

Actionable Patient Safety Solutions (APSS)

22G Isolation Precautions and Environmental Safety

Isolation precautions apply to all patients in all healthcare settings in every scenario and are particularly important to standardize due to the impact on the full healthcare system if not employed properly.

Our APSS outline actionable steps healthcare organizations should take to successfully implement and sustain behavior change for high reliability, shared understanding, thorough communication, and meaningful person-centered care across the organization.

Actionable steps include:

- Executive Summary Checklist
- Leadership checklist guide to determine whether current evidence-based guidelines are being followed in your organization
- Performance improvement plan to follow if improvements are necessary
- Clinical workflow for preoccupation with workflow for areas of improvement
- How to educate patients and family members about the significance of their role throughout the continuum
- Guidance on how to measure outcomes

Want to Help Create an APSS?

Each APSS is developed by a multidisciplinary workgroup comprised of patient safety experts, healthcare technology professionals, hospital leaders, and patient advocates. The Foundation is proud to connect as many stakeholders as possible to focus on how these challenges can best be addressed.
