational tests and records
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations

<b>RANGE STATEMENT</b>	
<b>authorities</b>	and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges, pulling, pushing and load testing devices
<b>Materials</b>	Materials may include lubricants, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repair of final drive assemblies and associated components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURHTQ3003 Repair final drive - driveline (heavy vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURTH313166A Repair final drive – driveline (heavy vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out repairs to the driveline and its components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and analysis of results, completion of repairs to final drive and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes heavy vehicles and agricultural machinery and earthmoving equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake repairs to final drive driveline	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for repair of drivelines are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with rotating components are observed
2. Test driveline and analyse results	2.1. Methods for tests associated with drivelines is implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Driveline test results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. Carry out repairs	3.1. Methods for repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.2. Adjustments made during the repair work are in accordance with manufacturer/component supplier specifications
4. Prepare equipment for use or storage	4.1. Repair schedule documentation is completed 4.2. Final inspection is made to ensure protective guards, safety features are in place 4.3. Final inspection is made to ensure work is to workplace expectations 4.4. Equipment is cleaned for use or storage to workplace expectations 4.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- the identification of application, purpose and operation
- dangers of working with rotating shafts and gear systems
- types and layout of service/repair manuals (hard copy and electronic)
- testing procedures, including balancing shaft
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

## AURHTR3005 Diagnose and repair heavy trailer electronically controlled roll stability systems

### Modification History

Release 1	New unit of competency
-----------	------------------------

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair electronically controlled roll stability systems fitted to trailers over 4.5 tonnes. It involves diagnosing deviations from correct operation, repair operations of roll stability system components and associated systems, and post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the roll stability systems of trailers in the road transport environment.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a heavy trailer roll stability system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a heavy trailer roll stability system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a heavy trailer roll stability system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - interpret gauges, diagnostic and test equipment
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools related to the repair of heavy trailer roll stability systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
  - computerised technology and communication devices

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing heavy trailer roll stability systems
- dangers of working with heavy trailer roll stability systems
- legislation and regulatory requirements
- application, purpose and operating principles of heavy trailer roll stability systems
- testing procedures for heavy trailer roll stability systems
- repair procedures for heavy trailer roll stability systems
- post-repair testing procedures for heavy trailer roll stability systems
- identification of the effects of associated systems on heavy trailer roll stability systems

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• observe safety procedures and requirements</li> <li>• select methods and techniques appropriate to the circumstances</li> <li>• complete preparatory activity in a systematic manner</li> <li>• diagnose and repair a range of heavy trailer roll stability systems</li> <li>• diagnose and repair heavy trailer roll stability systems according to workplace, manufacturer and component supplier requirements</li> <li>• present vehicle in a condition that complies with workplace requirements.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• heavy trailer with roll stability faults relevant to the qualification being sought</li> <li>• equipment appropriate for the testing of heavy trailer roll stability systems</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

<b>Overview of assessment</b>	
	<ul style="list-style-type: none"><li>• specifications and workplace instructions</li><li>• tools appropriate for the repair, replacement and adjustment of heavy trailer roll stability systems.</li></ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.</p> <p>Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.</p> <p>Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.</p> <p>Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.</p> <p>Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.</p> <p>Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.</p>

## Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><b>Workplace instructions</b> may include:</p>	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<p><b>Job requirements</b> may include:</p>	<ul style="list-style-type: none"> <li>• heavy trailer roll stability system diagnosis and repair methods, processes and equipment</li> </ul>
<p><b>Workplace health and safety requirements:</b></p>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<p><b>Procedures and information</b> may include:</p>	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of heavy trailer roll stability systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• heavy trailer roll stability service requirements and repair manuals.</li> </ul>
<p><b>Diagnostic tests</b> may</p>	<ul style="list-style-type: none"> <li>• isolation of faults</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"><li>• visual inspection of heavy trailer roll stability components</li><li>• component inspection and evaluation.</li></ul>

## AURHTX3001 Repair transmissions - manual (heavy vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURTH306666A Repair transmissions – manual (heavy vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out removal, repair and replacement of manual transmissions.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>The unit includes identification and confirmation of work requirement, preparation for work, testing and analysis of systems, removal, repair and replacement of manual transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>For repairs to electronic controlled drive management refer to AURETR3044 Service and repair electronic drive management systems.</p> <p>This unit of competence applies to the following and should be contextualised to the qualification to which it is being applied:</p> <ul style="list-style-type: none"> <li>heavy vehicles, agricultural machinery and mobile plant equipment.</li> </ul> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake testing of manual transmission	<p>1.1.Nature and scope of work requirements are identified and confirmed</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5.Technical and/or calibration requirements for testing of manual transmissions are sourced and support equipment is identified and prepared</p> <p>1.6.Warnings in relation to working with manual transmissions are observed</p>
2. Test manual transmission and analyse results	<p>2.1.Methods for tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2.Road/site test is conducted for abnormalities</p> <p>2.3.Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.4.Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.5.Report is processed in accordance with workplace procedures</p>
3. Prepare to repair manual transmissions	<p>3.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2.Procedures and information are identified and sourced</p> <p>3.3.Technical and tool requirements for repair are identified and support equipment is identified and prepared</p>
4. Carry out repairs	<p>4.1.Methods for repairs are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2.Adjustments made during repairs are in accordance with manufacturer/component supplier specifications</p>
5. Prepare vehicle/ equipment for use or storage	<p>5.1.Repair schedule documentation is completed</p> <p>5.2.Road/site test is conducted to ensure transmission operation is to manufacturer/component supplier specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>5.3. Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.4. Final inspection is made to ensure work is to workplace expectations</p> <p>5.5. Vehicle/equipment is cleaned for use or storage to workplace expectations</p> <p>5.6. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with transmissions
- the identification of application, purpose and operation
- types and layout of service/repair manuals (hard copy and electronic)
- diagnostic procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques, appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting testing results
- identification of application, purpose and operation
- application of full repair sequence as per the Range Statement to a manual transmission relative to the qualification being sought
- conducting repairs in accordance with workplace and manufacturer/component supplier requirements
- completing repair of transmissions and associated components within workplace timeframes
- vehicle/transmission presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to repairing manual transmissions
- equipment, hand and power tooling appropriate to repairing manual transmissions
- activities covering mandatory task requirements
- specifications and work instructions

**EVIDENCE GUIDE****Method of assessment**

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Methods</b>	<p>Methods include:</p> <ul style="list-style-type: none"> <li>road testing, test under operating conditions</li> <li>visual, aural and functional assessment (including: fluid leakage, gear selection, wear, damage, corrosion)</li> </ul>
<b>Specific requirements</b>	<p>Specific requirements:</p> <ul style="list-style-type: none"> <li>manual transmissions, front and/or rear wheel drive configurations</li> <li>transmission must be of multiple speed constant mesh or synchromesh design</li> </ul> <p>Other variables may include:</p> <ul style="list-style-type: none"> <li>belt drive transmission</li> <li>power take off assemblies</li> <li>multiple forward and reverse gears</li> <li>multi countershaft</li> <li>synchronised and non-synchronised gear selection</li> <li>metal and non-metal gears</li> <li>electrical/pneumatic control</li> <li>transverse/longitudinal mounting</li> <li>helical, double helical and spur gears</li> <li>transfer case</li> </ul>
<b>Repair methods and sequence</b>	Repair methods and sequence are to include isolation of fault(s); dismantling, inspection and evaluation; replacement of component parts; assembly and completion of operational tests and records
<b>Faults</b>	Faults to include noisy operation, jumping out of gear, external oil leaks, loss of drive
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and

<b>RANGE STATEMENT</b>	
	substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tools, meters, gauges and load testing devices
<b>Materials</b>	Materials may include fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repair, removal and replacement of manual transmissions and/or associated components</li> <li>• regulatory/legislative requirements pertaining to automotive</li> </ul>

**RANGE STATEMENT**

	<p>industry, including Australian Design Rules</p> <ul style="list-style-type: none"><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURHTX3002 Inspect, test and replace transmissions - automatic (heavy vehicle)

### Modification History

Release	Comment
Release 1	<p>Replaces AURTH307165A Inspect, test and replace transmissions - automatic (heavy vehicle)</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the inspection, testing and replacement of automatic and semi-automatic transmissions and associated components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, inspecting, testing and analysis of systems, replacement of automatic and semi-automatic transmissions and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involved includes automatic and semi-automatic transmissions in heavy vehicles, agricultural machinery and mobile plant equipment.</p> <p>Work requires individuals to demonstrate discretion, judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and test transmission	<p>1.1. Nature and scope of work requirements are identified and confirmed</p> <p>1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>1.3. Procedures and information such as workshop manuals and specifications, and tools, are sourced</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.5. Technical and/or calibration requirements for testing of transmissions are sourced and support equipment is identified and prepared</p> <p>1.6. Warnings in relation to working with semi automatic, automatic transmissions are observed</p>
2. Inspect and test the transmission and analyse results	<p>2.1. Methods for system inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.2. Methods for system tests are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>2.3. Road/site test is conducted to identify transmission operational abnormalities</p> <p>2.4. Results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance</p> <p>2.5. Results are documented with evidence and supporting information and recommendation(s) made</p> <p>2.6. Report is processed in accordance with workplace procedures</p>
3. Prepare to remove and replace transmission	<p>3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work</p> <p>3.2. Procedures and information are identified and sourced</p> <p>3.3. Technical and tool requirements for removal and replacement are identified and support equipment is identified and prepared</p>
4. Carry out removal and replacement	<p>4.1. Methods for removal and replacement are implemented in accordance with workplace procedures and manufacturer/component supplier specifications</p> <p>4.2. Adjustments made during the removal and replacement are</p>

ELEMENT	PERFORMANCE CRITERIA
	in accordance with manufacturer/component supplier specifications
5. Prepare vehicle/ equipment for use or storage	5.1. Removal and replacement schedule documentation is completed 5.2. Final inspection is made to ensure protective guards, safety features are in place 5.3. Final inspection is made to ensure work is to workplace expectations 5.4. Vehicle/equipment is cleaned for use or storage to workplace expectations 5.5. Job card is processed in accordance with workplace procedures

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- dangers of working with transmissions
- operating principles of automatic and semi automatic transmissions and their relationship to other systems
- types and layout of service/repair manuals (hard copy and electronic)
- diagnostic procedures
- removal and replacement procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques, appropriate to the circumstances
- completing preparatory activity in a systematic manner
- interpreting diagnosis results
- conducting repair and/or replacement of a range of transmissions in accordance with workplace and manufacturer/component supplier requirements
- completing work within workplace timeframes
- vehicle/transmissions presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to carrying out repairs to automatic and semi-automatic transmissions and associated components
- equipment, hand and power tooling appropriate to carrying out repairs to automatic and semi-automatic transmissions and associated components

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Transmissions</b>	Transmissions include automatic and semi automatic transmissions, power shift transmissions
<b>Variables</b>	Other variables may include: <ul style="list-style-type: none"> <li>• transfer case</li> <li>• power take off assemblies</li> <li>• pre-selective transmissions</li> <li>• electronically controlled transmissions</li> </ul>
<b>Testing methods</b>	Methods are to include: <ul style="list-style-type: none"> <li>• operational testing, testing under operating conditions, test bench testing, electrical testing</li> <li>• visual, aural and functional assessment (including fluid leakage, speed and range selection, wear, damage, corrosion, electrical leakage, short circuits, broken circuits)</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site

<b>RANGE STATEMENT</b>	
	evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tools, meters, gauges and load and pressure testing devices
<b>Materials</b>	Materials may include transmission fluids, spare parts and cleaning materials
<b>Communications</b>	Communications are to include but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair of automatic and semi-automatic transmissions and associated components</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURHTX3004 Diagnose and repair heavy vehicle clutch systems

### Modification History

Release	Comment
Release 1	Replaces AURT306170A Inspect, service and/or repair clutch assemblies and associated operating system components  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern heavy vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair clutch systems fitted to heavy vehicles. It involves diagnosing deviations from correct operation, repair operations of the clutch system and associated components, and post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the clutch systems of heavy vehicles in the road transport, mining, construction, and agricultural environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a heavy vehicle clutch system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a heavy vehicle clutch system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a heavy vehicle clutch system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tooling, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation.</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace procedures</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - carry out measurements
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlining causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of heavy vehicle clutch systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- operate diagnostic and test equipment
- use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements, relating to the diagnosing and repairing heavy vehicle clutch systems
- dangers of working with heavy vehicle clutch systems
- application, purpose and operating principles of heavy vehicle clutch systems, including:
  - single-disc clutch assemblies
  - two-disc clutch assemblies
  - coil spring clutches
  - diaphragm spring clutches
- maintenance procedures of heavy vehicle clutch systems
- testing procedures of heavy vehicle clutch systems
- repair procedures of heavy vehicle clutch systems
- post-repair testing procedures of heavy vehicle clutch systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of heavy vehicle clutch systems relative to the qualification being sought
- diagnose and repair heavy vehicle clutch systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with clutch system faults relevant to the qualification being sought
- equipment appropriate for the testing of heavy vehicle clutch systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of heavy vehicle clutch systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• heavy vehicle clutch systems diagnosis and repair methods, processes and equipment</li> </ul>
<b>Workplace Health and Safety (WHS) requirements</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of heavy vehicle clutch systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• heavy vehicle clutch service requirements and repair manuals.</li> </ul>
<b>Diagnosis tests</b> may include:	<ul style="list-style-type: none"> <li>• component inspection and evaluation.</li> <li>• hydraulic and mechanical systems</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"><li>• clutch slippage</li><li>• clutch drag and binding</li><li>• clutch chatter</li><li>• clutch pedal pulsation</li><li>• clutch vibration</li><li>• clutch system noise.</li></ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"><li>• component repair procedures, including<ul style="list-style-type: none"><li>• removal, replacement and adjustment procedures</li><li>• dismantle, repair, re-assembly and adjustment procedures.</li></ul></li></ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"><li>• mobile or stationary tests to evaluate clutch performance</li></ul>

## AURHTX4006 Diagnose complex faults in heavy commercial vehicle transmission and driveline systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in heavy commercial vehicle transmission and driveline systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical, electronic, mechanical or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of transmission and driveline systems of heavy commercial vehicles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1.Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2.Specifications for correctly functioning heavy commercial vehicle transmission and driveline systems are accessed and interpreted</p> <p>1.3.<b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4.Effects of systemic deficiencies or discrepancies or <b>faults</b> in heavy commercial vehicle transmission and driveline systems are identified and confirmed from indirect or direct evidence</p> <p>1.5.Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1.Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2.System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3.Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4.<b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5.Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1.Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2.Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3.Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4.Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5.Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to heavy commercial vehicle transmission and driveline systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of heavy commercial vehicle transmission and driveline systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to heavy commercial vehicle transmission and driveline systems
- concepts, types, functions, operations and limitations of heavy commercial vehicle transmission and driveline systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to heavy commercial vehicle transmission and driveline systems
- testing procedures for heavy commercial vehicle transmission and driveline systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different heavy commercial vehicle transmission and driveline systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex heavy commercial vehicle transmission and driveline systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated commercial vehicle

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- transmission and driveline system faults
- tools and equipment appropriate for the diagnosis of complex faults in commercial vehicle transmission and driveline systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults may include:***

- faults with
  - clutches
  - torque converters
  - manual and automatic transmissions
  - drive and power take-off shafts
  - differentials
  - mechatronic modules and multi-class bus systems
  - input sensors
  - output actuators
  - wiring harness
  - computer systems
- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration/adjustment specifications
- component specifications, component assembly, component damage and system modifications
- mechanical and hydraulic system faults.

***Tests may include:***

- wiring and connector integrity
- operation and specification of input and output devices
- controlling electronic components and computers
- data interpretation and readings related to direct indirect and

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	intermittent causes <ul style="list-style-type: none"> <li>hydraulic systems testing</li> <li>electrical systems testing</li> <li>mechanical systems testing</li> <li>road test.</li> </ul>
<b>Testing equipment</b> may include:	<ul style="list-style-type: none"> <li>analogue and digital multimeters, lab oscilloscopes, scan tools, test lights and test LEDs</li> <li>pulse generators</li> <li>manufacturer and component supplier testing equipment.</li> </ul>
<b>Diagnostic processes</b> may include:	<ul style="list-style-type: none"> <li>analysing manufacturer and component supplier specifications, schematics and operational procedures related to transmission and driveline systems</li> <li>six-step troubleshooting plan</li> <li>discover-investigate-fix methodology</li> </ul>

## AURHTX5005 Analyse and evaluate heavy vehicle transmission system faults

### Modification History

Release	Comment
Release 1	Replaces AURT571193A Analyse and evaluate heavy vehicle transmission system faults Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to analyse and evaluate heavy vehicle transmission systems in order to initiate action to sustain, vary or enhance performance.
-----------------	---

### Application of the Unit

Application of the unit	It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.  The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning heavy vehicle transmission systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Heavy vehicle transmission system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstances, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary heavy vehicle transmission systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- heavy vehicle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, functions, operations and limitations of heavy vehicle manual transmission systems/components.
- detailed knowledge of the types, function, operations and limitations of heavy vehicle automatic transmission systems/components.
- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three heavy vehicle transmission systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for heavy vehicle transmission systems.
- Document and report the diagnostic process and findings and recommended rectification.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, heavy vehicle transmission systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Systems</b>	<ul style="list-style-type: none"> <li>Transmission systems to be covered in this unit are to include both mechanical, automatic and integrated computer controlled systems made up of components, including clutches, torque converters, automatic and manual electric transmissions, gearboxes, differentials, drive shafts and final drives.</li> </ul>
<b>System failures</b>	<ul style="list-style-type: none"> <li>Transmission system failures covered by this unit are to include noises, leaks, air system pressures, contamination, clutch operation, vibrations, hard shifting, abnormal gear wear, loose mountings, lubrication, and operating temperature.</li> <li>Transmission system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Diagnosis</b>	Diagnosis for module and parts replacement in related electrical and electronic control systems are covered.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.

**RANGE STATEMENT**

<b>Testing equipment</b>	Testing equipment is to include pressure gauges, multimeters, inclinometer (electronic) and computerised diagnostic systems.
<b>Tests</b>	Tests to be conducted are to include pressure (oil and air), lubricant sampling, sensor integrity and function, wiring harness integrity.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"><li>• Workplace procedures relating to the use of tooling and equipment.</li><li>• Workplace procedures relating to reporting and communication.</li><li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to heavy vehicle transmission systems.</li><li>• Australian Design Rules.</li><li>• Vehicle industry regulations.</li><li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li></ul>

**Unit Sector(s)**

<b>Unit sector</b>	Mechanical - Heavy Vehicle
--------------------	----------------------------

**Co-requisite units**

Not applicable.

**Competency field**

<b>Competency field</b>	Technical - Transmission
-------------------------	--------------------------

## AURHTY2001 Inspect and service mechanical connections of heavy vehicles and trailers over 4.5 tonnes

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect and service mechanical connection systems fitted to both the tractive unit and the towed unit of heavy vehicles.</p> <p>The unit involves an inspection of the mechanical connection system to note deviations from correct operation as well as service to ensure the system complies with manufacturer's specifications.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the mechanical connection systems of heavy vehicles in the road transport, mining, construction, agricultural and other industrial environments.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and service a heavy vehicle mechanical connection system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting and servicing <b>heavy vehicle mechanical connection systems</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect a heavy vehicle mechanical connection system	<p>2.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service a heavy vehicle mechanical connection system	<p>3.1. <b>Service options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service and adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to carry out measurements and perform calculations
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection and servicing of heavy vehicle mechanical connection systems
- technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- identification, purpose and operating principles of heavy vehicle mechanical connection systems
- inspection procedures of heavy vehicle mechanical connection systems
- service procedures of heavy vehicle mechanical connection systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect and service a range of heavy vehicle mechanical connection systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy commercial vehicles with mechanical connection systems relevant to the qualification being sought
- tools and equipment appropriate for the inspection and servicing of heavy vehicle mechanical connection systems
- specifications and workplace instructions

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• heavy vehicle mechanical connection system inspection and servicing methods, processes and equipment.</li> </ul>
<b><i>Heavy vehicle mechanical connection systems</i></b> may include:	<ul style="list-style-type: none"> <li>• 5<sup>th</sup> wheel systems</li> <li>• king pins</li> <li>• landing gear systems.</li> </ul>
<b><i>Workplace health and safety (WHS) requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection and servicing of heavy vehicle mechanical connection systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>heavy vehicle mechanical connection system service requirements and repair manuals.</li></ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"><li>lubricant application and replacement</li><li>adjustments and operational testing.</li></ul>
<i>Final inspection</i> may include:	<ul style="list-style-type: none"><li>final check of heavy vehicle mechanical connection systems and components</li><li>checking of heavy vehicle mechanical connection system operation during mobile or stationary tests</li><li>cleaning of vehicle and components.</li></ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"><li>vehicle service book</li><li>job card or work order</li><li>workplace computerised or written records and invoice.</li></ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of heavy vehicle mechanical connection systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

## REQUIRED SKILLS AND KNOWLEDGE

### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing heavy vehicle mechanical connection systems
- legislation and regulatory requirements
- dangers of working with heavy vehicle mechanical connection systems
- application, purpose and operating principles of heavy vehicle mechanical connection systems, including:
  - 5th wheel systems
  - king pins
  - landing gear systems
- maintenance procedures of heavy vehicle mechanical connection systems
- testing procedures of heavy vehicle mechanical connection systems
- repair procedures of heavy vehicle mechanical connection systems
- post-repair testing procedures of heavy vehicle mechanical connection systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of heavy vehicle mechanical connection systems
- diagnose and repair heavy vehicle mechanical connection systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with mechanical connection system faults relevant to the qualification being sought
- equipment appropriate for the testing of heavy vehicle

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- mechanical connection systems
- specifications and workplace instructions
  - tools appropriate for the repair, replacement and adjustment of heavy vehicle mechanical connection systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### Application of the Unit

Application of the unit	Work applies to the emission control systems of heavy vehicles in the road transport, mining, construction, agricultural and marine environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a heavy vehicle emission control system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. National Environment Protection Measure for Diesel Vehicles (Guidelines) is sourced and observed throughout the work</p> <p>1.5. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.6. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a heavy vehicle emission control system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a heavy vehicle emission control system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tooling, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are cleaned and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to interpret instruments, gauges and other measuring equipment
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
- identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
    - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of heavy vehicle emission control systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
  - computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing heavy vehicle emission control systems
- dangers of testing exhaust gases
- legislation and regulatory requirements for heavy vehicle emissions
- identification of motor vehicle emissions and their effects on the environment and health
- application, purpose and operating principles of heavy vehicle emission control systems
- identification of the effects of associated systems on vehicle emissions
- interpretation of technical information, graphic symbols and diagrams
- diagnostic and testing procedures for heavy vehicle emission control systems
- repair procedures for heavy vehicle emission control systems
- post-repair testing procedures of heavy vehicle emission control systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of heavy vehicle emission control systems relative to the qualification being sought
- diagnose and repair heavy vehicle emission control systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- heavy vehicles with emission control faults relevant to the qualification being sought
- equipment appropriate for the testing of heavy vehicle emission

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

control systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of heavy vehicle emission control systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace instructions** may include:

- computer-generated instructions
- verbal instructions
- written instructions.

**Job requirements** may include:

- heavy vehicle emission control system diagnosis and repair methods, processes and equipment.

**Workplace health and safety requirements:**

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

**Procedures and information** may include:

- verbal, written and graphical instructions
- signage
- work schedules, plans and specifications
- work bulletins or memos
- material safety data sheets (MSDS)
- diagrams or sketches
- safe work procedures relating to the repair and replacement of heavy vehicle emission control systems
- regulatory and legislative requirements relating to the automotive industry
- National Environment Protection Measure for Diesel Vehicles (Guidelines)
- Australian Design Rules
- Engineer's design specifications and instructions
- organisational work specifications and requirements
- instructions issued by authorised workplace or external persons
- Australian standards
- heavy vehicle service requirements and repair manuals.

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Diagnostic tests</i></b> may include:	<ul style="list-style-type: none"> <li>• visual inspection of emission control system components</li> <li>• evaporative emission control</li> <li>• crankcase ventilation</li> <li>• exhaust gas recirculation</li> <li>• diesel exhaust fluid</li> <li>• catalytic converters</li> <li>• diesel particulate filters.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• rough running</li> <li>• poor performance</li> <li>• excessive fuel consumption</li> <li>• excessive emissions (particulates, hydrocarbons, carbon monoxide, oxides of nitrogen)</li> <li>• excessive oil consumption.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• exhaust gas colour assessment</li> <li>• exhaust gas composition analysis</li> <li>• on-board diagnostic system assessment procedures.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Heavy Vehicle
<b>Unit sector</b>	Technical – Emission and Exhaust

**Custom Content Section**

Not applicable.

## AURJTA1001 Perform minor adjustments to motorcycles

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to carry out minor adjustments to motorcycle components and equipment.</p> <p>The unit involves identifying motorcycle components and adjustment requirements, including the use of specialist tools to perform minor adjustments to motorcycles to ensure safe and efficient operation.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to the minor adjustments of motorcycles in the motorcycle retail, service and repair environment.</p> <p>Work requires individuals to demonstrate some judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to adjusting <b>motorcycles</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are identified and applied</p> <p>1.3. Work areas are cleared to allow set-up and activities to take place according to workplace policies and procedures</p>
2. Inspect motorcycle and determine work requirement	<p>2.1. Inspection is carried out to determine adjustment requirements according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection findings are reported according to workplace procedures, including recommendations for necessary <b>minor adjustments</b></p>
3. Perform minor adjustments	<p>3.1. Adjustment options are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. <b>Appropriate tools</b>, techniques and materials are selected and prepared</p> <p>3.3. Adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>3.4. Post-adjustment testing is carried out to ensure safe and correct operation of the motorcycle</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- literacy skills:
  - reading skills to the level required to understand information relating to work orders, including common industry terminology, work plans and safety procedures
  - writing skills to prepare reports and interpret technical information and specifications
- numeracy skills to correctly interpret metric and non-metric systems of measurement
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow standard workplace procedures
- problem-solving skills to:
  - identify technical and procedural problems
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as maintenance procedures
- teamwork skills to:
  - work with others and in a team by cooperating with team members
- technical skills to:
  - apply technical information related to motorcycle componentry and maintenance procedures
  - select and use appropriate tools and equipment
- technology skills to:
  - use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- motorcycle terminology
- methods of sourcing information relevant to adjusting motorcycles
- motorcycle inspection procedures
- motorcycle adjustment procedures, including the use of tools and equipment
- motorcycle post-adjustment testing procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- perform a range of adjustment tasks on a minimum of three different motorcycles with real or simulated adjustment requirements according to workplace, manufacturer and component supplier requirements
- complete workplace documentation
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- workplace location or simulated workplace
- motorcycles and motorcycle components
- equipment, hand and power tools and specialised repair tools and equipment appropriate to adjusting motorcycle
- specifications and workplace instructions.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle inspection and adjustment methods, processes and equipment.</li> </ul>
<b>Motorcycles</b> may include:	<ul style="list-style-type: none"> <li>• road and touring</li> <li>• enduro</li> <li>• agricultural</li> <li>• motocross</li> <li>• trials</li> <li>• scooters and mopeds</li> <li>• 2 stroke and 4 stroke.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Minor adjustments</b> may include:	<ul style="list-style-type: none"> <li>• brakes</li> <li>• clutch</li> <li>• suspension and steering</li> <li>• engine, attachments and controls</li> <li>• chain tension</li> <li>• foot controls</li> <li>• handlebars and controls</li> <li>• accessories.</li> </ul>
<b>Appropriate tools</b> may include	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• hand, power and air tools</li> <li>• specialised motorcycle repair tools</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• floor stands, workbench.</li></ul>
<i>Documentation</i> may include:	<ul style="list-style-type: none"><li>• warranty information</li><li>• job card or work order</li><li>• workplace computerised or written customer records and invoice.</li></ul>

**Unit Sector(s)**

<b>Unit sector</b>	Technical

**Custom Content Section**

Not applicable.

## AURJTA1002 Remove and replace motorcycle components and accessories

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove, replace and make final adjustments to components and accessories fitted to motorcycles.</p> <p>This unit involves demonstrating the ability to interpret equipment specifications and use tools and equipment to remove, fit and adjust motorcycle components and accessories to Australian Standards and customer requirements.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to components, ancillary equipment and accessories of motorcycles and motor scooters, including road, off-road, agricultural and race applications.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to removing and replacing motorcycle components and accessories</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Method options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. <b>Tools and equipment</b> required for the task are selected and prepared</p>
2. Remove and inspect motorcycle components or accessories	<p>2.1. <b>Components or accessories</b> for removal are identified</p> <p>2.2. Removal of component is carried according to manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.3. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>2.4. <b>Workplace documentation</b> is completed according to workplace procedures</p>
3. Fit, test and adjust motorcycle components	<p>3.1. Components or accessories for fitting are identified</p> <p>3.2. Fitting is implemented according to manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>3.3. Adjustments are made to components or accessories according to manufacturer and component supplier specifications</p> <p>3.4. Post-fitting testing is performed to ensure integrity of work carried out</p> <p>3.5. Further adjustments are made where necessary on conclusion of testing</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and motorcycle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - communicate effectively regarding work requirements with supervisor or other workers
  - report work outcomes and problems
- literacy skills:
  - reading skills to the level required to understand information related to work orders, including common industry terminology, work plans and safety procedures
  - writing skills to prepare reports and interpret technical information and specifications
- numeracy skills to: correctly interpret metric and imperial systems of measurement
- planning and organising skills to:
  - identify risk factors to minimise risk to self and others
  - contribute to activities which implement and follow standard workplace procedures
- problem-solving skills to:
  - identify technical and procedural problems
  - refer problems outside area of responsibility to appropriate person
- self-management skills to:
  - locate and identify appropriate tools and equipment
  - recognise limitations and seek timely advice
  - follow basic workplace documentation, such as work plans or procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to:
  - select tools and equipment appropriate to the task
  - use tools and equipment to perform minor adjustments to motorcycle components and accessories
- technology skills to use workplace technology to assist with work practices

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to removing and replacing motorcycle components and accessories
- motorcycle terminology
- types, function, application and operation of tools and equipment used for removing and replacing motorcycle components and accessories
- removal and replacement procedures of motorcycle components and accessories
- testing procedures and adjustment methods relating to motorcycle component and accessory removal and replacement

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- workplace documentation policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select removal, replacement, inspection and adjustment methods and techniques appropriate to the circumstances
- conduct a minimum of three different removal, replacement and adjustment tasks according to manufacturer and component supplier specifications
- confirm effectiveness of work relating to component or accessory removal or replacement
- complete workplace documentation requirements relevant to tasks performed.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources should be made available:

- operational motorcycles and a range of suitable components or accessories
- equipment, hand and power tools and specialised motorcycle tools and equipment appropriate for the removal and replacement of motorcycle components and accessories

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle component and accessory removal and replacement methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• job card or work schedule</li> <li>• written maintenance procedures</li> <li>• workshop manuals</li> <li>• work bulletins</li> <li>• verbal or written and graphical instructions</li> <li>• product assembly instructions</li> <li>• service instructions</li> <li>• manufacturers design specifications and maintenance instructions.</li> </ul>
<b>Tools and equipment</b> may include:	<ul style="list-style-type: none"> <li>• hand tools</li> <li>• hand-held power tools and air tools</li> <li>• specialised motorcycle repair tools</li> <li>• floor stands</li> <li>• workbench.</li> </ul>
<b>Components or accessories</b> may include:	<ul style="list-style-type: none"> <li>• wheels</li> <li>• mudguards</li> <li>• lighting system components</li> <li>• suspension system components</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• brake system components</li><li>• fuel and oil tanks</li><li>• seat</li><li>• control cables</li><li>• ignition system components</li><li>• handlebars and hand controls</li><li>• foot controls and foot-pegs</li><li>• mufflers and exhaust pipes</li><li>• windshield</li><li>• pannier bags</li><li>• luggage racks.</li></ul>
<b>Workplace documentation</b> may include:	<ul style="list-style-type: none"><li>• safety and emergency procedures</li><li>• reporting and recording procedures</li><li>• organisational quality policies and procedures</li><li>• material safety data sheets (MSDS)</li><li>• regulatory and legislative requirements pertaining to motorcycle safety</li><li>• organisation work instructions and requirements</li><li>• Australian standards.</li></ul>

## AURJTA5003 Analyse and evaluate motorcycle engine and transmission system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT573193A Analyse and evaluate motorcycle engine and transmission system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate motorcycle engine and transmission systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p> <p>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning motorcycle engine and transmission systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Motorcycle engine and transmission system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary motorcycle engine and transmission systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- motorcycle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetics and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- general knowledge of the types, functions, operations and limitations of motorcycle engines and transmission systems.
- detailed knowledge of the types, function, operations and limitations of motorcycle fuel systems/components.
- detailed knowledge of the types, function, operations and limitations of motorcycle ignition systems/components.
- detailed knowledge of the types, function, operations and limitations of motorcycle intake systems/components.
- detailed knowledge of the types, function, operations and limitations of motorcycle exhaust systems/components.

## REQUIRED SKILLS AND KNOWLEDGE

- detailed knowledge of the types, function, operations and limitations of motorcycle lubrication systems/components.
- detailed knowledge of the types, function, operations and limitations of motorcycle cooling systems/components.
- detailed knowledge of the types, function, operations and limitations of motorcycle engine and transmission mounting systems/components.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three motorcycle engine and transmission systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for motorcycle engine and transmission systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, motorcycle engine and transmission systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

## EVIDENCE GUIDE

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Motorcycles</b>	Motorcycles are to include two-wheel, four-wheel and two-wheel fitted with sidecar.
<b>Motorcycle engine systems</b>	Motorcycle engine systems are to include two-stroke, four-stroke petrol single and multi-cylinder.
<b>Total engine systems</b>	Total engine systems to be covered in this unit are to include the engine and related fuel, ignition, intake, exhaust, lubrication and cooling systems.
<b>Motorcycle engine system failures</b>	Motorcycle engine system failures covered by this unit are to include engine (poor performance, excessive oil consumption, engine stoppages), fuel (contamination, flow, pressure, leakage), ignition (no-start, no-run, misfire, erratic operation, lack of power, charging), intake (leakage, noise, vibration, inadequate control, exhaust (noise, pressure, abnormal emissions, blockages, lubrication (pressure, flow, leakage, abnormal engine wear, inadequate filtration, sludge formation, excessive deposits, overheating, cooling (overcooling, insufficient cooler flow, coolant out of specification, lack of air flow, internal corrosion), mounting (noise, vibration, hardness, clutch shudder, erratic transmission control).
<b>Transmission systems</b>	Transmission systems to be covered by this unit are to include mechanical with variable ratio or constant mesh and chain drive, belt drive and gear drive.
<b>Transmission system failures</b>	Transmission system failures covered by this unit are to include abnormal component wear, clutch operations, clutch pack slippage, chain or belt drive slippage, incorrect belt/chain adjustments, contamination, driveline phasing and alignment, hard shifting, leaks, loose mountings, lubrication, noises, operating temperature, rear wheel locking, vibrations.

<b>RANGE STATEMENT</b>	
<b>Engine and transmission system failures</b>	Engine and transmission system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.
<b>WHS</b>	WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.
<b>Legislative requirements</b>	Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include bore gauges, compression gauges, computer-based diagnostic system, cooling system analyser, crank case pressure tester (2-stroke), dial gauges, exhaust gas analysers, feeler gauges, micrometers, multimeter, oscilloscope, pressure gauges, spring compression testers, stethoscope, tachometer, telescopic gauges, temperature gauges, tension gauges, timing lights, torque gauges, vacuum gauges and verniers, and may include anemometer, barometer, hygrometer, specific gravity gauge and internet/satellite based diagnostics.
<b>Tests</b>	Tests to be conducted are to include component wear analysis, compression, cylinder leakage, engine performance, exhaust gas sampling, flow, lubricant sampling, oil consumption, pressure, sample collection/processing, sensor integrity and function, specific gravity, temperature, transmission clutch slippage, vacuum and wiring harness integrity.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> </ul>

## RANGE STATEMENT

	<ul style="list-style-type: none"> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to motorcycle engine and transmission systems.</li> <li>• Australian Design Rules.</li> <li>• Motorcycle industry legislation/regulations.</li> <li>• Motorcycle industry publications related to emerging engine and transmission system technology and technology changes.</li> </ul>

## AURJTB3001 Diagnose and repair motorcycle braking systems

### Modification History

Release	Comment
Release 1	Replaces AURT310166A - Repair hydraulic braking systems Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern heavy vehicle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair braking systems fitted to motorcycles. It involves diagnosing deviations from correct operation, repairing braking system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the braking systems of motorcycles.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a motorcycle braking system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a motorcycle braking system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a motorcycle braking system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of motorcycle braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

- operate diagnostic and test equipment
- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing motorcycle braking systems
- dangers of working with motorcycle braking systems
- operating principles of motorcycle braking systems
- application, purpose and operation of motorcycle braking systems, including:
  - drum brake systems
  - disc brake systems
- testing procedures for motorcycle braking systems
- repair procedures for motorcycle braking systems
- post-repair testing procedures for motorcycle braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle braking systems, including motorcycle disc brake and drum brake systems
- diagnose and repair motorcycle braking systems according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles with braking system faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle braking systems

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of motorcycle braking systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace instructions</i></b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b><i>Job requirements</i></b> may include:	<ul style="list-style-type: none"> <li>• motorcycle braking system diagnosis and repair methods, processes and equipment.</li> </ul>
<b><i>Workplace health and safety requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul> </li> </ul>
<b><i>Procedures and information</i></b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of motorcycle braking systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b><i>Diagnosis tests</i></b> may include:	<ul style="list-style-type: none"> <li>• visual inspection of braking system components</li> <li>• measurement of linkage and actuator adjustments</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• disc rotor thickness, parallelism and run-out measurements</li> <li>• brake drum diameter, out-of-round, and bell-mouthing measurements</li> <li>• brake fluid evaluation</li> <li>• isolation of faults.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• poor braking performance</li> <li>• braking system leaks</li> <li>• dragging brakes</li> <li>• excessive braking lever travel</li> <li>• abnormal braking system noise or smell.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including:</li> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• mobile or stationary tests to evaluate braking system performance.</li> </ul>

**Unit Sector(s)**

## AURJTB5002 Analyse and evaluate motorcycle braking system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT573393A Analyse and evaluate motorcycle braking system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate motorcycle braking systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning motorcycle braking systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Motorcycle braking system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary motorcycle braking systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- motorcycle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetics and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, functions and limitations of friction materials associated with motorcycle braking systems.
- detailed knowledge of the types, function, operations and limitations of motorcycle mechanical braking systems/ components.
- detailed knowledge of the types, function, operations and limitations of motorcycle hydraulic braking systems/ components.
- detailed knowledge of the types, function, operations and limitations of motorcycle abs braking systems/ components.
- detailed knowledge of the influence of equipment trailing on motorcycle braking systems.
- general knowledge of the Australian design rules requirements related to motorcycle braking

**REQUIRED SKILLS AND KNOWLEDGE**

systems.

- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three motorcycle braking systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for motorcycle braking systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, motorcycle braking systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters, or to enhance system performance.
<b>Motorcycles</b>	Motorcycles are to include two-wheel, four-wheel and two-wheel fitted with sidecar.
<b>Braking systems</b>	Braking systems to be covered in this unit are to include mechanical, hydraulic and ABS systems.
<b>Braking system failures</b>	<ul style="list-style-type: none"> <li>Braking system failures covered by this unit are to include application and release times, brake balance, brake drum wear, calibration/adjustment specifications, component damage, conductors - piping specifications, contamination, fluids out of specification, friction material abnormalities, leaks, overheating, system pressures.</li> <li>Braking system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.

**RANGE STATEMENT**

<b>Testing equipment</b>	Testing equipment is to include air gauges, computer-based diagnostic systems, dynamometer, micrometers, multimeter, pressure gauges, temperature gauges, verniers and may include brake timer and electronic stethoscope.
<b>Tests</b>	Tests to be conducted are to include accumulator pressure, disc stack height, pressure, system performance (distance/balance), sensor/actuator and wiring harness integrity, sampling (collection and processing, wear analysis (drum/disc/lining material) and monitoring/analysis of computer-based diagnostic systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to motorcycle braking systems.</li> <li>• Australian Design Rules.</li> <li>• Motorcycle industry regulations.</li> <li>• Motorcycle industry publications related to emerging braking system technology and technology changes.</li> </ul>

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and service motorcycle suspension system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting and servicing <b>motorcycle suspension systems</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect motorcycle suspension system	<p>2.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service motorcycle suspension system	<p>3.1. <b>Service options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service and adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to perform simple measurements
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection and servicing of motorcycle suspension systems
- technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of motorcycle suspension systems
- methods of sourcing information relevant to inspecting and servicing motorcycle suspension systems
- inspection procedures for motorcycle suspension systems, including:
  - front and rear suspension systems
- service procedures for motorcycle suspension systems, including:
  - front and rear suspension systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect and service a range of motorcycle suspension systems, including front suspension systems and components and rear suspension systems and shock absorbers according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles relevant to the qualification being sought
- tools and equipment appropriate for the inspection and servicing of motorcycle suspension systems
- specifications and workplace instructions.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle suspension system inspection and service methods, processes and equipment.</li> </ul>
<b>Motorcycle suspension systems</b> may include:	<ul style="list-style-type: none"> <li>• telescopic fork suspension</li> <li>• inverted telescopic fork suspension</li> <li>• front telelever and duolever</li> <li>• rear swing arm suspension (twin-sided, monoshock and paralever)</li> <li>• shock absorbers.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection and servicing of motorcycle suspension systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"> <li>• fluid replacement</li> <li>• adjustments and operational testing.</li> </ul>
<i>Final inspection</i> may include:	<ul style="list-style-type: none"> <li>• final check of suspension systems and components</li> <li>• checking of suspension system operation during mobile or stationary tests</li> <li>• cleaning of motorcycle.</li> </ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"> <li>• motorcycle service book</li> <li>• job card or work order</li> <li>• workplace computerised or written customer records and invoice.</li> </ul>

## AURJTD2002 Inspect and service motorcycle steering systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect and service steering systems fitted to motorcycles.</p> <p>The unit involves an inspection of the steering system to note deviations from correct operation as well as service to ensure the system complies with manufacturer's specifications.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the steering systems of motorcycles and motor scooters, including road, off-road, agricultural and race applications.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and service motorcycle steering systems	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting and servicing motorcycle steering systems</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect motorcycle steering system	<p>2.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service motorcycle steering system	<p>3.1. <b>Service options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service and adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to perform simple measurements
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection and servicing of motorcycle steering systems
- technology skills to use technology to collect and provide information

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of motorcycle steering systems
- methods of sourcing information relevant to inspecting and servicing motorcycle steering systems
- inspection procedures for motorcycle steering systems
- service procedures for motorcycle steering systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect and service a range of motorcycle steering systems according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian Standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles relevant to the qualification being sought
- tools and equipment appropriate for the inspection and servicing of motorcycle steering systems
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

## AURJTD3003 Diagnose and repair motorcycle suspension systems

### Modification History

Release	Comment
Release 1	Replaces AURTM316166A Repair suspension systems (motorcycle)  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern motorcycle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair suspension systems fitted to motorcycles. It involves diagnosing deviations from correct operation, repairing suspension system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the suspension systems of motorcycles.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a motorcycle suspension system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> relating to <b>motorcycle suspension systems</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a motorcycle suspension system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a motorcycle suspension system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
This section describes the skills and knowledge required for this unit.
<b>Required skills</b>

## REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - measure and calculate length, area and volume
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
  - plan own work requirements, setting own work program and managing time to ensure tasks are finished on time
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to:
  - identify and describe own role and role of others
  - work within a team
  - work with diverse individuals and groups
  - apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools related to the repair of motorcycle suspension systems, including the use of:
  - specialist tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE****Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing motorcycle suspension systems
- dangers of working with motorcycle suspension systems
- operating principles of motorcycle suspension systems
- application, purpose and operation of motorcycle suspension systems
- testing procedures for motorcycle suspension systems
- repair procedures for motorcycle suspension systems, including:
  - front fork cartridge removal and replacement procedures, including seal replacement, oil replacement and air purging
  - front fork slider bushes replacement procedures
  - rear shock absorber removal and replacement procedures
  - rear shock absorber dismantle and repair procedures
  - steering damper assembly repair procedures
- post-repair testing procedures for motorcycle suspension systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle suspension systems including:
  - front fork cartridge removal and replacement, including seal replacement, oil replacement and air purging
  - rear shock absorber removal and replacement
  - diagnosis and repair motorcycle suspension systems according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition the complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- motorcycles with suspension system faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle suspension systems
- motorcycle specifications and workplace instructions
- tooling appropriate for the repair, replacement and adjustment of motorcycle suspension systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle suspension system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the diagnosis and repair of motorcycle suspension systems</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b>Motorcycle suspension systems</b> may include:	<ul style="list-style-type: none"> <li>• telescopic fork suspension</li> <li>• inverted telescopic fork suspension</li> <li>• front telelever and duolever</li> <li>• rear swing arm suspension (twin-sided, monoshock and paralever).</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Diagnosis tests</i></b> may include:	<ul style="list-style-type: none"> <li>• visual inspection of suspension system components</li> <li>• evaluation of suspension during mobile or stationary tests</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Fault(s)</i></b> may include:	<ul style="list-style-type: none"> <li>• lack of front or rear suspension rebound damping</li> <li>• excessive front or rear suspension rebound damping</li> <li>• lack of front or rear suspension compression damping</li> <li>• excessive front or rear suspension compression damping.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• mobile or stationary tests to evaluate suspension system performance</li> <li>• bounce-test to ensure air has been purged from front fork assembly.</li> </ul>

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair steering systems fitted to motorcycles. It involves diagnosing deviations from correct operation, repairing steering system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the steering systems of motorcycles.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a motorcycle steering system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to <b>motorcycle steering systems</b> diagnosis and repair</p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a motorcycle steering system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a motorcycle steering system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace technology and tools relating to the repair of motorcycle steering systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- operate diagnostic and test equipment
- use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of motorcycle steering systems
- application, purpose and operation of motorcycle steering systems
- testing procedures of motorcycle steering systems
- repair procedures of motorcycle steering systems, including:
  - triple – clamp fork alignment procedures
  - front axle aligning procedures
- post-repair testing procedures of motorcycle steering systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle steering systems including headstem bearing removal, replacement and bearing preload adjustment
- diagnose and repair motorcycle steering systems according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- a motorcycle or motorcycles with steering system faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle steering

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of motorcycle steering systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of an holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle steering system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Motorcycle steering systems</b> may include:	<ul style="list-style-type: none"> <li>• triple-clamp steering</li> <li>• hub-centre steering.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of motorcycle steering systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>motorcycle service requirements and repair manuals.</li> </ul>
<b><i>Diagnosis tests</i></b> may include:	<ul style="list-style-type: none"> <li>visual inspection of steering system components</li> <li>evaluation of steering during mobile or stationary tests</li> <li>isolation of fault(s).</li> </ul>
<b><i>Fault(s)</i></b> may include:	<ul style="list-style-type: none"> <li>tight steering</li> <li>loose steering</li> <li>notchy steering</li> <li>incorrect steering alignment.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>component repair procedures, including               <ul style="list-style-type: none"> <li>removal, replacement and adjustment procedures</li> <li>dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>mobile or stationary tests to evaluate steering system performance.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Motorcycle
<b>Unit sector</b>	Technical – Steering and suspension

**Custom Content Section**

## AURJTD4005 Diagnose complex faults in motorcycle steering and suspension systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in motorcycle steering and suspension systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic, hydraulic or pneumatic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of steering and suspension systems of motorcycles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning motorcycle steering and suspension systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in motorcycle steering and suspension systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to motorcycle steering and suspension systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of motorcycle steering and suspension systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to motorcycle steering and suspension systems
- types, functions, operations and limitations of motorcycle steering and suspension systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to motorcycle steering and suspension systems
- testing procedures of motorcycle steering and suspension systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different motorcycle steering and suspension systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in motorcycle steering and suspension systems.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated motorcycle steering and

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

suspension systems faults

- tools and equipment appropriate for the diagnosis of complex faults in motorcycle steering and suspension systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i> may include:</b>	<ul style="list-style-type: none"> <li>• indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harness, computer systems</li> <li>• component damage and system modifications.</li> </ul>
<b><i>Tests</i> may include:</b>	<ul style="list-style-type: none"> <li>• wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes</li> <li>• use of a shock absorber dynamometer</li> <li>• on-road testing</li> <li>• component test.</li> </ul>

## AURJTD5006 Analyse and evaluate motorcycle steering, suspension and frame system faults

### Modification History

Release	Comment
Release 1	Replaces AURT573093A Analyse and evaluate motorcycle steering, suspension and frame system faults  Unit code updated to meet policy requirements  Reference to OHS legislation replaced with new WHS legislation  Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence to analyse and evaluate motorcycle steering, suspension and frame systems in order to initiate action to sustain, vary or enhance performance.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.  The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning motorcycle steering and suspension frame systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Motorcycle steering, suspension and frame system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4.Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary motorcycle steering, suspension and frame systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- motorcycle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- steering system theory, including steering angles.
- the functions of hydraulic pressure within steering and suspension systems.
- working knowledge of the types, applications and limitations of tyres used on motorcycles.
- detailed knowledge of the types, applications and limitations of materials used in motorcycle frames.
- detailed knowledge of the types, function, operations and limitations of motorcycle steering systems/components.
- detailed knowledge of the types, function, operations and limitations of motorcycle suspension systems/components.
- detailed knowledge of the types and influences of leading and trailing link suspension on motorcycle performance.

## REQUIRED SKILLS AND KNOWLEDGE

- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three motorcycle steering, suspension and frame systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for motorcycle steering, suspension and frame systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, motorcycle steering, suspension and frame systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

---

## EVIDENCE GUIDE

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Motorcycles</b>	Motorcycles are to include two-wheel, four-wheel and two-wheel fitted with sidecar.
<b>Steering and suspension systems</b>	Steering and suspension systems to be covered in this unit are to include steering, telescopic forks and leading and trailing link suspension.
<b>Frames</b>	Frames are to include tubular frame and alloy formed section.
<b>Steering and suspension failures</b>	Steering and suspension failures covered by this unit are to include alignment, control systems, emergency systems, frame out of specification, tyre wear, incorrect tyres, wheel balance, vibration, directional stability, calibration/ adjustment specifications, loss of oil, contamination, lubrication out of specification, loss of gas pressure, component specifications, abnormal component wear, component assembly, component damage (forks, frame, swinging arm, bearings, faulty valves, damaged/faulty springs and system modifications.
<b>Steering, suspension and frame system failures</b>	Steering, suspension and frame system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>

<b>RANGE STATEMENT</b>	
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include callipers, dial indicator, flow meters, fork/oil and rear suspension gas filler kits, handle bar gauge, plumb line, pressure gauges, protractors, squares, static and dynamic wheel balancer, straight edges, string line, tape measures, theodolite, tyre pressure gauges and verniers, and may include laser and light alignment equipment.
<b>Tests</b>	Tests to be conducted are to include tyre pressures, tyre tread, toe-in, toe-out, system pressures, frame alignment, ride height and wheel bearing specifications.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to motorcycle steering, suspension and frame systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging steering and suspension system technology and technology changes.</li> </ul>

## AURJTE3001 Diagnose and repair motorcycle engines

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair engines fitted to motorcycles. It involves diagnosing deviations from correct operation, repairing engine components and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the engines of motorcycles.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a motorcycle engine	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a motorcycle engine	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a motorcycle engine	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - measure and calculate length, area and volume
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to work within a team
- technical skills to use workplace tools relating to the repair of motorcycle engines, including the use of:
  - specialised tooling and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of motorcycle engines
- application, purpose and operation of motorcycle engines, including:
  - air-cooled engines
  - liquid-cooled engines
  - two-stroke engines
  - four-stroke engines
- testing procedures of motorcycle engines
- repair procedures of motorcycle engines
- post-repair testing procedures of motorcycle engines

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle engines
- diagnose and repair motorcycle engines according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles with engine faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle engines
- specifications and workplace instructions

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- tools appropriate for the repair, replacement and adjustment of motorcycle engines.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle engine diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of motorcycle engines</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> may	<ul style="list-style-type: none"> <li>• evaluation of abnormal noises</li> <li>• engine compression tests</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• cylinder leakage tests</li> <li>• oil pressure tests</li> <li>• visual inspection of engine and components</li> <li>• measurement of engine component wear</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• abnormal engine noise or operation</li> <li>• loss of power</li> <li>• engine component wear</li> <li>• engine leaks.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• mobile or stationary tests to evaluate engine performance.</li> </ul>

**Unit Sector(s)**

## AURJTE4002 Diagnose complex faults in motorcycle engine and transmission systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in motorcycle engine and transmission systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to system fault and failure diagnosis of engine and transmission systems of motorcycles.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning motorcycle engine and transmission systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in motorcycle engine and transmission systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to motorcycle engine and transmission systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of motorcycle engine and transmission systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of motorcycle engine and transmission systems
- types, functions, operations and limitations of motorcycle engine and transmission systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to motorcycle engine and transmission systems
- testing procedures of motorcycle engine and transmission systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• interpret workplace instructions and locate and apply information</li> <li>• apply safety requirements, including the use of personal protective equipment</li> <li>• identify and select appropriate diagnosis processes to be performed</li> <li>• complete diagnosis of complex faults on a minimum of three different motorcycle engine and transmission systems with real or simulated faults</li> <li>• document and report outcomes and required actions of diagnosis of complex faults in motorcycle engine and transmission systems.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• motorcycles with real or simulated engine and transmission</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

system faults

- tools and equipment appropriate for the diagnosis of complex faults in motorcycle engine and transmission systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b><i>Workplace health and safety (WHS) requirements:</i></b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b><i>Faults</i> may include:</b>	<ul style="list-style-type: none"> <li>• indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations</li> <li>• direct faults in input sensors, output actuators, wiring harness, computer systems</li> <li>• component damage and system modifications.</li> </ul>
<b><i>Tests</i> may include:</b>	<ul style="list-style-type: none"> <li>• wiring and connector integrity, operation and specification of input and output devices, controlling electronic components and computers, data interpretation and readings related to direct, indirect and intermittent causes</li> <li>• on-road testing</li> <li>• component test.</li> </ul>
<b><i>Testing equipment</i> may include:</b>	<ul style="list-style-type: none"> <li>• analogue and digital multimeters, lab oscilloscopes, scan tools, test lights and test LEDs</li> <li>• pulse generators</li> <li>• manufacturer/component supplier testing equipment.</li> </ul>
<b><i>Diagnostic processes</i> may include:</b>	<ul style="list-style-type: none"> <li>• analysing manufacturer/component supplier specifications, schematics and operational procedures related to motorcycle engine and transmission systems</li> <li>• six-step troubleshooting plan</li> <li>• discover-investigate-fix methodology.</li> </ul>

## Unit Sector(s)

## AURJTJ2001 Remove, inspect and fit motorcycle wheel assemblies

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to remove, inspect and fit wheel assemblies fitted to motorcycles. It involves diagnosing deviations from correct operation, removal, inspection and fitting procedures of wheel assemblies.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	Work applies to the wheel assemblies of motorcycles.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to remove wheel assembly	<p>1.1. <i>Workplace instructions</i> are used to determine job requirements for the removal of <i>motorcycle wheel assemblies</i></p> <p>1.2. <i>Workplace health and safety (WHS) requirements</i> are observed and applied throughout the work</p> <p>1.3. <i>Procedures and information</i> are sourced and interpreted</p> <p>1.4. <i>Removal options</i> are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate tools and equipment are selected and prepared</p>
2. Remove and inspect wheel assembly	<p>2.1. Wheel assembly is removed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <i>Inspection of wheel assembly</i>, mounting points and fittings for damage and wear is carried out</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Fit wheel assembly	<p>3.1. Information required for fitting, adjustment and refitting of wheel assemblies is accessed from manufacturer and component supplier specifications and correctly interpreted</p> <p>3.2. Wheel fitting and <i>adjustments</i> are carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Wheel operation is checked for correct assembly, run-out and alignment according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. Systems affected by wheel removal and refitting are checked for correct operation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - follow oral instructions
  - ask questions to clarify instructions or procedures
  - report inspection results
- learning skills to identify sources of information and assistance
- literacy skills to:
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - document repairs and parts required
  - complete job card
- numeracy skills to:
  - interpret gauges and instruments
  - interpret numerical information printed on tyres
- planning and organising skills to plan own work requirements and prioritise actions to achieve required outcomes
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to:
  - use workplace technology and tools related to the removal, refitting and adjustment of motorcycle wheel assemblies, including the use of specialist tooling and equipment, measuring equipment and computerised technology

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to motorcycle tyres and tubes
- lifting and supporting procedures for motorcycles
- wheel and rim types and applications
- motorcycle drive types and applications
- wheel removal, inspection, refitting and adjusting procedures
- post-fitting procedures and checks

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- remove, inspect and fit a range of motorcycle wheel assemblies according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycle wheel assemblies
- equipment appropriate for the removal, inspection, fitting and adjustment of motorcycle wheel assemblies
- specifications and workplace instructions.

#### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Motorcycle wheel assemblies</b> may include:	<ul style="list-style-type: none"> <li>• spoked wheels</li> <li>• composite type wheels</li> <li>• one-piece wheels.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules, plans, specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the repair and replacement of motorcycle wheel assemblies</li> <li>• regulatory and legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b>Removal options</b> may include:	<ul style="list-style-type: none"> <li>• front wheel removal</li> <li>• rear wheel removal</li> <li>• removal of other systems to gain access to wheel.</li> </ul>
<b>Inspection of wheel assembly</b> may include:	<ul style="list-style-type: none"> <li>• tyre condition</li> <li>• rim condition</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• wheel bearing condition.</li></ul>
<i>Adjustments</i> may include:	<ul style="list-style-type: none"><li>• spoke tensioning</li><li>• axle nut tensioning</li><li>• drive chain or drive belt tensioning.</li></ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Motorcycle
<b>Unit sector</b>	Technical – Wheels and Tyres

**Custom Content Section**

Not applicable.

## AURJTQ2001 Inspect and service motorcycle driveline systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to inspect and service driveline systems fitted to motorcycles.</p> <p>The unit involves an inspection of the driveline system to note deviations from correct operation as well as service to ensure the system complies with manufacturer's specifications.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the driveline systems of motorcycles and motor scooters, including road, off-road, agricultural and race applications.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect and service motorcycle driveline system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to inspecting and servicing <b>motorcycle driveline systems</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Appropriate tools and equipment are selected and prepared</p>
2. Inspect motorcycle driveline system	<p>2.1. Inspection is carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p> <p>2.2. Inspection results are compared with manufacturer and component supplier specifications</p> <p>2.3. Inspection findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Service motorcycle driveline system	<p>3.1. <b>Service options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Service and adjustments are carried out according to workplace procedures and manufacturer and component supplier specifications and without causing damage to components or systems</p>
4. Clean up work area and finalise work processes	<p>4.1. <b>Final inspection</b> is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. <b>Service schedule documentation</b> is completed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- learning skills to identify sources of information, assistance and expert knowledge
- literacy skills to
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - follow workplace documentation, such as codes of practice or operating procedures
  - document work performed during inspection and servicing operations
- numeracy skills to interpret gauges, instruments and measuring equipment
- planning and organising skills to ensure tasks are completed within an acceptable timeframe
- problem-solving skills to seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - follow workplace documentation, such as codes of practice or operating procedures
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools and equipment relating to the inspection and servicing of motorcycle driveline systems
- technology skills to use technology to collect and provide information.

#### Required knowledge

- WHS regulations, requirements, equipment and material, and personal safety requirements
- operating principles of motorcycle driveline systems
- methods of sourcing information relevant to inspecting and servicing motorcycle driveline systems
- inspection procedures for motorcycle driveline systems
- service procedures for motorcycle driveline systems
- workplace documentation policies and procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- inspect and service a range of motorcycle driveline systems, including motorcycle chain, belt and driveshaft systems according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles and motorcycle driveline system components
- tools and equipment appropriate for the inspection and servicing of motorcycle driveline systems
- specifications and workplace instructions.

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment****Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle driveline system inspection and servicing methods, processes and equipment.</li> </ul>
<b>Motorcycle driveline systems</b> must include:	<ul style="list-style-type: none"> <li>• chain drive</li> <li>• belt drive</li> <li>• driveshaft drive.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• safe work procedures relating to the inspection and servicing of motorcycle driveline systems</li> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>motorcycle service requirements and repair manuals.</li> </ul>
<i>Service options</i> may include:	<ul style="list-style-type: none"> <li>fluid replacement</li> <li>adjustments and operational testing.</li> </ul>
<i>Final inspection</i> may include:	<ul style="list-style-type: none"> <li>final check of motorcycle driveline fluid levels</li> <li>checking of motorcycle driveline system operation during mobile or stationary tests</li> <li>cleaning of motorcycle.</li> </ul>
<i>Service schedule documentation</i> may include:	<ul style="list-style-type: none"> <li>motorcycle service book</li> <li>job card or work order</li> <li>workplace computerised or written records and invoice.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Motorcycle
<b>Unit sector</b>	Technical – Driveline and Final Drives

**Custom Content Section**

Not applicable.

## AURJTQ3002 Diagnose and repair motorcycle driveline systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair driveline systems fitted to motorcycles. It involves diagnosing deviations from correct operation, repairing driveline system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the driveline systems of motorcycles.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a motorcycle driveline system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b> relating to diagnosing and repairing <b>motorcycle driveline systems</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a motorcycle driveline system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a motorcycle driveline system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - calculate ratios
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of motorcycle driveline systems, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements
- dangers of working with motorcycle driveline systems
- operating principles of motorcycle driveline systems
- application, purpose and operation of motorcycle driveline systems, including:
  - driveshaft systems
  - chain and sprocket systems
  - belt drive systems
- testing procedures of motorcycle driveline systems
- repair procedures of motorcycle driveline systems
- post-repair testing procedures of motorcycle driveline systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle driveline systems, including motorcycle chain, belt and driveshaft systems
- diagnose and repair motorcycle driveline systems according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles with driveline system faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle driveline systems

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- specifications and workplace instructions
- tooling appropriate for the repair, replacement and adjustment of motorcycle driveline systems.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle driveline system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Motorcycle driveline systems</b> must include:	<ul style="list-style-type: none"> <li>• chain drive</li> <li>• belt drive</li> <li>• driveshaft drive.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of motorcycle driveline systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>motorcycle service requirements and repair manuals.</li> </ul>
<b><i>Diagnosis tests</i></b> may include:	<ul style="list-style-type: none"> <li>visual inspection of driveline system components</li> <li>measurement of driveline wear</li> <li>evaluation of abnormal noises</li> <li>isolation of fault(s).</li> </ul>
<b><i>Fault(s)</i></b> may include:	<ul style="list-style-type: none"> <li>abnormal driveline system noise or operation</li> <li>rear wheel loss of power</li> <li>rear wheel lock-up</li> <li>driveline system leaks.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>component repair procedures, including:               <ul style="list-style-type: none"> <li>removal, replacement and adjustment procedures</li> <li>dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>mobile or stationary tests to evaluate driveline system performance.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical - Motorcycle
<b>Unit sector</b>	Technical - Driveline and Final Drives

## AURJTR5001 Analyse and evaluate motorcycle electrical and electronic system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT573293A Analyse and evaluate motorcycle electrical/electronic system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Minor changes to unit title</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate motorcycle electrical/electronic systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning motorcycle electrical/electronic systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Motorcycle electrical/electronic system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary motorcycle electrical/electronic systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- motorcycle terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- electrical theory covering voltage, current, resistance, power, magnetism and inductance.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, function, operations and limitations of motorcycle electrical/electronic systems/components.
- general knowledge of the Australian design rules requirements related to motorcycle electrical/electronic systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to:             <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three motorcycle electrical/electronic systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for motorcycle electrical/electronic systems.</li> <li>• Document and report the diagnostic process and findings and recommended rectification for two of the above.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, motorcycle electrical/electronic systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<b>Method of assessment</b>	Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

## EVIDENCE GUIDE

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Motorcycles</b>	Motorcycles are to include two-wheel, four-wheel and two-wheel fitted with sidecar.
<b>Electrical/electronic systems</b>	Electrical/electronic systems covered in this unit are to include lighting, ignition, charging, fuel injection, ABS, engine management and safety lock-out systems.
<b>Electrical/electronic systems failures</b>	<ul style="list-style-type: none"> <li>Electrical/electronic system failures covered in this unit are to include lighting (short circuit, grounded circuit, open circuit, faulty equipment, switches and relays), ignition (no-start, no-run, misfire, erratic operation, lack of power, charging, security lock-out), fuel injection (contamination, loss of power, no-start, poor or erratic running, abnormal emissions), ABS (intermittent faults, operator feedback), engine management (poor performance, lack of power, erratic running, induction interference), safety lock-out systems (failure to crank, engine stops).</li> <li>Electrical/electronic system failures covered in this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the

<b>RANGE STATEMENT</b>	
	analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include ABS diagnostic tooling, computer-based diagnostic systems, electronic vacuum gauge, engine control unit analyser, engine emission tester, fuel pressure and flow meter, headlight aiming testing equipment, injector tester, LED test lights, magnetic coil condenser tester, multimeter, peak voltage meters, resistor flow dynamometer, vacuum gauge.
<b>Tests</b>	Tests to be conducted are to include accumulator pressure, disc stack height, pressure, system performance (distance/balance), sensor/actuator and wiring harness integrity, sampling (collection and processing, wear analysis (drum/disc/lining material) and monitoring/analysis of computer-based diagnostic systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to motorcycle electrical/electronic systems.</li> <li>• Australian Design Rules.</li> <li>• Motorcycle industry regulations.</li> <li>• Motorcycle industry publications related to emerging electrical/electronic system technology and technology changes.</li> </ul>

## AURJTX3001 Diagnose and repair motorcycle clutch systems

### Modification History

Release	Comment
Release 1	Replaces AURT306170A Inspect, service and/or repair clutch assemblies and associated operating system components  Performance Criteria, Range Statement and Critical Aspects of Evidence updated to reflect modern motorcycle technologies

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair clutch systems fitted to motorcycles. It involves diagnosing deviations from correct operation, repairing clutch system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the clutch systems of motorcycles.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a motorcycle clutch system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a motorcycle clutch system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a motorcycle clutch system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - measure and calculate length, area and volume
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of motorcycle clutch systems, including the use of:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- specialised tools and equipment
- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements dangers of working with motorcycle clutch systems
- operating principles of motorcycle clutch systems
- application, purpose and operation of motorcycle clutch systems, including:
  - wet clutch systems
  - slipper clutch systems
- testing procedures for motorcycle clutch systems
- repair procedures for motorcycle clutch systems
- post-repair testing procedures for motorcycle clutch systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle clutch systems, including motorcycle wet clutch and slipper clutch systems, according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles with clutch system faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle clutch systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of motorcycle clutch systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle clutch system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of motorcycle clutch systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> may	<ul style="list-style-type: none"> <li>• visual inspection of clutch system components</li> <li>• measurement of linkage and actuator adjustments</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:	<ul style="list-style-type: none"> <li>• clutch performance testing</li> <li>• clutch fluid evaluation</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• slipping clutch</li> <li>• dragging clutch</li> <li>• excessive clutch lever travel</li> <li>• hydraulic clutch operating system leaks</li> <li>• clutch lever and cable faults</li> <li>• abnormal clutch system noise or smell.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• mobile or stationary tests to evaluate clutch system performance.</li> </ul>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to:
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
  - participate in self-improvement activities
- literacy skills to:
  - understand quality procedures
  - read, interpret and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - calculate ratios
  - assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of motorcycle automatic transmissions, including the use of:
  - specialised tools and equipment

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- measuring equipment
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information

**Required knowledge**

- WHS regulations, requirements, equipment and material, and personal safety requirements relating to diagnosing and repairing motorcycle automatic transmissions
- operating principles of motorcycle automatic transmissions
- application, purpose and operation of motorcycle automatic transmissions, including:
  - continuously variable transmissions (CVT)
- testing procedures for motorcycle automatic transmissions
- repair procedures for motorcycle automatic transmissions
- post-repair testing procedures for motorcycle automatic transmissions

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of motorcycle automatic transmissions
- diagnose and repair motorcycle automatic transmissions according to workplace, manufacturer and component supplier requirements
- present motorcycle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- motorcycles with automatic transmission faults relevant to the qualification being sought
- equipment appropriate for the testing of motorcycle automatic

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

transmissions

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of motorcycle automatic transmissions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• motorcycle automatic transmission diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the diagnosis and repair of motorcycle automatic transmissions</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• motorcycle service requirements and repair manuals.</li> </ul>
<b>Diagnosis tests</b> may include:	<ul style="list-style-type: none"> <li>• visual inspection of linkages and shafts</li> <li>• hydraulic pressure tests</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• component inspection and evaluation</li> <li>• isolation of fault(s).</li> </ul>
<b><i>Fault(s)</i></b> may include:	<ul style="list-style-type: none"> <li>• transmission slippage or loss of drive</li> <li>• harsh gearshifts</li> <li>• flaring gearshifts</li> <li>• transmission fluid leaks</li> <li>• abnormal transmission noise or smell.</li> </ul>
<b><i>Repair options</i></b> may include:	<ul style="list-style-type: none"> <li>• component repair procedures, including:               <ul style="list-style-type: none"> <li>• removal, replacement and adjustment procedures</li> <li>• dismantle, repair, re-assembly and adjustment procedures.</li> </ul> </li> </ul>
<b><i>Post-repair testing</i></b> may include:	<ul style="list-style-type: none"> <li>• mobile or stationary tests to evaluate automatic transmission performance</li> <li>• stall tests</li> <li>• hydraulic pressure tests.</li> </ul>

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Motorcycle
<b>Unit sector</b>	Technical - Transmission

## AURJTY3001 Repair and align motorcycle frames

### Modification History

Release	Comment
Release 1	Replaces AURV328166A Repair and align motorcycle frames Unit code updated to meet policy requirements Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out inspection and determine repairs required, replace and repair components and align motorcycle frame/components.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>The unit includes identification and confirmation of work requirement, preparation for work, the replacement, repair and alignment of frames and completion of work finalisation processes, including clean-up and documentation.</p> <p>This competence unit applies to all types of motorcycle frames, including for those with side cars and carrying compartments.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake frame alignment and repair	<p>1.1.The nature and scope of the work requirements are identified and confirmed.</p> <p>1.2.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work.</p> <p>1.3.Procedures and information such as workshop manuals and specifications, and tooling, are sourced.</p> <p>1.4.Method options are analysed and those most appropriate to the circumstances are selected and prepared.</p> <p>1.5.Technical and/or calibration requirements for frame alignment and repair are sourced and support equipment is identified and prepared.</p>
2. Inspect and measure to determine repair requirements	<p>2.1.Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>2.2.Detailed inspection report is prepared to guide the assessment of repair options.</p> <p>2.3.Work is completed without causing damage to any component or system.</p> <p>2.4.Inspection activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p> <p>2.5.Results of inspection are documented/processed in accordance with enterprise requirements.</p>
3. Replace and repair frame components	<p>3.1.Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>3.2.Repair/replacement is completed without causing damage to any component or system.</p> <p>3.3.Replacement and repair activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>
4. Align frame and components	<p>4.1.Information is accessed and interpreted from manufacturer/ component supplier specifications.</p> <p>4.2.Alignment of frame and components is carried out in accordance with vehicle manufacturer/component supplier specifications for methods, equipment used and tolerances.</p> <p>4.3.Alignment is completed without causing damage to any component or system.</p> <p>4.4.All alignment activities are carried out according to industry regulations/guidelines, WHS legislation, and enterprise procedures/policies.</p>

ELEMENT	PERFORMANCE CRITERIA
5. Prepare frame for delivery to customer and/or storage	<p>5.1.Alignment/repair documentation completed.</p> <p>5.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3.Final inspection is made to ensure work is to workplace expectations.</p> <p>5.4.Frame is prepared and/or stored to workplace expectations.</p> <p>5.5.Job card is processed in accordance with workplace procedures.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills required for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to repair and alignment of motorcycle frames, including specialist tooling, the use of measuring equipment, computerised technology and communication devices and the reporting/recording of results

#### Required knowledge

A working knowledge of:

- WHS regulations/requirements, equipment, material and personal safety requirements
- industry code of practice
- principles of frame alignment and steering geometry as applied to motorcycles
- alignment procedures
- repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is fully observed and there is ability to transfer competence to changing circumstances and to respond to unusual situations in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- accurately interpreting measurements
- conducting the repair and alignment of a range of frames in accordance with the workplace and manufacturer/component supplier requirements
- completing repair and alignment of frames and associated components within workplace timeframes
- frame presentation to customer in compliance with workplace requirements
- completing workplace documentation.

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to repair and alignment of motorcycle frames
- equipment, hand and power tooling appropriate to repair and alignment of motorcycle frames
- activities covering mandatory task requirements
- specifications and work instructions.

##### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.

**EVIDENCE GUIDE**

- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Repairs and alignment methods</b>	Repair and alignment methods are to include: <ul style="list-style-type: none"> <li>• visual, aural and functional assessment (including damage, wear and breakage)</li> <li>• using principles, angles and geometry of vehicle wheel and frame alignment.</li> </ul>
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices.
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and worksite visitors.
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include, but are not limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and worksite evacuation.
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management.
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures.
<b>Statutory/regulatory</b>	Statutory/regulatory authorities may include Federal,

<b>RANGE STATEMENT</b>	
<b>authorities</b>	State/Territory and local authorities administering acts, regulations and codes of practice.
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, power tooling, specialist tooling for removal/adjustment, measuring equipment, pressing equipment, heating equipment, pullers, welders - MMAW, oxy, GMAW, GTAW, lifting equipment, testing equipment and air operated equipment.
<b>Materials</b>	Materials may include spare parts and cleaning materials.
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault reporting and may include worksite specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers.
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to repair and alignment of motorcycle frames</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards.</li> </ul>

## AURKTA3001 Synchronise plant and equipment

### Modification History

Release	Comment
Release 1	Replaces AURT300373A Synchronise plant/equipment Unit code updated to meet policy requirements Minor changes to unit title Reference to OHS legislation replaced with new WHS legislation Licensing statement added to unit descriptor

### Unit Descriptor

Unit descriptor	This unit covers the competence required to synchronise plant/equipment.  Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.
-----------------	---

### Application of the Unit

Application of the unit	Work involved includes plant/equipment used for specific applications.  Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake synchronising operations	1.1.WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.2.Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.3.Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.4.Technical and/or calibration requirements for synchronising are sourced and support equipment is identified and prepared 1.5.Warnings in relation to working with plant/equipment are observed
2. Conduct synchronising procedures	2.1.Methods for synchronising procedures are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2.Synchronising procedures are implemented 2.3.Documentation of synchronising tests are completed
3. Analyse results	3.1.Operational functions are carried out and test results are compared with manufacturer/component supplier specifications 3.2.Results are analysed to indicate compliance or non-compliance 3.3.Results are documented with evidence and supporting information and recommendation(s) made 3.4.Report is forwarded to persons for action in accordance with workplace procedures
4. Prepare plant and equipment for use or storage	4.1.Workplace documentation is completed 4.2.Final inspection is made to ensure protective guards, safety features and cowlings are in place 4.3.Final inspection is made to ensure work is to workplace expectations 4.4.Plant/equipment is cleaned for use or storage to workplace expectations 4.5.Job card is completed and delivered to appropriate persons

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to synchronising plant/ equipment, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with vehicles and/or plant and equipment
- operating principles of engines and associated components and their relationship to each other
- workshop and site synchronisation procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- completing the synchronisation of plant/equipment to workplace and manufacturer/component supplier requirements
- conducting testing and inspections in accordance with workplace requirements
- interpreting test results
- completing the work within workplace timeframes
- presenting plant/equipment to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

## AURKTA3002 Inspect, service and repair harvesting equipment

### Modification History

Release	Comment
Release 1	<p>Replaces AURT300471B Inspect, service and repair harvesting equipment</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the inspection, service and repair of harvesting equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Harvesting equipment refers to specialised equipment involved in harvesting. It does not cover generalised equipment and systems which form the platform or the towing vehicle.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and analysis of results, servicing and repair of equipment and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
-------------------------	---

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect harvesting equipment	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including State/Territory regulatory requirements and personal protection needs are observed throughout work 1.3. Procedures and information such as workshop manuals, specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for inspecting harvesting equipment are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with harvesting equipment observed
2. Conduct inspection and analyse results	2.1. Methods for inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. Service and repair harvesting equipment	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information are identified and sourced 3.3. Technical and tool requirements for service and repair are identified and support equipment is identified and prepared 3.4. Methods for service and repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.5. Adjustments made during the service and repair are in accordance with manufacturer/component supplier specifications
4. Prepare equipment for operation	4.1. Variable operating parameters are identified from manufacturer/component supplier specifications and analysis of proposed working environment and conditions 4.2. Equipment variables, including management systems

ELEMENT	PERFORMANCE CRITERIA
	<p>settings, controls and monitoring systems are established and prepared for proposed operations</p> <p>4.3. Equipment and systems are test run and final adjustments are made to achieve and maintain operating parameters</p> <p>4.4. Regulatory requirements, including equipment safety and environmental compliance, are applied and satisfied</p>
5. Prepare equipment for use or storage	<p>5.1. Service/repairs schedule documentation is completed</p> <p>5.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3. Final inspection is made to ensure work is to workplace expectations</p> <p>5.4. Equipment is cleaned for use or storage to workplace expectations</p> <p>5.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with others
- help persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the servicing and repair of harvesting equipment, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with harvesting equipment
- operating principles of harvesting equipment and their relationship to each other
- equipment operating parameters and the factors which will impact on these
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service and/or repair procedures
- enterprise quality procedures

<b>REQUIRED SKILLS AND KNOWLEDGE</b>

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- completing a minimum of four full cycles requiring inspection, servicing, repair and preparing of harvesting equipment for operations, ensuring:
  - accurate interpretation of inspection results
  - completion of inspection, service and repair in accordance with workplace and manufacturer/ component supplier requirements
  - completion of work within workplace timeframes
  - preparation of equipment for operations
  - equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection/servicing and repair of harvesting equipment
- equipment, hand and power tooling appropriate to the service and repair of harvesting equipment
- activities covering mandatory task requirements

**EVIDENCE GUIDE**

	<ul style="list-style-type: none"> <li>• specifications and work instructions</li> </ul>
<b>Method of assessment</b>	<p>Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&amp;R Training Package</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Harvesting equipment</b>	Harvesting equipment may include grain, cane, cotton, rice, forage, sugar and balers
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, machine hygiene, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice

**RANGE STATEMENT**

<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, diagnostic and monitoring systems, meters, gauges, load testing devices and pulling and pushing devices
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the inspection, servicing and repair of harvesting equipment</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

## AURKTA3003 Inspect, service and repair crop planting and seeding equipment

### Modification History

Release	Comment
Release 1	<p>Replaces AURT300571A Inspect, service and repair crop planting and seeding equipment</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence required to carry out the inspection, service and repair of crop planting and seeding equipment.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

## Application of the Unit

<b>Application of the unit</b>	<p>Crop planting and seeding equipment refers to specialised equipment involved in planting and seeding. It does not cover generalised equipment and systems which form the platform or the towing vehicle.</p> <p>The unit includes identification and confirmation of work requirement, preparation for work, inspection and analysis of results, servicing and repair of equipment and completion of work finalisation processes, including clean-up and documentation.</p> <p>Work involves purpose-designed and constructed crop planting and seeding equipment which may be self-propelled, towed or airborne.</p> <p>Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment.</p>
--------------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to inspect crop planting and seeding equipment	1.1. Nature and scope of work requirements are identified and confirmed 1.2. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 1.3. Procedures and information such as workshop manuals and specifications, and tooling, are sourced 1.4. Method options are analysed and those most appropriate to the circumstances are selected and prepared 1.5. Technical and/or calibration requirements for inspecting crop planting and seeding equipment are sourced and support equipment is identified and prepared 1.6. Warnings in relation to working with crop planting and seeding equipment observed
2. Conduct inspection and analyse results	2.1. Methods for inspection are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 2.2. Inspection results are compared with manufacturer/component supplier specifications to indicate compliance or non-compliance 2.3. Results are documented with evidence and supporting information and recommendation(s) made 2.4. Report is processed in accordance with workplace procedures
3. Service and repair crop planting and seeding equipment	3.1. WHS requirements, including individual State/Territory regulatory requirements and personal protection needs are observed throughout the work 3.2. Procedures and information are identified and sourced 3.3. Technical and tool requirements for service and repair are identified and support equipment is identified and prepared 3.4. Methods for service and repair are implemented in accordance with workplace procedures and manufacturer/component supplier specifications 3.5. Adjustments made during the service and repair are in accordance with manufacturer/component supplier specifications
4. Prepare equipment for operation	4.1. Variable operating parameters are identified from manufacturer/component supplier specifications and analysis of proposed working environment and conditions 4.2. Equipment variables, including management systems

ELEMENT	PERFORMANCE CRITERIA
	<p>settings, controls and monitoring systems are established and prepared for proposed operations</p> <p>4.3. Equipment and systems are test run and final adjustments are made to achieve and maintain operating parameters</p> <p>4.4. Regulatory requirements, including equipment safety and environmental compliance, are applied and satisfied</p>
5. Prepare equipment for use or storage	<p>5.1. Service/repairs schedule documentation is completed</p> <p>5.2. Final inspection is made to ensure protective guards, safety features and cowlings are in place</p> <p>5.3. Final inspection is made to ensure work is to workplace expectations</p> <p>5.4. Equipment is cleaned for use or storage to workplace expectations</p> <p>5.5. Job card is processed in accordance with workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- apply research and interpretive skills sufficient to locate, interpret and apply manufacturer/component supplier procedures, workplace policies and procedures
- apply analytical skills for identification and analysis of technical information
- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- establish safe and effective work processes which anticipate and/or resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- use workplace technology related to the servicing and repair of crop sewing and seeding equipment, including the use of specialist tooling, measuring equipment, computerised technology and communication devices and the documenting/ recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with crop planting and seeding equipment
- operating principles of crop planting and seeding equipment and their relationship to each other
- equipment operating parameters and the factors which will impact on these
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service and/or repair procedures
- enterprise quality procedures
- work organisation and planning processes

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- completing a minimum of four full cycles requiring inspection, servicing, repair and preparing of crop planting/seeding equipment for operations ensuring;
  - accurate interpretation of inspection results
  - completion of inspection, service and repair in accordance with workplace and manufacturer/ component supplier requirements
  - completion of work within workplace timeframes
  - preparation of equipment for operations
  - equipment presentation to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the servicing and repair of crop planting and seeding equipment
- equipment, hand and power tooling appropriate to the service and repair of crop planting and seeding equipment
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge

Assessment must be by direct observation of tasks, with

**EVIDENCE GUIDE**

questioning on underpinning knowledge and it must also reinforce the integration of key competencies

Assessment may be applied under project related conditions and require evidence of process

Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances

It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements

Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, machine hygiene, dust and clean-up management
<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, diagnostic and monitoring systems, meters, gauges, load testing devices, and

**RANGE STATEMENT**

	pulling and pushing devices
<b>Materials</b>	Materials may include spare parts, lubricants, fluids and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	Sources of information/documents may include: <ul style="list-style-type: none"><li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li><li>• safe work procedures related to the inspection, servicing and repair of crop planting and seeding equipment</li><li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li><li>• engineer's design specifications and instructions</li><li>• organisation work specifications and requirements</li><li>• instructions issued by authorised enterprise or external persons</li><li>• Australian Standards</li></ul>

- apply plain English literacy and communication skills in relation to dealing with customers and team members
- apply questioning and active listening skills for example when obtaining information from customers
- apply oral communication skills sufficient to convey information and concepts to customers
- apply planning and organising skills to own work activities, including making good use of time and resources, sorting out priorities and monitoring own performance
- interact effectively with other persons both on a one-to-one basis and in groups, including understanding and responding to the needs of a customer and working effectively as a member of a team to achieve a shared goal
- use mathematical ideas and techniques to correctly calculate time, assess tolerances, apply accurate measurements, calculate material requirements and establish quality checks
- establish safe and effective work processes which anticipate and resolve problems and downtime, to systematically develop solutions to avoid or minimise reworking and avoid wastage
- use workplace technology related to the inspection, service and repair of track type drive and support systems, including the use of measuring equipment, computerised technology and communication devices and the documenting/recording of results

#### Required knowledge

A working knowledge of:

- WHS and environmental regulations/requirements, equipment, material and personal safety requirements
- dangers of working with track type drive and support systems
- the identification of application, purpose and operation
- the identification of component parts to include physical, fluid, gases and heat generation
- types and layout of service/repair manuals (hard copy and electronic)
- inspection procedures
- service and repair procedures
- enterprise quality procedures

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence in this unit signifies ability to transfer competence to changing circumstances and to respond to unusual circumstances in the critical aspects of:

- observing safety procedures and requirements
- communicating effectively with others involved in or affected by the work
- selecting methods and techniques appropriate to the circumstances
- completing preparatory activity in a systematic manner
- conducting inspection, service and repair of different tracked type drive and support systems in accordance with manufacturer/component supplier and workplace requirements
- interpreting inspection results
- completing service and repair within workplace timeframes
- presenting vehicle to customer in compliance with workplace requirements

##### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints

Assessment is to comply with regulatory requirements, including Australian Standards

The following resources should be made available:

- workplace location or simulated workplace
- material relevant to the inspection, service and repair of track type drive and support systems
- equipment, hand and power tooling appropriate to the inspection, service and repair of track type drive and support systems
- activities covering mandatory task requirements
- specifications and work instructions

##### Method of assessment

Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package

## EVIDENCE GUIDE

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge</p> <p>Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies</p> <p>Assessment may be applied under project related conditions and require evidence of process</p> <p>Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances</p> <p>It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role</p>
--	---

## Range Statement

<b>RANGE STATEMENT</b>	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<b>Variables</b>	Variables to include idlers, rollers, drive sprocket, track frame
<b>Servicing</b>	Servicing to include fluids, filters, adjustments, operational testing, visual inspections and records
<b>Repair methods</b>	Repair methods and sequence are to include isolation of fault(s), dismantling, inspection and evaluation, replacement of components parts, assembly and completion of operational tests and records
<b>Faults</b>	Faults include misalignment wear, pin and bush excessive wear, grouser wear and track tension
<b>WHS</b>	WHS requirements are to be in accordance with legislation/regulations/codes of practice and enterprise safety policies and procedures. This may include protective clothing and equipment, use of tooling and equipment, workplace environment and safety, handling of material, use of fire fighting equipment, enterprise first aid, hazard control and hazardous materials and substances
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation/regulation/codes of practice and workplace policies and practices
<b>Safe operating procedures</b>	Safe operating procedures are to include, but are not limited to operational risk assessment and treatments associated with vehicular movement, toxic substances, electrical safety, machinery movement and operation, manual and mechanical lifting and shifting, working in proximity to others and site visitors
<b>Emergency procedures</b>	Emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping of equipment, extinguishing fires, enterprise first aid requirements and site evacuation
<b>Environmental requirements</b>	Environmental requirements are to include but are not limited to waste management, noise, dust and clean-up management

**RANGE STATEMENT**

<b>Quality requirements</b>	Quality requirements are to include, but are not limited to regulations, including Australian Standards, internal company quality policy and standards and enterprise operations and procedures
<b>Statutory/regulatory authorities</b>	Statutory/regulatory authorities may include Federal, State/Territory and local authorities administering acts, regulations and codes of practice
<b>Tooling and equipment</b>	Tooling and equipment may include hand tooling, meters, gauges and load testing and pulling or pushing devices
<b>Materials</b>	Materials may include spare parts and cleaning materials
<b>Communications</b>	Communications are to include, but are not limited to verbal and visual instructions and fault documenting and may include site specific instructions, written instructions, plans or instructions related to job/task, telephones and pagers
<b>Information/documents</b>	<p>Sources of information/documents may include:</p> <ul style="list-style-type: none"> <li>• verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, memos, material safety data sheets, diagrams or sketches</li> <li>• safe work procedures related to the inspection, service and repair of track type drive and support systems</li> <li>• regulatory/legislative requirements pertaining to automotive industry, including Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisation work specifications and requirements</li> <li>• instructions issued by authorised enterprise or external persons</li> <li>• Australian Standards</li> </ul>

## AURKTA4009 Diagnose complex faults in mobile plant hydraulic systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose complex faults in mobile plant hydraulic systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of hydraulic systems in the mobile plant environment.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning mobile plant hydraulic systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4. Effects of systemic deficiencies or discrepancies or <b>faults</b> in mobile plant hydraulic systems are identified and confirmed from indirect or direct evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to mobile plant hydraulic systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of mobile plant hydraulic systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to mobile plant hydraulic systems
- concepts, types, functions, operations and limitations of mobile plant hydraulic systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to mobile plant hydraulic systems
- testing procedures for mobile plant hydraulic systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different mobile plant hydraulic systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in mobile plant hydraulic systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated mobile plant hydraulic system faults

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- tools and equipment appropriate for the diagnosis of complex faults in mobile plant hydraulic systems
- technical reference information and workplace instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults*** may include:

- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration or adjustment specifications
- component specifications, component assembly, component damage and system modifications
- indirect mechanical faults
- mechanical and hydraulic system faults

***Tests*** may include:

- wiring and connector integrity
- operation and specification of input and output devices
- controlling electronic components and computers
- data interpretation and readings related to direct indirect and intermittent causes
- hydraulic systems testing
- electrical systems testing
- mechanical systems testing
- road test.

***Testing equipment*** may include:

- analogue and digital multimeters
- lab oscilloscopes
- scan tools
- test lights and test LEDs
- pulse generators
- manufacturer and component supplier testing equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• pressure gauges</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to mobile plant hydraulic systems</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology</li></ul>

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning tracked mobile plant transmission, steering and braking systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Tracked mobile plant transmission, steering and braking system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

## REQUIRED SKILLS AND KNOWLEDGE

### Required skills

- research, organise and understand technical information related to contemporary tracked mobile plant transmission, steering and braking systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

### Required knowledge

- tracked mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- the functions of hydraulic pressure with transmission, steering and braking systems.
- detailed knowledge of tracked mobile plant transmission systems/components.
- detailed knowledge of the types, function, operations and limitations of tracked mobile plant steering and braking systems/components.
- detailed knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.

<b>REQUIRED SKILLS AND KNOWLEDGE</b>
<ul style="list-style-type: none"><li>• general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.</li></ul>

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three tracked mobile plant transmission, steering and braking systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for tracked mobile plant transmission, steering and braking systems.</li> <li>• Document and report the diagnostic process and findings and recommended rectification for two of the above.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, tracked mobile plant transmission, steering and braking systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<b>Method of assessment</b>	Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require

## EVIDENCE GUIDE

	<p>portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
<b>Guidance information for assessment</b>	

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### **Failure analysis and evaluation process**

The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

#### **Steering and braking systems**

Steering and braking systems to be covered in this unit are to include mechanical and hydraulic operated steering clutch/brake, independent drives, planetary and differential planetary, hydrostatic drive, single and multi-disc brake units.

#### **Transmission, steering and braking failures**

- Transmission, steering and braking failures covered by this unit are to include those to mechanical, hydraulic and electrical/electronic systems, including control systems, emergency systems, directional stability,

<b>RANGE STATEMENT</b>	
	<p>calibration/adjustment specifications, contamination, component specifications, component assembly, component damage and system modifications .</p> <ul style="list-style-type: none"> <li>• Transmission, steering system and braking failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations</li> </ul>
<b>Tracked mobile plant</b>	Tracked mobile plant covers all mobile plant with tracked undercarriage. Included are tracked type loaders, crawler tractors tracked type plant, hydraulic excavators and face shovels, material handling machines, agricultural tracked equipment and other rural equipments.
<b>Transmission systems</b>	Transmission systems to be covered in this unit are to include mechanical, power shift and automatic transmissions, clutches, torque converters, drivelines and final drive sub-systems.
<b>Coverage</b>	Coverage is to include infinitely variable transmission (belt, hydraulic and planetary).
<b>Unit context</b>	<ul style="list-style-type: none"> <li>• WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>• Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>• Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.

RANGE STATEMENT	
Testing equipment	Testing equipment is to include pressure and temperature gauges, flow meters, multimeter, data readers, computer-based diagnostic systems.
Tests	Tests to be conducted are to include system pressures, flow rates, stall testing, operating temperatures, and sensor and actuator integrity.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
Information and procedures	<ul style="list-style-type: none"><li>• Workplace procedures relating to the use of tooling and equipment.</li><li>• Workplace procedures relating to reporting and communication.</li><li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to tracked mobile plant steering and braking systems.</li><li>• Australian Design Rules.</li><li>• Vehicle industry regulations.</li><li>• Vehicle industry publications related to emerging steering and braking system technology and technology changes.</li></ul>

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning mobile plant hydraulic systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Mobile plant hydraulic system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary mobile plant hydraulic systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- wheeled and tracked mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, function and limitations of wheeled and tracked mobile plant excavating and ground engaging systems/components.
- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three mobile plant hydraulic systems with real or simulated multi-system and intermittent faults and identify and evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for mobile plant hydraulic systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, mobile plant hydraulic systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

**EVIDENCE GUIDE**

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Mobile plant</b>	Mobile plant covers all mobile plant with both wheeled and tracked undercarriage. Included are loaders, dump trucks, graders, scrapers, industrial tractors, crawler tractors, excavator plant, material handling machines, agricultural harvesters and other rural equipment.
<b>Hydraulic systems</b>	Hydraulic systems to be covered in this unit are to include all hydraulic systems or attachments and ground engaging equipment other than the transmission, steering, braking or suspension systems. Coverage is to include compensated systems, pressure and flow (PFC) and load sensing systems.
<b>Failures</b>	Failures covered by this unit are to include those to mechanical, hydraulic and electrical/electronic systems, including control systems, emergency systems, vibration, calibration/adjustment specifications, contamination, component specifications, component assembly, component damage and system modifications.
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.

<b>RANGE STATEMENT</b>	
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include stop watches, pressure gauges, flow meters, multimeter, data readers, computerised diagnostic system.
<b>Tests</b>	Tests to be conducted are to include pressure, flow and temperature, cycle time performance, filter inspection, sequencing, sensor and actuator integrity and wiring harness integrity.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"><li>• Workplace procedures relating to the use of tooling and equipment.</li><li>• Workplace procedures relating to reporting and communication.</li><li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li><li>• Manufacturer/component supplier specifications, schematics and operational procedures related to mobile plant hydraulic systems.</li><li>• Australian Design Rules.</li><li>• Vehicle industry regulations.</li><li>• Vehicle industry publications related to emerging hydraulic system technology and technology changes.</li></ul>

## AURKTB3001 Diagnose and repair mobile plant braking systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to repair braking systems and associated components. It involves identifying and confirming safety requirements, diagnosing deviations from correct operation, repairing mobile plant braking system components and associated systems, and undertaking post-repair testing procedures.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>Work applies to the braking systems of mobile plant equipment in construction, mining and agricultural environments.</p> <p>This unit does not apply to work relating to anti-lock braking systems (ABS) or to air braking systems.</p>
-------------------------	--

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a mobile plant braking system	<p>1.1. <b>Workplace instructions</b> are used to determine <b>job requirements</b></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. <b>Safety issues and warnings</b> in relation to working with heavy mobile equipment and its braking systems are identified and applied</p> <p>1.5. Diagnosis options are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>1.6. Appropriate <b>diagnostic tools and equipment</b> are selected and prepared</p>
2. Diagnose a mobile plant braking system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or system</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. <b>Diagnosis findings</b> are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a mobile plant braking system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected and prepared</p> <p>3.2. Tools and testing equipment are identified and checked for safe and effective operation</p> <p>3.3. Repairs, component replacement and adjustment are carried out according to workplace procedures and manufacturer and component supplier specifications, and without causing damage to components or systems</p> <p>3.4. <b>Post-repair testing</b> of braking system is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are checked and stored according to workplace procedures</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
  - coordinate work with site supervisor and other workers
  - report work outcomes and problems
- initiative and enterprise skills to:
  - adapt to new and emerging situations in the workplace relating to repairing mobile plant braking systems
- learning skills to:
  - ask questions to gain information
  - identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - read workplace instructions, specifications, warnings and technical procedures
  - produce clear and understandable workplace documentation
- numeracy skills to assess tolerances and apply accurate measurements and adjustments
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine job requirements
  - determine the underlying causes of faults
  - produce recommendations for necessary repairs or adjustments
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to work in a team, as applicable to the workplace's procedures and practices, to repair mobile plant braking systems
- technical skills to:
  - check and use mobile plant braking system testing and repair equipment
  - carry out measuring and testing, repair and adjustment procedures according to manufacturer and component supplier specifications
- technology skills to:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- operate diagnostic and testing equipment
- conduct performance testing of components, systems and equipment
- use tools and equipment efficiently and safely
- store and care for components, parts, tools, test equipment and support equipment

**Required knowledge**

- WHS regulations, requirements, equipment and material relating to mobile plant braking systems, including personal safety requirements
- environmental regulations and requirements relating to mobile plant braking systems
- application, purpose and operating principles of mobile plant braking systems, including:
  - multi-disc wet braking systems, including associated cooling systems
  - disc braking systems
  - drum braking systems
- lifting and support procedures for mobile plant equipment
- testing procedures of mobile plant braking systems
- repair procedures of mobile plant braking systems
- post-repair testing procedures of mobile plant braking systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- communicate effectively with others involved in or affected by the work
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of mobile plant braking systems
- conduct diagnosis and repair procedures according to workplace, manufacturer and component supplier requirements
- present vehicle and equipment in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- material relevant to the repair of mobile plant braking systems
- equipment, hand and power tools appropriate to the repair of

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- mobile plant braking systems
- specifications and work instructions.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• mobile plant equipment braking system diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• is to include that prescribed under individual legislation, regulations, codes of practice, and workplace policies and practices</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of mobile plant braking systems</li> <li>• regulatory and legislative requirements relating to automotive industry</li> <li>• Australian Design Rules</li> <li>• engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• heavy vehicle service requirements and repair manuals.</li> </ul>
<b>Safety issues and warnings</b>	<ul style="list-style-type: none"> <li>• safe use of tools and equipment</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

must include:	<ul style="list-style-type: none"> <li>• dangers associated with the workplace environment</li> <li>• hazard identification and control of hazardous materials and substances, including hydraulic fluid, brake fluid and brake lining fibres</li> <li>• machine tag-out, isolation and wheel chocking</li> <li>• stored fluid pressures from accumulators</li> <li>• high-pressure fluid hazards.</li> </ul>
<b><i>Diagnostic tools and equipment</i></b> may include:	<ul style="list-style-type: none"> <li>• hand tooling</li> <li>• oil pressure gauges</li> <li>• nitrogen test and charging equipment</li> <li>• lifting and slinging equipment</li> <li>• bleeding and brake testing devices</li> <li>• dust-extraction equipment.</li> </ul>
<b><i>Diagnostic tests</i></b> may include:	<ul style="list-style-type: none"> <li>• stall testing of service, park and secondary brakes</li> <li>• dynamic brake testing</li> <li>• friction material wear</li> <li>• brake drum component serviceability</li> <li>• disc brake component serviceability</li> <li>• multi-disc wet brake component serviceability</li> <li>• vehicle braking efficiency</li> <li>• accumulator pre-charge and oil application pressure testing.</li> </ul>
<b><i>Faults</i></b> may include:	<ul style="list-style-type: none"> <li>• poor performance of service, park or secondary brakes</li> <li>• failure or partial failure of service, park or secondary brakes</li> <li>• binding of service, park or secondary brakes.</li> </ul>
<b><i>Diagnosis findings</i></b> may include:	<ul style="list-style-type: none"> <li>• comparison of test results to manufacturer specifications</li> <li>• recommendations for repair, adjustment or replacement of parts.</li> </ul>

## AURKTB4003 Diagnose complex faults in mobile plant braking systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

<b>Unit descriptor</b>	<p>This unit describes the performance outcomes required to diagnose complex faults in mobile plant braking systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
------------------------	---

### Application of the Unit

<b>Application of the unit</b>	<p>Work applies to and includes system fault and failure diagnosis of braking systems in the mobile plant environment.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
--------------------------------	--

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2. Specifications for correctly functioning mobile plant braking systems are accessed and interpreted</p> <p>1.3. <b>Workplace health and safety (WHS) requirements</b>, equipment and system isolation requirements and personal protection needs are observed and applied throughout the work</p> <p>1.4. Effects of systemic deficiencies, discrepancies or <b>faults</b> in mobile plant braking systems are identified and confirmed from direct and/or indirect evidence</p> <p>1.5. Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1. Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2. System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3. Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4. <b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5. Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1. Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2. Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3. Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4. Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5. Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to mobile plant braking systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of mobile plant braking systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required skills

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to mobile plant braking systems
- types, functions, operations and limitations of mobile plant braking systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to mobile plant braking systems
- testing procedures for mobile plant braking systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- interpret workplace instructions and locate and apply information
- apply safety requirements, including the use of personal protective equipment
- identify and select appropriate diagnosis processes to be performed
- complete diagnosis of complex faults on a minimum of three different in mobile plant braking systems with real or simulated faults
- document and report outcomes and required actions of diagnosis of complex faults in mobile plant braking systems.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- vehicles systems with real or simulated mobile plant braking system faults

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

- tools and equipment appropriate for the diagnosis of complex faults in mobile plant braking systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults may include:***

- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration or adjustment specifications
- component specifications, component assembly, component damage and system modifications
- indirect mechanical faults.
- mechanical and hydraulic system faults.

***Tests may include:***

- wiring and connector integrity
- operation and specification of input and output devices
- controlling electronic components and computers
- data interpretation and readings related to direct indirect and intermittent causes
- hydraulic systems testing
- electrical systems testing
- mechanical systems testing
- road test.

***Testing equipment may include:***

- analogue and digital multimeters
- lab oscilloscopes
- data scanners
- test lights and test LEDs
- pulse generators
- manufacturer and component supplier testing equipment

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"><li>• pressure gauges.</li></ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"><li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to mobile plant braking systems</li><li>• six-step troubleshooting plan</li><li>• discover-investigate-fix methodology</li></ul>

## AURKTB5002 Analyse and evaluate wheeled mobile plant braking system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT572593A Analyse and evaluate wheeled mobile plant braking system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate wheeled mobile plant braking systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

Employability skills	This unit contains employability skills.
----------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning wheeled mobile plant braking systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Wheeled mobile plant braking system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p> <p>3.4. Analytical findings and results are evaluated against the</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>agreed criteria.</p> <p>3.5.Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6.Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1.Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2.A response option is selected from an analysis of the options, prevailing circumstances, regulatory requirements and commercial policies.</p> <p>4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1.Materials that can be reused is collected and stored.</p> <p>5.2.Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3.Waste and scrap is removed following workplace procedures.</p> <p>5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary wheeled mobile plant braking systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- wheeled mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetism and inductance (including semi-conductors and electronic system applications).
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- detailed knowledge of the types, functions, operations and limitations of wheeled mobile plant foundation braking systems/components.
- detailed knowledge of the types, functions and limitations of friction materials associated with wheeled mobile plant braking systems.
- detailed knowledge of the types, function, operations and limitations of abs traction control braking systems/components.
- detailed knowledge of the types, function, operations and limitations of air over hydraulic braking systems/ components.
- detailed knowledge of the types, function, operations and limitations of hydraulic over

## REQUIRED SKILLS AND KNOWLEDGE

- hydraulic braking systems/ components.
- detailed knowledge of the types, function, operations and limitations of air braking systems/components.
- detailed knowledge of the types, function, operations and limitations of full hydraulic braking systems/components.
- detailed knowledge of the types, function, operations and limitations of compression braking systems components.
- detailed knowledge of the types, function, operations and limitations of mobile plant retarder systems/components.
- detailed knowledge of the influence of equipment trailing on mobile plant braking systems.
- general knowledge of the Australian design rules requirements related to wheeled mobile plant braking systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- general knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- detailed knowledge of automotive digital computing systems.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work order and locate and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self and others
  - prevent damage and wastage of goods, equipment and products
  - maintain required production output and product quality.
- Complete failure analyses on a minimum of three wheeled mobile plant braking systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for wheeled mobile plant braking systems.
- Document and report the diagnostic process and findings and recommended rectification for two of the above.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

##### Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, wheeled mobile plant brake systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

##### Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

## EVIDENCE GUIDE

	<p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>
--	---

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Wheeled mobile plant</b>	Wheeled mobile plant covers all mobile plant other than that with tracked undercarriage. Included are loaders, dump trucks, graders, scrapers, industrial tractors, material handling machines, agricultural harvesters and other rural equipment.
<b>Braking systems</b>	Braking systems to be covered in this unit are to include foundation, ABS with traction control, air over hydraulic, hydraulic over hydraulic, air brakes, regenerative braking, full hydraulic, compression and transmission retarders.
<b>Braking system failures</b>	<ul style="list-style-type: none"> <li>Braking system failures covered by this unit are to include air supply capacity and response, application and release times, brake balance, brake drum wear, calibration/ adjustment specifications, component damage, conductors - piping specifications, contamination, fluids out of specification, friction material abnormalities, leaks, overheating and system pressures.</li> <li>Braking system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.</li> </ul>
<b>Unit context</b>	<ul style="list-style-type: none"> <li>WHS requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures.</li> <li>Work is carried out in accordance with legislative obligations, Australian Design Rules, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements.</li> <li>Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.</li> </ul>
<b>Evaluative criteria</b>	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria

<b>RANGE STATEMENT</b>	
	and may include other measures.
<b>Isolation procedures</b>	Equipment isolation procedures are to industry and enterprise standards.
<b>Testing equipment</b>	Testing equipment is to include air gauges, computer-based diagnostic systems, micrometers, multimeter, pressure gauges, temperature gauges and verniers, and may include brake timer and electronic stethoscope.
<b>Tests</b>	Tests to be conducted are to include accumulator pressure, disc stack height, pressure, system performance (distance/balance), sensor/actuator and wiring harness integrity, sampling (collection and processing, wear analysis (drum/disc/lining material) and monitoring/ analysis of computer-based diagnostic systems.
<b>Personal protective equipment</b>	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
<b>Information and procedures</b>	<ul style="list-style-type: none"> <li>• Workplace procedures relating to the use of tooling and equipment.</li> <li>• Workplace procedures relating to reporting and communication.</li> <li>• Manufacturer/component supplier specifications and application procedures for testing equipment and material.</li> <li>• Manufacturer/component supplier specifications, schematics and operational procedures related to wheeled mobile plant braking systems.</li> <li>• Australian Design Rules.</li> <li>• Vehicle industry regulations.</li> <li>• Vehicle industry publications related to emerging braking system technology and technology changes.</li> </ul>

## AURKTD3001 Diagnose and repair mobile plant suspension systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required to diagnose and repair suspension systems fitted to mobile plant. It involves diagnosing deviations from correct operation, repair operations of suspension systems and associated systems, and post-repair testing procedures.</p> <p>Licencing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	Work applies to the suspension systems of mobile plant in the mining, construction and agricultural environments.
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

### Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to diagnose and repair a mobile plant suspension system	<p>1.1. <b>Workplace instructions</b> are used to determine <i>job requirements</i></p> <p>1.2. <b>Workplace health and safety (WHS) requirements</b> are observed and applied throughout the work</p> <p>1.3. <b>Procedures and information</b> are sourced and interpreted</p> <p>1.4. Diagnosis options are analysed and those most appropriate to the circumstances are selected</p> <p>1.5. Appropriate diagnostic tools and equipment are selected and prepared</p>
2. Diagnose a mobile plant suspension system	<p>2.1. <b>Diagnostic tests</b> are performed according to workplace procedures and without causing damage to components or systems</p> <p>2.2. <b>Faults</b> are identified from diagnostic test results and causes of faults are determined</p> <p>2.3. Diagnosis findings are reported according to workplace procedures, including recommendations for necessary repairs or adjustments</p>
3. Repair a mobile plant suspension system	<p>3.1. <b>Repair options</b> are analysed and those most appropriate to the circumstances are selected</p> <p>3.2. Appropriate tools, techniques and materials are selected and prepared</p> <p>3.3. Repairs and component replacements and adjustments are carried out without causing damage to components or systems and according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.4. <b>Post-repair testing</b> is carried out according to workplace procedures and relevant legislation</p>
4. Clean up work area and finalise work processes	<p>4.1. Final inspection is made to ensure work is to workplace expectations and vehicle is presented ready for use</p> <p>4.2. Tools and equipment are cleaned and stored according to workplace expectations</p> <p>4.3. Workplace documentation is processed according to workplace procedures</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
  - coordinate work with site supervisor and other workers
  - report work outcomes and problems
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and other measuring equipment
  - measure and calculate length, area and volume
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:
  - determine the underlying causes of faults
  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of mobile plant suspension systems, including the use of:

**REQUIRED SKILLS AND KNOWLEDGE**

- specialised tools and equipment
- measuring equipment
- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements
- dangers of working with mobile plant suspension systems
- application, purpose and operating principles of mobile plant suspension systems
- identification of the effects of associated systems on mobile plant suspension systems
- interpretation of technical information, graphic symbols and diagrams, including hydraulic system power flows
- testing procedures for mobile plant suspension systems
- repair procedures for mobile plant suspension systems
- post-repair testing procedures of mobile plant suspension systems.

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

##### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of mobile plant suspension systems relative to the qualification being sought
- diagnose and repair mobile plant suspension systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

##### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- mobile plant with suspension systems faults relevant to the qualification being sought
- equipment appropriate for the testing of mobile plant

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

suspension systems

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of mobile plant suspension systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• mobile plant suspension systems diagnosis and repair methods, processes and equipment</li> </ul>
<b>Workplace health and safety (WHS) requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of mobile plant suspension systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• mobile plant service requirements and repair manuals.</li> </ul>
<b>Diagnostic tests</b> may	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

include:

***Faults*** may include:

- hydraulic component failure
- mechanical component failure.

***Repair options*** may include:

- component repair procedures, including
  - removal, replacement and adjustment procedures
  - dismantle, repair, re-assembly and adjustment procedures.

***Post-repair testing*** may include:

- hydraulic system pressure tests.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to:
  - clarify workplace instructions and determine job requirements
  - gain information from appropriate persons and assistance as required
  - coordinate work with site supervisor and other workers
  - report work outcomes and problems
- initiative and enterprise skills to adapt to new and emerging situations in the workplace
- learning skills to identify sources of information, assistance and expert knowledge to expand knowledge, skills and understanding
- literacy skills to:
  - understand quality procedures
  - read and follow information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
  - obtain and record measurements
  - document repairs and parts required
- numeracy skills to:
  - assess tolerances and apply accurate measurements and adjustments
  - interpret instruments, gauges and other measuring equipment
  - measure and calculate length, area and volume
- planning and organising skills to:
  - plan own work requirements and prioritise actions to achieve required outcomes and ensure tasks are completed on time
  - identify risk factors and take action to minimise risk
- problem-solving skills to:

  - recognise a workplace problem or a potential problem and take action
  - refer problems outside area of responsibility to appropriate person and suggest possible causes
  - seek information and assistance as required to solve problems
- self-management skills to:
  - select and use appropriate equipment, materials, processes and procedures
  - recognise limitations and seek timely advice
- teamwork skills to apply knowledge of own role to complete activities efficiently to support team activities and tasks
- technical skills to use workplace tools relating to the repair of mobile plant steering systems, including the use of:

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

- specialised tools and equipment
- measuring equipment
- computerised technology
- technology skills to:
  - operate diagnostic and test equipment
  - use technology to collect, analyse and provide information.

**Required knowledge**

- WHS regulations, requirements, equipment, material and personal safety requirements
- dangers of working with mobile plant steering systems
- application, purpose and operating principles of mobile plant steering systems
- identification of the effects of associated systems on mobile plant steering systems
- interpretation of technical information, graphic symbols and diagrams, including hydraulic system power flows
- testing procedures for mobile plant steering systems
- repair procedures for mobile plant steering systems
- post-repair testing procedures of mobile plant steering systems

## Evidence Guide

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.

A person who demonstrates competency in this unit must be able to:

- observe safety procedures and requirements
- select methods and techniques appropriate to the circumstances
- complete preparatory activity in a systematic manner
- diagnose and repair a range of mobile plant steering systems relative to the qualification being sought
- diagnose and repair mobile plant steering systems according to workplace, manufacturer and component supplier requirements
- present vehicle in a condition that complies with workplace requirements.

#### Context of, and specific resources for assessment

Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.

Assessment is to occur:

- using standard workplace practices and procedures
- following safety requirements
- applying environmental constraints.

Assessment is to comply with relevant:

- regulatory requirements
- Australian standards
- industry codes of practice.

The following resources must be made available for the assessment of this unit:

- workplace location or simulated workplace
- mobile plant with steering systems faults relevant to the qualification being sought
- equipment appropriate for the testing of mobile plant steering systems

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

- specifications and workplace instructions
- tools appropriate for the repair, replacement and adjustment of mobile plant steering systems.

**Method of assessment**

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Workplace instructions</b> may include:	<ul style="list-style-type: none"> <li>• computer-generated instructions</li> <li>• verbal instructions</li> <li>• written instructions.</li> </ul>
<b>Job requirements</b> may include:	<ul style="list-style-type: none"> <li>• mobile plant steering systems diagnosis and repair methods, processes and equipment.</li> </ul>
<b>Workplace health and safety requirements:</b>	<ul style="list-style-type: none"> <li>• are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures</li> <li>• may include: <ul style="list-style-type: none"> <li>• protective clothing and equipment</li> <li>• use of tools and equipment</li> <li>• handling of material</li> <li>• use of fire-fighting equipment</li> <li>• first aid equipment</li> </ul> </li> <li>• hazard control, including control of hazardous materials and toxic substances.</li> </ul>
<b>Procedures and information</b> may include:	<ul style="list-style-type: none"> <li>• verbal, written and graphical instructions</li> <li>• signage</li> <li>• work schedules, plans and specifications</li> <li>• work bulletins or memos</li> <li>• material safety data sheets (MSDS)</li> <li>• diagrams or sketches</li> <li>• safe work procedures relating to the repair and replacement of mobile plant steering systems</li> <li>• regulatory and legislative requirements relating to the automotive industry</li> <li>• Australian Design Rules</li> <li>• Engineer's design specifications and instructions</li> <li>• organisational work specifications and requirements</li> <li>• instructions issued by authorised workplace or external persons</li> <li>• Australian standards</li> <li>• mobile plant service requirements and repair manuals.</li> </ul>
<b>Diagnosis tests</b> may include:	<ul style="list-style-type: none"> <li>• isolation of faults</li> <li>• component inspection and evaluation.</li> </ul>

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Faults*** may include:

- hydraulic system leaks
- loose steering
- binding steering.

***Repair options*** may include:

- component repair procedures, including:
  - removal, replacement and adjustment procedures
  - dismantle, repair, re-assembly and adjustment procedures.

***Post-repair testing*** may include:

- hydraulic system pressure tests.

**Unit Sector(s)**

<b>Competency field</b>	Mechanical – Mobile Plant
<b>Unit sector</b>	Technical – Steering and Suspension

**Custom Content Section**

Not applicable.

## AURKTD4005 Diagnose complex faults in mobile plant steering and suspension systems

### Modification History

Release	Comment
Release 1	New unit of competency

### Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes required diagnose complex faults in mobile plant steering and suspension systems in order to initiate action to service, repair, replace or improve performance.</p> <p>The unit involves evaluating system performance and identifying possible operational anomalies.</p> <p>Faults may be mechanical, electrical, electronic or hydraulic by nature, requiring the application of complex diagnostic processes to resolve.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	--

### Application of the Unit

Application of the unit	<p>Work applies to and includes system fault and failure diagnosis of steering and suspension systems in the mobile plant environment.</p> <p>The unit relates to an automotive technologist, master technician or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	--

## Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1.Workplace instructions and reports are used to determine the nature and objective of system diagnosis requirements</p> <p>1.2.Specifications for correctly functioning mobile plant steering and suspension systems are accessed and interpreted</p> <p>1.3.<b>Workplace health and safety (WHS) requirements</b>, including equipment and system isolation and personal protection needs, are observed and addressed throughout the work</p> <p>1.4.Effects of systemic deficiencies or discrepancies or <b>faults</b> in mobile plant steering and suspension systems are identified and confirmed from indirect or direct evidence</p> <p>1.5.Possible safety impacts of the work are considered and responded to according to regulatory and workplace procedures</p>
2. Prepare to perform diagnosis	<p>2.1.Criteria for diagnosis are developed and adopted to meet the objective of the work</p> <p>2.2.System performance achievements or discrepancies are identified from scrutiny of technical support information and available on-board diagnostic systems</p> <p>2.3.Diagnostic methods, including complexity of diagnostic process, sequence, <b>tests</b> and testing process are identified and selected from the range of available options</p> <p>2.4.<b>Testing equipment</b> is obtained and prepared for application according to manufacturer, component supplier and workplace requirements</p> <p>2.5.Tools and materials required to support the diagnostic process are identified, selected and prepared for use</p>
3. Apply complex diagnostic process	<p>3.1.Selected <b>diagnostic processes</b> are followed according to specifications and workplace procedures</p> <p>3.2.Testing is carried out according to workplace procedures and manufacturer and component supplier specifications</p> <p>3.3.Findings are verified, if necessary, by using reliable alternate or optional processes</p> <p>3.4.Conclusions are drawn from findings and documented according to workplace requirements</p> <p>3.5.Information and detail related to the evaluation of diagnosis is provided to the appropriate person or customer to confirm further action to be taken</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs
- numeracy skills to use mathematical ideas and techniques to complete measurements, calculate requirements, and present results of diagnosis
- planning and organising skills to conclude complex diagnostic processes which anticipate and allow for risks, cater for both direct and indirect evidence and avoid or minimise reworking and avoid wastage
- problem-solving skills to use available information to contribute to decision making strategies for solving complex problems as they relate to mobile plant steering and suspension systems
- self-management skills to plan and organise activities, including the planning of analytical processes, preparation of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage
- technical skills to use workplace tools relating to the complex diagnosis of mobile plant steering and suspension systems, including the use of:
  - specialised tools and equipment
  - measuring equipment
- technology skills to use workplace technology related to systems diagnosis, information research and management systems.

#### Required knowledge

- concepts and principles of mechanical, hydraulic, electronic and pneumatic systems related to mobile plant steering and suspension systems
- concepts, types, functions, operations and limitations of mobile plant steering and suspension systems and components
- diagnostic theory, including concept, design and planning
- types, functions, operations and limitations of diagnostic testing equipment related to mobile plant steering and suspension systems
- testing procedures for mobile plant steering and suspension systems, including accessing and interpreting scan tool system data
- methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
<b>Overview of assessment</b>	
<b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b>	<p>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy all of the requirements of the performance criteria and required skills and knowledge.</p> <p>A person who demonstrates competency in this unit must be able to:</p> <ul style="list-style-type: none"> <li>• interpret workplace instructions and locate and apply information</li> <li>• apply safety requirements, including the use of personal protective equipment</li> <li>• identify and select appropriate diagnosis processes to be performed</li> <li>• complete diagnosis of complex faults on a minimum of three different simulated mobile plant steering and suspension systems with real or simulated faults</li> <li>• document and report outcomes and required actions of diagnosis of complex faults in simulated mobile plant steering and suspension systems.</li> </ul>
<b>Context of, and specific resources for assessment</b>	<p>Competency is to be assessed in the workplace or a simulated workplace environment that accurately reflects performance in a real workplace setting.</p> <p>Assessment is to occur:</p> <ul style="list-style-type: none"> <li>• using standard workplace practices and procedures</li> <li>• following safety requirements</li> <li>• applying environmental constraints.</li> </ul> <p>Assessment is to comply with relevant:</p> <ul style="list-style-type: none"> <li>• regulatory requirements</li> <li>• Australian standards</li> <li>• industry codes of practice.</li> </ul> <p>The following resources must be made available for the assessment of this unit:</p> <ul style="list-style-type: none"> <li>• workplace location or simulated workplace</li> <li>• vehicles systems with real or simulated mobile plant steering</li> </ul>

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

and suspension system faults

- tools and equipment appropriate for the diagnosis of complex faults in mobile plant steering and suspension systems
- technical reference information and workplace instructions.

### Method of assessment

Assessment must satisfy the endorsed Assessment Guidelines of this Training Package.

Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with the application of required skills and knowledge.

Assessment methods must be by direct observation of tasks and include questioning on required skills and knowledge to ensure correct interpretation and application.

Competence in this unit may be assessed in conjunction with other units which together form part of a holistic work role.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate the needs of diverse clients.

Assessment processes and techniques must be culturally sensitive and appropriate to the language, literacy and numeracy capacity of the candidate and the work being performed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

***Workplace health and safety (WHS) requirements:***

- are those prescribed under legislation, regulations, codes of practice, and workplace policies and procedures
- may include:
  - protective clothing and equipment
  - use of tools and equipment
  - handling of material
  - use of fire-fighting equipment
  - first aid equipment
- hazard control, including control of hazardous materials and toxic substances.

***Faults*** may include:

- indirect faults caused by the influence of external systems (electrical and electronic) which may or may not be faulty in their primary operations
- direct faults in input sensors, output actuators, wiring harness, computer systems, calibration or adjustment specifications
- component specifications, component assembly, component damage and system modifications
- indirect mechanical faults
- mechanical and hydraulic system faults.

***Tests*** may include:

- wiring and connector integrity
- operation and specification of input and output devices
- controlling electronic components and computers
- data interpretation and readings related to direct indirect and intermittent causes
- hydraulic systems testing
- electrical systems testing
- mechanical systems testing
- road test.

***Testing equipment*** may include:

- analogue and digital multimeters
- lab oscilloscopes
- scan tools

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

	<ul style="list-style-type: none"> <li>• test lights and test LEDs</li> <li>• pulse generators</li> <li>• manufacturer and component supplier testing equipment</li> <li>• pressure gauges.</li> </ul>
<i>Diagnostic processes</i> may include:	<ul style="list-style-type: none"> <li>• analysing manufacturer and component supplier specifications, schematics and operational procedures related to mobile plant steering and suspension systems</li> <li>• six-step troubleshooting plan</li> <li>• discover-investigate-fix methodology.</li> </ul>

## AURKTD5003 Analyse and evaluate wheeled mobile plant steering and suspension system faults

### Modification History

Release	Comment
Release 1	<p>Replaces AURT572093A Analyse and evaluate wheeled mobile plant steering and suspension system faults</p> <p>Unit code updated to meet policy requirements</p> <p>Reference to OHS legislation replaced with new WHS legislation</p> <p>Licensing statement added to unit descriptor</p>

### Unit Descriptor

Unit descriptor	<p>This unit covers the competence to analyse and evaluate wheeled mobile plant steering and suspension systems in order to initiate action to sustain, vary or enhance performance.</p> <p>Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions. Users are advised to check with the relevant regulatory authority.</p>
-----------------	---

### Application of the Unit

Application of the unit	<p>It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process.</p> <p>The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.</p>
-------------------------	---

### Licensing/Regulatory Information

Not applicable.

## Pre-Requisites

Not applicable.

## Employability Skills Information

<b>Employability skills</b>	This unit contains employability skills.
-----------------------------	--

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

## Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	<p>1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements.</p> <p>1.2. Benchmark specifications for correctly functioning wheeled mobile plant steering and suspension systems are accessed and interpreted.</p> <p>1.3. WHS requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work.</p> <p>1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence.</p> <p>1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.</p>
2. Prepare for analysis and evaluation	<p>2.1. Evaluative criteria are developed/adopted to meet the objective of the work.</p> <p>2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems.</p> <p>2.3. Analytical and evaluative methodology, including diagnostic process, sequence, tests and testing equipment are developed and/or identified and selected from the range of available options.</p> <p>2.4. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements.</p> <p>2.5. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use.</p> <p>2.6. Wheeled mobile plant steering and suspension system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.</p>
3. Apply the analysis and evaluative methodology	<p>3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method.</p> <p>3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications.</p> <p>3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented.</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>3.4. Analytical findings and results are evaluated against the agreed criteria.</p> <p>3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements.</p> <p>3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.</p>
4. Select response measure	<p>4.1. Options for responding to the objective or need are identified from further research of technical support information.</p> <p>4.2. A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies.</p> <p>4.3. Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.</p>
5. Restore the workplace	<p>5.1. Materials that can be reused is collected and stored.</p> <p>5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements.</p> <p>5.3. Waste and scrap is removed following workplace procedures.</p> <p>5.4. Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures.</p> <p>5.5. Unserviceable equipment is tagged and faults identified in accordance with workplace.</p>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, organise and understand technical information related to contemporary wheeled mobile plant steering and suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity.
- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

#### Required knowledge

- wheeled mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- basic electrical theory covering voltage, current, resistance, power, magnetics and inductance (including semi-conductors and electronic system applications).
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- steering system theory, including steering angles.
- the functions of hydraulic pressure with steering and suspension systems.
- detailed knowledge of the types, applications and limitations of wheels and tyres used on wheeled mobile plant.
- detailed knowledge of the types, function, operations and limitations of wheeled mobile plant power assisted steering systems/components.
- detailed knowledge of the types, function, operations and limitations of wheeled mobile plant power full hydrostatic steering systems/components.
- detailed knowledge of the types and influences of trailed equipment operations on wheeled

## REQUIRED SKILLS AND KNOWLEDGE

- mobile plant steering performance.
- detailed knowledge of the types, function and limitations of wheeled mobile plant rigid frame suspension systems/components.
- detailed knowledge of the types, function and limitations of wheeled mobile plant oscillating axles suspension systems/components.
- detailed knowledge of the types, function and limitations of wheeled mobile plant hydrostatic suspension systems/components.
- detailed knowledge of the types, function and limitations of wheeled mobile plant oil/gas suspension systems/components.
- detailed knowledge of the types, function and limitations of wheeled mobile plant cushion hitch suspension systems/components.
- general knowledge of automotive digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- detailed knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

## Evidence Guide

<b>EVIDENCE GUIDE</b>	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<b>Overview of assessment</b>	
<p><b>Critical aspects for assessment and evidence required to demonstrate competency in this unit</b></p>	<ul style="list-style-type: none"> <li>• Interpret work order and locate and apply information.</li> <li>• Apply safety requirements, including the isolation of equipment and use of personal protective equipment.</li> <li>• Follow work instructions, operating procedures and inspection processes to: <ul style="list-style-type: none"> <li>• minimise the risk of injury to self and others</li> <li>• prevent damage and wastage of goods, equipment and products</li> <li>• maintain required production output and product quality.</li> </ul> </li> <li>• Complete failure analyses on a minimum of three wheeled mobile plant steering and suspension systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.</li> <li>• Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for wheeled mobile plant steering and suspension systems.</li> <li>• Document and report the diagnostic process and findings and recommended rectification for two of the above.</li> <li>• Work effectively with others.</li> <li>• Modify activities to cater for variations in workplace context and environment.</li> </ul>
<p><b>Context of, and specific resources for assessment</b></p>	<p>Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.</p> <p>Access to a requirement and objective(s) for analysis and evaluation, wheeled mobile plant steering and suspension systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.</p>
<p><b>Method of assessment</b></p>	<p>Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or</p>

<b>EVIDENCE GUIDE</b>	
	<p>authorisation for use by a competent authority.</p> <p>Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.</p> <p>Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.</p>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<b>Failure analysis and evaluation process</b>	The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.
<b>Wheeled mobile plant</b>	Wheeled mobile plant covers all mobile plant other than that with tracked undercarriage. Included are loaders, dump trucks, graders, scrapers, industrial tractors, material handling machines, agricultural harvesters and other rural equipment.
<b>Steering systems</b>	Steering systems to be covered in this unit are to include power-assisted, full hydrostatic and steer-by-wire systems for front, rear, all wheel drive, and articulated arrangements.
<b>Steering failures</b>	Steering failures covered by this unit are to include those in mechanical, hydraulic and electrical/electronic systems, including alignment, control systems, emergency systems, tyre wear, vibration, directional stability, calibration/ adjustment specifications, contamination, component specifications, component assembly, component damage and system modifications.
<b>Suspension systems</b>	Suspension systems are to cover rigid frame, oscillating axles, hydrostatic, oil/gas suspension units and cushion hitch.
<b>Suspension system failures</b>	Suspension system failures covered by this unit are to include alignment, hydraulics, ride height, component damage and systems modifications.
<b>Steering and suspension system failures</b>	Steering and suspension system failures covered by this unit are to include indirect faults caused by the influence of external systems which may or may not be faulty in their primary operations.
