ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to prepare the activity plans and specifications required by field technical staff to deploy a fibre to the x (FTTx) installation for optical access networks.</p> <p>Planning involves provisioning underground and aerial cable work, construction of fibre enclosures and providing specification details for installation and construction teams.</p> <p>Optical networks and FTTx are part of strategies by service providers using wave division multiplexing (WDM) to deliver very high speed broadband capacity through the Access Network for the National Broadband Network (NBN) initiative.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical cable supervisors apply the skills and knowledge in this unit when planning the installation activities for the deployment of broadband Access Networks using optical technologies.</p> <p>FTTx services can be underground or aerial and may include hybrid fibre coaxial (HFC) installations. Optical access networks with FTTx installations provide services in Next Generation Networks (NGN) using emerging technologies.</p> <p>NGN services include internet protocol TV (IPTV), video on demand (VoD), interactive TV, mesh networks and cloud computing.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for FTTx planning tasks	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements 1.3. Notify appropriate personnel of identified safety hazards at the work site 1.4. Obtain tools and safety equipment and material to perform tasks safely and efficiently 1.5. Select and use required protective equipment and make site safe and secure for installation work 1.6. Identify and select plant and machinery for installation work activities
2. Plan FTTx activities and develop specifications	2.1. Follow occupational health and safety (OHS) and environmental requirements for the given work and identify and avoid other services 2.2. Inspect proposed cable route visually according to cable plan and identify barriers to the cable installation 2.3. Modify cable plan, if required, and notify appropriate personnel 2.4. Prepare installation activities for FTTx provisioning according to project plan 2.5. Prepare installation specifications according to safe work practices and manufacturer's instructions to include optical fibre cable size, distribution area (DA), distribution joint including lead-in multipoint serving area (DLMSA), enclosures , location of optical network terminations (ONT), location and type of fibre distribution hub (FDH) and optical splitter provisioning 2.6. Verify cable length from customer access network fibre centre to end user ONT is within 20 km operating limit 2.7. Consult with appropriate personnel to confirm project scope, installation requirements and installation specifications according to project plan
3. Complete documentation and obtain sign off	3.1. Complete and present updated planning activities documentation to authorised personnel 3.2. Complete and provide updated specification documentation to vendors for supply of material and

ELEMENT	PERFORMANCE CRITERIA
	resources 3.3. Submit documentation to appropriate person for approval and sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - interact with senior project staff and equipment vendors
 - work effectively within group
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical and non-technical documentation
- numeracy skills to analyse and confirm installation requirements
- PC skills to carry out word processing and desktop research
- planning and organisational skills to:
 - make site access and equipment delivery arrangements
 - plan work activities according to project requirements and priorities
- problem solving skills to account for unexpected variations to requirements
- task management skills to work logically and systematically with required attention to detail
- technical skills to:
 - prepare FTTx specifications
 - prepare line drawings relevant to organisation
 - record design specifications in centralised system relevant to organisation

Required knowledge

- properties of passive optical devices including splitters and couplers
- FTTx installation equipment including tools and safety equipment
- FTTx specifications
- legislative privacy, safety and environmental requirements:
 - specific OHS requirements relating to handling of optical fibre and using laser optical sources
 - other personal safety issues

REQUIRED SKILLS AND KNOWLEDGE

- plant and equipment safety to be used in installation plans
- options for green ICT installations
- manufacturer's requirements for safe operation of equipment
- operation of optical transmitters and receivers
- organisational policy and procedures
- propagation of light in optical communication systems
- role of optical transmitters and receivers in optical communication systems
- concept of wavelength division multiplexing (WDM)
- site engineering
- typical issues and challenges that occur in preparing activity plans and on site
- workplace and industry environment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> inspect proposed cable route visually prepare installation activities for FTTx provisioning prepare and document FTTx designs and specifications.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites on which FTTx installations may be designed and prepared vendor product information and installation guides relevant regulatory and equipment documentation that impact on installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate carrying out preparation and design for FTTx installation within an optical distribution network review of FTTx designs and specifications completed by the candidate oral and written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTOPN4116A Use advanced optical test equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006
- AS/NZS IEC 61935.2:2006
- AS/NZS ISO/IEC 14763.3:2007
- AS/NZS ISO/IEC 15018:2005
- AS/NZS ISO/IEC 24702:2007

RANGE STATEMENT	
	<ul style="list-style-type: none"> • cabling security codes and regulations • Environmental Protection Acts • OHS • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Scope the work</i> may include:	<ul style="list-style-type: none"> • cable: <ul style="list-style-type: none"> • route • types • supports • distribution areas (DA) • enclosures • equipment required: <ul style="list-style-type: none"> • fibre hubs • optical splitters • project type: <ul style="list-style-type: none"> • large residential • medium residential • standard residential or small business.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to prepare the activity plans and specifications required by field technical staff to deploy a dense wavelength division multiplexing (DWDM) optical network suitable for a metropolitan area network (MAN) or long haul applications.</p> <p>It involves provisioning DWDM fibre and power cabling work, provisioning of splicing cabinets and patch panels, and providing specification details for installation and construction teams.</p> <p>DWDMs use optical multiplexing techniques to increase the carrying capacity of a fibre network by transmitting multiple optical wavelengths each carrying high speed data stream over a single fibre. DWDM systems offer up to 128 wavelengths, with each wavelength carrying up to 100 Gbps.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical officers and supervisors apply the skills and knowledge in this unit when planning installation activities for the deployment of high capacity networks using optical technologies.</p> <p>Optical networks using DWDM provide services in Next Generation Networks (NGN) using emerging technologies.</p> <p>NGN services include internet protocol TV (IPTV), video on demand (VoD), interactive TV and cloud computing.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for DWDM planning activities	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements 1.3. Notify appropriate personnel of identified safety hazards at the work site
2. Plan DWDM installation activities and develop specifications	2.1. Follow occupational health and safety (OHS) and environmental requirements for the given work and identify and avoid other services 2.2. Identify tools, safety equipment, plant and machinery for installation work activities 2.3. Conduct physical inspections of proposed DWDM sites and verify that backbone dark fibre is accessible and available according to cabling plan 2.4. Verify proposed backbone and customer fibre cable routes to the splicing cabinet and fibre patch panel and identify barriers to the cable installation 2.5. Verify proposed power cabling route from distribution board and circuit breakers and identify barriers to the cable installation 2.6. Modify cable plan if required and notify appropriate personnel 2.7. Prepare fibre installation specifications and power cable and grounding specifications according to cabling plan and safe work practices and manufacturer's instructions 2.8. Verify proposed location of associated hardware racks, cabinets and ironwork and confirm access to enterprise local area network (LAN)
3. Prepare DWDM shelf configuration and specifications according to customer requirements	3.1. Prepare a configuration document including configuration plans and specifications for the installation team 3.2. Specify location of DWDM shelves or racks and the shelf interconnection fibre cabling layout according to cabling plan 3.3. Specify the individual DWDM units and circuit card types required to suit customer requirements
4. Plan preliminary optical tests	4.1. Verify backbone fibres at patch panel and conduct bidirectional optical time domain reflectometer (OTDR) test and record measurement results and

ELEMENT	PERFORMANCE CRITERIA
	OTDR images 4.2. Conduct bidirectional <i>optical loss test set (OLTS) measurement</i> of insertion loss on backbone fibres from patch panel to patch panel at adjacent sites and record measurement results
5. Complete documentation and obtain sign off	5.1. Provide results of optical measurements to design team 5.2. Complete and provide updated specification documentation to installation team 5.3. Submit documentation to appropriate person for approval and sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse specific customer requirements
 - evaluate different types of technical data
 - identify details relating to the project from the approved network plan
- communication skills to discuss project brief with enterprise design and installation personnel, vendors, customers and contractors
- literacy skills to:
 - interpret technical documentation
 - write reports project briefs in required formats
- numeracy skills to:
 - interpret results and evaluate different types of technical data
 - analyse site survey data
- planning skills to:
 - consider current, new technology, facilities and features when developing options
 - plan, prioritise and monitor own work and that of others
- problem solving skills to address specific customer requirements
- research skills to:
 - analyse impacts on planning processes

REQUIRED SKILLS AND KNOWLEDGE

- obtain and study information relating to new technology or technology features
- obtain geographical site information
- study relevant legislation and associated operational codes
- technical skills to identify barriers to plan realisation and interpret test results

Required knowledge

- configuration of DWDM shelf
- DWDM principles of operation
- electrostatic discharge
- features and operating requirements of test equipment:
 - hand-held optical power meter
 - optical spectrum analyser
 - OTDR
 - transmission test set
- functions of optical add drop multiplexer
- internet protocol (IP) addressing, subnet mask, dynamic host configuration protocol (DHCP) and default gateway
- International Telecommunications Union (ITU) wavelength grid for DWDM
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- path protection and protection switching
- physical optical loopbacks and software loopbacks
- protocols used on optical DWDM systems
- ring topologies and linear network topologies
- specific OHS requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to conduct acceptance tests	<p>1.1. Obtain <i>installation and commissioning documents</i> and planning specifications from <i>appropriate personnel</i> to ensure the installed <i>optical network</i> is as planned and specified</p> <p>1.2. Conduct visual inspection of new installation and verify compliance of the system against <i>relevant legislation, codes, regulations and standards</i> and accepted industry practice</p> <p>1.3. Select and obtain required <i>test equipment</i> for suitability of acceptance testing</p> <p>1.4. Prepare acceptance schedule and <i>test criteria</i> in consultation with appropriate personnel</p>
2. Conduct acceptance testing	<p>2.1. Conduct and evaluate <i>performance tests</i> to ensure measurements meet with predetermined specifications and approved operating margins</p> <p>2.2. Verify performance levels to be within tolerance specifications set in manufacturer's instructions</p> <p>2.3. Test <i>protection mechanisms</i> to ensure performance criteria meets the specified standard</p> <p>2.4. Test <i>alarms</i> for satisfactory operation and refer identified problems to appropriate personnel for remedial action</p> <p>2.5. Record all acceptance test procedures and results</p>
3. Complete administrative tasks	<p>3.1. Complete acceptance documentation including recommendations</p> <p>3.2. Notify appropriate personnel and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to:
 - liaise with customers and technical staff to ensure requirements are known and can be met within timeframes

REQUIRED SKILLS AND KNOWLEDGE

- prepare reports and technical documentation
- literacy skills to interpret technical specifications, standards documents and related documentation
- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to develop activity plans to undertake inspections and tests in efficient manner
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to correctly handle, connect and calibrate test equipment

Required knowledge

- cabling, terminations and supporting structures that may be encountered in the system under inspection
- common performance levels and standards
- electrical and optical properties to be measured
- occupational health and safety (OHS) issues appropriate to the environment under inspection
- overview of typical network topologies, switching, routing and transmission techniques
- transmission type and signals that may be encountered
- various test equipment types suitable for tests to be made

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • verify 'as built' installation against installation plans • undertake acceptance and commissioning tests and analysis against specified performance criteria • complete report, including acceptance test procedures, results and recommendations • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which acceptance tests may be conducted • use of testing equipment currently used in industry • relevant regulatory and equipment documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking acceptance tests • oral or written questioning to assess knowledge of tests and inspections types of systems and applications • review of completed acceptance documentation for systems and equipment prepared by the candidate, including recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5059A Commission telecommunications network equipment • ICTTEN5092A Undertake outage management. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Installation and commissioning documents may include:

- agreed modifications to original design plan
- commissioning test results
- preliminary test results
- recommendations from commissioning procedures.

Appropriate personnel may include:

- network manager
- planning manager
- project manager.

RANGE STATEMENT	
<i>Optical network</i> may include:	<ul style="list-style-type: none"> • 10 Gbps ethernet local area network (LAN) services over the emerging global standard called optical transport network (OTN) • DWDM long haul system • DWDM metro system • gigabit Ethernet • optical portion of HFC network.
<i>Relevant legislation, codes, regulations and standards</i> include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • International Standards ISO 9000 and 9001 • ITU Standards • OHS • Privacy Act • private property law.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • advanced network tester - synchronous optical network (SONET)/synchronous digital hierarchy(SDH) • optical power meters • optical return loss test set • optical spectrum analyser • optical time domain reflectometer (OTDR) • protocol analyser.
<i>Test criteria</i> may include:	<ul style="list-style-type: none"> • 24 - 72 hours test duration • live traffic tests • test environment • test margins and errors • testing at highest data rate: <ul style="list-style-type: none"> • 10 Gbps • 40 Gbps • 100 GBps • topology: <ul style="list-style-type: none"> • point to point link • protected ring • normal and extreme load tests • using installed optical fibre during test.
<i>Performance tests</i> may include:	<ul style="list-style-type: none"> • end-to-end bit error rate (BER) test: <ul style="list-style-type: none"> • stressful pseudo random binary sequence (PRBS) pattern

RANGE STATEMENT	
	<ul style="list-style-type: none"> • forward error correction (FEC) testing • G.709 testing • receive interface specification: <ul style="list-style-type: none"> • received optical power • stability tests • transmit interface specification: <ul style="list-style-type: none"> • optical output power.
<i>Protection mechanisms</i> may include:	<ul style="list-style-type: none"> • 1:1 protection • 1+1 protection • optical channel path protection • path protection • wavelength protection.
<i>Alarms</i> may include:	<ul style="list-style-type: none"> • audible alarms • on-screen display and monitoring systems • visual indicators.

ICTOPN5120A Plan for an optical system upgrade and cut over

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to plan the activities of a major upgrade of optical systems from specifications provided by the planning and design section. Major upgrades in enterprise networks or telecommunications service provider's networks involve cut over activities to integrate additional work into existing network.</p> <p>The exponential growth of internet protocol (IP) traffic is driving IP optical integration, in particular the convergence of IP and dense wavelength division multiplexing (DWDM) networks in Next Generation Networks (NGN), necessitating regular system upgrades.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Field officers, technicians or technical supervisors from carriers, contractors or other service providers whose work involves upgrading optical systems and equipment in enterprise networks and service providers' core and access networks apply the skills and knowledge in this unit.</p> <p>They are involved in maintenance, upgrades and cut overs of emerging technologies in IP based telecommunications networks.</p> <p>Relevant jobs roles include a supervisor in charge of installation and maintenance teams responsible for the new installations and upgrades of telecommunications networks.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather information to prepare upgrade activity plan	1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> for compliance when conducting work 1.2. Obtain design specifications from the planning and design section to determine the scope and <i>nature</i> of the <i>upgrade</i> 1.3. Analyse the design specification and design plan and determine the accuracy of the design plan to site installation and requirements with <i>customer</i> 1.4. Determine the <i>network equipment</i> types and obtain installation details from manufacturer 1.5. Prepare an equipment and component list and source vendors for procurement
2. Prepare upgrade activity plans	2.1. Prepare a detailed <i>installation plan</i> of the upgrade for the installer 2.2. Prepare a detailed <i>installation procedure</i> to carry out the upgrade to minimise impact to the customer 2.3. Prepare pre-installation <i>optical tests</i> on existing equipment to determine benchmarks and performance levels prior to the upgrade 2.4. Prepare post-installation optical tests on upgrade to ensure upgraded system is achieving the desired results 2.5. Prepare monitoring schedule to progressively assess the <i>progress of the upgrade</i> 2.6. Prepare <i>contingency plan</i> for backing out if upgrade is not progressing according to schedule and disruptions to customer are excessive 2.7. Prepare cut over procedures
3. Complete documentation	3.1. Update and produce <i>documentation</i> for submission 3.2. Submit planning activity document to planning and design section for approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- analytical skills to evaluate impact of upgrades on customer, equipment and systems
- communication skills to provide advice and guidance and liaise with other technical staff on operational matters
- literacy skills to:
 - prepare:
 - installation plans
 - installation procedures
 - pre-installation tests
 - post-installation tests
 - contingency plans
 - cut over plan
 - read and interpret:
 - enterprise procedures, manuals and specifications
 - technical data, technical and non-technical information from a range of sources
 - test results
- numeracy skills to interpret technical data
- PC skills to monitor installed software
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - prepare upgrade plan
 - troubleshoot common equipment and network problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards
 - follow enterprise occupational health and safety (OHS) procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - analyse the impact of applications on traffic flow in the network
 - determine customer requirements and an upgrade plan
 - determine the impact of upgrading hardware and software on network functionality
 - identify the technical requirements, constraints and manageability issues for a given customer network requirement
 - implement upgrade of equipment and software

REQUIRED SKILLS AND KNOWLEDGE

- use test equipment and monitoring tools
- use tools and equipment to assemble and disassemble equipment

Required knowledge

- alarms
- backup systems
- computer knowledge
- escalation and outage procedures
- network management systems
- overview knowledge of telecommunications networks and equipment
- telecommunications monitoring tools
- telecommunications test equipment and test setups
- telecommunications wiring practices
- upgrade and post-upgrade routines

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare an upgrade plan incorporating the essential activities listed: <ul style="list-style-type: none"> • detailed installation plan and installation procedures • pre-installation and post-installation tests • monitoring schedule to assess progress of the upgrade • contingency plan.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where upgrade and cut over may be planned • use of equipment, software, test and monitoring equipment currently used in industry • relevant regulatory, equipment, enterprise and vendor documentation that impacts on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing upgrade • direct observation of the candidate performing tests and monitoring alarms • review of documents prepared by the candidate providing upgrade plan and assessing impact of upgrade taking into consideration customer feedback • oral or written questioning to assess knowledge of upgrade, testing and monitoring procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4073A Cut over customer premises equipment major upgrades • ICTTEN4076A Complete equipment and software

EVIDENCE GUIDE

upgrades

- ICTTEN4086A Undertake routine maintenance of the telecommunications network
- ICTTEN5061A Cut over new and replacement network equipment.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>Relevant legislation, codes, regulations and standards</i> may include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS Acts • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Nature</i> of upgrade work may include:	<ul style="list-style-type: none"> • commission of new system • installation of new additional equipment • installation of new software • integration of new equipment into existing system • provision of temporary service • removal of redundant equipment • test on new system.
<i>Upgrade</i> may include:	<ul style="list-style-type: none"> • introducing dispersion compensation devices • moving to 40 Gbps technology • network capacity upgrade: <ul style="list-style-type: none"> • additional optical fibres to be added • additional DWDM wavelength channels and associated hardware to be added • increase data rate by changing transmitter and receiver cards • replace optical fibre with a type more suited towards 40 Gbps • upgrading from erbium doped fibre amplifiers (EDFA) to Raman optical amplifiers • upgrading laser transmitter power.
<i>Customer</i> may be:	<ul style="list-style-type: none"> • asset manager

RANGE STATEMENT	
	<ul style="list-style-type: none"> • contractor • network planner • nominated customer representative • project manager • service provider.
<i>Network equipment</i> may include:	<ul style="list-style-type: none"> • asynchronous transfer mode (ATM) switch • dispersion compensation devices • enclosures • hubs • optical add drop multiplexer (OADM) • optical amplifier • optical filters • optical splitters • patch panels • regenerator • synchronous digital hierarchy (SDH) multiplexers • transponder shelf.
<i>Installation plan</i> may include:	<ul style="list-style-type: none"> • cable trays • detailed drawings and equipment layout • detailed list of equipment and types • earthing specifications • equipment locations • equipment mounting details • interconnecting cabling between racks • monitoring equipment • power feeds • rack positions • testing procedures • tools.
<i>Installation procedures</i> may include:	<ul style="list-style-type: none"> • setup procedures • monitoring progress according to plan • notification of network operations centre (NOC) • sourcing hardware and software • upgrade activity: <ul style="list-style-type: none"> • installing optical equipment • post-upgrade testing • pre-update testing • shutdown installation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • rectifying faults.
<i>Optical tests</i> may include:	<ul style="list-style-type: none"> • bit error rate test (BERT) • default settings • functional test • optical power levels • optical return loss • optical signal to noise ratio (OSNR) • performance tests.
<i>Progress of upgrade</i> may include:	<ul style="list-style-type: none"> • rate of deliverables against project timeline • risk management • timing.
<i>Contingency plan</i> may:	<ul style="list-style-type: none"> • be developed as part of the upgrade planning and design • be escalated and referred to more specialist team • invoke partial upgrade to be continued at later stage • invoke reversion procedure to pre-update condition.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • configuration details • implementation and testing procedures • network impact statement • software test results • system updates • test results and recommendations • upgrade details • vendor, equipment and enterprise specific details.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to commission DWDM transmission system	1.1. Implement hazard risk control measures 1.2. Review system specifications and technical data by identifying system operating parameters 1.3. Obtain and check tools and test equipment needed for the work 1.4. Verify all necessary equipment is installed, and circuit cards and filler cards are correctly located and seated 1.5. Check that interconnecting fibres to optical multiplexers and shelves are intact and correctly routed 1.6. Establish communication between computer and DWDM shelf 1.7. Upload latest software release to each DWDM shelf in the network
2. Commission DWDM transmission system	2.1. Connect an optical test set and a physical optical loopback to the system, and select protocol compatible with the DWDM hardware 2.2. Check the status of the connection and that test set data is passing correctly 2.3. Monitor quality of received signal by setting performance monitoring (PM) features and retrieve PM counts 2.4. Verify that no errors are counted by the test set during a long term stability test while customer input signal is set to the worst case (minimum) power level 2.5. Verify that no alarms are generated during the long term stability test period 2.6. Dispose of antistatic packaging to minimise environmental impact
3. Complete test and commissioning documentation	3.1. Finalise documentation on commissioning test results 3.2. Present results to appropriate person according to established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to:
 - interpret technical documentation, such as equipment manuals, specifications and service orders
 - write reports using standard formats
- numeracy skills to interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular situations
 - modify activities depending on operational contingencies, risk situations and environments
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities especially when dealing with infra-red laser light
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - backup and restore
 - clean optical fibre connector
 - examine optical fibre connector for contamination and assess whether cleaning is required
 - install software
 - measure optical power using handheld optical power meter
 - measurement of DC and AC voltages
 - select and use appropriate test equipment
 - setup internet protocol (IP) addresses and subnet masks

Required knowledge

- alarms
- DWDM principles of operation
- electrostatic discharge precaution

REQUIRED SKILLS AND KNOWLEDGE

- features and operating requirements of test equipment including:
 - hand-held optical power meter
 - transmission test set
 - optical spectrum analyser
- functions of optical add drop multiplexer
- IP addressing, subnet mask, dynamic host configuration protocol (DHCP) and default gateway
- International Telecommunications Union (ITU) wavelength grid for DWDM
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- path protection and protection switching
- physical optical loopbacks and software loopbacks
- protocols used on optical DWDM systems
- ring topologies and linear network topologies
- specific OHS requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and coordinate commissioning • test and commission DWDM transmission system • complete test and commissioning documentation • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to sites on which testing and commissioning a DWDM transmission system may be conducted • use of test equipment currently used in industry • manufacturer's technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing test and commissioning • review of test and commissioning documentation completed by the candidate • oral or written questioning to assess knowledge of test and commissioning procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTOPN5118A Plan and configure dense wavelength division multiplexing systems • ICTOPN5119A Perform acceptance and commissioning test on optical network • ICTOPN5120A Plan for an optical system upgrade and cut over • ICTOPN5122A Test the performance of specialised optical devices • ICTOPN5123A Analyse and integrate specialised optical devices in the network.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test specialised optical devices	<p>1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> and follow occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> for the given work</p> <p>1.2. Work safely according to relevant safety legislation and company work practices identifying <i>hazards</i> and using <i>personal protective equipment</i></p> <p>1.3. Determine the type of <i>optical device</i> using the design plan from <i>appropriate person</i> and obtain manufacturer's <i>specifications</i> for testing</p> <p>1.4. Determine the test procedures and <i>test equipment</i> required to evaluate suitability of the optical device</p>
2. Test the specialised optical device	<p>2.1. Set up the test layout according to safe industry practice and connect the specialised optical device into the test set-up</p> <p>2.2. Undertake a <i>test regime</i> to determine the performance characteristics of the specialised optical device</p> <p>2.3. Analyse the test results to determine the suitability and compatibility of the optical device for integration into the network</p>
3. Document the performance of the specialised optical device	<p>3.1. Prepare an evaluation report with recommendations on the suitability of the specialised optical device</p> <p>3.2. Present test results and evaluation report to appropriate person with copies filed for later reference according to organisation's policies</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test results
- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients

REQUIRED SKILLS AND KNOWLEDGE

- literacy skills to:
 - interpret technical documentation, such as equipment manuals, specifications and service orders
 - write reports using standard formats
- numeracy skills to interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular situations
 - modify activities depending on operational contingencies, risk situations and environments
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities especially when dealing with infra-red laser light
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - backup and restore
 - clean optical fibre connector
 - examine optical fibre connector for contamination and assess whether cleaning is required
 - install software
 - measure optical power using hand-held optical power meter
 - measure DC and AC voltages
 - select and use appropriate test equipment
 - setup internet protocol (IP) addresses and subnet masks

Required knowledge

- amplified spontaneous emission (ASE)
- attenuation characteristics of optical fibres
- dense wavelength division multiplexing (DWDM) principles of operation
- features and operating requirements of test equipment including:
 - hand-held optical power meter
 - optical spectrum analyser
 - transmission test set
- dispersion characteristics of various fibres
- dispersion compensation devices

REQUIRED SKILLS AND KNOWLEDGE

- electrostatic discharge precaution
- functions of optical add drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- gain equalisation
- International Telecommunications Union (ITU) wavelength grid for DWDM
- measurement of dispersion
- optical amplifier operation
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- optical return loss (ORL)
- path protection and protection switching
- polarisation dependent loss (PDL)
- protocols used on optical DWDM systems
- reflectance
- ring topologies and linear network topologies
- specific OHS requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
- tunable laser sources and their characteristics

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and coordinate test activities and equipment • test specialised optical devices and determine suitability for integration into a network • analyse test results • report and make recommendations on suitability for integration • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which optical device testing may be conducted • use of test equipment currently used in industry • manufacturer's technical documentation, legislation, codes and standards.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing tests • review of test documentation and reports completed by the candidate • oral or written questioning to assess knowledge of testing procedures and required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTOPN5118A Plan and configure dense wavelength division multiplexing systems • ICTOPN5119A Perform acceptance and commissioning test on optical network • ICTOPN5120A Plan for an optical system upgrade and cut over • ICTOPN5123A Analyse and integrate specialised

EVIDENCE GUIDE

	<p>optical devices in the network.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM)
- Australian building codes and regulations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5 or Category 6, 6A, 7 or 7A, and unshielded twisted pairs (UTP) • Environmental Protection Acts • fire regulations • Institute of Electrical and Electronics Engineers (IEEE) standards • OHS • relevant international standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • flashing lights • gas and other hazard detection equipment • identifying other services, including power and gas • safety barriers • safety equipment • safe working practices such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • trench guards • warning signs and tapes • woggles hats • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management • noise, dust and clean-up management.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • activating equipment without notifying other staff who may be working remotely on the

RANGE STATEMENT	
	<p>network</p> <ul style="list-style-type: none"> • cleaning alcohol, epoxy resins and other solvents and chemicals may be carcinogenic, cause allergies or be dangerous to health in other ways • environmental hazards: <ul style="list-style-type: none"> • air pollution • damage to natural or heritage precincts • dangerous gases • ground water contamination • heavy or noxious metals pollution • noise • petrochemical spillage • release of hydrochlorofluorocarbons (HCFC) • flammable cleaning chemicals fluids and solvents • fibre offcut damage to eyes and skin • health hazards: <ul style="list-style-type: none"> • dangerous or harmful substances • handling of optic fibres and lasers • risk of infection • risk of sustained injury from repetitive tasks • inhalation of fibre offcuts and particles from vacuum cleaning of worksite • laser damage to eyes.
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • inspection microscope with integral laser safety filter • safety glasses • video microscope.
<i>Optical device</i> may include:	<ul style="list-style-type: none"> • Bragg grating • coupler • dispersion compensation device (DCD) • DWDM multiplexer • erbium doped fibre amplifier (EDFA) • gain equaliser • Raman amplifier • ROADM.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • network engineer • project engineer

RANGE STATEMENT	
	<ul style="list-style-type: none"> • project manager.
<i>Specifications</i> may include:	<ul style="list-style-type: none"> • bandwidth • insertion loss • operating wavelength • ORL • ripple.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • broadband amplified spontaneous emissions (ASE) source • optical spectrum analyser • PDL controller • PDL meter • power meter • tunable laser source • variable attenuator.
<i>Test regime</i> may include:	<ul style="list-style-type: none"> • bandwidth • central wavelength and channel spacing • channel uniformity • insertion loss • ORL • PDL • ripple.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to analyse and integrate specialised optical devices into existing optical networks to support the higher bandwidths associated with Next Generation Networks (NGN).</p> <p>Carriers and service providers regularly upgrade existing infrastructures and extend the length of their networks' optical links due to expansion of NGN services such as voice, data and video.</p> <p>Performance testing of specialised optical devices is covered in a separate unit ICTOPN5122A Test the performance of specialised optical devices.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff from telecommunications carriers, service providers or other private and public organisations who have experience in optical transmission apply the skills and knowledge in this unit.</p> <p>They combine technical expertise with a range of analytical, research and planning skills to develop integration solutions for particular business needs.</p> <p>Relevant job roles include design and planning of networks using emerging technology.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Analyse specialised optical device and prepare for integration in the network</p>	<p>1.1. Obtain relevant legislation, codes, regulations and standards and follow occupational health and safety (OHS) and environmental requirements for the project work</p> <p>1.2. Work safely according to relevant safety legislation and company work practices identifying hazards and using personal protective equipment</p> <p>1.3. Obtain plans and drawings of existing optical network from appropriate person and review potential locations for suitability of integrating additional hardware</p> <p>1.4. Analyse and evaluate a range of integration options using device specifications which satisfy the customer's network requirements</p> <p>1.5. Prepare and submit the business case for adopting the recommended integration solution</p> <p>1.6. Prepare design plan with interconnection details to existing system and installation options and seek approval to proceed from customer</p> <p>1.7. Undertake an impact risk assessment of the hardware integration with the network operations centre (NOC) and prepare for contingencies using contingency plan</p>
<p>2. Integrate the specialised optical device in the network</p>	<p>2.1. Install and integrate specialised optical devices into existing network according to design plan</p> <p>2.2. Test the network and evaluate the results to verify optical network performance with the integrated specialised optical devices in operation</p>
<p>3. Document the integration of the specialised optical device in dense wavelength division multiplexing (DWDM) network</p>	<p>3.1. Produce an updated design plan and submit to customer with copies filed for later reference according to organisation's policies</p> <p>3.2. Prepare an evaluation report on the performance of the network with specialised optical devices with recommendations for future enhancements</p> <p>3.3. Notify NOC of job completion and obtain sign off from appropriate person</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate technical information and develop integration options
- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to:
 - interpret technical documentation, such as equipment manuals, specifications and service orders
 - write reports using standard formats
- numeracy skills to interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular situations
 - modify activities depending on operational contingencies, risk situations and environments
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities especially when dealing with infra-red laser light
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - backup and restore
 - clean optical fibre connector
 - examine optical fibre connector for contamination and assess whether cleaning is required
 - install software
 - measure optical power using handheld optical power meter
 - measure DC and AC voltages
 - select and use appropriate test equipment
 - setup internet protocol (IP) addresses and subnet masks

Required knowledge

- attenuation characteristics of optical fibres
- DWDM principles of operation

REQUIRED SKILLS AND KNOWLEDGE

- features and operating requirements of test equipment, including:
 - hand-held optical power meter
 - optical spectrum analyser
 - transmission test set
- dispersion characteristics of optical fibres
- dispersion compensation devices
- electrostatic discharge precaution
- functions of optical add drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)
- gain equalisation
- International Telecommunications Union (ITU) wavelength grid for DWDM
- measurement of dispersion
- optical amplifier operation
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- optical return loss (ORL)
- path protection and protection switching
- protocols used on optical DWDM systems
- reflectance
- ring topologies and linear network topologies
- specific OHS requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems
- tunable laser sources and their characteristics

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> monitor the network for faults and performance and produce a fault and performance report analyse performance monitoring and alarm data and prepare a report with recommendations based on this analysis.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> access to sites on which DWDM equipment and associated network management can be operated access to DWDM system and test equipment currently used in industry access to relevant equipment manuals, software manuals and other procedural documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate using transmission system manuals and specifications to manage the network and analyse test results evaluation of measurement results and reports produced by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTOPN5121A Test and commission a dense wavelength division multiplexing transmission system ICTOPN6124A Manage optical ethernet transmission ICTOPN6128A Design a dense wavelength division multiplexing system. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE	
	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Networking issues</i> may include:</p>	<ul style="list-style-type: none"> • access • administration • protocols: <ul style="list-style-type: none"> • SNMP • security • transaction language 1 (TL1).

RANGE STATEMENT	
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • network administrator • network planner • project manager.
<i>Network topology</i> may include:	<ul style="list-style-type: none"> • background maps • communications links between network elements or groups • groups of elements • nested groups of elements • physical shapes.
<i>Manage the network</i> may include:	<ul style="list-style-type: none"> • acknowledging or clearing alarms • determining alarm severity • determining overall network status • integrated with external management system • locally • managing connections • managing protection • monitoring the network for faults • monitoring the performance of network elements • performing software download and upgrade • producing equipment inventory at a given site • remotely • stand alone management • viewing historical event logs and alarm data • viewing performance parameters and thresholds • viewing real time active alarm data.
<i>Network degradation</i> may include:	<ul style="list-style-type: none"> • decreasing received optical power level • decreasing transmit optical power level.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to design a high capacity dense wavelength division multiplexing (DWDM) optical network suitable for a metropolitan area network (MAN) or long haul applications.</p> <p>It involves link budget design and providing specification details for configuration and commissioning teams.</p> <p>DWDMs use optical multiplexing techniques to increase the carrying capacity of a fibre network by transmitting multiple optical wavelengths each carrying high speed data stream over a single fibre. DWDM systems offer up to 128 wavelengths, with each wavelength carrying up to 100 Gbps.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical officers and supervisors apply the skills and knowledge in this unit when designing DWDM systems for the deployment of high capacity networks using optical technologies.</p> <p>Optical networks using DWDM provide services in Next Generation Networks (NGN) using emerging technologies.</p> <p>NGN services include internet protocol TV (IPTV), video on demand (VoD), interactive TV and cloud computing.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce a DWDM system design	1.1. Obtain the planning document from <i>appropriate person</i> and determine <i>site details</i> 1.2. Obtain the <i>service type</i> and the number of channels required between customer traffic sources and destinations and the type of <i>protection</i> required 1.3. Obtain <i>specifications</i> of the <i>optical fibre</i> between sites 1.4. Determine the fibre loss between sites
2. Calculate link budget for each wavelength path	2.1. Use vendor's engineering design rules, specifications and data to calculate link budget and link margin for each DWDM wavelength and path 2.2. Evaluate link budget and assess the calculated margin and make recommendations for improvement if warranted 2.3. Analyse the specifications of the installed optical fibre and determine if dispersion will limit the maximum traffic data rate 2.4. Generate options for system design that are realistic for the enterprise and network 2.5. Evaluate and select preferred option based on enterprise business strategy outcomes, service policy and compliance with relevant legislation 2.6. Discuss and confirm selected option with customer
3. Prepare detailed configuration documents for the DWDM system	3.1. Outline the <i>detailed requirements</i> of the DWDM system for <i>configuration document</i> 3.2. Prepare a configuration document according to the customer's traffic needs 3.3. Prepare an internet protocol (<i>IP</i>) <i>address allocation</i> for all DWDM shelves and associated routers and gateways 3.4. Submit documentation to appropriate person for approval and sign off
4. Investigate upgrade options using emerging technologies	4.1. Investigate the option of using a reconfigurable optical add-drop multiplexer (ROADM) and make recommendations outlining the benefits 4.2. Investigate the feasibility of a future upgrade up to 100 Gbps system using optical transport network (OTN)-DWDM technology

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify details relating to the project from the approved network plan
- communication skills to discuss project brief with enterprise design and installation personnel, vendors, customers and contractors
- literacy skills to:
 - write project briefs and interpret results and evaluate different types of technical data
 - interpret technical documentation and write reports in required formats
- numeracy skills to:
 - interpret results and evaluate different types of technical data
 - analyse site survey data
- planning skills to:
 - consider current, new technology, facilities and features when developing options
 - plan, prioritise and monitor own work and that of others
- problem solving skills to address and analyse specific customer requirements
- research skills to:
 - analyse impacts on planning processes
 - obtain and study information relating to emerging DWDM technologies
 - obtain geographical site information
 - study relevant legislation and associated operational codes
 - technical skills to identify barriers to plan realisation and evaluate emerging DWDM technologies

Required knowledge

- configuration of DWDM shelf
- DWDM principles of operation
- electrostatic discharge
- features and operating requirements of test equipment including:
 - optical time domain reflectometer (OTDR)
 - hand-held optical power meter
 - transmission test set
 - optical spectrum analyser
- functions of optical add drop multiplexer (OADM)
- functions of reconfigurable optical add drop multiplexer (ROADM)

REQUIRED SKILLS AND KNOWLEDGE

- IP addressing, subnet mask, dynamic host configuration protocol (DHCP) and default gateway
- International Telecommunications Union (ITU) wavelength grid for DWDM
- laser stability
- dispersion compensation devices
- link budget calculations and link margins
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- path protection and protection switching
- physical optical loopbacks and software loopbacks
- traditional protocols and emerging OTN technologies used on optical DWDM systems
- ring topologies and linear network topologies
- specific occupational health and safety (OHS) requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine the fibre loss between sites • calculate link budget and link margin • prepare DWDM shelf configuration and specifications • produce a configuration document • investigate an emerging DWDM technology.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which design of a DWDM system may be conducted • manufacturer's technical documentation, relevant regulations and specifications.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking DWDM calculations • review of data gathered, reports and project plans prepared by the candidate • oral or written questioning to assess knowledge of design and configuring of DWDM systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTOPN6125A Manage dense wavelength division multiplexing transmission system • ICTOPN6129A Analyse optical transmission systems. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Appropriate person may include:

- consultant
- planning engineer
- project engineer
- project supervisor
- site supervisor.

Site details may include:

- location of network sites
- number of network sites
- optical fibre path distance between sites
- straight line distance between sites
- type of site:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • OADM • ROADM • terminal.
<i>Service type</i> may include:	<ul style="list-style-type: none"> • interface requirements • protocol and bit rate: <ul style="list-style-type: none"> • digital video broadcasting - asynchronous serial interface (DVB-ASI) • enterprise system connection (ESCON) • ethernet <ul style="list-style-type: none"> • fast ethernet 100 Mbps • 1 GbE • 10 GbE • fibre channel • OTN • synchronous digital hierarchy (SDH) • synchronous optical networking (SONET) <ul style="list-style-type: none"> • STM-1 155 Mbps • STM-4 622 Mbps • STM-16 2.48 Gbps • STM-64 10 Gbps • STM-256 40 Gbps • 100 Gbps • HD-SDI • SD-SDI.
<i>Protection</i> may include:	<ul style="list-style-type: none"> • equipment protection • path protection.
<i>Specifications</i> may include:	<ul style="list-style-type: none"> • chromatic dispersion (ps/nm*km) • cladding diameter • core diameter • end-to-end attenuation or dB loss per km at nominated wavelength • fibre type <ul style="list-style-type: none"> • non-zero dispersion shifted fibre (NZDSF) ITU-T G.655 • non-dispersion shifted fibre (NDSF) ITU-T G.652 also known as standard single mode fibre 'SMF' • dispersion-shifted fibre (DSF) ITU-T G.653

RANGE STATEMENT	
	<ul style="list-style-type: none"> • 1550-nm loss-minimised fibre (ITU-T G.654) • ITU-T G.656 • LEAF fibre • number of fusion splices • polarisation mode dispersion • refractive index profile of core.
<i>Optical fibre</i> may include:	<ul style="list-style-type: none"> • existing fibre • fibre optimised for DWDM system • new fibre.
<i>Detailed requirements</i> may include:	<ul style="list-style-type: none"> • actual wavelengths specified • chirp parameter • dispersion compensation devices • maximum allowable span length • optical amplifier • optical signal to noise ratio (OSNR) • receiver threshold • transmit laser: <ul style="list-style-type: none"> • maximum power • minimum power • stability • type.
<i>Configuration document</i> may include:	<ul style="list-style-type: none"> • channel configuration information • fixed optical attenuators • protection details • slot positions and circuit card type • type and quantity of circuit cards.
<i>IP address allocation</i> may include:	<ul style="list-style-type: none"> • default gateway IP address • shelf IP addresses • subnet mask.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to conduct characterisation tests on existing optical network	<p>1.1. Obtain <i>relevant legislation, codes, regulations and standards relevant legislation, codes, regulations and standards</i> and follow occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> for the given work</p> <p>1.2. Identify <i>hazards</i> and work safely according to relevant safety legislation and company work practices using <i>personal protective equipment</i></p> <p>1.3. Construct <i>test procedures</i> for each test to be conducted</p> <p>1.4. Notify customer and arrange for site access</p>
2. Conduct link characterisation tests and analyse existing optical network	<p>2.1. Perform <i>optical tests</i> to characterise the existing fibre link</p> <p>2.2. Analyse the results of the optical tests, and determine the extent and nature of future upgrades based on the tests</p>
3. Document the analysis of optical network with recommendations	<p>3.1. Produce final drawings and plans of proposed upgrade requirements for optical transmission and submit to project manager according to enterprise policy</p> <p>3.2. Prepare a report on the measured performance of the network and recommendations on future upgrades</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to: <ul style="list-style-type: none"> • liaise with internal and external personnel on technical and operational matters • relate to work associates, supervisors, team members and clients • literacy skills to: <ul style="list-style-type: none"> • interpret technical documentation, such as equipment manuals, specifications and service orders • write reports using standard formats

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular situations
 - modify activities depending on operational contingencies, risk situations and environments
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities especially when dealing with infra-red laser light
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - backup and restore
 - clean optical fibre connector
 - examine optical fibre connector for contamination and assess whether cleaning is required
 - install software
 - measure DC and AC voltages
 - measure optical power using handheld optical power meter
 - select and use appropriate test equipment
 - setup IP addresses and subnet masks

Required knowledge

- attenuation characteristics of optical fibres
- chromatic dispersion (CD) test
- dense wavelength division multiplexing (DWDM) principles of operation
- dispersion
- dispersion characteristics of various fibres
- dispersion compensation devices
- electrostatic discharge precaution
- features and operating requirements of test equipment including:
 - hand-held optical power meter
 - optical spectrum analyser
 - transmission test set
- functions of optical add drop multiplexer (OADM) and reconfigurable optical add-drop multiplexer (ROADM)

REQUIRED SKILLS AND KNOWLEDGE

- gain equalisation
- insertion loss test
- International Telecommunications Union (ITU) wavelength grid for DWDM
- measurement of dispersion
- methods to reduce dispersion
- optical amplifier operation
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- optical return loss (ORL) test
- optical signal to noise ratio (OSNR) test
- optical time domain reflectometer (OTDR) test
- path protection and protection switching
- performance qualification of 40 Gbit/s and 100 Gbit/s transceivers
- polarisation mode dispersion (PMD) test
- protocols used on optical DWDM systems
- reflectance
- ring topologies and linear network topologies
- specific OHS requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT

regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- Australian building codes and regulations
- compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5 or Category 6, 6A, 7 or 7A, and unshielded twisted pairs (UTP)
- Environmental Protection Acts
- fire regulations
- International Electrotechnical Commission (IEC):
 - IEC 61282-3 Technical report on calculation of PMD
 - IEC 61290-1 Gain of optical amplifiers
 - IEC 61290-2 Power measurements on optical amplifiers
 - IEC 61291 Generic specs for optical amplifiers
 - IEC 61291-4 Performance template for multi-channel optical amplifiers
 - IEC 61941 Standard on PMD measurement for single mode optical fibre
- OHS
- relevant international standards
- technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.

OHS and environmental requirements may relate to:

- decommissioning and isolating worksite and lines prior to commencement
- flashing lights
- gas and other hazard detection equipment
- identifying other services, including power and gas
- safe working practices, such as the safe use and handling of:
 - asbestos
 - chemicals

RANGE STATEMENT	
	<ul style="list-style-type: none"> • materials • tools and equipment • work platforms • safety barriers • safety equipment • special access requirements • suitable light and ventilation • trench guards • warning signs and tapes • woggles hats • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste management.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • infra-red laser light at transmitter ports and fibres • needle stick injuries from fractured optical fibres.
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • dust protection • earmuffs • eye protection • gloves • hard hats • personal reflecting jackets • safety boots • safety glasses • traffic signs • warning signs and tapes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Confirm the location of proposed installation is according to the <i>installation plan</i> and <i>relevant legislation, codes, regulations and standards</i> 1.2. Recognise and report <i>hazards</i> 1.3. Obtain <i>approvals</i> and authorisations for work and carry at all times during works 1.4. Inform land owner or tenant of imminent works 1.5. Locate adjoining services according to enterprise guidelines and occupational health and safety (OHS) practices 1.6. Clear site of vegetation and debris according to work specifications and any relevant approvals
2. Excavate site	2.1. Place pegs for proposed installation according to enterprise guidelines and site plans 2.2. Excavate using the appropriate equipment for the size of excavation, the location of the works, and according to enterprise guidelines 2.3. Conduct levelling of the site within the tolerance specified in the installation plan 2.4. Employ <i>OHS practices</i> and <i>personal protective equipment</i> , where appropriate, in the manner intended by the manufacturer
3. Complete administration	3.1. Note approved alterations on the original plan and design using the appropriate symbols, and return plan to originator 3.2. Complete and sign <i>reports</i> according to enterprise policy where required 3.3. Inform land owner or tenant of construction completion and the expected next steps according to enterprise guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to read and interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - interpret drawings related to preparing a site for an installation
 - use hand, power tools and excavation equipment

Required knowledge

- construction methods and performance requirements
- features and operating requirements of construction equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur on site

ICTPMG2173A Plan, organise and undertake work activities

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to plan, organise and undertake work activities in a telecommunications environment, including voice, video and data networks in domestic, commercial or industrial installations.</p> <p>The work activity may be a project for a new installation or upgrade of capacity or technology for existing network or subsystem for convergence to Next Generation Networks (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff who plan, organise and undertake work on customer premises and service providers for new and upgrades of telecommunications activity apply the skills and knowledge in this unit.</p> <p>They may be part of a project team responsible for cabling, equipment deployment in network infrastructure, such as broadband provisioning, wireless mobile and data networks.</p>
---------------------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to undertake work activities	<p>1.1. Prepare work requirements from job request or work orders and confirm with appropriate parties including customer and other appropriate parties and/or by site inspection</p> <p>1.2. Apply and monitor occupational health and safety (OHS) standards, statutory requirements, relevant legislation codes, regulations and standards and enterprise procedures throughout the work procedure</p> <p>1.3. Procure resources required to satisfy job plan for compliance with job specifications</p> <p>1.4. Coordinate requirements, including requests for equipment isolation, with others involved or affected by the work according to enterprise requirements</p>
2. Coordinate and undertake work	<p>2.1. Coordinate work activities with appropriate parties according to enterprise procedures, job and environmental requirements</p> <p>2.2. Undertake and monitor tasks to comply with plans, work requirements and enterprise procedures</p>
3. Complete the work	<p>3.1. Finalise work and restore worksite according to enterprise procedures and job requirements</p> <p>3.2. Notify appropriate parties of work completion according to enterprise procedures and job requirements</p> <p>3.3. Complete job records, costing data and necessary reports according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with and convey information to others
- literacy skills to prepare and interpret work procedures
- problem solving skills to estimate materials and resource requirements
- task management skills to:

REQUIRED SKILLS AND KNOWLEDGE

- coordinate and sequence work requirements
- develop and implement work plan
- review job progress against agreed goals
- technical skills to use hand and power tools and equipment

Required knowledge

- appropriate tools, plant, equipment and materials required to do the work
- enterprise permit procedures and recording procedures
- OHS
- relevant engineering and design practices and procedures
- relevant statutory requirements
- team communication process and goals
- time management techniques
- work planning and organisation theory

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and prepare for work activities • coordinate and undertake work activities applying all related OHS requirements and work practices • complete all document and reports for work activities • demonstrate alignment with job request and consideration of customer needs.
Context of and specific resources for assessment	<p>Assessments must ensure:</p> <ul style="list-style-type: none"> • sites on which work may be conducted • use of equipment including equipment currently used in industry • relevant regulatory, organisational procedures and equipment documentation that impact on work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a range of work activities completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate planning, organising and undertaking work activities.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG2130A Prepare site for support installation. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
Requirements may include:	<ul style="list-style-type: none"> • codes of practice • customer requirements and specifications • design specifications • job specifications • manufacturer specifications • national and state guidelines, policies and imperatives relating to the environment • procedures and work instructions • quality assurance systems • standards called-up in specifications.
Relevant legislation codes, regulations and standards may	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • AS 3901 and AS 3902 and any subsequent updates • enterprise-specific policies, procedures and standards • environmental protection act • International standards ISO 9000 and ISO 9001 • OHS • relevant building and electrical codes • trade practices legislation.
Resources may include:	<ul style="list-style-type: none"> • materials • network equipment • personnel • plant • safety equipment • tools.
Equipment isolation may include:	<ul style="list-style-type: none"> • danger tag system for greater safety of: <ul style="list-style-type: none"> • multiple locking systems • flow of steam, electricity, gases or liquids • operation of machinery, plant or equipment • use of faulty or unsafe plant and equipment • lock-out and tag-out • safety device systems: <ul style="list-style-type: none"> • full pressure blanks • isolating switches • locks • safety bars • shields • spectacle blanks to lock systems or devices to an 'off' position.
Enterprise procedures may refer to:	<ul style="list-style-type: none"> • arrangements for dealing with emergencies • formal arrangements of how work is to be done and by whom • making provision for the recycling or re-use of materials • modifying job requirements to meet unforeseen requirements • communicating the extent of change to those affected.
Environmental requirements may	<ul style="list-style-type: none"> • area surrounding the work site including:

RANGE STATEMENT	
relate to:	<ul style="list-style-type: none"> • atmosphere • drains • ecosystem • soils • underground water tables • protection of the environment including: <ul style="list-style-type: none"> • containment of chlorofluorocarbons • correct handling of toxic substances • correct use of enterprise vehicles and machinery • minimisation of construction waste materials • minimisation of factors that contribute to the production of greenhouse gases • proper disposal of waste materials • reduction of energy usage • restriction of burning off • re-use or recycling of trade materials.
<i>Job records</i> may include:	<ul style="list-style-type: none"> • contract history file • daily diary • plans • time sheets or cards.

ICTPMG4048B Schedule installation of customer premises equipment

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to effectively schedule the installation of customer premises equipment (CPE). It includes planning, provisioning and monitoring of customer premises installations.

CPE may be for small to medium enterprises or large government organisations with installations in computer networking, security installations, radio frequency identification (RFID), cable TV (CATV), home networks and internet protocol TV (IPTV) networks.

Application of the Unit

Lead foremen or estimators with appropriate authority to direct the activities of customer premises installation staff, building workers, contractors, manufacturers and vendors apply the skills and knowledge in this unit.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Plan installation project	<p>1.1 Obtain <i>relevant legislation, codes, regulations and standards</i> and follow occupational health and safety (<i>OHS</i>) <i>and environmental requirements</i> for the given work</p> <p>1.2 Plan <i>work schedules</i> for <i>relevant parties</i> to provision services and deliverables in correct sequence for satisfactory project completion within the specified timeframe</p> <p>1.3 Order materials in advance of needs to avoid work delays</p> <p>1.4 Negotiate the provision and connection of required network capacity and facilities with network provider</p> <p>1.5 Determine <i>customer equipment</i> types and quantities and organise timing of delivery according to work schedule timeframe</p> <p>1.6 Determine <i>essential criteria</i> for selecting labour resources in order to satisfy regulatory, enterprise and client requirements</p> <p>1.7 Calculate installation workloads to complete task within specified timeframe</p>
2. Provision resources for installation project	<p>2.1 Arrange for connection of <i>network services</i> to customer equipment</p> <p>2.2 Coordinate logistics associated with the delivery of material to site according to the installation timeframe</p> <p>2.3 Allocate labour to the installation as determined in the planning stage</p> <p>2.4 Ensure that all installation personnel are advised of installation and customer requirements</p>
3. Monitor and adjust resource allocations	<p>3.1 Adjust labour resources as necessary, to meet budget and completion timeframe</p> <p>3.2 Monitor work progress against project schedules and budgets</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communications skills to efficiently deal with employees, labour hire companies, customers, consultants, contractors and suppliers
- learning skills to proactively keep up to date with changes in the CPE area
- literacy skills to read and interpret basic technical data
- numeracy skills to estimate or calculate cost of labour and materials
- planning and organisational skills to:
 - improve systems and procedures
 - prioritise and organise own work
 - efficiently plan work schedules
- research skills to source alternative parts supplies
- technology skills to use software and hardware when:
 - planning work schedules
 - ordering supplies.
 -

Required knowledge

- Australian Communications and Media Authority (ACMA) licensing requirements (cabling provider rules)
- operation of computers and application of software programs as used in the Telecommunications Industry
- industry cabling practices
- OHS procedures
- overview of project management including:
 - phases of project management
 - roles and responsibilities within project management
 - project reporting
- telecommunications components and assemblies
- telecommunications CPE.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan an installation project • plan work schedules of installation team • organise supply of materials • arrange for connection of network services.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • work site where scheduling may be conducted • use of computer hardware and software currently used in industry.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of scheduling different CPE types in different locations • review of an oral and written report with completed documentation • direct observation of the candidate scheduling a CPE installation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL4004B Schedule and supply cabling installation • ICTCBL4023B Supervise cabling project. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • Communications Alliance: <ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS/ACIF S008:2006 and AS/ACIF S009:2006 AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • compliance with appropriate ACMA technical standard requirements for underground, aerial, Category 5 or Category 6, 6A, 7 or 7A and unshielded twisted pairs (UTP) • Environmental Protection Acts • fire regulations • noise abatement and heritage legislation • OHS • relevant international standards • Trade Practices Act.
<p>OHS and environmental requirements may relate to:</p>	<ul style="list-style-type: none"> • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste management • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas

	<ul style="list-style-type: none"> • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation.
Work schedules may include:	<ul style="list-style-type: none"> • building works • connection to network boundary • council approvals • cutover of customer equipment • delivery of network services from carrier • installation of customer equipment • jumpering of building distributor • loading of database information • logistics.
Relevant parties may include:	<ul style="list-style-type: none"> • carrier • clients • CPE installation contractors • earthmoving or building work contractors • equipment vendors • inspectors • local council • regulatory bodies.
Customer equipment may include:	<ul style="list-style-type: none"> • answering machine • cable modem • cable TV set-top boxes • digital subscriber line routers • fax machine • Internet protocol (IP) PBX • IP PBX server • key telephone system

	<ul style="list-style-type: none"> • PBX • Session initiation protocol (SIP)-enabled UC system • telephone handsets • video conferencing equipment • voice over internet protocol (VoIP) gateway • worldwide interoperability for microwave access (WiMAX) CPE.
<i>Essential criteria</i> may include:	<ul style="list-style-type: none"> • experience • licences • physical abilities • project management skills • qualification • vendor certifications.
<i>Network services</i> may include:	<ul style="list-style-type: none"> • the provision of: <ul style="list-style-type: none"> • bandwidth • digital or analogue circuits • exchange circuits • radio spectrum • virtual PBX • wireless access.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope network infrastructure requirements	1.1. Determine the requirements of the project from client and approved network plan 1.2. Assess current access network conditions to determine existing network capacity and capability 1.3. Analyse <i>site survey data</i> and geographical information where necessary to assess suitability of site to design requirements 1.4. Assess risk of <i>barriers to plan realisation</i> to ensure delivery of network infrastructure project is achievable 1.5. Analyse the impact on planning of <i>relevant legislation and associated operational codes</i> 1.6. Produce a <i>scoping document</i> with consideration to new technology or technology features required in the project
2. Develop project brief	2.1. Develop planning options considering current and new technology, facilities, features, present and future needs 2.2. Conduct cost-benefit studies to guide decision making processes according to sound business practice 2.3. Discuss project brief with the customer, as required, and obtain approval of planning options 2.4. Produce planning specifications relating to location, route, area, product and/or platform 2.5. Estimate timing, costing and an operating budget according to enterprise policy 2.6. Prepare the final <i>project brief</i> and present to operational staff for implementation
3. Manage the project	3.1. Define the roles and responsibilities of stakeholders within the terms of the project 3.2. Establish a reporting and communications line to ensure project is effectively managed 3.3. Review and continually monitor progress of the project against deliverables and timelines and invoke contingencies if required 3.4. Complete <i>project documents</i> in line with enterprise standards and guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis skills to:
 - analyse site survey data
 - assess current Access Network capacity and capability
- communications skills to liaise and negotiate with customers to ensure requirements are known and can be met within timeframes
- literacy skills to produce:
 - contingency plan
 - planning specifications
 - project brief
 - scoping document
- numeracy skills to conduct cost-benefit analysis
- planning and organisational skills to:
 - plan efficient work schedules
 - plan location route area, product and platform
 - prioritise and organise own work
- problem solving skills to account for unexpected variations to requirements
- research skills to gain and maintain relevant and current technical product knowledge

Required knowledge

- Australian Communications and Media Authority (ACMA) licensing requirements
- common customer telecommunications applications and related equipment
- computer operation
- familiarity with the workplace and industry environment
- industry cabling practices
- leasing versus purchase options
- legislative and environmental impacts, including options for green ICT installations
- network and transmission equipment
- network topologies, interface and interconnect solutions
- occupational health and safety (OHS) procedures
- performance parameters and typical faults in equipment and related connection and transmission media, and various test equipment types
- project management
- telecommunications components and assemblies

REQUIRED SKILLS AND KNOWLEDGE

ICTPMG5027A Develop customer premises equipment installation project plans

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to plan installation of customer premises equipment (CPE). This can include customer premises cabling and CPE.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Technical planners, designers and supporting administration staff apply the skills and knowledge in this unit. It may apply to technical staff moving into planning and management positions.</p> <p>Installation projects may be new installations, upgrade of capacity or technology for an existing network or subsystem for convergence to Next Generation Networks (NGN).</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess project requirements	1.1. Discuss and clarify project deliverables with <i>customer</i> using available <i>documentation</i> 1.2. Determine the <i>type of CPE project</i> required for the installation 1.3. Evaluate access, occupational health and safety (<i>OHS</i>) and <i>environmental issues</i> and include in job specification 1.4. Quantify and source <i>equipment</i> required 1.5. Estimate costs using organisational costing guidelines
2. Prepare detailed equipment, system design and configuration	2.1. Capture <i>data</i> necessary to the project design brief 2.2. Negotiate system specifications based on project requirements with customer and sales staff 2.3. Translate available data into a detailed <i>system design and configuration</i> 2.4. Verify deliverables with customer
3. Detail project and quality plans	3.1. Develop <i>project plan</i> to meet customer's needs with detailed task list, resource needs and timeframes 3.2. Develop contingency plans to meet problems that may arise 3.3. Produce a <i>quality plan</i> incorporating flow process charts 3.4. Verify plans with customer and appropriate personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate most effective technical solutions
- communication skills to:
 - liaise with customers to ensure requirements are known and can be met within timeframes
 - negotiate approvals and contract arrangements with suppliers and contractors

REQUIRED SKILLS AND KNOWLEDGE

- literacy skills to:
 - interpret technical specifications and manuals
 - document technical requirements and procedures
- numeracy skills to:
 - analyse and confirm capacity requirements
 - calculate budget requirements and limitations
- planning and organisational skills to:
 - make site access and equipment delivery arrangements
 - set out project requirements and priorities
- problem solving skills to account for unexpected variations to requirements
- research skills to gain and maintain relevant and current technical product knowledge

Required knowledge

- cabling types, structures and connectors
- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- current legislation relating to installation of telecommunications equipment and connection to carrier services
- CPE
- environmental impacts including options for green ICT installations
- cost-effective solutions in installation:
 - leasing
 - purchase
- network and transmission equipment
- network topologies, interface and interconnect solutions
- OHS requirements:
 - electrical safety
 - materials handling
 - physical hazards
 - confined spaces
 - heights
 - lifting
- power requirements
- typical performance parameters and typical faults that may be encountered in customer equipment and related connection and transmission media
- warranty information for equipment supplies and contractor work guarantees

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess CPE project requirements • prepare detailed system design and configuration • develop project and quality plans for CPE installation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site on which CPE installation can be planned • relevant documentation, data, technical manuals and other site related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking practical planning • review of plans completed by the candidate • oral or written questioning to assess knowledge of installation issues, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG5031A Prepare a project brief • ICTPMG5039A Prepare project specifications. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication</p>

EVIDENCE GUIDE

	<p>skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Customer</i> may include:	<ul style="list-style-type: none"> • architects • building construction managers • companies • home owners • third parties: <ul style="list-style-type: none"> • communications consultant • contractor to a major supplier.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • quotation forms • sales orders • specification lists.
<i>Type of CPE project</i> may include:	<ul style="list-style-type: none"> • cabling • new equipment installation • equipment upgrade.
<i>OHS and environmental issues</i>	<ul style="list-style-type: none"> • confined spaces

RANGE STATEMENT	
may include:	<ul style="list-style-type: none"> • electrical safety • hazardous material • height hazards • trip hazards • waste disposal.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • alarm equipment • bandwidth managers • biometric systems • closed circuit TV (CCTV) • cordless private automatic branch exchange (PABX) and business systems • digital subscriber line (DSL): <ul style="list-style-type: none"> • asymmetrical DSL (ADSL) • cable TV (CATV) • fibre to premises terminal equipment • internet protocol TV (IPTV) • modems • network equipment • PABX • peripherals • radio frequency identification (RFID) • security systems • voice over internet protocol (VoIP) phones.
<i>Data</i> may include:	<ul style="list-style-type: none"> • applications: <ul style="list-style-type: none"> • hotel • redundancy • voice mail • barred services • competitive call billing data • class of service • extension relationship • international and national dialling access details • operational configuration.
<i>System design and configuration</i> may involve:	<ul style="list-style-type: none"> • architecture • compatibility • competing technologies • firmware • hardware • interoperability

RANGE STATEMENT	
	<ul style="list-style-type: none"> • longevity • performance • return on investment • scalability • software • topologies.
<i>Project plan</i> may include:	<ul style="list-style-type: none"> • checklists • Gantt charts • PERT charts • software-based programs.
<i>Quality plan</i> may include:	<ul style="list-style-type: none"> • dependencies • inspection • manufacturer's technical manuals • responsibilities • technical standards • testing and related procedures • work instructions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan a project brief	1.1. Contact <i>customer</i> to obtain <i>project</i> details and approved network plan 1.2. Assess current <i>network conditions</i> 1.3. Analyse <i>site survey data</i> and geographical information to initiate studies if required 1.4. Assess <i>barriers to plan</i> realisation 1.5. Analyse the impact of <i>relevant legislation, codes, regulations and standards</i> on planning processes
2. Develop preliminary project brief	2.1. Develop <i>project specifications</i> , including <i>new technology</i> according to customer requirements 2.2. Draft a sketch plan according to enterprise practice for area in question 2.3. Clarify project brief with the customer as required 2.4. Present final report with option for approval before proceeding with project brief
3. Assess tenders	3.1. Follow <i>process for seeking quotes or issuing tenders</i> for completion of project 3.2. Assess quotes or tenders against project criteria and any proposed variations 3.3. Examine detailed project costing estimates to ensure that budget parameters are attained 3.4. Assess competitive tenders with <i>consideration</i> to meet specified timeframes 3.5. Obtain tender approval from the customer
4. Monitor contract progress and completion	4.1. Monitor contract activity with progress against specifications 4.2. Establish and maintain regular liaison with project manager and site supervisor 4.3. Discuss contract problems or difficulties with project manager and contractor as required 4.4. Negotiate and implement contract variations 4.5. Prepare project completion advice in conjunction with project manager, installation manager and operational staff 4.6. Undertake a <i>quality audit</i> of the project and submit any recommendations for improvement according to enterprise procedures 4.7. Prepare a final report on project outcomes and achievement

ELEMENT	PERFORMANCE CRITERIA
	4.8. Present report to customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate most effective technical solutions
- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - negotiate approvals and contract arrangements with suppliers and contractors
- literacy skill to:
 - interpret technical specifications, equipment manuals and tenders
 - write reports and document technical requirements and procedures
- numeracy skills for:
 - confirming capacity requirements
 - budget requirements
- planning and organisation skills to:
 - set out and monitor project requirements and priorities
 - undertake audits
- problem solving skills to address variations and contract issues
- research skills to maintain current technical product knowledge

Required knowledge

- common customer telecommunications applications and related equipment
- familiarity with the workplace and industry environment
- leasing versus purchase options
- legislative and environmental impacts including options for green ICT installations
- network and transmission equipment
- network topologies, interface and interconnect solutions
- performance parameters and typical faults in equipment and related connection and transmission media, and various test equipment types
- warranty information and contractor work guarantees

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> develop a project brief for a telecommunications project analyse and document considerations in project specifications apply legislative and environmental conditions to project brief development assess tenders and monitor contract work to completion.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites on which projects may be conducted relevant databases, legislative requirements and other site and project related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate undertaking brief preparation and monitoring contracts review of project brief prepared by the candidate outlining specifications, specified timeframes, enterprise financial systems and policy review of report prepared by the candidate outlining specified planning processes oral or written questioning to assess knowledge of planning, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTPMG5027A Develop customer premises equipment installation project plans ICTPMG5039A Prepare project specifications. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customer may include:

- communication consultants
- enterprises
- government bodies
- internal or external to the organisation
- other carriers
- service providers.

Project may include:

- installation or upgrade for:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • broadband network • switching • transmission • radio network: <ul style="list-style-type: none"> • fixed • mobile • systems including: <ul style="list-style-type: none"> • optical • radio • microwave and satellite • multiplexing • transmission • network management • physical support infrastructure • various transmission paths.
<i>Network conditions</i> may be obtained from:	<ul style="list-style-type: none"> • capacity assessment data • network performance data associated with the network • traffic dimensioning data.
<i>Site survey data</i> may include:	<ul style="list-style-type: none"> • building availability and capacity • earthing requirements environmental impact • geological surveys • line of sight data • power availability • regulatory and statutory requirements • site availability • site ownership and acquisition data • weather conditions.
<i>Barriers to plan</i> may include:	<ul style="list-style-type: none"> • community opposition • environmental considerations • government policy • heritage legislation restrictions • local planning approvals.
<i>Relevant legislation, codes, regulations and standards</i> may include:	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards TS 14 • Australian standards applying to radio frequency (RF) hazards • heritage legislation • industrial awards and conditions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • International standards ISO 9000/9001 • International Telecommunications Union (ITU) recommendations • National Parks Act • OHS Act • State/Territory and Federal Environment Acts • Telecommunications Act and relevant codes.
<i>Project specifications</i> may include:	<ul style="list-style-type: none"> • broad project description • cost-benefit studies as a guide to the decision making process • costing estimates and operating budget • location, route, area, product and platform • planning options for future needs to include new technology • preferred equipment and vendors • profit margins according to enterprise policy • proposed project timing • resources • sketch plan.
<i>New technology</i> may include:	<ul style="list-style-type: none"> • internet protocol (IP) networks • optical networks • virtual networks • web-based networks • wireless networks.
<i>Process for seeking quotations or issuing tenders</i> may include:	<ul style="list-style-type: none"> • confidential tender processes • existing service level agreement • multiple quotes • requirements for preferred suppliers.
<i>Consideration</i> may include:	<ul style="list-style-type: none"> • capacity • performance • price • product type • quality • timeframes.
<i>Quality audit</i> includes:	<ul style="list-style-type: none"> • requirements of customer or organisation • review of process and methodology.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for project estimate	1.1. Analyse project design obtained from <i>appropriate personnel</i> to determine project requirements according to project plan 1.2. Verify project requirements with customers and project team 1.3. Ascertain impact of time restraints on estimate 1.4. Analyse the impact of <i>relevant legislation, codes, regulations and standards</i> on planning processes 1.5. Establish availability of all appropriate <i>data and documentation</i> to allow for the completion of the work
2. Estimate resource requirements	2.1. Conduct site inspection to verify design details and project context 2.2. Produce an estimate of type, quantity and schedule of <i>resources</i> required for the project from the project plans 2.3. Prioritise sequence of work appropriate to enterprise needs 2.4. Calculate contractor and employee labour hours required according to project requirements, industrial awards and enterprise policies 2.5. Record estimates of materials, equipment and labour hours according to enterprise guidelines
3. Calculate costing details	3.1. Estimate the amount and type of resources required for successful completion of project including risk management and contingencies 3.2. Calculate costs for resources from <i>current information</i> following standard costing procedures 3.3. Produce a detailed record of all required resources and costing details for project specifications
4. Prepare detailed project plan	4.1. Prepare detailed plan, including specifications for materials, equipment, resources, locations and network routes 4.2. Forward plan and specifications to the appropriate personnel for project implementation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate most effective solutions
- communication skills to:
 - liaise with customers to ensure requirements are known and can be met within timeframes
 - negotiate approvals and contract arrangements with suppliers and contractors
- literacy skills to:
 - interpret technical specifications, equipment manuals and tenders
 - write project specifications and detailed project plan
- numeracy skills to:
 - calculate budget requirements and limitations
 - determine workforce requirements
- planning and organisational skills to:
 - prioritise sequence of work
 - set out project requirements
- problem solving skills to address variations and contract issues
- research skills to gain and maintain relevant and current technical product knowledge
- technical skills to prepare drafts of detailed plan

Required knowledge

- common customer telecommunications applications and related equipment
- cost effective solutions in planning
- drafting techniques
- familiarity with the workplace and industry environment
- legislative and environmental impacts including options for green ICT installations
- network and transmission equipment
- network topologies, interface and interconnect solutions
- specific occupational health and safety (OHS) requirements
- warranty information and contractor work guarantees

Evidence Guide

EVIDENCE GUIDE

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare project management plan	1.1. Evaluate and assess <i>project brief and related documents</i> 1.2. Produce a <i>document</i> on project <i>tasks and associated timelines</i> , including installation processes and test requirements 1.3. Assess and produce a document on <i>resource requirements</i> to assist allocation of appropriate resources 1.4. Produce a <i>training plan</i> assessing training needs and associated timelines for efficient project implementation 1.5. Determine and document <i>budgetary requirements</i> 1.6. Assess the roles of all identified <i>parties</i> associated with the project to ensure their involvement 1.7. Produce a project verification document, including monitoring and control processes and review processes such as <i>quality audits</i> 1.8. Consult with all relevant parties prior to finalising draft plan and make changes as appropriate
2. Develop and evaluate management plan	2.1. Produce a preliminary plan for consultation including identified <i>factors</i> that may impact on the realisation of the project and observance of <i>relevant legislation, codes, regulation and standards</i> 2.2. Consult with customer and clarify any amendments 2.3. Develop a final plan with recommendations
3. Finalise documentation	3.1. Produce and document a final plan to include implementation details and training needs. 3.2. Present plan to customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> analytical skills to compare and evaluate most effective technical solutions

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
 - liaise with customers to ensure requirements are known and can be met within timeframes
 - negotiate approvals and contract arrangements with suppliers and contractors
- literacy skills to interpret technical specifications and related documentation and document technical requirements and procedures
- numeracy skills to:
 - determining workforce requirements
 - calculating budget requirements and limitations
 - assessing channel capacities and overall dimensioning requirements
- organisation skills to arrange training and relevant documentation
- planning and organisation skills to:
 - set out project requirements and priorities
 - make site access and equipment delivery arrangements
- problem solving skills to account for unexpected faults or equipment incompatibilities or logistics problems
- research skills to gain and maintain relevant and current technical product knowledge

Required knowledge

- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- current legislation relating to installation of telecommunications equipment and connection to carrier services
- customer premise equipment
- leasing versus purchase options to assist in delivering cost effective solutions
- network and transmission equipment
- network topologies, interface and interconnect solutions
- occupational health and safety (OHS) requirements for:

EVIDENCE GUIDE

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Project brief and related documents refer to:

- equipment and system needs:
 - computer network equipment site evaluation, including barriers to installation
 - switching
 - transmission and radio network
 - transmission paths:
 - cable,
 - optical fibre
 - radio
 - microwave
 - satellite
- safety aspects of building or area using

RANGE STATEMENT	
	<p>available software:</p> <ul style="list-style-type: none"> • building and equipment hazards • ceiling access • construction type • system design and configuration.
<i>Document</i> may refer to:	<ul style="list-style-type: none"> • activities: <ul style="list-style-type: none"> • dependencies • inspection • manufacturer's technical manuals and responsibilities • requirements to ensure that installation and service activities are performed under controlled conditions • technical standards • testing and related procedures • work instructions • contingency plans to account for delays and other problems • critical paths and timelines • quality plans: <ul style="list-style-type: none"> • check lists • Gantt charts • software based programmes • process flow charts • tasks and overall work structure.
<i>Tasks and associated timelines</i> may include:	<ul style="list-style-type: none"> • estimating overall timeframes based on standard installation times • identifying critical paths and minimum timelines • identifying independent tasks and those that depend on others • identifying timeframes associated with each aspect of the project • initiating documentation: <ul style="list-style-type: none"> • sales orders • quotation forms • specification lists • making allowances for: <ul style="list-style-type: none"> • likely network outages and restrictions • anticipated barriers and contingency

RANGE STATEMENT	
	<p>provisions for delays and problems</p> <ul style="list-style-type: none"> • special award conditions: <ul style="list-style-type: none"> • weather allowance • site allowance • district allowance • timelines for planning approvals: <ul style="list-style-type: none"> • government planning bodies • local government • frequency spectrum agency.
<p><i>Resource requirements</i> may include:</p>	<ul style="list-style-type: none"> • locating possible resource banks • merits of using contract versus enterprise resources • material requirements including spare parts • identifying documentation required including: <ul style="list-style-type: none"> • design briefs • labour contracts • manuals • plans • specifications • identifying systems, including communication tools • identifying test equipment: <ul style="list-style-type: none"> • hand-held cable testers • insulation resistance tester • multimeter • optical time domain reflectometer (OTDR) • oscillator and probe set • proprietary devices • protocol analysers • pulse echo tester • signal generator • signal level meter • spectrum analyser • time domain reflectometer (TDR) • using tendering process according to enterprise policy: <ul style="list-style-type: none"> • by letter or through the press, contracting and subcontracting • consideration of:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • capacity • company performance • delivery times • performance • price • product type • quality assurance processes • quality.
<i>Training plans</i> may include:	<ul style="list-style-type: none"> • consideration of costs • location of delivery • method • project and customer needs and skills gaps • specific resources for training • timeframe • use of: <ul style="list-style-type: none"> • installation staff • specialist trainers.
<i>Budgetary requirements</i> may include:	<ul style="list-style-type: none"> • costings with compliance and profit margin • detailed financial statement • expenditure approval procedures in line with enterprise policy • risk analysis of financial options.
<i>Parties</i> may include:	<ul style="list-style-type: none"> • contractor • customer • designers • equipment manufacturers • installers • lessee • operational staff • planners • project management • site owner • sub contractor • suppliers.
<i>Quality audits</i> may refer to:	<ul style="list-style-type: none"> • reviews of process • reviews of methodology
<i>Factors</i> may include:	<ul style="list-style-type: none"> • competencies and skills gap • critical paths • equipment and system needs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • independent tasks and relationship • network outage • resources: <ul style="list-style-type: none"> • tools and equipment • finance • manpower • machinery • equipment and spares • safety aspects • timelines.
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) technical standards • Australian building codes and regulations • Environmental Protection Act • fire regulations • heritage legislation • industrial awards and conditions • International Standards ISO 9000 and 9001 • International Telecommunications Union (ITU) recommendations • noise abatement • OHS compliance requirements which may vary in different states and countries. • Telecommunications Act and associated codes • Trade Practices legislation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate design requirements	1.1. Consult relevant legislation, codes, regulations and standards that impact on the project 1.2. Determine need for enhancement to new or existing telecommunications network from telecommunications project plan and associated project brief 1.3. Determine specific purpose and type of network growth and enhancement using collated data from other relevant sources 1.4. Consult customer regarding enterprise criteria and determine timeframe for design plan 1.5. Establish and organise design resource requirements
2. Evaluate information to prepare design drawings	2.1. Obtain site access through consultation with affected property owners where project impacts on private property 2.2. Collect field data and propose ways to manage physical impediments that may affect building construction work 2.3. Verify existing equipment, equipment layouts and building services to plan for network growth 2.4. Ascertain the impact of relevant heritage, environmental and other governmental legislation and initiate action or organise consultative processes to gain approvals according to enterprise policy 2.5. Prepare design drawing according to enterprise requirements
3. Select design option	3.1. Analyse proposed network needs to determine a set of realistic design options 3.2. Evaluate and select preferred design option according to approved enterprise criteria and discuss selected option with customer 3.3. Assess system compatibility and make modifications to design
4. Prepare design plan	4.1. Prepare detailed design plan including relevant geographical and topological information, equipment and material and cost estimates 4.2. Discuss final designs with planners and project management and obtain approval to proceed 4.3. Produce final detailed design brief with drawings,

ELEMENT	PERFORMANCE CRITERIA
	material requirements and testing and maintenance plans for operational staff to follow

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate effective technical solutions of new and emerging technologies of NGN
- communication skills to:
 - negotiate approvals and contract arrangements with suppliers and contractors
 - liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to:
 - interpret technical specifications and related documentation
 - document technical requirements and procedures
- numeracy skills to:
 - determine workforce requirements
 - analyse and confirm capacity requirements
 - calculate budget requirements and limitations
- organisational skills to arrange relevant documentation and approvals
- planning and organisational skills to:
 - set out project requirements and priorities
 - make site access and equipment delivery arrangements
- problem solving skills to account for unexpected variations to requirements
- research skills to gain and maintain relevant and current technical product knowledge
- technical skills to plan NGNs

Required knowledge

- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- cost-effective solutions in planning
- current legislation relating to installation of telecommunications equipment and connection to carrier services

REQUIRED SKILLS AND KNOWLEDGE

- customer premises equipment
- environmental impacts and options for green ICT installations
- network and transmission equipment
- network topologies, interface and interconnection solutions
- occupational health and safety (OHS) requirements for:
 - electrical safety
 - materials handling
 - physical hazards:
 - confined spaces
 - heights
 - lifting
- power requirements and electrical safety
- technology of NGN
- test equipment types

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare a design brief for building and equipment design provisioning • analyse network and enterprise needs to determine design options • prepare detailed design documentation to enable realisation of design.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which projects may be designed • relevant databases, legislative requirements and other site and project related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking design tasks • review of drawings, plans and specifications prepared by the candidate • oral or written questioning to assess knowledge of the design process • a completed design brief for a project.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG6033A Develop a project management plan. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTPMG7145B Undertake a telecommunications project

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor changes to several performance criteria.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake a telecommunications project. It requires research and planning to cover an extensive range of complexities and technologies.

Application of the Unit

Telecommunications technical staff apply the skills and knowledge in this unit to undertake complex projects requiring high levels of planning and management.

Their job roles combine technical and occupational health and safety (OHS) skills to perform project work using emerging and converging technologies within the ICT industry.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for a telecommunications project</p>	<p>1.1 Obtain project plan from authorised personnel to identify the nature of the project and project specifications</p> <p>1.2 Verify location of proposed project work according to the appropriate plans</p> <p>1.3 Analyse project specifications and research emerging telecommunications technology that may benefit the project</p> <p>1.4 Consult authorised personnel to finalise the project specifications and obtain agreement</p> <p>1.5 Source and work with allocated project resources as required, including those for safe work practices</p> <p>1.6 Prepare contingency plans, including any risks that could impact on the project</p> <p>1.7 Develop implementation plan for ICT products and solutions according to standards with minimal workplace disruption and obtain agreement from authorised personnel</p> <p>1.8 Notify authorised personnel of possible network outage where required</p>
<p>2. Carry out the telecommunications project work</p>	<p>2.1 Follow OHS and environmental requirements according to plan and manufacturer specifications</p> <p>2.2 Inform appropriate personnel of existing and potential hazards on work site</p> <p>2.3 Perform project work phases according to agreed plan and accepted work practice</p> <p>2.4 Implement project planning principles, including risks that may impact on the project</p> <p>2.5 Monitor the project to completion to ensure that it is progressing according to plan and risks are minimised</p> <p>2.6 Report on the implementation phases</p>
<p>3. Clean up work site and complete documentation</p>	<p>3.1 Remove and dispose of project waste and debris from work site according to environmental requirements as required</p> <p>3.2 Restore changes made to the work area to the customer's satisfaction as required</p> <p>3.3 Complete all project documents and present to the customer</p>

	3.4 Declare asset ready for commissioning and integration if required 3.5 Notify the customer and obtain sign-off
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate risks and new technologies
- communication skills to work effectively in a group, present information and negotiate project implementation issues
- information technology skills for word processing and desktop research
- literacy skills to prepare reports and document work
- numeracy skills to carry out telecommunications work
- problem-solving skills to anticipate and respond to issues in project progress
- research skills to gather data, observe and analyse project issues.
-

Required knowledge

- organisational project management policy and procedures
- operation of transmitters and receivers
- safety management:
 - personal protective equipment conforming to industry and OHS standards
 - precautions required to minimise, control or eliminate hazards that may exist during work activities
 - relevant legislation, codes, regulations and standards
- telecommunications system principles and operational procedures
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • research and report on emerging technology for a telecommunications project • prepare an implementation plan with contingency plan and risk analysis • conduct and monitor telecommunications project work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications operations site on which a project can be carried out • computers and relevant computer software • relevant legislation, codes, regulations and standards.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate carrying out project work • oral or written questioning to assess required knowledge and skills • review of reports and implementation plans prepared by the candidate for telecommunications projects.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN7182B Produce a radio link budget • ICTTEN7193B Plan a transmission network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Support human resources activities	1.1. Assist and advise on recruitment action and induction of new staff 1.2. Monitor staff training needs and implement technical training activities for staff 1.3. Provide information and advice to relevant personnel 1.4. Review and advise on occupational health and safety (OHS) and security in the workplace
2. Manage conflict in the workplace	2.1. Assess conflict situation 2.2. Determine ways to resolve conflict with conflicting parties 2.3. Apply decision-making procedures to the business model for conflict resolution
3. Apply quality management systems and processes in the workplace	3.1. Determine essential requirements of a product using a quality management approach 3.2. Assess the relationship between customer and owner to identify process to achieve agreement on measurable quality features 3.3. Analyse quality investigation for improvement by involving individuals, groups and managers
4. Monitor work practices to ensure business objectives will be met	4.1. Develop strategies using management characteristics to meet business objectives 4.2. Analyse individual management objectives that would be applicable to the workplace 4.3. Produce a business model representing the activities of a sound management plan for a telecommunications workplace
5. Determine human factors when managing people and groups	5.1. Establish consultation processes between management and staff to resolve grievances 5.2. Analyse the interpersonal skills required of managers and team leaders using identified communications channels 5.3. Conduct discipline and performance feedback in the workplace to evaluate consultation processes, including principles of equal employment opportunity (EEO), cultural diversity and change management
6. Perform work using self-organisation	6.1. Evaluate methods of improving own productivity and perform a self-appraisal

ELEMENT	PERFORMANCE CRITERIA
principles	6.2. Evaluate the effectiveness of <i>information processing</i> methods used in the workplace applying time management techniques 6.3. Produce a report to communicate information efficiently and effectively in the workplace
7. Apply effective communication techniques to business meetings	7.1. Research the levels, directions and effectiveness of <i>channels</i> used when communicating in business 7.2. Develop a plan for managing business meetings in the workplace

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate information
- communication skills to:
 - work effectively in a group
 - conduct oral presentations to a group
- conflict management skills to deal with grievances, disputes or disagreements
- information technology skills for word processing and desktop research
- initiative and enterprise skills to identify improvements to quality
- literacy skills to prepare reports
- planning and organisational skills to plan, prioritise and organise own work
- problem solving skills to resolve issues in the workplace
- research skills to gather data and information

Required knowledge

- equity and diversity principles
- management procedures and policies
- OHS requirements
- organisational policy and procedures
- overview knowledge of behaviour theories:
 - Herzberg's two factor
 - McClelland's acquired needs
 - Vroom's expectancy

REQUIRED SKILLS AND KNOWLEDGE

- personal safety issues
- public sector legislation, codes of practice and other formal agreements that directly impact on business operations
- technical knowledge of telecommunications networks
- workplace and industry environment

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine the human factors which need to be analysed when managing people and groups • conduct business meetings applying effective communication techniques • determine essential requirements of a product applying quality management principles • monitor and implement training for staff • resolve problems and conflicts in a business environment • support human resource management program.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications workplace • relevant enterprise documentation, including human resources (HR) and quality management policies.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate running a productive business meeting and effective interview techniques • oral or written questioning to assess the required knowledge and skills • review of quality reports prepared by the candidate • evidence of consultations with staff and management.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG8143A Manage a telecommunications project. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant personnel may include:

- colleagues
- employee groups
- managers
- OHS committees and other people with specialist responsibilities
- employees
- specialist resource managers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • supervisors • unions.
<i>Decision-making procedures</i> may include:	<ul style="list-style-type: none"> • objectivity • qualitative • quantitative • subjectivity.
<i>Customer and owner</i> may include:	<ul style="list-style-type: none"> • customer: <ul style="list-style-type: none"> • external • internal • owner: <ul style="list-style-type: none"> • management • shareholders.
<i>Management characteristics</i> may include:	<ul style="list-style-type: none"> • authority • coaching • consultation • control • delegation • duties • management hierarchy • mentoring • ownership • partnership • responsibility • skilling and training.
<i>Communications channels</i> may include:	<ul style="list-style-type: none"> • industrial relations • internal • pro-active • public relations • retro-active.
<i>Information processing</i> may include:	<ul style="list-style-type: none"> • classification • flagging • follow-up • procedures • storage.
<i>Channels</i> may refer to:	<ul style="list-style-type: none"> • oral • non-verbal • written: <ul style="list-style-type: none"> • agendas • minutes

RANGE STATEMENT	
	<ul style="list-style-type: none"> • memos • letters and faxes • visual • electronic: <ul style="list-style-type: none"> • email • web notifications • social networking.

ICTPMG8143B Manage a telecommunications project

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to produce a plan and manage a telecommunications project using project management processes.

Application of the Unit

Telecommunication systems managers apply the skills and knowledge in this unit to implement specified projects that may be for an installation or upgrade of the telecommunications network.

Their job roles include producing plans for projects, developing risk management strategies, preparing budgets, planning for contingencies, developing procedures for commissioning the project and archiving project documentation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to manage a project</p>	<p>1.1 Develop a project proposal, including specific <i>project management processes</i></p> <p>1.2 Determine the role of major stakeholders and implications for the project</p> <p>1.3 Develop a risk management strategy and present to stakeholders for agreement</p> <p>1.4 Check for technical compliance of project with relevant standards</p> <p>1.5 Select project management computer software</p> <p>1.6 Conduct a skills audit of personnel and identify additional training requirements</p>
<p>2. Apply project management processes</p>	<p>2.1 Determine participants' responsibilities using critical path method (CPM) to draw a network diagram</p> <p>2.2 Sequence and coordinate <i>activities</i> required for a specific project</p> <p>2.3 Determine the critical path to optimise timing of the project deliverables</p> <p>2.4 Assess the viability of project estimates by preparing a budget</p> <p>2.5 Perform risk analysis to determine factors that may hinder the project deliverables</p> <p>2.6 Assess the progress of the project with <i>contingencies</i> to manage risks</p> <p>2.7 Determine any updates and recommendations in agreement with the customer</p> <p>2.8 Prepare contract variations if required</p>
<p>3. Complete work and document activities</p>	<p>3.1 Select procedures for commissioning if required and finish the project</p> <p>3.2 Produce final documentation with recommendations and present to customer</p> <p>3.3 Document and archive project documentation</p> <p>3.4 Obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate risks
- communication skills to work effectively in a group, present information and negotiate contract variations
- information technology skills for word processing, desktop research and using project management software
- literacy skills to prepare reports and contract variations
- numeracy skills to:
 - calculate budget requirements
 - determine workforce requirements
- problem solving skills to anticipate and respond to issues in project progress
- research skills to gather data, observe and analyse project issues.
-

Required knowledge

- organisational project management policy and procedures
- safety management:
 - personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - precautions required to minimise, control or eliminate hazards that may exist during work activities
 - relevant legislation, codes, regulations and standards
- workplace and industry environment:
 - commissioning procedures
 - industrial issues
 - roles and responsibilities
 - skills audit
- telecommunication communication systems
- site engineering
- project management processes and software.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare and apply project management process to a telecommunications project using project management software • develop a plan to manage a telecommunication project with a risk management strategy, budget and contingencies • complete work and project documentation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications site on which projects can be managed • computers and relevant computer software • relevant legislation, codes, regulations and standards.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral or written questioning to assess knowledge and skills in the project management process • direct observation of the candidate performing project management tasks • review of the candidate generated project documentation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG8142A Manage telecommunications workplace • ICTPMG7145B Undertake a telecommunications project • ICTPMG8149B Evaluate and use telecommunications management networks. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor changes to unit descriptor, application and two performance criteria.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse, evaluate and monitor business performance using appropriate network diagnostic models and tools in the management of open systems in IT/ICT communications networks.

Application of the Unit

Network, IT and engineering staff who analyse and monitor performance of telecommunications network apply the skills and knowledge in this unit.

Relevant job roles include managing and monitoring operational communications networks, such as asynchronous transfer mode (ATM), cellular networks, telephone exchanges and computer clusters.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to evaluate and use telecommunications management network</p>	<p>1.1 Research and evaluate network management architectures in common carrier and extended models</p> <p>1.2 Evaluate features and functionality of the Standards Committee International Telecommunications Union (ITU-T) TMN architecture and network models</p> <p>1.3 Research and evaluate techniques for collecting management information from network nodes using interrupts and polling</p> <p>1.4 Analyse configuration management problems and produce an assessment report on solutions by integrated network management systems</p>
<p>2. Analyse fault management and accountability procedures</p>	<p>2.1 Evaluate effectiveness of fault management processes from beginning to resolution, including automation of fault management</p> <p>2.2 Analyse reasons for alarm correlation with process analysis and apply <i>fault identification</i> to network problems</p>
<p>3. Plan for reliability and survivability</p>	<p>3.1 Research and produce a report on quality of service (QoS) in a telecommunications context, including relevant international standards and range and type of possible monitoring parameters for a QoS</p> <p>3.2 Analyse reasons for service levels in a telecommunications context</p> <p>3.3 Perform linear and exponential trend analysis on real or simulated data for a single <i>monitoring parameter</i></p> <p>3.4 Research and assess reliability and survivability in a telecommunications context with reference to disaster and security management policies and procedures</p> <p>3.5 Develop a disaster recovery plan for a telecommunications network</p>
<p>4. Research and report network management techniques</p>	<p>4.1 Research how accounting records are generated and used for both voice and data networks</p> <p>4.2 Analyse the process of generating bills from accounting records, configuration and customer information as appropriate</p> <p>4.3 Research and report on network management <i>techniques and standards</i> used for the IT/ICT systems and networks</p> <p>4.4 Research and report on standards used in the simple network management protocol (SNMP) network management model and the global system for mobiles (GSM) network</p>

	4.5 Analyse network management functions over a CNET network simulation or similar data network and produce a report on the findings
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate a range of complex technical data
- communication skills to work effectively within a group and present information
- information technology skills for word processing, using statistical data and desktop research
- literacy skills to prepare reports and read and interpret technical standards
- planning and organising skills to manage own work in short timeframes
- research skills to gather data and information
- technical skills to use telecommunications management networks.
-

Required knowledge

- administrative network management systems
- business model
- business processes
- enterprise solutions
- operations network management systems
- organisational policy and procedures
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • research and evaluate the architectural features and functions of network management systems • research and report: <ul style="list-style-type: none"> • major features, configuration and functions of management systems • on fault management and accountability procedures • major features and functions of QoS agreements • on network management techniques • analyse the major features of planning for reliability and survivability.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications operations site with a network management system • networked computers with relevant software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral or written questioning to assess knowledge of network management • direct observation of the candidate performing network management functions within a telecommunication system • review of research reports prepared by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN8180B Analyse a cellular mobile network system • ICTTEN8194A Investigate the application of cloud networks in telecommunications switching.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare information and formats for training, marketing and sales resources	1.1. Identify <i>target audience</i> , product type, <i>resources</i> type, format and purpose to be developed 1.2. Locate enterprise resources relating to <i>telecommunications product information and technical data</i> suitable for training such as marketing and sales materials, manufacturer's documentation and sites for suitable resources 1.3. Research a range of formats for the resources and materials to meet requirements of the identified audience 1.4. Determine specifications for the resource material and confirm with customer for approval
2. Develop resources and obtain approvals	2.1. Produce draft training, marketing and sales resources in consultation with relevant <i>user groups</i> and <i>training resource designers</i> 2.2. Check that resources are for the latest product available for sales and marketing 2.3. Produce clear and accurate training manuals and user guides for consultation 2.4. Confirm accuracy of information with <i>appropriate technical staff</i> prior to publication or production and obtain approvals
3. Monitor distribution and maintenance of resources	3.1. Develop schedule for distribution of resources consistent with product or facility release and list of users 3.2. Seek feedback on the content and presentation from users and make improvements as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to determine enterprise information requirements
- communication skills to:
 - explain product information

REQUIRED SKILLS AND KNOWLEDGE

- liaise with others to determine needs
- interpersonal skills to relate to customers and other members of staff
- literacy skills to:
 - develop written technical information resources
 - interpret technical specifications and related documentation
- PC skills to collate and present information
- planning and organisational skills to:
 - plan project requirements and priorities
 - prepare for distribution of product technical information for technical, sales and training staff
- research skills to gain and maintain relevant and current technical knowledge

Required knowledge

- common customer telecommunications applications and related equipment
- occupational health and safety (OHS) and regulatory requirements
- specific product knowledge and reference documents relevant to products
- technical terminology
- training resource development

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • interpret and use equipment and system manuals, specifications, relevant enterprise policy and documentation • develop training resources for different knowledge and skill levels • evaluate web-based training resources • implement improvements based on feedback • provide a range of resource types, including print based and web-based.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • workplace where technical information may be developed and distributed to technical, sales and training staff • relevant product technical information, databases, legislative requirements and other site and project related documentation.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of resources developed in different formats by the candidate for a range of training resources • oral or written questioning to assess knowledge of the process for researching and creating training resources.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTEDU5025A Develop and deliver training associated with new or modified products. <p>Aboriginal people and other people from a non-English</p>

ICTRFN2163B Install a satellite antenna

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and test satellite antenna equipment on dwellings, buildings, masts and other structures, or at ground level to receive signals from geostationary communications satellites.

Application of the Unit

Technical staff who install or replace satellite antennas on single and multiple dwellings, commercial buildings, telecommunications structures and at ground level apply the skills and knowledge in this unit.

Installations may be new or existing, standalone or part of a site with multiple antennas.

Licensing/Regulatory Information

Depending on the particular installation, organisational requirements and state or territory legislation, specific licences may be required in areas such as:

- working on roofs
- working at heights
- structure climbing
- tower rescue
- hoisting and mounting antennas
- installing feedlines
- electromagnetic energy (EME) awareness.

Users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for work on a satellite antenna	<p>1.1 Prepare for installation applying all relevant legislation, codes, regulations and standards and identify any safety issues</p> <p>1.2 Organise resources to be available on site</p> <p>1.3 Notify customer to arrange access to the site and possible outage</p> <p>1.4 Organise tools and equipment and ensure they are in safe working order and adjusted to manufacturer's specifications</p> <p>1.5 Obtain details of satellite to be acquired and precise details of satellite antenna location</p> <p>1.6 Determine the look angles for the satellite receiving antenna</p> <p>1.7 Determine polarisation angle of the satellite receiving antenna feedhorn</p> <p>1.8 Determine suitable position to mount the antenna with agreement from customer</p>
2. Assemble and mount satellite antenna and cables	<p>2.1 Assemble satellite antenna on site according to plans, specifications and enterprise guidelines using safe industry practices</p> <p>2.2 Connect coaxial cable to antenna and install lightning protection devices</p> <p>2.3 Mount satellite antenna onto installed mounting arrangements and set initial antenna azimuth, elevation and polarisation</p>
3. Test and align antenna system	<p>3.1 Connect installed antenna system to satellite receiver or test equipment and make final adjustments to azimuth, elevation and polarisation to optimise the signal level and quality</p> <p>3.2 Conduct performance tests according to manufacturer's specifications and enterprise guidelines</p> <p>3.3 Interpret test results and compare with manufacturer's design specifications and make adjustments</p>
4. Complete administrative duties	<p>4.1 Record test results and complete appropriate records</p> <p>4.2 Secure and clean up site to original condition in an environmentally safe manner</p> <p>4.3 Notify customer of work completion and obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer on operational and site matters
- literacy skills to interpret technical documentation, including antenna specifications and test equipment manuals
- numeracy skills to:
 - determine look angles from charts or by calculation
 - evaluate different types of technical data
 - interpret results
 - take radio frequency (RF) measurements
- planning and organisation skills to arrange site access
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - assemble antenna according to plans
 - physically align antenna
 - strip, prepare and terminate single, dual, triple and quad shield coaxial cable
 - use hand and power tools and operate test equipment
 - use multimeter to test coaxial cable
 - use signal level meter or spectrum analyser.
 -

Required knowledge

- antenna:
 - directivity
 - front to back ratio
 - operation of parabolic reflector and feedhorn
 - optimum placement
 - pattern
 - polarisation
- bit error ratio (BER)
- coaxial cable types and properties
- electromagnetic waves:
 - absorption by trees and buildings
 - awareness of exposure to electromagnetic radiation (EMR)
 - reflection

- legislation, codes of practice and other formal agreements that directly impact on antenna installation
- modulation:
 - bandwidth
 - individual spectrum shape of digital satellite television signals
- modulation error ratio (MER)
- RF spectrum:
 - terminology related to bands used for satellite broadcasting: (C, S, L, Ku, Ka bands)
- satellite antenna product knowledge
- signal level expressed in dBuV units
- specific OHS requirements that impact on the installation of satellite antenna equipment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assemble, install, align and test a satellite antenna according to plans and specifications, and site specific safety requirements • conduct performance tests according to manufacturer's specifications and enterprise guidelines.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • suitable site for satellite antenna installation • range of antennas and cables currently used in industry • range of general and test equipment required for satellite antenna installation and testing.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing a satellite receiving antenna given the satellite details and the satellite antenna coordinates • direct observation of the candidate preparing, securing and connecting a cable to the satellite antenna • direct observation of appropriate signal performance measurement and adjustment of azimuth, elevation and polarisation alignment • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN2164B Install a terrestrial antenna • ICTDRE3156B Install digital reception equipment.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • AS Communications Cabling Manual (CCM) Volume 1 • Australian building codes and regulations • AS/NZS 1367:2007 • AS/NZS 1768:2007 • AS 1417.1:1987 • enterprise standards • environmental protection • fire regulations • heritage legislation • industrial relations agreements including awards and enterprise agreements • international standards • local government • manufacturer's enterprise operating policy and procedures • national code • OHS Act • other services and utilities codes of practice and standards: <ul style="list-style-type: none"> • electricity • gas • water • power company requirements • Privacy Act • Spectrum Management Authority • statutory requirements • Trade Practices Act • traditional land owners.
<p>Safety issues may refer to:</p>	<ul style="list-style-type: none"> • devices to support construction personnel at heights: <ul style="list-style-type: none"> • elevated personnel vehicles • non-metallic ladders • platforms

	<ul style="list-style-type: none"> • external factors affecting works: <ul style="list-style-type: none"> • concentration of other services • terrain • weather conditions • precautions for unsafe weather conditions to undertake works: <ul style="list-style-type: none"> • heavy rains • high winds • severe cold • severe heat • thunderstorms • preparing for work at a telecommunications site with potential EMR hazards • safety issues in: <ul style="list-style-type: none"> • fall arrest • fall guarding • roof work.
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • fall arrest systems required on structure where no ladder cages installed • general equipment: <ul style="list-style-type: none"> • elevated platform • hand and power tools • ladder • winch • magnetic compass • personal protective equipment: <ul style="list-style-type: none"> • earmuffs • eye protection • dust protection • gloves • hard hats • personal reflecting jackets • safety boots • safety equipment: <ul style="list-style-type: none"> • aerial safety belts and lines • helmets • safety cages • traffic signs • warning signs and tapes • witches hats.

Details of satellite may include:	<ul style="list-style-type: none"> • horizontally polarised transponders: <ul style="list-style-type: none"> • forward correction error (FEC) • frequency • symbol rate • satellite longitude • satellite name • vertically polarised transponders: <ul style="list-style-type: none"> • FEC • frequency • symbol rate.
Satellite antenna location may include:	<ul style="list-style-type: none"> • latitude • longitude.
Look angles may refer to:	<ul style="list-style-type: none"> • azimuth angle relative to north • elevation angle relative to horizontal.
Suitable position may include:	<ul style="list-style-type: none"> • consideration of future building additions • consideration of growth of trees • ground level • outside wall of building • rooftop • unobstructed view in direction of satellite.
Coaxial cable may include:	<ul style="list-style-type: none"> • coaxial cable with flooded polyethylene (PE) jacket for underground applications • RG11 quad shielded • RG6 quad shielded.
Initial antenna azimuth, elevation and polarisation may be set according to:	<ul style="list-style-type: none"> • calibrated markings on antenna mount • inclinometer • magnetic compass • plumb bob.
Test equipment may include:	<ul style="list-style-type: none"> • field strength meter • multimeter • satellite meter • signal level meter • spectrum analyser.
Optimise the signal may refer to:	<ul style="list-style-type: none"> • achieving uniform performance across multiple transponders • BER pre FEC • carrier to noise ratio (C/N) • MER • signal strength in dBuV.

<i>Performance tests</i> may include:	<ul style="list-style-type: none">• signal quality across all satellite digital channels• signal strength of satellite digital television channels.

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and test receiving antenna equipment on dwellings, buildings, masts and other structures to receive terrestrial signals.

Application of the Unit

Technical staff who install or replace receiving antennas on single and multiple dwellings, commercial buildings and telecommunications structures apply the skills and knowledge in this unit.

This unit may apply to installations for digital radio and digital TV reception applications. Installations may be new or existing, standalone or part of a site with multiple antennas.

Licensing/Regulatory Information

Depending on the particular installation, organisational requirements, and state or territory legislation, specific licences may be required in areas, such as:

- working on roofs
- working at heights
- structure climbing
- tower rescue
- hoisting and mounting antennas
- installing feedlines
- electromagnetic energy (EME) awareness.

Users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for work on a terrestrial antenna	<p>1.1 Prepare for installation applying all <i>relevant legislation, codes, regulations and standards</i> and identify any <i>safety issues</i></p> <p>1.2 Organise resources to be available on site</p> <p>1.3 Notify customer to arrange access to the site and possible outage</p> <p>1.4 Organise <i>tools and equipment</i> and ensure they are in safe working order and adjusted to manufacturer's specifications</p>
2. Assemble and mount antenna and coaxial cable	<p>2.1 Assemble antenna on site according to plans, specifications and enterprise guidelines using safe industry practice</p> <p>2.2 Connect <i>coaxial cable</i> to antenna and install lightning protection devices</p> <p>2.3 Mount antenna to structure and set <i>polarisation and initial antenna azimuth and elevation</i></p>
3. Test and align antenna system	<p>3.1 Connect installed antenna system to appropriate <i>test equipment</i> and pan antenna to <i>optimise the signal</i> across all specified channel frequencies</p> <p>3.2 Conduct <i>performance tests</i> according to manufacturer's specifications and enterprise guidelines</p> <p>3.3 Interpret test results and compare with manufacturer's design specifications and make adjustments</p>
4. Complete administrative duties	<p>4.1 Record test results and complete appropriate records</p> <p>4.2 Secure and clean up site to original condition in an environmentally safe manner</p> <p>4.3 Notify customer of work completion and obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer on operational and site matters
- literacy skills to interpret technical documentation, including antenna specifications and test equipment manuals
- numeracy skills to:
 - evaluate different types of technical data
 - interpret results
 - take radio frequency (RF) measurements
- planning and organisation skills to arrange site access
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - assemble antenna according to plans
 - physically align antenna
 - strip, prepare and terminate single, dual, triple and quad shield coaxial cable
 - use hand and power tools and operate test equipment
 - use multimeter to test coaxial cable
 - use signal level meter or spectrum analyser.
 -

Required knowledge

- antenna:
 - directivity
 - front to back ratio
 - optimum placement
 - pattern
 - polarisation
- bit error ratio (BER)
- coaxial cable types and properties
- electromagnetic waves:
 - absorption by trees and buildings
 - awareness of exposure to electromagnetic radiation (EMR)
 - reflection
- legislation, codes of practice and other formal agreements that directly impact on antenna installation

- modulation:
 - bandwidth
 - individual spectrum shape of analog and digital television signals and DAB+ digital radio signals
- modulation error ratio (MER)
- RF spectrum:
 - Australian DAB+ digital radio channel frequencies
 - Australian television UHF and VHF channel plan (digital and analog)
 - terminology related to bands used for broadcasting (Bands I , II, III, IV and V)
- signal level expressed in dBuV units
- specific OHS requirements that impact on the installation of terrestrial antenna equipment
- television antenna product knowledge.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assemble, install, align and test a terrestrial antenna according to plans and specifications, and site specific safety requirements • conduct performance tests according to manufacturer's specifications and enterprise guidelines.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for antenna installation • range of antennas and coaxial cables currently used in industry • range of general and test equipment required for antenna installation and testing.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing a directional receiving antenna with a given direction of polarisation • direct observation of the candidate preparing, securing and connecting a coaxial cable to the antenna • direct observation of appropriate signal performance measurement and adjustment of azimuth alignment • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN2163B Install a satellite antenna • ICTDRE3156B Install digital reception equipment. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the assembly of an antenna system	1.1. Arrange access to the site according to required procedure 1.2. Apply all relevant <i>legislation, codes, regulations and standards</i> in the planning process 1.3. Obtain relevant antenna specifications, requirements and <i>radio communication site management book (RCSMB)</i> from <i>appropriate personnel</i> 1.4. Organise appropriate installation personnel to be available on site 1.5. Assess relevant hazard levels from RCSMB and take appropriate preventative action according to prescribed safety requirements 1.6. Identify <i>other antennas</i> at site location and notify those who may be affected by outages 1.7. Inspect the <i>antenna system</i> and <i>feedline</i> for physical damage before any further work is performed 1.8. Organise <i>tools and equipment</i> and ensure they are in safe working order and adjusted to manufacturer's specifications
2. Assemble, mount and align antenna and prepare feedline	2.1. Follow site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures 2.2. Assemble antenna system in a safe manner according to manufacturer's instructions 2.3. Mount antenna with correct azimuth and <i>polarisation</i> according to manufacturer's instructions and work practices 2.4. Install radome to antenna if provided 2.5. Install <i>lightning protection systems</i> according to plans and specifications 2.6. <i>Align</i> the antenna in the horizontal and vertical planes to maximise signal
3. Test antenna installation and document test results	3.1. Conduct <i>performance tests</i> in a safe manner according to manufacturer's specifications and instructions 3.2. Record, interpret and compare test results with manufacturer's data or the design specifications 3.3. Confirm correct overall operation of antenna system
4. Complete administrative tasks	4.1. Complete and store appropriate records and test results according to enterprise policy

ELEMENT	PERFORMANCE CRITERIA
and clean up site	4.2. Label radio frequency (RF) transmitter equipment and feed lines according to legislation 4.3. Notify all affected by outage that normal operation can resume 4.4. Clean, pack and store all tools and test equipment and organise transport in suitable protective casing where appropriate 4.5. Restore any changes made to the worksite to the client's satisfaction and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to provide advice and guidance to others or to seek assistance
- literacy skills to read and interpret manuals, specifications, relevant enterprise policy and documentation
- negotiation skills to enable interaction with site owner and organisations or individuals who may be affected by an outage
- numeracy skills to:
 - evaluate different types of technical data
 - interpret results
 - setup and check that equipment is calibrated
 - take RF measurements
- planning and organisational skills to organise and prepare installation resources
- problem solving skills to respond to typical antenna installation challenges
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - operate a range of specialised radio communications equipment
 - perform diagnostic procedures
 - use hand and power tools

Required knowledge

- current industry practice for antenna installation including:
 - earthing

REQUIRED SKILLS AND KNOWLEDGE

- lightning protection
- detailed knowledge of procedures and equipment required for:
 - antenna sweep testing to measure return loss
 - measurement of distance to fault
 - measurement of feedline insertion loss
 - measurement of forward and reflected RF power
- features of instrument and equipment test methods and performance requirements
- legislation, codes of practice and other formal agreements that directly impact on operation and testing of radio communications antennas and equipment
- overview knowledge of antennas and feedlines
- RF awareness, electromagnetic radiation (EMR) standards and specific OHS requirements that impact on the use and testing of radio communications instruments and equipment
- suitability of antennas to withstand extreme environments
- typical issues and challenges that occur in telecommunications antenna installations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • conduct installation of a communications antenna according to plans and specifications • assess hazard levels at an RF site and apply knowledge of safety precautions for self, fellow workers and the public at large • mount antenna, connect transmission line and physically align antenna • use appropriate test equipment to perform a return loss sweep measurement or a measurement of forward and reflected power on at least two different antenna systems.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for antenna installation • range of antennas and feedlines currently used in industry • range of general and test equipment required for antenna installation and testing.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing a directional communications antenna and adjusting its alignment • direct observation of the candidate preparing, securing and connecting a coaxial transmission line or waveguide to the antenna under test • review of sweep test reports completed by the candidate for two different antenna types • oral or written questioning of candidate to assess knowledge of antenna installation practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTRFN3070A Install mobile telecommunication in motor vehicles. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for installation of mobile telecommunications in motor vehicles	1.1. Obtain relevant legislation, codes, regulations and standards and follow occupational health and safety (OHS) and environmental requirements for the given work 1.2. Obtain mobile telecommunications equipment and manufacturer's installation documentation 1.3. Determine critical automotive electrical systems which need to be considered during the installation process to prevent any damage to the vehicle system 1.4. Verify installation requirements from customer and advise customer of issues affecting performance 1.5. Obtain tools and test equipment required for safe work practices
2. Install mobile equipment	2.1. Attach primary mobile telecommunications equipment to vehicle using fixing and fastening hardware clear of air bag deployment and according to customer, vehicle and equipment manufacturer and OHS requirements 2.2. Wire primary mobile telecommunications equipment to vehicle electrical system using industry wiring practices without impacting on other electrical systems 2.3. Attach and wire peripheral mobile telecommunications components of the installation to customer and manufacturer's requirements 2.4. Replace any existing fittings or vehicle components removed during installation and restore to original condition 2.5. Test the completed installation to verify that the operation of critical automotive electrical systems have not been affected and rectify if required
3. Complete installation	3.1. Restore vehicle and worksite to customer's satisfaction by disposing of waste materials according to environmental requirements 3.2. Note and document any damage which may have occurred during installation and report according to enterprise procedures 3.3. Instruct customer on operation of installed equipment 3.4. Complete all administrative tasks and file

ELEMENT	PERFORMANCE CRITERIA
	according to <i>enterprise requirements</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise and negotiate with customer and colleagues
- literacy skills to interpret technical documentation, specifications and service orders
- numeracy skills to take measurements and interpret results
- planning and organisational skills to organise and prepare installation resources
- problem solving skills to respond to typical installation challenges
- task management skills to adhere to all safety requirements and work systematically with required attention to detail
- technical skills to:
 - perform diagnostic procedures
 - use hand and power tools

Required knowledge

- customer service principles, particularly dealing with customers face to face
- electrical fundamentals
- electromagnetic radiation awareness
- enterprise or service-specific knowledge of products and services supplied
- objectives and methods of training for product use for customer education
- OHS principles and enterprise-specific job safety analysis (JSA) requirements
- overview knowledge of mobile radio and cellular radio product range and connection methods
- pre-installation enterprise-specific requirements
- quality assurance of enterprise requirements
- radio frequency (RF):
 - principles
 - safety
 - theory
- return path technology
- telephony principles to support return path awareness

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> install cable loom, wiring mobile and peripheral equipment test the equipment to verify correct installation and operation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites on which installation may be conducted use of testing equipment currently used in industry relevant regulatory and equipment documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate undertaking installation review of installation documentation completed by the candidate oral or written questioning to assess knowledge of tests and types of systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTRFN3055A Install a radio communications antenna and feedline. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally</p>

EVIDENCE GUIDE

	<p>appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communication Industry Forum (ACIF) standards and codes
- AS 3901:
- AS 3902:
- AS 4346:
- AS 2809.1:
- AS 2772.1:
- International Standards ISO 9000, ISO 9001
- OHS
- Environmental Protection Act
- Trade Practices legislation
- safety regulations for specialised vehicles, such as petrol tankers, public service vehicles, fire engines and gas driven vehicles.

RANGE STATEMENT	
<i>OHS and environmental requirements</i> may include:	<ul style="list-style-type: none"> • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves • safety glasses • safe working, practices such as the safe use and handling of: <ul style="list-style-type: none"> • materials • tools and equipment • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management.
<i>Mobile telecommunications equipment</i> may include:	<ul style="list-style-type: none"> • digital radio communications Association Public Safety Communications Officials standard (APCO-25) • GPS • mobile data terminal • powered cellular mobile equipment cradle incorporating: <ul style="list-style-type: none"> • Bluetooth device • charger • power and external antenna connections • speaker, microphone and external antenna • terrestrial trunked radio • two-way transceiver: <ul style="list-style-type: none"> • high frequency (HF) • ultra-high frequency (UHF) • very high frequency (VHF).
<i>Critical automotive electrical systems</i> may include:	<ul style="list-style-type: none"> • air bags • antilock braking system circuitry • engine management modules • mobile data systems for taxis • patient monitoring equipment • police communications computer network • vehicle alarm systems • vehicle computers.
<i>Installation requirements</i> may include:	<ul style="list-style-type: none"> • position of external speaker, microphone and external antenna • replacement or repositioning of existing equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • type of equipment.
<i>Issues affecting performance</i> may include:	<ul style="list-style-type: none"> • excessive length of coaxial cable • external antenna mounted too close to metal surfaces • external antenna mounted too close to other antennas • external antenna mounted too low on vehicle • inappropriate or low efficiency antenna.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • cable identification kit • hand tools: <ul style="list-style-type: none"> • crimping tools • hole punch • nibbling tool • pliers • reamer • screwdrivers • terminating tools • power tools: <ul style="list-style-type: none"> • drill • hole saw • soldering iron.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • cellular phone tester • directional power meter • multimeter • site master cable and antenna analyser • standing wave ratio indicator • test lamp.
<i>Primary mobile telecommunications equipment</i> may include:	<ul style="list-style-type: none"> • powered equipment cradle for cellular handset • two-way radio transceiver.
<i>Fixing and fastening hardware</i> may include:	<ul style="list-style-type: none"> • adhesives: <ul style="list-style-type: none"> • double sided tape • injected polystyrene foam • cable ties • equipment brackets • expanding anchors suitable for sheet metal • heat shrink • plastic sheathing

RANGE STATEMENT	
	<ul style="list-style-type: none"> • screws and nuts • spiral wrap.
<i>Industry wiring practices</i> may include:	<ul style="list-style-type: none"> • avoiding running power leads and antenna cable in parallel with vehicle wiring over long distances • maintaining as great a distance as possible between radio power leads and vehicle's electronic modules and wiring • powering mobile unit directly from the battery using waterproof fuse holder • routing and securing under hood wiring from mechanical hazards, such as exhaust and moving parts • using caution when routing cables to avoid chafing and pinching of wires.
<i>Peripheral mobile telecommunications components</i> may include:	<ul style="list-style-type: none"> • external antenna • external speaker • microphone.
<i>Test</i> may include:	<ul style="list-style-type: none"> • functionality: <ul style="list-style-type: none"> • intended operation of all functions of the mobile equipment • operation of entertainment units.
<i>Administrative tasks</i> may include:	<ul style="list-style-type: none"> • completing job orders and submitting to appropriate enterprise organisational unit • completing test sheets as per specification and logging test instrument usage • completing warranty forms • following quality control procedures • handing over installation briefs, documents and equipment manuals to operational staff • recording test results.
<i>Enterprise requirements</i> may relate to:	<ul style="list-style-type: none"> • commercial vehicle • domestic vehicle • police and emergency vehicle • reporting • work procedures for implementing maintenance and installation work.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for WiMAX equipment installation	1.1. Arrange access to the site according to required procedure 1.2. Verify <i>customer requirements</i> , type of <i>WiMAX CPE equipment</i> and location of proposed installation according to the plans obtained from <i>authorised personnel</i> 1.3. Prepare <i>tools, equipment</i> and CPE required for installation
2. Install the outdoor unit and antenna	2.1. Make worksite safe by identifying existing and potential <i>hazards</i> 2.2. Comply with <i>relevant legislation, codes, regulations and standards, occupational health and safety (OHS) and environmental requirements</i> 2.3. Mount the outdoor unit according to manufacturer's specifications and enterprise plans 2.4. Connect the outdoor unit to the indoor unit using specified cable 2.5. Position the antenna towards the distant WiMAX base station for preliminary orientation 2.6. Align the unit for maximum signal strength using received signal strength indication (RSSI) display 2.7. Record the installation and alignment details 2.8. Connect <i>indoor unit and accessories</i> to customer equipment
3. Test the performance of the installation	3.1. Test WiMAX CPE according to manufacturer's procedures 3.2. Check operating environment does not degrade test results 3.3. Evaluate test results to verify operational performance with customer
4. Restore site and complete documentation	4.1. Restore worksite to the customer's satisfaction 4.2. Complete reports on installation 4.3. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers on technical and operational matters
- literacy skills to interpret technical documentation and standards and incorporate technical language into written reports
- numeracy skills to interpret technical data such as specifications of equipment operations
- problem solving skills to address common operational problems in installation
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technology skills to:
 - install outdoor units and antenna
 - connect to indoor units
 - test WiMAX equipment

Required knowledge

- WiMAX:
 - products
 - protocols IEEE 802.16 and IEEE 802.11
- microwave propagation and losses caused by foliage, buildings, and metallic structures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install and test WiMAX CPE outdoor unit • install indoor unit and connect to customer network • reinstate site, document and complete installation reports.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which WiMAX installations can be conducted • tools and equipment required for installation • relevant regulatory and equipment documentation..
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate installing and connecting WiMAX CPE equipment.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTDRE3165A Install a complex digital reception system • ICTRFN4095A Conduct radio frequency measurements. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE	
	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Customer requirements</i> may include:</p>	<ul style="list-style-type: none"> • backup procedures • bandwidth • congestion • network connectivity • power back up • quality of service (QoS) • redundancy • wireless access.
<p><i>WiMAX CPE equipment</i> may include:</p>	<ul style="list-style-type: none"> • indoor unit • outdoor unit • USB unit.

RANGE STATEMENT	
Authorised personnel may include:	<ul style="list-style-type: none"> • customer • network administrator • network planner • project manager • supervisor.
Tools may include:	<ul style="list-style-type: none"> • crimping tool • cable stripping tool • drill bits • screwdrivers • spanner • wall anchors and screws.
Equipment may include:	<ul style="list-style-type: none"> • compass • global positioning system (GPS) • inclinometer • laptop.
Hazards may include:	<ul style="list-style-type: none"> • building debris • earth potential rise • glass fibre • live power lines • manual handling • radio frequency (RF) equipment emitting radiation.
Relevant legislation, codes, regulations and standards may include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) electromagnetic radiation (EMR) standard • AS/NZS 4268:2008 • AS/NZS 4295:2004 • AS/NZS 4415.1:2003 • AS/NZS 4582:1999 • AS/NZS 4583:1999 • AS/NZS 4769.1:2000 • AS/NZS 4770:2000 • Australian building codes and regulations • Australian standards • enterprise standards

RANGE STATEMENT	
	<ul style="list-style-type: none"> • environmental protection • equipment standards • European Telecommunications Standards Institute (ETSI) EN 300 220-1 • ETSI EN 301 406 • fire regulations • heritage legislation • international standards • intrinsically safe lightning protection • local government • OHS • Radcoms Act • RSS-119 • site engineering standards • spectrum planning reports • Telecommunications Act • Telecommunications Industry Alliance and Electronic Industries Alliance (TIA/EIA) standards.
<p><i>OHS and environmental requirements</i> may relate to:</p>	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • plastic • rubber • leather • head protection • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safety harness • safety line • safe working practices, such as the safe use and handling of:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<p><i>Indoor unit and accessories</i> may include:</p>	<ul style="list-style-type: none"> • correct cable: <ul style="list-style-type: none"> • crossover • straight-through • optional extension module: <ul style="list-style-type: none"> • voice over internet protocol (VoIP) • wireless fidelity (WiFi) • power unit: <ul style="list-style-type: none"> • AC power • DC power adaptor • DC power supply • protection device: <ul style="list-style-type: none"> • lightning protection • surge protection.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to construct radio communications device	1.1. Prepare for construction applying all relevant <i>legislation, codes, regulations and standards</i> and identify any <i>safety issues</i> 1.2. Determine details of <i>radio communications device</i> to be constructed from <i>project specifications</i> 1.3. Produce wiring diagram, <i>component list</i> and <i>block diagram</i> of the radio communications device to prepare for the construction and testing of the device 1.4. Draw up plans showing the <i>method of construction</i> and the <i>enclosure details</i> 1.5. Designate suitable <i>test points</i> along the signal flow paths on circuit diagram for testing of the functional blocks 1.6. Produce test setups to evaluate the performance of the radio communications device 1.7. Obtain <i>tools</i> and <i>test equipment</i>
2. Construct and test radio communications device	2.1. Assemble radio communications device according to circuit diagram and layout drawing 2.2. Test <i>performance</i> and operation of individual functional blocks and overall radio communications device according to the test regime 2.3. Transmit or receive signals to evaluate the qualitative performance through radio communications device
3. Complete documentation and clean up worksite	3.1. Document results of test procedures and compare with initial project specifications 3.2. Finalise project report and make recommendations for improvement to the radio communications device 3.3. Remove waste from worksite according to environmental requirements and restore site to safe condition

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to liaise with technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports in required formats
- numeracy skills to take test measurements, interpret results and evaluate performance
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving skills to troubleshoot and manage contingencies to adapt construction and test procedures to requirements of radio communications device
- research skills to source components from supplier catalogues, databases and websites
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - operate an oscilloscope and radio frequency (RF) test equipment
 - solder, construct and prepare wires and cables
 - use hand tools

Required knowledge

- electrical symbols and circuit diagrams
- general principles of radio communications and radio propagation
- identification of:
 - components
 - device pinouts
 - part numbers
 - polarities
 - ratings
- operation and characteristics of:
 - amplifiers
 - demodulators
 - mixers
 - modulators
 - oscillators

REQUIRED SKILLS AND KNOWLEDGE

- principles of modulation
- terminology related to radio communications.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and prepare for construction of a radio communications device • prepare wiring diagram and component list • construct radio communications device • test radio communications device.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where radio communications device may be constructed and tested • use of test instruments currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate constructing and testing a radio communications device • oral or written questioning of required skills and knowledge • evaluation of report prepared by the candidate outlining construction, testing procedures, results and recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN2140A Use hand and power tools • ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where <i>bold italicised</i> text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for use of instruments and field equipment	1.1. Plan and prepare work according to site procedures, <i>operating environment</i> and relevant <i>legislation, codes, regulations and standards</i> 1.2. Select <i>measurements</i> required to meet performance outcomes 1.3. Read, interpret and use equipment and system manuals, specifications and relevant organisation policy to determine work requirements 1.4. Select and ensure <i>equipment</i> for work activities is ready for operation 1.5. Determine, address and report <i>potential risks and hazards</i> and <i>environmental issues</i> 1.6. Adhere to relevant emergency procedures, policy guidelines and OHS procedures to ensure safety of personnel and plant
2. Test the instruments and field equipment	2.1. Perform safety checks according to instrument and equipment manual and organisational procedures 2.2. Confirm equipment is calibrated and calibration label is within approved timeframes 2.3. Select appropriate traceable calibrated equipment where measurements are required to be traceable to the National Measurements Act 2.4. Label and report damaged or unsafe instruments and field equipment and send for service 2.5. Update operational log books
3. Operate instruments and field equipment	3.1. Optimise instrument and equipment settings for the particular measurement or analysis 3.2. Perform measurements with the optimum precision given field and technical constraints 3.3. Assess data for accuracy and precision against quality control information, known standards and references within <i>measurement uncertainty</i>
4. Maintain instruments and field equipment	4.1. Use fault finding techniques to verify and rectify faults 4.2. Perform preventative <i>maintenance</i> within limits of authorisation and report equipment wear and faults 4.3. Replace defective parts and make adjustments according to equipment specifications 4.4. Seek expert help from appropriate colleagues where problems are encountered

ELEMENT	PERFORMANCE CRITERIA
	4.5. Update maintenance and calibration records according to organisation procedures
5. Commission new instruments and equipment	5.1. Arrange commissioning procedures with manufacturer's agent 5.2. Unpack, check and assemble instruments and equipment according to manufacturer's warranty requirements 5.3. Check instrument and equipment performance against specifications prior to acceptance of item 5.4. Prepare operating instructions and make available to relevant personnel

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse test results
- communication skills to liaise with internal and external personnel on technical, operational and legal site matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to:
 - check that equipment is calibrated
 - evaluate technical data
 - interpret results
 - take radio frequency (RF) measurements
- planning and organisational skills to organise and maintain a range of instruments and equipment
- problem solving skills to find simple equipment and instrument faults
- task management skills to work systematically with required attention to detail and adherence to safety requirements
- technical skills to:
 - operate radio communications test and diagnostic equipment
 - perform diagnostic and fault-finding procedures
 - use hand and power tools

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- features and operating requirements of calibrated equipment and test equipment:
 - digital radio communications measuring equipment
 - RF termination
 - spectrum analyser
 - power meter
 - modulation analyser
- features of instrument and equipment test methods and performance requirements
- legislation, codes of practice and other formal agreements that directly impact on operation and testing of radio communications instruments and equipment
- manufacturer's requirements for operation and testing of radio communications equipment and calibrated equipment
- measurements according to test specifications
- radio communications instruments and equipment
- specific OHS requirements that impact on the use and testing of radio communications instruments and equipment
- typical issues and challenges that occur with radio communications instruments and field equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare, operate and maintain a range of instruments and field equipment appropriate to a radio communications environment • comply with site risk control, OHS, environmental, quality and communication requirements • apply knowledge of technical procedures and requirements for different types of equipment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which instruments and field equipment can be operated • use of field measurement equipment currently used in industry • relevant instrument and equipment manuals and other procedural documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate operating and maintaining radio communications equipment • evaluation of measurement results and reports produced by the candidate • evaluation of the candidate's oral or written reports on findings with recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN4095A Conduct radio frequency measurements. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Operating environment may include:

- day or night
- dry or wet
- field environment
- heights or on roof tops
- laboratory
- old underground workings and voids
- stable or broken ground
- various natural landscapes.

RANGE STATEMENT	
<p><i>Legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA): <ul style="list-style-type: none"> • assignment guidelines • Business Operating Procedures (BOPs) • CIs • Radiocommunications Assignment and Licensing Instruction (RALIs) • spectrum planning reports • technical standards • WIs • Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) EMR standard • Australian building codes and regulations • Australian standards • enterprise standards • environmental protection • equipment standards • fire regulations • heritage legislation • international standards • intrinsically safe lightning protection • local government • OHS • Radcoms Act • site engineering standard • Telecoms Act.
<p><i>Measurements</i> may include:</p>	<ul style="list-style-type: none"> • bandwidth • blocking • carrier frequency • cross modulation • electric field strength (E field) • forward RF power • frequency deviation • harmonic and spurious levels • intermodulation distortion products (IMD) • intermodulation • magnetic field strength (H field) • 'mask'

RANGE STATEMENT	
	<ul style="list-style-type: none"> • modulation • noise level • occupied spectrum • receiver sensitivity • reflected RF power • return loss • RF power • VSWR.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • bit error rate tester (BERT) • constellation analyser • data logger • field strength meter • generators • gravity meter • internet protocol (IP) transmitter and receiver • memory magnetometer • mobile communications • modulation analyser • motors • personal protective equipment for RF • portable PC with testing and diagnostic software • return loss measurement set • RF power meter • satellite navigation system • spectrum analyser • transient electromagnetic (TEM) transmitter and receiver • theodolite • two-way radios.
<i>Potential risks and hazards</i> may include:	<ul style="list-style-type: none"> • adverse weather conditions: <ul style="list-style-type: none"> • electrical storms • extreme heat • fires • floods • earth potential rise (EPR) • EMR • elevated plant • emissions • hazardous chemicals

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hazardous gases • laser output • underground plant.
<i>Environmental issues</i> may include:	<ul style="list-style-type: none"> • dust • flora and fauna • materials • noise • run-off • spills • waste management and disposal • water quality.
<i>Measurement uncertainty</i> may include:	<ul style="list-style-type: none"> • intermittent faults • power supply fluctuations • temperature variations • uncalibrated equipment.
<i>Maintenance</i> may include:	<ul style="list-style-type: none"> • calibration of equipment • cleaning and storing • completing usage records • replacing 'remove and replace' components • working adjustments to tolerances.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to conduct RF measurements	1.1. Arrange access to the site according to required procedure 1.2. Determine type of <i>measurements</i> required based on the <i>industry environment</i> 1.3. Assess the impact of conducting measurements on the network and advise customers and <i>appropriate person</i> accordingly 1.4. Assess previous <i>measurement data</i> if available
2. Conduct RF measurements	2.1. Check that prescribed safety arrangements associated with RF radiation are in place otherwise take corrective action 2.2. Monitor work activity to ensure it meets site specifications, and <i>relevant legislation, codes, regulations and standards</i> 2.3. Configure <i>test equipment</i> according to manufacturer's specifications 2.4. Conduct measurements according to planned requirements 2.5. Assess RF levels at occupational and non occupational distances 2.6. Record all measurements and test configurations
3. Analyse measurement outcomes	3.1. Verify measurements against relevant standards and vendor specifications 3.2. Assess problems and variance for corrective action and notify appropriate person according to enterprise procedures 3.3. Record processes and recommendations
4. Document measurement results	4.1. Complete customer documentations 4.2. Notify customer to obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- analytical skills to review and evaluate measurements
- communication skills to provide advice and guidance to others or to seek assistance
- literacy skills to interpret technical documentation
- numeracy skills to check that equipment is calibrated, to take RF measurements, interpret results and evaluate different types of technical data
- planning and organisational skills to organise and prepare for measurements
- problem solving skills to minimise measurement errors
- task management skills to work logically and systematically with required attention to detail when following complex test procedures
- technical skills to:
 - operate a range of specialised radio frequency test equipment and
 - perform diagnostic procedures
 - use hand and power tools

Required knowledge

- detailed knowledge of:
 - analog and digital modulation methods
 - logarithmic units
 - standard test procedures and test setups
 - transmitter and receiver architectures
- RF:
 - instrument and features and types
 - radiation hazards
 - safety practices

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and conduct RF test using RF test equipment and instruments • measure, record and interpret test results • monitor work to meet related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for RF measurements • a range of test equipment and items to test • relevant regulatory and equipment documentation that impact on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. the following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate setting up equipment and performing RF measurements • review report of RF measurements prepared by candidate • oral or written questioning of the candidate to support the above measurement results • candidate report on findings and making recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN4158A Select an antenna system for radio communications • ICTRFN4159A Identify and test cellular network equipment • ICTRFN4174A Undertake radio communications signals monitoring • ICTRFN4177A Install radio communications base station equipment

EVIDENCE GUIDE

- ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network
- ICTTEN4202A Install and test an radio frequency identification system
- ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment
- ICTCMP5176A Undertake radio communications site audit.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised wording, if used in the performance criteria, is detailed below.** Essential operating

RANGE STATEMENT

conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Measurements may relate to:

- antenna
 - bandwidth
 - beamwidth
 - impedance
 - radiation pattern
 - return loss
- bit error rate (BER) as a function of received signal level (RSL)
- carrier to noise ratio
- electric field strength
- electromagnetic interference (EMI) and electromagnetic compatibility (EMC) measurements:
 - conducted
 - radiated
- impedance
- modulation error rate (MER)
- receiver:
 - 20 dB quieting
 - blocking
 - cross modulation
 - image frequency
 - intermodulation
 - sensitivity
 - SINAD
 - total harmonic distortion
- RF amplifier:
 - gain
 - stability of RF amplifier when
 - operating at 10% higher or lower supply voltage
 - operating at extreme humidity
 - operating at extreme temperatures
 - operating into a complex load impedance
 - noise figure
- RF hazard measurements:

RANGE STATEMENT

	<ul style="list-style-type: none"> • non-occupational worker • occupational worker • RF measurements on passive devices: <ul style="list-style-type: none"> • return loss • S parameters • transmission loss • spectrum surveillance • sweep measurements • transmission line measurements • transmitter: <ul style="list-style-type: none"> • adjacent channel power • carrier frequency • carrier frequency stability • carrier power level • deviation limiting • frequency deviation • harmonic power level • modulation depth • modulation response • occupied bandwidth • out of band spurious emissions • phase deviation • phase noise • spectrum mask • transient frequency behaviour • two-tone intermodulation distortion • unwanted spurious emissions.
<p><i>Industry environment</i> may include:</p>	<ul style="list-style-type: none"> • aeronautical • aerospace • broadcasting: <ul style="list-style-type: none"> • AM in MW band • analog • cable • digital DAB+ • digital DRM • digital DVB • FM stereo in VHF band • global positioning system (GPS)

ICTRFN4158A Select an antenna system for radio communications

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required for the selection of an antenna system for radio communications to meet given performance requirements.</p> <p>This unit does not cover the estimation or analysis of radio signals within the desired area of coverage or over a specific radio path. This is covered in ICTRFN5179A Evaluate and analyse radio frequency (RF) signal coverage plots.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff from regulatory authorities or other private and public organisations apply the skills and knowledge in this unit. They combine technical radio communications skills with broader organisational and administrative skills to evaluate and select antenna systems in a range of commercial and community contexts.</p> <p>Technical staff may be responsible for small projects or parts of larger projects, and for the coordination and direction of small technical groups.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to select antenna system	1.1. Establish extent of project from design brief or specification within a team environment 1.2. Obtain and review plans and drawings of existing or proposed installation site 1.3. Determine whether <i>antenna system</i> hardware requires a secure hut or shelter 1.4. Determine <i>antenna requirements</i> and antenna <i>feedline requirements</i> from design brief or specifications and research available commercial products 1.5. Determine earthing components to meet regulatory and earthing requirements of antenna system 1.6. Prepare the antenna feedline route to comply with job specifications and regulatory requirements 1.7. Identify installation options and assess against performance requirements and customer requirements
2. Select antenna system	2.1. Evaluate potential antenna system solutions which satisfy required performance, budgetary and regulatory requirements, and are suitable for installation in the specified environment 2.2. Make recommendations and select optimum antenna system
3. Document antenna system selection	3.1. Document calculations, final specifications and reasons for selection of antenna system 3.2. Prepare a final report, including documentation and drawings of selected antenna system and distribute to <i>appropriate persons</i> in accordance with enterprise policies and procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> communication skills to liaise with internal and external personnel on technical,

REQUIRED SKILLS AND KNOWLEDGE

- operational and commercial matters
- literacy skills to:
 - interpret technical documentation
 - write final reports in required format
 - numeracy skills to:
 - convert decibel gain values to ratios
 - evaluate and calculate effective isotropic radiated power (EIRP)
 - evaluate different types of technical data
 - interpret results
 - planning and organisational skills to:
 - plan, prioritise and monitor own work
 - coordinate teamwork with others
 - problem solving and contingency management skills to adapt requirements of particular sites and customers, and modify activities depending on differing operational contingencies, risk situations and environments
 - research skills to examine and evaluate antenna patterns, specifications and data, and be able to synthesise antenna systems from commercially available products
 - spatial skills to interpret and convert between two-dimensional and three-dimensional antenna patterns
 - task management skills to work systematically with required attention to detail

Required knowledge

- antenna and propagation theory and industry practice
- antenna array theory
- transmission line theory and industry practice
- specific issues related to antenna installations and the creation of particular radiation patterns

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test cellular network equipment	1.1. Produce an alarm list from <i>cellular network</i> subsystem which shows faults or <i>disturbances</i> 1.2. <i>Reset sub-element</i> according to manufacturer's specifications 1.3. Clear or block alarms and <i>adjust alarm thresholds</i> according to manufacturer's specifications
2. Test cellular network sub-element equipment	2.1. Test parameters influencing <i>cell performance</i> and record performance for a range of field settings 2.2. Test, record and report <i>sub-element</i> performance according to manufacturer's specifications 2.3. Run diagnostic test on sub-element 2.4. <i>Swap</i> the working or executing sub-element with the spare or idle unit to allow software upgrades 2.5. Swap the working or executing sub-element with the spare or idle sub-element to allow replacement of hardware
3. Rectify faults in cellular network equipment subsystems	3.1. Locate <i>faulty sub-element</i> within <i>subsystem</i> and identify fault 3.2. Identify faulty parts or equipment and <i>replace or repair</i> according to service agreement 3.3. Record fault details and rectification summary 3.4. Hand over and sign off with customer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to liaise with internal and external personnel on technical requirements • literacy skills to read, interpret and prepare technical documentation • numeracy skills to read and interpret measurements and report to supervisors • planning and organisational skills to plan the test in coordination with supervisors • safety awareness skills to: <ul style="list-style-type: none"> • apply precautions and required action to minimise, control or eliminate hazards

REQUIRED SKILLS AND KNOWLEDGE

that may exist during work activities

- work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - install network equipment
 - perform fault clearance
 - select and use appropriate test equipment and practices to suit different network applications
 - recognising and interpreting alarms

Required knowledge

- anti static protection
- cellular antenna installation
- electrical concepts and measurements
- electromagnetic radiation (EMR) and mitigation
- network components and their basic functions
- occupational health and safety (OHS) relevant to work activity
- overview knowledge of:
 - 1st, 2nd and 3rd generations of cellular networks
 - features and operating requirements of test equipment
- procedures for repairs and swap activities
- test operation of cellular network equipment
- testing network components
- voltage levels and polarity

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • measure cell performance • measure output power received at around a cell • produce an alarm list and use this to locate faults • run diagnostic tests on sub-elements and subsystems • locate and repair faulty sub-elements and subsystems.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for mobile phone network tests and measurements • performance testing software • relevant legislation and documentation to test and repair network equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing measurements and repairing faults • review of fault details, rectification summary and recommendations prepared by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN3056A Install telecommunications network equipment • ICTTEN3089A Repair and replace telecommunications network hardware. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to monitor radio communications signals for interference management, investigation, licence conditions intelligence and frequency occupancy purposes with discretion to determine appropriate action according to relevant Acts and regulations.</p> <p>Individuals must comply with radio communications transmitter licensing requirements and operator certificates for maritime and aeronautical services and occupational health and safety (OHS) electromagnetic radiation (EMR) licensing requirements as appropriate.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Field officers from regulatory authorities or other private and public organisations apply the skills and knowledge in this unit. They combine technical skills with broader organisational and administrative skills to monitor and action non-compliance of radio communications.</p> <p>Field officers may be responsible for small projects or parts of larger projects, and for the coordination and direction of small groups working on sites remote from the organisational headquarters.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for radio communications signals monitoring	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards , including OHS issues and possible hazards 1.2. Identify the specific triggers that lead to the need for monitoring activities 1.3. Determine monitoring coordinates as a result of a client complaint 1.4. Determine the extent and nature of the communications problem through desktop research and relevant information 1.5. Enter necessary details into the appropriate work management system
2. Plan and organise monitoring activities	2.1. Determine monitoring activities and responsibilities according to organisational requirements 2.2. Determine procedures, timeframes, resources and equipment requirements for self and others according to organisational and task requirements 2.3. Obtain resources and equipment and prepare according to organisational and task requirements 2.4. Identify communication strategies to make clients aware of their obligations under relevant legislation, codes, regulations and standards according to organisational policy and procedures 2.5. Update and review procedural and information guides as required 2.6. Implement risk management strategies as required according to set procedures and timelines
3. Undertake monitoring	3.1. Carry out monitoring activities according to organisational and legislative requirements, including OHS 3.2. Use and maintain resources and equipment according to organisational and task requirements 3.3. Identify and confirm communications and/or interference problems 3.4. Locate position and source of communications and/or interference problems 3.5. Identify the organisation responsible for the communications and/or interference problems 3.6. Undertake compliance analysis of unlicensed, unauthorised and non-standard equipment if

ELEMENT	PERFORMANCE CRITERIA
	<p>appropriate</p> <p>3.7. Provide advice to operational and technical subordinate officers according to organisational policy and procedures as required</p>
<p>4. Act on non-compliance</p>	<p>4.1. Provide information to client and take action as a result of failure to achieve compliance according to organisational guidelines and legislative requirements based on the seriousness of the possible breach</p> <p>4.2. Identify contraventions of compliance requirements and report recommended action according to organisational policy and procedures</p> <p>4.3. Refer serious or complex situations for advice or resolution according to organisational policy and procedures</p> <p>4.4. Use relevant collection methods to gain information and evidence about elements of each offence to be prosecuted and provide according to legislation, procedures and rules of evidence</p> <p>4.5. Conduct and fulfil court attendance requirements in compliance with organisational guidelines as required</p> <p>4.6. Ensure case is finalised according to court outcomes and organisational guidelines</p>
<p>5. Provide reports and information</p>	<p>5.1. Interpret requirements of relevant legislation and provide information and advice on technical and operational matters</p> <p>5.2. Advise clients affected by outcomes within limits of privacy legislation</p> <p>5.3. Maintain records and prepare and provide reports according to organisational requirements</p> <p>5.4. Update any compliance management systems with relevant findings and outcomes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- communication skills to liaise with a diverse range of clients and staff to promote awareness and action on radio communications issues
- information technology skills for word processing, using statistical data and desktop research
- literacy skills to write reports using standard formats and to read and interpret a range of technical and legal information
- oral presentation skills required for legal settings
- problem solving skills to respond to typical challenges encountered in different radio communications monitoring situations
- research and analysis skills to gather and interpret technical data
- safety skills to operate equipment and vehicles
- technical skills to:
 - operate receiving equipment, antenna systems, remote monitoring systems and workplace equipment
 - operate direction finding equipment
 - use HF, VHF, UHF and microwave receiving techniques
 - use triangulation techniques

Required knowledge

- legislation, codes of practice and other formal agreements that directly impact on monitoring of radio communications signals:
 - specifics of what constitutes an offence
 - responses for non-compliance
 - environmental requirements
 - privacy issues
- specific OHS requirements that impact on monitoring in terms of safety of self and public safety:
 - RF personal protective equipment
 - EMR at RF transmission sites
 - building site induction requirements
 - environmental conditions
- specific monitoring procedures for radio communications and relevant organisational policies and procedures
- characteristics of different environments and workplaces where monitoring takes place
- radio communications systems used in the relevant work context
- specific issues related to antenna performance:
 - directivity
 - gain

REQUIRED SKILLS AND KNOWLEDGE

- height
- effects of cable attenuation and impedance mismatch
- effects of ionosphere:
 - HF propagation
 - warning, fadeout, solar flares
 - ionospheric prediction service (IPS)
- modulation methods, AM, FM and digital formats
- field strength surveys and EMR measurements
- propagation properties of terrain
- RF awareness

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> plan and conduct radio communications signals monitoring activities under general direction in a range of different contexts comply with site risk control, OHS, environmental, quality and communication requirements apply knowledge of appropriate procedures and techniques for efficient and effective preparation and operation, including calibration, maintenance and commissioning of instruments and field equipment appropriate to a communications environment site respond effectively to different challenges and operational requirements for monitoring, including coping with difficulties, irregularities and breakdowns in routine.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites on which monitoring may be conducted use of monitoring and testing equipment currently used in industry relevant regulatory and equipment documentation that impact on monitoring activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate carrying out monitoring activities review of monitoring reports completed by the candidate for different sites and equipment oral or written questioning to assess knowledge of legislation and monitoring procedures review of the candidate responses to a range of different situations likely to be encountered when conducting monitoring activities.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE**assessment**

industry sector, workplaces and job role is recommended, for example:

- ICTRFN4095A Conduct radio frequency measurements
- ICTCMP5176A Undertake radio communications site audit.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards • Commonwealth legislation and regulations • Crimes Act and Criminal Code Act • Interception Act • International ISO standards • International Telecommunications Union (ITU) regulations • National Measurements Act • OHS Act • Privacy Act • private property law • Radio Communications Act • spectrum management legislation • state, territory and local government legislation and regulations: <ul style="list-style-type: none"> • building • conservation and land management • emergencies • environmental protection • international legislation/codes of behaviour • Telecommunications Act.
<p><i>Hazards</i> may include:</p>	<ul style="list-style-type: none"> • environmental conditions: <ul style="list-style-type: none"> • broken ground • dust • flora and fauna • location involving working over old underground workings and voids • materials • natural landscapes • noise • run-off and spills • waste management and disposal • water quality • wet conditions • working at heights or on roof tops • safety issues: <ul style="list-style-type: none"> • electromagnetic radiation • emissions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • EMR based on site power • hazardous chemicals • laser output • underground plant • vehicle safety: <ul style="list-style-type: none"> • 4WD • driving in adverse conditions • winches.
Triggers may relate to:	<ul style="list-style-type: none"> • assisting frequency assigners prior to allocations • broadcast survey at head office request • complaints • complaints in writing • expired licences • field strength for low power open narrowcasting (LPONS) and digital action plan (DAP) • interference • investigations • monitoring to check complaint is legitimate or interference occurring may be intermittent interference • monitoring of high demand spectrum when a large user is requesting more spectrum whilst appearing to be using their existing inefficiently • noise floor measurements for spectrum planning • proactive compliance activity • site audits • special events monitoring under contract • task created as a result of monitoring.
Monitoring activities may include or relate to:	<ul style="list-style-type: none"> • audio content • channel usage (orphans) • deviation • EMC issues • feed into investigation • field strength • focused and benchmark audit activities • frequency • modulation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • occupancy • other compliance assurance activities • power • radiation patterns • radio communications audit • radio interference complaint • spectrum display • surveillance • transmitted data • unlicensed services or content • verification of adherence to licence conditions.
<i>Responsibilities</i> may relate to the roles of:	<ul style="list-style-type: none"> • inspection specialists • line managers • program managers • project managers • senior inspectors • senior policy officers • supervisors.
<i>Procedures</i> may include:	<ul style="list-style-type: none"> • broadcast tower safety • channel occupancy with transmitter operating • decisions to target certain sites: <ul style="list-style-type: none"> • communal • power level • emergency procedures • evacuation procedures • geographical considerations • handling procedures • incident reporting procedures • interference complaints • investigation of power measurement to ensure correct power • ITU monitoring handbook • legislative requirements such as provisions of the • licence conditions regarding the operating frequency of transmitters • measurement procedures • monitoring instructions and policies • observation • OHS

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisational guidelines and code of conduct • power company requirements • RADCOM data purification • rejection procedures • safety procedures • sampling procedures • site visit compliance instruction procedure guide • statutory authority requirements (ACMA) • storage procedures.
<p><i>Resources and equipment</i> may include:</p>	<ul style="list-style-type: none"> • antenna configuration • Argus monitoring - software • communication equipment • communications receivers • dedicated HF monitoring stations • desk monitor equipment, such as universal monitoring remote control system (UMRCS) • Doppler systems • electronic recording equipment - multi-track • entry authority or warrant • field strength measurement • global positioning system (GPS) equipment • hand-held equipment • portable monitoring equipment • Radphones • receiver protection: <ul style="list-style-type: none"> • attenuators • filters • recording equipment • remote access of carriers monitoring systems through software installed on a desktop and dialup number for monitoring • satellite imagery • scanners • spatial data and information • spectrum analysers • storage equipment and facilities • vehicle mounted and mobile direction finding equipment • vehicles 2 or 4WD.

RANGE STATEMENT	
<i>Risk management strategies</i> may relate to:	<ul style="list-style-type: none"> • access • control • monitoring.
<i>Action</i> may include:	<ul style="list-style-type: none"> • advice • court prosecution • formal notification of intent • infringement notices • on-the-spot fines • warning.
<i>Collection methods</i> may include:	<ul style="list-style-type: none"> • determination of land ownership • interviewing • maintenance of case files • observation • recording • seizure.
<i>Records</i> may include:	<ul style="list-style-type: none"> • case files • forms: <ul style="list-style-type: none"> • application, • notification • invoices • notices: <ul style="list-style-type: none"> • infringement • seizure • receipts • statistics.

ICTRFN4177A Install radio communications base station equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skill and knowledge required to install a radio communications base station in the VHF, UHF or microwave bands.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Field officers from private or public organisations apply the skills and knowledge in this unit. They combine technical radio communications skills with organisational and administrative skills to install radio communications base station equipment in a range of commercial and community contexts.</p> <p>Base station installation generally includes data and voice equipment and wiring, transmitter, receiver, feedline and multicoupling equipment</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare to install radio communications base station equipment</p>	<p>1.1. Assess available installation options against customer requirements and relevant legislation, codes, regulations and standards</p> <p>1.2. Arrange access to the site according to required procedure</p> <p>1.3. Confirm equipment locations</p> <p>1.4. Confirm base station equipment listings and manufacturer's and enterprise documents against the installation brief</p> <p>1.5. Review installation briefs in consultation with the designers or manufacturers</p> <p>1.6. Adjust tools and equipment to manufacturer's specification</p>
<p>2. Install equipment and terminate voice and data cables, power cables and radio frequency (RF) cables</p>	<p>2.1. Observe <i>anti-static precautions when handling circuit cards</i> and conduct all work in a manner which is safe to self, fellow workers and the public at large</p> <p>2.2. Install racks, frames, and shelves as required for data and voice frequency (VF) interface equipment, transmitter and receiver</p> <p>2.3. Position equipment and install according to manufacturer's specifications and design detail</p> <p>2.4. Label equipment, distribution frames and blocks according to enterprise policy</p> <p>2.5. Strip cables and terminate conductors according to manufacturer's specifications</p> <p>2.6. Clean optical fibre connectors using <i>appropriate cleaning techniques</i></p> <p>2.7. Connect network termination unit (NTU) cables to data and VF interface unit via distribution frame</p> <p>2.8. Connect data and VF cables to radio equipment</p> <p>2.9. Connect digital and analog <i>alarm</i> inputs and outputs to supervisory, control and data acquisition (SCADA) controller</p> <p>2.10. Connect power cables to rectifier, battery rack, circuit breakers, and equipment according to manufacturer's and enterprise documents</p> <p>2.11. Use computer or handheld device to program internal software in the data and VF interface equipment, and transmitter and receiver</p>

ELEMENT	PERFORMANCE CRITERIA
	2.12. Interconnect <i>multicoupling equipment</i> to antenna feedline and transmitter and receiver units. 2.13. Mount lightning protection equipment and earth wire according to specification
3. Connect receiver and transmitter multicoupling equipment to antenna feedline	3.1. Perform distance to fault measurement on antenna feedline 3.2. Perform return loss measurement of overall antenna system at transmitter and receiver connector points 3.3. Record test results
4. Finalise installation and complete preliminary tests and administrative tasks	4.1. Complete preliminary tests to verify transmitter and receiver operation prior to commissioning 4.2. Complete installation report, test results and administrative tasks and forward to the <i>appropriate person</i> according to enterprise policy 4.3. Dispose of packaging according to accepted environmental conditions 4.4. Notify appropriate person that base station is ready for commissioning and integration

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to question, listen and respond to subject matter experts on technical and operational matters related to performance of telecommunications networks and fault-finding
- literacy skills to interpret technical documentation and incorporate technical language into written tasks and basic reports
- numeracy skills to:
 - interpret technical data for specifications of telecommunications networks
 - use mathematical formulas to solve problems in AC circuits
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the work of others
- problem solving skills to:
 - apply AC fault-finding techniques to different situations
 - apply network fault-finding techniques to fault find telecommunications

REQUIRED SKILLS AND KNOWLEDGE

network

- research skills to interrogate databases and other sources to investigate performance and systematic and logical fault-finding techniques of telecommunication networks
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - fibre optic connector cleaning techniques
 - load software from computer to various devices
 - select and use appropriate test equipment to undertake performance and fault-finding techniques in telecommunications networks including:
 - distance to fault measurement
 - return loss measurement
- terminate data and voice cable and RF cable

Required knowledge

- detailed knowledge of:
 - anti-static precautions
 - RF radiation hazard awareness
 - network termination unit
 - radio transmitter system
 - radio receiver system
 - multicoupler
 - SCADA system inputs and outputs
- operation and purpose of testing equipment and meaning of test results and network element and system specifications
- overview of telecommunications networks
- performance testing and fault finding techniques of telecommunications networks

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • install radio communications base station equipment • perform distance to fault measurement on feedline • perform return loss measurement on feedline • document and complete installation report.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which base station installation can be conducted • tools and equipment required for installation • technical specifications, organisational documentation and requirements for installation and testing.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of an oral and written report with completed documentation • direct observation of the candidate installing and connecting base station equipment • oral or written questioning to assess knowledge of radio communications base station installation procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN4095A Conduct radio frequency measurements. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006
- AS/NZS IEC 61935.2:2006
- AS/NZS ISO/IEC 14763.3:2007
- AS/NZS ISO/IEC 15018:2005

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • fire regulations • industry drafting codes of practice • mining legislation • noise abatement and heritage legislation • OHS • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
Base station may include:	<ul style="list-style-type: none"> • analog modulation • digital modulation • repeater • terrestrial trunked radio (TETRA).
Anti-static precautions may include:	<ul style="list-style-type: none"> • avoiding contact with static materials, such as plastics • circuit cards transported in anti-static bags or cartons • electrically conducting floor mats • use of conducting wrist strap earthed via high resistance path.
Appropriate cleaning techniques may include:	<ul style="list-style-type: none"> • alcohol swabs • dry type cleaning cassette for optical connectors • lint free dry wipes • microscope for examining optical connector face.
Alarm may include:	<ul style="list-style-type: none"> • forward power • over temperature • over voltage • PLL unlock • rack door • radio hut door • reverse power • time out.
Multicoupling equipment may include:	<ul style="list-style-type: none"> • cavity filter • ferrite isolator • hybrid multicoupler • receiver multicoupler • receiver preselect amplifier

RANGE STATEMENT	
	<ul style="list-style-type: none"> transmitter multicoupler.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> consultant customer project engineer supervisor team leader.

ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to maintain a hybrid fibre coaxial (HFC) broadband cable network. It involves routine maintenance tasks, analysing results and initiating corrective action.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights, confined spaces, crane operation, rigging, driving and other operations involved in this unit. Users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Field officers from telecommunications carriers, service providers and contractors apply the skills and knowledge in this unit. They combine a broad range of optical and radio frequency (RF) technical skills with organisational skills to maintain the HFC broadband cable network, generally with limited supervision and guidance.</p> <p>Relevant job roles involve adjustment of optical and RF power levels, investigating sources of RF and broadcast interference to the network and conducting specialised tests to determine the status of the HFC network.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare for routine maintenance of broadband cable network</p>	<p>1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> for the given work</p> <p>1.2. Determine the <i>HFC network elements</i> requiring <i>maintenance</i> and obtain maintenance details from the various HFC manufacturer's equipment manuals</p> <p>1.3. Plan a detailed <i>routine maintenance schedule</i> and discuss with all relevant personnel</p> <p>1.4. Notify the <i>network operations centre (NOC) of the proposed maintenance details and maintenance schedule</i></p> <p>1.5. Assess the <i>potential impact</i> of the proposed maintenance on customers and network, and plan for minimal possible <i>outage</i> or deferral of maintenance</p> <p>1.6. Obtain necessary <i>tools</i> and <i>resources</i> and <i>test equipment</i> to undertake the maintenance</p> <p>1.7. Ascertain and record recent <i>network stability</i> and network <i>performance</i></p>
<p>2. Undertake routine HFC network maintenance tasks</p>	<p>2.1. Conduct <i>routine maintenance tasks</i> according to documented enterprise instructions and following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> and record results</p> <p>2.2. Protect the network from excessive interference or degradation of service during maintenance routines</p> <p>2.3. Monitor relevant alarms during the running of the maintenance tasks and report incidences to NOC</p> <p>2.4. Escalate unresolved faults according to established enterprise procedure</p> <p>2.5. Conduct <i>performance measurements</i> following routine maintenance schedule</p>
<p>3. Analyse results and initiate corrective action</p>	<p>3.1. Assess outcomes of performance measurements and maintenance routines to ensure they are according to specification</p> <p>3.2. Analyse identified problems for likely impact and repair within capability and initiate or escalate repair action where repair is beyond capability</p> <p>3.3. Undertake outage if required in conjunction with NOC and according to prescribed enterprise outage plan</p> <p>3.4. Record problems and incidences in the maintenance log for future action as required by the maintenance</p>

ELEMENT	PERFORMANCE CRITERIA
	agreement 3.5. Verify alarms to ensure maintenance routines did not generate further problems

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate impact of maintenance on customers and network
- communication skills to provide advice and guidance to others and to liaise with other technical staff on operational matters
- initiative and enterprise skills to identify improvements to maintenance procedures
- literacy skills to read technical data and interpret technical and non-technical information from a range of sources and write reports
- PC skills to upgrade installed software
- planning and organisational skills to plan for outage
- technical skills to:
 - identify noise and ingress
 - set up, operate and interpret results on complex test instruments:
 - optical instruments: optical time domain reflectometer (OTDR), optical power meter
 - RF instruments: digital signal level meter, RF sweep equipment, spectrum analyser
 - use hand and power tools to assemble and disassemble equipment in pits and in elevated situated situations

Required knowledge

- 16 QAM
- 256 QAM
- 64 QAM
- overview of AC and DC theory
- amplifier types and placement
- awareness of forward error correction (FEC) and Reed-Solomon Code
- bi-directional RF amplifier and unidirectional RF amplifier
- bit error ratio (BER) and acceptable values
- calculation of overall gain or loss when given signal levels in dBmV

REQUIRED SKILLS AND KNOWLEDGE

- coaxial transmission line characteristics including cable tilt or slope
- constellation diagram interpretation
- digital modulation techniques
- DOCSIS cable modem characteristics
- eye diagram interpretation
- forward path from head end to subscriber showing expected signal levels at key points
- frequency spectrum and RF frequency plan HFC broadband cable network
- future BCN and migration to all-optical cable networks
- HFC broadband cable network principles, architecture and associated equipment
- measurement of optical power
- minimum standards allowable in the return path for ingress
- modulation error ratio (MER) and acceptable values
- optical fibre characteristics
- passive devices including filter, attenuator, power inserter, coaxial splitter, coupler, multitap, equaliser
- power supply requirements in a HFC broadband cable network
- quadrature phase shift keying (QPSK)
- return path from subscriber to head end showing expected signal levels at key points
- RF amplifier characteristics including gain and tilt adjustment, equalisation, overload
- services carried on HFC broadband cable network
- spectrum utilisation of the return path showing location of telephony and data channels and signalling and test frequencies
- forms of ingress and where they may fall in the return path
- video stream transport formats:
 - DVB-ASI
 - HD-SDI
 - MPEG-2
 - SD-SDI

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan, conduct and record HFC maintenance activities procedures and techniques • comply with site risk control, OHS, environmental, quality and communication requirements • perform RF and optical measurements
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which HFC maintenance may be conducted • use of maintenance tools and test instruments currently used in industry • relevant regulatory, enterprise and equipment documentation that impact on maintenance activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate carrying out HFC maintenance activities • review of maintenance reports completed by the candidate for different sites and equipment within the HFC network • oral or written questioning to assess knowledge of maintenance procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <ul style="list-style-type: none"> • ICTTEN4085A Monitor, analyse and action telecommunications network alarms • ICTTEN4086A Undertake routine maintenance of the telecommunications network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- appropriate licences:
 - cable
 - electrical
 - elevated work platform (EWP)
 - rigger
- Australian Communications Industry Forum (ACIF) standards and codes
- Australian Communications and Media Authority (ACMA) technical standards
- Australian building codes and regulations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Australian standards • enterprise standards • environmental protection • equipment standards • fire regulations • heritage legislation • international standards • intrinsically safe lightning protection • local government • OHS • site engineering standard • Telecommunications Act.
<i>HFC network elements</i> may include:	<ul style="list-style-type: none"> • headend • optical network: <ul style="list-style-type: none"> • optical node • optical or RF hub • RF network: <ul style="list-style-type: none"> • customer tap • global network amplifier (GNA) with reverse path amplifier • isolator • line extender (LE) with reverse path amplifier • line power inserter • splitter.
<i>Maintenance</i> may include:	<ul style="list-style-type: none"> • corrective maintenance • remote maintenance • routine maintenance.
<i>Network Operations Centre</i> may include:	<ul style="list-style-type: none"> • coordination of repairs or changes to the network • escalation of faults • monitoring: <ul style="list-style-type: none"> • network alarms • optical fibre cuts • power failures • performing diagnostic tests • troubleshooting.
<i>Maintenance schedule</i> may be:	<ul style="list-style-type: none"> • details from service level agreement (SLA) • frequency:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • monthly • quarterly • procedures • responsibilities and commitment • timings.
Potential impact may include:	<ul style="list-style-type: none"> • degradation of service to residential customers • disruption of service to residential customers • intermittent degradation of service to residential customers • intermittent performance • loss of service and revenue to enterprise customers • outage • total loss of service to residential customers.
Outage may include:	<ul style="list-style-type: none"> • loss of service to customers due to a network fault or upgrade • planned in the case of network upgrades • unplanned in relation to faults.
Tools may include:	<ul style="list-style-type: none"> • anti-static wrist strap • PC board or sub-rack removal tool • pliers • power drill • screwdrivers • sockets • soldering iron • spanners.
Resources may include:	<ul style="list-style-type: none"> • elevated work platform hire • licensed cabler • licensed electrician • licensed rigger • optical fibre specialist • optical fibre splicer.
Test equipment may include:	<ul style="list-style-type: none"> • network profiler - spectrum analyser and digital modulation analyser fitted with: <ul style="list-style-type: none"> • cable TV (CATV) module • dual path sweep module • sweep ingress analyser • integrated sweep transmitter • laptop computer

RANGE STATEMENT	
	<ul style="list-style-type: none"> • multimeter • optical fibre power meter • OTDR • oscilloscope.
<i>Network stability</i> may include:	<ul style="list-style-type: none"> • reliability of the network: <ul style="list-style-type: none"> • over time • under varying load conditions • under varying traffic conditions.
<i>Routine maintenance tasks</i> may include:	<ul style="list-style-type: none"> • adjusting pads and equalisers to obtain correct output signal levels in RF amplifiers • conducting: <ul style="list-style-type: none"> • basic AC DC voltage and resistance measurements using a multimeter • constellation measurement • MER measurement and BER measurement (pre and post FEC) using a digital analyser • multi channel tests across the whole band • system ingress measurement • digital channel power • measuring: <ul style="list-style-type: none"> • hum modulation • optical power levels at: <ul style="list-style-type: none"> • head end • hub • node • RF carrier levels at: <ul style="list-style-type: none"> • GNA • Hub • LE • tap • performing RF level and frequency measurements: <ul style="list-style-type: none"> • level • tilt • remotely monitoring and recording customer broadband cable modem levels to assist in pinpointing network problems • sweep testing the RF coaxial portion of the network:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • forward sweep test: <ul style="list-style-type: none"> • high frequency short circuits • standing waves • frequency 'suck-out' • flatness - peak to valley • reverse sweep test • using a network profiler instrument to troubleshoot faults in the HFC network • verifying and confirming: <ul style="list-style-type: none"> • forward optical transmitter output power and optical loss budget • reverse optical transmitter output power and optical loss budget.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety barriers • safety equipment • warning signs and tapes • environmental considerations: <ul style="list-style-type: none"> • clean-up • noise and dust • stormwater protection • waste management.
<i>Performance measurements</i> may include:	<ul style="list-style-type: none"> • Proof of performance tests on the: <ul style="list-style-type: none"> • forward path • return path • optical power levels and confirm correct operation • RF BER and MER measurements using network profiler.

ICTRFN5097A Test cellular handset enhancements and international roaming agreements

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to test the handset enhancements and international roaming capability of a subscriber's cellular phone service in a public land mobile network (PLMN) overseas.</p> <p>In order to guarantee the subscriber high quality and full availability, regular international roaming tests are necessary. Manual roaming testing has largely given way to fully automated testing due to the large number of PLMNs and tests required.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	Technical officers and supervisors who test the international roaming capabilities of cellular mobile equipment apply the skills and knowledge in this unit.
--------------------------------	--

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to conduct roaming tests	1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> for compliance when conducting work 1.2. Identify <i>need for tests</i> from service provider mobile network deployment taskforce 1.3. Develop enterprise <i>test procedure</i> according to roaming arrangements and manufacturer test regime 1.4. Arrange access to the location where <i>tests</i> are to be conducted according to required procedure 1.5. Select <i>resources</i> needed to conduct tests complying to roaming arrangements 1.6. Confirm details of international roaming partners and agreements with partner mobile operators 1.7. Advise network operations centre of the test details and test schedule
2. Conduct tests and analyse test results	2.1. <i>Conduct tests</i> according to enterprise test procedure 2.2. Analyse recorded test results for roaming compliance and functionality of SIM card and phone enhancements
3. Document results	3.1. Document details of roaming tests, SIM card validity and functionality of <i>phone enhancements</i> and make recommendations to <i>appropriate person</i> 3.2. Report non-compliance to appropriate person for investigation with international roaming partners and mobile phone manufacturer

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to review and evaluate measurements
- communication skills to interact with enterprise personnel, international roaming partners and customers to maintain a customer focus and consider customer needs
- literacy skills to interpret technical documentation
- numeracy skills to:

REQUIRED SKILLS AND KNOWLEDGE

- check that equipment is calibrated
- take measurements
- interpret results
- evaluate different types of technical data
- PC skills to:
 - control automated testing
 - load test files
 - store test results
- planning and organisational skills to organise and prepare for measurements
- problem solving skills to resolve technical issues within international roaming
- task management skills to work logically and systematically with required attention to detail when following complex test procedures
- technical skills to:
 - conduct test procedures
 - operate specialised roaming test equipment

Required knowledge

- features and operating requirements of specialised roaming test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- mobile phone network standards and specifications
- specific OHS requirements relating to the activity and site conditions
- test analysis

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • conduct tests on international roaming capability and functionality of handset enhancements • analyse results of testing • make recommendations based on test results.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where tests on handsets and international roaming agreements may be conducted • testing equipment currently used in industry • equipment, system manuals, specifications and relevant enterprise policy and documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. the following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate conducting international roaming agreement tests • review of report prepared by the candidate outlining findings, interpretation of test results and recommendations • oral or written questioning of the candidate to assess knowledge of handsets and handset enhancements.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN5148A Test and measure cellular phone and network equipment performance. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE	
	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Relevant legislation, codes, regulations and standards</i> include:</p>	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards • GSM Association permanent reference documents: • International Standards ISO 9000 and ISO 9001 • International Telecommunications Union (ITU) recommendations • IR.22 SCCP Signalling aspects for roaming • IR.24 End-to-end functional capability specification for inter-PLMN roaming • IR.26 End-to-end functional capability specification for inter-PLMN roaming addendum for Phase 2

RANGE STATEMENT	
	<ul style="list-style-type: none"> • IR.27 Functional capability test specification for inter-PLMN roaming phase 1 data services, fax services • IR.28 Specifications of the infrastructure in a PLMN to allow automatic testing • IR.29 Proposal of a minimum requirement on an automatic test equipment for roaming • IR.32 End-to-end functional capability specification for Inter-PLMN CAMEL-roaming • IR.35 End-to-end functional capability test specification for inter-PLMN GPRS roaming • IR.37 Guidelines and testing for optimal routing - Service definition Stage 1 testing • IR.50 2G/2.5G/3g roaming • IR.53 MMS inter-working tests • IR.60 Prepaid service roaming test • IR.62 End-to-end WLAN roaming test cases • IR.66 End-to-end interworking and roaming test specification for IMS • ITU Regulation 24 and standards • OHS • The International Roaming Expert Group (IREG) of the GSM Association.
<i>Need for tests</i> may include:	<ul style="list-style-type: none"> • compatibility of frequency bands from one country to another • emergence of additional network services • modification of a software release by an operator • new mobile phone enhancements and features • new roaming agreements between service providers.
<i>Test procedure</i> may include:	<ul style="list-style-type: none"> • IREG tests • PLMN test data • test equipment.
<i>Tests</i> may include:	<ul style="list-style-type: none"> • additional test cases • billing tests • check against manufacturer's standards • compatibility with normal features provided by carriers • connectionless mobile originated call (MOC) and mobile terminated call (MTC)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • email • general packet radio service (GPRS) and wideband code division multiple access (WCDMA) • IR35 including FTP and HTTP • IREG 24 Basic services and supplementary services • IREG 27 Data and fax services • IREG 28/29 Test with automatic answer circuits • IREG 32 CAMEL Phase 1 and 2 • MMS • P.862 standard • P.862.1 standard • phone enhancements • ping • prepaid tests • roaming functionality • SIM card validity • SMS • speech quality (PESQ) • test cases.
Resources may include:	<ul style="list-style-type: none"> • PLMN test data stored in test files • roaming test equipment required locally • SIM card boards.
Conduct tests may include:	<ul style="list-style-type: none"> • inbound roaming • keynote SIGOS - GlobalRoamer • MILBORNE Roaming Verification tester • outbound roaming • test line interface and roaming and mobile service test system - Nexus 8620/8610.
Phone enhancements may include:	<ul style="list-style-type: none"> • data • email • fax • multimedia messaging service (MMS) • SMS • WiFi.
Appropriate person may include:	<ul style="list-style-type: none"> • account manager • international roaming partner • marketing manager

RANGE STATEMENT	
	<ul style="list-style-type: none">• mobile phone manufacturer's representative• project manager.

ICTRFN5148A Test and measure cellular phone and network equipment performance

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to test, measure and document the performance of cellular mobile phone and network equipment. It also involves analysing test results and recommending modifications to the network.</p> <p>The integration of specialised optical devices into existing networks may be required as part of an upgrade required by services and applications of Next Generation Mobile Networks (NGMN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Field officers and supervisors from telecommunications carriers, service providers, contractors and other public or private organisations apply the skills and knowledge of this unit. They perform measurements during equipment upgrades or during commissioning, acceptance testing and routine maintenance on cellular network equipment.</p> <p>The skills are mainly related to testing cellular sub-elements and subsystems. Field officers under supervision may be responsible for projects and for the coordination of projects in sites remote from the organisational headquarters. Technical officers also participate in design activities.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to test cellular phone and network equipment	1.1. Obtain and follow <i>relevant legislation, codes, regulations and standards</i> 1.2. Scope the work by obtaining <i>work details</i> from <i>appropriate personnel</i> and arrange for site access to comply with security arrangements 1.3. Evaluate manufacturer's technical documentation and network procedures to plan a <i>test schedule</i> for the cellular network 1.4. Verify calibration of <i>test equipment</i> to ensure that tested cellular equipment is compliant 1.5. Prepare cellular equipment for testing according to manufacturer's test procedure 1.6. Notify operational staff of test and measurement schedule to ensure minimal impact on the cellular network
2. Test and measure cellular phone and network equipment	2.1. Work safely following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> for the given work, identifying <i>hazards</i> and using <i>personal protective equipment</i> 2.2. Configure network equipment for testing and set <i>options</i> to record test results 2.3. Block or mask alarms that may be triggered and interfere with test programme 2.4. Run the performance measurement software with options set and record test results 2.5. Re-establish alarms and normal operational status at conclusion of tests and notify appropriate personnel of the completion of the test schedule
3. Analyse measurement and prepare an evaluation report	3.1. Analyse the results of the performance tests and measurements and determine the performance level of the cellular equipment and compatibility with the network 3.2. Prepare an evaluation report making recommendations on network modifications or changes to configurations settings for improved quality of service (QoS) 3.3. Present test results and evaluation report to appropriate personnel according to enterprise policy

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test results
- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to:
 - read and interpret technical documentation, such as equipment manuals, specifications and service orders
 - write reports using standard formats
- numeracy skills to:
 - interpret results
 - evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular situations
 - modify activities depending on operational contingencies, risk situations and environments
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities when dealing with radio frequency (RF) radiation
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - confront typical issues and challenges that occur in cellular network testing
 - prepare and interpret technical documentation
 - recognise and interrogate the network element alarms and record fault conditions
 - select and use appropriate test equipment following industry practices

Required knowledge

- features and operating requirements of cellular test equipment, including the digital cellular test set, spectrum analyser and RF power meter

REQUIRED SKILLS AND KNOWLEDGE

- network components, their functions and approved specifications
- overview knowledge of transmission lines, transmitter and receiver architecture and associated cellular network
- specific knowledge related to cellular antenna and feedlines, and their impact on mobile spectrum interference
- testing network components
- types of adjustments that need to be made when measuring cellular transmission
- types of networks that will influence the transmission either on the radio path and/or transmission line

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare for coverage prediction	1.1. Prepare for given work according to relevant legislation, occupational health and safety (OHS), codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Establish <i>type of coverage</i> required 1.4. Determine specifications and the minimum acceptable signal level or timing signal delay within the coverage area 1.5. Use <i>prediction software</i> specific to the enterprise 1.6. Verify <i>mapping coordinate system</i> to be used 1.7. Create custom antenna pattern files representative of the expected antenna type for the type of coverage required
2. Load data into the software program and create coverage plot	2.1. Select and load <i>system parameters</i> 2.2. Select and load <i>antenna elements</i> or antenna pattern files 2.3. Select suitable <i>propagation model</i> settings applicable to the study 2.4. Load appropriate <i>clutter properties</i> 2.5. Create the coverage plot using appropriate <i>plot options</i> settings
3. Analyse coverage plot outcomes	3.1. Evaluate the initial coverage plot against initial specifications 3.2. Adjust system parameters and antenna elements until coverage plot is within specifications 3.3. Compare measured signal strength at various locations with the predicted values 3.4. Use measured data to correct and fine tune the model 3.5. Evaluate a range of possible solutions and make appropriate recommendations to ensure transmission meets operational requirements
4. Complete documentation	4.1. Tabulate results 4.2. Prepare report with final recommendations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - be able to synthesise antenna systems from commercially available products
 - examine and evaluate antenna patterns, specifications and data
- communication skills to liaise with internal and external personnel on technical, operational and commercial matters
- literacy skills to:
 - interpret technical documentation
 - write final reports in required format
- numeracy skills to:
 - evaluate and convert RF field strength measurements
 - evaluate different types of technical data
 - interpret results
- planning and organisational skills to:
 - coordinate teamwork with others
 - plan, prioritise and monitor own work
- problem solving and contingency management skills to:
 - adapt requirements of particular sites and customers
 - modify activities depending on differing operational contingencies, risk situations and environments
- spatial skills to interpret and convert between two-dimensional and three-dimensional antenna patterns
- task management skills to work systematically with required attention to detail
- technical skills to select and use appropriate propagation models and practices to suit different situations

Required knowledge

- antenna and propagation theory
- antenna array theory
- overview of various mapping coordinate systems and their datums
- propagation models and their limitations in various environments
- specific issues related to antenna installations and the creation of particular radiation patterns

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and coordinate activities to produce coverage plots using appropriate software settings • generate: <ul style="list-style-type: none"> • an RF signal coverage plot • a path profile for a point-to-point link • evaluate, analyse and make recommendations on antenna installation specifications.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to computer facility on which coverage plots and paths may be generated • use of propagation prediction software • access to digital terrain database.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate creating a coverage map and a point-to-point path profile • review of reports completed by the candidate • oral or written questioning to assess knowledge of the planning of terrestrial radio facilities using software.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN4095A -Conduct radio frequency measurements • ICTRFN4096A - Conduct field tests of radio and wireless networks • ICTRFN4158A Select an antenna system for radio communications. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Type of coverage may include:

- directional pattern
- omnidirectional
- point to point.

Prediction software may include:

- ATDI
- Atoll
- CRC Predict
- EDX

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Planet EV • Radio Mobile • TEMS.
<i>Mapping coordinate system</i> may include:	<ul style="list-style-type: none"> • AGD-66 • AGD-84 • GDA94 • WGS-84.
<i>System parameters</i> may include:	<ul style="list-style-type: none"> • 'k' value • feeder loss • frequency • latitude and longitude • nominal receive antenna height • polarisation • site elevation • transmit antenna height above ground • transmitter power • transmitter site name.
<i>Antenna elements</i> may include:	<ul style="list-style-type: none"> • antenna gain (dBi) • broadside array of dipoles • collinear array of dipoles • dipole • dipole panel • half power beamwidth.
<i>Propagation model</i> may include:	<ul style="list-style-type: none"> • Egli • FCC point-to-point • International Telecommunications Union Radiocommunications sector (ITU-R) 1546 • ITU-R 1812 • ITU-R 525 • Longley-Rice • Okumura-Hata.
<i>Clutter properties</i> may include:	<ul style="list-style-type: none"> • average clutter height • buildings and trees • open • reflection coefficient of the land • RMS roughness of an area • suburban • urban.
<i>Plot options</i> may include:	<ul style="list-style-type: none"> • 0.6 First Fresnel zone clearance

RANGE STATEMENT

	<ul style="list-style-type: none"> • azimuth range or degrees • First Fresnel zone • first threshold level • path profile • polar plot • radial range (km) • radio horizon map • rainbow colour plot • second threshold level • signal strength prediction map • third threshold level • threshold units • timing signal delay study map.

ICTRFN6098B Monitor the capacity of and recommend changes to the cellular mobile network

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to make recommendations on cellular mobile network systems at the system design level.

Application of the Unit

Technical officers and engineers may apply the skills and knowledge in the unit. They undertake mobile network performance measurements and report on mobile capacity enhancement to senior management.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Monitor the capacity of the cellular mobile network	1.1 Monitor traffic levels from the network management system 1.2 Use approved enterprise plans to identify planned network growth 1.3 Obtain customer forecast data from marketing 1.4 Apply identified data against capacity trigger criteria 1.5 Determine coverage and cell parameters
2. Make recommendations relating to capacity changes	2.1 Identify requirements for additional capacity 2.2 Recommend changes or additions to frequency parameters and submit to planning personnel 2.3 Assess capacity of transmission path and switch resources and recommend improvements noting transmission medium 2.4 Manipulate traffic through switch parameter settings as a means of relieving traffic congestion 2.5 Determine cost of proposed changes and undertake studies of appropriate return on investment (RoI)
3. Assess capacity changes	3.1 Organise tests and studies to ensure that increased capacity adequately caters for traffic flow 3.2 Make recommendations for further change to network should the increase capacity not meet need

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytic skills to interpret capacity requirements
- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to:
 - interpret technical documentation, such as equipment manuals, specifications and service orders
 - write reports using standard formats
- numeracy skills to estimate costs and calculate return on investments
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the capacity measurement process in liaison with others
- problem solving and ability to convey solutions to others
- task management skills to work systematically with required attention to detail
- technical skills to:
 - select and use appropriate tests to measure cell capacity usage
 - use teletraffic statistical data.
 -

Required knowledge

- blocking, non-blocking and grade of service
- Erlang B measurements
- features and operating requirements of test equipment
- field measurements for cell traffic capacity
- information required to:
 - analyse and interpret statistical data as applied to teletraffic measurement
 - prepare and conduct a capacity measurement
- legislation, codes of practice and other formal agreements that directly impact on radio communications site transmission
- overview knowledge of:
 - transmission lines
 - transmitter and receiver architecture and their impact on radio communications traffic
- switching architecture and in particular space and time switching
- types of adjustments that need to be made to procedures to meet the requirements of particular sites and environmental conditions
- typical issues and challenges that occur in telecommunications cellular capacity design and how these may be addressed
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • source and analyse relevant data to prepare a plan indicating growth potential and recommendations for meeting growth within timeframes • use tools and software packages for forecasting and measurement • identify site or channel capacity, relevant network growth and forecasting growth.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to sites with cellular mobile network • capacity monitoring data and equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking a practical monitoring exercise • evaluation of report prepared by the candidate outlining recommendations relating to capacity changes • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN5148A Test and measure cellular phone and network equipment performance • ICTTEN6169A Produce and evaluate architecture designs for convergent cellular mobile networks • ICTPMG8149B Evaluate and use telecommunications management networks.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce architecture designs for wireless broadband	1.1. Review WiMAX specification 802.16 protocol structure for point-to-point (backhaul) and point-to-multipoint (end user) topologies and identify requirements of the network 1.2. Assess technical characteristics and functions of network elements in a WiMAX network 1.3. Evaluate advantages of modulation techniques used in wireless access technologies 1.4. Compare characteristics and operating principles of multiplexing techniques used at the physical layer of wireless access technologies
2. Design architectures for a proposed fixed and a mobile WiMAX network	2.1. Develop a proposed network topology for a fixed (802.16d) WiMAX network showing the relationship of network elements 2.2. Develop a proposed network topology for a mobile (802.16e) WiMAX network showing the relationship of network elements 2.3. Evaluate design considerations between a fixed and mobile WiMAX network and produce design specifications 2.4. Determine appropriate multiple-antenna system in WiMAX design by considering their benefits 2.5. Produce a report on the architecture design for a WiMAX network
3. Evaluate network management products	3.1. Research, analyse and evaluate current network management products 3.2. Produce an evaluation report on the effectiveness of network management products that could be used to manage WiMAX network elements
4. Produce network designs for possible implementation	4.1. Compare WiMAX with other competing wireless technologies and their interoperability 4.2. Investigate inclusion of wireless fidelity (WiFi) in the design architectures as a complementary technology 4.3. Obtain latest technical specifications and pricing by contacting possible vendors 4.4. Determine support and training requirements needed 4.5. Produce an implementation document on WiMAX architecture configurations and designs and present to appropriate person for approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate documentation on competing wireless technologies
- communication skills to liaise with vendors
- numeracy skills to use financial modelling to evaluate a range of architecture design solutions
- literacy skills to read and interpret technical information
- problem solving skills for a defined range of anticipated problems:
 - when predicting line traffic
 - impact on input and output devices
 - processors from current and future demand requirements
- project planning skills to plan, prioritise and organise work required
- research skills to source, analyse and evaluate broad features of current security issues and best practice in security devices, products and procedures

Required knowledge

- client business domain
- current industry accepted network hardware and software products and their general features and capabilities
- detailed knowledge of:
 - current industry-accepted WiMAX network protocols
 - remote user issues
 - the management systems
 - WiMAX network design
 - WiMAX network traffic evaluation
- current industry security products, devices and procedures and their general features and capabilities
- theoretical concepts of current industry network development and design methodologies

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply knowledge of WiMAX communication architecture, hardware, protocols and networking systems • integrate other wireless technologies • analyse and evaluate competing wireless technologies • design viable WiMAX network solutions • assess network performance.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • documents detailing: <ul style="list-style-type: none"> • IEEE 802.16 standards for WiMAX • client requirements • technical specifications • expected traffic volume • vendors and vendor offerings and pricing • information on a range of IT business solutions • future organisational business processes • budget for architecture designs for WiMAX networks.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate assessing network requirement • evaluation of implementation document prepared by the candidate outlining WiMAX architecture designs • oral or written questioning of the candidate to assess knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • ICTTEN6206A Produce an ICT network architecture design • ICTTEN5204A Produce technical solutions from business specifications. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTRFN7182B Produce a radio link budget

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse the technical performance of fixed and mobile radio systems and to plan and calculate link budgets.

Application of the Unit

Telecommunications engineers apply the skills and knowledge in this unit as part of their work with radio systems for a telecommunications service provider.

The job role includes responsibility for establishing the layout of the digital radio system to minimise transmission loss and optimise the system performance.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Analyse suitability of radio systems	<p>1.1 Analyse the spectral efficiency of functional elements of mobile radio systems for determining optimal frequency utilisation</p> <p>1.2 Analyse the features of radio systems to evaluate the effectiveness of a particular application</p> <p>1.3 Compare the features and specifications of antennas used in radio systems to assist with radio link budget</p> <p>1.4 Report on the suitability of radio systems, including recommendations to improve network performance</p>
2. Calculate a radio link budget	<p>2.1 Calculate path loss using variables in appropriate propagation models for a power link budget</p> <p>2.2 Evaluate the power link budget against allowable power margins specifications</p> <p>2.3 Evaluate modulation types and spectral efficiency</p> <p>2.4 Confirm radio power link budget achieves specified reliability</p>
3. Complete evaluation and planning documentations	<p>3.1 Complete an evaluation report on performance of radio systems with recommendations on improvements to the system</p> <p>3.2 Document the processes carried out to determine the optimal power link budget for a radio system</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to review complex information to make judgements
- communication skills to work effectively within a group and present information
- information technology skills for word processing and desktop research
- literacy skills to prepare reports given a specific format
- numeracy skills to:
 - calculate link budgets
 - gather and record data from measurements
- research skills to gather data and information
- technical skills to operate test equipment.
-

Required knowledge

- HF, VHF, UHF and microwave receiving techniques
- modulation methods:
 - AM
 - FM
 - digital formats
- multiplexing systems
- operation of transmitters and receivers
- organisational policy and procedures
- personal safety issues
- propagation methods
- radio communications systems
- radio frequency (RF) losses
- RF technologies
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse the signal degradation characteristics of radio paths and calculate power budgets for various distances and antenna heights versus transmitted power • research the constraints imposed by mobile phone frequency allocations and simulate carrier to interference radiation patterns around a cell site • complete evaluation report on radio system performance and document processes used to determine power link budget.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • telecommunications operations site • mobile telephony devices and equipment • networked computers and relevant software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral or written questioning to assess required knowledge • review of link budget reports completed by the candidate for different communication scenarios • direct observation of the candidate analysing radio systems and calculating link budgets.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG7145B Undertake a telecommunications project • ICTTEN7193B Plan a transmission network. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Functional elements may include:	<ul style="list-style-type: none"> • code division multiple access (CDMA) • frequency division multiple access (FDMA) • time division multiple access (TDMA) • wideband code division multiple access (WCDMA).
Radio systems may include:	<ul style="list-style-type: none"> • 3G • 4G • CDMA • GPRS • Global system for mobiles (GSM) • trunked • WCDMA • worldwide interoperability for microwave access (WiMAX).
Path loss refers to:	<ul style="list-style-type: none"> • received power to transmitted power ratio and may depend on: <ul style="list-style-type: none"> • antenna height • atmospheric absorption • distance • rain • reflection coefficient.
Variables may include:	<ul style="list-style-type: none"> • clutter factor • Doppler effect on mobile transmission • frequency • Fresnel distance and absorption • K factor • point-to-multipoint • point-to-point • Raleigh fading and counter measures • reflection coefficient.
Modulation types may include:	<ul style="list-style-type: none"> • FM • AM • orthogonal frequency division multiplex (OFDM) • COFDM

	<ul style="list-style-type: none">• quaternary phase shift keying (QPSK)• 16 quadrature amplitude modulation (QAM)• 256 QAM.
<i>Specified reliability</i> may include:	<ul style="list-style-type: none">• drop outs• outage time• power margin• signal fading.

Elements and Performance Criteria

<p>1. Research mobile network systems and interfaces to interconnected networks</p>	<p>1.1 Analyse the <i>interfaces</i> between a cellular mobile network and customers, including the public switched telephone network (PSTN) and internet to validate the interoperability of the individual systems</p> <p>1.2 Research the <i>latest generation</i> of mobile radio systems and develop a plan for integration of <i>emerging cellular technologies</i> to meet future demands and customer expectations</p>
<p>2. Analyse constraints imposed by frequency spectrum allocations</p>	<p>2.1 Analyse techniques to <i>increase system capacity</i> for a fixed spectrum bandwidth</p> <p>2.2 Plan the <i>frequency allocation</i> for a cellular network from the derived specifications</p> <p>2.3 Develop a simulation that plots the <i>carrier to interference radiation</i> pattern for a given cell geometry in a reflective environment</p>
<p>3. Analyse the operations of the major subsystems of a cellular network</p>	<p>3.1 Evaluate the major <i>subsystem functions</i> of the cellular network and analyse the <i>subsystem components</i> to determine capability for upgrades</p> <p>3.2 Research and report how the major subsystems <i>interface to other network subsystems</i></p> <p>3.3 Simulate the transmission path for a cellular network</p>
<p>4. Analyse system capability</p>	<p>4.1 Simulate traffic flow measurements in a microcellular environment</p> <p>4.2 Produce an analytical report on cellular mobile convergence with a plan for cellular mobile system integration to existing networks</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical issues
 - work effectively within group
- literacy skills to:
 - interpret technical documentation
 - prepare documents in agreed format
- numeracy skills to:
 - take measurements
 - interpret results
- PC skills to:
 - carry out desktop research
 - do word processing
 - use statistical data
- planning and organisational skills to plan simulations to aid analysis
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular sites
 - modify activities depending on differing operational contingencies, risk situations and environments
- research skills to:
 - evaluate different types of technical data and compare with theoretical values and approved specifications
 - gather and record data from measurements
 - gather data, observe and analyse interfacing issues
- task management skills to:
 - adhere to all safety requirements
 - work systematically with required attention to detail
- technical skills to:
 - enable 'login' into cellular network elements for tests and analysis
 - recognise and interrogate cellular network elements alarms
 - recognise different transmission techniques
 - record fault conditions
 - select and use appropriate test equipment and practices to suit different network applications.
-

Required knowledge

- allocations and bandwidth requirements of cellular systems
- approved specifications

- efficiency and system capacity given the spectrum allocation, number of channels required and Grade of Service
- equipment subsystem diagnosis and repair procedures
- features and differences between major frequency bands and their allocation of licenses
- features and operating requirements of cellular test equipment
- interworking with existing systems
- key features of cellular mobile radio systems
- major element functions of a mobile radio system
- major frequency bands and their allocation of licenses
- microcellular systems
- minimising latency
- network components and their functions
- overview knowledge of transmission lines, transmitter and receiver architecture
- radio spectrum in use, specifying restrictions and characteristics
- radio frequency (RF) and electromagnetic energy (EME) hazards
- specific knowledge related to antenna performance and mobile components and their impact on mobile spectrum interference
- spectrum efficiency
- system configuration procedures
- testing network components
- the types of adjustments that need to be made when measuring cellular transmission
- the types of networks that will influence the transmission either on the radio path and/or transmission line.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan a frequency allocation for a cellular network • analyse techniques to increase system capacity for a fixed spectrum bandwidth • develop a plan for integration of emerging cellular technologies • analyse the interfaces between a mobile network and customers • research and report the interfacing of major subsystems to other network subsystems • produce an analytical report on cellular mobile convergence with a plan for cellular mobile system integration to existing networks.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which cellular network analysis, research and simulation may be conducted • use of test equipment currently used in industry • manufacturer's and enterprise technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluation of reports prepared by the candidate • review of test documentation and reports completed by the candidate • oral questioning or written questioning to assess required.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG8143B Manage a telecommunications project.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Interfaces</i> may include:	<ul style="list-style-type: none"> • A • Abis • Iu • Iur • Iub • Iu-CS (circuit switch) • Iu-PS (packet switch) • S1
<i>Latest generation</i> may include:	<ul style="list-style-type: none"> • 3G • high speed packet access (HSPA)
<i>Emerging cellular technologies</i> may include:	<ul style="list-style-type: none"> • 2 x 2 multiple input-multiple output (MIMO) • 4 x 4 MIMO • 4G • long term evolution (LTE) • SF-frequency division multiple access (FDMA)
<i>Increase system capacity</i> may include:	<ul style="list-style-type: none"> • cellular re-use • orthogonal frequency division multiple access – multiple input-multiple output (OFDM – MIMO) • OFDMA • overlay • underlay.
<i>Frequency allocation</i> may include:	<ul style="list-style-type: none"> • patterns: <ul style="list-style-type: none"> • 7/21 • 4/12 • 3/9 • 1/1.
<i>Carrier to interference radiation</i> may include:	<ul style="list-style-type: none"> • carrier interference: <ul style="list-style-type: none"> • carrier to adjacent (C/A) • carrier to interference (C/I) • carrier to reflection (C/R).
<i>Subsystem functions</i> may include:	<ul style="list-style-type: none"> • cellular elements: <ul style="list-style-type: none"> • AUC

	<ul style="list-style-type: none"> • base station controller (BSC) • base transceiver station (BTS) • eNode B • node B • home location register (HLR) • HSS • mobile station (MS) • mobile services switching centre (MSC) • SAE • transcoder • visitor location register (VLR) • burst timing and content • logical channels • multiplexing • radio path • signal protocols.
<i>Sub-systems components</i> may include:	<ul style="list-style-type: none"> • alarm gathering unit • charging unit • clocking unit • common channel signalling unit • gateway gprs support node (GGSN) • HSS • MME • operation and maintenance unit • SAE gateway • serving GPRS support node (SGSN) • statistical unit.
<i>Interface to other network sub-systems</i> may include:	<ul style="list-style-type: none"> • application parts: <ul style="list-style-type: none"> • Base Station System Application Part (BSSAP) • integrated services user parts (ISUP) • managed application provider (MAP) • SYGTRAN.

Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse the performance of a satellite communications system.

The analysis may be required for a new installation project or an upgrade of capacity or technology in an existing network or as a result of convergence to Next Generation Networks (NGN).

Application of the Unit

Supervisors and engineers who analyse satellite communications systems apply the skills and knowledge in this unit when writing specifications, planning, designing and implementing satellite communications systems.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Research satellite communication systems	<p>1.1 Research <i>satellite applications</i> with various <i>orbit</i> types for assessing their spatial positioning for specific purpose</p> <p>1.2 Analyse and report on the architecture, major subsystems and critical components in the communication systems of a recently launched commercial satellite</p> <p>1.3 Research and report on <i>multiple access techniques</i> and their typical applications</p>
2. Analyse uplink and downlink variables	<p>2.1 Determine <i>uplink and downlink criteria</i> that impact on carrier to noise ratio</p> <p>2.2 Determine up/down link criteria that impact on baseband signal to noise ratio</p> <p>2.3 Determine the critical parameters of a satellite system</p> <p>2.4 Research common types of baseband signal processing, their spectral and noise improvement parameters for determining criteria for link budget evaluations</p>
3. Conduct a link budget analysis	<p>3.1 Produce a satellite link budget and calculate link margin for a satellite system with <i>specified modulation types</i></p> <p>3.2 Analyse the relationship between the bit error ratio (BER) for a given energy per bit per noise power density (E_b/N_0) and forward error correction (FEC) parameter for determining the operational performance of the link</p>
4. Analyse properties of geostationary satellites	<p>4.1 Calculate the <i>look angles</i> for a geostationary satellite from any receiving location</p> <p>4.2 Research and report on <i>frequency re-use</i> in conjunction with polarisation selection and the use of spot beams</p> <p>4.3 Analyse and specify the major features of <i>very small aperture terminal (VSAT)</i> systems, and calculate link reliability in high rainfall regions</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to solve complex problems by making informed judgements and assumptions
- literacy skills to prepare reports following an analysis or evaluation
- planning and organisational skills to develop systems and procedures in solving complex mathematical formulas
- problem solving and contingency management skills to manage unforeseen issues
- research skills to gather and record data from measurements
- technical skills to visualise radio frequency (RF) systems on board operational satellite platforms.
-

Required knowledge

- antenna calculations:
 - gain
 - beamwidth
 - polarisation
 - effective isotropic radiated power (EIRP)
- BER
- carrier/noise ratio
- constellation and eye diagrams
- decibels, dB, dBm, dBW
- distance to satellite and typical delays
- frequency spectrum (satellite bands)
- G/T ratio
- geostationary orbit
- link budget calculation
- look angle calculations
- low earth orbiting (LEO) satellites
- modulation types:
 - n-FSK:
 - 2FSK
 - 4FSK
 - n-PSK:
 - 2PSK
 - 4PSK
 - 8PSK
 - 16PSK
 - n-QAM:
 - 16 QAM

- 256QAM
- spread spectrum:
 - direct sequence
 - frequency hopping.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse satellite communications system architecture • produce a satellite link budget and calculate link margin for a range of digital modulation types • calculate the look angles for a geostationary satellite from any receiving location • analyse and specify the major features of (VSAT) systems.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site on which satellite analysis may be conducted • data, calculators and appropriate software tools.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing analysis • review of link budget documentation completed by the candidate • review of look angle calculation reports • oral or written questioning to assess knowledge of satellite communications systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN7182B Produce a radio link budget. <p>Aboriginal people and other people from a non English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Satellite applications</i> may include:</p>	<ul style="list-style-type: none"> • broadcasting: <ul style="list-style-type: none"> • broadcast satellite service (BSS) • fixed service satellite (FSS) • defence • domestic communications • earth observation: <ul style="list-style-type: none"> • mapping • meteorology • international communications: <ul style="list-style-type: none"> • Intelsat • global positioning system (GPS) • navigational.
<p><i>Orbit</i> may include:</p>	<ul style="list-style-type: none"> • geostationary • inclined orbit • low earth orbiting (LEO): <ul style="list-style-type: none"> • polar • non-polar • Molniya highly elliptical orbit.
<p><i>Multiple access techniques</i> may include:</p>	<ul style="list-style-type: none"> • code division multiple access (CDMA) • frequency division multiple access (FDMA) • hybrid multiple access schemes: <ul style="list-style-type: none"> • FDMA/time division multiple access TDMA • polarisation division multiple access (PDMA) • space division multiple access (SDMA) • time division multiple access (TDMA).
<p><i>Uplink and downlink criteria</i> may include:</p>	<ul style="list-style-type: none"> • antenna gain • bandwidth • error correction bits • modulation type • path loss • transmitter power.
<p><i>Specified modulation</i></p>	<ul style="list-style-type: none"> • m-PSK:

<i>types</i> may include:	<ul style="list-style-type: none"> • 8PSK • OQPSK • QPSK • M-QAM: <ul style="list-style-type: none"> • 16QAM • spread spectrum: <ul style="list-style-type: none"> • direct sequence • frequency hopping.
<i>Look angles</i> include:	<ul style="list-style-type: none"> • azimuth • elevation.
<i>Frequency re-use</i> may include:	<ul style="list-style-type: none"> • orthogonal polarisation • spatial discrimination directional beams.
<i>Very small aperture terminal</i> may include:	<ul style="list-style-type: none"> • availability • latency • multicast • topology.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Set up a business operation	1.1. Develop a business plan for a small business operation according to business planning guidelines 1.2. Follow the statutory and legal requirements to register a business 1.3. Ensure adequate business insurance policies are held according to business plan and to mitigate risks 1.4. Provide and maintain a vehicle through purchase, lease or hiring purchase, including managing fringe benefits tax (FBT) liabilities according to business plan
2. Provide customer service	2.1. Determine and maintain a customer base to support the business plan 2.2. Analyse and determine customer expectations in relation to industry standards 2.3. Provide customer service that meets customer expectations according to enterprise standards 2.4. Monitor and evaluate performance on installations completed against industry standards
3. Perform simple financial management tasks	3.1. Record income and expenditure using bookkeeping tools and software according to normal accounting standards 3.2. Construct a simple financial balance sheet using banking records or supply information to accountant according to normal accounting standards 3.3. Calculate simple taxation and superannuation requirements or supply information to accountant according to normal accounting standards 3.4. Complete a Business Activity Statement (BAS) or supply data to accountant according to normal accounting standards
4. Cost and quote an installation	4.1. Establish the extent of work to be completed through professional and personable discussions with customer 4.2. Complete a job specification for the quote with cost estimates of time required to complete work 4.3. Estimate and include cost of materials to be used using supplier quoted prices 4.4. Determine and include a margin for profit and ongoing costs for installation according to business plan

ELEMENT	PERFORMANCE CRITERIA
	4.5. Check finalised quote for accuracy according to established policies and procedures 4.6. Submit quote to customer within agreed timeframe

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to relate to customers, employees and government officers
- literacy skills to:
 - develop plans using a set format
 - interpret relevant regulatory, taxation and insurance information
- planning and organisational skills to schedule own work
- problem-solving skills to develop solutions unique to a customer
- numeracy skills to:
 - interpret financial information
 - prepare quotes
- technical skills to:
 - estimate telecommunications work
 - operate simple computer software packages

Required knowledge

- business banking principles
- business registration and licensing requirements
- cash or accrual accounting principles
- Commonwealth, state, territory and local government legislative requirements relating to business operation:
 - anti-discrimination
 - environmental issues
 - equal employment opportunity
 - industrial relations
 - OHS
 - taxation requirements
- costs associated with running a business
- current tax rates

REQUIRED SKILLS AND KNOWLEDGE

- industry codes of practice
- industry standard:
 - materials and labour costs
 - rates of pay
- nature of legal responsibility
- OHS responsibilities and procedures
- sources of advice and specialist services
- sources of information about regulatory, taxation and insurance requirements and issues

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce a business plan and set up a business • define and meet customer needs • perform simple financial management tasks including completing BAS, FBT and insurance documentation • quote for installation jobs that cover all aspects of costing.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • resources: <ul style="list-style-type: none"> • Australian Taxation Office (ATO) guides • financial management record keeping software • access to industry standard labour rates and material suppliers • general office bookkeeping procedures • customer service guides.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing business tasks • review of business plans, records and quotes prepared by the candidate • oral or written questioning on required knowledge and skills.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTSMB4161A Operate a contractor business with employees. <p>Aboriginal people and other people from a non-English</p>

ICTSUS4183A Install and test renewable energy system for ICT networks

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to install a renewable energy system and integrate it into the network.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit is for technical staff who install ICT networks powered by renewable energy solutions. This results in more efficient systems with cost reduction while meeting sustainability targets.</p>
--------------------------------	--

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to install renewable energy system	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to site according to required procedure 1.3. Assess extent of system implementation using feasibility report and organisational guidelines 1.4. Produce a report to meet the customer and organisational requirements 1.5. Liaise with appropriate person to obtain approval for the plans with recommendations 1.6. Determine and source renewable energy components according to the agreed plan
2. Install and test renewable energy system	2.1. Install and configure components according to occupational health and safety (OHS) and environmental requirements , plan, manufacturer's and organisational requirements 2.2. Identify and resolve problems 2.3. Integrate the renewable system into the network 2.4. Test and enhance system performance to meet organisational requirements
3. Complete documentation and clean up worksite	3.1. Produce an evaluation report on the actual cost-benefits of implementing the renewable energy system to the organisation 3.2. Provide a support manual for the customer 3.3. Record all test results and records for the customer 3.4. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> analytical skills to evaluate information from reports communication skills to liaise with internal and external personnel on technical, operational and business related matters

REQUIRED SKILLS AND KNOWLEDGE

- literacy skills to:
 - interpret technical renewable energy systems' installation manuals
 - process and present written and verbal information to a diverse range of people
 - write reports, design solutions and recommendations in required formats
- numeracy skills to assess cost benefits and renewable energy options
- problem solving skills to resolve installation problems
- research skills to determine requirements
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to evaluate alternate energy systems and their compatibility with existing power sources

Required knowledge

- broad knowledge of systems diagnostic features
- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- current industry accepted hardware products and renewable energy system products
- customer and business liaison
- documenting technical specifications
- linkage between processes
- technologies:
 - alternate energy, such as solar, wind, chemical
 - areas of the hardware relevant to configuration and testing
 - installation procedures
 - renewable energy system relevant to configuration and testing
 - renewable energy systems' functionality
 - set-up and configuration procedures
- vendor specifications and requirements for component installation

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> ascertain and meet client requirements for installation of a renewable energy system hardware plan and connect the hardware components according to vendor and technical specifications.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> site on which renewable energy solutions can be implemented renewable energy system currently used in industry relevant documentation, feasibility studies, equipment manuals and other site related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate carrying out installation and testing activities review of plans completed by the candidate for different sites oral or written questioning to assess knowledge of legislation and safety procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTSUS5187A Implement server virtualisation for a sustainable ICT system ICTSUS4185A Install and test power management software ICTSUS4184A Install and test power saving hardware ICTSUS4186A Install thin client applications for Power over Ethernet.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • contract law • National Association of Testing Authorities (NATA) requirements • OHS • regulated or industry codes of practice including appropriate Australian Communications and Media Authority (ACMA) technical standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006 • Trade Practices Act.
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> • budget constraints • communication methods • dispute resolution • documenting procedures and templates • financial control mechanisms • infrastructure • operational costs.
<i>Customer</i> may include:	<ul style="list-style-type: none"> • department within the organisation • government department • person within a department • private organisation • third party.
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • diagnostic policy • preventative maintenance • problem solution processes • roles and technical responsibilities in the IT department • vendor and product service level support agreements • work environment.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • infrastructure administrator

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network administrator • power systems manager • property manager • supervisor.
<i>Renewable energy components</i> may include:	<ul style="list-style-type: none"> • converter • deep cycle gel cells • inverter • regulator • solar cells • solar panels • wind generator.
<i>OHS and environmental requirements</i> relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas • safety equipment <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up management • clean-up protection • dust • noise • stormwater protection • waste management.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to install and test power saving hardware	1.1. Arrange access to site according to required procedure 1.2. Assess extent of system implementation using feasibility report and <i>organisational guidelines</i> 1.3. Produce a report to meet the <i>customer</i> and <i>organisational requirements</i> 1.4. Liaise with <i>appropriate person</i> to obtain approval for the plans with recommendations 1.5. Determine and source <i>power saving hardware components</i> according to the agreed plan
2. Install, test and evaluate power saving hardware	2.1. Install and configure components and according to occupational health and safety (OHS) and environmental requirements, plan, manufacturer's and industry standards 2.2. Resolve identified problems 2.3. Test and enhance system performance to meet organisational requirements
3. Complete documentation and clean up worksite	3.1. Produce an evaluation report on the actual cost-benefits of implementing the power saving hardware to the organisation 3.2. Provide a support manual for the customer 3.3. Record all test results and records for the customer 3.4. Restore any changes made to the worksite to customer's satisfaction and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to liaise with internal and external personnel on technical, operational and business related matters • literacy skills to: <ul style="list-style-type: none"> • read technical documentation • write reports with design solutions and recommendations in required formats

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to assess cost benefits of power saving hardware
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving skills to resolve installation issues
- research skills to interrogate vendor databases and websites to identify solutions to meet client business specifications
- technical skills to evaluate low power devices and methodologies

Required knowledge

- broad knowledge of systems diagnostic features
- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- current industry accepted hardware products
- customer and business liaison
- documenting technical specifications
- linkage between processes
- set-up and configuration procedures
- technologies such as:
 - areas of the hardware relevant to configuration and testing
 - installation procedures
 - power saving hardware functionality
- vendor specifications and requirements for component installation

Install and configure software according to occupational health and safety (OHS) and environmental requirements, plan, installation procedures and <i>organisational requirements</i> 2.3. Resolve identified technical problems
3. Complete documentation and sign off procedures	3.1. Document the installation and configuration process according to organisational guidelines 3.2. Provide user documentation 3.3. Notify <i>customer</i> and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to use information to meet organisational needs in a defined range of areas
- communication skills to:
 - interact with others
 - present information
 - question and actively listen to customers and vendors
- literacy skills to:
 - interpret technical installation manuals for renewable energy systems
 - process and present written information to a diverse range of people
- problem solving skills to meet a defined range of unpredictable problems

REQUIRED SKILLS AND KNOWLEDGE**Required knowledge**

- areas of the hardware relevant to configuration and testing
- current industry-accepted software products, with general features and capabilities
- installation procedures
- OHS requirements in relation to work safety, environmental factors and ergonomic considerations
- power saving software functionality
- set-up and configuration procedures
- systems diagnostic features
- vendor specifications and requirements for component installation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to install thin client applications	1.1. Assess extent of applications to be implemented using feasibility report and <i>organisational guidelines</i> 1.2. Highlight issues associated with adoption of Web 2.0 applications 1.3. Produce an implementation plan and present to <i>customer</i> 1.4. Liaise with <i>appropriate person</i> to obtain approval for the plans with any recommendations 1.5. Notify customer for site access
2. Evaluate appropriate applications	2.1. Develop criteria for Web 2.0 applications to satisfy enterprise needs 2.2. Test and evaluate Web 2.0 applications according to agreed criteria 2.3. Present findings to the customer with recommendations on Web 2.0 applications
3. Install hardware components and applications	3.1. Follow occupational health and safety (OHS) and environmental requirements according to plan and manufacturer's specifications 3.2. Develop implementation plans with prioritised tasks and contingency arrangements for minimum disruption to customer 3.3. Install <i>hardware components</i> and <i>thin client software</i> needed for the work according to network and <i>organisational requirements</i> 3.4. Bench test performance of applications 3.5. Resolve identified problems
4. Complete work and document activities	4.1. Document the installation and integration process according to organisational guidelines 4.2. Provide user documentation 4.3. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to:
 - interpret technical installation manuals
 - process and present written and verbal information to a diverse range of people
 - write reports, design solutions and recommendations in required formats
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving skills to resolve installation issues
- research skills to interrogate vendor databases and websites to identify solutions to meet client business specifications
- technical skills to evaluate thin client software and methodologies

Required knowledge

- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- customer and business liaison
- documenting technical specifications
- linkage between processes
- set-up and configuration procedures
- systems diagnostic features
- Web 2.0:
 - applications and functionality
 - areas of the Web 2.0 relevant to configuration and testing
 - current industry accepted Web 2.0 products
 - vendor specifications and requirements for Web 2.0 applications
 - Web 2.0 application procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to implement server virtualisation	1.1. Assess extent of virtualisation to be implemented using feasibility report and organisational guidelines 1.2. Analyse existing server infrastructure utilisation 1.3. Research and analyse alternative virtualisation scenarios including a risk analysis and relative comparisons of each consideration 1.4. Provide a brief report of proposed preferred plan and describe resources required 1.5. Liaise with appropriate person to obtain approval for the plans with any recommendations
2. Design virtual server specification	2.1. Confirm network operating system, server applications and server design with customer 2.2. Determine product and vendor architecture and equipment specifications 2.3. Determine technology and resources within business requirements and budget
3. Install virtual server	3.1. Follow occupational health and safety (OHS) and environmental requirements according to plan and manufacturer's specifications 3.2. Notify customer for site access 3.3. Create a detailed task list specifying stages and sequence of work required 3.4. Review hardware and software to ensure compatibility 3.5. Install the required operating system, additional tools or third-party software as specified in design 3.6. Patch the operating system and applications to ensure maximum security and reliability
4. Integrate and test virtual server	4.1. Determine tests to ensure virtual server integration 4.2. Develop the test plan referring to resources and network impact 4.3. Run the system tests according to test plan and record outcomes 4.4. Analyse the error report and make changes as required 4.5. Test required changes or additions 4.6. Validate changes or additions against specifications
5. Complete work and	5.1. Document the installation and integration process

ELEMENT	PERFORMANCE CRITERIA
document activities	according to organisational guidelines 5.2. Provide user documentation 5.3. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to:
 - interpret technical installation manuals
 - process and present written information to a diverse range of people
 - write reports, design solutions and recommendations in required formats
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving skills to resolve installation issues
- research skills to interrogate vendor databases and website to identify different solutions to meet client business specifications
- technical skills to evaluate virtual servers and methodologies

Required knowledge

- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- current industry-accepted products
- customer and business liaison
- documenting technical specifications
- linkage between processes
- systems diagnostic features
- technologies:
 - power supply requirements and management
 - registered random access memory (RAM)
 - server design and network architecture
 - set-up and configuration procedures

REQUIRED SKILLS AND KNOWLEDGE

- single and multiple processors
- vendor specifications and requirements for software installation
- virtual server functionality

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> determine and meet client requirements for installation and testing of virtual server install, integrate and test virtualisation components according to vendor and technical specifications.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> site and equipment on which servers can be virtualised server virtualisation currently used in industry relevant documentation, feasibility studies, equipment manuals and other site-related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate carrying out installation, integration and testing of virtual server review of plans completed by the candidate for different sites outlining design and resources required oral or written questioning to assess knowledge of methodologies used.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTSUS4183A Install and test renewable energy system for ICT networks ICTSUS4184A Install and test power management software ICTSUS4185A Install and test power saving hardware ICTSUS4186A Install thin client applications for Power over Ethernet.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Organisational guidelines may include:

- budget allocations
- operational costs
- organisational cost
- projected growth
- security.

Appropriate person may include:

- IT consultant
- IT specialist

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network administrator • network manager.
<i>Server applications</i> may include:	<ul style="list-style-type: none"> • database and data warehousing • directory services • file sharing • line of business applications • management • messaging • network and remote access • printer sharing • server virtualisation • terminal services • web services.
<i>Customer</i> may include:	<ul style="list-style-type: none"> • company representative • government department • private organisation.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • digital subscriber line (DSL) modems • hard drives • hubs • modems and other connectivity devices • monitors • peripheral devices • personal computer • personal digital assistant (PDA) • printers • switches • workstations.
<i>Business requirements</i> may relate to:	<ul style="list-style-type: none"> • application • network • people • system.
<i>Task</i> may include:	<ul style="list-style-type: none"> • activities • function • job • work.
<i>Software</i> may include:	<ul style="list-style-type: none"> • customised • in-house • open source software applications • organisation-specific software

RANGE STATEMENT	
	<ul style="list-style-type: none"> • packaged software.
<i>Integration</i> may involve:	<ul style="list-style-type: none"> • power supply requirements and management • registered RAM • requirements for software installation • server design and network architecture • set-up and configuration procedures • single and multiple processors • vendor specifications.

ICTSUS6233A Integrate sustainability in ICT planning and design projects

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to integrate sustainability concepts and policies into ICT planning and design projects. It involves accessing industry information and applying legislative and occupational health and safety (OHS) guidelines.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technical managers, supervising technicians, project managers, consultants or contractors in organisations conducting ICT planning or design projects apply the skills and knowledge in this unit.</p> <p>Typical ICT projects involve upgrades of equipment hardware and software or new installations of Next Generation Networks (NGN) using emerging technologies.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to integrate sustainability into the planning and design stages of an ICT project	1.1. Evaluate suitable ICT <i>projects</i> into which sustainability can be integrated 1.2. Negotiate with the <i>stakeholders</i> to establish the extent to which sustainability is to be integrated 1.3. Research and identify suitable technology solutions applicable to the project 1.4. Gather power consumption data on <i>ICT equipment</i> required for an <i>energy audit</i> based on an <i>agreed standard</i>
2. Devise strategies for incorporating sustainability into an ICT project	2.1. Determine and oversee implementation of <i>short term technology solutions</i> to achieve reduction of power consumption 2.2. Initiate and progress <i>sustainable management principles</i> which result in reduced environmental impact 2.3. Establish, regularly review and improve <i>key performance indicators</i> (KPI) on sustainability performance 2.4. Incorporate innovative planning and design rules for ICT projects which foster sustainability and environmental best practice
3. Analyse energy audit data	3.1. Identify <i>energy usage</i> within the scope of the ICT project and provide a <i>detailed report</i> 3.2. Estimate potential energy savings and payback periods for recommended actions 3.3. Estimate the carbon dioxide (CO ₂) emissions for the nominated project 3.4. Evaluate the estimated CO ₂ emissions with comparable <i>benchmarks</i> 3.5. Make recommendations in order of priority and give estimates of implementation costs on integration of sustainability for other ICT projects

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- analytical skills to:
 - compare and evaluate effective technical solutions involving integration of sustainability
 - interpret technical specifications and related sustainability documentation
- communication skills to:
 - adjust communication to suit different audiences
 - liaise with customers to outline sustainability strategy benefits and how they can be incorporated into the project within specified timeframes
 - negotiate approvals and contract arrangements with suppliers and contractors
 - respond effectively to diversity
 - to consult on and validate policy
 - work as a member of a team
- literacy skills to:
 - document technical requirements and procedures
 - evaluate complex and formal documents such as policy and legislation
 - prepare written reports requiring precise expression, language and structures suited to the intended audience
- numeracy skills to:
 - analyse and confirm capacity requirements
 - calculate budget requirements and limitations
 - determine workforce requirements
 - estimate CO₂ emissions
- organisational skills to arrange relevant documentation and approvals
- planning and organisational skills to:
 - set out project requirements and priorities
 - make site access and equipment delivery arrangements
- problem solving skills to account for unexpected variations to requirements, and to effectively manage different points of view and dissenting stakeholders
- research skills to:
 - research and present information
 - gain and maintain relevant and current technical product knowledge
- technical skills to integrate sustainability into a technical project

Required knowledge

- best practice approaches relevant to own work area
- environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and OHS safety

REQUIRED SKILLS AND KNOWLEDGE

- implications of policy being developed
- estimated CO₂ emissions
- ICT power consumption calculations
- policy development processes and practices
- power consumption audit methodology
- principles, practices and available tools and techniques of sustainability management relevant to the telecommunications industry
- quality assurance systems relevant to own organisation
- relevant industry competence
- relevant organisational policies, procedures and protocols
- systems and procedures to aid in the achievement of workplace sustainability

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and integrate sustainability into ICT projects by devising strategies to conserve resources • analyse energy audit data on enterprise resource consumption • develop and monitor policies for review and improvements, benchmarking against industry best practice and attempting new approaches continuously over time.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which planning, design and integration of sustainability may be carried out • relevant legislation, standards, guidelines, reports and equipment specifications and drawings • range of workplace documentation, personnel, information and resources: <ul style="list-style-type: none"> • compliance obligations • organisational plans • work responsibilities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate analysing energy audit data • review of policy developed and procedural documentation completed by the candidate outlining the approach taken • review of implementation strategy, plans and work plans completed by the candidate • evaluation of methods used to involve stakeholders in policy development, implementation and review.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE

	<p>for example:</p> <ul style="list-style-type: none"> • ICTPMG6033A Develop project management plan • ICTPMG6034A Prepare a detailed design brief • ICTTEN6206A Produce an ICT network architecture design. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Projects may include:

- advanced meter infrastructure (AMI)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • alternative energy cellular base station sites • equipment upgrades • introduction of new technology • passive optical network (PON) technology for fibre to the premises (FTTP) • smart grid partnerships • software upgrade.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • competitors • customers • employees • investors • media • regulators • society.
<i>ICT equipment</i> may include:	<ul style="list-style-type: none"> • data storage • firewall • multiplexer • printer • router • server • switch • telephone system • workstation.
<i>Energy audit</i> may refer to:	<ul style="list-style-type: none"> • AS/NZ 3598:2000: <ul style="list-style-type: none"> • Level 1 consumption benchmark • Level 2 preliminary assessment • Level 3 economic analysis.
<i>Agreed standard</i> may include:	<ul style="list-style-type: none"> • AS/NZ 3598:2000 (or latest revision) • BS EN 16001:2009 Energy Management Systems • ISO 14001:2004 Environment.
<i>Short term technology solutions</i> may include:	<ul style="list-style-type: none"> • energy efficient hardware • hibernation of: <ul style="list-style-type: none"> • hard drive • LCD monitor • workstation • multifunction devices • remote energy management • replacing desktop PCs with thin clients

RANGE STATEMENT	
	<ul style="list-style-type: none"> • server virtualisation • use of videoconference technology.
<i>Sustainable management principles</i> may include:	<ul style="list-style-type: none"> • audit waste management procedures • improving the energy efficiency of ICT network equipment: <ul style="list-style-type: none"> • reducing the need for air conditioning • shutting down equipment during low demand • supply chain: <ul style="list-style-type: none"> • driving ethical values through the supply chain • engaging supplier's involvement in emissions reporting and continual improvement • engaging suppliers who provide information on energy consumption and product lifecycles • influencing suppliers to provide energy efficient products and services • procurement strategies: <ul style="list-style-type: none"> • assessment of suppliers' environmental policies and procedures • lowering of energy consumption or environmental impact of replacement products or services • managing the environmental impacts of electrical and electronic equipment • use of energy consumption and environmental impact as criteria in the process of awarding contracts.
<i>Key performance indicators (KPIs)</i> may include:	<ul style="list-style-type: none"> • kg CO₂ emitted per floor area occupied in permanent buildings • kg CO₂ emissions from company car fleet • percentage of timber used in construction from well managed, sustainable sources • percentage volume of material from sustainable sources • reduction of quantity (in 1000's kg) of ozone depleting gases used in air-conditioning equipment.
<i>Energy usage</i> may include:	<ul style="list-style-type: none"> • a percentage of overall energy use in this

RANGE STATEMENT	
	project <ul style="list-style-type: none"> • individual equipment • location.
<i>Detailed report</i> may include:	<ul style="list-style-type: none"> • details of energy efficiency improvements • energy consumption records • energy saving practices and financial returns • energy use in graphical form • executive summary with recommendations • implementation costs • payback periods • review process • timelines.
<i>Benchmarks</i> may include:	<ul style="list-style-type: none"> • AccountAbility AA1000 Assurance Standard (2008) • BSI BenchMark • Carbon Disclosure Project (CDP) • Dow Jones Sustainability Index (DJSI) • Global Reporting Initiative (GRI) G3 guidelines (telecommunications sector supplement).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare information for establishing a business case	1.1. Evaluate the proposed ICT project to determine the scope and potential of sustainability integration 1.2. Research <i>appropriate sources of information</i> relevant to the project to prepare the business case 1.3. Analyse and evaluate the <i>expected goals</i> of the project and relate the business case to broader organisational goals 1.4. Identify and consult with <i>stakeholders</i> to plan and validate options 1.5. Identify and report on any assumptions and known <i>constraints</i> that can impact on the project
2. Produce the Business Case for the ICT sustainability project	2.1. Evaluate the <i>critical success factors</i> to determine the vital strategy for the project to successfully implement sustainability and gain competitive advantage 2.2. Prepare a cost-benefit analysis and estimate <i>overall benefit</i> obtained by introducing or improving sustainability in the project 2.3. Prepare an <i>estimate of costs</i> over an appropriate time period and determine the potential the <i>return on investment (RoI)</i> 2.4. Evaluate and analyse <i>alternative options</i> to determine the benefits, disadvantages, costs and risks
3. Produce business case documentations	3.1. Validate the options with stakeholders and determine the recommended option 3.2. Prepare an implementation plan for the recommended option for the ICT project 3.3. Produce an <i>executive summary</i> of the proposal including the consequences of not implementing the sustainability activity

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

REQUIRED SKILLS AND KNOWLEDGE

- analytical skills to compare and evaluate effective technical solutions involving introduction or improvement of sustainability
- research and writing skills to research and present information, and to prepare written business cases requiring precise expression, language and structures suited to the intended audience
- communication skills to:
 - prepare a press release regarding the level of achievement of sustainability benchmarks, environmental targets and performance highlights
 - liaise with customers to outline the resulting sustainability benefits
 - adjust communication to suit different audiences
 - respond effectively to diversity
 - work as a member of a team
 - consult on and validate policy
- literacy skills to:
 - prepare a business case
 - evaluate complex and formal documents, such as government policy and legislation
 - interpret technical specifications and related sustainability documentation
 - document technical requirements and procedures
- numeracy skills to:
 - determine workforce requirements
 - analyse and confirm capacity requirements
 - calculate budget requirements and limitations
 - perform calculations related to life cycle assessment (LCA)
- organisational skills to arrange relevant documentation and approvals
- planning and organisational skills to:
 - set out project requirements and priorities
- problem solving skills to account for unexpected variations to requirements, and to effectively manage different points of view and dissenting stakeholders
- research skills to gain and maintain relevant and current technical product knowledge
- technical skills to utilise sustainability software tools
- project management skills to undertake or manage a complex project

Required knowledge

- best practice approaches relevant to sustainability
- environmental and sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and occupational health and safety (OHS) implications of policy being developed

REQUIRED SKILLS AND KNOWLEDGE

- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the ICT industry
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational policies, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability
- ICT power consumption calculations
- energy consumption and energy audit methodology
- environmental impacts of products, processes, systems and services

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • candidate's involvement as a key person in establishing a business case to introduce or improve sustainability in an ICT project • implementation strategy, as part of the policy, that has been devised, implemented and reviewed showing a measurable improvement utilising the chosen benchmark indicators • communicating with stakeholders to discuss approaches to sustainability improvements development and implementation, and contributing to the resolution of disputes among stakeholders • using software systems for recording and filing documentation for measurement of current usage and using word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information • reviewing and improving policies by identifying improvements and benchmarking against industry best practice and attempting new approaches continuously over time.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which preparation of a business case for introducing or improving sustainability in an ICT project may be carried out • access to relevant legislation, standards, guidelines, reports and equipment specifications and drawings • access to a range of workplace documentation and personnel, information and resources, such as compliance obligations, organisational plans, work responsibilities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of

EVIDENCE GUIDE	
	<p>portfolios of evidence and third-party workplace reports of on the job performance by the candidate</p> <ul style="list-style-type: none"> • review of policy developed and procedural documentation outlining the approach taken • review of implementation strategy, plans and work plans • analysis of methods used to involve stakeholders in policy development, implementation and review • evaluation of participation in sustainability work practices and programs • observation over time in relation to review of work area relating to policy and procedures being developed to assess measurement of resources used, hazards and compliance.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG6033A Develop project management plan • ICTPMG6034A Prepare a detailed design brief • ICTTEN6206A Produce an ICT network architecture design <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include</p>

EVIDENCE GUIDE	
	equipment modified for people with special needs.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Appropriate sources of information</i> may include:</p>	<ul style="list-style-type: none"> • International standards for environmental management - Life cycle assessment <ul style="list-style-type: none"> • AS/NZS ISO 14040:1998 • AS/NZS ISO 14041:1999 • AS/NZS ISO 14042:2001 • AS/NZS ISO 14043:2001 • AS/NZS ISO 14048:2003 • AS/NZS 3598:2000 • BS EN 16001:2009 • United States Environmental Protection Agency (EPA) - Life Cycle Assessment: Principles and Practice EPA/600/R-06/060 May 2006 • Dow Jones Sustainability Index (DJSI).
<p><i>Expected goals</i> may include:</p>	<ul style="list-style-type: none"> • achieving best practice in products, processes or services while protecting the environment without sacrificing profitability • enhancing company reputation • guiding new product development to reduction of resources and emissions • improving public perception • providing information on trade-offs of alternative processes, products and materials.
<p><i>Stakeholders</i> may include:</p>	<ul style="list-style-type: none"> • business partners • community • customers • government organisations

RANGE STATEMENT	
	<ul style="list-style-type: none"> • shareholders • staff • technical experts.
Constraints may include:	<ul style="list-style-type: none"> • existing business partnerships and arrangements • existing contracts or service level agreements • reluctance to accept change.
Critical success factors may include:	<ul style="list-style-type: none"> • customer satisfaction • increase in customers • new sources of business • positive cash flow • profit margin • quality of products and services • revenue growth.
Overall benefit may include:	<ul style="list-style-type: none"> • better use of workspace • employee satisfaction • enhanced brand value • enhanced company reputation • improved public perception • more reliable service to customers • tangible benefits and intangible benefits.
Estimate of costs may include:	<ul style="list-style-type: none"> • annual operating costs • capital costs • detailed breakdown of costs • recurring costs • summary of costs by category.
Return on investment (RoI) may include	<ul style="list-style-type: none"> • carbon trading • project life • rate of depreciation • simple RoI calculation.
Alternative options may include:	<ul style="list-style-type: none"> • a range of approaches • an option that achieves same result as preferred option • collaborative delivery • in-house delivery of the project • innovative approaches.
Executive summary may include:	<ul style="list-style-type: none"> • background to the proposal • introduction to the proposal • past and current environment

RANGE STATEMENT	
	<ul style="list-style-type: none">• rationale for establishing the business case at this time.

ICTSUS7235A Use ICT to improve sustainability outcomes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to improve sustainability outcomes through the reduction of environmental, economic and social impacts for a range of industries using ICT based solutions. It involves meeting the requirements for monitoring and reporting of greenhouse gas emissions and using ICT for creating opportunities to improve sustainability by addressing products, services and processes specific to specific enterprises and industries.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit is applies to individuals employed as an ICT consultant or with an ICT related role in an organisation. Work normally involves a high degree of autonomy or is within a management team with a high level of responsibility.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Design and manage a sustainability audit	<p>1.1. Use an audit tool reflects criteria of benchmark, nature of risks, relevant information and data types, evaluation of performance and legislative requirement</p> <p>1.2. Define the scope, objectives and benchmarks for the audit in consultation with relevant stakeholders</p> <p>1.3. Use an <i>audit tool</i> to reflect criteria of benchmark, nature of risks, relevant information and data types, evaluation of performance and legislative requirement</p> <p>1.4. Document requirements for audit resources, timing, schedule and responsibilities consistent with industry best practice and relevant standards</p> <p>1.5. Ensure <i>collection strategies</i> are objective, systematic and that information and data is valid and reliable</p> <p>1.6. Report outcomes clearly and concisely, including benefits to be achieved by adoption of audit report recommendations</p>
2. Monitor energy consumption and emissions	<p>2.1. Analyse requirements of the National Greenhouse and Energy Reporting System (NGERS) and other relevant <i>legislation</i> and industry standards in relation to a range of <i>industries</i> and the needs of specific organisations</p> <p>2.2. Identify links with functional areas and environmental management systems to ensure comprehensive information and data collection</p> <p>2.3. Determine <i>hardware</i> and <i>software</i> required for collecting, collating, analysing and reporting emissions related information and data</p> <p>2.4. Factor requirement for an external audit into the monitoring proposal</p> <p>2.5. Critically evaluate energy consumption and emissions data</p> <p>2.6. Develop improvement strategies based on the review of data</p> <p>2.7. Use industry <i>best practice</i> as a quality benchmark</p>
3. Develop ICT solutions to improve sustainability outcomes	<p>3.1. Research and analyse <i>mitigation and adaptation strategies</i> appropriate for a range of industries</p> <p>3.2. Benchmark and document performance expectations in consultation with relevant stakeholders</p> <p>3.3. Develop and document technical specifications</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>including hardware, software, networking, interface and security requirements</p> <p>3.4. Determine timelines, resources and costs for implementation and ongoing monitoring and maintenance</p> <p>3.5. Analyse the impact of ICT solution in relation to performance benchmarks</p> <p>3.6. Analyse opportunities and develop recommendations to improve sustainability of enterprise products, services and processes</p> <p>3.7. Present report for client sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and evaluate complex and formal documents such as legislation and technical reports
- communication skills to consult with stakeholders and liaise with clients
- literacy skills to prepare written reports and other documentation requiring precision of expression and language and structures suited to the intended audience
- research skills to analyse and present information
- technical skills to:
 - conduct an ICT sustainability audit
 - quantify sustainability objectives, targets, achievements and measures
 - use relevant systems and procedures to aid in the achievement of emissions reduction

Required knowledge

- auditing sustainability processes and practices
- corporate social responsibility
- development processes and practices
- hazard identification and control
- industry standards
- legislation framework underpinning sustainability
- principles, practices and available tools and techniques of sustainability

REQUIRED SKILLS AND KNOWLEDGE

- management relevant to a range of industries
- relevant ISO standards
- sustainability from a local, national and international perspective
- sustainability including ecological, economic and social issues
- technical performance measurement

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • audit and analyse patterns of energy use • develop monitoring and reporting systems that comply with regulatory requirements • develop a workable implementation strategy • formulate solutions using ICT to reduce emissions • develop benchmarks for reviewing and improving performance.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • relevant reports: <ul style="list-style-type: none"> • government • Intergovernmental Panel on Climate Change (IPCC) • scientific • conference papers • vendor white papers • resources, tools and networking equipment • suitable hardware and software • suitable bandwidth for internet connections • relevant legislation and regulations • manufacturers' technical specifications • relevant ISO standards.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate managing organisation sustainability • review of analyses, plans and reports completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE**assessment**

industry sector, workplace and job role is recommended, for example:

- ICTSUS7236A Manage improvements in ICT sustainability.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Stakeholders may include:

- clients and customers
- Federal Government

RANGE STATEMENT	
	<ul style="list-style-type: none"> • local government • management • non-government organisations (NGOs) • shareholders • staff • state government • suppliers.
Audit tool may include:	<ul style="list-style-type: none"> • National Carbon Accounting System Data Viewer • National Carbon Accounting Toolbox.
Collection strategies may include:	<ul style="list-style-type: none"> • electricity billing information • hardware sensor devices.
Legislation may include:	<ul style="list-style-type: none"> • Australian Government White paper • Australian Government Green paper • Carbon Pollution Reduction Scheme (CPRS) • Emissions Trading Scheme (ETS).
Industries may include:	<ul style="list-style-type: none"> • building • electricity • logistics • motor.
Hardware may include:	<ul style="list-style-type: none"> • sensors • wireless sensor networks.
Software may include:	<ul style="list-style-type: none"> • avoiding mass extinctions engine (AMEE) • carbon footprint calculators • logica carbon reporting software • online system for comprehensive activity reporting (OSCAR) • statistical analytic software (SAS) carbon reporting software • sustainability SCO2 (Software CO2).
Best practice information may be found in:	<ul style="list-style-type: none"> • 2020 Report • company case studies • vendor white papers.
Mitigation and adaptation strategies may include:	<ul style="list-style-type: none"> • broadband or telepresence • carbon capture and storage (CCS) • geosequestration • household monitoring • monitoring sources of energy that produce CO2

RANGE STATEMENT

	<ul style="list-style-type: none">• remote workstation solutions• The Intelligent Office.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Critically analyse an organisation's ICT assets energy footprint</p>	<p>1.1. Audit and assess level and type of use across the range of <i>ICT devices, infrastructure</i> and <i>software</i></p> <p>1.2. Audit and establish baselines of ICT energy consumption and other elements contributing to the organisation's carbon footprint</p> <p>1.3. Assess ICT usage in relation to its contribution to the organisation's business goals and priorities</p> <p>1.4. Determine critical issues for the organisation relevant to ICT usage and carbon footprint</p> <p>1.5. Assess current ICT usage in relation to sustainable <i>asset management</i></p> <p>1.6. Apply industry <i>best practice</i> where appropriate</p>
<p>2. Develop ICT sustainability strategies and policy</p>	<p>2.1. Include goals for reduction of <i>sustainability impacts</i> and equipment <i>life cycle management</i> approaches in organisational policy</p> <p>2.2. Check policy scope is consistent with <i>industry standards and benchmarks</i> and amend where necessary</p> <p>2.3. Ensure policy reflects the organisation's commitment to sustainability as an integral part of business planning and as a business opportunity</p> <p>2.4. Consult with <i>stakeholders</i> as an integral part of policy development, implementation and review processes</p> <p>2.5. Recommend policy options based on effectiveness, timeframes and cost</p> <p>2.6. Develop and produce strategies for implementation, monitoring, review and audit as part of the policy documentation.</p>
<p>3. Formulate technical and behavioural solutions to improve ICT sustainability</p>	<p>3.1. Determine and document hardware, software, network and interface requirements of solutions</p> <p>3.2. Develop <i>strategies</i> to improve sustainability outcomes including for example energy efficiency and <i>alternative energy sources</i></p> <p>3.3. Develop guidelines for improving <i>sustainability</i> through asset management</p> <p>3.4. Document requirements, resource allocations, training needs and implementation timelines for selected strategies and obtain sign off from relevant stakeholders</p>

ELEMENT	PERFORMANCE CRITERIA
4. Monitor and evaluate sustainability data	4.1. Develop criteria for measuring performance improvement 4.2. Identify trends that may indicate the need for remedial action and use to promote continuous improvement of performance 4.3. Modify policy and technical solutions in response to data analysis to ensure improvements are made 4.4. Determine scope, frequency and method of monitoring and reporting in consultation with stakeholders 4.5. Review data to ensure compliance with the management of sustainability and legislative requirements 4.6. Document findings and present to stakeholders

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to research, analyse and present information
- communication skills to consult with stakeholders
- literacy skills to:
 - read and evaluate complex and formal documents, such as legislation and technical reports
 - prepare written reports and other documentation requiring precision of expression and language and structures suited to the intended audience
- safety awareness skills to implement enterprise occupational health and safety (OHS) policy and procedures
- technical skills to:
 - quantify sustainability objectives, targets, achievements and measures
 - use relevant systems and procedures to aid in the achievement of ICT sustainability

Required knowledge

- energy efficiency and alternative energy sources
- hazard identification and control

REQUIRED SKILLS AND KNOWLEDGE

- industry standards
- IT:
 - hardware
 - interfacing
 - networking
 - software
- legislation framework underpinning sustainability
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management in the ICT industry
- relevant ISO standards
- sustainability from a local, national and international perspective
- sustainability including ecological, economic and social issues

Evidence Guide

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to plan, conduct and report on applied research to influence strategic practices on ICT sustainability and outcomes within an organisational context. The unit also covers constructing an applied research strategy, using a range of applied research techniques, and analysing and presenting findings.</p> <p>The competitive context and the evolution of technologies in the ICT sector mean that the capacity to innovate is important.</p> <p>Energy and climate change strategies, supply chain and product responsibility and innovation are key factors in achieving sustainability targets.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to leaders or enterprise managers using applied research to enhance individual, team and organisational performance in sustainability.</p> <p>The intended purpose and approach to applied research may vary across a range of contexts and organisations. In this unit, the focus is on applied research to attain improved organisational outcomes. It involves leading a range of research activities and techniques that, in combination, can provide quality information to enhance the development of capabilities in an enterprise to reach sustainability targets.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1) Provide direction for the development of an applied research strategy for ICT sustainability	1.1 Provide vision for the <i>applied research strategy</i> to meet the sustainability requirements of the identified research purpose 1.2 Clarify and confirm <i>applied research purpose</i> and needs of the <i>target group</i> 1.3 Facilitate the development of policies and procedures in relation to conducting applied research for the enterprise 1.4 Guide the development of mechanisms for collecting and maintaining data in a systematic manner 1.5 Review <i>factors affecting the reliability and validity of data</i> 1.6 Review relevant research ethics and codes of conduct
2) Control the use of a range of applied research techniques and resources	2.1 Review and evaluate a range of <i>applied research methods and theories</i> and <i>data collection techniques</i> 2.2 Guide the selection of appropriate methods to gather and analyse data on sustainability relevant to the research project 2.3 Authorise access to <i>appropriate sources of information</i> relevant to the research project 2.4 Select <i>sustainable management principles</i> that will have the most sustainable impact on the project 2.5 Ensure <i>relevance of the research</i> through integrity of the data collected and analysis tools used
3) Promote findings	3.1 Ensure accuracy of data and research details and adherence to any <i>legal requirements</i> 3.2 Evaluate the relevance of collated and analysed data against the original applied research strategy 3.3 Evaluate the impact of findings 3.4 Recommend implementation strategies 3.5 Ensure documentation and presentation of <i>research findings</i> is in a clear and logical manner consistent with audience needs 3.6 Identify the need for and an appropriate approach to, further research 3.7 Promote research findings and the approach to further research

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse and interpret structurally intricate information in the area being researched
 - evaluate effective technical solutions in sustainability implementation
- communication and teamwork skills to:
 - consult with target groups using a range of communication techniques
 - develop written texts which deal with complex ideas and concepts
 - present research findings creatively to meet audience needs
- literacy skills to:
 - document technical requirements and procedures
 - evaluate complex and formal documents such as policy and legislation
 - prepare written reports requiring precise formats and structures to suit target audience
- numeracy skills to:
 - analyse and confirm research findings such as carbon dioxide (CO₂) emissions and carbon footprint
 - perform statistical analysis of trends and changes
- initiative and enterprise skills to discover and source appropriate information, and to identify future implication of information and data collected
- planning and organising skills to:
 - construct an applied research strategy
 - initiate and design research methodology
 - manage an applied research project
- problem solving skills to:
 - analyse research
 - check the integrity of data collected
 - collect, organise, analyse and present data
 - conduct trend analyses
 - develop and examine the validity of the applied research strategy using a range of applied research techniques
 - evaluate a range of sustainable management principles
- self-management and learning skills to:
 - conduct research to develop capabilities and learning related activities
 - manage own time and determine priorities

REQUIRED SKILLS AND KNOWLEDGE

- review and adhere to relevant ethics and codes of conduct
- store data to maintain privacy and confidentiality of information
- technical skills to:
 - select suitable technology and technical services
 - use a range of software tools to analyse technical data
 - use technology and web media to discover, access, collect and store data, information and research in a systematic manner
- leadership skills to:
 - set research directions, make decisions and solve problems
 - manage, guide and influence research team members
 - communicate, motivate and facilitate research team interactions

Required knowledge

- environmental and sustainability legislation, regulations and codes of practice applicable to industry and organisation
- audit methodology on ICT energy, waste, product life cycles and CO₂ emissions
- principles, practices and available tools and techniques of sustainability management relevant to the telecommunications industry
- communication processes and methods
- data collection methods
- legislation, regulations, policies, procedures and guidelines relating to handling or storing data, including privacy and freedom of information
- presentation techniques
- reporting methods
- research ethics and codes of conduct
- research tools and methods
- selection of appropriate applied research techniques
- leadership strategies relevant to a research environment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • lead the formulation of a research proposal or plan which includes: <ul style="list-style-type: none"> • specific research questions on sustainability • valid population or sample size • description of the geographical, cultural, social or institutional context within which the research will be carried out • full description of the data collection methods • analysis of the limitations to research design • lead the design of an applied research project using appropriate tools and techniques • design a research report with analysis of data, and valid and reliable findings • evaluate relevance of the research results • apply knowledge of applied research techniques.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • research activity that relates to an actual workplace or simulated context and topic • range of tools and techniques appropriate to the given situations and research topic.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of projects relating to conducting applied research conducted by the candidate • direct observation of the candidate applying research skills • oral or written questioning to assess knowledge of applied research.

EVIDENCE GUIDE	
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTSUS8238A Conduct and manage a life cycle assessment for sustainability. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define and scope project goal	1.1. Access appropriate sources of information relevant to the LCA project 1.2. Define the goal of the project 1.3. Specify information needed to inform decision-makers 1.4. Determine required level of specificity 1.5. Determine data organisation and display of results 1.6. Define scope of the study 1.7. Determine ground rules for performing the work
2. Conduct a life cycle inventory (LCI)	2.1. Generate a life cycle flow diagram 2.2. Develop a data collection plan for the LCI 2.3. Collect the actual data 2.4. Evaluate and document the LCI results
3. Conduct a life cycle impact assessment (LCIA)	3.1. Select and define impact categories 3.2. Classify LCI results to the impact categories 3.3. Model LCI impacts within impact categories using science-based conversion factors 3.4. Normalise potential impacts in ways that can be compared 3.5. Assign impact categories by grouping into one or more sets to facilitate the interpretation of the results 3.6. Assign weighting factors to emphasise the most important potential impacts
4. Interpret and evaluate results from the LCI and the LCIA and communicate them	4.1. Identify the significant issues based on the LCI and the LCIA 4.2. Evaluate completeness check, consistency check and sensitivity check 4.3. Make recommendations for improving the product, process or service life cycle
5. Report results of the LCA study	5.1. Document the results of the LCA study 5.2. Finalise the report with a conclusion and make recommendations as a result of the LCA study

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate effective technical solutions involving life cycle aspects of sustainability, and to critically evaluate data quality
- communication skills to:
 - prepare a press release regarding the level of achievement of sustainability benchmarks, environmental targets and performance highlights
 - liaise with customers to outline the resulting sustainability benefits
 - adjust communication to suit different audiences
 - respond effectively to diversity
 - work as a member of a team
 - consult on and validate policy
- literacy skills to:
 - evaluate complex and formal documents such as policy and legislation
 - interpret technical specifications and related sustainability documentation
 - document technical requirements and procedures
 - prepare written reports requiring precise expression, language and structures suited to the intended audience
- numeracy skills to:
 - determine workforce requirements
 - analyse and confirm capacity requirements
 - calculate budget requirements and limitations
 - perform calculations related to LCA
 - estimate carbon dioxide (CO₂) emissions
- planning and organisational skills to:
 - set out project requirements and priorities
 - make site access and equipment delivery arrangements
 - arrange relevant documentation and approvals
- problem solving skills to account for unexpected variations to requirements, and to effectively manage different points of view and dissenting stakeholders
- research skills to:
 - research and present information
 - examine statistical databases
 - gain and maintain relevant and current technical product knowledge
- technical skills to utilise life cycle assessment software
- project management skills to undertake or manage a complex LCA project

Required knowledge

REQUIRED SKILLS AND KNOWLEDGE

- best practice approaches relevant to own work area
- environmental and sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and occupational health and safety (OHS) implications of policy being developed
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the telecommunications industry
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational policies, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability
- ICT power consumption calculations
- power consumption and energy audit methodology
- CO2 emissions estimation
- environmental impacts of products, processes, systems and services

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • undertake a LCA for sustainability • undertake scoping and definition of goals of a LCA for sustainability • produce a LCI using relevant software and data collection strategies • use life cycle assessment and other software for researching and interpreting charts, flowcharts, graphs and other visual data and information • evaluate LCI and LCIA results, using completeness, consistency and sensitivity checks • make recommendations based on the results of the LCA study.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which planning, design and integration of sustainability may be carried out • relevant legislation, standards, guidelines, reports and equipment specifications and drawings • a range of workplace documentation and personnel, information and resources (such as compliance obligations, organisational plans, work responsibilities).
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of projects relating to conducting applied research conducted by the candidate • direct observation of candidate applying research skills • oral or written questioning to assess knowledge of applied research.

EVIDENCE GUIDE	
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTSUS8237A Lead applied research in ICT sustainability. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Appropriate sources of</i>	<ul style="list-style-type: none"> AS/NZS 3598:2000

RANGE STATEMENT	
<i>information</i> may include:	<ul style="list-style-type: none"> • BS EN 16001:2009 • Dow Jones Sustainability Index (DJSI) • International standards for environmental management - Life cycle assessment <ul style="list-style-type: none"> • AS/NZS ISO 14040:1998 • AS/NZS ISO 14041:1999 • AS/NZS ISO 14042:2001 • AS/NZS ISO 14043:2001 • AS/NZS ISO 14048:2003 • United States Environmental Protection Agency (EPA) - Life Cycle Assessment: Principles and Practice EPA/600/R-06/060 May 2006.
<i>Goal</i> may include:	<ul style="list-style-type: none"> • establishing baseline information for a process • guiding new product development to reduction of resources and emissions • identifying gaps in data • providing information on trade-offs of alternative processes, products and materials • ranking relative contribution of individual processes • selecting best product, process or service with least effect on human health and the environment • supporting product certification.
<i>Information</i> may include:	<ul style="list-style-type: none"> • changes to be made to reduce specific environmental impacts • impacts relevant to stakeholders and interested parties • products or processes which cause the least environmental impact • technologies or processes which cause least detrimental impact: <ul style="list-style-type: none"> • smog • acid rain • particulates • aquatic pollution.
<i>Specificity</i> may relate to:	<ul style="list-style-type: none"> • enterprise-specific versus generic products • internal enterprise use or public purposes • product-specific data versus generic data • product-specific versus generic study.

RANGE STATEMENT	
Data organisation may include:	<ul style="list-style-type: none"> • equivalent use as the basis for comparison • a functional unit that appropriately describes the function of the product or process being studied • volume or weight as the basis for comparison.
Scope of the study may include:	<ul style="list-style-type: none"> • manufacturing • materials manufacture • packaging and distribution • product fabrication • raw materials acquisition • recycling and waste management • use, re-use and maintenance • variants: <ul style="list-style-type: none"> • cradle-to-grave • cradle-to-gate • economic input-output life cycle assessment (EIO LCA) • gate-to-gate • well-to-wheel.
Ground rules may include:	<ul style="list-style-type: none"> • define the systems analysed • documenting assumptions or decisions made throughout the project • methodology used • quality assurance procedures: <ul style="list-style-type: none"> • available time and level of resources • internal review • external review • formal review process • reporting requirements • setting of boundaries • software used for modelling: <ul style="list-style-type: none"> • EcoLab • GaBi Software • SimaPro • stating the basis for comparison.
Flow diagram may include:	<ul style="list-style-type: none"> • all alternatives under consideration: <ul style="list-style-type: none"> • baseline system • alternative systems • boundaries • mapping inputs and outputs (material and

RANGE STATEMENT	
	<ul style="list-style-type: none"> energy) to a process or system • subsystems.
<i>Data collection plan</i> may include	<ul style="list-style-type: none"> • defining the data quality goals • developing a data collection worksheet or spreadsheet: <ul style="list-style-type: none"> • data collection procedures • data quality measures • geographic scope • presentation of results • purpose of the inventory • system boundaries • types of data used • identifying data sources and types: <ul style="list-style-type: none"> • equipment and process specifications • equipment logs • journals • laboratory test results • meter readings from equipment • identifying data types: <ul style="list-style-type: none"> • measured • modelled • non-LCI data (data not intended for use in LCI) • non-site specific • sampled • vendor data • identifying data quality indicators: <ul style="list-style-type: none"> • completeness • consistency • precision.
<i>Collect the actual data</i> may include:	<ul style="list-style-type: none"> • atmospheric emissions • conversion of fuel units into energy units • co-product allocation • data categories: <ul style="list-style-type: none"> • CO₂ emissions • reporting emissions required by regulatory agencies • reporting of all emissions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • direct contact with experts • efficiency of transportation mode: <ul style="list-style-type: none"> • conversion of tonne-kilometres into fuel units <ul style="list-style-type: none"> • litres (gallons) of diesel fuel • emissions generated from combustion of the fuels • energy input data • energy sources • illegal waste disposal included if data is available • industrial scrap • ISO 14041:6.5.3 (2004) allocation procedure • obtain non-specific inventory data • products • purchase LCI data • research • specific data versus composite data • site visits • solid wastes • transportation data: <ul style="list-style-type: none"> • conversion to ton-miles or tonne-kilometres • distance shipped • weight of shipment • waterborne wastes.
<i>Evaluate and document</i> may include:	<ul style="list-style-type: none"> • air emissions • data parameter groups within a category • data parameters within a group: <ul style="list-style-type: none"> • carbon dioxide (CO₂) • chlorine (Cl) • sulphur dioxide (SO₂) • define boundaries set • define systems analysed • describing the methodology used in analysis • presentation of information: <ul style="list-style-type: none"> • graphical format • tabular format • water borne waste solid wastes.
<i>Impact categories</i> may include:	<ul style="list-style-type: none"> • acidification

RANGE STATEMENT	
	<ul style="list-style-type: none"> • aquatic toxicity • global warming • resource depletion • stratospheric ozone depletion • terrestrial toxicity.
<i>Classify LCI results</i> may include:	<ul style="list-style-type: none"> • assigning LCI results to impact categories: <ul style="list-style-type: none"> • CO₂ emissions attributed to global warming • NO₂ emissions attributed to ozone formation • SO₂ emissions attributed to acidification.
<i>Grouping</i> may include:	<ul style="list-style-type: none"> • sorting of indicators by characteristics, such as: <ul style="list-style-type: none"> • emissions: <ul style="list-style-type: none"> • air • water • location: <ul style="list-style-type: none"> • global • local • regional • sorting of indicators by a ranking system, such as: <ul style="list-style-type: none"> • high priority • medium priority • low priority.
<i>Weighting</i> may include:	<ul style="list-style-type: none"> • determining weights to place on impacts • identifying the underlying values of the stakeholders • weighting methods: <ul style="list-style-type: none"> • analytic hierarchy process • modified Delphi technique • decision analysis using multi-attribute theory.
<i>Evaluate and report LCIA results</i> may include:	<ul style="list-style-type: none"> • definition of systems analysed • description of methodology used in the analysis • description of the boundaries that were set • documentation of limitations • verify accuracy of LCIA results.
<i>Significant issues</i> may include:	<ul style="list-style-type: none"> • essential contributions for life cycle stages to LCI or LCIA results: <ul style="list-style-type: none"> • individual unit processes

RANGE STATEMENT	
	<ul style="list-style-type: none"> • groups of processes • impact category indicators: <ul style="list-style-type: none"> • emissions • resource use • waste • inventory parameters: <ul style="list-style-type: none"> • emissions • energy use • waste.
<i>Completeness check</i> may include:	<ul style="list-style-type: none"> • all relevant information and data needed for the interpretation are available and complete • develop checklist to indicate each significant area represented in results • organise data by: <ul style="list-style-type: none"> • life cycle stage • processes • type of data represented: <ul style="list-style-type: none"> • environmental release to air • raw materials energy • transportation.
<i>Consistency check</i> may include:	<ul style="list-style-type: none"> • comparisons made on inconsistent data sources • comparisons made on data from different eras • data from plants using different technologies • data from technology based on different standards: <ul style="list-style-type: none"> • European • US.
<i>Sensitivity check</i> may include:	<ul style="list-style-type: none"> • evaluation of the reliability of results using: <ul style="list-style-type: none"> • contribution analysis • sensitivity analysis • uncertainty analysis.
<i>Results of the LCA study</i> may include:	<ul style="list-style-type: none"> • administrative Information • details of the practitioner who conducted the LCA study • date of report • definition of goal and scope • life cycle inventory analysis: <ul style="list-style-type: none"> • data collection

RANGE STATEMENT

	<ul style="list-style-type: none"> • calculation procedures • life cycle impact assessment: <ul style="list-style-type: none"> • methodology • results of the impact assessment performed • life cycle interpretation: <ul style="list-style-type: none"> • results • assumptions and limitations • data quality assessment • critical review (internal and external): <ul style="list-style-type: none"> • details of reviewers and their affiliation • critical review reports • responses to recommendations.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to perform rigging work on telecommunications radio structures.</p> <p>A licensed rigger is required for the installation of some rigging equipment.</p> <p>The National Standard for Licensing Persons Performing High Risk Work applies to persons performing dogging and rigging work. Completion of the following units is required for certification at either basic, intermediate or advanced levels.</p> <p>CPCCLDG3001A Licence to perform dogging</p> <p>CPCCLRG3001A Licence to perform rigging basic level</p> <p>CPCCLRG3002A Licence to perform rigging intermediate level</p> <p>CPCCLRG4001A Licence to perform rigging advanced level.</p> <p>If operation of an elevated work platform (EWP) is required, a licence may be required.</p> <p>Users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Technical staff who work in rigging and install systems for telecommunications radio structures apply the skills and knowledge in this unit. They may make use of rigging plant and equipment, fall arrest, fall guarding and fall constraint and team communications.</p> <p>This unit applies to standard telecommunications structures.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare rigging systems	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site and confirm customer requirements 1.3. Inform appropriate personnel of existing and potential site hazards 1.4. Select tools and safety equipment required for safe rigging practice 1.5. Use rigging systems in a telecommunications environment according to specifications 1.6. Identify the proposed position of equipment to be mounted on telecommunications radio structures according to specifications and industry practice 1.7. Estimate safe working loads for rigging systems and equipment according to specifications 1.8. Select and inspect rigging equipment to ensure that it is fit for purpose according to specifications
2. Set up and carry out rigging work on telecommunications radio structures	2.1. Set up rigging and dogging equipment following safe working practices and procedures according to the occupational health and safety (OHS) Act 2.2. Operate rigging equipment and install telecommunications antenna and associated equipment according to specifications 2.3. Use internationally recognised communication signals and protocols with crane drivers and helicopter crews according to the Crane Association Crane Safety Manual for Operators/Users
3. De-rig and complete documentation	3.1. De-rig and lower rigging equipment according to specifications 3.2. Restore site to customer expectations following completion of installation according to industry practice 3.3. Complete documentation and notify customer for sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with other personnel, including the use of radio devices
- literacy skills to interpret technical documentation, plans and specifications
- planning and organisational skills to prioritise and monitor own work and OHS responsibilities
- problem solving and contingency management skills to adapt rigging activities and requirements to particular sites and conditions
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - apply remote area first aid
 - prevent and treat hypothermia
 - select and use required personal protective equipment for rigging projects to suit different applications and for working at height conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to select and use rigging equipment and practices to suit different applications

Required knowledge

- features and operating requirements of rigging equipment
- hypothermia symptoms and methods of prevention and treatment
- licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- overview knowledge of meteorology and weather prediction
- remote area first aid
- specific knowledge related to:
 - electromagnetic radiation (EMR) safety practices
 - optical fibre cabling and equipment safety practices
 - personal protective equipment for rigging projects
 - requirements of the OHS Act, relevant regulations, and applicable site and company OHS procedures
 - rigging practices and systems to telecommunications radio structures
 - working at heights safety practices

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply OHS requirements and work practices associated with rigging • carry out basic dogging skills • carry out basic rigging skills • set up a mobile crane • use specialised hand or power tools and equipment normally used in rigging.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site on which rigging operations may be conducted • rigging and safety equipment • relevant regulations, standards specifications and manuals.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate setting up and carrying out rigging work on a telecommunications radio structure • oral or written questioning of the candidate to assess OHS requirements and work practices associated with rigging.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTCR2189A Use operational safety in a telecommunications rigging environment • ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to use operational safety in a telecommunications rigging environment	<p>1.1. Prepare for given work according to <i>relevant legislation, codes, regulations and standards</i> and applicable to fall arrest, fall guarding and fall restraint systems</p> <p>1.2. Select <i>tools</i> and <i>safety equipment</i> required for safe rigging practice</p>
2. Assess hazards associated with wearing safety equipment	<p>2.1. Inform appropriate personnel of <i>potential faults and non-compliances</i> in <i>personal equipment</i></p> <p>2.2. Inform appropriate personnel of primary hazards associated with the use of a <i>safety harness and associated equipment and control strategies</i></p>
3. Check and fit a safety harness	<p>3.1. Use correct <i>safety harness fitting method</i></p> <p>3.2. Confirm that the lanyard is appropriate for the task and check lanyard and harness for faults according to manufacturer's specifications and workplace procedures</p> <p>3.3. Fit the safety harness according to manufacturer's instructions</p>
4. Use a safety harness in a telecommunications environment	<p>4.1. Minimise risks to self and others while using a safety harness and lanyards using identified safety principles associated with effective <i>fall arrest</i>, fall guarding and fall restraint systems</p> <p>4.2. Confirm the safety of possible hook-on points and select the optimum hook-on points</p> <p>4.3. Attach and detach lanyards in a safe manner to and from anchor points</p>
5. Verify the rescue plan to be activated in the event of a fall	<p>5.1. Confirm the <i>rescue plan</i> is in place with work supervisor</p> <p>5.2. Notify individuals of their roles in the rescue plan</p> <p>5.3. Provide a report to the supervisor on the application of operational safety in rigging practice in a telecommunications environment</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to properly and adequately assess risk on telecommunications network structures
- communication skills to liaise with other personnel, including the use of radio devices
- literacy skills to interpret manufacturer's operating instructions, technical documentation, plans and specifications
- numeracy skills to:
 - take measurements
 - interpret results
 - evaluate different types of technical data
- planning and organisational skills to prioritise and monitor own work and occupational health and safety (OHS) responsibilities
- problem solving and contingency management skills to adapt rigging activities to particular sites and conditions
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - check and fit a safety harness
 - use a safety harness where a fall hazard exists at height in a telecommunications context
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - prevent and treat hypothermia
 - select and use required personal protective equipment for rigging projects to suit different applications and for work at heights conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to select and use appropriate equipment and practices to suit different applications

Required knowledge

- electromagnetic radiation (EMR) safety practices
- fall arrest, fall guarding and fall restraint when working at heights in a telecommunications rigging environment
- features and operating requirements of rigging equipment
- government and local government legislation, regulations, and by-laws including:

REQUIRED SKILLS AND KNOWLEDGE

- applicable site and company OHS procedures
- OHS Act
- relevant codes of practice
- subsequent amendments in regards to fall arrest, fall guarding and fall restraint when working at heights in a telecommunications rigging environment
- hazards associated with wearing a safety harness and associated equipment
- licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- optical fibre cabling and equipment safety practices
- personal protective equipment for rigging projects
- rescue plan to be activated in the event of a fall
- risks present when working on telecommunications radio structures
- safe rigging practices and systems to telecommunications radio structures
- suspension trauma
- working at heights safety practices
- workplace operational procedures.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- use fall arrest, fall guarding and fall restraint systems when working at heights in a telecommunications rigging environment
- check and fit a safety harness according to industry practice
- use a safety harness where a fall hazard exists at height in a telecommunications context
- demonstrate knowledge of the rescue plan to be activated in the event of a fall
- apply related OHS requirements and work practices associated with fall arrest, fall guarding and fall

EVIDENCE GUIDE	
	restraint when working at heights in a telecommunications rigging environment.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site on which rigging operations may be conducted • rigging and safety equipment • relevant regulations, standards specifications and manuals.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate checking and fitting a safety harness using correct method • direct observation of the candidate using a safety harness in a telecommunications environment • review of report prepared by the candidate outlining a rescue plan in the event of a fall • oral or written questioning of the candidate to assess OHS requirements and work practices associated with rigging.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTCR2188A Use rigging practices and systems on telecommunications network structures • ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p>

EVIDENCE GUIDE

	<p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- Australian Communications and Media Authority (ACMA) technical standards
- appropriate licences that may be required:
 - crane
 - dogging
 - rigging
 - scaffolding
 - winch.
- Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) electromagnetic radiation (EMR) standard
- AS 1353.1:1997
- AS 1353.2:1997
- AS 1657:1992
- AS 2089:2008
- AS 2319:2001

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS 2626: replaced by AS/NZS 1891.4:2000 • AS 3775.1:2004 • AS 3775.2:2004 • AS 3777:2008 • AS 4497.2:1997 • AS/NZS 1891.1:2007 • AS/NZS 1891.4:2000 • AS/NZS 4801:2001 • AS/NZS ISO 14001:2004 • Australian building codes and regulations • Australian Standards • CE, American national standards Institute (ANSI) equipment standards • enterprise standards • environmental protection • equipment certifications: <ul style="list-style-type: none"> • NFPA 1983 (2006 edition) • NFPA/UL G-rated (General Use) • equipment standards: <ul style="list-style-type: none"> • intrinsically safe lightning protection • site engineering standard • fire regulations • heritage legislation • international standards • local government • OHS • Radcoms Act • related publications • Telecoms Act • WI's, CI's, Business Operating Procedures (BOP), Radiocommunications Assignment and Licensing Instruction (RALI), assignment guidelines.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • crane • hand • load and tension gauge • mechanical • power.
<i>Safety equipment</i> may include:	<ul style="list-style-type: none"> • aerial safety belts and lines • anchor straps

RANGE STATEMENT	
	<ul style="list-style-type: none"> • earmuffs • elevated platform • equipment guards • fall arrest systems • fall constraint systems • fall guarding systems • flashing lights • gloves • guards • helmets • pulleys • rigging plates • rope clamps • safety cages • safety glasses • safety harnesses: <ul style="list-style-type: none"> • basic • full body fall arrest • sit harness • scaffold deck • warning signs and tapes.
<p><i>Potential faults and non-compliances</i> may relate to:</p>	<ul style="list-style-type: none"> • assessing condition of personal equipment and inspecting for: <ul style="list-style-type: none"> • abrasions • chemical damage • cracks • deformities • heat damage • mechanical failure • wear • determining appropriate: <ul style="list-style-type: none"> • anchors • ascenders • climbing equipment for network structures • descenders • karabiners • lines • non-registered equipment and damage to: <ul style="list-style-type: none"> • connectors

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fall arrestor • harnesses • lanyards • shock absorbers • using climbing equipment and fall arrest systems • using: <ul style="list-style-type: none"> • anchor points • connectors • jointing splices • karabiners • rigging screws • shackles • slings • snatch blocks • strops • synthetic ropes • turn buckles • wire rope grips • wire ropes.
<i>Personal equipment</i> may include:	<ul style="list-style-type: none"> • personal protective equipment for: <ul style="list-style-type: none"> • carrying out rigging work • work at a telecommunications site with potential optical fibre and laser equipment hazards • personal monitor for detecting and reporting RF EMR hazards.
<i>Safety harness and associated equipment and control strategies</i> may include:	<ul style="list-style-type: none"> • aerial safety belts and lines • anchor straps • crane cage • elevated platform • equipment guards • fall arrest devices and systems • fall constraint systems • fall guarding systems • flashing lights • guards • helmets and other personal safety equipment: <ul style="list-style-type: none"> • earmuffs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gloves • safety glasses • lanyards, static lines and anchors • pulleys • rescue harness • rigging plates • rope clamps • safety cages • safety harness, basic to full body fall arrest and sit harness • safety issues: <ul style="list-style-type: none"> • in roof work • installation of fall arrest • fall guarding • fall restraint systems • free fall • suspension trauma • unprotected edge • working at heights • scaffold deck • suspension trauma, fall restraint verses fall arrest, pendulum effect • verifying and maintaining the EMR hazard management plan against an on site situation • warning signs and tapes.
<p><i>Safety harness fitting method</i> includes:</p>	<ul style="list-style-type: none"> • fitting components: <ul style="list-style-type: none"> • attachment point • front buckle • lanyard • leg straps • non-fall arrest attachment points • shock absorber and inspection tags • shoulder straps • checking and fitting a safety harness: <ul style="list-style-type: none"> • visual inspection • functionality assessment • currency of inspection records <ul style="list-style-type: none"> • tags • logs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • correct fitting and adjustment sequence: <ul style="list-style-type: none"> • straps untwisted • evenness on shoulders • tightened to 'flat hand space' comfort • objects in pockets are no hazard • lanyard secured • types and application of different safety harnesses.
<i>Lanyard</i> may relate to:	<ul style="list-style-type: none"> • types: <ul style="list-style-type: none"> • single • double • retractable • twin tail • situations with two or more people working together and people working below • checking: <ul style="list-style-type: none"> • connection to harness • functionality assessment • length • visual inspection.
<i>Fall arrest</i> may include:	<ul style="list-style-type: none"> • arrest of: <ul style="list-style-type: none"> • free fall • limited free fall • restrained free fall • total restrained fall • fall factors 1 and 2, maximum allowable fall distances • fixed and temporary • systems with: <ul style="list-style-type: none"> • abseil lines • attachment devices • double lanyards • harnesses • pole straps • rails • static lines.
<i>Rescue plan</i> may relate to:	<ul style="list-style-type: none"> • abseil rescue • performing rescues from telecommunications

RANGE STATEMENT	
	<p>network structures</p> <ul style="list-style-type: none"> • personal and team safety • raise and lower systems • stabilising a casualty • treating suspension trauma • roles: <ul style="list-style-type: none"> • emergency services • equipment operators • trained specialists • your own • using appropriate first aid in rescue situations on telecommunication network structures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to use safe rigging practices	1.1. Notify appropriate personnel and take necessary precautions to minimise, control or eliminate hazards that may exist during work activities 1.2. Prepare for given work according to minimum approach distances for hazards on telecommunications network structures as prescribed in <i>relevant legislation, codes, regulations and standards</i>
2. Assess the status and condition of telecommunications network structures and identify climbing route	2.1. Inspect and assess the <i>status and condition of telecommunications structures</i> according to industry practice 2.2. Plot optimum climbing route to avoid hazards and the most effective use of selected equipment according to manufacturer's instructions and industry practice
3. Prepare climbing equipment	3.1. Select <i>climbing equipment</i> in keeping with the structures to be climbed according to industry practice 3.2. Inspect climbing equipment for damage according to <i>specifications</i> and industry practice
4. Climb telecommunications network structures	4.1. Use safe climbing practices when ascending telecommunications network structures according to the occupational health and safety (OHS) Act 4.2. Maintain permanent attachment when more than three metres from the ground adhering to <i>safety requirements when working at heights</i> 4.3. Maintain three points of contact at all times according to industry practice while climbing telecommunications network structures 4.4. Manage ropes to avoid entanglement or fouling on the structure 4.5. Maintain safe working and minimum approach distances from hazards on <i>telecommunications network structures</i> at all times according to standards and regulations
5. Use climbing and working fall arrest systems	5.1. Perform transfers to and from the climbing system and the working system using fall prevention practices according to industry practice 5.2. Use the working fall arrest system according to specifications

ELEMENT	PERFORMANCE CRITERIA
6. Perform rescues	6.1. <i>Perform rescues</i> according to situation, industry practice and local instruction 6.2. Obtain medical treatment if required 6.3. Report accidents or incidents according to company procedures and local instructions

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to accurately assess risk on telecommunications network structures
- literacy skills to interpret technical documentation, plans and specifications
- communication skills to liaise with other personnel, including the use of radio devices
- numeracy skills to:
 - take measurements and interpret results
 - evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and OHS responsibilities
- problem solving and contingency management skills to adapt rigging activities and requirements to particular sites and conditions
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment for rigging projects to suit different applications and for work at height conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - select and use appropriate equipment and practices to suit different applications
 - assess the status and condition of telecommunications network structures to be climbed
 - identify climbing route according to industry practice

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- falls:
 - fall factors according to the Guidelines for the Prevention of Falls
 - fall prevention
 - fall types according to Australian standards and regulations
- features and operating requirements of rigging equipment
- optical fibre cabling and equipment safety practices
- personal protective equipment
- radio frequency electromagnetic radiation (EMR):
 - associated risks
 - methods of detecting
 - need to verify and maintain the EMR hazard management plan against an on-site situation
 - preparing for work at a telecommunications site with potential EMR hazards
 - reporting EMR hazards safety practices
 - sources and types of radio frequency (RF) EMR
- rescue methods and practices
- safe rigging principles
- suspension trauma:
 - cause
 - effect
 - prevention
 - treatment
- using a safety harness:
 - hazards associated with wearing a safety harness
 - how to check, fit and use a safety harness
 - the types and application of different safety harnesses
- licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- risks present when working on telecommunications radio structures
- specific OHS issues that affect rigging:
 - relevant regulations, and applicable site and company OHS procedures
 - rigging practices and systems for telecommunications radio structures
 - safe climbing practices including maintaining three points of contact while climbing
 - safe working and minimum approach distances for hazards on telecommunications network structures according to standards and regulations
 - safety requirements when working at heights according to the OHS Act

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use safe rigging practices according to OHS requirements, regulations and standards • assess the status and condition of telecommunications structure to be climbed and plot climbing route according to industry practice • select climbing equipment and climb telecommunications network structure • work safely on telecommunications network structures using climbing and working fall arrest systems • perform rescues from telecommunications network structures to industry standards.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a mentor or supervisor appropriately experienced and certified in rigging and rescuing for telecommunications radio structures • a workplace conducting rigging operations with: <ul style="list-style-type: none"> • rigging equipment • safety equipment.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate climbing and performing a rescue on a telecommunications network structure • oral or written questioning of the candidate to assess OHS requirements associated with rigging.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE

assessment

industry sector, workplace and job role is recommended, for example:

- ICTTCR2188A Use rigging practices and systems on telecommunications network structures
- ICTTCR2189A Use operational safety in a telecommunications rigging environment.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare materials and secure site	1.1. Notify appropriate personnel and take necessary precautions to minimise, control or eliminate hazards that may exist during work activities 1.2. Determine nature and location of structure from construction design plans, relevant legislation, codes, regulations and standards 1.3. Determine materials, tools and equipment required from construction design plans 1.4. Check steel for assembly against construction design plans to ensure no parts are missing 1.5. Secure and clean site according to site security instructions for public safety
2. Construct foundations for radio structure	2.1. Locate other services according to industry practice, and arrange for relocation of services if required 2.2. Excavate foundation according to engineering specifications and construct foundations according to construction design plans 2.3. Install earthing according to construction design plans, enterprise occupational health and safety (OHS) guidelines and industry practice 2.4. Provide samples of concrete for analysis according to enterprise guidelines and manufacturer's specifications, relevant standards and regulations
3. Assemble and mount a telecommunications radio structure	3.1. Select an area free of interference and close to the construction site suitable for structure assembly 3.2. Assemble radio structure in sections on the ground according to engineering specifications and using personal protective equipment following safety guidelines 3.3. Mount and secure preassembled sections to tower construction according to plans, specifications and enterprise OHS guidelines 3.4. Maintain a vertical positioning of the structure and within twist tolerances during construction phase 3.5. Secure and tension guy wires according to construction design plans, enterprise OHS guidelines and industry practice
4. Complete administrative duties	4.1. Update the original design plan with approved amendments and return to design section

ELEMENT	PERFORMANCE CRITERIA
	4.2. Secure and clean up site to original condition in an environmentally safe manner 4.3. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - interpret technical documentation, such as equipment manuals and specifications
 - read and interpret drawings related to layouts, design, construction and project management
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - organise and maintain equipment
 - plan, prioritise and monitor own work and OHS responsibilities
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - apply remote area first aid
 - prevent and treat hypothermia
 - select and use required personal protective equipment for rigging projects to suit different applications and for work at height conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - assist problem rectification
 - operate plant and machinery

REQUIRED SKILLS AND KNOWLEDGE

- use diagnostic equipment
- use hand and power tools
- use meteorology awareness and prediction

Required knowledge

- basic knowledge of:
 - meteorology
 - remote area first aid
- features and operating requirements of:
 - construction equipment
 - rigging equipment
- hypothermia symptoms and methods of prevention and treatment
- information required to build a telecommunications radio structure
- rigging practices and systems to telecommunications radio structures
- legislation, codes of practice and other formal agreements that impact on the work activity
- licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures
- manufacturer's requirements for safe operation of equipment
- OHS:
 - Act and regulations
 - company procedures
 - requirements relating to the activity and site conditions
- specific knowledge of:
 - electromagnetic radiation (EMR) safety practices
 - personal protective equipment for rigging projects
 - working at heights safety practices
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • undertake pre construction checks to ensure safe working environment • construct foundations according to engineering specifications • select site for hoisting equipment ensuring location is safe for the operator and the construction • preassemble structure at ground level ensuring completion of each assembled component • assemble and mount a telecommunications radio structure, including temporary and permanent guy anchors • install functional and protective earthing systems following security and safety procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where telecommunications radio structures may be constructed • rigging and safety equipment currently used in industry • relevant regulations, standards specifications and manuals.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate assembling and mounting a telecommunications radio structure • oral or written questioning of the candidate to assess OHS requirements and work practices associated with constructing a telecommunications radio structure.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTCBL3020A Construct aerial cable supports. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- appropriate licences that may be required:
 - crane
 - dogging
 - rigging

RANGE STATEMENT

	<ul style="list-style-type: none"> • scaffolding • winch • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • AS Communications Cabling Manual (CCM) Volume 1 • Australian building codes and regulations • Australian standards • enterprise standards • environmental protection • fire regulations • heritage legislation • industrial relations agreements including awards and enterprise • international standards • local government • manufacturer's enterprise operating policy and procedures • national codes • OHS Act • other services and utilities codes of practice and standards: <ul style="list-style-type: none"> • electricity • gas • water • power company requirements • Privacy Act • spectrum management regulations • statutory requirements • Trade Practices Act • traditional land owners.
<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • cable locator • earth testers • fall arrest systems • hand tools • hoisting equipment: <ul style="list-style-type: none"> • crane • helicopters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • jury and winch • power tools • safety equipment: <ul style="list-style-type: none"> • aerial safety belts and lines • equipment guards • flashing lights • guards • helmets • safety cages • traffic signs • trench guards • warning signs and tapes • witches hats • survey instruments.
<i>Steel for assembly</i> may include:	<ul style="list-style-type: none"> • guy wires and anchors • pre-cut and pre-drilled steel for construction • steel braces.
<i>Site security instructions</i> may relate to:	<ul style="list-style-type: none"> • cleaning site daily • ensuring that no hazards remain on tower during construction • security fence during construction • security fence and anti-climbing devices at the completion of the construction.
<i>Other services</i> may include:	<ul style="list-style-type: none"> • gas • other telecommunications • power • sewerage • water.
<i>Foundations</i> may include:	<ul style="list-style-type: none"> • constructions: <ul style="list-style-type: none"> • grillage • pad • pier-type • rock anchors.
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • earmuffs • eye protection • gloves: <ul style="list-style-type: none"> • leather • plastic

RANGE STATEMENT	
	<ul style="list-style-type: none"> • rubber • gumboots • hard hats • overalls • personal reflecting jackets • riggers' gloves • safety boots • vests.
Safety guidelines may refer to:	<ul style="list-style-type: none"> • antenna principles for working safely on telecommunications radio structures • devices to support construction personnel at heights: <ul style="list-style-type: none"> • elevated personnel vehicles • non-metallic ladders • platforms • earth protection • external factors affecting works: <ul style="list-style-type: none"> • concentration of other services • terrain • weather conditions • fall arrest: <ul style="list-style-type: none"> • fixed • temporary • licences: <ul style="list-style-type: none"> • backhoe operator • borer • chainsaw operation • crane chaser • crane operator • dogman • driver's • forklift • heavy vehicle • machinery operation • rigger • winch operator • lifting methods • load calculation • personal protective equipment

RANGE STATEMENT

ICTTCR3191A Install radio plant and equipment on telecommunications structures

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to install basic telecommunications radio plant and equipment on telecommunications structures.</p> <p>This unit applies to standard telecommunications structures.</p> <p>A licensed rigger is required for the installation of some rigging equipment.</p> <p>The National Standard for Licensing Persons Performing High Risk Work applies to persons performing dogging and rigging work.</p> <p>Completion of the following units is required for certification at either basic, intermediate or advanced levels.</p> <p>CPCCLDG3001A Licence to perform dogging</p> <p>CPCCLRG3001A Licence to perform rigging basic level</p> <p>CPCCLRG3002A Licence to perform rigging intermediate level</p> <p>CPCCLRG4001A Licence to perform rigging advanced level.</p> <p>If operation of an elevated work platform is required, a licence may be required.</p> <p>Users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

Application of the unit	Technical staff who install basic telecommunications radio plant and equipment on telecommunications structures apply the skills and knowledge in this unit. They may use rigging plant and equipment, fall arrest, fall guarding and fall constraint and team communications.
--------------------------------	--

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		
	ICTTCR2188A	Use rigging practices and systems on telecommunications network structures
	ICTTCR2189A	Use operational safety in a telecommunications rigging environment
	ICTTCR2190A	Use safe rigging practices to climb and perform rescues on telecommunications network structures

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation of radio plant	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site and discuss customer requirements 1.3. Inform appropriate personnel of existing and potential site hazards 1.4. Select tools and safety equipment required for safe rigging practice 1.5. Develop installation plans in agreement with customer or site supervisor 1.6. Procure materials and verify delivery against inventory according to industry practice
2. Install plant and equipment	2.1. Set up rigging equipment for safe and effective use according to specifications 2.2. Install telecommunications radio equipment and feeders according to specifications and industry practice following occupational health and safety (OHS) and environmental requirements 2.3. Maintain installation progress documentation according to company and customer requirements
3. Assist with testing and fault-finding	3.1. Assist with testing of telecommunications radio equipment mounted on telecommunications structures 3.2. Identify and locate faults by interpreting test results and rectify according to industry practice 3.3. Document test results according to specifications and customer requirements
4. Clean up site and complete documentation	4.1. De-rig and lower rigging equipment according to specifications 4.2. Restore site to customer expectations following completion of installation according to industry practice 4.3. Complete documentation and notify customer for sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with other personnel, including the use of radio devices
- literacy skills to interpret technical documentation, plans and specifications
- numeracy skills to take measurements and interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and OHS responsibilities
- problem solving and contingency management skills to adapt rigging activities and requirements to particular sites and conditions
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to :
 - select and use personal protective equipment
 - be aware of meteorology and weather prediction
 - use appropriate installation equipment

Required knowledge

- antenna principles
- features and operating requirements of rigging equipment
- relevant regulations and typical issues and challenges that occur onsite
- rigging practices and systems in relation to telecommunications radio structures, and related licensing and regulatory issues
- specific knowledge of:
 - electromagnetic radiation (EMR) safety practices
 - optical fibre cabling and equipment safety practices
 - working at heights safety practices
- specific OHS requirements relating to the activity and site conditions:
 - basic survival skills
 - company OHS procedures
 - hypothermia

REQUIRED SKILLS AND KNOWLEDGE

- remote area first aid

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the ability to:

- install basic telecommunications radio plant and equipment on telecommunications structures
- assist with testing and fault-finding basic telecommunications radio plant and equipment mounted on telecommunications structures
- use effective communications skills related to:
 - dogging
 - work associates
 - supervisors
 - team members
 - enterprise documentation.

Context of, and specific resources for assessment

Assessment must ensure:

- site on which rigging operations may be conducted
- rigging and safety equipment
- relevant regulations, standards, specifications and manuals.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the candidate setting up and carrying out installation work on a telecommunications structure
- oral or written questioning of the candidate to assess OHS requirements and work practices associated with installing radio plant and equipment on

EVIDENCE GUIDE	
	telecommunications structure.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTCR3192A Protect against electromagnetic radiation and system hazards when working on telecommunications radio sites. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare for work at a telecommunications site with potential EMR hazards</p>	<p>1.1. Prepare for given work using safe working practices and procedures according to the occupational health and safety (OHS) Act and <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2. Assess <i>potential sources of radio frequency (RF) EMR</i> allowing permissible public and occupational EMR exposure limits according to Australian Radiation Protection and Nuclear Safety Agency (ARPANSA)</p> <p>1.3. Verify <i>methods for determining EMR levels</i> and strategies for eliminating, minimising, or isolating on-site EMR hazards according to industry practice</p> <p>1.4. Confirm work objectives and specifications of equipment to be installed according to design drawings, installation plans, and equipment manufacturer's specifications</p> <p>1.5. Select equipment and <i>personal protective equipment</i> required to support the <i>EMR hazard management plan</i> according to company policy</p>
<p>2. Plan and carry out the EMR hazard management plan against an on-site situation</p>	<p>2.1. Produce EMR hazard management plan according to company policy</p> <p>2.2. Consult with client to confirm EMR hazard management plan and update if required</p> <p>2.3. Communicate the agreed EMR hazard management plan to all personnel on site</p>
<p>3. Monitor the EMR hazard management plan</p>	<p>3.1. Maintain ongoing communication to all personnel regarding amendments to the EMR hazard management plan according to company policy</p> <p>3.2. Ensure that a personal radiation monitor (Radman) is worn according to manufacturer's instructions and industry practice</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE

Required skills

- communication skills to:
 - communicate the revised EMR hazard management plan to all personnel on site
 - liaise with other personnel
 - use radio devices
- literacy skills to read and interpret:
 - EMR hazard management plan
 - specifications and technical documentation
- numeracy skills to:
 - evaluate different types of technical data
 - interpret results
 - take measurements
- planning and organisational skills to plan, prioritise and monitor own work and OHS responsibilities
- problem solving and contingency management skills to adapt rigging activities and requirements to particular sites and conditions
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - apply remote area first aid
 - ensure that Radman is worn according to manufacturer's instructions and industry practice
 - prevent and treat hypothermia
 - select and use personal protective equipment for rigging projects to suit different applications and for work at heights
 - select and use required personal protective equipment for rigging projects to suit different applications and for work at heights conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - interpret and analyse documentation as sources of information relating to the site and potential EMR hazards
 - select and use appropriate equipment and practices to suit different applications
 - review the EMR hazard management plan and update to align with the on-site situation
 - use equipment required to support the EMR hazard management plan

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
<ul style="list-style-type: none"> • antenna principles • EMR risk assessment and mitigation strategies • features and operating requirements of rigging equipment • licensing and regulatory issues applying to rigging practices and systems on telecommunications radio structures • remote area first aid • rigging practices and systems to telecommunications radio structures • specific knowledge of: <ul style="list-style-type: none"> • EMR: <ul style="list-style-type: none"> • associated risks • methods of detecting and reporting EMR hazards • potential dangers of overexposure • safety practices and devices • sources and types of radio frequency EMR • optical fibre cabling and equipment safety practices • personal protective equipment • requirements of the OHS Act, relevant regulations, and applicable site and company OHS procedures • working at heights safety practices

ICTTEN2008A Use electrical skills in telecommunications work

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required for an entry-level worker to use electrical skills working in telecommunications.

Application of the Unit

Technical staff who undertake basic testing, circuit building and evaluation of cable and wireless devices apply the skills and knowledge in this unit. They may work in domestic, commercial and industrial situations.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria

<p>1. Connect up, test and verify DC and AC circuitry</p>	<p>1.1 Identify any hazards and work health and safety (WHS) issues for a safe work site, and notify appropriate personnel</p> <p>1.2 Connect a series and a parallel <i>DC and AC circuit configuration</i> following <i>safe work practices</i></p> <p>1.3 Choose the appropriate <i>test equipment</i> and measure the values of electrical quantities of the circuits</p> <p>1.4 Use <i>calculations</i> to verify the measured values of the <i>electrical quantities</i> in a series and in a parallel circuit configuration</p> <p>1.5 Compare the measured values to the calculated values, and determine the reasons for any variations</p> <p>1.6 Measure LV, ELV and TNV voltages to determine that the value is within equipment or power supply specifications</p> <p>1.7 Use appropriate test equipment to measure AC voltage (multimeter) or AC current (clamp meter) in a safe manner that does not require an LV circuit to be disconnected</p> <p>1.8 Test residual current devices (RCD) or earth leakage devices to ensure they are working prior to working with AC mains powered equipment, power supplies and tools</p> <p>1.9 Evaluate results and determine <i>probable faults if relevant</i></p>
<p>2. Evaluate analog and digital signals</p>	<p>2.1 Compare <i>characteristics of an analog signal and a digital signal</i></p> <p>2.2 Produce a layout using the <i>building blocks</i> to represent a typical analog and a digital circuit showing the different characteristics between that of an analog signal and a digital signal</p> <p>2.3 Produce 4-bit binary codes with their decimal equivalent to represent output voltages of a digital to analog converter</p> <p>2.4 Choose appropriate test equipment and measure the output voltage of a digital device for 'high' and 'low' logic states</p>
<p>3. Perform cable selection</p>	<p>3.1 Compare basic <i>transmission characteristics</i> of different <i>types of cables</i> used in telecommunications and select the most appropriate cable type to suit <i>application characteristics</i></p> <p>3.2 <i>Connect two devices with a patch cable and test the connection</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to request technical information for activities
- literacy skills to:
 - interpret technical documentation
 - incorporate technical language into written tasks
- numeracy skills to:
 - interpret technical data, such as specifications of telecommunications networks
 - perform mathematical problem solving in AC and DC tasks and fault finding
- problem-solving skills to apply AC and DC fault-finding techniques to different situations
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment, conforming to industry and WHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to select and use appropriate test equipment and practices to perform basic AC and DC testing and fault finding tasks.
-

Required knowledge

- AC and DC electrical quantities, encompassing SI units, WHS issues and the application of Ohm's law
- AC and DC fault-finding techniques and use of testing equipment
- AC and DC theory
- analog and digital principles
- application of binary to decimal conversion and vice versa
- distinction between analog and digital signals and devices
- encoding techniques and their application in wired, wireless and optical communications systems
- features and applications of unshielded twisted pair (UTP), coaxial and fibre cables
- typical electronic devices, cable types and their applications
- modulation techniques used in wired, wireless and optical communications systems
- techniques to convert analog to digital and digital to analog.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use Ohm’s law and fundamental electrical principles to solve basic AC and DC electrical problems • connect and test an AC and DC circuit • evaluate cable and wireless devices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • appropriate AC and DC testing equipment • manufacturer’s documentation and equipment • safety equipment.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking AC and DC measurements and fault finding • oral or written questioning to assess knowledge of fundamental concepts of telecommunications networks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN2140B Use hand and power tools. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>DC and AC circuit configuration</i> may include:</p>	<ul style="list-style-type: none"> • AC to DC supply • DC circuit: <ul style="list-style-type: none"> • resistances • single DC voltage source: <ul style="list-style-type: none"> • battery • DC voltage supply • solar panel • power loads • AC circuit: <ul style="list-style-type: none"> • inductors, capacitors and resistances • single AC voltage source: <ul style="list-style-type: none"> • AC generator • AC voltage supply • alternator • low voltage AC source.
<p><i>Safe work practices</i> may relate to:</p>	<ul style="list-style-type: none"> • component tolerances not exceeded • correct use of power supply and test equipment • identifying electrical safety hazards • isolation from main supply • overdrawing of current • power down during set-up procedure • well laid out circuitry: <ul style="list-style-type: none"> • avoid contact with external sources • avoid shorting of components.
<p><i>Test equipment</i> may include:</p>	<ul style="list-style-type: none"> • AC current clamp meters • multimeters, including digital multimeters • ohmmeters • voltmeters.
<p><i>Calculations</i> may include:</p>	<ul style="list-style-type: none"> • application of Ohm's law • engineering notation • power calculations • power consumption and efficiencies • voltage dividers

	<ul style="list-style-type: none"> • voltage, resistance and current calculations.
Electrical quantities may include:	<ul style="list-style-type: none"> • current • power • voltage.
Probable faults may include:	<ul style="list-style-type: none"> • blown fuse • cracked circuit board • failed components • faulty power supply • foreign battery • intermittent faults • loose connections • open circuit • short circuit • short to ground • split pairs • water damage.
Characteristics of an analog signal and a digital signal may include:	<ul style="list-style-type: none"> • analog signal characteristics: <ul style="list-style-type: none"> • continuously variable, infinite number of states • intelligence based on recreating exact waveshape • signal to noise ratio increase with amplification • digital signal characteristics: <ul style="list-style-type: none"> • encryption • error detection and correction • finite number of discrete states • high noise immunity • intelligence based on ability to discern only two states • regeneration • type of square wave (complex waveform).
Building blocks may include:	<ul style="list-style-type: none"> • analog: <ul style="list-style-type: none"> • amplifiers • attenuators • displays • filters • oscillators • transducers • digital: <ul style="list-style-type: none"> • ADC and DAC • computers • counter • data routers, switches and bridges

	<ul style="list-style-type: none"> • digital amplifier • digital display • input and output transducers • multiplexer.
Transmission characteristics may include:	<ul style="list-style-type: none"> • attenuation • balanced • characteristic impedance (Z_0) • crosstalk • frequency range • transmission windows for glass optical fibre • unbalanced • waveguide cut-off frequency.
Types of cable may include:	<ul style="list-style-type: none"> • aluminium and copper DC busbars • coaxial cable • multi-pair communications cable • optical fibre • performance data cable CAT 5 and higher • rack and sub-rack alarm and power distribution cables • shielded twisted pair (STP) communications cable • UTP communications cable.
Application characteristics may include:	<ul style="list-style-type: none"> • audio • data • digital subscriber line (DSL) • ethernet • microwave • optical/laser • power • radio frequency (RF) • satellite • video.

Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to safely use hand and power tools in the workshop and on the worksite.

It involves preparing for work, selecting, using and maintaining hand and power tools and cleaning up.

Application of the Unit

Technical staff who use hand and power tools apply the skills and knowledge in this unit. They may make use of safety equipment and workshop facilities.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for work activity	<p>1.1 Identify the type of work to be performed from <i>work instructions</i></p> <p>1.2 Select appropriate <i>hand and power tools</i> for the work to be performed</p> <p>1.3 <i>Set up and check tools</i> for use according to available <i>information</i></p> <p>1.4 Examine <i>work environment</i> and plan work with tools to maximise safety and productivity</p> <p>1.5 Clear and clean work area to make it free of obstructions and allow clear access to tools</p>
2. Prepare work piece for tool use	<p>2.1 Mount, support or align <i>work piece</i> correctly to the tool or machine to be used</p> <p>2.2 Anchor work piece securely where necessary to prevent movement</p>
3. Operate hand and power tools	<p>3.1 Use hand and power tools according to industry and enterprise <i>safe working practices</i></p> <p>3.2 Use <i>safety equipment</i> during tool operation according to industry and enterprise safe working practices</p> <p>3.3 Monitor tool operation continuously and discontinue use if abnormal operation occurs</p> <p>3.4 Clean the work area on completion of work</p>
4. Maintain hand and power tools after use	<p>4.1 Clean and store tools according to industry and enterprise safe working practices</p> <p>4.2 Report abnormal tool operation or other problems according to established procedures</p> <p>4.3 Perform programmed maintenance of tools according to work role</p> <p>4.4 Arrange inspection of power tools according to <i>regulatory requirements</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with colleagues on technical and operational matters
 - record and report procedures
- literacy skills to interpret and understand the information required for the preparation and application of hand and power tools including:
 - equipment
 - manufacturer's instructions
 - materials safety data sheets
 - quality assurance procedures
 - work instructions
- planning and organisational skills to manage time, organise priorities and plan work
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards associated with use of particular hand and power tools
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - use relevant chemicals and cleaning agents and dispose of waste products
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - select and use appropriate hand and power tools
 - use technical information for tools, processes, materials and equipment.
 -

Required knowledge

- electrical and compressed air safety
- equipment types, characteristics, technical capabilities and limitations
- features and operating requirements of hand and power tools
- general housekeeping policies and procedures
- industry and work site terminology
- information required to operate equipment according to a test specification
- job safety analysis (JSA) or safe work method statement
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- materials commonly used in the industry
- material safety data sheets (MSDS) and materials handling methods
- operational, maintenance and basic diagnostic procedures
- power sources

- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur onsite.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • interpret work orders relevant to the selection and use of tools • interpret specifications and instructions relating to the materials and equipment on which the tools are to be used • prepare work environment and set up tools for safe and effective use • perform work processes following all relevant safety requirements applying to the use of hand and power tools • monitor tool operation for correct operation during use • inspect completed work to verify correct tool operation and use • document and communicate work related information including reporting of faults and other problems • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where hand and power tools may be used • use of hand and power tools currently used in industry • relevant regulatory and equipment documentation that impact on the use of hand and power tools.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate setting and checking tools for use • direct observation of the candidate operating hand and power tools according to industry and enterprise safe working practices • oral or written questioning to assess required knowledge.

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTWHS2170B Follow WHS and environmental policy and procedures. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Work instructions</i> may include:</p>	<ul style="list-style-type: none"> • charts and hand drawings • diagrams or sketches • MSDS • memos • plans • quality requirements: <ul style="list-style-type: none"> • dimensions and tolerances • material standards • standards of work • recording and reporting of work outcomes • safe work procedures or equivalent related to using hand and power tools • signage • specifications • verbal or written and graphical instructions • work bulletins • work schedules.
<p><i>Hand and power tools</i> may include:</p>	<ul style="list-style-type: none"> • hand tools: <ul style="list-style-type: none"> • chisels • crowbars • files • hacksaws • hammers • measuring equipment • pliers • pop riveting machines • screwdrivers • shovels • spanners • wire strippers • power tools: <ul style="list-style-type: none"> • angle grinders • circular saws

	<ul style="list-style-type: none"> • drills • grinders • hammer drills • jig saws • lifting and hoisting equipment.
<i>Set up and check tools</i> may include:	<ul style="list-style-type: none"> • inspect tools for: <ul style="list-style-type: none"> • damage • missing components • other defects prior to use • install operating components (bits or blades) in tools • set or adjust tools.
<i>Information</i> may relate to:	<ul style="list-style-type: none"> • Australian and enterprise quality standards and procedures • enterprise or external personnel • enterprise work orders and instructions • industry codes and symbols • job procedures • product change policies and procedures • tool manufacturers' specifications, operating procedures and setting instructions.
<i>Work environment</i> may include:	<ul style="list-style-type: none"> • client site • hazardous or exposed conditions • operational indoor workplaces • operational outdoor workplaces • restricted or confined spaces.
<i>Work piece</i> may include blocks of:	<ul style="list-style-type: none"> • aluminium • bronze • plastic • stainless steel • steel • wood.
<i>Safe working practices</i> may refer to:	<ul style="list-style-type: none"> • barriers or screens to control access and minimise dust and noise • clearing route for safe placement of leads • control of hazardous materials • emergency procedures related to equipment operation: <ul style="list-style-type: none"> • emergency shutdown and stopping • evacuation • extinguishing equipment fires • organisational first aid requirements • handling of materials

	<ul style="list-style-type: none"> • identification of potential hidden hazards: <ul style="list-style-type: none"> • ‘blind’ drilling in walls • harmful gasses • non-visible laser emission • place tools in safe positions when not in use • running electrical power leads to power supply so they are clear of traffic or covered where possible • use of fire fighting equipment • use of first aid equipment • use of tools and equipment • visually checking power leads for serviceability and safety • workplace environment and safety.
<i>Safety equipment</i> may include:	<ul style="list-style-type: none"> • earth leakage circuit breaker (ELCB) • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses • rubber mats.
<i>Regulatory requirements</i> may include:	<ul style="list-style-type: none"> • environment protection legislation • Federal, state and territory legislation • OHS legislation relevant to workplace activities • workers’ compensation legislation • workplace agreements and awards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare for the installation of a home or small office network</p>	<p>1.1. Prepare for given work confirming site specific occupational health and safety (OHS) and environmental requirements with appropriate personnel</p> <p>1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel</p> <p>1.3. Determine nature and scope of the network and network resources from job briefs or appropriate personnel</p> <p>1.4. Select and obtain personal computer system and network device requirements according to enterprise procedures</p> <p>1.5. Obtain operating instructions, manuals, hardware and software testing methodologies</p> <p>1.6. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the work site</p>
<p>2. Install and troubleshoot a home or small office network</p>	<p>2.1. Set up personal computer systems according to manufacturer's specifications and enterprise procedures</p> <p>2.2. Set up, configure and share network resources between network devices</p> <p>2.3. Determine network addressing scheme for network connectivity and confirm using calculations</p> <p>2.4. Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures</p> <p>2.5. Identify security threats and initiate control measures according to enterprise procedures</p>
<p>3. Complete and document network installation</p>	<p>3.1. Restore worksite to safe condition according to established safety procedures</p> <p>3.2. Record and store essential installation information according to enterprise procedures</p> <p>3.3. Notify appropriate personnel about the completion of the task according to enterprise procedures</p> <p>3.4. Notify customer and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and peers to achieve outcomes
- literacy skills to read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data and perform calculations to confirm network connectivity
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems according to help desk procedures
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - configure the security features of a network to minimise risk of any security breach
 - correctly use tools and equipment
 - design a small computer network using appropriate protocols, tools and models to provide a specified range of services
 - develop a security policy for a small computer network
 - install, configure and maintain basic wired and wireless computer networks, systems and peripherals
 - plan, select, install and configure network operating systems

Required knowledge

- correct usage of tools and equipment
- enterprise OHS procedures
- basic computer systems and network operating systems
- computer networking principles (wired and wireless)
- network addressing systems (basic)
- network services and associated network models and protocols
- network security management
- troubleshooting procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement OHS workplace procedures and practices • plan the installation of an internet connected network • set up and configure wired and wireless networks with simple addressing schemes • troubleshoot network and internet connectivity • set up resource sharing • deploy simple firewall network security.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where installation of a SOHO network may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and configuring a SOHO network • direct observation of the candidate deploying simple firewall network security • oral or written questioning to assess knowledge of personal computer systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN2208A Install and configure a small to medium business network. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements may include:

- awards provisions
- hazardous substances and dangerous goods code
- legislation
- local safe operation procedures
- material safety management systems
- protective equipment.

Environmental requirements may

- dust

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • excessive energy and water use • excessive noise • fume • gas • liquid waste • smoke emissions • solid waste • vapour.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • customer/client • manager • network manager • site engineer • supervisor.
<i>Network resources</i> may include:	<ul style="list-style-type: none"> • dynamic host configuration protocol (DHCP) server • domain name system (DNS) server • files • software • web browser.
<i>Personal computer system</i> may include:	<ul style="list-style-type: none"> • interface cards • media connections • operating system • PC hardware • peripheral devices.
<i>Network device</i> may include:	<ul style="list-style-type: none"> • hub • network attached storage device • print server • router (wired or wireless) • switch.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> • instructions: <ul style="list-style-type: none"> • designs • drawings • job sheets • plans • manufacturer's specifications • operational procedures • reporting and communication • use of tools and equipment.
<i>Network addressing scheme</i> may	<ul style="list-style-type: none"> • dynamic addressing

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • static addressing • sub-net addressing.
<i>Calculations</i> may include:	<ul style="list-style-type: none"> • binary addition • binary conversion • binary division • binary multiplication • binary number system • binary subtraction.
<i>Essential installation information</i> may include:	<ul style="list-style-type: none"> • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords • security access codes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare for the installation of a small to medium enterprise network</p>	<p>1.1. Prepare for given work confirming site specific occupational health and safety (OHS) and environmental requirements with appropriate personnel</p> <p>1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel</p> <p>1.3. Determine nature and scope of the business network and network resources from job briefs or appropriate personnel</p> <p>1.4. Select and obtain computer system and network device requirements according to enterprise procedures</p> <p>1.5. Obtain operating instructions, manuals, hardware and software testing methodologies</p> <p>1.6. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the work site</p>
<p>2. Install and configure a small to medium enterprise network</p>	<p>2.1. Set up wired infrastructure according to manufacturer's specifications and enterprise procedures</p> <p>2.2. Set up and configure resource sharing on a network server</p> <p>2.3. Install WAN connection and ISP services and configure according to enterprise procedures</p> <p>2.4. Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures</p> <p>2.5. Implement data backup and disaster recovery measures according to enterprise procedures</p>
<p>3. Complete and document network installation</p>	<p>3.1. Restore worksite to safe condition according to established safety procedures</p> <p>3.2. Record and store essential installation information according to enterprise procedures</p> <p>3.3. Notify appropriate personnel about the completion of the task according to enterprise procedures</p> <p>3.4. Notify customer and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and peers to achieve outcomes
- literacy skills to:
 - develop network documentation and maintain network records
 - read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems according to help desk procedures
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - determine business needs of a small ISP
 - identify customer requirements and provide help desk support
 - implement WAN services to the internet
 - install, configure and troubleshoot networking devices
 - instigate data backup and disaster recovery procedures
 - modify and translate network and port addresses to establish connectivity
 - plan wired network infrastructure
 - use router testing methodologies to verify a given configuration

Required knowledge

- correct usage of tools and equipment
- data backup services and procedures
- enterprise OHS procedures
- ISP services
- network device configuration
- network models and topologies
- subnet addressing
- troubleshooting procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement OHS workplace procedures and practices • plan the installation of a network that uses subnet addressing and provides ISP services • set up and configure wired infrastructure • troubleshoot local network and WAN connectivity and services • configure resource sharing on a network server • provide network data backup and disaster recovery.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where installation of a small to medium business network may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and configuring a small to medium business network • direct observation of the candidate providing network data backup and disaster recovery • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN2207A Install and configure a home or small office network.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS may include:

- awards provisions
- hazardous substances and dangerous goods code
- legislation
- local safe operation procedures
- material safety management systems
- protective equipment.

RANGE STATEMENT	
<i>Environmental requirements</i> may include:	<ul style="list-style-type: none"> • dust • excessive energy and water use • excessive noise • fume • gas • liquid waste • smoke emissions • solid waste • vapour.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • client • customer • manager • network manager • site engineer • supervisor.
<i>Network resources</i> may include:	<ul style="list-style-type: none"> • dynamic host configuration protocol (DHCP) server • domain name system (DNS) server • files • software • web browser.
<i>Network device</i> may include:	<ul style="list-style-type: none"> • router • server • switch • wired infrastructure for a small to medium size business.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> • instructions: <ul style="list-style-type: none"> • designs • drawings • job sheets • plans • manufacturer's specifications • operational procedures • reporting and communication • use of tools and equipment.
<i>Wired infrastructure</i> may include:	<ul style="list-style-type: none"> • connectors and cabling • copper cables • distribution frames • fibre cables.

RANGE STATEMENT	
<i>Essential installation information</i> may include:	<ul style="list-style-type: none"> • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords • security access codes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to build a LAN or WAN	1.1. Prepare for given work confirming site-specific occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with <i>appropriate personnel</i> 1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3. Determine network design specification from job briefs or appropriate personnel 1.4. Determine <i>network addressing scheme</i> for network connectivity and confirm using <i>calculations</i> 1.5. Select and obtain <i>network hardware</i> according to <i>established procedures</i> 1.6. Obtain operating instructions, manuals, hardware and software testing methodologies 1.7. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Build and verify a network	2.1. Establish connections between network hardware according to manufacturer's specifications and established procedures 2.2. Verify network routing and switching to conform to network design specification 2.3. Set up, configure and share <i>network resources</i> between network devices
3. Monitor network performance and troubleshoot network	3.1. Monitor network traffic and assess performance metrics against manufacturer's specifications and established procedures 3.2. Identify security threats and initiate control measures according to enterprise procedures 3.3. Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures
4. Complete and document network build	4.1. Restore work site to safe condition according to established safety procedures 4.2. Record and store network schematics and network addressing scheme 4.3. Notify appropriate personnel about the completion of the task 4.4. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and peers to achieve outcomes
- literacy skills to:
 - read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data and devise addressing schemes
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems according to help desk procedures
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - configure applications and verify their connection to provide network services
 - configure interfaces, test and verify correct functionality
 - configure the security features of a network to minimise risk of security breach
 - plan, build, configure, test and analyse the performance of a network
 - use appropriate tools to develop and test network addressing
 - use appropriate tools to monitor and analyse the routing of packets in a network

Required knowledge

- enterprise OHS procedures
- internet and computer network communication
- network addressing schemes
- open systems interconnect (OSI) and transmission control protocol (TCP)/IP model
- planning the cabling of Ethernet networks
- seven layer OSI model
- tool and equipment correct usage
- troubleshooting procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement OHS workplace procedures and practices • develop a network addressing scheme • determine required network components to build the network • plan, build, configure, test and analyse the performance of a network • troubleshoot network problems.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where building and maintenance of a secure network may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate building configuring and testing a secure wired LAN or WAN network • direct observation of the candidate troubleshooting network problems • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4212A Apply advanced routing protocols to network design • ICTTEN4213A Configure and troubleshoot advanced network switching

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTTEN4214A Install and maintain a wide area network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTTEN2218A Operate new media software packages

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge to operate media software packages and supporting hardware to produce a media design. It involves selection and appraisal of media software tools, assessment and manipulation of software functions. It also involves use and creation of graphics and editing media files.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>The unit provides an introduction to the use of media software packages for people wanting to be employed in the multimedia production area.</p> <p>It may eventually lead to employment in graphic design, industrial design, production of promotional and marketing media material.</p>
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify relevant new media software and supporting hardware to meet a design brief	1.1. Perform the media work in a safe manner to comply with occupational health and safety (<i>OHS</i>) <i>criteria</i> and accepted industry practice 1.2. Identify the basic <i>requirements of a media design brief</i> , including <i>user environment</i> from <i>customer specifications</i> 1.3. Research and review new media <i>software</i> and <i>hardware</i> available to realise the design requirements 1.4. Select a new media software program to meet design brief requirements 1.5. Identify relevant new media hardware to support design brief requirements 1.6. Select, <i>re-encode</i> and <i>transcode</i> relevant <i>file formats</i> to process and modify digital <i>media files</i> to suit <i>user application</i>
2. Develop a new media graphic design	2.1. Review design brief to ensure customer requirements are well interpreted 2.2. Procure or create suitable <i>graphics</i> , video or sound to meet requirements of design brief 2.3. Manipulate graphics, video or sound using freely available <i>software tools</i> for evaluating the capabilities and limitations of different software packages 2.4. Produce a media design according to customer specifications and save the new media files using the designated file formats
3. Review new media design	3.1. Evaluate media design for <i>creative, dramatic</i> and <i>technical quality</i> , file size, and <i>data</i> suitability to meet the brief 3.2. Test and run graphics, video and sound of the media design as part of a multimedia presentation and present designs in the appropriate format

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to work with others in a team
- literacy skills to read and interpret technical information and software specifications
- numeracy skills to size objects in computer assisted design (CAD)
- PC skills to load software and apply written keyboard instructions
- problem solving skills to clarify and solve unpredictable software and user environment problems that may arise
- technical skill to :
 - accurately incorporate workflow and stakeholder input
 - investigate, analyse and evaluate new media software requirements
 - manipulate digital photographs, images, videos and sound
 - use and configure new media hardware
 - use new media software programs
 - use software tools to develop, edit and test design
 - use visual design techniques

Required knowledge

- functions and features of two new media applications
- graphic design and stylistic language conventions
- software tools to develop, edit and test design
- the principles of:
 - digital imaging and file formats
 - file management and
 - transfer systems
 - video and sound file formats
 - visual design principles
- vendor product directions in new media hardware and software
- visualisation and interpreting creative information, scripts (text) and images

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate new media software • manipulate files effectively • produce a media design using two new media software packages • evaluate design • test and run design.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • work stations with appropriate software tools loaded • media capable PCs • peripheral media equipment with HD capability • LAN with media server • internet access.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate operating new media software • oral or written questioning to assess knowledge of media applications and required knowledge • review of new media graphic designs and presentations prepared by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS criteria may include:

- correct posture
- ergonomic desk and chair
- length of time in front of computer
- light position
- lighting
- repetitive strain injury prevention
- type of monitor
- typing position
- ventilation.

Requirements of a media design brief may include:

- animation
- application
- format:
 - audio
 - graphic

RANGE STATEMENT	
	<ul style="list-style-type: none"> • images • video • length • protocol • resolution or definition: <ul style="list-style-type: none"> • high definition (HD) • standard definition (SD) • type of production.
<i>User environment</i> may include:	<ul style="list-style-type: none"> • home theatre • internet protocol TV (IPTV) • iTunes • UTube • media player • mobile devices • Web.
<i>Customer specifications</i> may refer to material for:	<ul style="list-style-type: none"> • advertising campaign • animation • magazine • marketing • multimedia • point of sale • promotion • promotional material • sales brochure • theatre production • video clip • Web promotion material.
<i>Software</i> may include:	<ul style="list-style-type: none"> • animation software: <ul style="list-style-type: none"> • 3D Studio Max • Cinema 4D • Houdini • Lightwave • Maya • Motionbuilder • Soft Image - XSI • graphics: <ul style="list-style-type: none"> • 3D Studio Max • Illustrator • Maya

RANGE STATEMENT

ICTTEN2219A Install and test internet protocol devices in convergence networks

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and test internet protocol (IP) based telecommunications networking using convergent technologies.

This entry-level unit introduces IP convergence of the emerging technologies used in telecommunications to deliver services of Next Generation Networks (NGN) by configuring and testing an IP device.

NGN services include internet protocol TV (IPTV), IP security, digital home networks, IP-based cable access TV (CATV), IP core and access networks, home automation, interactive TV, radio frequency identification (RFID), biometric recognition systems, mesh networks, smart grids and cloud computing.

Application of the Unit

Technicians and cable installers who install and maintain IP-based equipment for customer and service providers apply the skills and knowledge in this unit.

They may be up-skilling from traditional legacy telecommunications technologies or cross-skilling from related industries to provide services in NGN using IP technologies.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Gather information to prepare for the installation of an IP device	<p>1.1 Obtain and clarify work health and safety (WHS) requirements and environmental requirements for a given work area with appropriate person</p> <p>1.2 Identify safety hazards and notify appropriate personnel</p> <p>1.3 Obtain identified operating instructions, manuals, and hardware and software testing methodologies</p> <p>1.4 Obtain documentation on a range of IP devices that can be networked according to the open system interconnection (OSI) reference model in networking</p> <p>1.5 Obtain the range of required IP devices to be connected to the network and identify the IP-based telecommunications application that will be provided</p>
2. Prepare for the installation of an IP device	<p>2.1 Select an IP device for installation that can be integrated into the existing network</p> <p>2.2 Obtain appropriate hardware, software, network protocols, peripheral devices and media types and connectors for configuration process</p> <p>2.3 Draw the physical topology of the device connection to the network and seek approval from the appropriate person</p> <p>2.4 Obtain configuration details to start setting up the device</p>
3. Configure and test the IP device	<p>3.1 Determine network addressing scheme for mapping network connectivity and verify by calculations</p> <p>3.2 Assign a valid static IP address to the device</p> <p>3.3 Use network commands to determine and verify the media access control (MAC) address, the IP address and network performance of the device</p> <p>3.4 Determine security threats and initiate security solutions to prevent security breaches according to enterprise procedures</p>
4. Complete and document network installation	<p>4.1 Restore work site to safe condition according to established safety procedures</p> <p>4.2 Record and store essential installation information according to enterprise procedures</p> <p>4.3 Notify appropriate person about the completion of the task according to enterprise procedures</p>
5. Test a wireless link	<p>5.1 Select the types of wireless connections used in telecommunications</p> <p>5.2 Set up a wireless link to connect two wireless devices</p>

	following safe work practices 5.3 Transmit data over the link and verify the accuracy of the received data
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work effectively within a group
- literacy skills to interpret configuration instructions
- numeracy skills to gather and record data from measurements
- technical skills to:
 - configure and test an IP device
 - recognise security threats and offer solutions.
 -

Required knowledge

- computer networking principles
- configuration instructions
- IP addressing
- IP devices
- organisational policy and procedures relating to the installation and testing of internet protocol devices
- procedures for basic testing and troubleshooting of an IP device
- procedures for assigning networking protocols
- security configurations
- wireless technologies and basic applications
- work health and safety (WHS) requirements and personal safety issues relating to the installation and testing of internet protocol devices.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare for the installation of an IP device connected to a network • set up and configure IP device with simple addressing schemes • test and secure the device against security threats • produce essential installation information • follow WHS workplace procedures and practices • test wireless link.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a small network with IP devices • tools, equipment, materials and documentation required for installing and testing IP devices • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and testing IP devices • review of drawings of and records for installation • oral or written questioning to assess knowledge of personal computer systems • direct observation of the candidate setting up wireless link and transmitting data.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• ICTTEN2207A Install and configure a home or small office network• ICTTEN2208A Install and configure a small to medium business network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

WHS requirements may include:	<ul style="list-style-type: none"> • award provisions • hazardous substances and dangerous goods code • legislation • local safe operation procedures • material safety management systems • protective equipment.
Environmental requirements may include managing:	<ul style="list-style-type: none"> • dust • excessive energy and water use • excessive noise • fumes • gas • liquid waste • smoke emissions • solid waste • vapour.
Appropriate person may include:	<ul style="list-style-type: none"> • customer • network manager • site manager • supervisor.
IP devices may include:	<ul style="list-style-type: none"> • asymmetric digital subscriber line (ADSL) router • biometric device: <ul style="list-style-type: none"> • face recognition • fingerprint scanner • iris recognition scanner • voice recognition • computer network: <ul style="list-style-type: none"> • data switch • gateway • hub • router • server • wireless access point (AP) • IP CCTV unit or camera

	<ul style="list-style-type: none"> • IP security alarm panel • IP wireless router • RFID device • voice over internet protocol (VoIP) phone.
OSI reference model has seven layers, including:	<ul style="list-style-type: none"> • L1 – physical • L2 – data link • L3 – network • L4 – transport • L5 – session • L6 – presentation • L7 – application.
Network may include:	<ul style="list-style-type: none"> • carrier access network • carrier core network • client-server network • Ethernet • home network • internet • intranet • IPTV • local area networks (LAN) • mesh network • peer-to-peer network • RFID • smart grid network • virtual private network (VPN) • VoIP • wide area network (WAN) • wireless local area network (WLAN or WiFi).
IP-based telecommunications application may include:	<ul style="list-style-type: none"> • IP security network • IP-PBX • IPTV • VoIP • Web 2 applications.
Hardware may include:	<ul style="list-style-type: none"> • displays • DSL modems • external drives • IP device • memory • mobile equipment • motherboard • network interface card (NIC) card

	<ul style="list-style-type: none"> • uninterrupted power supply (UPS) • workstations.
Software may include:	<ul style="list-style-type: none"> • configuration software • diagnostic software • modem driver • MS Office suite • operating system (OS) • printer driver.
Network protocols may include:	<ul style="list-style-type: none"> • address resolution protocol (ARP) • dynamic host configuration protocol (DHCP) • file transfer protocol (FTP) • H.323 • hypertext transfer protocol HTTP • IP • simple network management protocol (SNMP) • transmission control protocol (TCP)/IP • telnet • wireless application protocol (WAP).
Peripheral devices may include:	<ul style="list-style-type: none"> • Bluetooth device • IP speakers • modem • printer • RFID reader • scanner • USB and Firewire devices • webcam.
Media types and connectors may include:	<ul style="list-style-type: none"> • type: <ul style="list-style-type: none"> • cable: <ul style="list-style-type: none"> • Category 5, 5e, 6 or 7 • coaxial • crossover • optical fibre • roll over • straight through • wireless • connectors: <ul style="list-style-type: none"> • BNC • FC • RJ45 • SC

	<ul style="list-style-type: none"> • ST.
Configuration details may include:	<ul style="list-style-type: none"> • access levels • authorisation level • encapsulation • encryption • IP addressing and subnet mask • security level.
Network addressing scheme may include:	<ul style="list-style-type: none"> • dynamic addressing • IPv4 addressing • IPv6 addressing • static addressing • subnet addressing.
Calculations may include:	<ul style="list-style-type: none"> • binary addition • binary conversion • binary multiplication • binary number system • binary subtraction.
Network commands may include:	<ul style="list-style-type: none"> • ping • prompt • traceroute • tracert.
Security threats may include:	<ul style="list-style-type: none"> • denial of service (DoS) attack • hacking • phishing • spoofing • trojans • viruses • worms.
Security solutions may include:	<ul style="list-style-type: none"> • firewalls • hacking preventions • IPSec • password logons • public key infrastructure (PKI) • secure sockets layer (SSL) • wired equivalency protection (WEP) • wireless fidelity (WiFi) protected access (WPA).
Essential installation information may include:	<ul style="list-style-type: none"> • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords

	<ul style="list-style-type: none">• security access codes.
Wireless connections may include:	<ul style="list-style-type: none">• AM and FM• Bluetooth• cellular• infra-red• microwave• optical and laser• satellite• two-way radio• WiFi• worldwide interoperability for microwave access (WiMAX).

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN3054B Provide infrastructure for telecommunications network equipment

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install supporting infrastructure for telecommunications equipment and associated hardware equipment. This includes carrier grade switching, transmission and access equipment and associated media, power and monitoring equipment and alarm systems.

Application of the Unit

Field officers, installation technicians or technical supervisors from carriers, contractors or other service providers apply the skills and knowledge in this unit.

This unit may apply to switching, transmission and radio networks and the various transmission paths including cable, optical fibre, radio, microwave and satellite.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.

If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for installation infrastructure work</p>	<p>1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work</p> <p>1.2 Notify customer to arrange site access and obtain installation plan and specifications</p> <p>1.3 Conduct a site survey to verify that infrastructure installation requirements can be met</p> <p>1.4 Identify site hazards and notify appropriate personnel to make site safe</p> <p>1.5 Notify customer of alterations required to installation design and make recommendations for possible solutions</p> <p>1.6 Obtain approval for alterations and update installation plan</p> <p>1.7 Develop an installation activity schedule to minimise disruption to the workplace and according to relevant regulation and standards</p> <p>1.8 Obtain material supplies, safety equipment, resources, tools and test equipment to be available when required for installation for safe work practice</p>
<p>2. Build network equipment infrastructure</p>	<p>2.1 Prepare for the given work according to occupational health and safety (OHS) and environmental requirements</p> <p>2.2 Build metal superstructure to house equipment according to manufacturer's specifications and to safety and electrical standards</p> <p>2.3 Build ducts and tray ways for signal and data cabling and optical cables according to plan and specification after consultation with operational staff</p> <p>2.4 Build busbars or power cabling infrastructure as specified on the plan</p> <p>2.5 Install cable distribution frames according to plan and manufacturer's specifications</p> <p>2.6 Install earthing to all metal infrastructures according to specifications</p>
<p>3. Install power infrastructure</p>	<p>3.1 Install batteries and rectifiers and connect according to manufacturer and OHS requirements</p> <p>3.2 Test and monitor battery discharge levels and obtain replacement batteries under warranty where required</p>
<p>4. Supervise DC power distribution</p>	<p>4.1 Coordinate and arrange for power distribution work to be performed by qualified personnel to meet electrical safety</p>

	<p>requirements and certifications</p> <p>4.2 Monitor electrical work to ensure compliance with installation plan</p> <p>4.3 Identify and rectify faults where possible or escalate according to enterprise policy</p>
<p>5. Restore site and complete documentation</p>	<p>5.1 Attach infrastructure <i>labels and designations</i> according to enterprise requirements</p> <p>5.2 Complete inspection sheets and declare asset ready for next stage of installation using appropriate sign off documentation</p> <p>5.3 Clean up and prepare site in readiness for next installation phase</p> <p>5.4 Notify customer and obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate most effective technical solutions
- communication skills to:
 - liaise with customers to ensure requirements are known and can be met within timeframes
 - negotiate approvals and contract arrangements with suppliers and contractors
- literacy skills to:
 - document technical requirements and procedures
 - interpret technical specifications and related documentation
- numeracy skills to calculate budget requirements and limitations
- planning and organisation skills to:
 - make site access and equipment delivery arrangements
 - set out project requirements and priorities
- problem solving skills to account for unexpected variations to requirements
- technical skills to:
 - perform cabling and terminating work
 - use hand tools to:
 - affix supports, cable trays and racks to surfaces
 - assemble infrastructure
 - work with construction materials.
 -

Required knowledge

- cabling types, connectors and cabling structures
- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- current legislation relating to installation of telecommunications equipment and connection to carrier services
- environmental impacts including options for green ICT installations
- network topologies, interface and interconnect solutions
- OHS requirements for:
 - confined spaces
 - electrical safety
 - heights
 - lifting
 - materials handling
 - physical hazards
- overview knowledge of network and transmission equipment
- understanding of power requirements and electrical safety
- warranty information for equipment supplies and contractor work guarantees.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify potential earthing locations cable routes, cables trays, data cabinets, telecommunication enclosures, distributors • build metal superstructure • install protective earth and functional earth installations • install power infrastructure • supervise DC power distribution.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where installation of supporting infrastructure may be conducted • use of plant, tools and equipment currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate building metal superstructure to house equipment • direct observation of the candidate installing protective earth and functional earth installations • review of installation activity schedule prepared by the candidate • oral or written questioning to assess knowledge of installation issues, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3009B Install, terminate and certify structured

	<p>cabling installation</p> <ul style="list-style-type: none">• ICTCBL3010B Install and terminate optical fibre cable on customer premises. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • crane • forklift • winch • AS Communications Cabling Manual (CCM) Volume 1 • AS/ACIF S008:2006 • AS/ACIF S009:2006 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian Construction Industry Forum (ACIF) standards and codes • cabling security codes and regulations • Environmental Protection Acts • OHS Acts.
<p>Customer may be:</p>	<ul style="list-style-type: none"> • architect • asset manager • builder • nominated representative • project manager • service provider.
<p>Site survey may include:</p>	<ul style="list-style-type: none"> • cable tunnels • equipment bays • floor layout • floor loadings • lighting • preparation area

	<ul style="list-style-type: none"> • roof structures • ventilation • wall structures.
Infrastructure may include:	<ul style="list-style-type: none"> • air conditioning requirements • alarm panels • cable entries • distribution frames • duct and cable trays • equipment racks • power supplies • radio structure.
Hazards may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR): <ul style="list-style-type: none"> • event at a site, such as an electrical distribution substation, may expose telecommunications personnel, users or plant to hazardous voltages • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • needle stick injury • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
Materials supplies may include:	<ul style="list-style-type: none"> • back shelf cards • cable racks • cable trays, nuts and bolts • distribution frames or blocks • earth terminal and rod • frames and cabinets • insulation blocks • iron support structures • jumper wire • lacing, twine and cable ties • patch panels • termination blocks.
Safety equipment may include:	<ul style="list-style-type: none"> • electrical isolators • EWP • harnesses

	<ul style="list-style-type: none"> • manual lifters • personal protective equipment: • acid proof clothing • earmuffs • face masks • gloves • head protection • kneepads • safety boots • safety glasses • safety barriers.
<p>Resources may include:</p>	<ul style="list-style-type: none"> • finance • labour • materials • tools and test equipment • vehicles.
<p>Tools and test equipment may include:</p>	<ul style="list-style-type: none"> • tools: <ul style="list-style-type: none"> • anti-static wrist strap • PC board or subrack removal tool • pliers • power drill • screwdrivers • sockets • soldering iron • spanners • test equipment: <ul style="list-style-type: none"> • anti static testers • cable testers • displacement tools • humidity and temperature testers • insulation tester • load testers • multimeter • optical fibre power meter • oscilloscope • tong meter • volt meters.
<p>OHS and environmental requirements may relate</p>	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas

to:	<ul style="list-style-type: none"> • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Power distribution work</i> may include:	<ul style="list-style-type: none"> • 240 V rectifier panels • backup motor generator set • certifying electrical installation • installation of power distribution panel and cables • termination and connection of power cables to equipment • testing of electrical cabling.
<i>Qualified personnel</i> may include:	<ul style="list-style-type: none"> • electrical contractor • internal electrician • power company staff.
<i>Labels and designations</i> may include:	<ul style="list-style-type: none"> • cabinets • cables • distribution panels • racks • vendor labels.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan for installation of telecommunications network equipment	1.1. Prepare for given work according to relevant occupational health and safety (OHS) and environmental requirements 1.2. Notify customer to arrange site access if necessary 1.3. Assess existing and potential site hazards 1.4. Verify location of proposed network equipment installation according to the appropriate plans obtained from authorised personnel 1.5. Develop installation plans to ensure minimal disruption to the workplace and according to relevant legislation, codes, regulations and standards 1.6. Obtain tools and test equipment required for safe work practice 1.7. Notify affected parties of possible network outage if required
2. Install network hardware and cabling	2.1. Install network equipment according to the plan and manufacturer's instructions using safe industry practices 2.2. Insert equipment cards and modules 2.3. Install all interconnecting cables to specification 2.4. Confirm service interruption is within limits agreed with the customer 2.5. Document all installation drawings for the customer
3. Install equipment accessories	3.1. Install alarms according to instruction manuals and to specification 3.2. Install operations administration and maintenance system according to specification 3.3. Install communication facilities for operational staff according to specification, taking into account any special needs of the site and the operational staff 3.4. Install operator communication facilities according to needs and to specification
4. Configure and test the system	4.1. Install software and configuration instructions according to system specifications if required 4.2. Test to verify the system performance according to customer requirements

ELEMENT	PERFORMANCE CRITERIA
	4.3.Recommend any possible changes and confirm with customer 4.4.Record all test results
5. Clean up worksite and complete documentation	5.1.Remove and dispose of installation waste and debris from worksite according to environmental requirements 5.2.Restore changes made to the work area during installation to the customer's satisfaction 5.3.Complete all installation documents and present to the customer 5.4.Declare asset ready for commissioning and integration 5.5.Notify the customer and obtain signoff

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - interpret test equipment settings and readings
 - interpret design specifications including:
 - circuit diagrams
 - plans
 - specifications
- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to make site access and equipment delivery arrangements
- problem solving to account for unexpected faults or equipment incompatibilities
- technical skills to:
 - apply antistatic techniques for material and equipment handling
 - correctly handle, connect and calibrate test equipment
 - install cables including:

REQUIRED SKILLS AND KNOWLEDGE

- appropriate cable separation
- minimum bending radii
- provision of spare length
- terminate cables including:
 - stripping
 - conductor identification and fanning
 - cleaning of optical fibres connectors
 - provision of spare length
- use hand tools for mounting and securing equipment

Required knowledge

- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment
- electrical and or optical properties to be measured
- overview knowledge of network and transmission equipment
- power requirements and electrical safety
- typical performance parameters and faults that may be encountered in customer equipment and related connection and transmission media
- various test equipment types suitable for tests to be made
- waste handling and environmental compliances in its disposal

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and install network hardware and cabling according to equipment/system manuals and specifications • configure and test installation • verify cable continuity • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation of telecommunications network equipment may be conducted • use of network testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on telecommunications network equipment installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing telecommunications network equipment • review of reports completed by the candidate for different scenarios and situations • oral or written questioning to assess knowledge of planning, types of systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTSUS4184A Install and test power saving hardware • ICTTEN4051A Install configuration programs on PC based customer equipment • ICTTEN4198A Install, configure and test an internet

Application of the Unit

Application of the unit	<p>Cablers, installers and technicians who install and maintain a broad range of telecommunications networks including fault investigations, apply the skills and knowledge in this unit.</p>
--------------------------------	---

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for fault-finding activity	1.1. Prepare for given work according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> 1.2. Arrange access to the site according to required procedure 1.3. Locate existing and potential site <i>hazards</i> 1.4. Contact the customer to verify nature of the <i>recurrent fault</i> and the <i>network type</i>
2. Conduct activities for recurrent network fault-finding	2.1. Analyse fault history using <i>fault records</i> to establish nature of fault 2.2. Select <i>test equipment</i> and conduct the <i>appropriate test</i> to identify potential faults ensuring the diagnostic process does not compromise the <i>integrity</i> of the network element or system 2.3. Evaluate test results to determine <i>relevant symptoms</i> of the recurrent fault using <i>appropriate methods</i> and <i>appropriate process</i> 2.4. Locate the probable cause, type and location of the fault 2.5. Rectify the fault or escalate to appropriate level
3. Report fault-findings and solutions	3.1. Prepare customer report on the diagnostic procedure, fault identification and fault clearance 3.2. Update fault records database 3.3. Restore worksite to the customer's satisfaction 3.4. Notify the customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to question and respond to subject matter experts on technical and operational matters related to performance of telecommunications networks and fault-finding
- literacy skills to interpret technical documentation and incorporate technical

REQUIRED SKILLS AND KNOWLEDGE

- language into written tasks and basic reports
- numeracy skills to interpret technical data for specifications of telecommunications networks
 - planning and organisational skills to:
 - coordinate the fault-finding process in liaison with others
 - plan, prioritise and monitor own work
 - problem solving skills to apply network fault-finding techniques in a telecommunications network
 - research skills to interrogate databases and other sources to investigate systematic and logical fault-finding techniques of telecommunication networks
 - safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
 - technical skills to select and use appropriate test equipment to undertake fault-finding techniques in telecommunications networks

Required knowledge

- application of Ohm's law, impedance and reactance formulas to solve AC electrical problems
- behaviour of faulty network elements, including symptoms and impact on network
- interpretation of test results and network element/system specifications
- operation and purpose of testing equipment
- operation of transformers
- overview of telecommunications networks
- performance testing and fault finding techniques of telecommunications networks
- systematic and logical fault finding
- types of power sources used in telecommunications networks

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • test telecommunications networks to identify faults • identify and rectify recurrent faults • conduct and report on a fault-finding task in a telecommunications network for a range of faults • use systematic and logical fault-finding techniques in telecommunications networks and field testing procedures to particular workplace situations • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which network testing and fault-finding may be conducted • use of line transmission, optical and radio measurement equipment currently used in industry • system documentation, and other site-related documentation necessary to conduct tests and fault-finding investigations.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking network tests and fault-finding techniques • review of the candidate's evaluation of network testing and fault diagnosis • oral or written questioning to assess knowledge of performance of telecommunications networks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN3056A Install telecommunications network equipment.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS and environmental requirements may relate to:

- need to decommission and isolate worksite and lines prior to commencement
- need to identify other services, including power and gas
- personal protective clothing:
 - earmuffs
 - gloves:
 - leather

RANGE STATEMENT	
	<ul style="list-style-type: none"> • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses for laser work • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste disposal containers: <ul style="list-style-type: none"> • drop sheets • sharps containers • waste management.
Hazards may include:	<ul style="list-style-type: none"> • earth potential rise (EPR): • optical fibre cable: <ul style="list-style-type: none"> • bare fibres • hazardous laser light • radio frequency (RF) equipment emitting radiation

RANGE STATEMENT	
	<ul style="list-style-type: none"> remote power feeding services which operate at above telecommunications network voltage (TNV).
Recurrent fault may relate to:	<ul style="list-style-type: none"> call drop out distortion heat, vibration intermittent fault or interference noise occurrences at set periodic times periodic loss of performance.
Network type may include:	<ul style="list-style-type: none"> cable customer access network (CAN) customer premises equipment (CPE) data hybrid fibre coaxial (HFC) optical radio.
Fault records may include:	<ul style="list-style-type: none"> customer complaint database fault records database previous repairs repair technician reports.
Test equipment may include:	<ul style="list-style-type: none"> bit error rate tester (BERT) cathode ray oscilloscope (CRO) local area network (LAN) Cat tester multimeters transmission level measuring set.
Appropriate test may include:	<ul style="list-style-type: none"> bit error rate (BER) crosstalk impedance loopback power level return loss wire maps.
Integrity may include:	<ul style="list-style-type: none"> downgraded performance interference loss of connection.
Relevant symptoms may include:	<ul style="list-style-type: none"> emission of: <ul style="list-style-type: none"> heat noise

RANGE STATEMENT	
	<ul style="list-style-type: none"> • odours • errors • low output levels or poor coverage • loss of functionality of equipment: <ul style="list-style-type: none"> • distortion • intermittent operation • loss of timings • noise • physical damage to equipment.
<i>Appropriate methods</i> may include:	<ul style="list-style-type: none"> • direct observation • interrogation of network performance data • measurement • questioning.
<i>Appropriate process</i> may include:	<ul style="list-style-type: none"> • analysis of symptoms • fault isolation • observation and measurements • use of manufacturer's diagnostic data.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to recover customer equipment	1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> 1.2. Notify <i>customer</i> for site access and location details of <i>customer equipment</i> for <i>recovery</i> 1.3. Identify site <i>hazards</i> and notify customer to make site safe 1.4. Arrange for <i>tools and lifting equipment</i> if required
2. Recover customer equipment	2.1. Verify equipment is out of operational service and disconnect from all power feeds 2.2. Dismantle equipment and peripheral units according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with minimal disruption to building occupants 2.3. Package and label recovered equipment and dispose of according to arranged <i>disposal agreement</i>
3. Complete documentation and clean up worksite	3.1. Amend site records to show existing equipment layout 3.2. Clean up and restore site to customer satisfaction 3.3. Collect and dispose of waste material and debris according to environmental requirements 3.4. Notify customer of job completion to obtain sign off and present with a copy of documentation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to liaise with customers to ensure requirements are known and can be met within timeframes • literacy skills to: <ul style="list-style-type: none"> • interpret technical documentation, such as equipment manuals and specifications • update site records • planning and organisational skills to:

REQUIRED SKILLS AND KNOWLEDGE

- arrange for tools and equipment
- make site access and equipment recovery arrangements
- set out project requirements
- problem solving skills to solve logistics problems
- safety awareness skills to disconnect equipment from power sources
- technical skills to:
 - dismantle and recover equipment
 - use hand and power tools

Required knowledge

- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer requirements for safe operation of equipment
- overview knowledge of customer premises equipment and customer premises cabling
- regulatory and specific OHS requirements relating to the site
- types of power sources used with telecommunications equipment
- typical issues and challenges that occur on site

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Process recovered equipment	1.1. Conduct a visual inspection of the <i>external condition</i> of the <i>customer equipment</i> for acceptability 1.2. Conduct <i>functional tests</i> on equipment to determine equipment suitable for repair 1.3. Salvage, label and store functional equipment for use as spare parts 1.4. Label and scrap non-functional equipment and parts according to company procedures
2. Renovate and repair equipment	2.1. Clean and <i>renovate equipment housing</i> to acceptable standard for reuse 2.2. Conduct full functional and operational tests on equipment circuit boards for suitability of reuse 2.3. Repair and rectify faulty equipment circuit boards for reuse 2.4. Reassemble equipment circuit boards into renovated housings and relabel accordingly 2.5. Reload new compatible software according to manufacturer's specifications 2.6. Conduct a final acceptance test on the refurbished equipment according to manufacturer's specifications and record test results
3. Package refurbished product and complete documentation	3.1. Prepare and place new labels on equipment and parts before using protective wrapping 3.2. Seal and label <i>packaging</i> with <i>documentation</i> according to specification 3.3. Store and assemble completed packages for distribution according to company requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> communication skills to liaise with customers to ensure requirements are known and can be met within timeframes

REQUIRED SKILLS AND KNOWLEDGE

- literacy skills to:
 - read and interpret technical documentation, such as equipment manuals and specifications
 - record test results
 - update site records
- planning and organisational skills to organise equipment
- problem solving skills to solve equipment problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - repair and test recovered equipment
 - repair circuit boards
 - test equipment
 - use hand and power tools

Required knowledge

- features and operating requirements of test equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- operate equipment according to a test specification
- overview knowledge of customer premises equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

ICTTEN3077B Commission an electronic unit

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to commission an electronic unit within a telecommunications environment with applications. Applications include voice over IP (VoIP), radio frequency identification (RFID), security networks, telephony, data, video and multimedia.

The commissioning may be for a new installation or upgrade of capacity or technology for existing network or subsystem for convergence to Next Generation Networks (NGN).

Application of the Unit

Field officers and technicians from telecommunications carriers, other service providers and contractors apply the skills and knowledge in this unit.

It involves commissioning an electronic unit at customer's premises or within a carrier network.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to commission an electronic unit</p>	<p>1.1 Prepare for work following occupational health and safety (<i>OHS</i>) requirements</p> <p>1.2 Organise resources based on existing and potential site hazards</p> <p>1.3 Notify customer or network operations personnel for site access and network specifications</p> <p>1.4 Determine the type and complexity of the electronic unit from specifications</p> <p>1.5 Verify that the installed electronic unit and associated cabling conform to specifications</p> <p>1.6 Establish commissioning dates and confirm with all parties</p> <p>1.7 Determine commissioning parameters according to specification and establish planned outage if required</p> <p>1.8 Obtain test equipment and check suitability and calibration status</p> <p>1.9 Produce a preliminary commissioning plan according to manufacturer's instructions and enterprise guidelines for discussion with the customer</p> <p>1.10 Inform affected customers of impending action and likely timing and impact by the work</p>
<p>2. Organise planned outages</p>	<p>2.1 Negotiate outage times with appropriate groups and affected customers to minimise disruptions</p> <p>2.2 Refer to contingency plans and arrange for emergency communications if required</p> <p>2.3 Notify alarm management centre of planned action</p> <p>2.4 Obtain authority to proceed from the relevant control centre and notify customers affected by the outage</p>
<p>3. Perform commissioning procedures</p>	<p>3.1 Program equipment or install software according to manufacturer's specifications</p> <p>3.2 Set electronic unit parameters according to manufacturer's specifications and customer requirements</p> <p>3.3 Set up test equipment and conduct tests according to manufacturer's specifications and industry practice</p> <p>3.4 Connect and test network access facilities for correct performance</p> <p>3.5 Conduct the cut over according to project design and industry practice in consultation with appropriate person</p>

	3.6 Check that remote alarm and monitoring features are functional, if applicable
4. Finalise commissioning documentation	4.1 Update relevant databases according to enterprise and network guidelines 4.2 Notify appropriate person of commissioning results and work completion 4.3 Complete <i>administrative tasks</i> according to industry practice and enterprise guidelines

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations
- planning and organisational skills to arrange site access and organise equipment
- problem solving to account for unexpected faults or equipment configuration anomalies
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - correctly test and carry out commissioning procedures
 - install supporting structures
 - terminate cables
 - use hand tools for removing and securing equipment covers.
 -

Required knowledge

- electrical and or optical properties to be measured
- extensive range of networking equipment
- legislation and licensing surrounding installation of telecommunications equipment
- network operation procedures
- power requirements and electrical safety
- test equipment types
- transmission type and signals that may be encountered.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • commission electronic unit according to specifications • interact with enterprise personnel, customers and other contractors keeping a customer focus and consideration of customer needs • negotiate the arrangements for the commissioning • deal with faults and problems and provide solutions.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which installation and commissioning procedures can be conducted • relevant regulatory and equipment documentation that impact on commissioning • use of testing equipment currently used in industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate applying enterprise escalation and outage procedures within service assurance guidelines • review of reports completed by the candidate outlining test plan and test results complete with analysis of faults with solutions • oral or written questioning to assess knowledge of commissioning procedures and types of systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN3104A Maintain an electronic system • ICTTEN3054B Provide infrastructure for

	<p>telecommunications network equipment</p> <ul style="list-style-type: none">• ICTTEN3089A Repair and replace telecommunications network hardware• ICTCBL2068A Install telecommunications service to a building• ICTCBL3049A Install systems and equipment on customer premises. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>OHS requirements</i> may include:</p>	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services: <ul style="list-style-type: none"> • gas • power • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses for laser work • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation.
--	---

Hazards may include:	<ul style="list-style-type: none"> • earth potential rise (EPR): • optical fibre cable: <ul style="list-style-type: none"> • bare fibres • hazardous laser light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV).
Network operations personnel may include:	<ul style="list-style-type: none"> • alarm operations • network operations centre staff • network operations manager • project manager.
Electronic unit may relate to:	<ul style="list-style-type: none"> • biometrics • internet protocol TV (IPTV) • multiplexing • RFID • surveillance • VoIP.
Planned outage may refer to:	<ul style="list-style-type: none"> • allocation of additional services and support • notification to affected customers • plan for: <ul style="list-style-type: none"> • redundant path • standby equipment.
Test equipment may include:	<ul style="list-style-type: none"> • bit error rate (BER) testers • communication system analysers • digital analysers • laser sources • magnetic error reduction (MER) meters • microwave link analysers • modulation analysers • multimeters • optical attenuators • optical fibre power meters • oscillators • oscilloscopes • optical time domain reflectometer (OTDR) • pattern generators • power meters • RF microwave test sets • RF sweep testers • signal level meters (SLM) • spectrum analysers

	<ul style="list-style-type: none"> • transmission measuring sets • voltage standing wave ratio (VSWR) meters.
<i>Affected customers</i> may include:	<ul style="list-style-type: none"> • building owner • communications consultant • contractor to a major supplier • end users • equipment owner • householder • operations staff.
<i>Contingency plans</i> may include:	<ul style="list-style-type: none"> • additional notification to affected customers • additional technical support • provision of: <ul style="list-style-type: none"> • additional services • redundant path • standby equipment.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • customer • design engineer • network operations manager • project manager • supervisor.
<i>Administrative tasks</i> may refer to:	<ul style="list-style-type: none"> • checking correct labelling of all equipment and amending where required • completing job orders and submitting to appropriate enterprise organisational unit • completing test sheets according to specification and logging test instrument usage • following quality control procedures • handing over installation briefs, documents and equipment manuals to operational staff • providing customers with a telecommunications cabling advice (TCA) form, such as TCA1 or equivalent form • recording test results and updating appropriate data bases • updating design specifications and returning to design area as required by enterprise requirements.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN3089A Repair and replace telecommunications network hardware

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to repair and replace network hardware in a telecommunications network as part of fault restoration. This unit involves work performed under the direction of the Network Operations Centre (NOC), where control of the network is coordinated.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Field officers, technicians or technical supervisors from carriers, contractors or other service providers apply the skills and knowledge in this unit.</p> <p>This unit may apply to replacement of equipment in switching, transmission and fixed and mobile radio networks, including the various transmission path components, such as cable, optical fibre, radio, microwave and satellite.</p> <p>The unit applies to installation of new, additional and replacement equipment.</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for hardware repair and replacement	1.1. Obtain relevant legislation, codes, regulations and standards for the given work 1.2. Discuss and record details of hardware to be repaired or replaced and proposed work schedule with the NOC appropriate person 1.3. Work safely according to relevant safety legislation and company work practices identifying hazards and using personal protective equipment 1.4. Obtain appropriate replacement hardware and associated documentation 1.5. Inspect network and determine the need for repair task 1.6. Obtain tools and check they are in good working order 1.7. Undertake an impact risk assessment of the hardware replacement with the NOC and prepare for contingencies using contingency plan
2. Rectify fault by replacing hardware	2.1. Replace equipment as instructed by the NOC following anti-static precautions in the case of sensitive electronic equipment and occupational health and safety (OHS) and environmental requirements 2.2. Inform NOC if problems occur with hardware replacement so that escalation may commence and contingency plan initiated 2.3. Test the replacement hardware to ensure satisfactory functionality
3. Clean up worksite and complete administrative work	3.1. Remove waste and debris from work site and dispose of according to environmental requirements and restore work area to customer's satisfaction 3.2. Recover faulty equipment and return to appropriate point for disposal or refurbishment 3.3. Complete documentation, update fault records and make recommendations according to the enterprise quality assurance system 3.4. Notify the customer of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to question and respond to subject matter experts on technical and operational matters related to performance of telecommunications networks and fault-finding
- literacy skills to:
 - incorporate technical language into written tasks and basic reports
 - interpret enterprise policy
 - interpret technical documentation
- numeracy skills to:
 - apply mathematical formulas to solve problems in AC and DC circuits
 - interpret technical data for specifications of telecommunications networks
- PC skills to update records database
- planning and organisational skills to:
 - coordinate the fault-finding process in liaison with others
 - plan, prioritise and monitor own work
- problem solving skills to:
 - apply AC and DC fault finding techniques to different situations
 - apply network fault-finding techniques in a telecommunications network
- research skills to interrogate databases and other sources to investigate systematic and logical fault-finding techniques of telecommunication networks
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - replace network hardware
 - select and use appropriate test equipment to undertake fault finding techniques in telecommunications networks
 - use anti static procedures

Required knowledge

- application of DC and AC electrical and principles
- behaviour of faulty network elements including symptoms and impact on network

REQUIRED SKILLS AND KNOWLEDGE

- interpretation of test results and network element/system specifications
- operation and purpose of testing equipment
- overview of telecommunications hardware and networks
- performance testing and fault-finding techniques of telecommunications networks
- systematic and logical fault-finding
- types of power sources used in telecommunications networks

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • rectify fault as instructed by NOC, following OHS requirements and anti-static precautions • replace telecommunications hardware within service assurance guidelines according to enterprise procedures • update fault records database according to enterprise procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • suitable site to replace telecommunications network hardware • range of hardware currently used in industry • range of general and test equipment required for testing telecommunications network hardware.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate developing rectification strategy • direct observation of the candidate replacing telecommunications network hardware within service assurance guidelines • oral or written questioning of the candidate to assess knowledge of replacement of telecommunications network hardware practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN3056A Install telecommunications network equipment. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5, 6, 6A, 7 or 7A and unshielded twisted pairs (UTP) • Environmental Protection Acts • OHS • relevant international standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Hardware</i> may include:	<ul style="list-style-type: none"> • complete systems, subunits or circuit cards from: <ul style="list-style-type: none"> • access • broadband • cellular radio • hybrid fibre coaxial (HFC) • internet protocol (IP) network: <ul style="list-style-type: none"> • gateways • router • servers • switches • voice over internet protocol (VoIP) • wireless LAN • network management • optical transmission • synchronous digital hierarchy (SDH) multiplexing • switching • transmission.
<i>NOC</i> may relate to:	<ul style="list-style-type: none"> • engineering unit within an enterprise responsible for: <ul style="list-style-type: none"> • analysing problems • communicating with other NOCs and technical staff

RANGE STATEMENT	
	<ul style="list-style-type: none"> • coordinating repairs or changes to the network • escalation of issues • establishing control over a network • monitoring the network alarms • performing diagnostic tests • tracking problems through to completion.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • customer • engineer • project manager • supervisor.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • building debris • earth potential rise • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • needle stick injury • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • earmuffs • electrical isolators • gas detectors • gloves • head protection • kneepads • masks • personal protective clothing • safety boots • safety glasses.
<i>Repair task</i> may include:	<ul style="list-style-type: none"> • conducting test • evaluating AC and DC test results • determining faulty component • replacement of faulty component.

RANGE STATEMENT	
<i>Tools</i> may include:	<ul style="list-style-type: none"> • crimping tools • hacksaw • ladders • levels and measuring tools • PC board or subrack card removal tool • pliers • power drills • screwdrivers • sockets • soldering iron • spanners • terminating tools.
<i>Hardware replacement</i> may include:	<ul style="list-style-type: none"> • cold swap • hot swap.
<i>Contingencies</i> may include:	<ul style="list-style-type: none"> • additional notification to affected customers • provision of: <ul style="list-style-type: none"> • additional services • additional technical support • redundant path • standby equipment.
<i>Anti-static precautions</i> may include:	<ul style="list-style-type: none"> • anti-static floor mat • anti-static workbench mat • anti-static wrist strap • controlled environment • correct printed circuit board handling procedures • use of anti-static bags.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • flashing lights • gas and other hazard detection equipment • identifying other services, including power and gas • safety barriers • safety equipment • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals

RANGE STATEMENT	
	<ul style="list-style-type: none"> • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • trench guards • warning signs and tapes • witches hats • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste management.
<i>Test</i> may include:	<ul style="list-style-type: none"> • bandwidth • blocking • call rate • congestion • distortion • drop out rate • functionality • generation of alarms • interference • latency • network tests • packet loss rate • power level measurement • quality of service • recovery rate • redundancy • signal to noise ratio • transmission quality • upload and download rate.
<i>Quality assurance</i> may include:	<ul style="list-style-type: none"> • acting on logs, reports and other data to guide ongoing quality improvements • updating logs and reporting on installation or maintenance activities.

ICTTEN3104A Maintain an electronic system

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to perform periodic maintenance and testing of electronic systems and equipment on site and from remote locations, ensuring that electronic systems remain safe and fit for purpose.</p> <p>This unit does not include the major servicing of equipment or repair due to breakdowns.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff who maintain an electronic system on site and from remote locations apply the skills and knowledge in this unit.</p> <p>On site routine maintenance involves inspection of critical parts, replacement of disposable items and confirmation that performance is within specification and operating levels are normal.</p> <p>Remote monitoring may be implemented from a Network Management Centre or Help Desk via dedicated communications services or by web-based services. Performance monitoring, investigation of alarms and updating of software, firmware and security systems are all able to be managed remotely.</p> <p>This unit applies to all telecommunications applications including telephony, data, and video and multimedia.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to maintain system	1.1. Consult with customer or property owner to arrange for site access if required 1.2. Plan a schedule of routine preventive maintenance for the electronic system based on recommended maintenance periods from manufacturer's handbooks and specifications 1.3. Report to appropriate person the impact of proposed maintenance activities on customer's service delivery 1.4. Confirm equipment is accessible and correctly set up for on site preventive maintenance activities and for remote interrogation if required 1.5. Confirm that alarms are functioning according to manufacturer's specifications and enterprise guidelines 1.6. Take corrective action if anomalies or faults are detected, according to enterprise guidelines and manufacturer's specifications
2. Undertake preventive maintenance routines on site and remotely	2.1. Conduct preventive maintenance according to planned schedule 2.2. Report to appropriate person any instances where the maintenance activities cannot be fully met or where there are identified defects outside the planned schedule 2.3. Verify equipment is functioning against expected operational parameters to confirm operational status 2.4. Take corrective action if faults are detected, according to enterprise guidelines and manufacturer's specifications 2.5. Escalate to the next level of support when required where preventive maintenance activity falls outside own level of expertise 2.6. Dispose of on site waste materials according to safe working practices and approved procedures
3. Make recommendations and update records	3.1. Record results of routine tests and make recommendations 3.2. Store records according to enterprise guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to record and process measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - read and interpret results from testing routines
 - use electronic test equipment
 - use remote maintenance software to:
 - monitor and control a remote system
 - perform maintenance tasks
 - upload and download files

Required knowledge

- features and operating requirements of electronic equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- testing methods and performance requirements
- troubleshooting and repair procedures
- typical issues and challenges that occur on site and when conducting remote maintenance

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify maintenance required • communicate maintenance details to customers and work associates • undertake preventive maintenance routines on site and remotely • conduct and interpret tests • complete documentation.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • suitable site for maintenance of a range of equipment • use of test equipment currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of an oral and written report prepared by the candidate including test results and recommendations • direct observation of the candidate maintaining an electronic system on site and remotely • oral or written questioning of required knowledge.

ICTTEN3250B Provide infrastructure for telecommunications customer equipment

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install supporting infrastructure for telecommunications equipment and associated hardware equipment. The unit also includes installation of access equipment and associated media, power and monitoring equipment and alarm systems.

Application of the Unit

The unit applies to field officers, installation technicians, technical supervisors, contractors and other service providers.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for infrastructure installation work</p>	<p>1.1 Identify <i>relevant legislation, codes, regulations and standards</i> that apply to work</p> <p>1.2 Notify <i>customer</i> to arrange site access and obtain installation plan and specifications</p> <p>1.3 Conduct a <i>site survey</i> to verify that <i>infrastructure</i> installation requirements can be met</p> <p>1.4 Identify site <i>hazards</i> and notify appropriate personnel to make site safe</p> <p>1.5 Notify customer of alterations required to installation design and make recommendations for possible solutions</p> <p>1.6 Obtain approval for alterations and update installation plan</p> <p>1.7 Develop an installation activity schedule to minimise disruption to the workplace according to relevant regulation and standards</p> <p>1.8 Obtain <i>material supplies, safety equipment, resources, tools and test equipment</i> required for safe installation</p>
<p>2. Build customer equipment infrastructure</p>	<p>2.1 Prepare for and undertake work according to <i>work health and safety (WHS) and environmental requirements</i></p> <p>2.2 Build telecommunications closet or telecommunications equipment room for equipment, distributors and AC-DC power systems according to design plans, manufacturer specifications and safety and electrical standards</p> <p>2.3 Build <i>cable support systems</i> for signal, data cabling and optical cables according to plans and specifications</p> <p>2.4 Organise the installation of mains AC electrical power cabling infrastructure as specified on the plan</p> <p>2.5 Install cable distribution frames according to plan and manufacturer specifications</p> <p>2.6 Install protective earthing to metal infrastructures or gas arrestors according to specifications or design</p>
<p>3. Install UPS power infrastructure</p>	<p>3.1 <i>Install uninterruptible power source or supply (UPS) systems</i> as required by specification or design, and connect according to manufacturer and WHS requirements</p> <p>3.2 Test and monitor UPS battery discharge levels and obtain replacement batteries under warranty where required</p> <p>3.3 Identify and rectify faults where possible or escalate according to organisational policy</p>

4. Restore site and complete documentation	4.1 Attach infrastructure <i>labels and designations</i> according to organisational requirements 4.2 Complete inspection sheets and declare asset ready for customer sign-off documentation 4.3 Clean up site 4.4 Notify customer and obtain sign-off
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate most effective technical solutions
- communication skills to:
 - liaise with customers to ensure requirements are identified
 - negotiate approvals and contract arrangements with suppliers and contractors
- literacy skills to:
 - document technical requirements and procedures
 - interpret technical specifications and related documentation
- numeracy skills to calculate budget requirements and limitations
- planning and organising skills to:
 - meet client requirements within agreed timeframes
 - secure site access and make arrangements for equipment delivery
 - set out project requirements and priorities
- problem-solving skills to respond to unexpected variations to requirements
- technical skills to:
 - perform cabling and terminating work
 - use hand tools to:
 - affix supports, cable trays and racks to surfaces
 - assemble infrastructure
 - work with construction materials.
 -

Required knowledge

- best practices to minimise environmental impacts, including options for green ICT installations
- cabling types, connectors and cabling structures
- common customer telecommunications applications and related equipment
- range of other customer equipment, such as alarms and media devices
- current legislation and standards relating to installation of telecommunications equipment and connection to carrier services
- key features of backup UPS systems and AC mains power requirements and electrical safety
- network topologies, interface and interconnect solutions
- type of connections to carrier infrastructure or equipment
- WHS requirements for:
 - confined spaces
 - electrical safety
 - heights
 - lifting
 - materials handling

- physical hazards
- warranty information for equipment supplies and contractor work guarantees.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify and work with potential earthing locations, cable routes, cable support systems, data cabinets, telecommunication enclosures, and distributors • build 19 inch racks • install protective earth installations • organise AC mains power infrastructure • install UPS DC backup power.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site where supporting infrastructure may be installed, including simulated environment • use of industry-current plant, tools and equipment • relevant regulatory and equipment documentation that impacts on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate building metal superstructure to house equipment • direct observation of the candidate installing protective earth and functional earth installations • review of installation activity schedule prepared by the candidate • oral or written questioning to assess knowledge of installation issues, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3009B Install, terminate and certify structured

	<p>cabling installation</p> <ul style="list-style-type: none">• ICTCBL3010B Install and terminate optical fibre cable on customer premises. <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • appropriate licences for: <ul style="list-style-type: none"> • crane • forklift • winch • AS/ACIF S008:2006 • AS/ACIF S009:2006 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Communications Alliance standards and codes • Communications Cabling Manual (CCM) Volume 1 • Environmental Protection Acts • WHS Acts
<p>Customer may be:</p>	<ul style="list-style-type: none"> • architect • asset manager • builder • business owner • nominated representative • project manager • service provider
<p>Site survey may include:</p>	<ul style="list-style-type: none"> • cable tunnels pathways • equipment bays • floor layout • floor loadings • lighting • preparation area • roof structures

	<ul style="list-style-type: none"> • ventilation • wall structures
Infrastructure may include:	<ul style="list-style-type: none"> • air conditioning requirements • alarm panels • cable entries • distribution frames • duct and cable trays • equipment racks • power supplies • radio structure
Hazards may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR) • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build-up • needle stick injury • optical fibre cable containing hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin
Material supplies may include:	<ul style="list-style-type: none"> • cable racks • cable trays, nuts and bolts • distribution frames or blocks • earth terminal and rod • frames and cabinets • insulation blocks • iron support structures • jumper wire • lacing, twine and cable ties • patch panels • termination blocks
Safety equipment may include:	<ul style="list-style-type: none"> • electrical isolators • EWP • harnesses • manual lifters • personal protective equipment, including: <ul style="list-style-type: none"> • acid-proof clothing • earmuffs

	<ul style="list-style-type: none"> • face masks • gloves • head protection • kneepads • safety boots • safety glasses • safety barriers
Resources may include:	<ul style="list-style-type: none"> • finance • labour • materials • tools and test equipment • vehicles
Tools and test equipment may include:	<ul style="list-style-type: none"> • tools: <ul style="list-style-type: none"> • antistatic wrist strap • pliers • power drill • screwdrivers • sockets • soldering iron • spanners • test equipment: <ul style="list-style-type: none"> • antistatic testers • cable testers • displacement tools • humidity and temperature testers • insulation testers • load testers • multimeters • optical loss test set • oscilloscope • structured cabling certification • volt meters
WHS and environmental requirements may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating work site and lines before beginning work • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management • identifying other services, including power and gas • safe work practices, such as the safe use and handling of:

	<ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • traffic cones • trench guards • warning signs and tapes • special access requirements • suitable light and ventilation
<i>Cable support systems</i> may include:	<ul style="list-style-type: none"> • entrance facilities • intra- and inter-building facilities
<i>Installing uninterruptible power source or supply systems</i> may include:	<ul style="list-style-type: none"> • organising certification of electrical installation • terminating and connecting DC power cables to equipment • testing DC electrical cabling
<i>Labels and designations</i> may include:	<ul style="list-style-type: none"> • cabinets • cables • distribution panels • racks • vendor labels

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4001B Identify requirements for customer telecommunications equipment

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify requirements for customer's telecommunications equipment.

Cable used must be compliant with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5, 6A, 7 or 7A and unshielded twisted pairs (UTP). Cabling products must be ACMA-approved.

Assessment by a TITAB registered assessor is recommended.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who identify requirements for customer's telecommunications equipment apply the skills and knowledge in this unit.

This unit applies to indoor and outdoor installation within a customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN) and multimedia.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to identify services required</p>	<p>1.1 Notify customer to arrange access to site and identify <i>customer equipment</i></p> <p>1.2 Assess site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures</p> <p>1.3 Notify customer to arrange access to the site and discuss customer requirements</p> <p>1.4 Confirm details of types and models of existing and proposed <i>customer equipment</i></p> <p>1.5 Establish <i>intended uses of customer's equipment</i> to assist in identifying cabling requirements</p> <p>1.6 Establish required <i>cabling requirements</i> with customer and make alternate recommendations</p> <p>1.7 Locate existing <i>facilities</i> and systems including network facilities</p> <p>1.8 Verify building construction to confirm accessibility</p> <p>1.9 Utilise existing floor plans where available and integrate into subsequent <i>documentation</i></p> <p>1.10 Notify customer where physical location may incur additional cost</p> <p>1.11 Prepare a report on required services</p>
<p>2. Establish availability of and access to existing cabling</p>	<p>2.1 Calculate capacity of existing cabling against proposed usage to ensure appropriate decisions are taken on extent of new cabling required</p> <p>2.2 Inspect cabling to ensure compliance with ACMA regulations, <i>relevant legislation, codes, regulations and standards</i></p> <p>2.3 Prepare a report on cabling infrastructure and equipment to meet customer requirements</p>
<p>3. Complete required reports and documentation</p>	<p>3.1 Complete all required documents promptly and accurately according to company policy</p> <p>3.2 Obtain customer confirmation of documented requirements where required</p> <p>3.3 Distribute relevant documentation promptly to required parties</p> <p>3.4 Obtain sign off from customer</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - interpret technical documentation, such as equipment manuals and specifications
 - read and interpret drawings related to customer's telecommunications equipment
 - write reports
- numeracy skills to calculate capacity of existing cabling
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - establish cabling requirements
 - inspect cabling.
 -

Required knowledge

- features and operating requirements of test equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify services required and availability and access to existing cabling • identify locations of equipment and placement of cables on support structures and building faces for both internal and external locations for service delivery • complete required reports and documentation including order forms, services checklists and quotation forms.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which telecommunications installations can be conducted • relevant databases, licensing requirements and other site-related documentation.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate identifying requirements for customer's telecommunications equipment.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2017B Alter services to existing cable system. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Telecommunications - Telecommunications networks engineering

ICTTEN4003B Estimate and quote for customer telecommunications equipment installation

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to estimate and quote for customer telecommunications equipment installation.

It involves preparing detailed estimates and quotes and updating schematic drawings and specifications.

Application of the Unit

Technical staff who estimate and quote for customer equipment installation apply the skills and knowledge in this unit.

This unit applies to indoor and outdoor installation within a customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN) and multimedia.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Confirm and update schematic drawings and specifications</p>	<p>1.1 Obtain existing specifications and drawings and prepare additional or new schematic drawings and specifications for installation if required</p> <p>1.2 Confirm all fittings, cable types and equipment locations with customer</p>
<p>2. Price labour, materials and other relevant items and establish availability</p>	<p>2.1 Obtain quotations and delivery dates from suppliers to ensure fair comparisons between suppliers</p> <p>2.2 Estimate labour costs based on company or industry-labour rates and conditions</p> <p>2.3 Check pricing documentation to ensure supply proposal matches <i>customer specification</i> for material, quality and performance</p>
<p>3. Estimate labour, materials and other relevant item requirements</p>	<p>3.1 Prepare estimations allowing for <i>contingencies</i> during installation and <i>relevant legislation, codes, regulations and standards</i></p> <p>3.2 Calculate costs using standard unit measures where relevant</p> <p>3.3 Ensure estimates will return a profit on installation where appropriate</p>
<p>4. Prepare and confirm quote with customer</p>	<p>4.1 Prepare an equipment installation quote that meets customer requirements</p> <p>4.2 Negotiate <i>changes and variations</i> to meet customer and company needs</p>
<p>5. Establish customer's financial arrangements</p>	<p>5.1 Obtain customer's approval of <i>purchase arrangements</i> and method of payment</p> <p>5.2 Complete finance company negotiations successfully where required and obtain customer's agreement</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret drawings related to customer's telecommunications equipment
- communication skills to liaise and negotiate with customers and suppliers on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to estimate and quote for telecommunications installation
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to estimate requirements for customer telecommunications equipment installation.
-

Required knowledge

- features of customer telecommunications equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- processes and techniques required to prepare plans, estimate and quote for installations
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- typical issues and challenges that occur when dealing with customers.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare detailed estimates, updated schematic drawings and specifications, including material and labour costs for telecommunications equipment installations • negotiate with contractors on material availability and pricing for customer equipment installations • complete detailed quotes for installations that allow for changes and variations • prepare and confirm quote and financial arrangements with customer.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which estimates and quotes may be conducted • relevant databases, licensing requirements and other site-related documentation.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review written estimates and quotes with completed documentation • oral or written questioning on the estimate and quote process.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2017B Alter services to existing cable system. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTTEN4040A Assign a transmission path

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to allocate channel capacity to a customer or customer group based on details provided in a service request.</p> <p>It involves identifying requirements and translating them into quantitative changes to network transmission and access systems.</p> <p>The activity may be for a new installation or upgrade of capacity or technology for existing network or subsystem for convergence to Next Generation Networks (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical officers or engineers from private and public organisations apply the planning skills and knowledge in this unit. They combine technical skills with organisational skills to assess customer requirements and allocate a transmission medium to provide access to the customer.</p> <p>They may be responsible for small projects or parts of larger projects and primarily perform planning functions to provide service to a customer.</p>

-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect data to evaluate capability of transmission path	1.1. Determine <i>service details</i> from service request 1.2. Use transmission medium plans to locate customer position relative to the access network provisioning 1.3. Evaluate <i>existing transmission mediums</i> in close proximity to assess their capability to deliver service to customer 1.4. Specify <i>equipment</i> to be used on the service from service request 1.5. Specify line interface type that is to be used according to enterprise guidelines
2. Allocate transmission medium for service	2.1. Select appropriate <i>transmission medium</i> to deliver service to customer's premises 2.2. Record information about transmission medium between customer's premises and exchange or network terminal point 2.3. Verify <i>service delivery point interface</i> at exchange or network terminal point is compatible with required system 2.4. Conduct appropriate <i>allocation process</i> to assign new services and send completed allocation information to appropriate field staff to verify physical allocation before providing service
3. Maintain transmission medium records	3.1. Advise relevant personnel of impending bearer shortages to facilitate future planning allocation 3.2. Update plans and databases to record all details

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret information affecting dimensioning decisions
- communication skills to liaise with:
 - customers to ensure requirements are known and can be met within timeframes
 - technical staff, subject matter experts and manufacturers

REQUIRED SKILLS AND KNOWLEDGE

- literacy skills to:
 - interpret technical specifications and related documentation
 - notate and record information
- numeracy skills to make calculations to determine capacity requirements
- PC skills for interacting with software systems for allocation and re-routing of channel capacity
- planning and organisational skills to:
 - ensure correct allocation of actual and virtual resources
 - make site access and equipment delivery/allocation arrangements
- technical skills to implement changes to transmission systems:
 - channel allocation
 - reconfiguring
 - virtual private network (VPN)

Required knowledge

- common customer telecommunications applications and related equipment
- Core Networks using emerging and converging technologies
- current legislation relating to installation of telecommunications equipment and connection to carrier services
- customer access options and their technical support systems
- multiplexing principles and transmission hierarchies
- network and transmission equipment
- network topologies, interfaces and interconnect solutions

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess transmission needs for a transmission path according to service request • select suitable equipment to provide new services • interact with internal and external personnel, keeping a customer focus and consideration of customer needs • deal with problems and provide solutions • assess future needs.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where transmission paths can be allocated • computer networking facility • relevant regulatory and equipment documentation • use of equipment currently used in industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate assessing transmission needs and conducting allocation process • review of plans and databases completed by the candidate providing details of new transmission path • oral or written questioning to assess knowledge of assigning transmission paths.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3069A Install network cable equipment • ICTCBL3103A Maintain cable network • ICTCBL4002A Prepare design drawings and specification for a cable installation. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Service details may relate to:

- data allocation based on common digital hierarchy increments:
 - asynchronous transfer mode (ATM)
 - custom throughput requirements
 - E1
 - Synchronous transport module level x(STM-X)
- multiple voices channels (ISDN)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • need ascertained from application: <ul style="list-style-type: none"> • other data sources • private automatic branch exchange (PABX) • video • single voice channel.
<i>Existing transmission mediums</i> may be determined from:	<ul style="list-style-type: none"> • databases • local knowledge and include allocation within existing multiplex schemes: <ul style="list-style-type: none"> • associated physical media • ATM • plesiochronous digital hierarchy (PDH) (E1) transmission system • synchronous digital hierarchy (SDH) • maps.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • access equipment: <ul style="list-style-type: none"> • fibre termination equipment • microwave • modems • satellite • line termination units • multiplex equipment • network infrastructure including ports on multiplex equipment • transmission equipment.
<i>Transmission medium</i> may include:	<ul style="list-style-type: none"> • frequency allocation on radio transmission • global system for mobile (GSM) communications • hybrid fibre coaxial (HFC) • microwave • satellite • system channel on optical fibre • twisted pair • VPN on a multi protocol label switching (MPLS) link.
<i>Service delivery point interface</i> may include:	<ul style="list-style-type: none"> • ATM adapter • cross connect port • digital subscriber line access multiplexer (DSLAM) • exchange line interface unit

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fibre termination point • main distribution frame (MDF).
<i>Allocation process</i> may relate to:	<ul style="list-style-type: none"> • automated allocation for a group service • manual or computer based procedures for allocating new transmission channel capacity • service.

ICTTEN4050A Install and configure a wireless mesh network

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to install and configure a wireless mesh network comprised of radio nodes organised in a mesh topology. Wireless mesh networks provide users with secure wireless roaming beyond traditional wireless local area network (LAN) boundaries and are readily deployed in areas that lack wired backhaul.</p> <p>The mesh topology and ad-hoc routing give mesh networks stability, offer redundancy and have the ability to self form and self heal. Mesh networks enable local communities and those in remote areas to participate in a distributed shared network without the need for centralised management.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technicians and technical officers from private and public organisations who install and test wireless networking equipment or radio communications equipment apply the skills and knowledge in this unit.</p>
---------------------------------------	---

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Configure wireless mesh nodes and wireless access points	1.1. Determine internet protocol (IP) addressing schemes from design plan obtained from <i>appropriate person</i> 1.2. Confirm compatibility of factory installed firmware in wireless routers with mesh routing requirements, otherwise install <i>upgrade firmware</i> 1.3. Configure <i>wireless router settings</i> and wireless fidelity (<i>WiFi</i>) <i>wireless access point settings</i> for inclusion in mesh network 1.4. Connect mesh node and access node back-to-back via a <i>straight LAN cable</i> according to design plan
2. Connect separate mesh networks via backbone	2.1. Configure routing software on mesh and backbone nodes to enable mesh traffic to reach backbone 2.2. Connect mesh node and backbone node back-to-back via a straight LAN cable 2.3. Configure <i>gateway server</i> and gateway node and add required <i>services</i> to the network
3. Test connectivity within mesh network	3.1. Assemble all wireless mesh routers with <i>configuration sheets</i> attached and power up the routers 3.2. Connect PC to a wireless mesh router and confirm that an IP address is provided automatically by dynamic host configuration protocol (DHCP) 3.3. Confirm connectivity to mesh nodes and the gateway by pinging individual IP addresses, and rectify faulty nodes if required
4. Test network connectivity via wireless backbone	4.1. Install mesh nodes according to design plan 4.2. Install and <i>align</i> directional antennas on wireless backbone path according to installation instructions and occupational health and safety (OHS) procedures 4.3. Confirm connectivity between mesh clusters at either end of wireless backbone
5. Clean up work site and complete administrative work	5.1. Remove waste from work site, dispose of according to environmental requirements and restore work area to customer's satisfaction 5.2. Update <i>documentation records</i> and make recommendations according to the enterprise policy 5.3. Notify the customer of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with vendors and installation personnel on technical and operational matters
- literacy skills to interpret technical documentation and write reports in required formats
- numeracy skills to perform calculations, interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to:
 - adapt testing procedures to requirements of particular situations
 - modify activities depending on operational contingencies, risk situations and environments
- technical skills to:
 - install software
 - select and specify appropriate performance tests and test equipment
 - set up IP addresses and subnet masks
 - use IT networking skills

Required knowledge

- 802.11 wireless protocols
- allocation of IP addresses and subnet masks
- antenna gain, polarisation
- cable loss
- calculation of effective isotropic radiated power (EIRP)
- calculation of line of site radio range
- decibels and related units
- network topologies
- radio frequency (RF) frequency bands
- routing protocols
- transmission control protocol (TCP)-IP protocols
- wireless networking hardware, access points, wireless routers, gateway

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • configure wireless mesh nodes • install wireless mesh nodes, access point nodes and gateway • test nodes for connectivity.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which configuring and installing wireless mesh network may be conducted • technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate configuring wireless mesh routers • direct observation of the candidate installing wireless mesh nodes, access point nodes and gateway • direct observation of the candidate testing nodes for connectivity • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5217A Plan a wireless mesh network • ICTRFN3055A Install a radio communications antenna and feedline. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • network engineer • project designer • project manager.
<i>Upgrade firmware</i> may include:	<ul style="list-style-type: none"> • OpenWrt Linux based firmware • Freifunk firmware • MIT Roofnet.
<i>Wireless router settings</i> may include:	<ul style="list-style-type: none"> • LAN settings: <ul style="list-style-type: none"> • firewall usage • LAN IP address and subnet mask • LAN protocol • routing protocol:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • optimised link state routing (OLSR) • system settings: <ul style="list-style-type: none"> • country • host name • wireless settings: <ul style="list-style-type: none"> • basic service set identifier (BSSID) • channel number/frequency • extended service set identifier (ESSID) • wireless LAN (WLAN) IP address • WLAN IP address and subnet mask • WLAN mode • WLAN protocol.
<i>WiFi wireless access point settings</i> may include:	<ul style="list-style-type: none"> • settings: <ul style="list-style-type: none"> • DHCP settings: <ul style="list-style-type: none"> • maximum number of DHCP users • starting IP address • DHCP type • router IP address • router name • wireless settings: <ul style="list-style-type: none"> • wireless channel number or frequency • wireless network name (SSID).
<i>Straight LAN cable</i> may include:	<ul style="list-style-type: none"> • Category 5 • Category 5e • Category 6.
<i>Gateway server</i> may include:	<ul style="list-style-type: none"> • connection to another network • connection to the internet • via asymmetrical digital subscriber line (ADSL).
<i>Services</i> may include:	<ul style="list-style-type: none"> • domain name system (DNS) • mail server • web proxy.
<i>Configuration sheets</i> may include:	<ul style="list-style-type: none"> • host name • LAN settings • routing protocol • software or firmware version • WAN settings • wireless router details

RANGE STATEMENT	
	<ul style="list-style-type: none"> • wireless settings.
<i>Align</i> may include:	<ul style="list-style-type: none"> • azimuth angle • elevation angle • set antenna polarisation: <ul style="list-style-type: none"> • horizontal • vertical.
<i>Documentation records</i> may include:	<ul style="list-style-type: none"> • configuration details: <ul style="list-style-type: none"> • access point • gateway • router • IP Addresses • signal levels.

ICTTEN4051A Install configuration programs on PC based customer equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to install software on customer equipment, including telecommunications, data communications and security networks.</p> <p>The activity may be for a new installation, upgrade of capacity or technology for existing network or subsystem for convergence to Next Generation Networks (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Field officers, technicians or technical supervisors from telecommunications carriers, contractors or other service providers or private providers apply the skills and knowledge in this unit. It involves configuration of specialist PC based customer equipment to allow access to telecommunications services.</p> <p>Customer equipment includes digital home integration, security, voice over IP (VoIP), internet protocol television (IPTV), radio frequency identification (RFID), wireless networking and home automation.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install software	<p>1.1. Arrange access to the site according to required procedure</p> <p>1.2. Determine the type of <i>customer equipment</i> from the installation plan to prepare the software requirements to provide <i>functionality</i> required</p> <p>1.3. Prepare equipment <i>software configuration specifications</i> to include enhancements in customer requirements and confirm with customer</p> <p>1.4. Notify customers on proposed software installation</p> <p>1.5. Confirm software compatibility with existing system if required</p> <p>1.6. Document job software specification</p>
2. Install the program and provide secure remote access	<p>2.1. Configure <i>customer specific data</i> according to system specifications</p> <p>2.2. Install and test system functionality to verify system operational performance following occupational health and safety (OHS), manufacturer's specifications and industry standards</p> <p>2.3. Develop and configure <i>security arrangements and codes</i> for remote access systems in consultation with customer</p> <p>2.4. Conduct tests to validate security arrangements</p>
3. Undertake administrative tasks	<p>3.1. Save and record configuration program and provide program backup for contingency use by customer</p> <p>3.2. Complete administrative tasks and provide a copy of job specification to be securely stored on site following enterprise policy</p> <p>3.3. Notify customer of job completion and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret required software and hardware settings

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations and take readings for necessary configuration changes
- planning and organisation skills to make site access and equipment delivery arrangements
- problem solving to account for unexpected faults or equipment configuration anomalies
- technical skills to:
 - handle, connect and calibrate test equipment
 - manage transfer of data, installation and configuration of software
 - use networking skills

Required knowledge

- channels allocations
- common operating systems and their impact on the configuration of, or version of software to be installed
- frequency
- IP addressing
- logon procedures
- numbering formats
- product or service functions to ensure correct operation of completed installation
- relevant regulatory and industry requirements

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare software configuration • load software into customer equipment • install security programs agreed with customer • test program and program features including: <ul style="list-style-type: none"> • system facilities • product features • required peripherals associated with the product • system functionality.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • suitable site for installation of system programs • use of equipment currently used in industry • relevant regulatory and enterprise documentation that impacts on testing and installation.
Method of assessment	<p>The following assessment methods are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing installation and configuration of software into equipment • review of written documentation prepared by the candidate outlining activity conducted, specific installation details and job completion records • written and oral questioning of the candidate on procedures and considerations for a range of installation situations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment. <p>Aboriginal people and other people from a non-English</p>

Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare requirements for alteration</p>	<p>1.1. Arrange access to the site according to required procedure and comply with <i>site security arrangements</i> and <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2. Assess <i>facilities</i> and capacity to ensure requirements can be met</p> <p>1.3. Evaluate existing system availability and access to accommodate proposed changes</p> <p>1.4. Notify appropriate personnel of identified <i>safety hazards</i> at worksite</p> <p>1.5. Evaluate the compatibility of existing and proposed <i>systems</i> and equipment before proceeding with planned changes</p> <p>1.6. Negotiate planned system outages and outage time with the customer</p>
<p>2. Document specifications and plans for alteration</p>	<p>2.1. Produce an amendment plan of systems <i>alterations</i> to assess suitability with existing system</p> <p>2.2. Produce <i>specifications</i> for alteration requirements according to customer requirements</p> <p>2.3. Select materials and <i>tools and equipment</i> compatible with the upgrade activity</p>
<p>3. Install additional equipment and program system feature changes</p>	<p>3.1. Produce an activity plan for minimal disruption of alterations to ongoing client activity</p> <p>3.2. Carry out all alterations in a <i>safe manner</i> according to relevant standards and regulations and manufacturer's specifications</p> <p>3.3. Test new work in isolation and when integrated with existing systems to confirm compatibility of alterations with existing network</p>
<p>4. Update plans and records</p>	<p>4.1. Update all plans and documents to show installed systems accurately and clearly</p> <p>4.2. Complete <i>documentation</i> for customer support</p>
<p>5. Restore site to required condition</p>	<p>5.1. Remove waste and debris from worksite and dispose of according to environmental requirements to maintain safe work site conditions</p> <p>5.2. Recover obsolete equipment and return to customer or for disposal as agreed with customer</p> <p>5.3. Notify customer of job completion and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret equipment settings and readings
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to:
 - interpret technical specifications and related documentation
 - produce plans and update documentation
- planning and organisation skills to arrange site access and equipment delivery
- problem solving skills to account for unexpected faults or equipment configuration anomalies
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- network addressing
- specific OHS requirements relating to the activity and site conditions
- types of CPE
- typical issues and challenges that occur on site
- vendor products

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify customer's needs • develop plans and drawings to give effect to planned changes to systems and equipment • alter system and equipment including physical and programming change according to OHS and relevant standards and regulations • identify, conduct and interpret tests appropriate to the change.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • systems and equipment to effect changes • equipment and systems manuals, specifications and enterprise policy.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing additional equipment and programming system changes • review of amendment plan prepared by the candidate outlining systems alterations and specifications • review of test results and documentation completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4073A Cut over customer premises equipment major upgrades. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTTEN4073A Cut over customer premises equipment major upgrades

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to cut over major equipment and network upgrades in customer premises. It involves cut over works, testing and rectifying problems.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technical staff who upgrade customer premises systems and equipment apply the skills and knowledge in this unit.</p> <p>Relevant job roles include supervisors in charge of installation and maintenance teams responsible for new installations and upgrades of telecommunications customer equipment.</p> <p>This unit applies to indoor and outdoor installation within customer premises. Customer premises equipment (CPE) includes telephony, data, video, digital broadcasting and computer networks including local area networks (LAN) and multimedia in domestic, commercial or industrial installations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the cut over	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Notify customer for site access, security arrangements and location details of customer equipment for major upgrade 1.3. Identify site hazards and notify appropriate personnel to make site safe 1.4. Prepare a cut over plan and seek approval from customer 1.5. Complete functional testing of new systems and equipment prior to cut over to minimise system downtime 1.6. Notify network carrier of cut over details to prevent unnecessary alarm call outs and reports 1.7. Organise system backup from support personnel
2. Cut over the system and equipment into service	2.1. Conduct cut over works for major system upgrade according to cut over plan with minimal disruption to customer service according to occupational health and safety (OHS) and environmental requirements 2.2. Conduct tests according to technical manuals and specifications to complete installation task 2.3. Analyse test results to verify system compatibility and interoperability with existing system 2.4. Rectify any problems if required
3. Finalise work and clean up worksite	3.1. Complete documentation containing installation details and test records 3.2. Amend site records to show existing equipment layout 3.3. Organise customer training in the new or modified system 3.4. Clean up and restore site to customer satisfaction 3.5. Collect and dispose of waste material and debris according to environmental requirements 3.6. Notify customer of job completion to obtain sign off and present with a copy of documentations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate technical test results to diagnose problem
- communication skills to interact with enterprise personnel and customers while maintaining a customer focus and consideration of customer needs
- literacy skills to read and interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform cut over procedures
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- cut over procedures
- detailed knowledge of CPE equipment
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop and implement a cut over plan • identify and organise resources including customer resources necessary to complete the cut over • conduct relevant tests and interpret test results • identify and resolve problems.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where cut over can be conducted • use of plant, tools and equipment currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit.</p> <ul style="list-style-type: none"> • direct observation of the candidate performing cut over procedures of CPE • review of cut over plans, installation documents and records prepared by the candidate • oral or written questioning to assess knowledge of cut over and CPE installation procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment • ICTTEN4076A Complete equipment and software upgrades. <p>Aboriginal people and other people from a non-English speaking background may have second language issues</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Construction Industry Forum (ACIF) standards and codes AS/ACIF S008:2006 and AS/ACIF S009:2006
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006
- AS/NZS IEC 61935.2:2006

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS.
<i>Customer</i> may be:	<ul style="list-style-type: none"> • asset manager • contractor • nominated customer representative • project manager • service provider.
<i>Customer equipment</i> may include:	<ul style="list-style-type: none"> • alarms systems • internet protocol (IP) private branch exchange (PBX) • IP PBX server • IP security systems • internet protocol TV (IPTV) • network management addition • PBX • session initiation protocol (SIP)-enabled unified communication (UC) system • video conferencing equipment • voice over internet protocol (VoIP) gateway • worldwide interoperability for microwave access (WiMAX) CPE.
<i>Major upgrade</i> may include:	<ul style="list-style-type: none"> • network capacity upgrade • network major software upgrade • network services upgrade • network technology upgrade • system integration.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR) • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
<i>Cut over plan</i> may include:	<ul style="list-style-type: none"> • access and security arrangements • after hours access • contingencies • contingency plans • customers communication priorities • customers communications needs • downtime • installation of backup equipment • provision of temporary services • testing procedures • timing and disruption to services.
<i>Network carrier</i> refers to:	<ul style="list-style-type: none"> • asset owner • internet service provider • service provider.
<i>Support personnel</i> may include:	<ul style="list-style-type: none"> • help desk • IT support • network operations support • vendor backup.
<i>Cut over works</i> may include:	<ul style="list-style-type: none"> • commission of new system • installation of new additional equipment • installation of new software • integration of new equipment into existing system • jumpering of bypass connection • provision of temporary service • removal of redundant equipment • test on new system.
<i>OHS and environmental requirements</i> may include:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves • head protection • kneepads

RANGE STATEMENT	
	<ul style="list-style-type: none"> • masks • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Tests</i> may include:	<ul style="list-style-type: none"> • ability to make and receive a call • configuration • diagnostic • programme checks • routing • software • switching • traffic measurement • transmission.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the upgrade activity	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Notify customer for site access, security arrangements and location details of equipment for upgrade 1.3. Identify site hazards and notify appropriate personnel to make site safe 1.4. Prepare an upgrade plan against work order and seek approval from customer 1.5. Organise system back up from support personnel 1.6. Obtain tools and test equipment and check for accuracy and safety 1.7. Allocate specific tasks according to the skill mix of staff involved 1.8. Run test plan on current equipment and identify and rectify problems in consultation with planners 1.9. Complete functional testing of new systems and equipment prior to upgrade to minimise system downtime 1.10. Analyse test results to predict compatibility and interoperability issues of equipment and systems prior to the upgrade work
2. Undertake upgrade	2.1. Implement upgrade according to design specification following occupational health and safety (OHS) and environmental requirements 2.2. Follow procedures for upgrade of network in sequential order as defined in instruction manuals 2.3. Monitor progress of upgrade periodically to ensure that plans in relation to time and duration are being met 2.4. Notify planner of problems encountered with detail as to the impact of the problem on the upgrade plan 2.5. Abort upgrade and implement contingency plan should an upgrade plan not be realised without major disruption to network 2.6. Monitor system response during upgrade and take action according to instructions provided
3. Test upgrade for acceptance	3.1. Undertake tests according to the predetermined test plan 3.2. Analyse test results and verify against specified

ELEMENT	PERFORMANCE CRITERIA
	performance levels 3.3. Escalate problems encountered according to enterprise policy 3.4. Invoke reversion procedure to pre-upgrade state, if directed by planners, according to enterprise policy 3.5. Record upgrade test results and provide to network management group 3.6. Run post-upgrade routines according to documented procedures
4. Monitor post-upgrade performance	4.1. Conduct ongoing tests to ensure success of upgrade 4.2. Monitor relevant alarms to measure impact of upgrade 4.3. Review customer complaints to assess impact of upgrade on customer satisfaction
5. Finalise administrative work and clean up worksite	5.1. Complete relevant work <i>documentation</i> and administrative tasks according to enterprise policy 5.2. Amend site records to show upgraded equipment layout 5.3. Organise customer training in the new or modified system 5.4. Clean up and restore site to customer satisfaction 5.5. Collect and dispose of waste material and debris according to environmental requirements 5.6. Declare asset ready for use 5.7. Notify customer of upgrade job completion to obtain sign off of work order and present with a copy of documentation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate impact of upgrades on customer equipment and systems
- communication skills to:
 - provide advice and guidance to others and to liaise with other technical staff on

REQUIRED SKILLS AND KNOWLEDGE

- operational matters
 - respond to customer complaints
- literacy skills to read and interpret:
 - contingency plans
 - enterprise procedures, manuals and specifications
 - technical data, technical and non-technical information from a range of sources
 - test results
- numeracy skills to interpret technical data
- PC skills to monitor installed software
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - prepare upgrade plan
 - troubleshoot common equipment and network problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - analyse the impact of applications on traffic flow in the network
 - determine customer requirements
 - determine the impact of upgrading hardware and software on network functionality
 - identify the technical requirements, constraints and manageability issues for a given customer network requirement
 - implement upgrade of equipment and software
 - use test equipment and monitoring tools
 - use tools and equipment to assemble and disassemble equipment

Required knowledge

- alarms
- backup systems
- upgrades and post-upgrade routines
- computer knowledge
- escalation and outage procedures
- network management systems
- overview knowledge of telecommunications networks and equipment

REQUIRED SKILLS AND KNOWLEDGE

- telecommunications monitoring tools
- telecommunications test equipment and test set-ups
- telecommunications wiring practices

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- analyse the implications of hardware and software upgrade on the remainder of the network
- plan and identify the components of the upgrade process
- prepare an upgrade plan and organise system backup
- run test plan and analyse test results
- implement upgrade and monitor progress of upgrade periodically using both vendor and enterprise specific monitoring tools
- implement contingency plan
- escalate problems encountered according to enterprise policy
- analyse alarms and alarm conditions
- review customer complaints to assess impact of upgrade.

Context of, and specific resources for assessment

Assessment must ensure:

- site where upgrade may be conducted
- use of equipment, software, test and monitoring equipment currently used in industry
- relevant regulatory, equipment, enterprise and vendor documentation that impacts on work activities.

Methods of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the candidate performing upgrade
- direct observation of the candidate performing tests and monitoring alarms
- review of documents prepared by the candidate providing upgrade plan and assessing impact of upgrade taking into consideration customer feedback
- oral or written questioning to assess knowledge of upgrade, testing and monitoring procedures.

Guidance information for

Holistic assessment with other units relevant to the

EVIDENCE GUIDE**assessment**

industry sector, workplaces and job role is recommended, for example:

- ICTTEN4073A Cut over customer premises equipment major upgrades
- ICTTEN4086A Undertake routine maintenance of the telecommunications network.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • Australian Construction Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS Acts • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p><i>Customer</i> may be:</p>	<ul style="list-style-type: none"> • asset manager • contractor • network planner • nominated customer representative • project manager • service provider.
<p><i>Equipment</i> may include:</p>	<ul style="list-style-type: none"> • Core and Access network: <ul style="list-style-type: none"> • cellular mobile network • dense wavelength division multiplexing (DWDM) network • gateway router • IP-Core Network • mesh network • multiprotocol label switching (MPLS) router • network server • optical network • satellite network • switching equipment • transmission equipment • worldwide interoperability for microwave access (WiMAX) network

RANGE STATEMENT	
	<ul style="list-style-type: none"> • customer network: <ul style="list-style-type: none"> • alarms systems • IP private branch exchange (PBX) • IP PBX server • IP security systems • Internet protocol TV (IPTV) • LAN: <ul style="list-style-type: none"> • data switch • router • server • network management addition • PBX • session initiation protocol (SIP)-enabled UC system • video conferencing equipment • voice over internet protocol (VoIP) gateway • WiMAX CPE.
<i>Upgrade</i> may include:	<ul style="list-style-type: none"> • network capacity upgrade • network major software upgrade • network services upgrade • network technology upgrade • system integration.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR): <ul style="list-style-type: none"> • event at a site, such as an electrical distribution substation, may expose telecommunications personnel, users or plant to hazardous voltages • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • vermin.
<i>Upgrade plan</i> may include:	<ul style="list-style-type: none"> • access and security arrangements • after hours access • contingencies • contingency plans • customers communication priorities • customers communications needs • downtime • installation of backup equipment • provision of temporary services • test plans • testing procedures • timing and disruption to services.
<i>Support personnel</i> may include:	<ul style="list-style-type: none"> • help desk • IT support • network operations support • vendor backup.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • communication testers • frequency analysers • microwave link analysers • network analyser • protocol analyser • spectrum analysers • traffic analyser • transmission measuring sets.
<i>Test</i> may include:	<ul style="list-style-type: none"> • ability to make and receive a call • configuration tests • diagnostic tests • programme checks • routing tests • software tests • switching tests • traffic measurement test • transmission tests.
<i>Upgrade work</i> may include:	<ul style="list-style-type: none"> • commission of new system • installation of new additional equipment • installation of new software • integration of new equipment into existing system

RANGE STATEMENT	
	<ul style="list-style-type: none"> • provision of temporary service • removal of redundant equipment • test on new system.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Progress of upgrade</i> may include:	<ul style="list-style-type: none"> • rate of deliverables against project timeline • risk management • timing.
<i>Contingency plan</i> may:	<ul style="list-style-type: none"> • be developed as part of the upgrade planning and design • be escalated and referred to more specialist team • invoke partial upgrade to be continued at later stage • invoke reversion procedure to pre-update

RANGE STATEMENT	
	condition.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • configuration details • implementation and testing procedures • network impact statement • software test results • system updates • test results and recommendations • upgrade details • vendor, equipment and enterprise specific details.

ICTTEN4078A Commission an electronic system

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to commission an electronic system within a telecommunications environment in a broad range of applications.</p> <p>This involves commissioning an electronic system with applications, including cellular telemetry, voice over IP (VoIP), radio frequency identification (RFID), supervisory control and data acquisition (SCADA) networks and SCADA security, telephony, data, video, IP television (IPTV) and multimedia.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Field officers and technicians employed by telecommunications carriers, service providers or contractors apply the skills and knowledge in this unit.</p> <p>It involves commissioning an electronic system at customer's premises and within a carrier network. The commissioning may be for a new installation or an upgrade of capacity or technology for an existing network or subsystem for convergence to Next Generation Networks (NGN).</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to commission an electronic system	1.1. Prepare for work following occupational health and safety (<i>OHS</i>) requirements 1.2. Organise resources based on existing and potential site hazards 1.3. Notify customer or network operations personnel for site access and network specifications 1.4. Determine the function and requirements of the electronic system from specifications 1.5. Identify potential security threats and vulnerability where remote monitoring and control via the public telecommunications network or internet are used, and report to appropriate person 1.6. Verify that the installed electronic system and associated cabling conform to specifications and assess compatibility of system units 1.7. Establish commissioning dates with all parties and establish planned outage 1.8. Check suitability and calibration status of test equipment 1.9. Produce a preliminary commissioning plan according to manufacturer's instructions and enterprise guidelines for discussion with the customer
2. Organise planned outages	2.1. Negotiate outage times with appropriate groups and affected customers to minimise disruptions 2.2. Arrange for emergency communications based on contingency plans 2.3. Notify alarm management centre of planned action 2.4. Obtain authority to proceed from the relevant control centre and notify customers affected by the outage
3. Perform commissioning procedures	3.1. Configure the electronic system parameters and install software according to manufacturer's specifications and customer requirements 3.2. Conduct tests according to manufacturer's specifications and industry practice 3.3. Conduct the cut over according to project design and industry practice in consultation with appropriate person 3.4. Conduct a security audit, including remote threat

ELEMENT	PERFORMANCE CRITERIA
	analysis in applications where the public telecommunications network or internet is linked to the overall electronic system
4. Finalise commissioning	4.1. Record configuration information and update relevant databases according to enterprise and network guidelines 4.2. Notify appropriate person of commissioning results and work completion 4.3. Complete <i>administrative tasks</i> according to industry practice and enterprise guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations
- planning and organisational skills to arrange site access and contingency plans
- problem solving to account for unexpected faults or equipment configuration anomalies
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - conduct security audit
 - conduct tests
 - configure electronic system parameters
 - establish planned outage
 - identify security threats

REQUIRED SKILLS AND KNOWLEDGE

- install software
- perform cut over

Required knowledge

- acceptance testing
- commissioning procedures
- commissioning testing
- electrical and optical properties to be measured
- extensive range of networking equipment
- legislation and licensing associated with installation of telecommunications equipment
- network operation procedures
- power requirements and electrical safety
- setup and operation of test equipment applicable to a wide range of measurements
- transmission type and signals that may be encountered

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • negotiate arrangements for commissioning • configure electronic equipment and system parameters • commission electronic system according to specifications • deal with faults and problems and provide solutions • identify potential security threats and vulnerability.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which installation and commissioning procedures may be conducted • relevant regulatory and equipment documentation that impact on commissioning • use of testing equipment currently used in industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate applying enterprise escalation and outage procedures within service assurance guidelines • review of reports completed by the candidate outlining test plan and test results complete with analysis of faults with solutions • oral or written questioning to assess knowledge of commissioning procedures and types of systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN3077A Commission an electronic unit • ICTTEN3104A Maintain an electronic system • ICTTEN4076A Complete equipment and software upgrades • ICTTEN4081A Locate, diagnose and rectify faults

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements may include:

- decommissioning and isolating worksite and lines prior to commencement
- identifying other services:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gas • power • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses for laser work • safe working practices to handle: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • earth potential rise (EPR) • optical fibre cable: <ul style="list-style-type: none"> • bare fibres • hazardous laser light • radio frequency (RF) equipment emitting radiation • remote power feeding services operating above telecommunications network voltage (TNV).
<i>Network operations personnel</i>	<ul style="list-style-type: none"> • alarm operations

RANGE STATEMENT	
may include:	<ul style="list-style-type: none"> • network operations centre staff • network operations manager • project manager.
<i>Electronic system</i> may relate to:	<ul style="list-style-type: none"> • biometrics • cellular telemetry • IPTV • multiplexing • RFID • supervisory control and data acquisition (SCADA) • surveillance • VoIP.
<i>Security threats</i> may include:	<ul style="list-style-type: none"> • disgruntled employees • general internet threats • holes in firewalls • malware • network Intrusion • recreational hackers • virus • worm.
<i>Planned outage</i> may refer to:	<ul style="list-style-type: none"> • allocation of additional services and support • notification to affected customers • plan for: <ul style="list-style-type: none"> • redundant path • standby equipment.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • bit error rate (BER) tester • communication system analyser • digital analyser • laptop computer with diagnostic routines • laser source • magnetic error reduction (MER) meter • microwave link analyser • modulation analyser • multimeter • optical attenuator • optical fibre power meter • oscillator • oscilloscope • optical time domain reflectometer (OTDR)

RANGE STATEMENT

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to locate and rectify a fault	1.1. Prepare for given work according to relevant legislation, occupational health and safety (OHS), codes, regulations and standards and identified hazards 1.2. Arrange access to the site according to required procedure 1.3. Obtain information on the nature of fault from the customer 1.4. Obtain suitable testing tools and equipment and specify personal protective equipment 1.5. Conduct fault finding using methodical and safe practices suitable for system and problem type
2. Locate and diagnose the fault	2.1. Conduct appropriate test to identify type of fault 2.2. Isolate the fault progressively to remove likely variables from assessment 2.3. Locate the fault without undue interruptions to the customer activity in the shortest possible time 2.4. Notify the customer of the findings
3. Rectify the fault	3.1. Determine the options to rectify the fault and present them to the customer 3.2. Advise the customer of costs of any repair not covered by service agreement 3.3. Rectify the fault if in agreement with the client 3.4. Conduct the work in a manner which is safe to the repairer and the customer 3.5. Refer any unresolved faults to other parties for resolution or escalation if required
4. Complete documentation and clean up worksite	4.1. Advise the customer of successful fault clearance and secure sign off 4.2. Complete all records 4.3. Complete reports to justify the fault diagnosis and rectification methodology if required 4.4. Remove all waste and debris from worksite and dispose them according to environmental requirements 4.5. Restore any changes made to the worksite during fault repair to the client's satisfaction

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with clients on technical and operational matters and raise OHS issues
- literacy skills to interpret technical documentation and standards and incorporate technical language into written tasks including report on recommendation to rectify fault
- numeracy skills to interpret technical data, such as specifications of equipment operations
- problem solving skills to apply methodology in fault diagnosis
- research skills to access technical information and sources to assist fault identification
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to select and use appropriate methods for fault identification and rectification

Required knowledge

- fault-finding techniques and test equipment
- safety requirements and standards
- various client's workplace environment and practices
- various types of networks and equipment
- various types of networks and equipment faults and rectification

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify different faults • establish context and background information and determine and rank likely causes of fault • obtain suitable tools and equipment and apply simple checks, tests and fault-finding methodology • apply recommended means to rectify fault • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where fault identification and resolution may be conducted • use of test and related equipment currently used in industry • relevant technical specifications and requirements for telecommunications networks • regulatory and site-related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate locating and rectifying faults following OHS requirements • oral or written questioning to assess knowledge of types of faults and implications • evaluation of written reports prepared by the candidate, outlining test result interpretation, fault rectification and recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTOPN4115A Install and test a dense wavelength division multiplexer system • ICTTEN4051A Install configuration programs on PC

EVIDENCE GUIDE

	<p>based customer equipment</p> <ul style="list-style-type: none"> • ICTTEN4198A Install, configure and test an internet protocol network • ICTTEN4199A Install, configure and test a router. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, OHS, codes, regulations and standards

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM)

RANGE STATEMENT

may include:

Volume 1

- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006
- AS/NZS IEC 61935.2:2006
- AS/NZS ISO/IEC 14763.3:2007
- AS/NZS ISO/IEC 15018:2005
- AS/NZS ISO/IEC 24702:2007
- cabling security codes and regulations
- contract law
- National Association of Testing Authorities (NATA) requirements
- regulated or industry codes of practice including appropriate Australian Communications and Media Authority (ACMA) technical standards
- technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006
- Trade Practices Act
- OHS including specific OHS and environmental requirements:
 - decommissioning and isolating work site and lines prior to commencement
 - environmental considerations include:
 - clean-up protection
 - stormwater protection
 - waste management
 - noise, dust and clean-up management
 - identifying other services including power and gas
 - safety equipment:
 - flashing lights
 - gas and other hazard detection equipment
 - safety barriers
 - trench guards
 - warning signs and tapes
 - witches hats
- safe working practices such as the safe use

RANGE STATEMENT	
	<p>and handling of:</p> <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR): <ul style="list-style-type: none"> • event at a site, such as an electrical distribution substation may expose telecommunications personnel, users or plant to hazardous voltages • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • needle stick injury • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
<i>Nature of fault</i> may include:	<ul style="list-style-type: none"> • cable fault • distortion • excessive latency • interference • intermittent • low signal level • network fault • no transmission • poor grade of service • poor signal quality.
<i>Customer</i> may include:	<ul style="list-style-type: none"> • fault centre • individual reporting the fault • network manager

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network administrator • network operations centre staff • site manager.
<i>Testing tools and equipment</i> may include:	<ul style="list-style-type: none"> • cable locator • cable test set • LAN Cat tester • network management system • optical fault locator • optical time domain reflectometer (OTDR) • protocol analyser • pulse echo test set • sniffer • spectrum analyser.
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • electrical isolators • gas detectors • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses.
<i>Appropriate test</i> may include:	<ul style="list-style-type: none"> • bit error rate test (BERT) • cable tests • distortion • frequency measurement • insertion loss • packet sniffing • ping • protocol analysis • return loss • route test • signal loss: <ul style="list-style-type: none"> • optical

ICTTEN4085A Monitor, analyse and action telecommunications network alarms

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to take appropriate action in response to network alarms. It includes network impact, problem diagnosis, network restoration and normalisation of alarms.</p> <p>The alarms may be monitored locally on site, or remotely by technical field staff or by personnel at the Network Operations Centre (NOC).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Field officers, technicians, maintenance staff and supervisors from carriers, contractors or other service providers apply the skills and knowledge in this unit. It applies to maintenance staff who are responsible for monitoring equipment rooms, having both physical access to local alarms and remote access to alarms where the equipment is externally located.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan response to network alarm	1.1. Determine alarm severity and specific network elements affected from presentation of alarm 1.2. Assess the likely impact to the client and network of the alarm 1.3. Notify the NOC and other relevant parties of alarm condition 1.4. Prioritise the actioning of alarms according to existing service level agreement obligations and enterprise policy 1.5. Assess the impact of any outage issues and major customers affected 1.6. Provide information to and seek advice from other relevant parties in identifying the problem and cause of the alarm condition 1.7. Diagnose the likely cause of the alarm condition using established methodical strategies 1.8. Escalate diagnosis to higher level fault clearance unit according to enterprise policy where necessary
2. Arrange rectification of network problem	2.1. Implement enterprise policy relating to outages as required 2.2. Rectify network problems when appropriate capability and time constraints can be met 2.3. Enact escalation procedures according to enterprise policy 2.4. Make available all alarm data and diagnosis to other areas with responsibility and jurisdiction for network restoration 2.5. Provide clear and concise instructions to field staff to facilitate all repair efforts 2.6. Monitor the progress of the network repair effort 2.7. Apply enterprise policy in relation to alarms requiring no further action
3. Complete alarm clearance tasks	3.1. Reset alarms following network restoration 3.2. Notify all relevant parties of problem rectification 3.3. Undertake appropriate cause and effect studies to prevent re-occurrence of problem 3.4. Complete administrative tasks and recommend any changes required by the enterprise quality assurance system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to review alarm information and make judgments to inform operational decisions
- communication skills to provide advice and guidance to others and to liaise with technical personnel working across different levels and in different contexts
- initiative and enterprise skills to identify improvements to alarm resolution and troubleshooting
- learning skills to keep up to date with new technology
- literacy skills to read complex technical data and procedures
- numeracy skills to interpret levels, readings and numerical data
- problem solving skills to address complex problems from a remote location
- research skills to source technical information from enterprise website or manufacturer's technical documentation
- technical skills to undertake diagnosis and repairs on a range of networks

Required knowledge

- escalation procedures
- installed telecommunications systems and equipment
- path protection
- telecommunications networks
- test equipment and test procedures
- typical problems and challenges that arise in NOCs and in the field
- typical systems and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> monitor and analyse a range of network alarms including use of fault history and ranking of likely causes undertake and monitor network repairs plan and coordinate the actioning of network alarms.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites on which local and remote monitoring and analysis of network alarms may be conducted manufacturer's technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate performing remote diagnosis of network alarms, ranging from common to complex direct observation of the candidate preparing an action plan in response to a range of network alarms oral or written questioning of required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTTEN4081A Locate, diagnose and rectify faults ICTTEN4086A Undertake routine maintenance of the telecommunications network ICTTEN4087A Undertake remote diagnosis and repair of network faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan routine maintenance	<p>1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> for the given work</p> <p>1.2. Determine the <i>network elements</i> requiring <i>maintenance</i> and the maintenance details from the manufacturer's equipment manual</p> <p>1.3. Notify the <i>network operations centre (NOC)</i> of the proposed <i>maintenance schedule</i> and maintenance details to minimise disruption to the network</p> <p>1.4. Assess the <i>potential impact</i> of the proposed maintenance on customers and network and plan for possible <i>outage</i> or deferral of maintenance</p> <p>1.5. Obtain necessary <i>tools, test equipment and resources</i> to undertake the maintenance</p> <p>1.6. Produce a schedule of the planned routine maintenance</p> <p>1.7. Negotiate schedules and access with the customer where equipment to be maintained is located on customer premises</p> <p>1.8. Ascertain and record <i>network stability</i> to determine network performance</p>
2. Undertake planned maintenance	<p>2.1. Conduct routine maintenance tasks following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> and record <i>results</i></p> <p>2.2. <i>Escalate</i> unresolved faults according to established <i>enterprise procedure</i></p> <p>2.3. <i>Test</i> the network equipment for required performance following routine maintenance</p> <p>2.4. Check operation of associated network equipment to ensure that the maintenance did not generate other faults or alarms</p>
3. Report on routine maintenance and document results	<p>3.1. Notify all <i>relevant parties</i> of the results of the routine maintenance</p> <p>3.2. Update routine maintenance logs and record other additional work for inclusion in the next cycle of maintenance</p> <p>3.3. Complete <i>administrative tasks</i> and recommend any changes as required by the enterprise <i>quality assurance system</i></p> <p>3.4. Notify NOC of job completion and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate impact of maintenance on customers and network
- communication skills to provide advice and guidance to others and to liaise with other technical staff on operational matters
- initiative and enterprise skills to identify improvements to routine maintenance
- literacy skills to read and interpret technical data and technical and non-technical information from a range of sources
- PC skills to upgrade installed software
- planning and organisational skills to plan for outage
- technical skills to use hand and power tools to assemble and disassemble equipment

Required knowledge

- alarms
- computer knowledge
- network management systems
- overview knowledge of telecommunications networks and equipment
- telecommunications test equipment and test setups
- telecommunications wiring practices
- use of scheduler

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan a detailed routine maintenance schedule • conduct and record routine maintenance activities procedures and techniques • test network equipment complying with site risk control, OHS, environmental, quality and communication requirements.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which routine maintenance may be conducted • use of maintenance tools and test instruments currently used in industry • relevant regulatory and equipment documentation that impacts on maintenance activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate carrying out routine maintenance activities • review of maintenance reports completed by the candidate for different sites and equipment • oral or written questioning to assess knowledge of maintenance procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4081A Locate, diagnose and rectify faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE	
	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • cable • electrical • elevated work platform (EWP) • rigger • AS/ACIF standards and codes • Australian building codes and regulations • Australian and New Zealand standards • cabling security codes and regulations • Environmental Protection Acts • fire regulations • noise abatement and heritage legislation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • OHS • relevant international standards • Trade Practices Act.
<i>Network elements</i> may include:	<ul style="list-style-type: none"> • cellular base station • gateway • optical add drop multiplexer • private automatic branch exchange (PABX) • router • synchronous digital hierarchy (SDH) multiplexer • server • switch.
<i>Maintenance</i> may include:	<ul style="list-style-type: none"> • corrective maintenance • remote maintenance • routine maintenance.
<i>Network operations centre (NOC)</i> may include:	<ul style="list-style-type: none"> • coordinating repairs or changes to the network • escalation • monitoring: <ul style="list-style-type: none"> • network alarms • optical fibre cuts • power failures • performing diagnostic tests • troubleshooting.
<i>Maintenance schedule</i> may be:	<ul style="list-style-type: none"> • details from service level agreement (SLA) • frequency: <ul style="list-style-type: none"> • monthly • quarterly • procedures • responsibilities and commitment • timings.
<i>Potential impact</i> may include:	<ul style="list-style-type: none"> • customer impact: <ul style="list-style-type: none"> • disruption of service to residential customers • intermittent performance • loss of service and revenue to an enterprise customer • network impact: <ul style="list-style-type: none"> • call drop out • congestion

RANGE STATEMENT	
	<ul style="list-style-type: none"> • excessive latency • limited coverage • poor grade of service (GoS) • poor signal quality • routing problems • transmission loss.
<i>Outage</i> may include:	<ul style="list-style-type: none"> • loss of service to customers due to a network fault or upgrade • planned in the case of network upgrades • unplanned in relation to faults.
<i>Tools, test equipment and resources</i> may include:	<ul style="list-style-type: none"> • resources: <ul style="list-style-type: none"> • elevated work platform hire • licensed cabler • licensed electrician • licensed rigger • optical fibre specialist • test equipment: <ul style="list-style-type: none"> • communication system analyser • lap top computer • microwave link analyser • multimeter • optical fibre power meter • optical time domain reflectometer (OTDR) • oscilloscope • RF microwave test set • RF power meter • RF sweep tester • spectrum analyser • SWR meter • transmission measuring set • tools: <ul style="list-style-type: none"> • anti-static wrist strap • PC board or subrack removal tool • pliers • power drill • screwdrivers • sockets • soldering iron

RANGE STATEMENT	
	<ul style="list-style-type: none"> spanners.
<i>Network stability</i> may include:	<ul style="list-style-type: none"> reliability of the network over time reliability of the network under varying load conditions reliability of the network under varying traffic conditions.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> decommissioning and isolating work ite and lines prior to commencement safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> asbestos chemicals materials tools and equipment work platforms safety barriers safety equipment warning signs and tapes environmental considerations <ul style="list-style-type: none"> clean-up noise and dust stormwater protection waste management.
<i>Results</i> may include:	<ul style="list-style-type: none"> calibration date lubrication date meter readings replacement of air filter date visual inspection findings: <ul style="list-style-type: none"> electrical cables electrical connectors failed indicator lights and alarms.
<i>Escalate</i> may include:	<ul style="list-style-type: none"> requesting action from: <ul style="list-style-type: none"> expert staff network specialist NOC vendor.
<i>Enterprise procedure</i> may include:	<ul style="list-style-type: none"> clearing faults implementing maintenance installation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • reporting.
<i>Test</i> may include:	<ul style="list-style-type: none"> • bandwidth • bit error ratio (BER) • blocking • call rate • congestion • distortion • drop out rate • equipment self diagnostics • functionality • interference • latency • packet loss rate • ping • protocol analysis • quality of service (QoS) • recovery rate • redundancy • return loss • signal level • switching tests • testing functionality of: <ul style="list-style-type: none"> • individual equipment • system • uploads and downloads rate.
<i>Relevant parties</i> may include:	<ul style="list-style-type: none"> • customer • design engineer • NOC • project manager • supervisor.
<i>Administrative tasks</i> may include:	<ul style="list-style-type: none"> • checking and amending labelling of equipment • completing test sheets according to specification • completion and submission of job orders • following quality control procedures • handing over installation briefs and equipment manuals to operational staff • recording test results • updating databases • updating design specifications and returning

RANGE STATEMENT	
	them to design area.
<i>Quality assurance system</i> may include:	<ul style="list-style-type: none"> • analysing logs • correction of legacy problems • documenting logs • ongoing improvements • reporting on installation • reporting on maintenance activities.

Co-requisite units		

Competency field

Competency field	Telecommunications networks engineering
-------------------------	---

ICTTEN4087A Undertake remote diagnosis and repair of network faults

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to undertake remote diagnosis and repair of network faults. It includes fault diagnostic and repair strategies for working with remote network equipment.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Field officers, technicians or technical supervisors from carriers, contractors or other service providers apply the skills and knowledge in this unit.</p> <p>It is particularly relevant to field technicians remotely accessing the network and the network operation centre (NOC) which controls the coordination of remote network activities.</p>
--------------------------------	--

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Diagnose remote faults	1.1. Install remote access software on notebook computers 1.2. Verify network fault by analysing <i>relevant data</i> 1.3. Investigate <i>context and background information</i> relevant to network fault 1.4. Source <i>appropriate documentation</i> and <i>test equipment</i> relevant to the network fault 1.5. Conduct <i>appropriate tests and</i> analyse results 1.6. Diagnose <i>network faults</i> using established <i>methodical strategies</i> in a timely fashion without disruption to other services
2. Plan remote repair	2.1. Assess the level of involvement of the <i>NOC</i> in planning the repair 2.2. Plan for any necessary <i>outages</i> and notify customers 2.3. Develop <i>repair strategies</i> to clear fault 2.4. Develop a strategy for the rerouting of <i>customer traffic</i> if applicable 2.5. Advise on site personnel of required work and clearly communicate the repair strategy
3. Repair fault	3.1. Initiate remote repair strategies to reconfigure or repair remote equipment in a manner safe to self, fellow workers network equipment and public 3.2. Inform customers of repair progress where fault has caused degradation of service or outage 3.3. <i>Escalate</i> unresolved faults according to established <i>enterprise procedure</i> 3.4. Test the remote repair for required performance 3.5. Assess ongoing network performance and the likelihood of further problems
4. Report remote diagnosis and repair and document results	4.1. Notify all <i>relevant parties</i> of the results of the remote diagnosis and repair 4.2. Record details relating to any outage according to enterprise procedures 4.3. Complete all relevant documentation and recommend any changes required by the enterprise <i>quality assurance</i> system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to review alarm information and make judgments to inform operational decisions
- communication skills to:
 - liaise with technical personnel working across different levels and in different contexts
 - provide advice and guidance to others
- initiative and enterprise skills to identify improvements to alarm resolution and troubleshooting
- learning skills to keep up to date with new technology
- literacy skills to read complex technical data, procedures, equipment and system manuals and specifications
- numeracy skills to interpret levels, readings and numerical data
- problem solving skills to address complex problems from a remote location
- research skills to source technical information from enterprise website or manufacturer's technical documentation
- technical skills to:
 - interpret and use equipment and system manuals and specifications
 - undertake diagnosis and repairs on a range of networks

Required knowledge

- installed telecommunications systems and equipment
- path protection
- telecommunications networks
- test equipment and test procedures
- typical problems and challenges that arise in NOCs and in the field
- typical systems and procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • diagnose and identify faults including using fault history and ranking likely causes • plan and coordinate repair of network faults • apply enterprise escalation and outage procedures following related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which remote diagnosis and repair of network may be conducted • use of test equipment currently used in industry • manufacturer's technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • observation of the candidate performing remote diagnosis of network faults • observation of the candidate giving clear and precise instructions to staff engaged in on site repair • observation of the candidate repairing network faults • review of documentation completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL4099A Remotely locate and identify cable network faults • ICTTEN4081A Locate, diagnose and rectify faults • ICTTEN4085A Monitor, analyse and action telecommunications network alarms • ICTTEN4086A Undertake routine maintenance of the telecommunications network.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant data may include:

- alarm conditions
- customer reports
- event history
- event log
- service level degradation
- test results from remote interrogation.

RANGE STATEMENT	
<i>Context and background information</i> may include:	<ul style="list-style-type: none"> • customer reports • environmental factors • fault history • previous reports.
<i>Appropriate documentation</i> may include:	<ul style="list-style-type: none"> • manufacturer's technical documentation • test procedures • trouble clearing and alarm reference guide.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • bit error rate tester • communication system analyser • digital analyser • laser source • magnetic error reduction meter • microwave link analyser • modulation analyser • multimeter • optical attenuator • optical fibre power meter • optical loss test set • oscillator • oscilloscope • optical time domain reflectometer (OTDR) • pattern generator • personal computer loaded with diagnostic routines • power meter • radio frequency (RF) microwave test set • RF sweep tester • signal level meter • spectrum analyses • transmission measuring set • voltage standing wave ratio (VSWR) meter.
<i>Appropriate tests</i> may include:	<ul style="list-style-type: none"> • bandwidth • blocking • call rate • congestion • distortion • drop out rate • functionality • interference • latency

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network tests • optical transmission • packet loss rate • quality of service (QoS) • radio transmission • recovery rate • redundancy • signal to noise ratio • transmitted power measurements • upload and download rates.
<i>Network faults</i> may include:	<ul style="list-style-type: none"> • out of specification faults • dynamic loops • intermittent performance problems • latency • network dropout • severe cable or transmission path damage • system configuration problems • system equipment failure or partial failure • traffic congestion.
<i>Network operation centre</i> may include:	<ul style="list-style-type: none"> • engineering unit within an enterprise responsible for: <ul style="list-style-type: none"> • coordinating repairs or changes to the network • monitoring the network • performing diagnostic tests.
<i>Outages</i> may include:	<ul style="list-style-type: none"> • loss of service to customers due to a network fault or upgrade • planned, in the case of network upgrades • unplanned in relation to faults.
<i>Repair strategies</i> may include:	<ul style="list-style-type: none"> • force traffic to alternate path • isolate faulty unit • switch to redundant equipment.
<i>Customer traffic</i> may include:	<ul style="list-style-type: none"> • analogue or digital forms of: <ul style="list-style-type: none"> • data • image • voice.
<i>Escalate</i> may include:	<ul style="list-style-type: none"> • greater involvement from the NOC • progressive shifting of network restoration responsibility to more capable areas.

RANGE STATEMENT	
<i>Enterprise procedure</i> may include:	<ul style="list-style-type: none"> • installation • maintenance • reporting.
<i>Relevant parties</i> may include:	<ul style="list-style-type: none"> • contractors • customers • equipment vendors and manufacturers • fault centre • individual reporting the fault • network administrator • network manager • network operations centre staff • on site technical staff • site manager.
<i>Quality assurance</i> may include:	<ul style="list-style-type: none"> • acting on logs, reports and other data to guide ongoing quality improvements • updating logs and reporting on installation or maintenance activities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for equipment repairs	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Identify hazards , make work site safe according to relevant safety legislation and company work practices and use personal protective equipment 1.3. Notify customer and other appropriate personnel of work and arrange for site access and security where required 1.4. Obtain fault details to determine type of system fault 1.5. Determine the type of repair required according to enterprise guidelines, site requirements and type of equipment, and arrange for additional technical support as appropriate 1.6. Confirm if warranties and service agreements covering identified repairs exist 1.7. Obtain tools and necessary hardware and ensure that replacement parts and material is delivered to the worksite at the required time
2. Repair fault	2.1. Follow occupational health and safety (OHS) and environmental requirements when carrying out repair or replacement tasks 2.2. Notify appropriate personnel of service disruption and remove network equipment from service 2.3. Diagnose the fault and carry out repair work on equipment according to manufacturer's or enterprise procedures 2.4. Test equipment to manufacturer's specifications following repairs and return to live operation for testing overall performance
3. Complete repair work documentation and administrative tasks	3.1. Notify customer and other appropriate personnel of completion of repair work according to enterprise guidelines 3.2. Record any changes to equipment and store according to enterprise guidelines 3.3. Dispose of waste and debris from worksite according to environmental requirements and enterprise guidelines 3.4. Complete administrative tasks and make recommendations for improvements under quality assurance system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers on technical and operational matters and raise OHS issues
- literacy skills to:
 - incorporate technical language into written tasks to prepare report on recommendations to rectify faults
 - interpret technical documentation and standards
- numeracy skills to interpret technical data, such as equipment specifications
- problem solving skills to diagnose faults
- research skills to access technical information and sources to assist in fault identification
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - select and use appropriate methods for fault identification and rectification
 - use hand tools

Required knowledge

- anti static procedures
- enterprise policies and procedures
- fault diagnosis techniques
- general fault-finding techniques and test equipment
- OHS
- product knowledge
- safety requirements and standards
- telecommunications network and equipment fault types and rectification
- telecommunications network and equipment types
- test equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • diagnose and identify faults methodically using fault history and recognition of likely causes • repair telecommunication equipment according to manufacturer's or enterprise procedures applying related OHS requirements and work practices • test the equipment following repairs and put back into commission.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which diagnosis and repair of communication equipment may be conducted • use of test equipment currently used in industry • manufacturer's technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate diagnosing faults in communications equipment, ranging from common to complex • review of documentation completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4081A Locate, diagnose and rectify faults • ICTTEN4086A Undertake routine maintenance of the telecommunications network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTTEN4126A Install and configure internet protocol TV in a home network

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to integrate internet protocol TV (IPTV) functionality into an existing customer home network.</p> <p>It involves installing and configuring a secure internet protocol (IP) network for the customer.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to technical staff installing an IP network for the delivery of emerging technologies for IPTV and convergence networks.</p> <p>Relevant job roles include installer of Next Generation Networks (NGN). These IP networks provide fast internet, voice over internet protocol (VoIP), IPTV and internet TV services.</p>
--------------------------------	---

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to implement IPTV in a home network	<p>1.1. Obtain and clarify occupational health and safety (<i>OHS</i>) <i>requirements</i> and risk control measures and procedures for a given work area with <i>appropriate personnel</i></p> <p>1.2. Evaluate existing customer home network equipment for operational status</p>
2. Design IPTV integration to a home network to meet customer requirements	<p>2.1. Prepare a configuration layout integrating IPTV to the existing customer network using <i>IPTV network elements</i> to provide optimum video delivery service</p> <p>2.2. Select IPTV network elements to provide optimum video delivery service</p> <p>2.3. Obtain configuration instructions for the network elements</p> <p>2.4. Design a connection plan to integrate the customer network elements and optimise system performance</p> <p>2.5. Identify any connection problems and amend design plan</p>
3. Implement IPTV design plan to a home network	<p>3.1. Interconnect network elements according to design plan using manufacturer's instructions</p> <p>3.2. Configure and test the network elements to provide integrated IPTV to the existing system</p> <p>3.3. Provide a free to air (FTA) connection over digital video broadcasting - terrestrial (DVB-T) to complement the IPTV service</p> <p>3.4. Set up <i>customer specific operations</i> as required</p> <p>3.5. Configure <i>security measures</i> in an IPTV network to protect against <i>security threats</i></p> <p>3.6. Troubleshoot home network according to manufacturer's specifications and escalate unresolvable items to the service provider</p>
4. Complete and document network installation	<p>4.1. Restore worksite to safe condition according to established safety procedures</p> <p>4.2. Record and store <i>essential installation information</i></p> <p>4.3. Notify appropriate personnel about the completion of the task and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer to determine needs
- literacy skills to:
 - develop integration plan
 - interpret technical specifications and related documentation
- project planning skills to set benchmarks and identify scope
- problem solving skills to resolve a predictable range of network problems
- numeracy skills to produce IP addressing schemes
- technical skills to:
 - configure IP network
 - dimension network parameters
 - evaluate competing video over broadband networks
 - implement and verify:
 - border gateway protocol (BGP)
 - enhanced interior gateway routing protocol (EIGRP)
 - flash
 - hypertext transfer protocol (HTTP)
 - internet group management protocol (IGMP)
 - open shortest path first (OSPF)
 - real time streaming protocol (RTSP)
 - routing information protocol (RIP)
 - web cache communication protocol (WCCP) operations
 - implement secure video network
 - trouble shoot home network performance issues

Required knowledge

- competing video delivery over broadband networks
- current industry-accepted hardware and software products
- IPTV configurations
- IPTV protocols and encoding techniques
- networking technologies incorporating substantial depth in network operating systems and IP networks
- transmission technologies and protocols
- video compression formats

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • create and follow implementation plans for IPTV • install relevant network hardware and software • configure and test the IPTV network according to specified guidelines • integrate IPTV to existing network • produce appropriate documentation • implement secure network.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where the installation and configuration of an IPTV network may be conducted • equipment currently used in industry • information on different protocols • relevant technical information, legislative requirements and other site and project related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and configuring IPTV in a home network ensuring network security • review of implementation plans outlining integration elements to optimise system performance • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTDRE4166A Integrate customer digital reception equipment • ICTDRE4167A Integrate data delivery modes • ICTTEN4215A Install and configure internet

EVIDENCE GUIDE

	<p>protocol TV in a service provider network.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements may include:

- awards provisions
- hazardous substances and dangerous goods codes
- legislation
- local safe operation procedures

RANGE STATEMENT	
	<ul style="list-style-type: none"> material safety management systems protective equipment.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> customer site administrator site engineer site manager supervisor.
<i>IPTV network elements</i> may include:	<ul style="list-style-type: none"> dual decoders dual DVB-T tuners hard disk drive (HDD) home gateway integrated access device (IAD) internet devices: <ul style="list-style-type: none"> digital TV mobile devices PC layer 2 protocols: <ul style="list-style-type: none"> Ethernet G.hn (G.9600) for home grid network media centre media router multipoint control unit (MCU) for HD video conferencing set top box
<i>Customer specific operations</i> may include:	<ul style="list-style-type: none"> electronic program guide (EPG) information widgets: <ul style="list-style-type: none"> news headlines traffic watch weather linear IPTV channels network personal video recorder (nPVR) set up social networking applications video on demand (VoD).
<i>Security measures</i> may include:	<ul style="list-style-type: none"> digital signatures and certificates encryption integrity and authentication.
<i>Security threats</i> may include:	<ul style="list-style-type: none"> botnets distributed denial of service (DDoS) fraud

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hacking • malware.
<i>Essential installation information</i> may include:	<ul style="list-style-type: none"> • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords • security access codes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install an IP network	1.1. Prepare for given work according to relevant legislation, occupational health and safety (OHS), codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Review existing <i>network</i> design <i>documentation</i> to ensure it is current and complete 1.4. Select the <i>components</i> and <i>network elements</i> required to be installed to meet the technical <i>requirements</i> 1.5. Contact vendors and service suppliers to obtain specifications and availability of identified components 1.6. Develop plans, with prioritised tasks and contingency arrangements, for installation of components with minimum disruption to <i>client</i> 1.7. Liaise with <i>appropriate person</i> to obtain approval for the plans, including security clearance and timing
2. Install and configure an IP network	2.1. Install and configure server <i>hardware</i> and <i>software</i> according to organisational and industry <i>standards</i> , following plans 2.2. Install and configure <i>computer</i> , other hardware and software according to organisational and industry standards and plans 2.3. Install and configure other software required for the network to operate with security and integrity according to the plan
3. Test and reconfigure the IP network	3.1. Test the installed software and hardware, utilising available <i>technical tools</i> , to ensure that all components are functioning as expected 3.2. Test the network to ensure it is functioning according to specifications 3.3. Resolve problems identified in the modified network
4. Complete documentation and clean up worksite	4.1. Complete hardware and asset recording document in line with <i>organisational requirements</i> 4.2. Document installation, boot-up and configuration procedures according to organisational requirements 4.3. Tabulate test results and complete all user reports 4.4. Complete client report and notify of status of the network

ELEMENT	PERFORMANCE CRITERIA
	4.5. Clean up and restore worksite to client's satisfaction 4.6. Secure sign-off from appropriate person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports in required formats
- numeracy skills to take test measurements, interpret results and evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the process in liaison with others
- problem solving and contingency management skills to adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- technical skills to select and use router test software and hardware to suit different network applications

Required knowledge

- client business domain, business function and organisation
- current industry-accepted hardware and software products
- data and voice transmission technologies and protocols
- networking technologies incorporating substantial depth in some areas
- router-based network architectures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and prepare for the IP network installation task • select network elements to meet the client business specifications • install, configure and test the network elements to ensure interoperability within the network • apply network topologies, protocols and security issues • apply solutions to defined network problems.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where network installation may be conducted • use of field measurement equipment currently used in industry • network design documentation • equipment specifications • network components • hardware and software • live network • organisational guidelines • networked (LAN) computers • WAN service point of presence.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing, configuring and testing a new or updated network • evaluation of report prepared by the candidate outlining testing procedures, test results, recommendation to network changes and completion records • oral or written questioning of required knowledge.
Guidance information for	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE**assessment**

for example:

- ICTTEN4199A Install, configure and test a router
- ICTTEN5201A Install, configure and test a server.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Network may include:

- data
- internet
- internet protocol private branch exchange (IP)

RANGE STATEMENT	
	PBX) <ul style="list-style-type: none"> • IPTV • large and small local area networks (LAN) • national wide area networks (WAN) • radio frequency identification (RFID) • storage area network (SAN) • voice • voice over internet protocol (VoIP) • virtual private network (VPN).
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • audit trails • client training • equipment inventory • ISO, IEC, AS standards • naming standards • project management templates and report writing • satisfaction reports • version control.
<i>Components</i> may include:	<ul style="list-style-type: none"> • CD, DVD and Blu-ray drives • central processing unit (CPU) • complementary metal oxide semiconductor (CMOS) battery • central processing unit (CPU) upgrades • fax and modem cards • hard drives (internal and external) • hardware • interface cards • motherboards • RAM upgrades • software • wireless adaptors.
<i>Network elements</i> may include:	<ul style="list-style-type: none"> • adaptors • communications cables and connectors • hubs • routers • servers • switches.
<i>Requirements</i> may refer to:	<ul style="list-style-type: none"> • application • business • network

RANGE STATEMENT	
	<ul style="list-style-type: none"> • people in the organisation • system.
Client may include:	<ul style="list-style-type: none"> • external organisations • individuals • internal departments • Internal employees.
Appropriate person may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor.
Hardware may include but is not limited to:	<ul style="list-style-type: none"> • cables: <ul style="list-style-type: none"> • Category 5e, 6, or 7 • crossover • fibre • shielded twisted pairs (STP) • straight through • unshielded twisted pairs (UTP) • digital subscriber line (DSL) modems • modems and other connectivity devices • network elements • personal computers • remote sites • workstations.
Software may include:	<ul style="list-style-type: none"> • commercial software applications • in-house or customised software • open software • organisation-specific software • packaged software.
Standards may include:	<ul style="list-style-type: none"> • ISO, IEC, IEEE, IETF, ITU, AS standards • organisational standards • project standards.
Computer may include:	<ul style="list-style-type: none"> • laptops • mobile equipment • netbooks • other devices • servers • smart phones • workstations.
Technical tools may include:	<ul style="list-style-type: none"> • diagnostic software • hyperterminal

RANGE STATEMENT	
	<ul style="list-style-type: none"> • LAN Cat tester.
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • preventative maintenance and diagnostic policy • problem solution processes • roles and technical responsibilities in the network management • vendor and product service level support agreements • work environment.

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install a router	1.1. Prepare for given work according to relevant legislation, occupational health and safety (OHS), codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Ascertain network topology from technical requirements 1.4. Determine the internet protocol (IP) addressing scheme for the network topology 1.5. Evaluate network management and security requirements , with reference to current and future requirements 1.6. Select a router with appropriate features according to technical requirements 1.7. Choose cables , wireless application protocol (WAP), wide area network (WAN) connectors and other peripherals according to network and router specification, and WAN protocols
2. Install and configure a router	2.1. Assemble router and peripherals according to manufacturer's requirements, enterprise guidelines and protocols 2.2. Connect communications cables and WAN connectors to the router and to the network 2.3. Configure router according to manufacturer's instructions and technical requirements, taking into account interoperability requirements with network components
3. Test the router and reconfigure the network	3.1. Test the router for connectivity across the network and for routing protocol functions 3.2. Adapt or modify the predetermined router configuration, depending on outcome of tests 3.3. Review router in line with organisational requirements 3.4. Test router and peripherals according to manufacturer's instructions and technical requirements 3.5. Test hardware and router to ensure full functionality and interoperability 3.6. Reconfigure additional hardware as required 3.7. Make adjustments to network depending on test

ELEMENT	PERFORMANCE CRITERIA
	results
4. Complete documentation and clean up worksite	4.1. Tabulate test results and complete all user reports 4.2. Complete report and notify client of status of the network 4.3. Clean up and restore worksite to client's satisfaction 4.4. Secure sign off from <i>appropriate person</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports in required formats
- numeracy skills to take test measurements, interpret results and evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the process in liaison with others
- problem solving and contingency management skills to adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- technical skills to select and use router test software and hardware to suit different network applications

Required knowledge

- Australian Computer Society Code of Ethics
- effect of a router on delimiting broadcast traffic and on conserving bandwidth
- how dynamic routing algorithms or protocols create and maintain routing tables
- providing the network with redundant paths for reliability and the way routers manage these paths
- router:
 - basic router commands
 - configuration:

REQUIRED SKILLS AND KNOWLEDGE

- clock rate
- password protection of router
- routing protocol
- dynamic routing
- firewalls
- functions
- routing protocols and how they operate
- tables
- router-based network architectures
- use of routing tables in intelligent packet routing and switching

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and prepare for the router installation task • select a router to meet the client business specifications • install and test the router that ensures interoperability within the network and applying router principles and technologies • report on the status of the completed installation and seek sign off and customer satisfaction • use routers • apply solutions to defined routing problems.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where router installation may be conducted • use of field measurement equipment currently used in industry • relevant router specifications • technical requirements for a network • router • cabling • networked (LAN) computers • WAN service point of presence • relevant equipment and organisational documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing, configuring and testing a router • oral or written questioning of underpinning skills and knowledge • evaluation of report prepared by the candidate outlining testing procedures, results, recommendations to network changes and

EVIDENCE GUIDE	
	completion records.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4198A Install, configure and test an internet protocol network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install specified RFID system	1.1. Prepare for given work according to relevant legislation, occupational health and safety (OHS), codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Choose the most suitable RFID system based on specifications and in consultation with appropriate person 1.4. Evaluate options for equipment installation siting and antenna positioning to include the effects of electromagnetic interference and shielding 1.5. Investigate causes of interference with RFID systems 1.6. Specify the network element requirements for the installation and any training requirements for clients 1.7. Create a deployment plan including down times and advise the user group 1.8. Obtain all components and devices required for the RFID system
2. Install specified RFID system and resolve any faults	2.1. Install interrogators or readers according to given plan 2.2. Install tags and document the correct procedures for locating and orienting tags 2.3. Install and undertake network configuration activities using relevant operating system and application upgrades to integrate RFID system into the overall network 2.4. Troubleshoot problems between interrogators or readers, tags and networks including tuning for optimum performance and rectify any faults
3. Test the RFID installation according to specification and standards	3.1. Test system installation according to design specifications and standards including optimum placement of tags and data transmission completeness and record outcomes 3.2. Carry out any changes 3.3. Validate changes or additions against specifications 3.4. Document the test results
4. Complete documentation in	4.1. Complete all documentation for users according to the design and customer requirements

ELEMENT	PERFORMANCE CRITERIA
compliance with customer requirements and clean up worksite	4.2. Complete report and notify client of status of the network and standards applying to the installation 4.3. Clean up and restore worksite to client's satisfaction 4.4. Secure sign off from appropriate person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports, user and training documentation in required formats
- numeracy skills to take test measurements, interpret results and evaluate performance and interoperability of RFID system
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt configuration procedures to requirements of RFID network and reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to interrogate vendor databases and website to implement different configuration requirements to meet client design specifications
- technical skills to select and use RFID diagnostic test, application software and hardware to suit different RFID network applications

Required knowledge

- client business domain, business function and organisation
- common network cable types and connectors
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- current industry-accepted hardware and software products
- desktop applications and operating systems as required
- enterprise communication and training systems in relation to training and advising staff involved in the deployment
- network topologies
- RFID technologies incorporating substantial depth in network operating systems, protocols, interrogators and sensors, wireless technologies and cabling standards

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan installation • use basic research skills for adapting RFID technologies to specified plan and design • implement and verify RFID operations • implement RFID architecture across a secure environment • encode RFID tags and attach to items • integrate RFID information into business applications • configure the network with IP addressing • cable and test the RFID network • create technical and user documentation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where RFID installation may be conducted • use of field measurement equipment currently used in industry • relevant network element specifications • technical requirements for an RFID network • cabling • networked (LAN) computers • workstations • RFID diagnostic software • WAN service point of presence.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and testing an RFID system • oral or written questioning of underpinning skills and knowledge • evaluation of report prepared by the candidate outlining testing procedures, test results and recommendation of network changes.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICTTEN4198A Install, configure and test an internet protocol network.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>RFID system</i> may include:	<ul style="list-style-type: none"> • antenna • cabling • databases • interrogators or readers • power supplies • tags • wireless units.
<i>Specifications</i> may include:	<ul style="list-style-type: none"> • cable drops • device mounting locations • electrical specifications for: <ul style="list-style-type: none"> • adapters • interrogators • power units • readers • sensors • tags • wireless units • interrogation zone locations • RFID network topology • site diagrams.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • IT support manager • network administrator • RFID network manager • small or medium enterprise (SME) customer • small office home office (SOHO) customer • supervisor.
<i>Network element requirements</i> may include:	<ul style="list-style-type: none"> • drives • routers • servers • switches.
<i>Training requirements</i> relate to:	<ul style="list-style-type: none"> • education requirements for support staff • client requirements • relevant enterprise policies.
<i>Clients</i> may include:	<ul style="list-style-type: none"> • external organisations • individual people • internal departments • internal employees

RANGE STATEMENT	
	<ul style="list-style-type: none"> • logistic company • warehouse.
<i>User group</i> may include:	<ul style="list-style-type: none"> • administration • dispatch • inventory • stores • transport • warehouse.
<i>Configuration</i> may include:	<ul style="list-style-type: none"> • access control needs • hostnames • IP addresses • network connectivity issues • port numbers • server domains.
<i>Optimum performance</i> may include:	<ul style="list-style-type: none"> • antenna type • cable length or loss • equipment mounting and protection • interference considerations • latency • tag type <ul style="list-style-type: none"> • active • operating frequency • passive.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • audit trails • ISO, IEC, AS standards • naming standards • operational instructions • project management templates • report writing • training documentations • version control.

ICTTEN4210A Implement and troubleshoot enterprise routers and switches

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to implement and troubleshoot routers and switches. It involves configuring and programming routers and switches to establish voice and data services and applications over local area networks (LAN) and wide area networks (WAN) connections for enterprise networks.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>This unit applies to medium to large enterprises requiring the use of internetwork services and applications. It also applies to networks employing virtual LAN (VLAN) connectivity and hierarchical addressing schemes and where access control will be used to achieve network security.</p> <p>Relevant job roles include installer of IP networks, enterprise network technician, network administrator and network support.</p>
---------------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for implementation of network routers and switches	1.1. Prepare for given work according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with <i>appropriate personnel</i> 1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3. Determine nature and scope of the network routers and network switches and <i>network resources</i> from job briefs or appropriate personnel 1.4. Select and obtain network services and network application requirements according to <i>enterprise procedures</i> 1.5. Obtain identified operating instructions, manuals, hardware and software testing methodologies 1.6. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Implement network switches and routers	2.1. Configure routers and switches according to manufacturer's specifications and enterprise procedures 2.2. Determine <i>network addressing scheme</i> for network connectivity and verify using <i>calculations</i> 2.3. Activate and verify network WAN links to provide network connectivity 2.4. Enable <i>network services</i> and <i>network applications</i> to the network to complete network connectivity process 2.5. Set up traffic access and filtering according to enterprise procedures
3. Troubleshoot network switches and routers	3.1. Monitor network performance and isolate faults using diagnostic and analysis tools 3.2. Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures
4. Document configuration and troubleshooting records	4.1. Restore work site to safe condition according to established safety procedures 4.2. Record and store <i>essential implementation information</i> according to enterprise procedures 4.3. Notify appropriate personnel about the completion of the task according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with technical staff
- literacy skills to read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data and perform calculations
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to :
 - configure and activate network access and security measures
 - configure switches and routers to enable LAN and WAN links
 - connect enterprise networks using WAN services and applications
 - connect the enterprise network to external services
 - maintain enterprise network documentation
 - troubleshoot network faults and implement recovery action
 - use a hierarchical internet protocol (IP) network address scheme
 - use tools and equipment to analyse enterprise network

Required knowledge

- access control lists
- correct use of tools and equipment
- enterprise:
 - features and applications
 - OHS procedures
 - record keeping procedures
 - switching and routing protocols and strategies:

REQUIRED SKILLS AND KNOWLEDGE

- hierarchical addressing
- multilayer switching
- routing protocols
- VLAN routing
- implement enterprise WAN links
- network diagnostic and troubleshooting techniques
- network modelling

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine customer networking requirements • configure routers and switches using hierarchical addressing over VLANs to meet network link requirements • enable and control access to network services and applications across the network • diagnose and rectify network hardware and device configuration faults • document configuration information, fault-finding history and remediation action.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network facility and workstations • operating instructions, installation documents and manuals • hardware and software testing tools currently used in industry.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and troubleshooting routers and switches • review documentation of implementation and troubleshooting prepared by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN2207A Install and configure a home or small office network • ICTTEN2208A Install and configure a small to medium business network

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTTEN2209A Build and maintain a secure network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS may include:

- awards provisions
- hazardous substances and dangerous goods codes
- legislation
- local safe operation procedures

RANGE STATEMENT	
	<ul style="list-style-type: none"> • material safety management systems • protective equipment.
<i>Environmental requirements</i> may include:	<ul style="list-style-type: none"> • dust • excessive energy and water use • excessive noise • fumes • gas • liquid waste • smoke emissions • solid waste • vapour.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • customer • manager • network manager • site engineer • supervisor.
<i>Network resources</i> may include:	<ul style="list-style-type: none"> • domain name system (DNS) server • dynamic host configuration protocol (DHCP) server • files • software • web browser.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> • instructions: <ul style="list-style-type: none"> • designs • drawings • job sheets • plans • manufacturer's specifications • operational procedures • reporting and communication • use of tools and equipment.
<i>Network addressing scheme</i> may include:	<ul style="list-style-type: none"> • dynamic • static • subnet.
<i>Calculations</i> may include:	<ul style="list-style-type: none"> • binary addition • binary conversion • binary division • binary multiplication • binary number system

RANGE STATEMENT	
	<ul style="list-style-type: none"> • binary subtraction.
<i>Network services</i> may include:	<ul style="list-style-type: none"> • authentication servers • collaborative services • DHCP • directory services • DNS • email • network file system • printing • web services.
<i>Network applications</i> may include:	<ul style="list-style-type: none"> • media player • spreadsheet • word-processor.
<i>Essential implementation information</i> may include:	<ul style="list-style-type: none"> • fault history • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • network recovery actions • passwords • router configuration details • security access codes • switch configuration details.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the design and installation of an internetwork	1.1. Prepare for given work according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with <i>appropriate personnel</i> 1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3. Determine nature and scope of the <i>internetwork</i> from job briefs and appropriate personnel 1.4. Obtain operating instructions, manuals, hardware and software testing methodologies 1.5. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Design an enterprise internetwork	2.1. Produce enterprise <i>internetwork topology</i> after considering technical requirements, physical and financial constraints and expansion projections 2.2. Determine <i>network devices</i> and <i>network resources</i> according to enterprise procedures 2.3. Produce the internetwork design including network security and router and switch configurations to meet design specifications and <i>enterprise procedures</i>
3. Install and configure a designed internetwork	3.1. Install network hardware to network topology design plan according to enterprise procedures 3.2. Determine <i>network addressing scheme</i> for network connectivity and verify using <i>calculations</i> 3.3. Configure routers and switches to perform the logical connection of the internetwork 3.4. Conduct connectivity and performance tests to verify the network installation meets the design specification 3.5. Troubleshoot internetwork and internet connectivity according to manufacturer's specifications and enterprise procedures
4. Complete and document network design and installation	4.1. Restore worksite to safe condition according to established safety procedures 4.2. Record and store <i>essential design and installation information</i> according to enterprise procedures 4.3. Notify appropriate personnel about the completion of the task according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise and negotiate with customers and peers to achieve design specifications
- literacy skills to:
 - develop network documentation and maintain network records
 - read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems according to help desk procedures
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - analyse the impact of applications on traffic flow in the network
 - apply network design methodologies to design networks that provide a range of services and applications found in larger networks
 - conduct a wireless site survey
 - determine customer requirements and a design specification
 - determine the impact of upgrading hardware and software on network functionality
 - identify the technical requirements, constraints and manageability issues for a given customer network requirement
 - install a network design
 - use tools and equipment

Required knowledge

- enterprise OHS procedures
- open systems interconnect (OSI) layered communication model
- network requirements:
 - applications

REQUIRED SKILLS AND KNOWLEDGE

- lifecycle
- manageability
- quality of service
- network design concepts:
 - business requirements
 - network topologies
 - physical and financial constraints
 - security
 - wired or wireless options
- tool and equipment use
- troubleshooting:
 - impact of network failure
 - maintenance
 - troubleshooting methodology

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine customer requirements • design an internetwork that uses advanced routing and addressing techniques • install an internetwork according to design specification • configure network devices to meet design functionality • document internetwork design, installation and configuration.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where design and installation of an internetwork network may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate designing, installing and configuring an internetwork • review of documents prepared by the candidate detailing design and installation • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN2207A Install and configure a home or small office network • ICTTEN2208A Install and configure a small to

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to apply routing protocols	1.1. Prepare for given work according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with <i>appropriate personnel</i> 1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3. Determine nature and scope of the <i>network</i> and <i>network routing requirements</i> from job briefs and appropriate personnel 1.4. Determine hardware and software diagnostic test methodologies and testing resources according to <i>enterprise procedures</i> 1.5. Obtain operating instructions, manuals, hardware and software testing methodologies 1.6. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Build and test advanced routing	2.1. Set up router interfaces according to manufacturer's specifications and established procedures 2.2. Implement advanced routing protocols to achieve network design requirements 2.3. Implement classless addressing across a network to perform logical connectivity and confirm using <i>calculations</i> 2.4. Troubleshoot network routing according to manufacturer's specifications and established procedures 2.5. Identify security threats and initiate control measures according to enterprise procedures
3. Complete and document advanced router installation	3.1. Restore worksite to safe condition according to established safety procedures 3.2. Record and store <i>essential installation information</i> according to enterprise procedures 3.3. Notify appropriate personnel about the completion of the task according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise and negotiate with customers and peers to achieve design specifications
- literacy skills to:
 - develop network documentation and maintain network records
 - read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems according to help desk procedures
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - configure network routing interfaces and protocols
 - implement IP addressing schemes and security strategies
 - troubleshoot advanced routing for client networks
 - use software tools and equipment
 - verify routing

Required knowledge

- distance vector routing protocols RIP v1 and v2
- dynamic routing
- enterprise OHS procedures
- hybrid routing protocols enhanced interior gateway routing protocol (EIGRP)
- link-state routing protocols open shortest path first (OSPF)
- routing and packet forwarding
- routing tables
- scalable routing strategies variable length subnet masking (VLSM) and classless inter-domain routing (CIDR)
- security protocols using access lists
- static routing
- use of software tools and equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan network routing requirements to meet design specification • configure advanced protocols on network routers • manage network addressing • troubleshoot the network • install network security.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network facility and workstations • tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate applying advance routing protocols • review documentation of network routing requirements and router installation prepared by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN2209A Build and maintain a secure network • ICTTEN4213A Configure and troubleshoot advanced network switching • ICTTEN4214A Install and maintain a wide area network.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to work on a switched network	1.1. Prepare for given work according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with <i>appropriate personnel</i> 1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3. Determine nature and scope of the network and network topology from job briefs or appropriate personnel 1.4. Select and obtain wireless and wired network components requirements according to <i>enterprise procedures</i> 1.5. Obtain operating instructions, manuals, hardware and software testing methodologies 1.6. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Configure network switches	2.1. Set up and configure network switches according to manufacturer's specifications and enterprise procedures 2.2. Build and configure a routed network using remote access management 2.3. Establish multiple VLANs across the network to manage the access and traffic across the network
3. Troubleshoot network	3.1. Monitor network traffic and assess performance against manufacturer's specifications and established procedures 3.2. Troubleshoot network according to manufacturer's specifications and enterprise procedures 3.3. Identify and rectify faults according to enterprise procedures
4. Complete and document network installation and configuration	4.1. Restore worksite to safe condition according to established safety procedures 4.2. Record and store <i>essential configuration information</i> according to enterprise procedures 4.3. Notify appropriate personnel about the completion of the task according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and peers to achieve outcomes
- literacy skills to read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot network malfunctions
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - configure a network to support multiple VLANS
 - configure a switch using VLAN trunking and spanning tree protocols
 - design and build a interVLAN switched network
 - establish LAN switching over a wireless network
 - install switch and remote access security
 - use tools and equipment

Required knowledge

- enterprise OHS procedures
- interVLAN routing
- spanning tree protocol
- switch and remote network security management
- tool and equipment correct usage
- troubleshooting procedures
- VLAN trunking protocol
- wireless LAN setup and access configuration

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • build and configure a routed network • configure a VLAN on a given network topology • configure VLAN trunking and spanning tree protocols • establish VLANs over a wireless network • design and deploy remote access and network security.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where configuring advanced network switching may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing network switch configuration • direct observation of the candidate troubleshooting network problems • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN2209A Build and maintain a secure network • ICTTEN4212A Apply advanced routing protocols to network design • ICTTEN4214A Install and maintain a wide area network.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS may include:

- awards provisions
- hazardous substances and dangerous goods codes
- legislation
- local safe operation procedures
- material safety management systems

RANGE STATEMENT	
	<ul style="list-style-type: none"> • protective equipment.
<i>Environmental requirements</i> may include:	<ul style="list-style-type: none"> • dust • excessive energy and water use • excessive noise • fume • gas • liquid waste • smoke and fugitive emissions • solid waste • vapour.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • customer • manager • network manager • site engineer • supervisor.
<i>Enterprise procedures</i> may include:	<ul style="list-style-type: none"> • instructions: <ul style="list-style-type: none"> • designs • drawings • job sheets • plans • manufacturer's specifications • operational procedures • reporting and communication • use of tools and equipment.
<i>Essential configuration information</i> may include:	<ul style="list-style-type: none"> • installation software • installation and configuration documentation • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords • security access codes • troubleshooting reports.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for the installation and maintenance of a network with WAN access	1.1. Prepare for given work according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> with <i>appropriate personnel</i> 1.2. Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3. Determine nature and scope of the network from job briefs or appropriate personnel 1.4. Select and obtain network hardware, software, WAN protocol and technology requirements according to <i>enterprise procedures</i> 1.5. Obtain operating instructions, manuals, installation procedures, hardware and software testing methodologies and testing resources 1.6. Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Install and maintain a WAN accessible network	2.1. Determine <i>network addressing scheme</i> for network connectivity and confirm using <i>calculations</i> 2.2. Identify security threats and initiate control measures according to enterprise procedures 2.3. Set up and configure the network to provide WAN access according to manufacturer's specifications and enterprise procedures 2.4. Use hardware and software analysis and diagnostic methodologies to test network connectivity
3. Complete and document WAN network installation	3.1. Restore worksite to safe condition according to established safety procedures 3.2. Record and store <i>essential installation information</i> according to enterprise procedures 3.3. Notify appropriate personnel about the completion of the task according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to:
 - identify customer requirements
 - liaise with customers and peers to achieve outcomes
- literacy skills to read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot client network problems using industry standard troubleshooting methodologies and tools
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - determine and select an appropriate WAN configuration
 - facilitate network connectivity by installing and configuring a WAN communication protocols:
 - frame relay
 - high-level data link control (HDLC)
 - link access procedure, balance (LAPB)
 - point-to-point (PPP)
 - implement teleworker services and network security measures
 - use tools and equipment

Required knowledge

- enterprise OHS procedures
- IP addressing services and network scaling
- methods of securing network services including access control lists
- Open Systems Interconnection layered communication model
- requirements to provide teleworker network services
- tools and equipment correct usage
- WAN link protocols:
 - frame relay

REQUIRED SKILLS AND KNOWLEDGE

- HDLC
- LAPB
- PPP
- WAN troubleshooting methodologies and analysis and diagnostic tools

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan the installation of a WAN accessible network • select and apply WAN link protocols • configure IP addressing across the WAN • troubleshoot WAN communication issues • install WAN access security measures.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where installation and maintenance of a WAN may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and maintaining a WAN • direct observation of the candidate troubleshooting WAN communication problems • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN2209A Build and maintain a secure network • ICTTEN4212A Apply advanced routing protocols to network design • ICTTEN4213A Configure and troubleshoot advanced network switching.

ICTTEN4215A Install and configure internet protocol TV in a service provider network

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to install and configure a multi-protocol label switching (MPLS) network for internet protocol TV (IPTV). This includes secure Core and Access Networks for the service provider.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to technical staff installing an internet protocol (IP) service provider network for the delivery of emerging technologies for IPTV using multicast (broadcast) and unicast video on demand (VoD) streaming.</p> <p>Relevant job roles include installer of Next Generation Networks (NGN). These IP networks provide fast internet, voice over internet protocol (VoIP), IPTV and internet TV services.</p>
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to implement an IPTV service provider	1.1. Obtain and clarify occupational health and safety (OHS requirements) and risk control measures and procedures for a given work area with appropriate personnel 1.2. Use the topology of an IPTV network and design plans to locate the network elements for video over broadband 1.3. Select network elements to provide optimum video delivery service 1.4. Obtain configuration instructions for the network elements
2. Implement an IPTV network to meet business requirements	2.1. Configure an IP-MPLS core network overlaying the IP network to deliver IPTV 2.2. Implement VoD application to meet bandwidth requirements and quality of service (QoS) requirements for commercial viability of IPTV network 2.3. Install and configure video service routers for content delivery system (CDS) applications to support TV streaming and internet streaming with session shifting for follow-me or mobile video facility 2.4. Produce the addressing scheme and protocols required for IP multicasting used in the IPTV network 2.5. Configure security measures in an IPTV network to protect against security threats 2.6. Configure the label switch routers (LSR) to provide secure methods of transporting IP packets using layer 2 protocols in an MPLS network 2.7. Configure the MPLS-TE (traffic engineering) to provide routing on diverse paths to avoid congestion and guarantee bandwidth services 2.8. Troubleshoot network according to manufacturer's specifications and enterprise procedures
3. Build and configure CDN architecture network	3.1. Build the content delivery network (CDN) architecture overlaying the routing and switching architecture of an IP network to deliver internet TV to Internet devices 3.2. Use routing and switching infrastructure to enable CDN share characteristics of each element to produce network functionality 3.3. Install and configure web cache communication protocol (WCCP) on the router to redirect traffic flows in real-time to reduce transmission costs and download times
4. Complete and document network	4.1. Restore worksite to safe condition according to established safety procedures

ELEMENT	PERFORMANCE CRITERIA
installation	4.2. Record and store <i>essential installation information</i> according to enterprise procedures 4.3. Notify appropriate personnel about the completion of the task according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer to determine needs
- literacy skills to interpret technical specifications and related documentation
- project planning skills to set benchmarks and identify scope
- problem solving skills to resolve a predictable range of network problems
- numeracy skills to produce IP addressing schemes
- technical skills to:
 - deploy point-to-multipoint video broadcast over IP-MPLS network
 - dimension network parameters
 - evaluate competing video over broadband networks
 - implement and verify implement and verify:
 - border gateway protocol (BGP)
 - enhanced interior gateway routing protocol (EIGRP)
 - flash
 - hypertext transfer protocol (HTTP)
 - internet group management protocol (IGMP)
 - open shortest path first (OSPF)
 - real time streaming protocol (RTSP)
 - routing information protocol (RIP)
 - web cache communication protocol (WCCP) operations
 - implement MPLS architecture across a WAN environment
 - implement secure video streaming (unicast) over MPLS network

Required knowledge

- competing video delivery over broadband networks
- current industry-accepted hardware and software products
- networking technologies incorporating detailed knowledge of network operating

REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install relevant network hardware and software • configure and test the IPTV network according to specified guidelines • configure the LSR in an MPLS network • build and configure CDN architecture network • implement secure network.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where the installation and configuration of an IPTV network may be conducted • equipment currently used in industry • information on different protocols • relevant technical information, legislative requirements and other site and project-related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and configuring IPTV in a service provider network ensuring network security • direct observation of the candidate building and configuring CDN architecture network • direct observation of the candidate configuring the LSR in an MPLS network • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4126A Install and configure internet protocol TV in a home network • ICTTEN4198A Install, configure and test an internet

EVIDENCE GUIDE

protocol (IP) network

- ICTTEN4199A Install, configure and test a router
- ICTTEN4212A Apply advanced routing protocols to network design
- ICTTEN4213A Configure and troubleshoot advanced network switching.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>OHS requirements</i> may include:	<ul style="list-style-type: none"> • awards provisions • hazardous substances and dangerous goods codes • legislation • local safe operation procedures • material safety management systems • protective equipment.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • customer • network administrator • network manager • site engineer • supervisor.
<i>Topology of an IPTV network</i> may include:	<ul style="list-style-type: none"> • digital subscriber line access multiplexer (DSLAM) • head end servers • home gateway • media centres • media content servers • MPLS routers • MPLS switches • set top box.
<i>Network elements</i> may include:	<ul style="list-style-type: none"> • head end servers • media content servers • MPLS routers and switches • video service routers.
<i>Protocols</i> may include:	<ul style="list-style-type: none"> • IGMP • point to multipoint (p-to-mp) for IPTV • protocol independent multicast (PIM) • reverse path forwarding (RPF) • routing table protocol (RTP) • RTSP • session definition or data protocol (SDP) • session initiation protocol (SIP) • spanning-tree protocol (STP).
<i>Security measures</i> may include:	<ul style="list-style-type: none"> • digital signatures and certificates • encryption • integrity and authentication.
<i>Security threats</i> may include:	<ul style="list-style-type: none"> • botnets • distributed denial of service (DDoS)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fraud • hacking • malware.
<i>Layer 2 protocols</i> may include:	<ul style="list-style-type: none"> • asynchronous transfer mode (ATM) • Ethernet • frame relay (FR) • IGMP • packet over SONET (POS) • p-to-mp for IPTV • point-to-point protocol (PPP) unicast for VoD streaming • PIM • STP.
<i>MPLS network</i> may include location and type of:	<ul style="list-style-type: none"> • core label switch routers (Core LSR) • edge label switch routers (Edge LSR) • hosting servers for media content.
<i>Internet devices</i> may include:	<ul style="list-style-type: none"> • digital TV • media centre • mobile devices • PC.
<i>Network functionality</i> may include:	<ul style="list-style-type: none"> • application processing • caching • file access and sharing • multimedia delivery.
<i>Essential installation information</i> may include:	<ul style="list-style-type: none"> • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords • security access codes.

ICTTEN4229B Design, install and configure a customer smart technology network

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor change to unit title and other minor editorial changes.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, install and configure an enterprise smart technology network in a home or commercial environment. It involves testing and troubleshooting the smart technology network installation.

Smart technology network changes the focus from the physical infrastructure to the new world of virtual infrastructure. It uses the internet protocol (IP) home network to provide applications that are scalable and sustainable from an energy conservation aspect.

Scalability, cost savings, security, flexibility of infrastructure and energy consumption are significant factors when businesses considers smart technology network.

Smart technology network solutions support the application of Next Generation Technologies (NGN).

Application of the Unit

This unit applies to the design, installation and configuration of a smart technology network suitable for domestic or industrial enterprises using IP networking technology.

Relevant job roles include designer and installer of smart grid networks, IP networks, and sustainable networks. This includes maintaining and supporting smart grid networks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for the design and installation of a smart technology network</p>	<p>1.1 Prepare for given work according to occupational health and safety (OHS) and environmental requirements with appropriate personnel from the enterprise</p> <p>1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel</p> <p>1.3 Determine nature and scope of the smart technology network from customer specifications and appropriate personnel</p> <p>1.4 Obtain operating instructions, manuals, hardware and software testing methodologies</p> <p>1.5 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the work site</p>
<p>2. Design a customer smart technology network</p>	<p>2.1 Produce a smart technology network topology that is interoperable and scalable after considering customer requirements, technical specifications, physical and financial constraints and expansion projections</p> <p>2.2 Determine network devices and network resources according to enterprise procedures</p> <p>2.3 Produce the smart technology network design, including network security and network element configurations to meet design specifications and enterprise procedures</p>
<p>3. Install and configure a designed smart technology network</p>	<p>3.1 Install smart technology network hardware to topology design plan according to enterprise procedures</p> <p>3.2 Determine network addressing scheme for network connectivity and verify using calculations</p> <p>3.3 Configure network elements to perform the logical connection of the smart technology network topology with the network security features required</p> <p>3.4 Conduct connectivity and performance tests to verify that the network installation meets the design specification</p> <p>3.5 Troubleshoot the smart technology network and internet connectivity according to manufacturer specifications and enterprise procedures</p>
<p>4. Complete and document network design and installation</p>	<p>4.1 Restore work site to safe condition according to established safety procedures</p> <p>4.2 Record and store essential design and installation information according to enterprise procedures</p> <p>4.3 Notify appropriate personnel about the completion of the</p>

	task according to enterprise procedures
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise and negotiate with customers and peers to achieve design specifications
- literacy skills to:
 - develop network documentation and maintain network records
 - read and interpret enterprise procedures, manuals and specifications
- numeracy skills to interpret technical data
- planning and organising skills to plan and prioritise own work
- problem-solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - troubleshoot common network problems according to help desk procedures
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - follow enterprise OHS procedures
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - analyse the impact of applications on traffic flow in the network
 - apply network design methodologies to design networks that provide a range of services and applications found in larger networks
 - conduct a wireless site survey
 - determine customer requirements and a design specification
 - determine the impact of upgrading hardware and software on network functionality
 - identify the technical requirements, constraints and manageability issues for a given customer network requirement
 - install a network design
 - use tools and equipment.
 -

Required knowledge

- enterprise OHS procedures
- network design concepts:
 - business requirements
 - network topologies
 - physical and financial constraints
 - security
 - wired or wireless options
- network requirements:
 - applications

- lifecycle
- manageability
- quality of service
- open systems interconnect (OSI) layered communication model
- tool and equipment use
- troubleshooting:
 - impact of network failure
 - maintenance
 - troubleshooting methodology.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine customer requirements • design a smart technology network that uses advanced networking techniques • install a smart technology network according to design specification • configure network devices to meet design functionality • document smart technology network design, installation and configuration.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where design and installation of a smart technology network may be conducted • use of tools, equipment and materials currently used in industry • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate designing, installing and configuring a smart technology network • review of documents prepared by the candidate detailing design and installation • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p>

	<ul style="list-style-type: none">• ICTTEN2207A Install and configure a home or small office network• ICTTEN2208A Install and configure a small to medium business network• ICTTEN4210A Implement and troubleshoot enterprise routers and switches. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS may include:	<ul style="list-style-type: none"> • hazardous substances and dangerous goods codes • legislation • local safe operation procedures • material safety management systems • protective equipment.
Environmental requirements may include managing:	<ul style="list-style-type: none"> • dust • excessive energy and water use • excessive noise • fume • gas • liquid waste • smoke emissions • solid waste • vapour.
Appropriate personnel may include:	<ul style="list-style-type: none"> • customer • manager • network manager • site engineer • supervisor.
Smart technology network may refer to:	<ul style="list-style-type: none"> • domestic: <ul style="list-style-type: none"> • home automation: <ul style="list-style-type: none"> • climate control • light switches • power • thermostats • window shade • wireless control • in-home patient monitoring • internet protocol TV (IPTV) • home computer network • home security • smart sprinkler • industrial:

	<ul style="list-style-type: none"> • building automation • commercial lighting (wireless control) • heating, ventilation and air conditioning (HVAC) energy management • industrial security • plant monitoring: <ul style="list-style-type: none"> • infra-red • pressure settings • temperature control • smart sprinkler • warehousing.
<i>Smart technology network topology</i> may refer to:	<ul style="list-style-type: none"> • physical and logical interconnection between network devices: <ul style="list-style-type: none"> • bus • mesh • ring • star • tree.
<i>Network devices</i> may include:	<ul style="list-style-type: none"> • interface units • IP network • router • sensors • server • switch.
<i>Network resources</i> may include:	<ul style="list-style-type: none"> • files • printers • software.

<i>Network addressing scheme</i> may include:	<ul style="list-style-type: none"> • dynamic • static • subnet.

<p><i>Calculations</i> may include:</p>	<ul style="list-style-type: none"> • binary addition • binary conversion • binary division • binary multiplication • binary number system • binary subtraction.
<p><i>Essential design and installation information</i> may include:</p>	<ul style="list-style-type: none"> • configuration • design • installation • installation software • IP addressing schemes • logical and physical diagrams • network administrator codes • passwords • security access codes • troubleshooting reports.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4241A Design network projects

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and design projects for access, building and core telecommunications networks.

The unit includes legacy, current and emerging technologies and practices. It also includes use of access network deployment data, technology, equipment, capacity management and network management information sources.

The project may be for a new installation or to upgrade the technology or the capacity of an existing network or subsystem to facilitate convergence to the next generation network (NGN).

Application of the Unit

Technical staff and their subcontractors from private and public organisations apply the skills and knowledge in this unit. They combine technical planning and design skills with broader organisational skills to plan and design projects for a service provider, such as a major carrier or other communications service providers.

Technical officers, communications workers or engineers may be responsible for small projects or parts of larger projects on NGN in the deployment of copper, wireless, hybrid fibre coaxial (HFC), fibre to the x (FTTx) and fibre networks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Analyse different types of network technologies</p>	<p>1.1 Determine <i>network</i> characteristics using <i>network information sources</i></p> <p>1.2 Select techniques to provide service to greenfields, brownfields and rehabilitation projects for access networks</p> <p>1.3 Select techniques to provide for new service, capacity expansion and equipment recovery projects for building and core networks</p> <p>1.4 Produce a brief on how <i>network architecture components</i> relate to the larger network and their impact on the work</p> <p>1.5 Develop an installation activity schedule that complies with relevant regulations and standards to minimise disruption to the workplace</p> <p>1.6 Evaluate availability of <i>equipment</i> and <i>technologies</i> and establish compatibility with existing network equipment</p>
<p>2. Apply deployment and construction practices for network technologies</p>	<p>2.1 Review conduit and jointing chamber standards and practices for the access network</p> <p>2.2 Examine standards, practices and requirements for locating telecommunications infrastructure in the access network</p> <p>2.3 Examine standards, practices and requirements for locating and standing racks, cabinets and supporting infrastructure</p> <p>2.4 Examine capacity and practices for cabling and patching twisted-pair, coaxial and fibre distribution frames</p>
<p>3. Review network standards and prepare a draft design</p>	<p>3.1 Review customer's <i>network deployment rules</i> and apply to a network design</p> <p>3.2 Produce a preliminary plan or design on the deployment of the network that maintains integrity of access, building and core networks</p> <p>3.3 Establish a solution for anticipated constraints through discussions with appropriate personnel</p> <p>3.4 Review plan to ensure that it complies with requirements of <i>applicable legislation, codes, regulations and standards</i> required when working on network, and where appropriate make adjustments</p> <p>3.5 Produce final project design that includes recommendations agreed with the customer</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - evaluate different types of technical data
 - interpret data results
 - interpret technical and non-technical documentation and write summary reports in required formats
 - select and compare benefits and limitations of access equipment
- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - negotiate approvals and contract arrangements with suppliers, contractors, customers and consultants
 - negotiate with customers, stakeholders and colleagues
 - work in a team environment for organisational objectives
- literacy skills to:
 - document technical requirements and procedures
 - interpret technical specifications and related documentation
 - read technical reports and incorporate findings in designs
- numeracy skills to:
 - calculate hazardous induction and earth potential rise (EPR) zones
 - calculate transmission requirements and link budgets
 - develop accurate costing for designs
 - make engineering calculations for designs
- planning and organising skills to:
 - balance priorities of conflicting demands
 - develop cost-effective designs
 - plan workload
 - prioritise and monitor own work
 - schedule and coordinate activities of other parties
- problem-solving skills to account for unexpected variations to requirements
- technical skills to:
 - apply customer practices and procedures to project designs
 - apply network code systems
 - assign activity coding
 - produce CAD or other electronic drawings
 - read plans.
 -

Required knowledge

- access network issues and challenges
- commercial considerations of access network deployment

- common network topologies
- compatibility issues of technology and equipment
- criteria for exemption processes
- enterprise deployment rules and rationale
- major equipment components of modern access architecture
- monitoring techniques to manage the access network
- network architectures and geographical categorisation
- network capacity and capability management
- network capacity limitation of various platforms
- network information sources
- network technology and equipment
- product capability and availability
- telecommunications legislation, Acts, regulations and their sources.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify and document the most suitable network technology to be deployed for a given requirement • apply established planning, design and management techniques for the deployment of a project • produce a project design that complies with the techniques, rules and standards of the deployed network.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • network planning and design documentation and other site-related documentation • equipment specifications • live network or training facilities with simulated network • organisational guidelines • access to relevant standards and practices documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate planning, designing and managing the deployment of access network architecture • review of reports completed by the candidate for differing examples of access networks • review of final deployment plan prepared by the candidate outlining recommendations for the customer • oral or written questioning to assess knowledge of equipment and technologies as used within the access network • presentation by candidate of their considerations of the standards and practices relevant to the design.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• ICTNPL4109A Evaluate the capability of access networks. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Network may refer to:</p>	<ul style="list-style-type: none"> • broadband: <ul style="list-style-type: none"> • wireless fidelity (WiFi) • world interoperability for microwave access (WiMAX) • copper: <ul style="list-style-type: none"> • coaxial • hybrid fibre coaxial (HFC) • twisted-pair • digital services: <ul style="list-style-type: none"> • asymmetrical digital subscriber lines (ADSL) • digital subscriber lines (DSL) • next generation network (NGN): <ul style="list-style-type: none"> • broadband access • data transfer • internet protocol (IP) based systems • internet protocol private branch exchange (IP PBX) • internet protocol TV (IPTV) • mobile data • mobile telephony • multimedia • video • voice over internet protocol (VoIP) • optical: <ul style="list-style-type: none"> • fibre to the node (FTTN) • fibre to the premises (FTTP) • FTTx • HFC • wireless networks: <ul style="list-style-type: none"> • cellular • microwave • radio • satellite.
<p>Network information</p>	<ul style="list-style-type: none"> • network management databases for:

<i>sources</i> may include:	<ul style="list-style-type: none"> • capacity assessment data • network performance data • traffic dimensioning data • network management tools.
<i>Network architecture components</i> may include:	<ul style="list-style-type: none"> • copper network: <ul style="list-style-type: none"> • copper cable • lead-in • lightning protection • line power supply • loading coils • main distribution frame • pair gain system • ethernet broadband remote access server (EBRAS) • HFC network • IP edge • optical: <ul style="list-style-type: none"> • add/drop multiplexer • broadband passive optical network (BPON) • cross connect unit • distribution/lead-in multi-port (DLM/LM) • fibre access points • fibre distribution hub (FDH) • dense wavelength division multiplexing (DWDM) systems • cloud network • gigabit passive optical network (GPON) • high density/optical fibre distribution frame (HD/OFDF) • home optical network terminal • optical distribution network • optical fibre • optical receiver • packet optical line terminal (P-OLT) • video optical line terminal (V-OLT) • wave division multiplexing (WDM) • wireless network: <ul style="list-style-type: none"> • antennae • dish • headend • hubs and nodes

	<ul style="list-style-type: none"> • radio frequency (RF) amplifier • radio towers and huts • RF transmitters and receivers • satellite • tap • waveguide • video service centre.
<p>Equipment may include:</p>	<ul style="list-style-type: none"> • digital • IP-based • optical: <ul style="list-style-type: none"> • add/drop multiplexers • amplifiers • filters • receivers • splitters/combiners • switches • transmitters • wireless: <ul style="list-style-type: none"> • amplifiers • filters • microwave • receivers • RF broadband • satellite • transmitters.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4242A Conduct site surveys to identify carrier installation requirements

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to survey a site to identify and document installation requirements for telecommunications infrastructure projects.

Application of the Unit

Technical staff who identify requirements for carrier telecommunications installations apply the skills and knowledge in this unit.

This unit applies to access, building and core installation projects within a carrier access network. It may be applied to carrier, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN) and multimedia.

This unit is one in a sequence of units that cover network design activities, including:

- design drawings and specifications
- designing a dense wavelength division multiplexing (DWDM) system
- designing infrastructure
- estimating and quoting
- site surveys.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Obtain access to work site	<p>1.1 Notify parties if necessary to arrange access to site to discuss installation requirements and identify <i>carrier network systems</i></p> <p>1.2 Assess site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures</p> <p>1.3 Use <i>network information systems</i> to obtain <i>planning data</i></p>
2. Identify existing infrastructure	<p>2.1 Confirm details of the installation with stakeholders</p> <p>2.2 Verify site conditions and building construction</p> <p>2.3 Locate and record existing facilities and systems</p> <p>2.4 Confirm installation locations and identify <i>barriers to planned network extension</i></p> <p>2.5 Integrate <i>existing network</i> and floor plans into documentation where available</p>
3. Integrate existing infrastructure into design brief	<p>3.1 Review existing plans, drawings and databases against the design brief</p> <p>3.2 Calculate capacity of existing facilities against proposed usage to ensure appropriate design decisions for new installation</p> <p>3.3 Incorporate all data into new installation design</p> <p>3.4 Mark up plans and prepare report on new installation design</p> <p>3.5 Develop contingency plans for anticipated constraints</p>
4. Review design for compliance with standards and legislation	<p>4.1 Examine standards, practices and requirements for locating telecommunications infrastructure in the access network</p> <p>4.2 Review installation design to ensure compliance with requirements of federal, state and local regulations, <i>relevant legislation</i>, codes and standards</p> <p>4.3 Initiate any special studies or investigations necessary for the completion of the project</p>
5. Complete required reports and documentation	<p>5.1 Complete required documents promptly and accurately according to <i>planning parameters</i></p> <p>5.2 Obtain carrier confirmation of documented requirements</p> <p>5.3 Distribute design documentation to stakeholders promptly</p> <p>5.4 Obtain <i>project plan</i> sign-off from carrier</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify details relating to the project from approved network plan
- communication skills to discuss project brief with the customer
- learning skills to:
 - develop and study planning options, considering present and future needs
 - identify barriers to plan realisation
- literacy skills to write project briefs
- numeracy skills to:
 - analyse site survey data
 - develop cost estimates and operating budgets according to enterprise policy
 - undertake cost-benefit studies to inform the decision-making process
- planning skills to review current and new technology, facilities and features when developing options
- problem-solving skills to:
 - address and analyse specific customer requirements
 - assess current access network conditions
- research skills to:
 - analyse impact on planning processes
 - establish cabling requirements
 - evaluate requirements of relevant legislation and associated operational codes
 - inspect installed equipment
 - obtain and evaluate information relating to new technology or technology features
 - obtain geographical information
- technical skills to apply the three phases of project management to the project brief.
-

Required knowledge

- detailed knowledge of:
 - content and format of project briefs, reports and charters
 - procedures for developing cost estimates and operating budgets according to enterprise policy
 - project management software systems
 - telecommunications carrier infrastructure
 - theory of project management
- overview knowledge of:
 - current and emerging challenges facing technology
 - influence of local and international economic conditions and financial authorities on the telecommunications industry
 - legislation, codes of practice and other formal agreements that impact on the work activity

- manufacturer requirements for safe operation of equipment
- procedures for responding to typical issues and challenges that occur on site, including:
 - barricading
 - damage to site
 - obtaining access
 - problematic weather
 - safety management
 - vegetation and mud
 - waste management.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate existing infrastructure on an installation site • integrate existing infrastructure into an installation design • develop design specifications for an installation project • engage stakeholders and carriers in design approval process.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network planning area, systems and deployment rules and standards • relevant databases, licensing requirements and other site-related procedures.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking an assessment of an access network • review of documents prepared by the candidate, capturing the network design requirements for a range of project types • review of solutions developed by the candidate that address network shortfalls • oral or written questioning to assess knowledge of planning the access network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4108A Plan the deployment of access network architectures • ICTNPL4109A Evaluate the capability of access networks.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Carrier network systems</i> may refer to:</p>	<ul style="list-style-type: none"> • broadband: <ul style="list-style-type: none"> • wireless fidelity (WiFi) • world interoperability for microwave access (WiMAX) • copper: <ul style="list-style-type: none"> • coaxial • hybrid fibre coaxial (HFC) • twisted-pair • digital services: <ul style="list-style-type: none"> • asymmetrical digital subscriber lines (ADSL) • digital subscriber lines (DSL) • internet protocol (IP) network: <ul style="list-style-type: none"> • computer • IP private branch exchange (IP PBX) • internet protocol TV (IPTV) • voice over internet protocol (VoIP) • optical: <ul style="list-style-type: none"> • fibre to the x (FTTx) • fibre to the node (FTTN) • fibre to the premises (FTTP) • HFC • point-to-point network • point-to-multipoint network • wireless networks: <ul style="list-style-type: none"> • cellular • microwave • radio • satellite.
<p><i>Network information systems</i> may include:</p>	<ul style="list-style-type: none"> • network management databases for: <ul style="list-style-type: none"> • capacity assessment data • network performance data • traffic dimensioning data • network management tools.

Planning data may relate to:	<ul style="list-style-type: none"> • current and proposed network growth • demographic growth • traffic quantity and flow.
Barriers to planned network extensions may include:	<ul style="list-style-type: none"> • building availability • environmental considerations • financial constraints • government policy • heritage legislation restrictions • land acquisition constraints • material availability • planning approvals • technology availability.
Existing network may include:	<ul style="list-style-type: none"> • access network technology and exchange switching and transmission systems • boundaries between access and inter-exchange networks.
Relevant legislation may include:	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standard TS 14 • Australian standards applying to radiation hazards • heritage legislation • industrial awards and conditions • International Standards ISO 9001:2008 • International Telecommunications Union (ITU) recommendations • National Parks Act • Privacy Act • state, territory and federal Environment Acts • Telecommunications Act and relevant codes • WHS.
Planning parameters may relate to:	<ul style="list-style-type: none"> • network criteria cover: <ul style="list-style-type: none"> • network change • network growth • network reduction • sites, buildings and structures • organisational policies, procedures and guidelines • planning priorities driven by: <ul style="list-style-type: none"> • customer demand • enterprise policy • legislative requirements • marketing initiatives • network conditions • revenue projections

	<ul style="list-style-type: none">• planning processes, documented within enterprise process manuals.
<i>Project plan</i> may include:	<ul style="list-style-type: none">• activities• finance• labour• materials.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4243A Prepare design drawings and specifications for telecommunications installations

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare design drawings and specifications for a telecommunications installation.

Application of the Unit

Technical staff who prepare design drawings and specifications for a telecommunications installation apply the skills and knowledge in this unit.

This unit applies to access, building and core network installations within the carrier network. It may be applied to carrier, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

This unit is one in a sequence of units that cover network design activities, including:

- design drawings and specifications
- designing a dense wavelength division multiplexing (DWDM) system
- designing infrastructure
- estimating and quoting
- site survey.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Gather information on existing and proposed installation	1.1 Inspect site to confirm plans where possible 1.2 Review existing <i>plans, drawings and databases</i> against the design brief
2. Determine installation options	2.1 Identify installation options from the design brief and the customer 2.2 Assess installation options against customer requirements and requirements of <i>relevant legislation, codes, regulations and standards</i> 2.3 Establish and assess the cost of options against customer's budget 2.4 Select most suitable option based on function, cost, standards and customer deployment rules
3. Prepare and supply drawings and specifications	3.1 Prepare clear and accurate installation drawings indicating proposed facilities and services 3.2 Prepare detailed <i>design specifications</i> for the network installation that include scheduled and non-scheduled codes to facilitate costing 3.3 Provide drawings and specifications to relevant parties and file copies for later reference according to <i>company policies</i>
4. Verify specifications with customer	4.1 Verify prepared documentation with customer 4.2 Obtain authorisation and approval from customer to proceed according to company policy 4.3 Issue design to the field with authority to construct

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret drawings related to:
 - network coding system and identifiers
 - network layouts
 - frame locations
 - network locations
- communication skills to liaise with internal and external stakeholders on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to:
 - take and analyse measurements
 - prepare accurate costings
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics challenges
- task-management skills to:
 - adhere to safety requirements
 - work systematically with required attention to detail
- technical skills to prepare design drawings and specifications.
-

Required knowledge

- detailed knowledge of carrier network practices, procedures and systems, including databases and deployment rules
- legislation, codes of practice and other formal agreements that impact on the work activity, including schedule of rates and contract requirements
- Telecommunications Act and codes of practice
- procedures for responding to typical issues and challenges that occur on site, including:
 - barricading
 - damage to site
 - obtaining access
 - problematic weather
 - safety management
 - vegetation and mud
 - waste management.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine installation options • produce schematics and plan drawings • access database and knowledge systems for network information • produce design drawings and specifications • verify specifications with customer.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where network installation may be conducted • use of equipment currently used in industry • relevant regulations, company policies and cabling specifications that impact on network installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a design project completed by the candidate • oral or written questioning to assess knowledge of design options • direct observation of the candidate assessing design requirements • review of design drawings and specification for a network installation prepared by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4244A Estimate and quote for carrier telecommunications equipment installations

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to estimate and quote for carrier telecommunications equipment installation.

It involves preparing detailed estimates and quotes and updating schematic drawings and specifications.

Application of the Unit

Technical staff who estimate and quote for carrier equipment installation apply the skills and knowledge in this unit.

This unit applies to indoor and outdoor installation within a carrier network. It may be applied to large scale commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), multimedia, fibre to the x (FTTx), radio and satellite installations.

This unit is one in a sequence of units that cover network design activities including:

- design drawings and specifications
- designing a dense wavelength division multiplexing (DWDM) system
- designing infrastructure
- estimating and quoting
- site survey.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Confirm and update schematic drawings and specifications</p>	<p>1.1 Review existing specifications and drawings for completeness</p> <p>1.2 Prepare additional drawings and specifications for installation if required</p> <p>1.3 Compare drawings and specifications with design brief to confirm requirements</p> <p>1.4 Confirm cable and location details with the carrier</p>
<p>2. Cost resources and establish availability</p>	<p>2.1 Cost scheduled items using schedule of rates</p> <p>2.2 Obtain quotes and supply dates for non-scheduled items</p> <p>2.3 Estimate labour costs based on company practices</p> <p>2.4 Negotiate costing with suppliers</p> <p>2.5 Cross-check costings to ensure supply proposal matches <i>carrier specification</i></p>
<p>3. Prepare estimates for carrier quote</p>	<p>3.1 Prepare estimates allowing for <i>contingencies</i> during installation and requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>3.2 Ensure estimates will return a profit on installation where appropriate</p>
<p>4. Prepare quote and confirm with carrier</p>	<p>4.1 Prepare a project installation quote from estimates to meet carrier installation requirements</p> <p>4.2 Negotiate <i>changes and variations</i> to meet carrier and company needs</p>
<p>5. Obtain approval and initiate installation project</p>	<p>5.1 Obtain carrier's approval for project design drawings and estimate</p> <p>5.2 Issue design drawings and specifications with authority to construct</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret drawings related to carrier's telecommunications equipment
- communication skills to liaise and negotiate with carriers and suppliers on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to estimate and quote for telecommunications installation
- problem-solving skills to solve equipment and logistics challenges
- task-management skills to:
 - adhere to safety requirements
 - work systematically with required attention to detail
- technical skills to estimate requirements for carrier telecommunications equipment installation.
-

Required knowledge

- features of carrier telecommunications equipment
- manufacturer requirements for safe operation of equipment
- procedures for responding to typical issues and challenges that occur on site, including:
 - barricading
 - damage to site
 - obtaining access
 - problematic weather
 - safety management
 - vegetation and mud
 - waste management
- processes and techniques required to prepare plans, estimates and quotes for installations
- sources of legislation, codes of practice and other formal agreements relating to installing carrier telecommunications equipment that impact on the work activity
- typical issues and challenges that occur when dealing with carriers.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare detailed estimates, and updated schematic drawings and specifications, including material and labour costs for telecommunications installations • negotiate with contractors on material availability and pricing for carrier network installations • complete detailed quotes for installations that allow for changes and variations • prepare and confirm quote with carrier.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • relevant databases, licensing requirements and other site-related documentation • sites on which estimates and quotes may be conducted.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of written estimates and quotes with completed documentation • oral or written questioning on the estimate and quote process.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2017B Alter services to existing cable system. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Carrier specification</i> may include:</p>	<ul style="list-style-type: none"> • cable • connectors • cost per cable length installed per outlet • equipment types: <ul style="list-style-type: none"> • bandwidth managers • digital subscriber line (DSL): <ul style="list-style-type: none"> • asymmetrical DSL (ADSL) • digital broadcasting • computer telephony integration (CTI) technologies • modems • network equipment • private automatic branch exchange (PABX) • radio frequency (RF) equipment • single line telephones • telephone systems • radio systems • optical systems, including FTTx • video and data • existing builders or electrical contractors schedule • frames • requirements for: <ul style="list-style-type: none"> • equipment • labour • materials • other resources • scope of works • support system • wireless networks: <ul style="list-style-type: none"> • cellular • microwave • radio • satellite • timeframes.
---	---

<p><i>Contingencies</i> may include:</p>	<ul style="list-style-type: none"> • need for integration with existing building works schedules where available • requirements for installation method or of any proprietary system being installed • relevant constraints.
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • Australian Communications Industry Forum (ACIF) standards and codes • cabling security codes and regulations • compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5, 6, 6A, 7 or 7A and unshielded twisted pairs (UTP) • Environment Protection Acts • fire regulations • Institute of Electrical and Electronics Engineers (IEEE) • mining legislation • noise abatement and heritage legislation • relevant international standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006 • Telecommunications Act and code of practice • Trade Practices Act • WHS Acts and relevant codes and standards.
<p><i>Changes and variations</i> may include:</p>	<ul style="list-style-type: none"> • availability • delivery • disputes • insurance • maintenance • network/system security implications • preparation of manuals • restricted site access

	<ul style="list-style-type: none">• testing requirements• time penalties.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4245A Design infrastructure for telecommunications network installations

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design supporting infrastructure for telecommunications network installations.

This includes carrier grade switching, transmission and access equipment and associated media, power and monitoring equipment and alarm systems, fibre distribution hubs (FDHs), and remote power feeds.

Application of the Unit

Field officers, design technicians and technical supervisors from carriers, contractors and other service providers apply the skills and knowledge in this unit.

This unit may apply to switching, transmission and radio networks and the various transmission paths, including cable, optical fibre, radio, microwave and satellite.

This unit is one in a sequence of units that cover network design activities including:

- design drawings and specifications
- designing a dense wavelength division multiplexing (DWDM) system
- designing infrastructure
- estimating and quoting
- site survey.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.

If working at heights, achievement of the unit ‘CPCPCM2015A Work safely on roofs’ from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for design of infrastructure work	<p>1.1 Review preparation to ensure work complies with requirements of relevant legislation, codes, regulations and standards</p> <p>1.2 Notify customer to arrange site access and obtain plans and specifications</p> <p>1.3 Conduct site survey to verify that infrastructure design requirements can be met</p> <p>1.4 Identify site hazards and notify appropriate personnel to make site safe</p> <p>1.5 Develop a design activity schedule to minimise disruption to the workplace according to relevant regulations and standards</p> <p>1.6 Discuss material supplies, safety equipment, resources, tools and test equipment with the construction group so that they are available when required for installation</p>
2. Design network equipment infrastructure	<p>2.1 Prepare infrastructure designs according to electrical safety and work health and safety (WHS) and environmental requirements after consultation with operational staff</p> <p>2.2 Design metal superstructure to house equipment according to manufacturer specifications</p> <p>2.3 Design cable pathways, including cable distribution frames and support materials, according to specifications</p>
3. Design power infrastructure	<p>3.1 Design power supply and earthing according to specifications and standard electrical practices</p> <p>3.2 Design battery and rectifier equipment for project according to manufacturer and WHS requirements</p> <p>3.3 Design high Ohmic distribution (HOD) and associated power distribution systems</p>
4. Design and monitor DC power distribution work	<p>4.1 Design power distribution work to meet electrical safety requirements and certifications</p> <p>4.2 Monitor electrical work by qualified personnel to ensure compliance with installation plan</p> <p>4.3 Identify and rectify faults where possible or escalate according to enterprise policy</p>
5. Complete documentation and restore site	<p>5.1 Attach infrastructure labels and designations according to enterprise requirements</p> <p>5.2 Complete inspection sheets and declare asset ready for next</p>

	<p>stage of installation using appropriate sign-off documentation</p> <p>5.3 Clean up and prepare site in readiness for next installation phase</p> <p>5.4 Notify carrier and obtain sign-off</p>
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and evaluate most effective technical solutions
- communication skills to:
 - liaise with carriers to ensure requirements are known
 - negotiate approvals and contract arrangements with suppliers and contractors
- literacy skills to:
 - document technical requirements and procedures
 - interpret technical specifications and related documentation
- numeracy skills to calculate budget requirements and limitations
- planning and organising skills to:
 - make site access and equipment delivery arrangements
 - set out project requirements and priorities
- problem-solving skills to account for unexpected variations to requirements
- technical skills to:
 - perform cabling and terminating designs
 - use design tools to:
 - affix supports, cable trays and racks to surfaces
 - assemble infrastructure
 - work with construction materials.
 -

Required knowledge

- cabling types, connectors and cabling structures
- common carrier telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- current legislation relating to installation of telecommunications equipment and connection to carrier services
- environmental impacts, including options for green ICT installations
- interface and interconnect solutions
- network power requirements and electrical safety
- network topologies
- overview knowledge of network and transmission equipment
- warranty information for equipment supplies and contractor work guarantees
- WHS requirements for:
 - confined spaces
 - electrical safety
 - heights
 - lifting
 - materials handling
 - physical hazards.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • conduct a site survey to identify infrastructure features, including: <ul style="list-style-type: none"> • potential earthing locations • cable routes • locations for cables trays, data cabinets, telecommunication enclosures, and distributors • design infrastructure for access network • design protective earth and functional earth installations • design power infrastructure • design and monitor DC power distribution work.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where installation of supporting infrastructure may be conducted • use of plant, tools and equipment currently used in industry • relevant regulatory and equipment documentation that impacts on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate designing metal superstructure to house equipment • direct observation of the candidate designing protective earth and functional earth installations • review of design drawings prepared by the candidate • oral or written questioning to assess knowledge of design issues, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• ICTNPL4247A Apply compliance requirements to telecommunications work• ICTTEN4241A Design network projects• ICTTEN4242A Conduct site surveys to identify carrier installation requirements• ICTTEN4243A Prepare design drawings and specifications for telecommunications installations• ICTTEN4244A Estimate and quote for carrier telecommunications equipment installations• ICTTEN4246A Design dense wavelength division multiplexing installations. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN4246A Design dense wavelength division multiplexing installations

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design a dense wavelength division multiplexing (DWDM) system in optical networks.

Application of the Unit

Telecommunications technical staff who design systems for the installation of long haul or metropolitan area DWDM equipment apply the skills and knowledge in this unit.

This unit is one in a sequence of units that cover network design activities, including:

- design drawings and specifications
- designing a DWDM system
- designing infrastructure
- estimating and quoting
- site survey.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Obtain access to work site safely and with authority from site owner</p>	<p>1.1 Obtain and review DWDM installation brief</p> <p>1.2 Determine <i>site</i> access requirements</p> <p>1.3 Notify parties if necessary to arrange access to site to discuss DWDM installation requirements</p> <p>1.4 Assess site-specific safety requirements and enterprise work health and safety (WHS) processes and procedures</p>
<p>2. Prepare to install design DWDM units</p>	<p>2.1 Survey location for DWDM installation and scope the installation parameters</p> <p>2.2 Identify suitable location for DWDM <i>equipment racks</i></p> <p>2.3 Determine number and location of shelves and cards in the racks</p> <p>2.4 Determine capacity of the optical distribution frames (ODFs), patching and network management system (NMS) connections for the installation</p> <p>2.5 Determine <i>power feed options</i></p>
<p>3. Design DWDM units and associated cabling</p>	<p>3.1 Design DWDM racks, including locations and layout</p> <p>3.2 Examine standards, practices and requirements for designing DWDM systems</p> <p>3.3 Design DWDM shelf and card positions from customer and manufacturer documents</p> <p>3.4 Design supporting <i>patch panel</i> and jumpering schemes</p> <p>3.5 Include appropriate <i>ancillary equipment and connections</i> in design specifications</p> <p>3.6 Prepare detailed design drawings for racks, shelves and cards from manufacturer and carrier documents</p> <p>3.7 Prepare detailed design drawings for patching, jumpering and power feeds from manufacturer and carrier documents</p>
<p>4. Review design for compliance with standards and legislation</p>	<p>4.1 Confirm that DWDM installation design meets the brief</p> <p>4.2 Review installation design to ensure compliance with requirements of federal, state and local regulations, relevant <i>legislation</i>, codes and standards</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation
- technical skills to:
 - assemble and secure standard telecommunications equipment rack, associated ironwork and optical fibre support ducting
 - clean optical fibre connector
 - examine optical fibre connector for contamination and assess whether cleaning is required
 - prepare and connect power and ground wires
 - use a digital multimeter to measure DC and AC voltage and to check continuity.
 -

Required knowledge

- DWDM principles of operation
- electrostatic discharge: implications and precautions
- optical fibre connector: types and characteristics
- optical fibre: types and characteristics
- principles of safe measurement of optical power from laser transmission systems
- specific WHS requirements that impact on the safe inspection of optical connectors.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> design a DWDM installation and associated cabling according to installation brief and installation site conditions design DWDM system power and ground connections complete and confirm installation design report.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> suitable site for DWDM equipment installation access to tools and equipment required for installation a range of optical fibres to suit the installation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate preparing designs for DWDM systems review of DWDM designs prepared by the candidate oral or written questioning of the candidate to assess knowledge of DWDM design practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTBWN3088B Install optical fibre splitters in fibre distribution hubs ICTTEN3056A Install telecommunications network equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Site</i> may include:	<ul style="list-style-type: none"> • optical add drop multiplexer (OADM) site • terminal site.
<i>Equipment racks</i> may include:	<ul style="list-style-type: none"> • 19 inch type • 23 inch type • 535 mm (ETSI rack) type.
<i>Power feed options</i> may include:	<ul style="list-style-type: none"> • battery options • earthing requirements • primary power sources • rectifier and transformer requirements • separations form other services.
<i>Patch panels</i> may include:	<ul style="list-style-type: none"> • rack mounted • wall mounted.
<i>Ancillary equipment and connections</i> may include:	<ul style="list-style-type: none"> • air filter • alarm connections • C/L band splitter tray • cooling fan assembly • coupler tray • craft terminal • data communications connections • equaliser tray • ethernet hub • fibre management trays • optical attenuators • optical fibre patch cords • optical multiplexer • optical service channel tray • telemetry connections • variable optical attenuators.
<i>Legislation</i> may include:	<ul style="list-style-type: none"> • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS – relevant codes • Australian building codes and regulations • cabling security codes and regulations • Comms Alliance (CA) standards and codes

	<ul style="list-style-type: none">• relevant international standards where they are enforced• technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006• Telecommunications Act and code of practice• WHS Acts and relevant codes and standards.

Unit Sector(s)

Telecommunications - Telecommunications networks engineering

ICTTEN5024A Provide consultancy and technical support in the customer premises equipment sector

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes skills and knowledge required to provide consultancy to a client wishing to install or upgrade telecommunications equipment on their premises.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technicians involved in planning and consultancy with organisations deploying converging technologies integrating data, wireless, optical and internet protocol (IP) networks apply the skills and knowledge in this unit.</p> <p>This unit applies to installation of cabling and equipment within customer premises in domestic, commercial or industrial installations.</p> <p>Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN), and multimedia.</p>
--------------------------------	--

Licensing/Regulatory Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan to provide consultancy and technical support in the CPE sector	1.1. Obtain consultancy requirements from the client 1.2. Establish relationship with <i>industry</i> experts to maintain currency of latest industry innovations in the customer premises equipment (CPE) sector 1.3. Access sources of <i>product and technical information</i> relating to change and innovation 1.4. Access and evaluate latest data relating to change and innovation in the CPE sector for company use within an appropriate timeframe
2. Assess customer needs	2.1. Develop knowledge and understanding of the client's business to provide an accurate solution according to the requirements 2.2. Investigate communication requirements including <i>networks</i> , based on business needs and demands 2.3. Ascertain client's <i>physical and financial parameters</i> 2.4. Present reports and recommendations within client's timeframes
3. Provide consultancy and expert advice	3.1. Provide timely and accurate expert <i>consultancy</i> and advice to <i>company staff and clients</i> 3.2. Provide communication solutions that meet client's requirements and that meet <i>relevant legislation, codes, regulations and standards</i> 3.3. Provide alternative solutions for clients where their needs cannot be better met in an innovative way 3.4. Provide a report on advice and solutions that match both the physical and financial demands of the client 3.5. Consult with the client for an <i>agreed solution</i>
4. Control and manage product and technical information	4.1. Provide all relevant personnel with the latest product and technical information 4.2. Monitor the information flow process to ensure that appropriate personnel have access to the latest data 4.3. Provide the client with final consultancy reports and recommendations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations for dimensioning, cost and financial considerations
- planning and organisation skills to make site access arrangements and plan and prioritise own work
- problem solving skills to develop communications solutions
- research skills to gain and maintain relevant and current technical product knowledge
- technical skills to:
 - interpret drawings related to customer's telecommunications equipment
 - provide expert advice on installation and upgrade
 - use databases and diagnostic equipment

Required knowledge

- common customer telecommunications applications and related equipment
- connections to carrier infrastructure or equipment
- current legislation relating to installation of telecommunications equipment and connection to carrier services
- enterprise operations and policies
- IP networks
- new and emerging technologies
- overview knowledge of customer premise equipment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • provide consultancy advice related to full range of CPE products including: <ul style="list-style-type: none"> • product models and equipment types • peripherals • facilities including network facilities • system features • provide alternative solutions where customer's needs cannot be met precisely • prepare clear and concise reports to customers complete with recommendations and supporting data, including full financial considerations • provide regular updates to both company personnel and clients as to the latest product and technical information.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site with: <ul style="list-style-type: none"> • network or computer layout documentation and premises plans • network components • equipment specifications • organisational guidelines • business plan or model • relevant legislation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking a practical exercise • review of reports completed by the candidate for different test examples and situations • oral or written questioning to assess knowledge of planning, types of systems and applications.

EVIDENCE GUIDE

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:

- ICTTEN5204A Produce technical solutions from business specifications.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>Industry</i> may include:	<ul style="list-style-type: none"> • communications • information technology • multimedia industries.
<i>Product and technical information</i> relates to:	<ul style="list-style-type: none"> • CPE product • facilities including: <ul style="list-style-type: none"> • network facilities • system features • peripherals • product models and equipment types.
<i>Networks</i> may be:	<ul style="list-style-type: none"> • external • internal • in Australia • overseas.
<i>Physical and financial parameters</i> may include:	<ul style="list-style-type: none"> • physical parameters: <ul style="list-style-type: none"> • building size • equipment inventory • new equipment requirement • power requirements • site access • size of organisation • staffing • financial parameters: <ul style="list-style-type: none"> • capital expenditure • current budget allocation • current return on investment • forecast fund allocation • future return on investment • operational costs.
<i>Consultancy</i> may be:	<ul style="list-style-type: none"> • direct to a customer • through a third party considering provision of consultant's company product • supported by explanatory documentation.
<i>Company staff and clients</i> may include:	<ul style="list-style-type: none"> • own or partner company staff • sales and technical staff.
<i>Relevant legislation, codes, regulations and standards</i> include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • Australian Standards AS 3901, 3902 • fire regulations • heritage legislation • International Standards ISO 9000, 9001 • OHS • Trade Practices Legislation.
<i>Agreed solution</i> includes:	<ul style="list-style-type: none"> • cost details • equipment requirements • procurements information • recommended vendors • return on investment (RoI) information.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope design options	<p>1.1. Determine the nature, purpose and type of the new facilities in the proposed project from project specifications obtained from planners</p> <p>1.2. Analyse project brief to scope the requirements of the project and consider design options with consideration to legislation governing carriers in Australia</p> <p>1.3. Evaluate design requirements to determine optimal site selection for the project to house facilities</p> <p>1.4. Arrange for an environmental impact study (EIS) to be conducted on the selected site with project requirements to assess the suitability of the site</p>
2. Evaluate and arrange for land acquisition	<p>2.1. Evaluate the findings of the EIS to determine the suitability of the land for the project</p> <p>2.2. Prepare a justification report on a favourable EIS and consult affected property owners to establish a base for negotiation</p> <p>2.3. Determine the potential for land acquisition or purchase from analysis of previously gathered data and EIS findings and ensure compliance with regulation from legislation</p>
3. Analyse area and select design option	<p>3.1. Analyse physical attributes of the area, possible environmental impacts and previously collected data to prepare design options</p> <p>3.2. Prepare field sketch according to enterprise requirements and develop solutions to any obvious physical impediment to construction</p> <p>3.3. Produce design options for the area that are viable for the enterprise and recommend a preferred option with justifications</p> <p>3.4. Evaluate selection of preferred option to ensure that enterprise business strategy outcomes and policies are satisfied</p>
4. Notify interested parties	<p>4.1. Assess resources available for project implementation to ensure that works are within the enterprise's schedule</p> <p>4.2. Notify interested parties of the type, extent and duration of the proposed works according to enterprise policy</p> <p>4.3. Obtain all required written permission from interested parties and forward to those who will</p>

ELEMENT	PERFORMANCE CRITERIA
	carry out the job
5. Produce design plan and documentation	5.1. Prepare <i>design plan</i> to enterprise requirements including relevant <i>geographical and topological information</i> 5.2. Indicate location and specification of works and network equipment accurately and clearly 5.3. Specify resources needed to undertake the project 5.4. Update <i>enterprise information systems</i> according to enterprise guidelines and industry practice 5.5. Produce a complete <i>design report</i> and present to management for approval

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to read and interpret legislation, write reports and prepare design plan
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt requirements to particular building facilities
- research skills to interrogate databases and investigate different building services
- technical skills to:
 - evaluate design requirements
 - evaluate findings of EIS
 - scope requirements
 - use computer assisted design (CAD) software

Required knowledge

- Access Networks
- Australian building codes and regulations
- CAD software
- Core Networks
- Environmental Protection Act

REQUIRED SKILLS AND KNOWLEDGE

- heritage protection listings
- EIS
- legislation relevant to project
- network performance and capacity
- networks planning and procedures
- site surveys
- technological innovations and development
- Telecommunications Act 1997

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • scope design options • recommend acquisition of land • prepare justification report including evaluation of EIS findings • produce design options • prepare completed building design plan for a telecommunications project.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which projects may be designed • CAD drawing facilities • relevant databases, legislative requirements and other site and project related documentation.
<p>Method of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking design tasks • review of drawings, plans and specifications prepared by the candidate • oral or written questioning to assess knowledge of the design process • review of a completed building design plan for a telecommunications project prepared by the candidate.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4110A Evaluate the planning requirements for provisioning a telecommunications building facility • ICTNPL4111A Develop provisioning of telecommunications building works project • ICTNPL4150A Apply knowledge of regulation and legislation for the telecommunications industry.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate system needs	1.1. <i>Determine need for additional electronic equipment</i> from telecommunications project plan 1.2. Specify purpose of equipment and ascertain need for additional network equipment with <i>customer</i>
2. Analyse network and select design option	2.1. Analyse <i>possible impacts</i> on network and network service requirements 2.2. Generate options for system design that are realistic for the enterprise and network 2.3. Evaluate and select preferred option based on enterprise business strategy outcomes, service policy and compliance with relevant legislation 2.4. Discuss and confirm selected option with customer
3. Assess system compatibility	3.1. Assess <i>compatibility</i> of each equipment unit and intended use with other installed units from system plans, equipment manuals, installation environment and industry knowledge 3.2. Modify design accordingly 3.3. Provide customer with design and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- planning and organisational skills to plan and prioritise own work
- problem solving skills to:
 - deal with unexpected situations on the basis of safety and specified work outcomes
 - manage unexpected configuration anomalies
- technical skills to:
 - analyse the impact of additional telecommunications equipment on the network
 - assess compatibility between existing and additional equipment

REQUIRED SKILLS AND KNOWLEDGE

- determine customer requirements and a design specification
- identify the technical requirements, constraints and manageability issues for a given customer network requirement

Required knowledge

- electrical and optical properties to be measured
- integration, compatibility and interoperability of equipment
- legislation and licensing relevant to installation of telecommunications equipment including spectrum allocation
- power requirements and electrical safety
- transmission type and signals that may be encountered

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate system need for additional electronic equipment and design options • analyse network and design systems • assess system compatibility.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • telecommunications network where additional equipment design may be conducted • relevant regulatory and equipment documentation that impact on electronic system design.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking network analysis and design • review of reports completed by the candidate • oral or written questioning to assess knowledge of types of systems and application and compatibility issues.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the</p>

EVIDENCE GUIDE

	<p>candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to conduct acceptance testing	1.1. Obtain <i>installation and commissioning documents</i> and planning specifications from <i>appropriate personnel</i> to ensure the <i>installed system</i> is as planned and specified 1.2. Visually inspect new installation and verify compliance of the system against <i>relevant legislation, codes, regulations and standards</i> 1.3. Select and obtain required <i>test equipment</i> for suitability of acceptance testing 1.4. Prepare acceptance schedule and <i>test criteria</i> in consultation with appropriate personnel
2. Conduct acceptance testing	2.1. Undertake and analyse <i>performance tests</i> to ensure measurements meet with predetermined specifications and approved operating margins 2.2. Verify performance levels to be within tolerance specifications 2.3. Test <i>protection mechanisms</i> to ensure performance criteria meets the specified standard 2.4. Test <i>alarms</i> for satisfactory operation 2.5. Refer identified problems to appropriate personnel for remedial action 2.6. Record all acceptance test procedures and results
3. Complete administrative tasks	3.1. Complete acceptance documentation including recommendations 3.2. Notify appropriate personnel and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to:
 - liaise with customers and technical staff to ensure requirements are known and can be met within timeframes

REQUIRED SKILLS AND KNOWLEDGE

- prepare reports and technical documentation
- literacy skills to interpret technical specifications, standards documents and related documentation
- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to develop activity plans to undertake inspections and tests in efficient manner
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to correctly handle, connect and calibrate test equipment

Required knowledge

- cabling, terminations and supporting structures that may be encountered in the system under inspection
- common performance levels and standards
- electrical and or optical properties to be measured
- occupational health and safety (OHS) issues appropriate to the environment under inspection
- overview of typical network topologies, switching, routing and transmission techniques
- transmission type and signals that may be encountered
- various test equipment types suitable for tests to be made

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> inspect new installation and verify compliance against installation plans prepare acceptance schedule and test criteria undertake relevant acceptance tests and analysis against specified performance criteria complying with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where acceptance tests may be conducted use of testing equipment currently used in industry relevant regulatory and equipment documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate undertaking acceptance tests review of reports and plans completed by the candidate for different scenarios and situations oral or written questioning to assess knowledge of tests and inspections types of systems and applications review of a completed acceptance documentation for systems and equipment prepared by the candidate including recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTTEN5059A Commission telecommunications network equipment ICTTEN5092A Undertake planned outage management.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Installation and commissioning documents</i> may include:	<ul style="list-style-type: none"> • agreed modifications to original design plan • commissioning test results • preliminary test results • recommendations from commissioning procedures.
<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • network manager • planning manager • project manager.

RANGE STATEMENT	
<i>Installed system</i> may include:	<ul style="list-style-type: none"> • Access Network • broadband access network • IP networks • radio network • switching • transmission • wireless access network.
<i>Relevant legislation, codes, regulations and standards</i> include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • International Standards ISO 9000 and 9001 • International Telecommunications Union (ITU) standards • OHS • Privacy Act • private property law.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • digital analysers • global system for mobiles (GSM) spectrum frequency synthesiser • optical fibre power meters • optical time domain reflectometer (OTDR) • protocol analysers • spectrum analysers.
<i>Test criteria</i> may include:	<ul style="list-style-type: none"> • live traffic tests • normal and extreme load tests • test environment • test margins and errors.
<i>Performance tests</i> may include:	<ul style="list-style-type: none"> • compliance tests: <ul style="list-style-type: none"> • electromagnetic compatibility (EMC) • electromagnetic interference (EMI) • stability tests • transmission tests.
<i>Protection mechanisms</i> may include:	<ul style="list-style-type: none"> • uninterrupted power supply (UPS) • earth leakage breakers • earth protection • redundant standby equipment • software back up and restore.
<i>Alarms</i> may include:	<ul style="list-style-type: none"> • audible alarms

RANGE STATEMENT	
	<ul style="list-style-type: none">• on-screen display and monitoring systems• visual indicators.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for commissioning procedures	1.1. Prepare for work following occupational health and safety (<i>OHS</i>) requirements 1.2. Organise resources based on existing and potential site hazards 1.3. Notify network operations personnel for site access and network specifications 1.4. Determine from specifications the type and complexity of the network equipment 1.5. Establish commissioning dates and confirm with all parties 1.6. Determine commissioning parameters according to specification and establish planned outage if required 1.7. Obtain test equipment and check for suitability and accuracy 1.8. Produce a preliminary commissioning plan according to manufacturer's instructions and company guidelines for discussion with the customer 1.9. Inform affected customers of impending action and likely timing and impact by the work
2. Organise planned outages if necessary	2.1. Negotiate outage times with appropriate groups and affected customers to minimise any disruptions 2.2. Develop contingency plans if required and arrange for emergency communications 2.3. Notify alarm management centre of action planned 2.4. Obtain authority to proceed from the relevant control centre and notify customers affected by the outage
3. Complete installation procedures of network equipment	3.1. Install applications programmes and management data according to specification to complete installation procedures 3.2. Complete all hardware connections according to commissioning instructions 3.3. Undertake all specified performance tests to ensure operation meets all prescribed parameters and specifications as detailed in the original design brief 3.4. Undertake tests to verify compatibility between the hardware and the software 3.5. Correct performance defects or bring to the attention of designers for corrective action

ELEMENT	PERFORMANCE CRITERIA
4. Complete commissioning procedures with network management	4.1. Test alarms in conjunction with network management and operational groups to maintain network integrity 4.2. Simulate traffic tests through the new installation to emulate a live network 4.3. Test installed specific equipment features and operations administration maintenance system according to instructions 4.4. Diagnose, repair or escalate faults detected to the appropriate area when fault cannot be clearly diagnosed or repaired 4.5. Initiate vendor related tests where required
5. Finalise commissioning tasks	5.1. Complete <i>administrative tasks</i> as required by enterprise 5.2. Undertake operational staff training where required 5.3. Restore site to customers satisfaction 5.4. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations and evaluate test results
- problem solving to account for unexpected faults or equipment configuration anomalies
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

REQUIRED SKILLS AND KNOWLEDGE

- technical skills to:
 - correctly test and carry out commissioning procedures
 - use hand tools for removing and securing equipment covers

Required knowledge

- electrical and or optical properties to be measured
- extensive range of networking equipment
- legislation and licensing surrounding installation of telecommunications equipment including spectrum allocation
- network operation procedures
- power requirements and electrical safety
- transmission type and signals that may be encountered
- various test equipment types suitable for tests to be made

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • interact with enterprise personnel, customers and other contractors keeping a customer focus and consideration of customer needs • produce outage management plan and contingency plan • negotiate activity on the network and timing of commissioning • commission networking equipment to plan or specification • implement test plan, and interpret and analyse results against expected outcomes • test alarms and alarm regime • analyse faults, problems and anomalies and provide solutions • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which installation and commissioning procedures can be conducted • relevant regulatory and equipment documentation that impact on commissioning • use of testing equipment currently used in industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate completing commissioning procedures of network equipment • review of reports completed by the candidate outlining test plan and test results complete with analysis of faults with solutions • oral or written questioning to assess knowledge of commissioning procedures and types of systems.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE	
assessment	<p>industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN5058A Acceptance test new system and equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>OHS requirements</i> may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas

RANGE STATEMENT	
	<ul style="list-style-type: none"> • need for decommissioning and isolate worksite and lines prior to commencement • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses for laser work • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation.
Hazards may include:	<ul style="list-style-type: none"> • earth potential rise (EPR): <ul style="list-style-type: none"> • event at a site, such as an electrical distribution substation, may expose telecommunications personnel, users or plant to hazardous voltages • optical fibre cable: <ul style="list-style-type: none"> • bare fibres • hazardous laser light • radio frequency (RF) equipment emitting

RANGE STATEMENT	
	<ul style="list-style-type: none"> radiation • remote power feeding services which operate at above telecommunications network voltage (TNV).
<i>Network operations personnel</i> may include:	<ul style="list-style-type: none"> • alarm operations • network operations centre staff • network operations manager • project manager.
<i>Network equipment</i> may include:	<ul style="list-style-type: none"> • broadband • cellular radio • computer network: <ul style="list-style-type: none"> • gateways • router • servers • switches • voice over internet protocol (VoIP) • wireless local area network (LAN) • multiplexing • network management • optical transmission • switching • transmission.
<i>Planned outage</i> may relate to:	<ul style="list-style-type: none"> • allocation of additional services and support • notification to affected customers • plan for: <ul style="list-style-type: none"> • redundant path • standby equipment.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • adaptors • analog transmission measuring sets • communication system analysers • digital analysers • error meter • global system for mobiles (GSM) spectrum frequency synthesiser • lap top computer • laser source • microwave link analyser • modulator tester • multimeters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • optical attenuators • optical fibre power meters • oscillator • oscilloscopes • optical time domain reflectometer (OTDR) • pattern generators • power meters • RF band noise measurer • RF microwave test sets • RF sweep tester • spectrum analysers • sweep test coaxial and wave guide antenna systems • standing wave ratio (SWR) meters • transmitter/receiver filter combiner equipment.
<i>Affected customers</i> may include:	<ul style="list-style-type: none"> • building owner • communications consultant • contractor to a major supplier • end users • equipment owner • operations staff.
<i>Contingency plans</i> may include:	<ul style="list-style-type: none"> • additional notification to affected customers • provision of: <ul style="list-style-type: none"> • additional services • additional technical support • redundant path • standby equipment.
<i>Hardware connections</i> may refer to:	<ul style="list-style-type: none"> • connecting equipment to the appropriate transmission bearers with distant end notification • checking alarms associated with the bearer and infrastructure • installing artificial links and dismantle on completion of the commissioning process.
<i>Performance tests</i> may include:	<ul style="list-style-type: none"> • bit error rate (BER) • crosstalk • impedance • loopback • power level • return loss

RANGE STATEMENT	
	<ul style="list-style-type: none"> • wire maps.
<i>Administrative tasks</i> may refer to:	<ul style="list-style-type: none"> • checking correct labelling of all equipment and amending • completing job orders and submitting to appropriate enterprise organisational unit • completing test sheets and logging test instrument usage • following quality control procedures • handing over installation briefs, documents and equipment manuals to operational staff • recording test results and updating appropriate data bases • tasks complying with enterprise requirements and policy • updating design specifications and returning to design area.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan integration strategy	<p>1.1. Determine the nature and scope of the integration activity of the <i>systems</i> from <i>appropriate personnel</i></p> <p>1.2. Prepare an <i>integration management plan</i> in agreement with appropriate personnel</p> <p>1.3. Obtain <i>outage management plan</i> if available otherwise prepare a <i>contingency plan</i> to ensure the system integration according to plan</p> <p>1.4. Identify affected systems, <i>traffic</i> and <i>customers</i></p> <p>1.5. Notify alarm management centre of action planned and obtain authority to proceed</p> <p>1.6. Notify customers affected by the outage of time and likely duration</p>
2. Integrate and test new system in the network	<p>2.1. Plan and conduct activities over a set of integration phases in a safe manner and according to the integration management plan</p> <p>2.2. Load operational software according to specification to ensure interoperability of new and existing system</p> <p>2.3. Undertake <i>tests</i> by simulating network traffic and ensure test results are recorded and stored according to enterprise requirements</p> <p>2.4. Analyse test results and ensure that the parameters established have all been met</p> <p>2.5. Evaluate problems during testing phase and rectify or escalate procedure</p> <p>2.6. Analyse <i>alarms</i> for fault conditions in conjunction with network management centre</p> <p>2.7. Locate and detect faults within capability or escalate according to enterprise policy</p> <p>2.8. Check operations administrative maintenance system and alarms are connected according to instruction manual</p> <p>2.9. Activate new alarms and deactivate old alarms</p>
3. Complete administrative tasks	<p>3.1. Complete integration records according to manufacturer's specification and enterprise policy and make recommendations for improvement for planning</p> <p>3.2. Notify project completion to appropriate personnel and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to arrange site access and equipment delivery
- problem solving skills to account for unexpected faults
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - load software
 - locate and detect faults
 - simulate network traffic
 - test and diagnose faults in new technologies
 - undertake tests

Required knowledge

- connections to carrier infrastructure or customer interface units (CIU)
- electrical and or optical properties to be measured
- OHS considerations, including electrical, optical and electromagnetic radiation (EMR) safety
- telecommunication network equipment and emerging technology networks
- test equipment types suitable for tests to be made
- typical performance parameters and faults that may be encountered in network equipment and related connection and transmission media

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the cut over strategy	1.1. Determine the nature and scope of the cut over activity from <i>appropriate personnel</i> 1.2. Prepare a <i>cut over management plan</i> in agreement with appropriate personnel 1.3. Obtain <i>outage management plan</i> if available otherwise prepare a <i>contingency plan</i> to ensure the system integration proceeds according to plan 1.4. Notify alarm management centre of action planned and obtain authority to proceed 1.5. Notify <i>customers</i> affected by the outage of time and likely duration
2. Cut over and test equipment into service	2.1. Perform cut over activities in a safe manner with minimal interruption to service and according to the cut over management plan 2.2. Conduct <i>tests</i> specified in the cut over plan according to technical manuals and specifications 2.3. Record and assess test results and ensure problems identified during cut over are rectified or escalated according to enterprise procedures 2.4. Analyse alarms for fault conditions in conjunction with network management centre 2.5. Enact contingency plans in the event of major problems during cut over
3. Complete administrative tasks	3.1. Complete test result sheets and hand over to operational personnel according to enterprise requirements 3.2. Ensure site is cleaned and ready for operational staff 3.3. Complete work documentation and administrative tasks and forward to the appropriate area according to enterprise policy 3.4. Notify project completion to appropriate personnel and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to make site access and equipment delivery arrangements
- problem solving skills to account for unexpected faults or equipment configuration anomalies
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - analyse alarms
 - conduct tests
 - correctly handle, connect and calibrate test equipment
 - perform cut over activities

Required knowledge

- electrical and optical properties to be measured
- legislation and licensing surrounding installation of telecommunications equipment
- power requirements and electrical safety
- test equipment types suitable for tests to be made
- transmission hierarchy and switching principles
- transmission type and signals that may be encountered

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop a contingency plan • implement a cut over plan and an outage plan • apply enterprise escalation and outage procedures • cut over and test network equipment within an industry acceptable time period.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network and equipment for cut over • equipment currently used in industry • systems manuals, specifications and enterprise policy.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking cut over preparations and processes • review of cut over test results and records completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5060A Integrate new systems and equipment into the telecommunications network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. ICTTEN5083A Locate, diagnose and rectify complex faults

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to locate, diagnose and rectify complex faults in telecommunications networks and equipment. It includes identification of faults in upstream or downstream services that may require involvement of third party providers.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Telecommunications officers, installers, maintenance staff and manufacturer or equipment specialists apply the skills and knowledge in this unit. It may be applied by those in advisory roles and technical rectification roles.</p> <p>Networks include cabling, customer premises equipment (CPE), Access, telephony, broadband deployment, local area networks (LAN), wide area networks (WAN) and internet protocol (IP) networks for enterprise and customer systems and installations.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to locate and rectify complex faults	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Notify client to arrange access to site 1.3. Obtain report of any action taken by first fault repairer and subsequent result 1.4. Obtain fault history to establish any fault patterns 1.5. Obtain all available data on the system equipment to assist with fault diagnosis 1.6. Develop strategies for identification and repair in discussion with other engineering and technical personnel 1.7. Obtain tools and test equipment relevant to the identified system type and fault 1.8. Set up equipment according to manufacturer's specifications and reconfigure as required
2. Locate and diagnose faults	2.1. Use methodical work practice suitable for system and problem type to identify system fault 2.2. Isolate and test fault progressively to remove likely variables from assessment and record test results 2.3. Refer faults that may involve third party services if required 2.4. Diagnose fault in the shortest time possible with minimum inconvenience to other client activity 2.5. Provide regular progress reports to client 2.6. Raise fault identification to a national support level within a specified timeframe if required 2.7. Undertake guidance from national support in fault diagnosis as required 2.8. Negotiate any necessary system downtime with the client
3. Rectify fault	3.1. Determine options to rectify fault including any system downtime and present to client for decision 3.2. Rectify fault totally, partially or provide temporary solution 3.3. Replace or repair faulty parts or equipment according to service agreement 3.4. Reprogram equipment as required 3.5. Dismantle and remove any temporary service in a safe and efficient manner where appropriate

ELEMENT	PERFORMANCE CRITERIA
	3.6. Perform repair under national support guidance as required 3.7. Perform routine checks to identify likelihood of further or likely problems 3.8. Rectify any further problems identified or bring to the attention of the customer for decision on further action necessary
4. Clean up worksite and complete records	4.1. Produce a report on fault diagnosis and rectification 4.2. Remove and dispose of waste and debris from worksite according to <i>environmental requirements</i> 4.3. Ensure changes made to the work area during fault repair are restored to the client's satisfaction 4.4. Complete all <i>records</i> , explain and justify faults and rectification action taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - listen and liaise with clients on technical and operational matters
 - negotiate with other repairers and support staff
 - raise occupational health and safety (OHS) matters
- literacy skills to:
 - explain and justify faults and rectification actions
 - incorporate technical language into written tasks such as records and reports
 - interpret technical documentation and standards
- numeracy skills to interpret technical data, such as specifications of equipment operations
- problem solving skills to apply methodology in fault diagnosis
- research skills to access technical information and sources to assist fault identification
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

REQUIRED SKILLS AND KNOWLEDGE

- select and use required personal protective equipment conforming to industry and OHS standards
- work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to select and use appropriate methods for fault identification and rectification

Required knowledge

- fault escalation procedures
- fault finding techniques and of test equipment
- fault types and rectification
- safety requirements and standards
- service agreements
- types of networks and equipment:
 - Access
 - broadband deployment
 - cabling
 - CPE
 - IP networks for enterprise and customer systems and installations
 - LAN
 - telephony
 - WANs
- workplace environment and practices

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • methodically analyse fault details and diagnose potential faults • conduct advanced tests to determine complex network fault • isolate and locate the fault logically • rectify faults using appropriate organisational procedures and OHS requirements • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment of this unit requires:</p> <ul style="list-style-type: none"> • sites on which fault diagnostics may be conducted • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on complex fault repairs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate applying safety aspects to the locating and rectifying the faults • oral or written questioning of the candidate to assess knowledge of types of faults and implications • evaluation of report prepared by the candidate including test result interpretation • written reports prepared by the candidate outlining fault rectification methodologies and recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5058A Acceptance test new systems and equipment • ICTTEN5059A Commission telecommunications

EVIDENCE GUIDE

	<p>network equipment</p> <ul style="list-style-type: none"> • ICTTEN5092A Undertake planned outage management. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS 3000:2007 • AS/NZS 3080:2003 - Telecommunications Installations - Generic cabling for commercial premises, clause 10.3.2 includes: <ul style="list-style-type: none"> • colour codes used to identify the various types of fibre • signals these cables would normally carry • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations. • OHS • regulated or industry codes of practice including appropriate Australian Communications and Media Authority (ACMA) technical standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Client</i> may include:	<ul style="list-style-type: none"> • enterprise personnel • fault centre • network operations centre staff • reporter of fault • site manager.
<i>System equipment</i> may include	<ul style="list-style-type: none"> • asynchronous transfer mode (ATM) or frame relay (FR) switch • carrier network • CPE network • gateways • multiplexing • optical transmission • radio network equipment • routers • servers • transmission paths: <ul style="list-style-type: none"> • cable • microwave • optic fibre • radio

RANGE STATEMENT	
	<ul style="list-style-type: none"> • satellite • wireless broadband.
<i>Other engineering or technical personnel</i> may include:	<ul style="list-style-type: none"> • carrier or service provider staff • electrical contractor • equipment manufacturer • equipment supplier • external customer • on site operation staff.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • adaptors • laser source • light meter • optical attenuators • transmitter or receiver filter combiner.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • analogue transmission measuring sets • cable tester • digital analysers • error meter • frequency measurer • global system for mobiles (GSM) spectrum frequency synthesiser • microwave link analyser • modulator tester • multimeters • network management set • optical fibre power meters • optical time domain reflectometer (OTDR) • pattern generators • portable computer • power meters • protocol analysers • radio frequency (RF) band noise measurer • RF microwave test sets • RF sweep tester • spectrum analysers • sweep tester for coaxial • standing wave ratio (SWR) meters • time domain reflectometer (TDR) • video tester.
<i>System fault</i> may include:	<ul style="list-style-type: none"> • 'out of specification' faults • dynamic loops

RANGE STATEMENT	
	<ul style="list-style-type: none"> • intermittent performance problems • latency • network dropout • severe cable or transmission path damage • system configuration problems • system equipment failure or partial failure • traffic congestion.
<i>Test</i> may include:	<ul style="list-style-type: none"> • bit error rate • equipment self diagnostics • protocol analysis • return loss • signal level: <ul style="list-style-type: none"> • electrical • optical • RF • signal to noise • TDR • test data (ping) • testing functionality of: <ul style="list-style-type: none"> • individual equipment • system • transmission paths, including egress or ingress via third party provider services.
<i>Services</i> may include:	<ul style="list-style-type: none"> • ATM interface • fibre to premises equipment • hybrid fibre coaxial (HFC) cable and modem • ISDN (PRA) interface unit • microwave equipment • satellite receiver • synchronous digital hierarchy (SDH) interface • telephone line • wireless modem • wireless transceiver equipment.
<i>Environmental requirements</i> include:	<ul style="list-style-type: none"> • clean-up management • dust • noise • waste management.
<i>Records</i> may include:	<ul style="list-style-type: none"> • service agreement • trouble ticket

RANGE STATEMENT

	<ul style="list-style-type: none">• work order• written site log.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish background information	1.1. Notify <i>client</i> to identify <i>type of fault</i> and occurrence 1.2. Obtain report of any action taken by first fault repairer and subsequent result 1.3. Analyse fault history in order to establish any <i>fault patterns</i> including questioning personnel involved in <i>previous fault repair</i> if relevant 1.4. Develop strategies for identification and repair using advice from <i>other engineering and technical personnel</i> 1.5. Refer to <i>relevant legislation, codes, regulations and standards</i> relating to repair 1.6. Inform customer of issues and possible solutions
2. Undertake fault diagnostic	2.1. Isolate fault progressively using a <i>fault identification approach</i> to remove likely variables from assessment 2.2. <i>Identify fault</i> in the shortest time possible or escalate to appropriate level 2.3. Seek back up support from the product manufacturer when required
3. Organise fault rectification	3.1. Determine options to <i>rectify fault</i> , including any downtime and present to customer for decision 3.2. Replace or repair defective parts or equipment according to service agreement 3.3. Reprogram equipment as required 3.4. Complete work in a manner which is safe both to the repairer and to the customer 3.5. Dismantle and remove temporary service in a safe and efficient manner where appropriate 3.6. Provide on site repair staff with clear and precise instructions on fault rectification where appropriate
4. Document fault details	4.1. Record details of fault and actions taken to both find and repair and store for future reference 4.2. Advise product manufacturer of fault and repair details if applicable 4.3. Recommend changes to product/product model design where appropriate 4.4. Advise client and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - interpret drawings related to customer's telecommunications equipment
 - provide expert advice on fault clearance
 - use databases
 - use diagnostic equipment

Required knowledge

- features and operating requirements of test equipment
- information required to operate remote diagnostic equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for effective operation of equipment
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • methodically identify and rank likely causes of faults • analyse and interpret test results • apply enterprise escalation and outage procedures • prioritise fault rectification in a timely manner and report progress • organise repair of fault and conduct of tests to verify outcomes • prepare documentation of fault: <ul style="list-style-type: none"> • nature • location • likely causes • repair methodology • recommendations relating to system redesign or specification.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which fault diagnostics may be conducted • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on complex fault repairs.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a complex CPE fault project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate providing expert advice and support on complex CPE faults.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTTEN5083A Locate, diagnose and rectify complex faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for implementation of planned outage	<p>1.1. Determine the requirements and purpose of the <i>outage</i> from the <i>outage plan</i> obtained from <i>relevant personnel</i></p> <p>1.2. Analyse all <i>relevant data</i> to determine the <i>likely impact</i> of the outage on clients and the network</p> <p>1.3. Notify customer of outage work and disruption to service</p> <p>1.4. Prepare for contingencies according to the <i>contingency plan</i> as specified in the outage plan</p>
2. Implement planned outage	<p>2.1. Conduct and monitor outage work as prescribed and implement contingency plan if required</p> <p>2.2. Restore system to normal operational status and conduct performance tests of the system according to specifications</p> <p>2.3. Analyse test results and certify system is operating to manufacturer's specifications</p> <p>2.4. Notify relevant personnel of completed outage work and of service restoration</p>
3. Undertake administrative tasks	<p>3.1. Document problems that occurred during outage or restoration of service and report these as continuous improvement according to enterprise <i>quality assurance</i> policy</p> <p>3.2. Complete required <i>documentation</i> and update records to reflect any changes made in the course of service restoration according to enterprise policy</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> analytical skills to interpret test equipment setups, settings and instrument readings communication and negotiation skills to liaise with customers and technical staff to ensure service level agreement requirements are known and can be met within timeframes literacy skills to read and interpret technical specifications and related

REQUIRED SKILLS AND KNOWLEDGE

documentation

- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to implement outage management plan and contingency plan
- problem solving skills to account for unexpected faults or equipment configuration anomalies
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to correctly handle, connect and calibrate test equipment

Required knowledge

- electrical and optical principles
- legislation and licensing surrounding installation of telecommunications equipment
- power requirements and electrical safety
- protection switching
- telecommunications networks
- test equipment types suitable for tests to be made
- transmission hierarchy and switching principles
- transmission type and signals that may be encountered

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement outage plan, complying with service assurance guidelines and all related OHS requirements and work practices • conduct performance tests to verify normal operation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which outage management may be conducted • use of testing equipment currently used in industry • manufacturer's and enterprise equipment documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate conducting performance tests to verify normal operation • review of outage plans completed by the candidate for different scenarios and situations • oral or written questioning to assess knowledge of likely impact of outage on both the customer and the network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5061A Cut over new and replacement network equipment • ICTTEN6044A Coordinate fault rectification and restoration of service following network outages. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Install and configure a network	1.1. Prepare the physical and logical structure of a LAN design to resolve hardware and software compatibility conflicts 1.2. Prepare file server and install <i>network server software</i> 1.3. Execute workstation boot procedures and verify network and work station functionality 1.4. Document network physical connections and workstation characteristics
2. Set up network facilities	2.1. Configure set-up procedures for a network print server, network printer and a shared file system 2.2. Connect a bridge or router between two networks 2.3. Set up a gateway for a network 2.4. Set up a logical disk or volume structure
3. Administer user accounts	3.1. Create a user account and a user log script 3.2. Produce a document of network users for notification of their access rights and privileges 3.3. Add and delete users to maintain an update user list 3.4. Establish disk quotas for users 3.5. Develop common user security procedures and set up user profiles
4. Install common applications	4.1. Install and configure an <i>application</i> in client-server mode 4.2. Establish security and multiple access to an application 4.3. Set up and configure an email client and a browser for the client
5. Install and configure systems applications	5.1. Configure a <i>backup system</i> for redundancy according to customer policy 5.2. Administer disk fault tolerance and redundancy techniques
6. Maintain system integrity	6.1. Implement system integrity and system monitoring techniques to provide a reliable customer data network 6.2. Use diagnostic software to detect and isolate system faults 6.3. Produce a report to the customer on the network performance and fault occurrence with recommendations for improving the integrity of the

ELEMENT	PERFORMANCE CRITERIA
	data communications network

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as software and hardware manuals and specifications and relevant enterprise policy and documentation
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise testing and contingency plans
- problem solving skills to solve software, hardware and logistics problems
- safety awareness skills to follow occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail
- technical skills to:
 - set up data communications network
 - use third party diagnostic programs and equipment and perform fault clearance.

Required knowledge

- features and operating requirements of data communications software and hardware for network systems
- manufacturer's requirements of testing software and equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur when administering a data communications network

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • establish and configure a data communications network • set up and maintain systems, facilities, applications, and software • administer user accounts • diagnose and isolate system faults.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where communications network and systems user accounts can be administered • use of equipment currently used in industry • relevant regulations and company policies that impact on communications network activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of report prepared by the candidate outlining network performance and fault occurrence with recommendations for improvement • oral or written questioning to assess knowledge of establishment and administration of communications network • direct observation of the candidate performing installation of network (LAN or WAN), applications, and backup, and administering network system testing.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5200A Install, configure and test a local area network switch • ICTTEN5201A Install, configure and test a server.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Network may include:

- billing network
- computers and communications technology:
 - applications and systems software
 - bridge
 - cabling
 - network printer
 - remote user equipment

RANGE STATEMENT	
	<ul style="list-style-type: none"> • router • servers • switch • workstations • internet protocol (IP) access network • LAN • mesh network • multi protocol label switching (MPLS) network • storage network • WAN.
Software may include:	<ul style="list-style-type: none"> • free downloads • open source • patches • proprietary.
Application may include:	<ul style="list-style-type: none"> • applications in NGN delivering multiple services: <ul style="list-style-type: none"> ◦ broadband access ◦ data transfer ◦ internet protocol TV (IPTV) ◦ mobile data ◦ multimedia • voice over IP (VoIP).
Backup system may be:	<ul style="list-style-type: none"> • local backup • remote backup.

ICTTEN5168A Design and implement an enterprise voice over internet protocol and a unified communications network

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to design and implement the infrastructure for enterprise voice over internet protocol (VoIP) and unified communications (UC) systems to meet business requirements using converging network technologies.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Telecommunications or IT technicians with significant technical expertise apply the skills and knowledge in this unit. They combine technical expertise with a range of analytical, research and planning skills to develop and tailor IP convergence solutions for particular business needs.</p> <p>This unit applies to individuals working to design and implement the infrastructure to enable enterprises to use VoIP and other packet-based services.</p> <p>It also applies to enterprises outlaying capital looking for return on investment by reducing operating costs and improved unified internet protocol (IP) based communication systems.</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Plan and design VoIP infrastructure to meet business requirements</p>	<p>1.1. Ascertain <i>end-user requirements</i> in consultation with client</p> <p>1.2. Select VoIP infrastructure in line with business and end-user requirements, within budget limitations</p> <p>1.3. Select <i>protocols for converged networks</i></p> <p>1.4. Select <i>hardware, software, network</i> and security <i>requirements</i> according to agreed business and end-user specifications</p> <p>1.5. Investigate <i>factors</i> affecting bandwidth and calculate bandwidth usage for various codecs, including considerations of overhead, connection quality and connection speeds</p>
<p>2. Install and configure VoIP infrastructure to meet business requirements</p>	<p>2.1. Implement telephone number mapping (ENUM), number portability, end point addressing, path selection, calling classes and overlapping number ranges</p> <p>2.2. Install, configure and test <i>gatekeepers</i></p> <p>2.3. Install and test <i>convergent terminal equipment</i> and software</p> <p>2.4. Install software and configure and test VoIP services</p> <p>2.5. Configure security access levels to safeguard data, making use of appropriate tools</p>
<p>3. Configure a UC network</p>	<p>3.1. Obtain the topology and components of a UC network</p> <p>3.2. Analyse the potential of IP multimedia subsystem (IMS) network architecture to enable the convergence of voice, video and data applications and various mobile network technologies over IP based layer</p> <p>3.3. Incorporate the use of a communications server to provide <i>real-time multimedia communications</i></p> <p>3.4. Select common videoconferencing codecs according to standards and practices</p> <p>3.5. Select <i>voice and video conferencing hardware</i></p> <p>3.6. Implement IP-private branch exchange (PBX) functionalities in the UC network</p>
<p>4. Test and evaluate the performance of convergent networks</p>	<p>4.1. Develop possible <i>network congestion solutions</i> for common network congestions to meet quality of service (QoS) specified</p> <p>4.2. Provide solutions for problems in contacting</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>emergency services</p> <p>4.3. Analyse network traffic and resolve problems using packet sniffer, monitoring software and hardware solutions</p> <p>4.4. Troubleshoot convergent communications over wireless networks</p> <p>4.5. Analyse types and effects of attacks, including man-in-the-middle attacks</p> <p>4.6. Plan ways to counteract denial of service (DoS) and distributed DoS (DDoS) attacks</p> <p>4.7. Predict the impact of virtual local area network (VLAN) hopping, media access control (MAC) address movements, additions and changes on network</p>
<p>5. Test and verify the security access levels</p>	<p>5.1. Analyse types of intrusion detection</p> <p>5.2. Monitor and evaluate capability and reliability of security systems</p> <p>5.3. Make system alterations to ensure protection against known and potential threats</p> <p>5.4. Verify and test that user settings conform to security policies</p> <p>5.5. Backup, upgrade and scan systems to minimise attacks</p>
<p>6. Complete documentation and sign off procedures</p>	<p>6.1. Complete required records and notify customer</p> <p>6.2. Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions</p> <p>6.3. Reinstate site according to customer and company requirements</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
<p>This section describes the skills and knowledge required for this unit.</p>
<p>Required skills</p>
<ul style="list-style-type: none"> • analytical skills to evaluate network traffic protocols and bandwidth considerations • communications skills to liaise with clients and determine business requirements

REQUIRED SKILLS AND KNOWLEDGE

- planning and organisational skills to plan, design and implement VoIP infrastructure
- project planning skills in relation to setting benchmarks and identifying scope
- problem solving skills in a predictable range of network problems
- research skills for identifying, analysing and evaluating broad features of a particular business domain and best practice in networking technologies
- technical skills to :
 - compare session initiation protocol (SIP), H323 and media gateway control protocol (MGCP) or media gateway control (Megaco)
 - configure a VoIP and a UC network and assess the performance of convergent networks and test and verify security access levels
 - define latency, jitter and wander and implement methods for reducing or eliminating them using jitter buffer, QoS, traffic shaping and VLANs
 - describe the format of a SIP uniform resource identifier (URI)
 - evaluate and implement SIP trunking to connect enterprise internet protocol (IP)-based communications systems over long distances
 - identify common G.7xx codes and describe the impact of compression on voice quality
 - identify the components of SIP
 - identify the functions of signalling protocols for converged networks

Required knowledge

- broad knowledge of:
 - client business domain, business function and organisation
 - current and emerging industry accepted hardware and software products
 - current and emerging transmission technologies and protocols
 - networking technologies

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • design and implement the infrastructure for enterprise VoIP and UC systems to meet business requirements using converged networks • apply knowledge of current networking, transmission technologies and protocols • evaluate network traffic protocols and bandwidth considerations • configure a UC network • assess the performance of convergent networks • test and verify security access levels.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • live network • networked computers • network design documentation • equipment specifications • network components.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of report prepared by the candidate outlining design process undertaken, including challenges faced and how these were addressed • direct observation of the candidate installing and configuring VoIP infrastructure and configuring a UC network • evaluation of system designed and implemented by the candidate in terms of performance and suitability of for business needs.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5201A Install, configure and test a server.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

End-user requirements may include:

- how and what the organisation wants in regard to:
 - preventative maintenance and diagnostic policy
 - problem solution processes
 - return on investment (RoI)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • roles and technical responsibilities in the IT department • vendor and product service level support agreements • work environment.
<i>Protocols for converged networks</i> may include:	<ul style="list-style-type: none"> • H225 • H320 • H323 • H450 • Megaco • MGCP • SIP.
<i>Hardware</i> may include:	<ul style="list-style-type: none"> • cable or DSL modems • IP phones • modems • multi-layer switches • networks • other connectivity devices • personal computers • remote sites • routers • servers • switches • wireless devices • workstations.
<i>Software</i> may include:	<ul style="list-style-type: none"> • commercial software applications • communications software • in-house or customised software • networking device operating systems • organisation-specific software • packaged software.
<i>Network</i> may include:	<ul style="list-style-type: none"> • data and voice • internet • large and small LANs • national wide area networks (WANs) • private lines • use of public switched telephone network (PSTN) for dial-up modems only • virtual private networks (VPNs).

RANGE STATEMENT	
Requirements may include:	<ul style="list-style-type: none"> reference to the business, system, application, network or people in the organisation simple addition or upgrade to a major new installation.
Factors may include:	<ul style="list-style-type: none"> codec choice compression latency packet reordering protocol incompatibility QoS issues.
Gatekeepers may include:	<ul style="list-style-type: none"> call manager media gateway media gateway controller (call agent) signalling gateway (SG).
Convergent terminal equipment may include:	<ul style="list-style-type: none"> analogue telephone adapter (ATA) IP phones single line adapter soft phones: <ul style="list-style-type: none"> personal digital assistant (PDA) wireless fidelity (WiFi).
Real-time multimedia communications may include:	<ul style="list-style-type: none"> directory look-up email file exchange instant messaging (IM) presence video conferencing.
Voice and video conferencing hardware may include:	<ul style="list-style-type: none"> multi-point control unit (MCU) session border controller (SBC) set-top box.
Network congestion solutions may include:	<ul style="list-style-type: none"> changing configurations monitoring network traffic and protocols upgrades.
Attacks may include:	<ul style="list-style-type: none"> brute force and dictionary attacks illicit servers man-in-the-middle attacks unsolicited calls viruses voicemail compromises.
Man-in-the-middle attacks	<ul style="list-style-type: none"> packet sniffing

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install the network switch	1.1. Prepare for installation in line with site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures 1.2. Notify customer to arrange access to site 1.3. Document the <i>topology</i> of the LAN 1.4. Obtain current and future <i>network capacity</i> predictions according to current and future business requirements from the <i>appropriate person</i> 1.5. Specify the number and type of <i>switch</i> required, with reference to future network requirements 1.6. Specify the requirements for network management and security, as prescribed by organisational policy 1.7. Select the switch and switch operating system software version with the appropriate features according to required specifications
2. Install and configure the network switch	2.1. Assemble, rack mount and connect switch and <i>peripherals</i> according to manufacturer's requirements 2.2. Connect <i>user</i> to access points using <i>cable</i> that meets the appropriate <i>standard</i> 2.3. Establish a valid network connection with other network devices 2.4. Configure a network internet protocol (IP) address for the switch 2.5. Install or configure simple network management protocol (SNMP) agent software, on each switch, to collect network traffic data for the management information base (MIB) from that segment of the network and relay it to the management console 2.6. Install and configure SNMP management console software on a computer designated to be the network manager's main console, to collect network traffic data from the switch acting as agents 2.7. Manually configure the user access ports of the switch for speed and for full or half-duplex operation
3. Test the network switch and reconfigure the network	3.1. Test the switch and other network devices according to manufacturer's requirements and organisational guidelines 3.2. Test to ensure that there is connectivity across the network

ELEMENT	PERFORMANCE CRITERIA
	3.3. Modify the network to verify SNMP management software 3.4. Make adjustments to the network, depending on test and troubleshooting results
4. Complete documentation and clean up worksite	4.1. Tabulate test results and complete all user reports 4.2. Complete report and notify client of status of the network 4.3. Clean up and restore worksite to client's satisfaction 4.4. Secure sign off from appropriate person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to read and interpret technical documentation and write reports in required formats
- numeracy skills to take test measurements, interpret results and evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
- technical skills to:
 - install and configure network switch
 - select switch and switch operating system
 - specify requirements for network management and security
 - test switch and other network devices

Required knowledge

- advantages and disadvantages of switches over hubs
- Australian Computer Society Code of Ethics
- common network cable types and connectors

REQUIRED SKILLS AND KNOWLEDGE

- common network topologies
- differences between standard and intelligent (i.e. configurable) switches and between switches and hubs
- documentation skills for networks
- implementation and configuration of networks
- providing the network with redundant paths for reliability and the way routers and switches manage these paths

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and prepare for the LAN switch installation task • select a LAN Switch to meet the client business specifications • install switches without the network losing connectivity or failing • install and test the switch that ensures interoperability within the network • use a range of switch configurations • apply solutions to a variety of switch-related problems • report on the status of the completed installation and seek sign off and customer satisfaction • use switches • apply solutions to defined switching problems.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where switch installation must be may be conducted • use of field measurement equipment currently used in industry • relevant switch specifications, technical requirements for a network, switch, cabling, networked (LAN) computers, workstations, servers and WAN service point of presence.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing, configuring and testing a LAN switch • oral or written questioning of required skills and knowledge • evaluation of report prepared by the candidate outlining testing procedures, results and recommendations to network changes.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICTTEN4198A Install, configure and test an internet protocol network.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>Topology</i> may include:	<ul style="list-style-type: none"> • bus • hierarchical • hybrid • ring • star.
<i>Network capacity</i> may include:	<ul style="list-style-type: none"> • expandability: <ul style="list-style-type: none"> • number of available uplink ports • hardware reliability • LAN topology support: <ul style="list-style-type: none"> • AppleTalk • Ethernet • FDDI • Token Ring • port bandwidth capabilities <ul style="list-style-type: none"> • 100 megabits per second) • redundant power supply (AC/DC).
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • IT support manager • network Administrator • network manager • small or medium enterprise (SME) customer • small office home office (SOHO) customer • supervisor.
<i>Switch</i> by vendors may include:	<ul style="list-style-type: none"> • 3Com • Accton • Bay • Cisco • DLink • Intel • NetGear • System 3000 Ethernet.
<i>Peripherals</i> may include:	<ul style="list-style-type: none"> • Bluetooth devices • fax • Firewire (IEEE 1394) • input equipment may include: <ul style="list-style-type: none"> • mouse • pens • touch pad

RANGE STATEMENT	
	<ul style="list-style-type: none"> • laptops and desktop computers • mobile phones • modems • multimedia kits • palmtops and personal digital assistants (PDAs) • personal computer • printers • scanners • speakers • tape cartridges • universal serial bus (USB).
<i>User</i> may include:	<ul style="list-style-type: none"> • department within the organisation • person within a department • third party.
<i>Cable</i> may include:	<ul style="list-style-type: none"> • Category 5e, 6 or 7 • crossover • fibre • shielded twisted pairs (STP) • straight through • unshielded twisted pairs (UTP).
<i>Standard</i> may include:	<ul style="list-style-type: none"> • EIA/TIA 568A • EIA/TIA 568B.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install a server	1.1. Prepare for work in line with site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures 1.2. Notify customer to arrange access to site 1.3. Obtain <i>server applications</i> and features from <i>appropriate person</i> 1.4. Choose the most suitable <i>server</i> with reference to required server application and server features 1.5. Choose the most suitable <i>network operating system</i> features with reference to required server solution and technical <i>requirements</i> 1.6. Provide alternative server solutions with reference to required server application and server features 1.7. Review required installation options 1.8. Analyse data migration requirements 1.9. Apply backup and recovery requirements with reference to organisational policy 1.10. Analyse education and training requirements for support staff and in line with <i>client</i> , requirements and relevant enterprise policies 1.11. Create and document a deployment plan 1.12. Advise <i>user</i> group of deployment and potential down times
2. Install and configure the server	2.1. Backup and restore local data in preparation for installation 2.2. Install and configure the server as required by technical requirements and functional specifications 2.3. Install and undertake configuration activities using relevant operating system and application upgrades 2.4. Reconnect and reconfigure relevant connectivity devices
3. Test the server and reconfigure the network	3.1. Run the <i>system</i> testing for benchmarking against client specification and requirements according to test plan, and record outcomes 3.2. Analyse the error report and make changes as required 3.3. Test required changes or additions 3.4. Validate changes or additions against specifications
4. Complete	4.1. Make and document server <i>configuration</i> and

ELEMENT	PERFORMANCE CRITERIA
documentation and clean up work site	operational changes 4.2. Tabulate test results and complete all documentations for users 4.3. Complete client report and notify of status of the network 4.4. Clean up and restore worksite to client's satisfaction 4.5. Secure sign-off from appropriate person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports in required formats
- numeracy skills to take test measurements, interpret results and evaluate performance and interoperability of network
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt configuration procedures to requirements of network and reconfigure depending on differing operational contingencies, risk situations and environments
- research skills to interrogate vendor databases and websites to implement different configuration requirements to meet security levels
- technical skills to select and use server diagnostic test, application software and hardware to suit different network applications

Required knowledge

- Australian Computer Society Code of Ethics
- common network:
 - cable types and connectors
 - topologies
- compatibility issues and resolution procedures
- desktop applications and operating systems as required
- documentation skills for networks
- enterprise communication/training systems in relation to training and advising staff

REQUIRED SKILLS AND KNOWLEDGE

involved in the deployment

- features of:
 - current network operating systems (NOS)
 - current server applications compatibility issues and resolution procedures
- implementation and configuration of servers
- system backup procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse server and network operational issues • apply user applications and relate user needs when configuring a server • create technical and user documentation • install and configure server • test server and reconfigure network • troubleshoot server and network failures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where server installation may be conducted • relevant server specifications: <ul style="list-style-type: none"> • cabling • networked (LAN) computers • server diagnostic software • switch • technical requirements for a network • WAN service point of presence • workstations • relevant regulatory documentation that impacts on installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing or updating network • oral or written questioning of required skills and knowledge • evaluation of report prepared by the candidate outlining testing procedures, test results and recommendation to network changes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE

	<p>for example:</p> <ul style="list-style-type: none"> • ICTTEN4198A Install, configure and test an internet protocol network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Server applications may include:

- database and data warehousing
- directory services
- file sharing

RANGE STATEMENT	
	<ul style="list-style-type: none"> • line of business applications • management • messaging • network and remote access • printer sharing • terminal services • web services.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • IT support manager • network administrator • network manager • small or medium enterprise (SME) customer • small office home office (SOHO) customer • supervisor.
<i>Server</i> may include:	<ul style="list-style-type: none"> • application or web servers • BEA Weblogic servers • email servers • file and print servers • firewall servers • FTP servers • IBM VisualAge and WebSphere • Novell NDS servers • proxy or cache servers.
<i>Network operating system</i> may include latest versions of:	<ul style="list-style-type: none"> • Apple OS • Linux OS • Unix OS • Windows OS.
<i>Requirements</i> may be in reference to:	<ul style="list-style-type: none"> • application • business • database • network • people in the organisation • platform • system.
<i>Client</i> may include:	<ul style="list-style-type: none"> • external organisations • individuals • internal departments • internal employees.

RANGE STATEMENT	
<i>User</i> may include:	<ul style="list-style-type: none"> • department within the organisation • person within a department • third party.
<i>System</i> may include:	<ul style="list-style-type: none"> • application service provider • applications • databases • gateways • internet service provider (ISP) • operating systems • servers.
<i>Configuration</i> may include:	<ul style="list-style-type: none"> • access control needs • cache sizes • consumers and suppliers • database cache • directory configuration • domain name system (DNS) • entry cache • hostnames • IP addresses • large objects • lightweight directory access protocol (LDAP) clients • log file rotation • NetBIOS naming • network connectivity issues • port numbers • root domain name (DN) • search and write performance • server domains.

ICTTEN5203A Dimension and design a radio frequency identification system

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to undertake a radio frequency identification (RFID) installation, configuration and testing. This could be part of the upgrade to an existing or the implementation of a new logistical or security network using RFID technology according to design specifications.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Officers in field work who carry out installation, maintenance and upgrade of ICT networks apply the skills and knowledge in this unit to integrate new and converging functionalities to a network. They would be employed by telecommunications and IT networking provisioning companies specialising in RFID technology.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to dimension and design an RFID system	1.1. Obtain <i>business requirements</i> for the <i>client</i> from an <i>appropriate person</i> for the design of the <i>RFID system</i> 1.2. Research <i>RFID technologies</i> , their functionalities and the different implementations of configurations 1.3. Select suitable software and hardware types to ensure that the proposed system is designed to meet business requirements 1.4. Conduct a survey of available interrogators or readers, tags and wireless units
2. Dimension and design an RFID system	2.1. Select the most appropriate interrogators or readers for the given specification to ensure their compatibility with current network infrastructure if applicable 2.2. Minimise interrogator to interrogator interference 2.3. Verify that antenna geometry and footprint are consistent with the chosen design 2.4. Minimise sources of interference 2.5. Incorporate into the <i>RFID design</i> the use of anti-collision protocols 2.6. Customise appropriate <i>tag to client requirements</i> 2.7. Predict the performance for read distance, write distance and tag response time to confirm that these conform with client requirements 2.8. Select the <i>optimal locations</i> for an RFID tag to be placed on an item 2.9. Prepare a design proposal for the RFID system including <i>specifications</i> 2.10. Prepare a report containing design <i>solutions</i> and recommendations of preferred products, including the justification for recommendations 2.11. Submit report to client for approval
3. Document the specified design	3.1. Complete documentation according to client requirements 3.2. Inform client about standards applying to the design 3.3. Secure sign off of RFID design from appropriate person

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports, design solutions and recommendations in required formats
- numeracy skills to interpret technical specifications and evaluate possible design solutions for optimum RFID system
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt configuration procedures to requirements of RFID network
- research skills to interrogate RFID vendor databases and website to implement different configuration requirements to meet client design specifications
- technical skills to:
 - evaluate and select RFID interrogators, readers and wireless units
 - evaluate antenna designs and protocols for design considerations to suit particular RFID system

Required knowledge

- business process design
- client business operations, business function and organisation
- compatibility issues with existing system and resolution procedures
- configuration of internet protocol (IP) networks
- customer and business liaison
- desktop applications and operating systems as required
- linkage between operational processes
- network protocols and operating systems
- network topologies
- radio spectrum and RFID frequencies
- RF interference
- RFID architecture
- RFID hardware and software
- RFID technologies incorporating substantial depth in network operating systems, protocols, interrogators and sensors, wireless technologies and cabling standards
- RFID vendor product knowledge
- security protocols, standards and data encryption

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • adapt RFID technologies to specified plan and design • evaluate RFID client specifications against accepted industry practices • include RFID architecture across a secure environment • encode RFID tags • attach encoded RFID tags and track the movement of tagged items • integrate RFID information into business applications • produce design information in configuring the network with IP addressing • produce information that can be shared between businesses • make recommendations and offer optimum design solutions.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites providing: <ul style="list-style-type: none"> • client functional requirements • RFID equipment specifications • database software • simulation software • organisational guidelines • network or computer layout documentation and premises plans.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking an RFID installation, configuration and testing • oral or written questioning to assess required knowledge • evaluation of research methodologies and the final

EVIDENCE GUIDE	
	design proposal prepared by the candidate outlining solutions and recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN5204A Produce technical solutions from business specifications. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

RANGE STATEMENT	
<i>Business requirements</i> may include:	<ul style="list-style-type: none"> • application of RFID • business inventory • network or people in the organisation • systems currently in use
<i>Client</i> may include:	<ul style="list-style-type: none"> • external organisations • individuals • internal departments • internal employees • logistic company • security organisation • warehouse.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • IT support manager • network administrator • RFID network manager • small or medium enterprise (SME) customer • small office home office (SOHO) customer • supervisor.
<i>RFID system</i> may include:	<ul style="list-style-type: none"> • antenna • cabling • databases • interrogators or readers • power supplies • tags • wireless units.
<i>RFID technologies</i> may include:	<ul style="list-style-type: none"> • RFID and networking tools and equipment • RFID interrogators/readers and tags • servers and workstations.
<i>RFID design</i> may include:	<ul style="list-style-type: none"> • hardware upgrades • implementing a new system • new hardware • new software • simulation software • software upgrades • user training.
<i>Tag to client requirements</i> may include:	<ul style="list-style-type: none"> • encryption requirements • memory size • security.

RANGE STATEMENT	
<i>Optimal locations</i> may include:	<ul style="list-style-type: none"> • media and adhesive selection for tags • package contents • packaging: <ul style="list-style-type: none"> • inserts • items • labels • tags • product to attach to: <ul style="list-style-type: none"> • liquids • metal • polarisation • tag orientation and location • tag stacking (shadowing).
<i>Specifications</i> may include:	<ul style="list-style-type: none"> • cable drops • device mounting locations • electrical specifications for: <ul style="list-style-type: none"> • adapters • interrogators • power units • readers • sensors • tags • wireless units • interrogation zone locations • RFID network topology • site diagrams.
<i>Solutions</i> may include:	<ul style="list-style-type: none"> • hardware upgrades • implementing a new system • new hardware • new software • software upgrades • user training.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce technical solutions from business specifications	1.1. Obtain <i>business requirements</i> and <i>business specifications</i> for the <i>client</i> from <i>appropriate person</i> 1.2. Research and identify the business model of the client 1.3. Determine technical specifications for business 1.4. Clarify and confirm the business <i>problem</i> and key stakeholders' <i>requirements</i> with stakeholders 1.5. Document business objectives and problem and confirm details with appropriate person
2. Evaluate the impact of the technical requirements	2.1. Review and assess business problems, opportunities and objectives 2.2. Determine <i>technical requirements</i> in respect of input and output, interface, process flow or quality requirements 2.3. Analyse <i>hardware, software</i> and <i>network</i> requirements 2.4. Build business platform based on software solutions 2.5. Investigate processes to be changed by the business solution 2.6. Produce an evaluation document on the <i>impact</i> of the technical requirements on the business
3. Produce technical business solutions	3.1. Develop <i>technical solutions</i> in response to problems and business requirements 3.2. Determine costs involved to implement the technical business solution 3.3. Investigate a range of supplier products to determine which one best meets technical requirements 3.4. Produce a report document on the technical solutions addressing the business specifications and recommendations against business requirements
4. Document and validate the agreed solutions	4.1. Forward technical requirements and solution overview to appropriate person for feedback 4.2. Analyse feedback and incorporate change as required 4.3. Document changes and distribute to appropriate person 4.4. Obtain sign off on final business solution

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to interpret technical documentation and write reports, design solutions and recommendations in required formats
- numeracy skills to interpret business requirements and specifications and evaluate possible technical design scenarios for optimum solution
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt varied business procedures to requirements
- research skills to interrogate vendor databases and website to implement different solutions to meet client business specifications
- technical skills to:
 - determine technical specifications
 - evaluate optimum solutions
 - produce technical solutions

Required knowledge

- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- customer and business liaison
- desktop applications and operating systems as required
- documenting technical specifications
- linkage between processes
- security protocols, standards and data encryption
- technologies, such as:
 - ICT network topologies
 - network protocols and operating systems
 - radio frequency (RF) networks and principles
 - optical networks and principles
 - mobile cellular networks
 - core networks
 - access networks
 - radio frequency identification (RFID) hardware and software.

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • adapt technologies to specified technical solutions • use site design software and hardware • evaluate client specifications against accepted industry practices • produce technical solutions from business specifications • produce information that can be shared between businesses • apply design concepts to business solutions • produce technical reports • make recommendations and offer optimum design solutions.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • client functional requirements • business specifications • database software • simulation software • organisational guidelines • network/computer layout • site design software and hardware • information on a range of ICT business solutions.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of evaluation document prepared by the candidate outlining the impact of technical requirements on the business • oral or written questioning assessing required knowledge • review of research methodologies and the final proposal prepared by the candidate outlining solutions and recommendations.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICTTEN5203A Dimension and design a radio frequency identification system
- ICTOPN6128A Design a dense wavelength division multiplexing system.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>Business requirements</i> may include:	<ul style="list-style-type: none"> • business application • business plan • existing system • mission statement • nature of the business • network or people in the organisation.
<i>Business specifications</i> may include:	<ul style="list-style-type: none"> • budget allocation • budget costs estimate • future plan • growth forecast • technical requirements • timeline.
<i>Client</i> may include:	<ul style="list-style-type: none"> • external organisations • finance company • health industry • ICT company • individual people • internal departments • internal employees • manufacturing company • service industry.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • ICT network administrator • ICT network manager • ICT support manager • small or medium enterprise (SME) customer • small office home office (SOHO) customer • supervisor.
<i>Problem</i> may refer to:	<ul style="list-style-type: none"> • application • business • business need or opportunity that needs to be addressed • network or people in the organisation • system.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • development team • project team • sponsor • user.

RANGE STATEMENT	
Requirements may be in reference to:	<ul style="list-style-type: none"> • application • business • database • network • people in the organisation • platform • system.
Technical requirements may refer to:	<ul style="list-style-type: none"> • bandwidth • hardware problems • network growth • network security • network traffic congestions • new technologies • power usage • software problems • transmission dropouts • upgrades.
Hardware may include:	<ul style="list-style-type: none"> • cabling networks • internet protocol TV (IPTV) • multimedia • network elements: <ul style="list-style-type: none"> • gateways • local area network (LAN) switches • routers • servers • wireless networks • optical networks • radio networks • RFID equipment • switching equipment • transmission equipment • voice and data equipment.
Software may include:	<ul style="list-style-type: none"> • commercial • customised software • in-house • packaged.
Network may include:	<ul style="list-style-type: none"> • broadband • data • ICT networks

RANGE STATEMENT	
	<ul style="list-style-type: none"> • internet • intranet • media • radio • RFID • security • switching • telecommunications • transmission.
<i>Impact</i> may refer to:	<ul style="list-style-type: none"> • fewer downtimes • improved efficiency • improved response times • increased return on investment (RoI) • lower operational costs • more 'user friendly' network.
<i>Technical solutions</i> may include:	<ul style="list-style-type: none"> • audit requirements • changes to: <ul style="list-style-type: none"> • network infrastructure • security or privacy provisions • e-business or e-commerce solution • hardware upgrades • implementing a new system • inventory management • new hardware • new software • occupational health and safety (OHS) requirements • quality requirements • software upgrades • user training.

ICTTEN5217A Plan a wireless mesh network

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to plan a wireless mesh network comprised of radio nodes organised in a mesh topology. Wireless mesh networks provide users with secure wireless roaming beyond traditional wireless local area network (LAN) boundaries and are readily deployed in areas that lack wired backhaul.</p> <p>The mesh topology and ad-hoc routing give mesh networks stability, offer redundancy and have the ability to self-form and self-heal. Mesh networks enable local communities and those in remote areas to participate in a distributed shared network without the need for centralised management.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff who work with wireless networking equipment or radio communications equipment apply the skills and knowledge in this unit to design a scalable wireless access network using mesh technology for growing communities.</p> <p>This may include planning officers and field officers from private and public organisations.</p>
---------------------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research wireless mesh networks and formulate the system architecture	1.1. Confirm with regulatory spectrum management authority the <i>specific regulations</i> regarding radio characteristics 1.2. Contact customer to determine <i>wireless mesh network</i> design specifications 1.3. Evaluate the use of <i>frequency bands</i> for the operation of the WMN 1.4. Evaluate and select the <i>wireless technology, internet protocol (IP)</i> version and <i>mesh routing protocol</i> to satisfy design criteria 1.5. Specify and source the <i>hardware and software requirements</i>
2. Prepare a detailed plan for the mesh network	2.1. Evaluate the maximum line of sight distances achievable between backbone nodes and between mesh nodes 2.2. Plan the sites where mesh nodes will be located and plot to scale on a map 2.3. Estimate the quantity and length of the links required between mesh nodes to ensure design is within specifications 2.4. Design backbone links in the mesh topology for scalability of future deployments 2.5. Select the location of the internet <i>gateway</i> for the network 2.6. Allocate operating frequencies at mesh nodes, backbone nodes and wireless access points for optimum network performance with minimal interference from adjacent network routers
3. Plan the IP addresses and subnet mask	3.1. Produce an addressing scheme and allocate IP addresses and subnet mask to mesh nodes, backbone nodes and access points 3.2. Produce a configuration scheme to secure the network
4. Document the mesh network	4.1. Document the plans and drawings for the mesh network 4.2. Produce an <i>installation plan</i> for the building of the mesh network 4.3. Following installation, configuration and testing of the mesh network, incorporate 'as built' amendments if appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analysis skills to evaluate information and make recommendations
- communication skills to liaise with vendors and installation personnel on technical and operational matters
- literacy skills to interpret technical documentation and write reports in required formats
- numeracy skills to perform calculations, interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and that of others
- problem solving and contingency management skills to adapt testing procedures to requirements of particular situations and modify activities depending on operational contingencies, risk situations and environments
- technical skills to:
 - configure and set up IP addresses and subnet masks
 - install software
 - select and specify appropriate performance tests and test equipment

Required knowledge

- antenna gain, polarisation
- cable loss
- calculation of effective isotropic radiated power (EIRP)
- calculation of line of site radio range
- decibels and related units
- IP addressing and subnet masks
- network security and firewalls
- network topologies
- radio frequency (RF) frequency bands
- routing protocols
- transmission control protocol (TCP)-IP protocols
- wireless networking hardware, access points, wireless routers and gateway
- wireless protocols

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate and select wireless technology and mesh routing protocol • plan a wireless mesh network from a project brief • produce an IP addressing scheme • prepare an installation plan.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where planning a wireless mesh network may be conducted • design criteria and other site related documentation • equipment specifications and technical documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate planning a wireless mesh network • review of plan prepared by the candidate outlining recommendations for the customer • review of IP addressing scheme prepared by the candidate • oral or written questioning to assess knowledge of equipment and technologies as used within the mesh network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4050A Install and configure a wireless mesh network • ICTRFN3055A Install a radio communications antenna and feedline.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Specific regulations may include:

- maximum allowable antenna gain
- maximum allowable EIRP
- maximum allowable power output for transmitter
- use of the 2.4 GHz band
- use of the 5.8 GHz band.

Wireless mesh network may

- client wireless mesh network - client nodes perform routing

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • hybrid wireless mesh network - perform mesh and access functions • infrastructure wireless mesh network - mesh routers for the clients.
<i>Frequency bands</i> may include:	<ul style="list-style-type: none"> • multiple frequencies for access and transmission • same frequency for access and transmission • separate frequencies for access and transmission.
<i>Wireless technology</i> may include:	<ul style="list-style-type: none"> • 802.11a • 802.11b • 802.11g • 802.11n • 802.11s draft IEEE 802.11 amendment • 802.16.
<i>Internet protocol (IP)</i> may include:	<ul style="list-style-type: none"> • IPv4 • IPv6.
<i>Mesh routing protocol</i> may include:	<ul style="list-style-type: none"> • ad-hoc on-demand distance vector (AODV) • better approach to mobile ad-hoc networking (BATMAN) • dynamic source routing (DSR) • hybrid wireless mesh protocol (HWMP) • infrastructure wireless mesh protocol (IWMP) • optimised link state routing protocol (OLSR).
<i>Hardware and software requirements</i> may include:	<ul style="list-style-type: none"> • hardware: <ul style="list-style-type: none"> • access points • antenna polarisation • directional microwave antennas • omnidirectional microwave antennas • wireless routers • software: <ul style="list-style-type: none"> • open source software: <ul style="list-style-type: none"> • FreeBSD • Freifunk • proprietary.
<i>Gateway</i> may include:	<ul style="list-style-type: none"> • asymmetric digital subscriber line (ADSL) • very small aperture terminal (VSAT).
<i>Installation plan</i> may include:	<ul style="list-style-type: none"> • addressing scheme • configuration instructions and commands

RANGE STATEMENT

	<ul style="list-style-type: none"> • frequency allocation plan • network element details: <ul style="list-style-type: none"> • MAC address • model, type and serial number • security implementation • siting of mesh routers and gateways • software version.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to inspect and test internal telecommunications network equipment not previously installed in an Australian network. It involves assessing its suitability and compliance with local regulations and conditions for the carrier or asset owner.</p> <p>It involves processes for checking specifications, complex testing procedures and administrative tasks.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Field officers, technicians or technical supervisors from carriers, contractors or other service providers apply the skills and knowledge in this unit to verify the compliance of new equipment or systems to Australian standards.</p> <p>This unit applies to installation of both new, additional and replacement equipment. It may apply to switching, transmission, broadband, internet protocol (IP) networks, optical and radio networks.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure conformity of international design to Australian standards	1.1. Assess original international design to verify compliance with Australian relevant legislation, codes, regulations and standards 1.2. Reconfigure international design in consultation with customer 1.3. Rewrite design specifications to include configuration amendments
2. Plan and establish test regime	2.1. Plan type and number of tests to ensure full trial of new or enhanced design and greatest coverage for minimal tests 2.2. Plan and establish test environment to ensure total validity of chosen tests 2.3. Design test regime of proposed system to test impact on existing systems 2.4. Confirm test regime in consultation with planners and verify that test equipment meets required standards
3. Undertake tests	3.1. Conduct and document tests including live system tests in logical and sequential order to planned test regime 3.2. Negotiate problems experienced during the test with system experts or designers to plan contingency activity according to enterprise policy 3.3. Prepare and submit trouble reports according to enterprise policy
4. Analyse test results	4.1. Analyse test results against design specifications and planned outcomes 4.2. Prepare a report referring major deficiencies to designers with recommendations for design change 4.3. Analyse minor variances, plan solutions and document changes to specifications
5. Retest design changes	5.1. Implement design and specification changes and conduct further tests as required 5.2. Analyse test results to verify compliance with updated design specifications 5.3. Document results of tests according to enterprise policy

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - assess compatibility and interoperability with existing system
 - interpret test equipment settings and readings
- communication skills to liaise with internal personnel, technical staff, manufacturers and vendor engineers on technical, operational and business related matters
- literacy skills to:
 - interpret technical specifications and related documentation
 - write reports and recommendations
- numeracy skills to make calculations and necessary calibration changes
- planning and organisational skills to plan, prioritise and monitor own work
- technical skills to:
 - interpret engineering specifications
 - perform high level and complex testing
 - test and evaluate new technologies

Required knowledge

- Australian standards applicable to system and equipment compliance
- connections to carrier infrastructure or equipment
- design criteria
- network and equipment tests for compliance
- network architectures
- relevant international standards

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply Australian standards to international designs • negotiate with equipment vendor and identify specific requirements • configure and set up test regimes • identify and conduct tests including live system tests and interpret and analyse results • approach problem diagnosis systematically, eliminating causes • retest design changes • prepare report, including deficiencies, analysis and recommendations.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • test site where qualification testing of equipment and systems may be conducted • equipment currently used in industry • relevant Australian and international standards, codes, design specifications, manuals and reference materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral report and direct observation of the candidate establishing a test regime • direct observation of the candidate undertaking tests including live system test on equipment and systems • review of reports completed by the candidate for different equipment types, test results and situations, analysing results with recommendations and supporting reasons • oral or written questioning of the candidate to assess knowledge of qualification and testing procedures, types of systems and tests.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE	
assessment	<p>industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTNPL6046A Undertake network performance analysis. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Relevant legislation, codes, regulations and standards</i> may	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards TS 14

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • Australian electrical standards • International Standards ISO 9000 and ISO 9001 • International Telecommunications Union (ITU) recommendations • occupational health and safety (OHS) • Telecommunications Act and associated codes.
<i>Reconfigure international design</i> may involve:	<ul style="list-style-type: none"> • conforming to: <ul style="list-style-type: none"> • Australian regulation, codes and standards • international standards.
<i>Tests</i> may include:	<ul style="list-style-type: none"> • network tests: <ul style="list-style-type: none"> • bandwidth • latency • packet loss rate • quality of service (QoS) • redundancy • uploads and downloads rate • switching tests: <ul style="list-style-type: none"> • blocking • call rate • congestion • drop out rate • functionality • QoS • recovery rate • transmission tests: <ul style="list-style-type: none"> • distortion • interference • optical transmission • radio transmission • signal to noise ratio • transmitted power measurements.
<i>Test environment</i> may involve:	<ul style="list-style-type: none"> • laboratory situation with simulated test conditions • trialling in a model network with actual test conditions.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • communication system analysers • global system for mobiles (GSM) spectrum frequency synthesizer

RANGE STATEMENT	
	<ul style="list-style-type: none"> • laser source • microwave link analyser • modulator tester • network analyser • optical fibre power meters • optical time domain reflectometer (OTDR) • pattern generators • power meters • protocol analyser • radio frequency (RF) band noise meter • RF microwave test sets • RF sweep tester • spectrum analysers • sweep test coaxial and wave guide antenna systems.
<i>Contingency activity</i> may refer to:	<ul style="list-style-type: none"> • P1 blocking: <ul style="list-style-type: none"> • referred to experts or trouble report issued • submitted to designers • P2 customer perception problems: <ul style="list-style-type: none"> • test continues • trouble report sent to designers • P3 identifiable problem: <ul style="list-style-type: none"> • work around problem or make minor changes • P4 minor: <ul style="list-style-type: none"> • usually specification error • change and document.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Undertake proactive maintenance of system	1.1. Prepare <i>methodology</i> to undertake platform data base <i>optimisation</i> and <i>administration</i> effectively 1.2. Produce a <i>cost benefit analysis</i> of database optimisation schedule to evaluate the effective return on investment (RoI) benefit to the organisation 1.3. Produce training instructions for new users on methodology to ensure effective database optimisation and administration 1.4. Interrogate and monitor <i>system platforms</i> to determine error logs, aging time on processes, <i>data base checks</i> and system loadings 1.5. Notify appropriate personnel of <i>problems</i> with advice and guidance on likely solutions 1.6. Conduct <i>measurements of the system</i> from a user perspective on response times and initiate investigations on problem where <i>specifications</i> are not being met 1.7. Assess availability of <i>data storage</i> space and initiate appropriate action where required 1.8. Develop procedures for system backup and restoration, review for efficiency of operation and amend where required
2. Provide application support to system users	2.1. Produce a set of procedures for formal meetings with users on a regular basis for effectiveness to discuss user issues and provide support 2.2. Set up a <i>user support network</i> to provide responsive system administration to users on an ongoing basis as critical issues arise
3. Create and delete user accounts	3.1. Create a hierarchical <i>user profiling system</i> to manage user accounts effectively according to enterprise policy 3.2. Establish and monitor <i>security</i> procedures relating to access according to policy 3.3. Assess grounds for deletion of user accounts and determine necessary action
4. Undertake special investigations	4.1. Evaluate <i>request for investigation</i> to determine detail of action required 4.2. Prepare activity plan including timelines, specific goals, investigative team and resources required to conduct the investigation

ELEMENT	PERFORMANCE CRITERIA
	4.3. Conduct investigation methodically according to plan and record the findings 4.4. Analyse findings and prepare and forward reports, including recommendations to the requesting body

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - perform cost benefit analysis of database
 - analyse findings of investigation
- communication skills to:
 - liaise with technical and other staff to ensure requirements are known
 - support users of applications
- initiative and enterprise skills to identify improvements to system administration tools and methods
- literacy skills to:
 - interpret technical specifications and related documentation and prepare reports and recommendations
 - produce training instructions
 - produce reports on system administration and investigations
- numeracy skills to make statistical calculations on traffic predictions
- planning and organisational skills to:
 - prepare methodology for data base optimisation and administration
 - develop support systems to manage user accounts
 - prepare activity plan for special investigations
- problem solving skills to:
 - overcome system problems
 - undertake special investigations
- technical skills to:
 - conduct database and data storage checks
 - develop user profiling system
 - interrogate and monitor system platforms:

REQUIRED SKILLS AND KNOWLEDGE

- conduct measurements
- monitor system loadings
- monitor system platforms
- provide system backup and restoration

Required knowledge

- back up systems
- computer knowledge
- meeting procedures
- methodology of system administration
- network management systems
- optimisation and administration database
- overview knowledge of telecommunications monitoring tools and telecommunications networks
- system:
 - investigation requests and actions
 - optimisation
- training instructions development
- user accounts security and profiling system

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • provide methodology for system maintenance • produce cost benefit analysis and training for database optimisation and administration • conduct system measurements • develop support processes for system users • manage user accounts and security procedures • investigate potential system administration problems and make recommendations.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network for maintenance and analysis of special investigations • equipment and systems manuals, specifications and enterprise policy.
Method of assessment	<p>The following assessment method is appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking system measurements and investigations • direct observation of the candidate providing application support, and creating and deleting user accounts • review of reports and recommendations completed by the candidate for special investigations • oral or written questioning to assess knowledge required to prepare methodology for system maintenance.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL6046A Undertake network performance analysis • ICTTEN6043A Undertake network traffic management

EVIDENCE GUIDE

- ICTTEN6044A Coordinate fault rectification and restoration of service following network outages
- ICTTEN6045A Implement planned network changes with minimal impact to the customer.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Methodology may include:

- implementation
- logical design

RANGE STATEMENT	
	<ul style="list-style-type: none"> • scoping • technical optimisation.
<i>Optimisation</i> refers to:	<ul style="list-style-type: none"> • steps: <ul style="list-style-type: none"> • add indexes • combine tables • de-normalise • sort • store derived data • use ranges.
<i>Administration</i> includes:	<ul style="list-style-type: none"> • administer users • awareness of database security • awareness of net and shared services • control database • create database • install database software • manage database interfaces • manage schema objects and data • manipulate storage structures • monitor and resolve lock conflicts • perform database backup • perform database recovery • performance monitoring • proactive maintenance.
<i>Cost benefit analysis</i> indicators include:	<ul style="list-style-type: none"> • benefit cost ratio (BCR) • net benefit • net present value (NPV) • present value of benefits (PVB) • present value of costs (PVC)
<i>System platforms</i> may include:	<ul style="list-style-type: none"> • Command post • HP open view • Oracle • SUN Operating system • UNIX • Windows 2000 • Windows NT.
<i>Data base checks</i> refer to:	<ul style="list-style-type: none"> • use of system resources, such as: <ul style="list-style-type: none"> • central processing unit (CPU) • internal and external hard drives • mesh networks

RANGE STATEMENT	
	<ul style="list-style-type: none"> • RAM • server farms • servers.
Problems may include:	<ul style="list-style-type: none"> • authorisations • backups • CPU usage time • data retrieval • flaky sectors on hard drive • lockups • logons • security breaches.
Measurements of the system may refer to:	<ul style="list-style-type: none"> • simulated or live environment • dummy loading of data to measure response in various situations, such as adding new customers to an existing data base.
Specifications refer to:	<ul style="list-style-type: none"> • speed of response and applications • vendor or platform and application specific.
Data storage may include:	<ul style="list-style-type: none"> • software and hardware variations • software redesign • storage area networks (SAN) • storage rearrangements.
User support network may include:	<ul style="list-style-type: none"> • email for logging issues • helpdesk for routine user support • hotline for critical system support • Wiki for collaborative and interactive user network and support.
User profiling system may include:	<ul style="list-style-type: none"> • allocation of users to specific groups • creation of customer user groups • creation of system access levels • creation of user profiles.
Security may include:	<ul style="list-style-type: none"> • encryption • firewall • logons with username and password • PINs • session initiation protocol (SIP).
Request for investigation may include:	<ul style="list-style-type: none"> • accessibility • availability • bandwidth allocation • data rate

RANGE STATEMENT	
	<ul style="list-style-type: none"> • filtering • network congestion • performance of platform • performance of platform application • remote access using virtual private network(VPN) • uploads and downloads.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate network capacity and traffic problems	1.1. Interrogate network alarms to identify any areas of route and circuit unavailability 1.2. Assess planned and unplanned outages to determine <i>network</i> unavailability and verify restoration times 1.3. Interrogate system to identify traffic status using network management system 1.4. Analyse system alert to identify real and potential traffic problems 1.5. Analyse customer complaints and traffic measurement <i>data</i> to identify network problems 1.6. Activate and deactivate semi permanent controls active in the network on a regular basis to simulate irregular traffic
2. Develop strategies to overcome network traffic problems	2.1. Conduct <i>traffic measurements</i> across all identified routes 2.2. Analyse results including historical data to make assessment of traffic volume requirements 2.3. Determine specific thresholds, loading and grading levels to alter traffic flows 2.4. Liaise with <i>personnel</i> to determine amendments to plan based on funding parameters and budgeted levels 2.5. Develop strategies based on traffic analyses and patterns to control traffic and prevent congestion or other traffic problems 2.6. Develop strategies for recovery where traffic congestion occurs 2.7. Develop contingency plans to allow for problems during network changes
3. Apply short and long term solutions	3.1. Implement software changes according to planned strategy 3.2. Develop short term ad hoc solutions where temporary solution only is required 3.3. Implement action plan to ensure that reversal action can be initiated in the case of temporary solution 3.4. Implement contingency plan where required 3.5. Undertake <i>monitoring</i> of changes and take measurements to assess the outcome of variations 3.6. Prepare a report based on analysis of measurements for appropriate personnel with recommendations for

ELEMENT	PERFORMANCE CRITERIA
	further changes or actions 3.7. Review and monitor strategies regularly and initiate corrective action where required
4. Detect and take action on potential traffic congestion	4.1. Measure and analyse <i>traffic loads</i> to assess potential congestion problems and determine possible impact 4.2. Control traffic flow to prevent processor overloads 4.3. Evaluate potential traffic increases for impact on the network and develop contingencies to control traffic flow if required
5. Provide traffic indicators for capacity planning	5.1. Predict future potential traffic trends and requirements using data on current and historical traffic patterns 5.2. Identify potential network traffic problems and make recommendations to network planners 5.3. Complete reports with recommendations and forward to enterprise planners and account managers

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret statistical data to determine trends
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to read and interpret technical specifications and related documentation and prepare reports and planning documentation
- numeracy skills to make statistical calculations on traffic predictions
- planning and organisational skills to develop activity plans and strategies for traffic management
- problem solving skills to overcome network traffic problems
- research skills to identify traffic trends and network capacity
- technical skills to perform statistical measurements

Required knowledge

- customer policies and service level agreements
- planning principles

REQUIRED SKILLS AND KNOWLEDGE

- traffic blocking, congestion and dimensioning principles
- traffic engineering
- traffic patterns
- transmission type and signals that may be encountered
- typical network topologies, switching, routing and transmission techniques
- various network management systems suitable for conducting traffic evaluations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement a contingency plan • apply short and long term solutions to traffic problems • conduct traffic measurements • develop contingencies to control traffic flow • identify potential network traffic problems and make recommendations • provide information for capacity planning.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network and equipment for traffic monitoring and management • equipment and systems manuals, specifications and enterprise policy.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking traffic monitoring and management • review of report completed by the candidate containing analysis of traffic flow and recommendations for potential problems • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL6046A Undertake network performance analysis. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

ICTTEN6044A Coordinate fault rectification and restoration of service following network outages

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to identify, analyse and resolve service faults by coordinating fault rectification. It describes strategies for dealing with customers, operational staff and associated system restoration.</p> <p>Network faults in service provider Core and Access Networks impact on services provided to customers.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Network engineering staff who coordinate fault rectification and restoration of service following network outages apply the skills and knowledge in this unit.</p> <p>This unit applies to network engineers, managers or senior operational staff who have high level technical skills and appropriate authority to coordinate the activities of maintenance personnel. It addresses compliance issues associated with service level agreements.</p>
--------------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare for restoration of client services</p>	<p>1.1. Evaluate relevant data to determine the nature of the fault and the extent of the outage</p> <p>1.2. Assess impact of the fault on network and clients and establish priority of actions to be taken</p> <p>1.3. Analyse alarm and other network data and record the details according to contractual agreements and enterprise policy</p> <p>1.4. Prepare an action plan to manage the fault rectification and restoration to minimise impact on the network and affected customer</p> <p>1.5. Provide a central point for all rectification and restoration activity and information to coordinate action and progress</p> <p>1.6. Prioritise service restoration based on assessment of contractual arrangements, including service level agreements with clients</p> <p>1.7. Negotiate with client's account manager regarding repair arrangements where service level agreements cannot be met</p>
<p>2. Implement action plan for fault rectification and service restoration</p>	<p>2.1. Notify all relevant personnel and departments involved in the outage according to enterprise policy</p> <p>2.2. Isolate affected alarms and monitor all associated alarms to confirm no additional problems occur</p> <p>2.3. Locate and rectify fault following action plan backed up by contingency plan according to enterprise policy</p> <p>2.4. Manage repair activity with appropriate technical support and adjust resource allocations or escalate if required to ensure effective restoration of network services within a specified timeline</p> <p>2.5. Reset alarms and restore services to normal network configuration</p> <p>2.6. Test and monitor network activity upon recovery to certify effective fault clearance and service restoration</p>
<p>3. Finalise administrative tasks</p>	<p>3.1. Complete administrative tasks according to enterprise instructions</p> <p>3.2. Notify customers of fault rectification and service restoration according to service level agreement</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise and negotiate with clients and internal staff to ensure requirements are known and can be met within specified timeframes
- literacy skills to read and interpret technical specifications and related documentation
- PC skills to communicate with network and enterprise database
- planning and organisational skills to ensure timely updates and information are communicated to appropriate parties
- problem solving skills to account for unexpected faults or equipment incompatibilities
- research skills to gain and maintain relevant and current technical product knowledge
- technical skills to operate and configure equipment

Required knowledge

- alarm conditions and the areas of the network or service they impact
- connections to carrier infrastructure or equipment
- customer care policies
- electrical and optical principles
- escalation procedures and appropriate tier level contacts
- legislation and licensing surrounding installation of telecommunications equipment
- network and transmission equipment
- occupational health and safety (OHS) requirements and work practices relevant to fault rectification
- power requirements and electrical safety
- protection switching
- telecommunications applications and related equipment
- test equipment
- transmission hierarchy and switching principles
- typical performance parameters and faults that may be encountered

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare an action plan to manage fault rectification and service restoration • coordinate implementation of action plan and manage repair activities • apply escalation procedures.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where fault rectification and restoration of service may be conducted • use of testing equipment currently used in industry • manufacturer's and enterprise documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate planning and conducting coordination tasks for fault rectification • review of service restoration plans completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN6045A Implement planned network changes with minimal impact to the customer. <p>Aboriginal people and other people from a non English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE	
	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Relevant data</i> may include:	<ul style="list-style-type: none"> • alarm urgency • client reports • environmental factors • historical data • industry and vendor • network operations centre (NOC) reports • service level degradation • technical reports • test results from remote interrogation.
<i>Nature of the fault</i> may include:	<ul style="list-style-type: none"> • distributed denial of service (DDoS) attack • failure of transmission equipment • fibre cut • radio frequency interference

RANGE STATEMENT	
	<ul style="list-style-type: none"> • return path amplifier failure in hybrid fibre coaxial (HFC) network • satellite transponder failure • uninterruptible power supply (UPS) failure.
Impact may include:	<ul style="list-style-type: none"> • customer impact: <ul style="list-style-type: none"> • disruption of service to residential customers • intermittent performance • loss of service and revenue to an enterprise • network impact: <ul style="list-style-type: none"> • call drop out • congestion • errors • excessive latency • limited mobile phone coverage • no transmission • poor grade of service (GoS) • poor signal quality • routing problems.
Details may include:	<ul style="list-style-type: none"> • duration of outage • geographical footprint of service problems • initial time of outage • outcome of automatic switch-over to standby equipment • services impacted.
Action plan may include:	<ul style="list-style-type: none"> • contingency plan • engage additional services • engage additional technical support • manual switchover to redundant path • monitor and amend procedures • provision of standby equipment.
Central point may include:	<ul style="list-style-type: none"> • network operations centre • network operations manager • outage coordinator.
Service level agreements may include:	<ul style="list-style-type: none"> • amount of scheduled maintenance • compensation • guaranteed uptime • levels of availability • performance

RANGE STATEMENT	
	<ul style="list-style-type: none"> • technical response to faults.
<i>Relevant personnel and departments</i> may include:	<ul style="list-style-type: none"> • client • design engineer • NOC • on site technical staff • other installations sharing same network traffic • project manager • specialist technical support staff.
<i>Outage</i> may be:	<ul style="list-style-type: none"> • planned outage in the case of network upgrade • unplanned outage as a result of a network failure or emergency disruption to service.
<i>Escalate</i> may refer to:	<ul style="list-style-type: none"> • greater involvement from the NOC specialist personnel • requesting vendor specialist technical support.
<i>Test and monitor</i> may include:	<ul style="list-style-type: none"> • alarm monitoring • congestion activity report • fault incidence report • network management report • traffic flow measurements.
<i>Administrative tasks</i> may include:	<ul style="list-style-type: none"> • analysing trending data • completing test sheets • logging test instrument usage • recording problems identified during repair process • undertaking cause and effect studies • updating database or system log with repair details.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for network changes plan	<p>1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work</p> <p>1.2. Evaluate work order with relevant personnel and identify the likely effects on the network and impact on customers of the planned changes</p> <p>1.3. Develop network engineering strategies including management of outages with involvement of the network operations centre (NOC)</p> <p>1.4. Prepare and produce a network changes plan for approval according to enterprise practice</p>
2. Implement and test network changes prior to customer utilisation	<p>2.1. Implement network changes according to network engineering strategies following occupational health and safety (OHS) and environmental requirements with minimal impact to customer traffic</p> <p>2.2. Conduct integration testing of newly installed equipment to ensure interoperability with existing equipment and network</p> <p>2.3. Conduct performance test to assess the network changes as stated in manufacturer's specifications and enterprise acceptance testing procedures</p> <p>2.4. Analyse test results and rectify problems or escalate according to enterprise procedures</p> <p>2.5. Initiate quality assurance procedures to ensure confidence in quality of processes according to enterprise policy</p> <p>2.6. Prepare reports for the appropriate area within the enterprise</p>
3. Enable functionality of network changes to customer	<p>3.1. Monitor network stability prior to connecting customer traffic and take action to rectify any problems</p> <p>3.2. Enable full functionality of network changes to customer according to the network changes plan and monitor network to ensure continued stability</p> <p>3.3. Prepare appropriate documentation according to enterprise requirements</p>
4. Assess and report on implementation of network changes	<p>4.1. Use monitoring data to evaluate the performance of the network changes and impact to customers according to network engineering strategies and customer requirements</p> <p>4.2. Document the implementation of the planned network changes and recommend any further</p>

ELEMENT	PERFORMANCE CRITERIA
	improvements as part of the enterprise's quality assurance system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to assess network changes and make recommendations
- communication skills to interact with enterprise personnel, customers and other contractors keeping a customer focus and consideration of customer needs
- literacy skills to read, interpret and use equipment and system manuals and specifications and relevant enterprise policy and documentation
- planning and organisational skills to coordinate all work groups associated with network change
- PC skills to load software and hardware
- problem solving skills to account for unexpected faults or equipment incompatibilities
- research skills to gain and maintain relevant and current technical product knowledge
- safety awareness skills to adhere to all related OHS requirements and work practices
- technical skills to:
 - conduct performance testing
 - correctly handle, connect and calibrate test equipment
 - interpret test results, diagnose and rectify faults
 - perform integration testing

Required knowledge

- compatibility and interoperability of system types
- factors affecting network stability
- hardware
- internet protocol (IP) based networks
- legislation and licensing relevant to work activity
- optical networks
- quality assurance procedures
- software

REQUIRED SKILLS AND KNOWLEDGE

- test equipment types suitable for tests to be made
- types of customer networks

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- evaluate planned network changes, including impact on customer
- develop network engineering strategies to manage outages
- implement network changes
- conduct integration testing, analyse results and rectify faults
- enable full functionality of network changes.

Context of and specific resources for assessment

Assessment must ensure:

- sites where network changes may be conducted
- use of testing equipment currently used in industry
- systems manuals, specifications and enterprise policy.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the candidate implementing network changes
- review of network changes plan prepared by the candidate outlining network engineering strategies to manage outages
- review of test results and documentation completed by the candidate
- oral or written questioning to assess required

EVIDENCE GUIDE	
	knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN6044A Coordinate fault rectification and restoration of service following network outages. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>

RANGE STATEMENT	
<i>Relevant legislation, codes, regulations and standards</i> may relate to:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5, 6, 6A, 7 or 7A, and unshielded twisted pairs (UTP) • Environmental Protection Acts • fire regulations • noise abatement and heritage legislation • OHS • relevant international standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006 • Trade Practices Act.
<i>Work order</i> may include:	<ul style="list-style-type: none"> • authority to proceed with change to the network • list of activities to be undertaken • schedule of activities.
<i>Relevant personnel</i> may include:	<ul style="list-style-type: none"> • carrier or service provider staff • electrical contractor • equipment manufacturer • equipment supplier • external customer • on site operation staff.
<i>Likely effects</i> may include:	<ul style="list-style-type: none"> • congestion • drop out • excessive latency

RANGE STATEMENT	
	<ul style="list-style-type: none"> • limited coverage • loss of coverage • loss of service • poor grade of service (GoS) • poor signal quality • routing problems.
<i>Network</i> may include:	<ul style="list-style-type: none"> • cellular mobile networks • data and voice • IP network • national wide area networks (WAN) • optical dense wavelength division multiplexing (DWDM) networks • public switched telephone network (PSTN).
<i>Impact</i> may include:	<ul style="list-style-type: none"> • disruption of service to residential customers • intermittent performance • loss of service and revenue to an enterprise.
<i>Customers</i> may include:	<ul style="list-style-type: none"> • building owner • communications consultant • contractor to a major supplier • end users • equipment owner • householder • operations staff.
<i>Network engineering strategies</i> may include:	<ul style="list-style-type: none"> • provision of redundant path • rerouting of traffic • supply of temporary equipment to maintain minimal services.
<i>Outages</i> may include:	<ul style="list-style-type: none"> • loss of service to customers due to a network disruption • planned outage in the case of network upgrade • unplanned outage in relation to fault.
<i>Network Operations Centre</i> may include:	<ul style="list-style-type: none"> • engineering unit within a carrier responsible for: <ul style="list-style-type: none"> • controlling the network • coordinating repairs or changes to the network • monitoring the network • performing diagnostic tests.
<i>Enterprise practice</i> may include:	<ul style="list-style-type: none"> • procedures for implementing installation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • procedures for implementing maintenance • reporting tasks.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • gas and other hazard detection equipment • identifying other services, including power and gas • safety equipment: <ul style="list-style-type: none"> • flashing lights • safety barriers • trench guards • warning signs and tapes • witches hats • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste management.
<i>Customer traffic</i> may include:	<ul style="list-style-type: none"> • analog or digital forms of: <ul style="list-style-type: none"> • data • image • voice.
<i>Integration testing</i> may include:	<ul style="list-style-type: none"> • compatibility • interface units • interoperability.
<i>Performance test</i> may include:	<ul style="list-style-type: none"> • bandwidth • blocking • call rate • congestion • distortion

RANGE STATEMENT	
	<ul style="list-style-type: none"> • drop out rate • functionality • interference • latency • network tests • optical transmission tests • packet loss rate • quality of service (QoS) • radio transmission test • recovery rate • redundancy • signal to noise ratio • switching tests • transmission tests • transmission tests • transmitted power measurements • upload and download rate.
<i>Manufacturer's specifications</i> may include:	<ul style="list-style-type: none"> • electrical • environmental parameters • mechanical • regulatory.
<i>Acceptance testing</i> may include:	<ul style="list-style-type: none"> • testing equipment following major upgrade • testing newly installed equipment.
<i>Escalate</i> may include:	<ul style="list-style-type: none"> • greater involvement from the NOC specialist personnel • requesting vendor specialist technical support.
<i>Quality assurance</i> may include:	<ul style="list-style-type: none"> • acting on logs, reports and other data to guide ongoing quality improvements • reporting on installation or maintenance activities • updating logs.
<i>Network stability</i> may include:	<ul style="list-style-type: none"> • alarm monitoring • congestion activity report • fault incidence report • network management report • traffic flow measurements.

ICTTEN6047A Manage a common channel signalling network

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to manage common channel signalling (CCS) network to control multiple data channels.</p> <p>The most common CCS signalling methods in use are integrated services digital network (ISDN) and signalling system No.7 (SS7). ISDN signalling is used primarily on trunks connecting end-user private branch exchange (PBX) systems to a central office. SS7 is primarily used within the public switched telephone network (PSTN). The two signalling methods are very similar since they share a common background and in some cases, the same signalling messages are transmitted in both ISDN and SS7.</p> <p>Voice over internet protocol (VoIP) communications use configurations with multiple routers to communicate via VoIP and CCS over a digital primary rate interface (PRI).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical officers or engineers from private and public organisations apply the skills and knowledge in this unit. They combine technical skills with organisational skills to provide signalling facilities to interconnect telecommunications over trunked networks.</p> <p>They may be responsible for small projects or parts of larger projects and their primary roles are to provide trunked transmission paths for a reliable service to customers.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse signalling and digital path alarms and clear network faults	1.1. Obtain relevant legislation, codes, regulations and standards to prepare for the task 1.2. Activate alarm management system to produce a trouble report and verify CCS and data faults or problems 1.3. Investigate cause of alarm and analyse results to determine appropriate repair action and allocate resources 1.4. Monitor repair and restoration procedures to ensure commitment to specified timelines and initiate escalation procedures as appropriate and according to enterprise procedures 1.5. Reset alarms on completion of repair and monitor subsequent alarms to ensure no re-occurrence of the problem
2. Monitor integrity of data received on equipment ports	2.1. Activate alarm screens and monitor port times on a regular basis to ensure that procedures are running 2.2. Clear port blockage and problems on completion of planned works and log in appropriate database 2.3. Monitor repair and restoration procedures to ensure commitment to specified timelines and initiate escalation procedures as appropriate and according to enterprise procedures
3. Monitor and acceptance test repair	3.1. Verify network stabilisation throughout repair and monitor repair action to ensure minimal impact on the overall network 3.2. Undertake acceptance testing according to prescribed operating procedures 3.3. Monitor network stability on completion and refer problems to the appropriate area for action 3.4. Block alarms for out of service circuits
4. Coordinate CCS relationships	4.1. Log requests for relationship change and follow up problems with appropriate support staff 4.2. Monitor network stability and manage loading of data until the process is completed 4.3. Update models and enterprise systems
5. Coordinate CCS rearrangements	5.1. Log requests for rearrangements scenarios and verify feasibility of rearrangement

ELEMENT	PERFORMANCE CRITERIA
	5.2. Enter details of rearrangement in appropriate system and update system records 5.3. Monitor completed work for accuracy and network stability on completion 5.4. Produce a copy of <i>documentation</i> for future reference

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interrogate and evaluate complex information from multiple sources and to develop positions and recommendations
- communication skills to:
 - liaise with vendors, customers, and technical experts on technical and operational matters
 - negotiate with other repair and support staff
- literacy skills to incorporate technical language into written tasks such as records and reports
- numeracy skills to interpret technical data
- planning and organisational skills to work in a methodical and logical manner
- research skills to access technical information and sources to assist fault identification
- technical skills to operate testing tools

Required knowledge

- acceptance tests
- alarm set ups
- CCS:
 - architecture
 - protocols
 - signalling
 - testing
- data and signalling pathways
- repair and restoration procedures
- routing architecture

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards include:

- Australian Communications and Media Authority (ACMA) standards as they apply to carrier operation
- International Standards ISO 9000 and ISO 9001
- International Telecommunications Union (ITU) recommendations network management series E410
- occupational health and safety (OHS)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Privacy Act.
<i>Repair and restoration procedures</i> may include:	<ul style="list-style-type: none"> • arranging test sequence • conducting clearance test • notifying network operation centre (NOC) • performing fault diagnosis • repairing or replacing affected component • restoring services • verifying alarm.
<i>Escalation procedures</i> may include:	<ul style="list-style-type: none"> • pass onto network specialist at NOC • verification of fault status: <ul style="list-style-type: none"> • clearance likely to exceed set time • fault too complex for local attention • vendor technical specialist.
<i>Acceptance testing</i> may include:	<ul style="list-style-type: none"> • compatibility • functionality • operational • performance.
<i>Rearrangements scenarios</i> may include:	<ul style="list-style-type: none"> • CCS SS7 violations • digital path alarms • digital information path (DIP) running errors • link conversions.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • alarm management system printouts • fault clearance methods • fault details • final fault clearance tests • recommendations • test results.

ICTTEN6091A Analyse and organise repair of highly complex telecommunications network faults

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to effectively manage the repair of highly complex network faults. It involves identification of faults across all network types with collaboration from the network operations centre (NOC).</p> <p>Highly complex network faults could comprise of interference, compatibility, compliance, interoperability and traffic congestion issues.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>This unit applies to network engineers, telecommunications officers, installers, maintenance staff and manufacturers or equipment specialists. It also applies to NOC staff in advisory roles and technical rectification roles.</p>
--------------------------------	---

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Research fault background	1.1. Analyse the current <i>relevant data</i> and previous actions taken by other personnel 1.2. Research areas of similarity to <i>network fault</i> 1.3. Develop commercial and technical strategies with the equipment vendor and <i>NOC</i> for diagnosing the fault 1.4. Obtain appropriate clearance and access to network equipment, software and firmware codes where they apply
2. Diagnose fault	2.1. Apply a methodical approach to isolate and diagnose the problem 2.2. <i>Simulate the fault</i> in a workshop or laboratory environment if possible 2.3. Seek support from the vendor while the investigation progresses 2.4. Instruct on site technical staff to run appropriate <i>tests</i> and analyse results 2.5. Diagnose network fault using established <i>methodical strategies</i> in a timely fashion without undue disruption to other services 2.6. Develop a plan to rectify the fault
3. Organise fault rectification	3.1. Recommend the fault rectification plan to the <i>NOC</i> , including any <i>outages</i> , seek approval and adjust plans accordingly 3.2. Instruct <i>on site repairers</i> with clear and methodical instructions on how to proceed in rectifying the fault 3.3. Organise the replacement or repair of faulty equipment with appropriate advice from vendors and manufacturers 3.4. Reconfigure replaced or repaired equipment and test the rectified fault to ensure required performance 3.5. Notify the <i>NOC</i> , affected customers and on site staff of the rectification of the fault
4. Report and document fault details and rectification	4.1. Notify vendors of repair details and recommend changes to equipment design where appropriate 4.2. Conduct cause and effect studies and forward results to the appropriate area for necessary action 4.3. Complete all <i>administrative tasks</i> and prepare a report including deficiencies, analysis and

ELEMENT	PERFORMANCE CRITERIA
	recommendations

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interrogate and evaluate complex information from multiple sources and to develop positions and recommendations
- communication skills to:
 - liaise with vendors, customers, and technical experts on technical and operational matters
 - negotiate with other repair and support staff
 - raise occupational health and safety (OHS) matters
- literacy skills to:
 - explain and justify faults and rectification actions
 - incorporate technical language into written tasks such as records and reports
 - interpret technical documentation and standards
- numeracy skills to interpret technical data, such as specifications of equipment
- problem solving skills to apply methodology in fault diagnosis
- research skills to access technical information and sources to assist fault identification
- safety awareness skills to adhere to all related OHS requirements and work practices
- technical skills to:
 - instruct site technical staff to run appropriate tests
 - diagnose network fault using methodical strategies
 - develop a plan to rectify fault

Required knowledge

- fault escalation procedures
- fault finding techniques and use of test equipment
- fault types and rectification
- integrated packet optical transport networks (P-OTNs)
- International Telecommunication Union (ITU) ITU-T G.709 standard
- network protocols

REQUIRED SKILLS AND KNOWLEDGE

- safety requirements and standards
- service agreements
- synchronous digital hierarchy (SDH)
- transmission control protocol (TCP)-internet protocol (IP)
- types of networks and equipment:
 - Access
 - broadband deployment
 - cabling
 - customer premises equipment (CPE)
 - IP networks for enterprise and customer systems and installations
 - local area networks (LAN)
 - telephony
 - wide area networks (WAN)
- workplace environment and practices

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • diagnose network fault using established methodical strategies to rank likely causes without undue disruption to other services • recommend fault rectification plan to the NOC • instruct on site repairers • facilitate the replacement or repair of faulty equipment with appropriate advice from vendors and manufacturers • facilitate the final testing of the rectified fault to ensure required performance • prepare report including deficiencies, analysis and recommendations.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where highly complex network faults may be demonstrated and analysed without jeopardising live traffic • equipment currently used in industry • design specifications and manufacturer's manuals and reference materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral report and direct observation of the candidate establishing a test regime • direct observation of the candidate undertaking tests on equipment and systems • review of reports completed by the candidate for different equipment types, test results and situations, analysing results with recommendations and supporting reasons.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE	
	<p>for example:</p> <ul style="list-style-type: none"> • ICTNPL6046A Undertake network performance analysis • ICTTEN6044A Coordinate fault rectification and restoration of service following network outages. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Relevant data</i> may relate to:	<ul style="list-style-type: none"> • alarm conditions

RANGE STATEMENT	
	<ul style="list-style-type: none"> • client reports • environmental factors • historical • industry and vendor • NOC • service level degradation • technical reports • test results from remote interrogation.
<i>Network fault</i> may include:	<ul style="list-style-type: none"> • compatibility • compliance • interference • intermittent performance problems • interoperability • network dropout • out of specification faults • software compatibility • system configuration problems • traffic congestion.
<i>Network Operations Centre</i> may include:	<ul style="list-style-type: none"> • engineering unit within a carrier responsible for: <ul style="list-style-type: none"> • coordinating repairs or changes to the network • monitoring the network • performing diagnostic tests.
<i>Simulate the fault</i> may include:	<ul style="list-style-type: none"> • circuit simulation software • computer modelling • equipment test bed.
<i>Tests</i> may include:	<ul style="list-style-type: none"> • bandwidth • bit interleaved parity (BIP-8) error detection • blocking • call rate • congestion • distortion • drop out rate • functionality • interference • intrusive through mode testing capability • latency • network tests • optical transmission

RANGE STATEMENT	
	<ul style="list-style-type: none"> • packet loss rate • quality of service (QoS) • radio transmission • recovery rate • redundancy • signal to noise ratio • transmitted power measurements • upload and download rates.
<i>Methodical strategies</i> may relate to:	<ul style="list-style-type: none"> • analysing test results • conducting tests • coordinating maintenance staff • isolating fault progressively to eliminate probable causes • monitoring path • reloading software • scheduling diagnosis for low traffic times • monitoring section • substituting hardware • trail trace identifier.
<i>Outages</i> may include:	<ul style="list-style-type: none"> • loss of service to customers due to a network fault or upgrade • planned outage in the case of network upgrade • unplanned outage in relation to faults.
<i>On site repairers</i> may include:	<ul style="list-style-type: none"> • carrier's engineers, technical officers and technicians • contractors • equipment vendors and manufacturers.
<i>Administrative tasks</i> may relate to:	<ul style="list-style-type: none"> • completing job orders and submitting to appropriate enterprise organisational unit • completing test sheets according to specification and logging test instrument usage • correct labelling of all equipment and amending where required • following quality control procedures • handing over installation briefs, documents and equipment manuals to operational staff • recording test results and updating appropriate databases • tasks that comply to enterprise requirements and policy • update fault history log with details of fault

RANGE STATEMENT	
	and details of repair <ul style="list-style-type: none">• updating design specifications and returning to design area as required by enterprise requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the testing of new software releases	1.1. Obtain manuals, specifications and instructions associated with new releases and identify areas of uncertainty for confirmation with the vendor 1.2. Plan the <i>testing environment</i> of the software release and likely impact with network management centre 1.3. Determine resources required to assist with the test and negotiate their availability 1.4. Determine and plan outage and notify network management centre as required 1.5. Notify customers of impact on the network during the test 1.6. Develop contingency plans to cater for likely problems during the test
2. Test software and hardware units	2.1. Load new software and conduct <i>tests</i> using appropriate <i>test equipment</i> according to vendor specifications 2.2. Evaluate test results to assess functionality and features of software and hardware according to vendor documentation 2.3. Test <i>compatibility</i> with existing network and take corrective action with vendor as required 2.4. Implement contingency plans in conjunction with network management if integrity of the network is compromised by the new release
3. Undertake administrative work	3.1. Document test results and store according to enterprise policy 3.2. Discuss ongoing or likely problems with the vendor and initiate follow up arrangements to ensure a permanent solution 3.3. Provide clearance for software and hardware release to be put in service in the system according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
- literacy skills to interpret technical documentation, such as software and hardware manuals, specifications and relevant enterprise policy and documentation
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise testing and contingency plans
- problem solving skills to solve software, hardware and logistics problems
- safety awareness skills to follow occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail
- technical skills to:
 - conduct tests on software and hardware units
 - load software
 - use diagnostic programs and equipment

Required knowledge

- features and operating requirements of testing routines and equipment, key performance indicators (KPIs) and service level agreements
- information required to operate software and hardware according to a test specification
- manufacturer's requirements for operation of equipment
- specific organisational requirements relating to the activity and site conditions
- system maintenance and upgrade procedures, codes of practice and other formal agreements that impact on the work activity
- test methods, performance and integration requirements
- typical issues and challenges that occur with new software and hardware releases

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> develop a plan for testing new software releases including functionality and performance under load conditions develop a contingency plan recognising potential causes of problems and impact on service levels test compatibility of software and hardware with existing system analyse impact of integration of new hardware and software release on the network and make recommendations for improvement.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> a system to verify compliance and compatibility of software and hardware test equipment currently used in industry systems manuals, vendor specifications and enterprise policy.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate testing compatibility of software and hardware with existing system and analysing problems arising review of test regime, including test results with analysis and improvement recommendations prepared by the candidate review of contingency plan prepared by candidate oral or written questioning of the candidate to assess knowledge of test methods, performance and integration requirements.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTTEN6045A Implement planned network changes

EVIDENCE GUIDE

	<p>with minimal impact to the customer.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Testing environment may include:

- live as a pilot
- simulated controlled environment
- staged
- variables:
 - availability of suitable location for testing

RANGE STATEMENT	
	<ul style="list-style-type: none"> • compatibility of existing software and hardware • nature of the release • operational environment involved • risks and uncertainty involved.
<i>Tests</i> may include:	<ul style="list-style-type: none"> • error check • full system • load testing of new system • performance • software performance using independent third party software • switching • traffic flow • transmission • transmitter power.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • communication testers • network manager • protocol analyser • transmission measuring sets.
<i>Compatibility</i> may include affect on:	<ul style="list-style-type: none"> • network • network management tools • new vendor network elements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Plan and prepare for the design of cellular mobile networks</p>	<p>1.1. Analyse the requirements of the mobile network</p> <p>1.2. Examine technical characteristics of the GPRS systems</p> <p>1.3. Develop network architecture for a GPRS network in addition to the circuit-switched domain of 2G</p> <p>1.4. Review 3G structure and identify requirements of the network to provide a wide variety of services ranging from voice and paging services to interactive multimedia, including teleconferencing and internet access</p> <p>1.5. Examine the technical characteristics, data rates, operating frequencies and multiplexing schemes of the 3G system</p> <p>1.6. Establish the positioning and types of antennas, terminals, processors, required protocols and architecture, based on technical specifications and requirements</p>
<p>2. Design a GPRS (2.5G) cellular network</p>	<p>2.1. Investigate how 2.5G GPRS overlays the GSM network to transmit and receive transmission control protocol (TCP)/ internet protocol (IP) based data to and from GPRS mobile devices</p>
<p>3. Design a 3G cellular network</p>	<p>3.1. Develop the network architecture for a 3G network and explain the functions of the network elements</p> <p>3.2. Integrate a 3G network with a wireless local area network (WLAN)</p>
<p>4. Research and evaluate design features of a proposed 4G cellular network</p>	<p>4.1. Investigate how a fully IP based 4G system will provide an end-to-end IP integrated solution for voice, data and streamed multimedia to end users roaming anytime and anywhere</p> <p>4.2. Investigate access schemes of a 4G network</p> <p>4.3. Investigate implication for IPv6. 4G support to greater number of IP based wireless devices with applications such as improved multicast, security and route minimisation capabilities</p> <p>4.4. Investigate the use of advanced antenna systems to enable 4G with high rate, high reliability and long range communications</p>
<p>5. Produce reports for architectural design for cellular networks</p>	<p>5.1. Report on the impact of competing technologies on each other</p> <p>5.2. Investigate the potential interoperability and global</p>

ELEMENT	PERFORMANCE CRITERIA
	roaming issues that may be faced by GSM, 2.5G, 3G and 4G cellular technologies

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- design skills to technically enhance cellular networks to include IP convergence
- group facilitation and presentation skills to transfer and collect information and gain consensus on concepts
- literacy and communication skills to analyse, evaluate and present information, when documenting network design and presenting it to senior managers, client users and sponsors for approval
- problem solving skills to predict traffic and the impact on input and output devices and processors from current and future demand requirements
- research skills to specify, analyse and evaluate broad features of current security issues and best practice in security devices, products and procedures
- technical skills to operate cellular networks

Required knowledge

- broad knowledge of the client business domain when designing network
- current industry accepted network hardware and software products and their general features and capabilities, and detailed knowledge when designing a GPRS (2.5G) and 3G network
- current industry security products, devices and procedures and their general features and capabilities, and detailed knowledge when finalising GSM, GPRS (2.5G) and 3G network design
- detailed knowledge of current industry accepted cellular mobile network protocols
- technical characteristics of GPRS systems:
 - capability classes and multi-slot classes
 - coding schemes
 - data rates
 - management systems when evaluating roaming features
 - operating frequencies and modulation schemes
 - remote user issues when establishing siting and types of antennas, terminals, processors, required protocols and GPRS (2.5G) and 3G network architecture, based on technical specifications and user requirements

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• theoretical concepts of three or more current industry network development and design methodologies when designing networks |
|---|

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> design viable GPRS (2.5G) and 3G network solutions to meet particular business needs research design features of 4G cellular networks.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> budget for designs for convergent cellular mobile networks cellular mobile network structures client requirements expected traffic volume information on a range of IT business solutions technical specifications vendors and vendor offerings and pricing.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> oral or written questioning to assess knowledge of current industry networks and design methodologies review of report prepared by the candidate outlining evaluation process undertaken, including challenges faced and how these were addressed direct observation of the candidate undertaking multiple antenna positioning evaluation of network designed by the candidate in terms of performance and suitability of business needs.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTRFN6098A Monitor the capacity of and recommend changes to the mobile cellular network. ICTRFN6171A Produce and evaluate architecture designs for WiMAX networks

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTTEN6172A Design and configure an IP-MPLS network with virtual private network tunnelling

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to design an internet protocol-multiprotocol label switching (IP-MPLS) network, examine MLPS data flow and configure virtual private network (VPN) tunnelling.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>This unit applies to technical staff dimensioning an IP-MPLS Core Network for a carrier or an internet service provider (ISP). MPLS and VPNs are used to provide secure, reliable and fast IP services in technology convergence of data, voice and video.</p> <p>Relevant job roles include designer and installer of Next Generation Networks (NGN). These IP networks provide fast internet, voice over internet protocol (VoIP) and internet protocol TV (IPTV) services.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Plan and design a IP-MPLS network to meet business requirements</p>	<p>1.1. Determine the IP-MPLS <i>network design requirements</i> in consultation with <i>enterprise customer</i></p> <p>1.2. Optimise <i>factors</i> affecting design</p> <p>1.3. Use label stacking to route MPLS packets in the network to build of <i>MPLS services</i></p> <p>1.4. Dimension layer-3 generation of core backbone to allow MPLS IP-VPN to provide <i>MPLS convergence</i> services</p> <p>1.5. Use MPLS control plane to set up wavelengths</p> <p>1.6. Produce the design topology of a MPLS <i>network</i> to include the location and types of edge label switch routers (LSR) and core LSRs in agreement with enterprise customer</p>
<p>2. Configure a MPLS network and verify traffic engineering (TE) considerations</p>	<p>2.1. Configure edge and core LSRs to provide secure methods of transporting IP packets in the MPLS network using <i>layer 2 protocols</i></p> <p>2.2. Configure the LSRs to provide toll bypass for convergence of voice and data over the IP network</p> <p>2.3. Classify traffic in MPLS terms and configure the Edge LSR to sort traffic into forward equivalent classes (FECs)</p> <p>2.4. Install and remove the two <i>standardised signalling protocols</i> for managing traffic engineering (TE) of MPLS paths</p> <p>2.5. Configure the MPLS-TE to provide routing on diverse paths to avoid congestion and guarantee bandwidth services</p>
<p>3. Configure a VPN and provide a virtual private LAN service (VPLS)</p>	<p>3.1. Configure a MPLS VPN tunnel for a customer network to provide multipoint-to-multipoint VPN connectivity</p> <p>3.2. Build a content hosting server into a MPLS based VPN to produce a media network</p> <p>3.3. Use virtual private LAN services (VPLS) as a VPN method for wide area network (WAN) multipoint-to-multipoint Ethernet connectivity spanning across multiple metropolitan areas</p> <p>3.4. Produce a VPLS topology using an internet protocol IP-MPLS cloud with provider edge (PE) routers connecting VPLS domains associated with enterprise customer</p>

ELEMENT	PERFORMANCE CRITERIA
4. Complete documentation	4.1. Produce a final design plan including network elements, configuration details and recommendations for design changes 4.2. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to use complex technical data to develop network designs
- communication skills to consult with customers
- literacy skills to read and write reports
- numeracy skills to use binary systems
- project planning skills to set benchmarks and identify scope
- problem solving skills to solve a range of predictable network problems
- research skills to identify, analyse and evaluate broad features of a particular business domain and best practice in networking technologies including hardware and software to be installed
- technical skills to:
 - deploy multipoint-to-multipoint VPLS domains via IP-MPLS cloud
 - implement and verify routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF) and border gateway protocol (BGP) operations
 - implement MPLS architecture across a WAN environment
 - implement secure VPN tunnels across the MPLS network

Required knowledge

- current industry-accepted hardware and software products
- network operating systems and cabling standards
- networking technologies
- the customer business, domain, function and organisation effect on customer requirements and network equipment
- transmission technologies and protocols

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and design a MPLS network that meets business requirements • configure and test the MPLS network according to specified guidelines • produce appropriate documentation • implement secure VPN tunnelling.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a live network and networked computers • network design documentation, equipment specifications and organisational guidelines • network components, routers, switches and multi-layer switches.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate planning, designing and configuring a MPLS • review of documentation completed by the candidate • oral or written questioning of the candidate to assess required knowledge and skills.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example with:</p> <ul style="list-style-type: none"> • ICTTEN6216A Design and manage internet protocol TV in a service provider network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE	
	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Network design requirements</i> may include:</p>	<ul style="list-style-type: none"> • bandwidth • firewalls • gateway to wireless local area networks (WLAN) • multi-layer switches • number and type of core and edge routers • number of channels • protocols: <ul style="list-style-type: none"> • BGP • label distribution protocol (LDP) • OSPF • resource reservation protocol (RSVP)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • quality of service (QoS) • security • servers • switches • throughput.
<i>Enterprise customer</i> may include:	<ul style="list-style-type: none"> • banks • clubs • external organisations • hospitals • internal departments • teaching institutions.
<i>Factors</i> may include:	<ul style="list-style-type: none"> • protocol incompatibility • QoS issues: <ul style="list-style-type: none"> • loss rate • latency • jitter • throughput • router availability.
<i>MPLS services</i> may include:	<ul style="list-style-type: none"> • any transport over MPLS (AToM): <ul style="list-style-type: none"> • 802.1Q - Ethernet VLAN • asynchronous transfer mode (ATM) • Ethernet • frame relay (FR) • high-level data link control (HDLC) • point-to-point protocol (PPP) • BGP MPLS VPN • Ethernet virtual circuit Ethernet over MPLS(EoMPLS) reroute link or node failure • link or node protection failure: <ul style="list-style-type: none"> • link resilience • node resilience • MVPN (multicast VPN) • QoS • traffic engineering: <ul style="list-style-type: none"> • bandwidth utilisation • capacity planning • congestion • virtual lines - toll bypass • VPLS.

RANGE STATEMENT	
<i>MPLS convergence</i> may include:	<ul style="list-style-type: none"> • ADSL cable • enterprise VoIP • FR-ATM transport • internet access • IPTV • VPN.
<i>Network</i> may include:	<ul style="list-style-type: none"> • data and voice • edge and core LSR • hosting servers for media content • internet • large and small LANs • national WANs • private lines • use of the public switched telephone network (PSTN) for dial-up modems only • VPNs • wireless.
<i>Layer 2 protocols</i> may include:	<ul style="list-style-type: none"> • ATM • Ethernet • FR • generic routing encapsulation (GRE) • packet over SONET (POS) • PPP.
<i>Standardised signalling protocols</i> may include:	<ul style="list-style-type: none"> • CR-LDP • RSVP-TE.

ICTTEN6206A Produce an ICT network architecture design

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to compile, and evaluate the business specifications from a client and produce a set of architecture design solutions that will cater for present and future forecast demands.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Officers in field work who to carry out design and implementation of technical solutions of ICT networks apply the skills and knowledge in this unit for a practical solution in network design. They would be employed by telecommunications and IT networking provisioning companies specialising in integrating the converging and emerging technologies of ICT networks.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to produce ICT architecture design	1.1. Obtain <i>business specifications</i> and <i>business requirements</i> for the <i>client</i> from <i>appropriate person</i> 1.2. Review specifications and requirements to identify the type of <i>ICT network</i> and network specifications required 1.3. Consult with key <i>stakeholders</i> to identify their requirements 1.4. Assess business problems, opportunities and objectives and confirm details with appropriate person
2. Produce the preliminary ICT network architecture design	2.1. Ascertain <i>technical requirements</i> , including <i>hardware</i> , <i>software</i> and <i>network elements</i> according to specifications 2.2. Select software solutions to suit business platform 2.3. Develop preliminary physical network diagrams as a preface to <i>architecture</i> blueprint 2.4. Produce a document on the possible <i>impact</i> of the network design on the business requirements
3. Evaluate preliminary design and likely performance using forecast demands	3.1. Predict forecast traffic demands and the impact on network design from current and future demand requirements 3.2. Benchmark the design using expected <i>performance parameters</i> 3.3. Review the design based on identification of the likely performance profile (best/worst) 3.4. Determine costs involved with a range of supplier products 3.5. Produce an evaluation report on predicted performance and costs of the network architecture design addressing the business specifications and recommendations
4. Finalise network design and obtain approval	4.1. Review the benchmarks and requirements and final design proposed 4.2. Determine the support and training requirements needed 4.3. Obtain the latest technical specifications and pricing by contacting possible vendors 4.4. Document the network design and present <i>documentation</i> to appropriate person for approval 4.5. Obtain sign off on final business solution

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to read and interpret technical documentation and write reports, design solutions and recommendations
- numeracy skills to interpret business requirements and specifications and evaluate possible technical design scenarios for optimum solution
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt varied business procedures to requirements
- research skills to interrogate vendor databases and websites to implement different solutions to meet client business specifications
- technical skills to:
 - evaluate and make further recommendations for optimum solution
 - produce technical designs

Required knowledge

- broad technical knowledge of technologies:
 - Access Networks
 - Core Networks
 - ICT network topologies
 - mobile cellular networks
 - network protocols and operating systems
 - optical networks and principles
 - radio frequency (RF) technologies and principles
 - radio frequency identification (RFID) hardware and software
- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- customer and business liaison
- desktop applications and operating systems
- documenting technical specifications
- linkage between processes

ICTTEN6216A Design and manage internet protocol TV in a service provider network

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to design a multiprotocol label switching (MPLS) network for internet protocol TV (IPTV) and manage the delivery of IPTV services. This includes Core and Access Networks for the service provider.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technical staff designing and dimensioning an IP-MPLS Core and Access Network for a service provider of IP services in technology convergence of data, voice and video apply the skills and knowledge in this unit.</p> <p>Relevant job roles include designer and installer of Next Generation Networks (NGN). These IP networks provide fast internet, voice over internet protocol (VoIP), IPTV and internet TV services.</p>
--------------------------------	---

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Produce and evaluate design requirements for an IPTV network	1.1. Analyse the <i>major video models</i> and the impact the <i>video challenges</i> will have on the design of an IPTV network 1.2. Evaluate IPTV against other <i>competing TV broadcast technologies</i> to determine optimum design approach 1.3. Produce the <i>topology of an IPTV network</i> showing <i>network architecture</i> from the <i>IPTV standards bodies</i> and determine the design requirements 1.4. Plan the dimensioning of <i>network parameters</i> for multicast and unicast video delivery over broadband in a service provider network
2. Design an IPTV network for video on demand (VoD) delivery	2.1. Design the content delivery system (CDS) to cache IPTV content in each major metropolitan area for broadcast or streaming VoD models to eliminate performance variability introduced by Internet transport or core peering relationships 2.2. Design a video network to provide VoD loads with <i>network solutions</i> using <i>VoD design requirements</i> 2.3. Design VoD application to meet bandwidth requirements and quality of service (QoS) requirements for commercial viability of IPTV network
3. Design and configure an MPLS IPTV network to meet business requirements	3.1. Determine the IP-MPLS <i>network design requirements</i> 3.2. Investigate <i>factors</i> that affect design considerations and ways they can be minimised 3.3. Produce the design topology of a <i>MPLS network</i> to provide secure methods of transporting IP packets using <i>layer 2 protocols</i> 3.4. Design an MPLS layer over the IP networking structure to combine the efficiency of multicast protocols with traffic engineering (TE) facilities to enable fast packet forwarding for real time video streaming applications
4. Manage the delivery of IPTV services	4.1. Determine the <i>operational processes</i> required to support IPTV by operators 4.2. Produce a plan of the management and customer support model including strategies dealing with the delivery of <i>VoD issues</i> 4.3. Produce a plan of a video network using <i>video delivery strategies</i> to deliver optimum average revenue per user (ARPU) to serve the demographic of an area and the <i>nature of an operator's business</i> 4.4. Manage and monitor video across the network using a <i>management tool</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse and evaluate:
 - broad features of a particular business domain and best practice in networking technologies when hardware and software network components to be installed are identified
 - competing video models over broadband networks
- literacy skills to produce plans
- problem solving skills to solve a predictable range of network problems
- project planning skills to set benchmarks and identify scope
- technical skills to:
 - deploy multipoint-to-multipoint VPLS domains via IP-MPLS cloud
 - design VoD facility for video delivery
 - dimension network parameters
 - implement and verify:
 - border gateway protocol (BGP)
 - enhanced interior gateway routing protocol (EIGRP)
 - Flash
 - hypertext transfer protocol (HTTP)
 - internet group management protocol (IGMP)
 - open shortest path first (OSPF)
 - real time streaming protocol (RTSP)
 - routing information protocol (RIP)
 - web cache communication protocol (WCCP) operations
 - implement MPLS architecture across a wide area network (WAN) environment
 - implement secure video streaming over MPLS network

Required knowledge

- competing video delivery over broadband networks
- current industry-accepted hardware and software products
- networking technologies incorporating detailed knowledge of network operating systems, IP networks and MPLS networks
- transmission technologies and protocols

Evidence Guide

Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse requirements and plan a telecommunication transmission network for a service provider.

The plan may be for a project associated with a new installation or an upgrade of capacity or technology in an existing network or for convergence to Next Generation Networks (NGN).

Application of the Unit

Technical officers, supervisors and engineers who plan transmission networks apply the skills and knowledge in this unit.

Transmission networks for service providers include optical Ethernet, dense wavelength division multiplexing (DWDM) and fibre to the x (FTTx) optical networks and wireless networks, such as microwave, satellite and worldwide interoperability for microwave access (WiMAX).

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Scope the project	<p>1.1 Obtain <i>relevant legislation, codes, regulations and standards</i> and follow occupational health and safety (OHS) and environmental requirements for the given work</p> <p>1.2 Obtain <i>project brief</i> from <i>appropriate person</i></p> <p>1.3 Evaluate potential transmission options and select the most suitable type of <i>transmission network</i> that meets the criteria outlined in the project brief</p> <p>1.4 Analyse the <i>limitations</i> of the transmission path characteristics and develop solutions for transmission impairments</p> <p>1.5 Produce a report outlining the reasons for the selection of a transmission network together with a shortlist of suitable equipment vendors and products</p> <p>1.6 Obtain the traffic load from <i>network information sources</i> or forecasts and <i>dimension</i> the proposed network service</p> <p>1.7 Produce a brief on the relationship between <i>transmission network architecture components</i> and the overall network and their impact on the work</p> <p>1.8 Evaluate the <i>equipment type</i> and <i>technologies</i> to determine availability, cost and compatibility with existing network equipment</p> <p>1.9 Determine <i>resources</i> and equipment needed for the work according to <i>enterprise procedures</i> and check for correct operation and safety</p> <p>1.10 Assess the capacity limitation of various platforms in the context of the work to optimise maximum network performance</p> <p>1.11 Determine product capability and calculate allowable capacity of transmission network to allow for network growth</p>
2. Produce a link budget	<p>2.1 Analyse the transmission system using equipment and vendor's specifications to produce a <i>link budget</i> and assess the resulting margin</p> <p>2.2 Document the results of the link budget analysis</p>
3. Produce deployment plan for transmission network	<p>3.1 Conduct planning work using current equipment components and complying with transmission network deployment rules and exemption process criteria</p> <p>3.2 Produce a preliminary plan on the deployment of the network that maintains integrity of the transmission network</p> <p>3.3 Establish a solution to unexpected situations through</p>

	<p>discussion with appropriate personnel, with consideration to job specifications, safety and enterprise procedures</p> <p>3.4 Review plan to ensure that it complies with all standards and codes required when working on network access and make adjustments where appropriate</p>
4. Complete work	<p>4.1 Produce final deployment plan including recommendations agreed with the customer</p> <p>4.2 Provide a report on network management and performance monitoring system to be incorporated in the transmission network to ensure the network is performing at optimum level</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse transmission situations
 - review and evaluate different options for transmission networks
 - select and compare benefits and limitations of one transmission method over another
- communication skills to:
 - interact with design team personnel and equipment vendors
 - maintain a customer focus and consider customer needs
- literacy skills to:
 - read and interpret technical and non-technical documentation
 - write summary reports in required formats
- numeracy skills to undertake link budget calculations, interpret results and evaluate different types of technical data
- PC skills to search databases of suitable equipment and vendors
- planning and organisational skills to plan and monitor own work and that of others
- problem solving skills to manage unexpected situations
- research skills to gather data on networks
- task management skills to work logically and systematically with required attention to detail
- technical skills to identify the technologies that constitute a transmission network.
-

Required knowledge

- alternating current and transmission line theory
- awareness of emerging telecommunications switching and transmission technologies including microwave radio, optical fibre and satellite
- capacity and capability management
- capacity limitation of various platforms
- commercial considerations of Access Network deployment
- common switching and transmission support services
- compatibility issues of technology and equipment
- currency of technology and equipment use
- data transmission
- digital multiplexing techniques and hierarchies
- enterprise deployment rules
- exemption process criteria
- network topologies
- product capability and availability that are allowable within a transmission network
- telecommunications:
 - alarm management
 - bearers

- performance monitoring systems
- transmission:
 - architectures and geographical categorisation
 - information sources
 - technology and equipment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate potential transmission options and select the most suitable type of transmission network • analyse the effect of transmission path characteristics on transmission systems and develop solutions for transmission impairments • select appropriate testing regimes for transmission technologies • determine key multiplexing features of transmission technologies • develop a transmission network work plan.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where transmission network may be planned • equipment and system manuals and specifications • legislation and documentation to plan a transmission network.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate planning the deployment of a transmission network • review of reports completed by the candidate for differing transmission network examples • review of final deployment plan prepared by the candidate outlining recommendations for the customer • oral or written questioning to assess knowledge of equipment and technologies as used within the transmission network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• ICTRFN7182B Produce a radio link budget. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant legislation, codes, regulations and standards</i> include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Radiation Protection Standard – Maximum Exposure Levels to Radio Frequency Fields – 3 kHz to 300 GHz • AS Communications Cabling Manual (CCM) Volume 1 • Australian building codes and regulations • Environmental Protection Acts • fire regulations • OHS • relevant international standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p><i>Project brief</i> may include:</p>	<ul style="list-style-type: none"> • access to existing services • details of budgeted costs • details of the grade of service required • location of intermediate add-drop points • location of transmission terminals • network topology • presence of existing services • protection methods • traffic bit rate • traffic protocols.
<p><i>Appropriate person</i> may include:</p>	<ul style="list-style-type: none"> • network engineer • project engineer • project manager.
<p><i>Transmission network</i> may include:</p>	<ul style="list-style-type: none"> • Core Network • geostationary • long haul network • mesh network • metropolitan area network • optical fibre: <ul style="list-style-type: none"> • passive optical network (PON)

	<ul style="list-style-type: none"> • submarine cable • terrestrial cable • point-to-point link • satellite • ring network • hybrid fibre coaxial (HFC) network • terrestrial microwave: <ul style="list-style-type: none"> • licensed • unlicensed • WiMAX.
Limitations may include:	<ul style="list-style-type: none"> • optical: <ul style="list-style-type: none"> • chromatic dispersion • four-wave mixing • polarisation mode dispersion (PMD) • satellite: <ul style="list-style-type: none"> • loss of orbital position • rain attenuation • terrestrial interference • wireless and terrestrial microwave: <ul style="list-style-type: none"> • atmospheric absorption • fading • terrestrial interference.
Network information sources may include:	<ul style="list-style-type: none"> • network management databases for: <ul style="list-style-type: none"> • capacity assessment data • network performance data • traffic dimensioning data • network management tools.
Dimension may include:	<ul style="list-style-type: none"> • allowance for future growth • capacity of the channels • number of channels required.
Transmission network architecture components may include:	<ul style="list-style-type: none"> • earth command and control station • earth station • horn antenna • low noise amplifier (LNA) • low noise block (LNB) • multiplexing equipment: <ul style="list-style-type: none"> • network management system • STM-1 multiplexer • STM-16 multiplexer • STM-192 multiplexer

	<ul style="list-style-type: none"> • STM-4 multiplexer • STM-64 multiplexer • synchronous digital hierarchy (SDH) • optical fibre network: <ul style="list-style-type: none"> • optical add-drop multiplexer (OADM) sites • reconfigurable optical add-drop multiplexer (ROADM) • terminal sites and optical add-drop multiplexer sites: <ul style="list-style-type: none"> • battery backup • dispersion compensation devices (DCD) • dense wavelength division multiplexing (DWDM) system • equipment racks • erbium doped fibre amplifier (EDFA) • optical amplifier • patch panel • power supplies • Raman amplifier • rectifier • regenerator • parabolic reflector • patch antenna • satellite antenna: <ul style="list-style-type: none"> • fixed • rotatable • satellite network • satellite receiver • satellite transmitter • satellite transponder • terrestrial microwave network: <ul style="list-style-type: none"> • circulators and isolators • coaxial cable • indoor unit • microwave transmitter and receiver • outdoor unit • parabolic reflector antennas • radio tower, mast, rooftop • waveguide.
<i>Equipment type</i> may include:	<ul style="list-style-type: none"> • asymmetrical • circuit switched • coarse wavelength division multiplexing (CWDM)

	<ul style="list-style-type: none"> • DWDM • digital • duplex • IP based • packet switched • simplex • symmetrical • time division multiplexing (TDM) • wavelength division multiplexing (WDM).
Technologies may include:	<ul style="list-style-type: none"> • compression types: <ul style="list-style-type: none"> • H.264 • MPEG-2 • MPEG-4 • protocols and transport methods: <ul style="list-style-type: none"> • asynchronous serial interface (ASI) • DVB-ASI • HD-SDI • SD SDI • optical transport network (OTN): <ul style="list-style-type: none"> • IP/MPLS over OTN/DWDM • optical Ethernet: <ul style="list-style-type: none"> • fast Ethernet • gigabit Ethernet • 10 Gbps • synchronous digital hierarchy (SDH) • synchronous optical network (SONET).
Resources may include:	<ul style="list-style-type: none"> • equipment • hardware • installation platforms • ladders • manpower • materials • safety equipment • software • tools.
Enterprise procedures may include:	<ul style="list-style-type: none"> • asset registration • compliance • preferred suppliers • preferred vendors • procurement agreements

	<ul style="list-style-type: none"> • purchase requisition • service level agreements.
<i>Link budget</i> may include:	<ul style="list-style-type: none"> • actual received power level • allowance for splices due to fibre cuts • contingencies • fade margin • margin • path loss • required receive level • transmitted signal power level • transmitter hardware losses.
<i>Network management</i> may include:	<ul style="list-style-type: none"> • administration • alarms • event history • maintenance • operation • provisioning.
<i>Performance monitoring</i> may include:	<ul style="list-style-type: none"> • alerting users that network degradation is underway • gauging the quality of payload signals • power level lower limit • power level upper limit • threshold crossing levels.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Develop technology roadmap</p>	<p>1.1. Analyse market research information and determine customer needs within the product and technology strategy from a <i>technology roadmap</i></p> <p>1.2. Evaluate <i>enterprise and technology issues</i> which will affect the design of the system and translate them into system requirements</p> <p>1.3. Evaluate the programme, product and technology needs that affect the definition of the system lifecycle</p> <p>1.4. Develop systems <i>integration, verification and validation plans</i> from the design requirements</p> <p>1.5. Develop and communicate key aspects on the implementation of the technology roadmap to stakeholders and customers</p>
<p>2. Develop interface management of system elements</p>	<p>2.1. Determine <i>system element</i> interfaces and the <i>sources of complexity</i> for the interface management of the system</p> <p>2.2. Develop a process and appropriate techniques to be adopted for the interface management of system elements</p> <p>2.3. Produce a control process of the <i>system element interfaces</i> of the management system</p> <p>2.4. Liaise and arbitrate where there are conflicts in the definition of interfaces</p>
<p>3. Implement systems integration</p>	<p>3.1. Evaluate suitability of <i>system integration, verification and validation plans</i> for the product and technology strategy of the technology road map for a consumer product</p> <p>3.2. Develop systems integration, verification and validation plans for complex systems, including the method and timing for each activity</p> <p>3.3. Manage system integration plan and diagnose complex faults</p> <p>3.4. Document fault conditions, report to appropriate person and follow up corrective actions</p> <p>3.5. Prepare evidence for customer acceptance and certification of the system integration management plan for the consumer product</p> <p>3.6. Plan and manage a transition to operational activity of the product</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate product and technology needs
- communication skills to:
 - interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
 - liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical documentation, software and hardware manuals, specifications and relevant enterprise policy
- numeracy skills to take and analyse measurements
- PC skills to use a word processor to translate enterprise and technology issues into system requirements
- planning and organisational skills to:
 - break large projects into a series of small projects
 - manage and prioritise own work
 - organise testing
- problem solving skills to resolve software, hardware and logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail and adherence to project requirements
- technical skills to:
 - develop systems integration, verification and validation plans for complex systems
 - document fault conditions
 - manage systems integration

Required knowledge

- enterprise and technology issues
- integration, verification and validation plans
- interface management systems
- legislation, codes of practice and other formal agreements that directly impact on system integration

REQUIRED SKILLS AND KNOWLEDGE

- | |
|---|
| <ul style="list-style-type: none">• specific OHS requirements that impact on activity in terms of safety of self and public safety• system element interfaces• system integration solutions techniques• system life cycles• technology roadmaps |
|---|

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan the implementation and testing of new system requirements, including system functionality and performance under load conditions • manage the interface elements of a new system • implement systems integration • recognise potential causes of problems and impact on service levels • analyse impact of integration of system changes on the network • prepare evidence for customer acceptance and certification of the system integration.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where the alignment of computer support systems with a product and technology strategy may be conducted • software tools currently used in industry • vendor products, specifications, equipment and enterprise policy required for the activity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate implementing system integration • direct observation of the candidate performing a systematic approach to test and analysis of problems arising • review of test regime, test results with interpretation and improvement recommendations prepared by the candidate • oral or written questioning of the candidate to assess required knowledge.
Guidance information for	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,

EVIDENCE GUIDE	
assessment	<p>for example:</p> <ul style="list-style-type: none"> • ICTTEN7220A Translate domain and solution architectures into platform requirements and designs. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Develop system design requirements</p>	<p>1.1. Produce a system requirements specification for a complex project involving <i>enterprise and technology issues</i> using the simplest possible technology and making the system modular</p> <p>1.2. Resolve and negotiate requirement conflicts in order to establish a complete and consistent requirement set</p> <p>1.3. Produce and develop acceptance criteria for requirements</p> <p>1.4. Design a requirements management plan with categorisations, structures and <i>sources of complexity</i></p> <p>1.5. Develop a process to manage the requirements enabling users to influence future improvements</p>
<p>2. Produce system design based on requirements</p>	<p>2.1. Evaluate the strengths and weaknesses of relevant technologies in the context of the design requirement and needs for <i>systems integration</i></p> <p>2.2. Create a range of alternative <i>interdisciplinary concepts</i> and assess their <i>attributes</i></p> <p>2.3. Plan for the incorporation of later <i>life cycle design attributes</i> in developing the design requirements</p> <p>2.4. Devise a system design strategy and approach and use the tools and techniques to conduct <i>functional analysis</i></p> <p>2.5. Produce a set of parameters to track critical aspects of the design</p> <p>2.6. Use documentation, modelling and simulation tools and techniques to represent a system or <i>system element</i></p> <p>2.7. Use complex simulations to evaluate design concepts for a system or system element</p> <p>2.8. Produce a report to evaluate and advise on the risks, suitability and limitations of models and simulations</p> <p>2.9. Identify the underlying domain specific issue, strategy and approach to be adopted for ensuring system robustness</p> <p>2.10. Produce a robust design using domain specific strategy and approach to platform requirements and designs</p>
<p>3. Verify solution design and</p>	<p>3.1. Determine specific aspects of the design to the original intent</p>

ELEMENT	PERFORMANCE CRITERIA
traceability	<p>3.2. Verify and track specific aspects of the current design back to the original intent throughout the supply chain</p> <p>3.3. Trace verification requirements back to system requirements and vice versa</p> <p>3.4. Use change control and configuration management to implement remedial actions and change control of inconsistencies</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- information technology skills for:
 - desktop research
 - enabling production of a system requirements specification for a complex project
 - word processing
- literacy skills to:
 - interpret technical documentation such as software and hardware manuals and specifications
 - interpret relevant enterprise policy and documentation
 - prepare reports given a specific format
 - read and comply with related occupational health and safety (OHS) requirements and work practices
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - break large projects into a series of small projects
 - organise testing and contingency plans
- problem solving skills to manage and trace technical margins both horizontally and vertically through the hierarchy
- task management skills to work systematically with required attention to detail and adherence to project requirements
- technical skills to:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate tools and techniques for architectural design	1.1. Apply the principles of architectural design within the lifecycle of application software 1.2. Develop a process to apply appropriate tools and techniques for architectural design of end to end solutions 1.3. Evaluate and select appropriate analysis and selection techniques to develop a partition between discipline technologies and derive discipline specific requirements
2. Analyse design options for optimal solutions	2.1. Analyse business options to support architectural design trade offs for an optimal design solution 2.2. Develop alternative architectural designs that are traceable to the requirements 2.3. Evaluate a range of architectural solutions and justify the selection of the optimum solution
3. Develop interface requirements for effective solutions across multiple domains	3.1. Evaluate <i>system element interfaces</i> and the <i>sources of complexity</i> for the <i>interface management</i> of the system across multiple domains 3.2. Develop a process and appropriate techniques to be adopted for the interface management of <i>system elements</i> for end to end architectural solutions 3.3. Produce a control process for the system element interfaces of the management system 3.4. Liaise and arbitrate between stakeholders where there are conflicts in the definition of interfaces
4. Manage end to end systems integration	4.1. Evaluate suitability of <i>system integration</i> , verification and validation plans for end to end architectural solutions across multiple domains 4.2. Develop systems integration, verification and <i>validation plans</i> for complex systems to ensure viable integration process 4.3. Manage system integration plan and diagnose complex faults 4.4. Document fault conditions, report to appropriate person and follow up corrective actions 4.5. Prepare evidence for customer acceptance and certification of the system integration management plan 4.6. Plan and manage a transition to operational activity for the end to end solution

ELEMENT	PERFORMANCE CRITERIA
5. Incorporate components of an architecture from a third party	5.1. Negotiate with vendor for acceptable <i>vendor agreements</i> and agreed <i>roles and responsibilities</i> of each party 5.2. Manage vendor within a clearly defined process for dealing with defects and scope changes 5.3. Plan beyond delivery of specific elements and establish requirements for ongoing maintenance and support from vendor
6. Manage requirements for the architecture solution	6.1. Negotiate minimum <i>component costs</i> with vendors and analyse vendor component costs as part of the assessment for the appropriateness of vendors quote 6.2. Manage the vendor selection process to provide high level of solution and support costs

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate product and technology needs
- communication skills to:
 - interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
 - liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical documentation, software and hardware manuals, specifications and relevant enterprise policy
- numeracy skills to take and analyse measurements
- PC skills to use a word processor to translate enterprise and technology issues into system requirements
- planning and organisational skills to:
 - break large projects into a series of small projects
 - manage and prioritise own work
 - organise testing and contingency plans
- problem solving skills to resolve software, hardware and logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS)

<p>REQUIRED SKILLS AND KNOWLEDGE</p> <p>requirements and work practices</p> <ul style="list-style-type: none"> • task management skills to work systematically with required attention to detail and adherence to project requirements • technical skills to: <ul style="list-style-type: none"> • develop systems integration, verification and validation plans for complex systems • document fault conditions • manage systems integration
<p>Required knowledge</p> <ul style="list-style-type: none"> • architectural design tools • interface management • management of end to end system integration • new end to end architecture design solutions • solutions for business options across multiple domains • system integration solutions techniques • system interfaces • validation plans • vendor agreements and negotiations

Evidence Guide

<p>EVIDENCE GUIDE</p> <p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate tools and techniques for architectural design • analyse design options for optimal solutions • develop interface requirements for effective solutions across multiple domains • manage end to end systems integration • incorporate components of an architecture from a third party • manage requirements for the architecture solution.

EVIDENCE GUIDE	
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where architecture solutions across multiple domains can be managed • simulation software tools currently used in industry • vendor products, specifications, equipment and enterprise policy required for the activity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate managing end to end architectural solutions across multiple domains • review of evaluations, documents and evidence for customer acceptance prepared by the candidate • oral or written questioning of the candidate to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN7222A Manage solution architecture and impacts in line with organisational processes. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p>

EVIDENCE GUIDE

	Where applicable, physical resources should include equipment modified for people with special needs.
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

System element interfaces may include:

- requirements posed on the system element
- services to be provided by the system element
- specified connected devices and interfaces
- system elements that can support several interfaces.

Sources of complexity may include:

- different domains
- multinational programmes
- multiple suppliers
- novel technology.

Interface management may include:

- integration with existing system
- fine-tuning capabilities in multi-operating environments
- links to legacy systems.

System elements may include:

- relationships:
 - contractual
 - customer
 - development
 - hierarchical.

Systems integration may include:

- bringing together of the component subsystems into one system and ensuring that the subsystems function together as a system
- process of linking together different computing systems and software applications physically or functionally.

Validation plans may include:

- identification of method

RANGE STATEMENT	
	<ul style="list-style-type: none"> • interaction between the stakeholders • timing for each activity.
<i>Vendor agreements</i> may include:	<ul style="list-style-type: none"> • dealing with defects and scope changes • milestones • objectives and acceptance criteria • roles and responsibilities • scope.
<i>Roles and responsibilities</i> may include:	<ul style="list-style-type: none"> • accountabilities • dependencies • impact on delivery.
<i>Component costs</i> may refer to:	<ul style="list-style-type: none"> • appropriateness • completeness • correctness.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop plan to support architectural design process	1.1. Prepare a plan with techniques to support the architectural design process and communicate the solution to different <i>stakeholder groups</i> 1.2. Analyse business options to support architectural design trade offs for optimal design solution 1.3. Evaluate strengths and weaknesses of relevant technologies in the context of the requirement 1.4. Assess a range of alternative <i>interdisciplinary concepts</i> and the effect of their <i>attributes</i> on the design requirements 1.5. Prepare a solutions architecture plan with <i>possible solutions</i> and <i>alternative solutions</i>
2. Develop interface requirements for effective solutions across multiple architectures	2.1. Evaluate <i>system element interfaces</i> and the <i>sources of complexity</i> for the interface management of the system across multiple architectures 2.2. Develop a process and appropriate techniques to be adopted for the interface management of <i>system elements</i> for solution architecture 2.3. Produce a control process of the system element interfaces of the management system 2.4. Liaise and arbitrate between stakeholders where there are conflicts in the definition of interfaces
3. Manage solution architecture systems integration	3.1. Evaluate suitability of <i>system integration</i> , verification and validation plans for solution architecture from requirements 3.2. Develop systems integration, verification and <i>validation plans</i> for complex systems to ensure viable integration process 3.3. Manage system integration plan and diagnose complex faults 3.4. Document fault conditions, report to appropriate person and follow up corrective actions 3.5. Prepare evidence for customer acceptance and certification of the system integration management plan 3.6. Plan and manage a transition to operational activity for the solution architecture
4. Manage solution implementation and notify stakeholder	4.1. Produce final <i>project management requirements</i> against solution architecture plan and notify the stakeholder groups of the impending implementation

ELEMENT	PERFORMANCE CRITERIA
groups	<p>4.2. Evaluate the impact of the proposed project solutions on customers and enterprise</p> <p>4.3. Manage solution architecture activities as part of an overall project plan and monitor solution architecture risks</p> <p>4.4. Manage the amendments to solution architecture processes to meet the needs of the project and apply necessary corrective actions</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate business options to support architectural design
- communication skills to:
 - interact with stakeholders while maintaining a customer focus and consideration of customer needs
 - liaise with internal and external personnel where there are conflicts in the definition of interfaces
 - present solutions at business meetings
 - work effectively within group
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret requirements
- numeracy skills to analyse requirements
- PC skills to use a word processor to translate enterprise and technology issues into validation plans
- planning and organisational skills to:
 - break large projects into a series of small projects
 - manage and prioritise own work
 - manage solution elements
- problem solving skills to solve domain, technology and logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail and adherence to project requirements

REQUIRED SKILLS AND KNOWLEDGE

- technical skills to:
 - develop alternative solutions
 - diagnose interface requirements
 - manage solution architecture systems integration

Required knowledge

- features and operating requirements of complex systems, key performance indicators (KPIs) and service level agreements
- information required to define solution architecture and impacts in line with organisational processes
- interdisciplinary concepts across multiple architectures
- issues and challenges that occur with system changes
- legislation, codes of practice and other formal agreements that directly impact on system integration
- manufacturer's requirements for operation of systems equipment
- organisational policy and procedures
- performance and integration requirements
- solutions architecture alternatives
- specific OHS requirements that impact on activity in terms of safety of self and public safety
- system element interfaces for solution architecture
- system integration plans
- validation plans

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare an architecture plan with solutions and alternative solutions • develop interface requirements for effective solutions across multiple architectures • manage solution architecture systems integration • analyse impact of proposed project solutions on customers and enterprise • prepare evidence for customer acceptance and certification of the system integration management plan • produce final project management requirements.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where the development and management of solution architecture systems integration across multiple architectures may be conducted • software tools currently used in industry • vendor products, specifications, equipment and enterprise policy required for the activity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate implementing system integration • direct observation of the candidate performing a systematic approach to test and analysis of problems arising • review of evaluations, plans and evidence for customer acceptance, prepared by the candidate • oral or written questioning of the candidate to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is</p>

EVIDENCE GUIDE

	<p>recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN7221A Manage end to end architectural solutions across multiple domains. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop application layer solutions	<p>1.1. Produce the requirements for applications layer solutions for delivery of new applications layer solutions to customers using forecasting demand data</p> <p>1.2. Prepare a plan for an organisational change control process and the integration of new solutions within a complete network infrastructure</p> <p>1.3. Produce a test management schedule for the testing process of the application product</p> <p>1.4. Translate complex design and architecture requirements to traceable application characteristics according to design requirements</p> <p>1.5. Develop application architecture solution specifications using an industry process according to design requirements</p> <p>1.6. Develop application software resource profiling and select suitable vendor for negotiations</p> <p>1.7. Translate complex requirements into software packaging</p> <p>1.8. Produce software deployment mapping and version control to ensure complete integration and compatibility of application solution to existing system</p> <p>1.9. Complete configuration management and provide complex input network design requirements</p>
2. Analyse test results of application layer solutions	<p>2.1. Use design document and integration document software to replicate issues exhibited in test environment</p> <p>2.2. Certify software solution compatibility and compliance to requirements using a web-based test management tool (quality centre) to conduct performance evaluation tests</p> <p>2.3. Analyse test reports to evaluate load balancing and network security issues in test environment</p> <p>2.4. Resolve complex issues in interface to isolate defects</p>
3. Manage deployment of application layer solutions	<p>3.1. Plan and prepare evidence for customer acceptance and certification</p> <p>3.2. Plan and manage transition to operation activities required for transition to operation of integrated application layer solution</p> <p>3.3. Prepare an installation failures procedure to make</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>changes whilst maintaining service levels</p> <p>3.4. Manage <i>change implementation plan</i> to maintain system stability</p>
<p>4. Maintain currency of application layer solutions</p>	<p>4.1. Manage ongoing <i>monitoring activities</i> to prolong new applications layer solution life cycle for cost-effective business reasons</p> <p>4.2. Produce <i>tuning activities</i> to make efficient use of resources</p> <p>4.3. Analyse the current demands for resources for deriving forecasts and future requirements</p> <p>4.4. Produce a capacity plan predicting the infrastructure resources needed to achieve agreed service levels</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate test results of application layer solutions
- communication skills to:
 - interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
 - liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical documentation, software and hardware manuals, specifications and relevant enterprise policy
- numeracy skills to take and analyse measurements
- PC skills to use a word processor to translate enterprise and technology issues into system requirements
- planning and organisational skills to:
 - manage and prioritise own work
 - organise testing and deployment of application layer solutions
- problem solving skills to resolve logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail and

REQUIRED SKILLS AND KNOWLEDGE

adherence to project requirements

- technical skills to:
 - develop application architecture solution specifications
 - manage deployment of application layer solutions
 - manage transition to operation activities
 - provide complex input network design requirements

Required knowledge

- installation failure procedures
- legislation, codes of practice and other formal agreements that directly impact on activity
- manage change
- new applications layer solutions
- software and hardware resources
- specific OHS requirements that impact on activity in terms of safety of self and public safety
- system integration techniques
- test management scheduling
- tuning activities to maintain currency
- use of forecasting demand data
- use of test management tools

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce a test management schedule for the testing process of the application product • develop application architecture solution specifications using an industry process • produce software deployment mapping and version control • analyse test results of application layer solutions • prepare evidence for customer acceptance and certification • prepare an installation failures procedure • manage ongoing monitoring activities • produce tuning activities • produce a capacity plan predicting the infrastructure resources needed.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where the management of application layer solutions may be conducted • software tools currently used in industry • vendor products, specifications, equipment and enterprise policy required for the activity.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate managing the deployment of application layer solutions • direct observation of the candidate performing a systematic approach to test and analysis of complex issues arising • review of performance evaluation tests, software deployment mapping, plans and evidence for customer acceptance, prepared by the candidate • oral or written questioning of the candidate to assess required knowledge.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICTTEN7224A Manage voice, data and internet protocol network solutions.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Requirements for applications layer

- diagnostic software tools
- hardware resources

RANGE STATEMENT	
<i>solutions</i> may include:	<ul style="list-style-type: none"> • management software tools • protocols • software resources.
<i>New applications layer solutions</i> may include:	<ul style="list-style-type: none"> • internet protocol (IP) games • internet protocol TV (IPTV) • mesh network applications • mobile voice over internet protocol (VoIP) • multicast mobile applications • multimedia products • web applications.
<i>Forecasting demand data</i> may be:	<ul style="list-style-type: none"> • collected from: <ul style="list-style-type: none"> • customers: <ul style="list-style-type: none"> • actual • prospective • economic planners • internal organisational groups • local • marketing organisations • real estate agents • sales organisations • state and federal governments • statutory bodies • traffic management systems • in relation to: <ul style="list-style-type: none"> • access transport planning • changing customer use patterns • demographic changes • economic forecasts • industry trends • influence of technology on traffic demand • land developments • local industry • market conditions • marketing programs • population trends • possible environmental impacts • power re-zoning • sales forecasts

RANGE STATEMENT	
	<ul style="list-style-type: none"> • shire planning • traffic patterns.
<i>Integration of new solutions</i> may include:	<ul style="list-style-type: none"> • no contentions • protocol compatibility • software compatibility • system interoperability.
<i>Test management schedule</i> may include:	<ul style="list-style-type: none"> • post-installation test procedures • pre-installation test procedures • produces test summary report • profiling of application solution • risk defects report • simulation testing • test process is testable for application built.
<i>Industry process</i> may include:	<ul style="list-style-type: none"> • complex architectural input • complex constructor table input • idea consultation.
<i>Integration document software</i> may include:	<ul style="list-style-type: none"> • fine-tuning capabilities in multi-operating environments • integration with existing system • links to legacy systems.
<i>Performance evaluation tests</i> may include:	<ul style="list-style-type: none"> • defects: <ul style="list-style-type: none"> • defects detected are logged and mapped to failed cases • releases: <ul style="list-style-type: none"> • manage software releases and iterations • requirements: <ul style="list-style-type: none"> • traceability • management • test lab: <ul style="list-style-type: none"> • execute test cases from test plan • test plan: <ul style="list-style-type: none"> • creating and updating test cases.
<i>Transition to operation activities</i> include:	<ul style="list-style-type: none"> • installation procedures • operations and maintenance (OM) expenses • OM • project scope • schedule and milestones • training procedures.

RANGE STATEMENT	
<i>Change implementation</i> plan may include:	<ul style="list-style-type: none"> • back out procedures • pre-validate changes prior to the change to assess environment stability • test process pre/post scheduled change to identify success.
<i>Monitoring activities</i> may include:	<ul style="list-style-type: none"> • current and future capacity • current and future performance • throughput of the infrastructure components.
<i>Tuning activities</i> may include:	<ul style="list-style-type: none"> • configuration settings • database performance tuning • network settings.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Develop voice, data and IP network solutions</p>	<p>1.1. Produce the requirements for voice, data and IP network solutions for the delivery of new voice, data and IP networks to customers using forecasting demand data</p> <p>1.2. Prepare a plan for an organisational change control process and the integration of new solutions within a complete network infrastructure</p> <p>1.3. Produce a test management schedule for the testing process of the network product solution</p> <p>1.4. Translate complex design and architecture requirements to traceable software application characteristics according to design requirements</p> <p>1.5. Develop network architecture solution specifications using an industry process according to design requirements</p> <p>1.6. Develop software and hardware resource profiling and select suitable vendor for negotiations</p> <p>1.7. Translate complex requirements into software packaging</p> <p>1.8. Produce software deployment mapping and version control to ensure complete integration and compatibility of network application solution to existing system</p> <p>1.9. Complete configuration management and provide complex input network design requirements</p>
<p>2. Analyse test results of voice, data and IP network solutions</p>	<p>2.1. Use design document and integration document software to replicate issues exhibited in test environment</p> <p>2.2. Certify software solution compatibility and compliance to requirements using web based test management tool (quality centre) to conduct performance evaluation tests</p> <p>2.3. Analyse test reports to evaluate load balancing and network security issues in test environment</p> <p>2.4. Resolve complex issues in interface to isolate defects</p>
<p>3. Manage deployment of voice, data and IP network solutions</p>	<p>3.1. Plan and prepare evidence for customer acceptance and certification</p> <p>3.2. Plan and manage transition to operation activities required for transition to operation of integrated IP network solution</p> <p>3.3. Prepare an installation failures procedure to make</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>changes whilst maintaining service levels</p> <p>3.4. Manage <i>change implementation plan</i> to maintain system stability</p>
<p>4. Maintain currency of voice, data and IP network solutions</p>	<p>4.1. Manage ongoing <i>monitoring activities</i> to prolong new IP network solution life cycle for cost-effective business reasons</p> <p>4.2. Produce <i>tuning activities</i> to make efficient use of resources</p> <p>4.3. Analyse the current demands for resources for deriving forecasts and future requirements</p> <p>4.4. Produce a capacity plan predicting the infrastructure resources needed to achieve agreed service levels</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interrogate and evaluate complex information from multiple sources to manage and maintain network solutions
- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - interpret relevant enterprise policy and documentation
 - interpret technical documentation, such as software and hardware manuals and specifications
 - read and comply with related occupational health and safety (OHS) requirements and work practices
- numeracy skills to:
 - interpret technical data
 - take and analyse measurements
- PC skills for:
 - desktop research
 - word processing
- planning and organisational skills to:
 - manage change

REQUIRED SKILLS AND KNOWLEDGE

- schedule tests
- tune activities to maintain currency
- problem solving skills to:
 - develop procedures such as for installation failure
 - produce new IP network solutions
- research skills to access technical information and sources to assist with planning and predicting infrastructure resources
- task management skills to work systematically with required attention to detail and adherence to project requirements
- technical skills to:
 - translate complex requirements design and architecture to traceable software application characteristics
 - use forecasting demand data
 - use test management tools

Required knowledge

- installation failure procedures
- manage change
- new IP network solutions
- software and hardware resources
- system integration techniques
- test management scheduling
- tuning activities to maintain currency
- use of forecasting demand data
- use of test management tools

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce a test management schedule • develop network architecture solution specifications • develop software and hardware resource profiling and select suitable vendor for negotiations • undertake configuration management of voice, data and IP network and provide complex input network design requirements • analyse test reports to evaluate load balancing and network security issues • plan and prepare evidence for customer acceptance • prepare installation failures procedure • produce tuning activities to enable efficiencies • produce a capacity plan predicting the infrastructure resources needed.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where management of voice, data and IP network solutions can be undertaken • software and hardware resources suitable for developing, deploying and managing voice, data and IP network solutions • tests and equipment currently used in industry.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate using design document and integration document software to replicate issues exhibited in test environment • oral and written questioning of the candidate to assess required knowledge of requirements developing voice, data and IP network solutions • review of the candidate's plan for new voice, data and IP network solutions within a complete network infrastructure

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> review of the candidate's documented capacity plan predicting infrastructure resources needs.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTTEN7223A Manage application layer solutions. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Requirements for voice, data and IP</i>	<ul style="list-style-type: none"> diagnostic software tools

RANGE STATEMENT

network solutions may include:

- hardware resources:
 - data:
 - routers
 - servers
 - switches
 - optical
 - wireless
- management software tools
- protocols
- software resources.

New voice, data and IP networks may include:

- IP games
- IP home networks
- IP security
- IP private branch exchange (PBX)
- internet protocol TV (IPTV)
- mesh network
- mesh network applications
- mobile data
- multiprotocol label switching (MPLS) network
- multicast mobile applications
- multimedia products
- voice over internet protocol (VoIP)
- web applications.

Forecasting demand data may be:

- collected from:
 - customers:
 - actual
 - prospective
 - economic planners
 - internal organisational groups
 - local
 - marketing organisations
 - real estate agents
 - sales organisations
 - state and federal governments
 - statutory bodies
 - traffic management systems
- in relation to:
 - access transport planning

RANGE STATEMENT	
	<ul style="list-style-type: none"> • changing customer use patterns • demographic changes • economic forecasts • industry trends • influence of technology on traffic demand • land developments • local industry • market conditions • marketing programs • population trends • possible environmental impacts • power re-zoning • sales forecasts • shire planning • traffic patterns.
<i>Integration of new solutions</i> may include:	<ul style="list-style-type: none"> • hardware compatibility • platform compatibility • protocol compatibility • software compatibility • technology compatibility • no contentions • signalling contention • system interoperability.
<i>Test management schedule</i> may include:	<ul style="list-style-type: none"> • post-installation test procedures • pre-installation test procedures • produces test summary report • profiling of software solution • risk defects report • simulation testing • test process is testable for network software built.
<i>Industry process</i> may include:	<ul style="list-style-type: none"> • complex architectural input • complex constructor table input • idea consultation.
<i>Integration document software</i> may include:	<ul style="list-style-type: none"> • fine-tuning capabilities in multi-operating environments • integration with existing system • links to legacy systems.
<i>Performance evaluation tests</i> may	<ul style="list-style-type: none"> • defects: <ul style="list-style-type: none"> • defects detected are logged and mapped to failed

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> cases • releases: <ul style="list-style-type: none"> • manage software releases and iterations • requirements: <ul style="list-style-type: none"> • traceability • management • test lab: <ul style="list-style-type: none"> • execute test cases from test plan • test plan: <ul style="list-style-type: none"> • creating and updating test cases.
<i>Transition to operation activities</i> include:	<ul style="list-style-type: none"> • installation procedures • operations and maintenance (OM) expenses • OM • project scope • schedule and milestones • training procedures.
<i>Change implementation plan</i> may include:	<ul style="list-style-type: none"> • back out procedures • pre-validate changes prior to the change to assess environment stability • test process pre and post scheduled change to identify success.
<i>Monitoring activities</i> may include:	<ul style="list-style-type: none"> • current and future capacity • current and future performance • throughput of the infrastructure components.
<i>Tuning activities</i> may include:	<ul style="list-style-type: none"> • configuration settings • database performance tuning • network settings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the test effort and develop test strategy for an application software	1.1. Analyse the functionalities of an application software from the system design document and create a test strategy for a new telecommunications product line 1.2. Produce the steps in developing the test strategy and the attributes of each step according to enterprise policy 1.3. Produce a test strategy for evaluating the suitability of the application software for integration into the telecommunications network 1.4. Analyse the test strategy and identify the types of risks that would hinder the test performance or reality
2. Plan test strategy for the regime	2.1. Produce the phases of a test cycle for a test regime according to the system design document 2.2. Assess a range of tests required to evaluate the performance and functionality of the application software and determine the tests required to suit the test regime 2.3. Evaluate features of testing tool and debuggers and select an appropriate tool to test the software application and detect faults 2.4. Evaluate the elements of a test plan that would cover the testing functionality of the application software
3. Design a test plan and produce test reviews	3.1. Determine the forecast time, effort and cost for low and medium intensity projects to perform testing 3.2. Develop a test case or test scenario with prerequisite states based on requirements to generate expected test results for the test plan 3.3. Produce a test plan for specific phases based on the requirements of the project specifications for the application software 3.4. Produce test reporting associated with particular test phases within the test plan 3.5. Analyse test reports and evaluate the impact of the test plan on the testing environment 3.6. Manage the progress of the test plan to minimise the risks associated with testing and ensure test compliance with test requirements 3.7. Report any detected defects to the product evaluation personnel and prepare a strategy to manage the defects

ELEMENT	PERFORMANCE CRITERIA
4. Manage test traceability	<p>4.1. Create a traceability matrix to correlate the relationship between marketing requirements and detailed requirements of the software product to the matching parts of design, test plan and test cases</p> <p>4.2. Analyse the testing metrics produced by the test tool to manage the tracking of defects and plan process improvements based on the metrics</p> <p>4.3. Produce an evaluation report from the traceability matrix to manage the defects or failures from the test plan</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate the functionalities of an application software
- communication skills to:
 - interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
 - liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical documentation, software and hardware manuals, specifications and relevant enterprise policy
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - manage and prioritise own work
 - organise testing
 - manage the progress of the test plan
- problem solving skills to resolve software, hardware and logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail and adherence to project requirements
- technical skills to:
 - plan test strategy for the regime

REQUIRED SKILLS AND KNOWLEDGE

- manage test traceability

Required knowledge

- applications software features and functionalities
- configuration of software testing tools
- creation of traceability matrix
- elements of test plans
- features of testing tools and debuggers
- identification of types of risks
- legislation, codes of practice and other formal agreements that directly impact on testing
- manage software defects
- management of test traceability
- phases of test cycles
- production of test reviews
- specific OHS requirements that impact on activity in terms of safety of self and public safety
- steps in developing test strategy
- testing procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce the steps in developing the test strategy • produce a test strategy for evaluating the suitability of the application software • design a test plan and produce test reviews • develop a test case or test scenario • produce a test plan for specific phases • produce test reporting associated with particular test phases within the test plan • create a traceability matrix • produce an evaluation report from the traceability matrix to manage the defects or failures from the test plan.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where the planning and management of a test regime for evaluation of application software may be conducted • software tools currently used in industry • vendor products, specifications, equipment and enterprise policy required for the activity.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate managing a test regime for evaluation of application software • direct observation of the candidate performing a systematic approach to test and analysis of problems arising • review of test regime, test results with interpretation and improvement recommendations prepared by the candidate • oral or written questioning of the candidate to assess required knowledge.

EVIDENCE GUIDE	
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTTEN7226A Manage development and application of testing artefacts. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate product and technology needs
- communication skills to:
 - interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
 - liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical documentation, software and hardware manuals, specifications and relevant enterprise policy
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - break large projects into a series of small projects
 - manage and prioritise own work
 - organise testing
- problem solving skills to resolve software, hardware and logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail and adherence to project requirements
- technical skills to:
 - configure software testing tools

REQUIRED SKILLS AND KNOWLEDGE

- create traceability matrix
- develop software testing strategies

Required knowledge

- applications software features and functionalities
- configuration of software testing tools
- creation of testing artefacts
- creation of traceability matrix
- domain and application testing
- elements of test plans
- features of testing tools and debuggers
- identification of types of risks
- management of:
 - software defects
 - test traceability
- phases of test cycles
- production of test reviews
- steps in developing test strategy
- testing procedures

ICTTEN7227B Analyse business specifications to produce technical solutions

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor changes to performance criteria.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to model and analyse business specifications and produce a technical solution that satisfies customers' business needs.

Application of the Unit

Telecommunication officers in service and provision work who carry out design and implementation of technical solutions of ICT networks apply the skills and knowledge in this unit for a practical solution in network design.

They would be employed by telecommunications and IT networking provisioning companies specialising in integrating the converging and emerging technologies of ICT networks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to analyse business specifications</p>	<p>1.1 Research the application of a suitable business model for telecommunication service provisioning that meets agreed customer requirements</p> <p>1.2 Obtain business requirements and business specifications to provide data for the model</p> <p>1.3 Determine the business drivers and key stakeholder/customer requirements with internal and external stakeholders</p> <p>1.4 Evaluate business objectives and customer requirements for input into the model</p>
<p>2. Produce technical solutions to meet business imperatives</p>	<p>2.1 Research tools and templates for analysing business models and provide reports on technical design and specifications</p> <p>2.2 Develop technical solutions for customer in response to drivers and business requirements</p> <p>2.3 Evaluate costs involved to implement the IT/ICT technical solutions for customer</p> <p>2.4 Produce a cost benefit analysis to assess the viability and optimum timing for deploying the technical solution for maximum return on investment (RoI)</p> <p>2.5 Investigate a range of vendor products to determine the most suitable to meet technical requirements and customer needs</p> <p>2.6 Produce a report document on the technical solutions addressing the business specifications and recommendations against customer requirements</p>
<p>3. Evaluate the impact of the technical requirements on the business</p>	<p>3.1 Review and assess business constraints, opportunities and objectives</p> <p>3.2 Determine technical requirements according to input-output, interface, process flow or quality requirements</p> <p>3.3 Analyse hardware, software and network requirements to suit the business plan</p> <p>3.4 Build business platform based on IT/ICT technical solutions</p> <p>3.5 Investigate processes to be changed by the business solution</p> <p>3.6 Produce an evaluation document on the impact of the technical requirements on the business</p>
<p>4. Document and</p>	<p>4.1 Submit technical requirements and solution overview to</p>

validate the agreed solutions	management for feedback 4.2 Analyse feedback and incorporate change as required 4.3 Document changes and distribute final business solution to internal and external stakeholders
-------------------------------	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and business related matters
- literacy skills to:
 - design solutions and recommendations in required formats
 - interpret technical documentation and write reports
- numeracy skills to:
 - evaluate possible technical design scenarios for optimum solution
 - interpret business requirements and specifications
- planning and organising skills to plan, prioritise and monitor own work
- problem-solving and contingency management skills to adapt varied business procedures to requirements
- research skills to interrogate vendor databases and websites to implement different solutions to meet client business specifications
- technical skills to:
 - produce optimum technical solutions
 - use software business tools.
 -

Required knowledge

- business models and tools
- business processes
- client business domain, business function and organisation
- compatibility issues and resolution procedures
- configuration of internet protocol (IP) networks
- customer and business liaison
- desktop applications and operating systems as required
- documenting technical specifications
- linkage between processes
- security protocols, standards and data encryption
- technologies:
 - access networks
 - core networks
 - ICT network topologies
 - mobile cellular networks
 - network protocols and operating systems
 - optical networks and principles
 - radio frequency (RF) networks and principles.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate client specifications against accepted industry practices • produce technical solutions from business specifications • analyse feedback from client and make adjustment to the proposal • apply design concepts to business solutions • produce technical reports • make recommendations and offer optimum design solutions • produce an evaluation document on the impact of the technical requirements on the business.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • client functional requirements • business specifications • database software • simulation software • organisational guidelines • network and computer layout • site design software and hardware • information on a range of ICT business solutions.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of work processes and procedures and/or performance in a project context • oral or written questioning on required knowledge and skills • evaluation of research methodologies and the final proposal prepared by the candidate outlining solutions and recommendations.

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTTEN7220A Translate domain and solution architectures into platform requirements and designs. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Business model</i> includes:</p>	<ul style="list-style-type: none"> • customers: <ul style="list-style-type: none"> • customer relationship • distribution channel • target customer • finances: <ul style="list-style-type: none"> • cost structure • revenue • infrastructure: <ul style="list-style-type: none"> • business partnerships • core capabilities • value configurations • offering: <ul style="list-style-type: none"> • customer preference • value proposition.
<p><i>Business requirements</i> may include:</p>	<ul style="list-style-type: none"> • business application • business plan • existing system • mission statement • nature of the business • network or people in the organisation.
<p><i>Business specifications</i> may include:</p>	<ul style="list-style-type: none"> • budget allocation • budget costs estimate • future plan • growth forecast • technical requirements • timeline.
<p><i>Business drivers</i> may be in reference to:</p>	<ul style="list-style-type: none"> • application solutions • business need or opportunity that needs to be addressed • business partnerships and associations • network or people in the organisation • system.
<p><i>Requirements</i> may be</p>	<ul style="list-style-type: none"> • application • business

in reference to:	<ul style="list-style-type: none"> • database • network • people in the organisation • platform • system.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • development team • project team • sponsor • user.
<i>Technical solutions</i> may include:	<ul style="list-style-type: none"> • audit requirements • changes to: <ul style="list-style-type: none"> • network infrastructure • security or privacy provisions • e-business or e-commerce solution • hardware upgrades • implementing a new system • inventory management • new hardware • new software • occupational health and safety (OHS) requirements • quality requirements • software upgrades • user training.
<i>Technical requirements</i> may be in reference to:	<ul style="list-style-type: none"> • bandwidth • hardware problems • network growth • network security • network traffic congestions • new technologies • power usage • software problems • transmission dropouts • upgrades.
<i>Hardware</i> may include:	<ul style="list-style-type: none"> • internet protocol TV (IPTV) • multimedia • network elements: <ul style="list-style-type: none"> • gateways • local area network (LAN) switches • routers • servers • wireless networks

	<ul style="list-style-type: none"> • optical networks • radio networks • switching equipment • transmission equipment • voice and data equipment.
<i>Software</i> may include:	<ul style="list-style-type: none"> • commercial • customised software • in-house • packaged.
<i>Network</i> may include:	<ul style="list-style-type: none"> • broadband • data • ICT networks • internet and intranet • media • radio • security • switching • telecommunications • transmission.
<i>Impact</i> may refer to:	<ul style="list-style-type: none"> • fewer downtimes • improved efficiency • improved response times • increased return on investment • lower operational costs • more 'user friendly' network.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage forecast service demand requirements	1.1. Develop a project plan to review <i>forecasting data</i> and generate planning forecasts using <i>forecasting tools</i> 1.2. Analyse and review forecasts according to enterprise policy and produce forecasts figures considering <i>new developments</i> in the area and technological changes where appropriate
2. Manage network development growth requirements	2.1. Analyse <i>market intelligence</i> on customer demand and <i>demand data</i> to plan for potential network traffic quantity and flow 2.2. Assess overall <i>planning</i> parameters, including approved business plan prior to commencing planning process 2.3. Analyse gathered information and produce a project plan with <i>specifications</i> to meet network growth
3. Manage project resources requirements	3.1. Assess the <i>resource requirements</i> to manage the project from scoping phase through to project completion 3.2. Analyse the outcomes of the project deliverables to determine the effectiveness of the project process
4. Develop process solutions	4.1. Produce the <i>requirements for process solutions</i> for the delivery of <i>product</i> and <i>services</i> to customers using forecasting demand data 4.2. Prepare a plan for the organisational change control process and the <i>integration of new solutions</i> within a complete network infrastructure 4.3. Produce a <i>test management schedule</i> for the testing process of the product solution 4.4. Develop solution specifications using <i>industry process</i> according to design requirements 4.5. Develop software and hardware resource profiling and select suitable vendor for negotiations 4.6. Complete configuration management and provide complex input design requirements
5. Analyse test results for process solutions	5.1. Use design document and <i>integration document software</i> to replicate issues exhibited in test environment 5.2. Certify software solution compatibility and compliance with requirements using web based test management tool to conduct <i>performance</i>

ELEMENT	PERFORMANCE CRITERIA
	<p><i>evaluation tests</i></p> <p>5.3. Analyse test reports to evaluate compatibility and security issues in a test environment</p> <p>5.4. Resolve complex issues in interface to isolate defects</p>
6. Manage process implementation	<p>6.1. Plan and prepare evidence for customer acceptance and certification</p> <p>6.2. Plan and manage <i>transition to operation activities</i> required for transition to operation of integrated IP solution</p> <p>6.3. Prepare an installation failures procedure to make changes whilst maintaining service levels</p> <p>6.4. Manage <i>change implementation plan</i> to maintain system stability</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to use information and data to manage network growth
- communication skills to discuss project brief with enterprise personnel, customers and other contractors
- literacy skills to read and write reports and project briefs
- numeracy skills to:
 - apply forecasting techniques
 - assess planning parameters
 - work with statistical data
- planning and organisational skills to consider current and new technology, facilities and features when developing options
- problem solving skills to account for unexpected changes in demand requirements
- research skills to:
 - obtain and study information relating to new technology or technology features
 - review forecasting data
- technical skills to:
 - use integration software

REQUIRED SKILLS AND KNOWLEDGE

- conduct performance evaluation tests

Required knowledge

- change management
- customer applications and usage levels
- forecasting techniques
- industry processes
- integration of new solutions
- market intelligence
- performance evaluation
- planning procedures
- product integration
- products and services
- project management
- sources of data to aid forecasting
- test management

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • manage forecast service demand requirements • manage network development growth requirements • manage project resources requirements • develop process solutions.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • forecast data and tools involved in planning • a range of software and hardware currently used in industry • relevant regulations, specifications that impact on forecasting activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate implementing process solutions • review of planning forecasts, specifications and evidence for customer acceptance completed by the candidate for different scenarios and situations • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN7230A Scope project requirements and process solutions. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Forecasting data may be:

- collated by:
 - directories
 - examining plans
 - historical usage data
 - interviews
 - maps
 - network management tools
 - reports
- collected from:
 - customers:
 - actual
 - prospective

RANGE STATEMENT	
	<ul style="list-style-type: none"> • economic planners • internal organisational groups • marketing organisations • real estate agents • sales organisations • state/territory and federal governments • statutory bodies • traffic management systems • changing customer use patterns • customer access planning • demographic changes • economic forecasts • industry trends • influence of technology on traffic demand • land developments • local industry • marketing programs • population trends • possible environmental impacts • re-zoning • sales forecasts • shire planning • telecommunications history in the area • traffic patterns.
<i>Forecasting tools</i> may include:	<ul style="list-style-type: none"> • specialist forecasting software • spreadsheets • statistical tools: <ul style="list-style-type: none"> • graphical estimation • moving averages: <ul style="list-style-type: none"> • simple • weighted • Poisson distribution • probability • queuing theory • regression analysis • trend analysis.
<i>New developments</i> may include:	<ul style="list-style-type: none"> • commercial • communications construction occurring directly or concurrently with primary activity

RANGE STATEMENT	
	<ul style="list-style-type: none"> • domestic • industrial.
<i>Market intelligence</i> may include:	<ul style="list-style-type: none"> • customer: <ul style="list-style-type: none"> • demand • feedback • projections • specific technology needs • impact of new technology • vendor forecasts.
<i>Demand data</i> may be:	<ul style="list-style-type: none"> • collected from: <ul style="list-style-type: none"> • customers: <ul style="list-style-type: none"> • actual • prospective • economic planners • internal organisational groups • marketing organisations • real estate agents • sales organisations • state/territory and federal governments • statutory bodies • traffic management systems • in relation to: <ul style="list-style-type: none"> • access transport planning • changing customer use patterns • demographic changes • economic forecasts • industry trends • influence of technology on traffic demand • land developments • local industry • marketing programs • population trends • possible environmental impacts • re-zoning • sales forecasts • shire planning • traffic patterns.

RANGE STATEMENT	
<i>Planning</i> can relate to:	<ul style="list-style-type: none"> • buildings • network change • network growth and network reduction • priorities which are driven by: <ul style="list-style-type: none"> • customer demand • legislative requirements • marketing initiatives • revenue projections • sites • structures.
<i>Specifications</i> may include:	<ul style="list-style-type: none"> • availability of equipment and resources • costing • funding • infrastructure developments • priority • risk assessment • technology requirements • timeframe.
<i>Resource requirements</i> may refer to:	<ul style="list-style-type: none"> • communications strategies • contracting and procurement • cost • human resources • quality • risk assessment • time • validation processes.
<i>Requirements for process solutions</i> may include:	<ul style="list-style-type: none"> • diagnostic software tools • hardware resources • management software tools • protocol management • software resources.
<i>Product</i> may include:	<ul style="list-style-type: none"> • broadband connections • business solutions • iPhone • mobile internet • optical network • phone conferencing • wireless services.

RANGE STATEMENT	
<i>Services</i> may include:	<ul style="list-style-type: none"> • assisting customer with new applications • assisting new product sourcing • business customer service • coverage • customer service • database hosting • international roaming • just-in-time deliveries • mobile service • quality of service (QoS) • service restoration.
<i>Integration of new solutions</i> may include:	<ul style="list-style-type: none"> • hardware compatibility • no contentions • platform compatibility • protocol compatibility • signalling contention • software compatibility • system interoperability • technology compatibility.
<i>Test management schedule</i> may include:	<ul style="list-style-type: none"> • post-installation test procedures • pre-installation test procedures • profiling of software solution • risk defects report • simulation testing • test process for testable network software built • test summary report.
<i>Industry process</i> may include:	<ul style="list-style-type: none"> • complex architectural input • complex constructor table input • idea consultation.
<i>Integration document software</i> may include:	<ul style="list-style-type: none"> • fine-tuning capabilities in multi-operating environments • integration with existing system • links to legacy systems.
<i>Performance evaluation tests</i> may include:	<ul style="list-style-type: none"> • defects detected, logged and mapped to failed cases • releases to manage software releases and iterations • requirements for traceability and management • test lab to execute test cases from test plan • test plan to create and update test cases.
<i>Transition to operation activities</i>	<ul style="list-style-type: none"> • installation procedures

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • operations and maintenance (OM) expenses • OM • project scope • schedule and milestones • training procedures.
<i>Change implementation plan</i> may include:	<ul style="list-style-type: none"> • back out procedures • pre-validate changes prior to the change to assess environment stability • test process pre and post scheduled change to identify success.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Conduct project scope definition activities	1.1. Develop and confirm procedures for project authorisation with an appropriate authority for the commitment of resources and effort 1.2. Establish agreement of desired project outcomes with relevant stakeholders 1.3. Develop scope management plan to determine the scoping requirements
2. Define and plan scoping project requirements and process solutions	2.1. Analyse needs in consultation with client and relevant stakeholders to verify project scope 2.2. Prepare project specifications with project objectives, deliverables , constraints, exclusions, assumptions and principal work activities for the delivery of products and services 2.3. Determine and agree measurable project outcomes and benefits to enable quantified evaluation of program performance 2.4. Develop and communicate scope definition, scope management strategies and plans to stakeholders and seek agreement 2.5. Align program scope to business requirements and organisational strategy
3. Manage scoping process	3.1. Conduct regular program reviews to measure project performance and to ensure that stated program, business and strategic objectives are met 3.2. Establish and maintain change management system to form the basis of ongoing scope management 3.3. Conduct reviews of scope changes and take action to ensure that project and program objectives are achieved or modified 3.4. Measure project outcomes against defined program scope and aligned strategic objectives 3.5. Communicate results of program outcomes to appropriate authority 3.6. Manage the impact of scope changes within established time, cost and quality constraints according to change control procedures and to meet project objectives 3.7. Review project planning process and document recommendations for improvements to future projects

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse project needs
- communication skills to liaise with and communicate decisions to enterprise personnel and stakeholders
- literacy skills to:
 - review and amend project plans
 - write quality reports
- numeracy skills to:
 - assess project parameters
 - calculate budget requirements and limitations
- planning and organisational skills to
 - prioritise actions for successful outcomes
 - set out project requirements and priorities
- problem solving skills to:
 - account for unexpected variations to requirements
 - control proposed changes in scope
- research skills to gain and maintain relevant and current technical product knowledge

Required knowledge

- products and solutions
- project life cycle and the significance of scope management
- scope management plans, methodologies, techniques and tools
- typical challenges and issues encountered in project scope management and options for addressing these
- vendor products

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Project authorisation may be:

- decided before involvement of the project manager
- scope statement:
 - aim of project

RANGE STATEMENT	
	<ul style="list-style-type: none"> • explanation of project • tools to measure success • required at a number of critical review points during the project.
<i>Appropriate authority</i> may relate to:	<ul style="list-style-type: none"> • authority to make decisions regarding the project • client • individual or group • owner • senior executive • sponsor.
<i>Relevant stakeholders</i> may include:	<ul style="list-style-type: none"> • clients • decision makers • internal and external parties • sponsors • team members.
<i>Scope management plan</i> may relate to:	<ul style="list-style-type: none"> • determining that a scope change has occurred or is about to occur • identifying and reporting incremental increases to scope that were not part of the original project requirements • identifying factors which influence changes to scope • implementing agreed changes to scope • monitoring and reporting: <ul style="list-style-type: none"> • achievement of project objectives • effect of scope changes on other areas.
<i>Needs</i> may be:	<ul style="list-style-type: none"> • activity-oriented • computer systems or buildings • improvement-oriented • outcome-oriented • product-oriented.
<i>Deliverables</i> may include:	<ul style="list-style-type: none"> • implementation plans • integration plans with existing network • preferred vendors • products and services defined within the project scope • proposed timelines • risk assessment strategy.

RANGE STATEMENT	
<i>Products</i> may include:	<ul style="list-style-type: none"> • broadband connections • business solutions • iPhone • mobile internet • optical network • phone conferencing • wireless services.
<i>Services</i> may include:	<ul style="list-style-type: none"> • assisting customer with new applications • assisting new product sourcing • business customer service • coverage • customer service • database hosting • international roaming • just-in-time deliveries • mobile service • quality of service (QoS) • service restoration.
<i>Scope management strategies</i> may relate to:	<ul style="list-style-type: none"> • controlling program scope creep • determining that a scope change has occurred or is about to occur • managing factors which influence changes to scope • managing scope changes when they occur • managing the effect of scope changes on other areas and on the achievement of multiple project objectives • progressive refinement of scope throughout multiple project life cycles.
<i>Project performance</i> may include:	<ul style="list-style-type: none"> • project's progress in terms of time and resources • time and resources spent on the projects, as compared to baseline data.
<i>Change management system</i> may include:	<ul style="list-style-type: none"> • change to control boards or committees • configuration management • documentation • impact analysis • risk analysis.
<i>Reviews of scope changes</i> may include:	<ul style="list-style-type: none"> • formal agreements: <ul style="list-style-type: none"> • contracts

RANGE STATEMENT	
	<ul style="list-style-type: none"> • subcontracts • memoranda of understanding • major elements of the program liable to change: <ul style="list-style-type: none"> • deletion of a line of business endeavour • deletion of poorly performing projects • new projects prioritising program • potential, perceived and actual changes • program documentation: <ul style="list-style-type: none"> • integrated (program) risk analysis • integrated budgets • integrated schedules • plans.
<i>Change control procedures</i> may include:	<ul style="list-style-type: none"> • assessing risk to project timeline: <ul style="list-style-type: none"> • excess costs • excess resources required to complete project on time • contingency plan • monitoring and reviewing progress.

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to investigate the application of cloud networks (infrastructure-as-a-service) in telecommunications switching.</p> <p>Most infrastructure-based services are embedded in physical infrastructure. Cloud computing and infrastructure-as-a-service changes the focus from the physical infrastructure to the new world of virtual infrastructure. No longer are services built around floor space, servers or ports, but rather around virtual machine (VM) images, application instances, and virtualised storage and networks.</p> <p>Scalability, cost savings, security, flexibility of infrastructure and energy consumption are significant factors when business considers cloud networks. Applications involving cloud networks are developed to support business strategies.</p> <p>Cloud network solutions support the application of Next Generation Technologies (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Telecommunication planning engineers and senior technical staff apply the skills and knowledge in this unit to investigate the application of cloud networks (infrastructure-as-a-service) in telecommunications switching.</p> <p>Technical planners develop strategies to accommodate shortfalls in capacity and functionality for a switching</p>
--------------------------------	---

	network, and develop solutions for network growth using emerging technologies.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Evaluate current physical network infrastructure</p>	<p>1.1. Analyse the scalability, functionality, cost, security and energy consumption of existing physical network infrastructure</p> <p>1.2. Report on the shortfalls and risks of existing physical infrastructure in accommodating network growth and increased functionality</p> <p>1.3. Investigate capacity and functionality shortfalls of existing physical infrastructure to highlight the limitations of the existing switching network</p> <p>1.4. Document estimated costs and issues associated with meeting capacity and functionality shortfalls using existing physical infrastructure</p>
<p>2. Investigate the application of cloud networks</p>	<p>2.1. Analyse trends in cloud networks (infrastructure-as-a-service) technologies and multiprotocol label switching (MPLS) architectures against the rapid changes in the landscape</p> <p>2.2. Determine the applicability of cloud networks (infrastructure-as-a-service) to meet capacity and functionality requirements of the network</p> <p>2.3. Assess the risks in using cloud networks to meet capacity and functionality requirements of the network</p> <p>2.4. Evaluate a range of cloud network solutions and justify the selection of an optimum network switching solution</p> <p>2.5. Develop solution elements using a series of small project elements</p> <p>2.6. Produce a cloud network alternative solution to emulate the existing Core Network of a service provider</p>
<p>3. Analyse the impact of the cloud network solution for system integration and across business domains</p>	<p>3.1. Prepare a plan for organisational change control process and the integration of cloud network solutions within a complete network infrastructure</p> <p>3.2. Prepare a test scenario and produce a test management schedule for the testing process of system elements and interfaces using simulation</p> <p>3.3. Use integration document software to replicate issues exhibited in test environment</p> <p>3.4. Certify cloud network solution compatibility and compliance to requirements using web based test</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>management tool (quality centre) to conduct <i>performance evaluation tests</i></p> <p>3.5. Analyse test reports to evaluate load balancing and network security issues in test environment</p> <p>3.6. Document and resolve conflicts detected in simulation testing</p>
<p>4. Develop a business case for implementation of a cloud network</p>	<p>4.1. Prepare a cost-benefit analysis of the cloud network solution as a business case to evaluate the return on investment (RoI)</p> <p>4.2. Investigate staging of the solution and timing implementation of the project elements as a scenario for real life implementation</p> <p>4.3. Research and report on the <i>key features</i> of cloud network implementation in a business case study</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate the existing physical network infrastructure
- communication skills to:
 - interact with enterprise personnel, customers and other contractors, while maintaining a customer focus and consideration of customer needs
 - work effectively within a group
 - liaise with internal and external personnel on technical and business matters
- literacy skills to:
 - prepare reports given a specific format
 - read and interpret technical documentation, software and hardware manuals, specifications and relevant enterprise policy
- numeracy skills to analyse requirements
- PC skills to use a word processor to translate enterprise and technology issues into a cloud network solution
- planning and organisational skills to:
 - manage and prioritise own work
 - manage solution elements

REQUIRED SKILLS AND KNOWLEDGE

- break up large project component into a series of smaller project components
- problem solving skills to solve domain, technology and logistics problems
- safety awareness skills to follow all related occupational health and safety (OHS) requirements and work practices
- task management skills to work systematically with required attention to detail and adherence to project requirements
- technical skills to:
 - prepare a test scenario and test regime for the simulation
 - resolve system conflict or defects following simulation testing
 - set up test management schedules and diagnose interface requirements

Required knowledge

- analysing infrastructure-as-a-service components
- existing digital switching technology in service provider core network
- information required to develop architectural solutions
- integration document software
- new cloud network technologies
- overview knowledge of cloud networking transmission, transmitter and receiver architecture and their associated infrastructure
- performance and integration requirements
- prepare and/or interpret technical documentation
- protocols as used on the MPLS and infrastructure-as-a-service
- specific knowledge related to network components and their functions
- specific organisational requirements relating to the computer systems
- typical issues and challenges that occur with system changes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate the current physical network infrastructure's capacity and functionality shortfalls • investigate the application of cloud networks and plan the architectural design • develop components of cloud networking solution for meeting capacity and functionality requirements of the network • assess the risks in using cloud networks to meet capacity and functionality requirements of the network • analyse impact of integration of cloud network solution on the network • prepare a test plan with test scenario and produce a test management schedule • use integration document and software test management tools to replicate issues exhibited in test environment • certify cloud network solution compatibility and compliance • prepare a cost-benefit analysis of the cloud network solution • develop a business case for implementation of a cloud network.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where the application of cloud networks in telecommunications switching may be investigated • software tools currently used in industry • vendor products, specifications, equipment and enterprise policy required for the activity.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate investigating the

EVIDENCE GUIDE	
	<p>application of cloud networks and planning the architectural design</p> <ul style="list-style-type: none">• review of reports, plans and business case for a cloud network solution prepared by the candidate• oral or written questioning of the candidate to assess knowledge of cloud networks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTTEN8197A Produce engineering solutions using numerical computations and simulation. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different

RANGE STATEMENT	
<p>work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Cloud networks</i> refers to:</p>	<ul style="list-style-type: none"> • delivery of internet protocol (IP) infrastructure (typically a platform virtualisation environment) as a service • overlays the IP network using MPLS.
<p><i>multiprotocol label switching (MPLS)</i> refers to:</p>	<ul style="list-style-type: none"> • encapsulating packets of various network protocols • use in creating virtual links between distant nodes • use in high-performance telecommunications networks which direct and carry data from one network node to the next • using layered protocols using the OSI 7 layer model.
<p><i>Infrastructure-as-a-service</i> may include:</p>	<ul style="list-style-type: none"> • computer hardware (typically set up as a grid for massive horizontal scalability) • computer network: <ul style="list-style-type: none"> • firewalls • gateways • load balancing • MPLS switch • servers • internet connectivity • platform virtualisation environment for running client specified virtual machines • service level agreements • utility computing billing: <ul style="list-style-type: none"> • per instance hour.
<p><i>Integration of cloud network solutions</i> may include:</p>	<ul style="list-style-type: none"> • hardware compatibility • no contentions • platform compatibility • protocol compatibility • signalling contention • software compatibility • system interoperability • technology compatibility.

RANGE STATEMENT	
<i>Test management schedule</i> may include:	<ul style="list-style-type: none"> • post-installation test procedures • pre-installation test procedures • produces test summary report • profiling of software solution • risk defects report • simulation testing • test process is testable for network software built.
<i>Integration document software</i> may include:	<ul style="list-style-type: none"> • fine-tuning capabilities in multi-operating environments • integration with existing system • links to legacy systems.
<i>Performance evaluation tests</i> may include:	<ul style="list-style-type: none"> • defects (defects detected are logged and mapped to failed cases) • releases (manage software releases and iterations) • requirements (traceability and management) • test lab (execute test cases from test plan) • test plan (creating and updating test cases).
<i>Key features</i> may include:	<ul style="list-style-type: none"> • bandwidth on demand • distribution • enhanced rate • transmission.

Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse the security features of an internet protocol (IP) based telecommunications network.

This applies to IT networking and telecommunications networking topologies.

Application of the Unit

Telecommunication engineers apply the skills and knowledge in this unit to analyse and report on the security of an ICT network, particularly Internet security.

They are responsible for the evaluation of security of ICT networks using converging switching and transmission technologies in local area networks (LAN) and wide area networks (WAN), broadband networks, internet protocol TV (IPTV) and virtual networks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Analyse the operation of the Internet</p>	<p>1.1 Evaluate the interrelationship of IP to open systems interconnect (OSI) seven layer model and the impact on network topologies and <i>network elements</i></p> <p>1.2 Assess media access control (MAC) and IP addressing and their application in security</p> <p>1.3 Report on transmission control protocol/internet protocol (TCP/IP) operations and the use of <i>transport protocols</i> for transmitting data over the network</p> <p>1.4 Examine the various types of <i>routing protocols</i> and implication on security</p> <p>1.5 Analyse forms of <i>label switching</i> as applied to data packets</p> <p>1.6 Use software to simulate the <i>least cost algorithms</i></p>
<p>2. Analyse internetwork protocols</p>	<p>2.1 Compare connection-oriented and connection-less networks in internetworking applications</p> <p>2.2 Research the <i>design parameters</i> used in networks</p> <p>2.3 Produce a report on IP multi-casting protocols and systems including IP <i>frame fields</i> of the data frames</p>
<p>3. Research and report internetwork operations</p>	<p>3.1 Analyse protocol considerations of voice over internet protocol (VoIP)</p> <p>3.2 Research the protocols G723.1, G729 and G729A standards and evaluate their application in internetworking</p> <p>3.3 Determine the format of JPEG and GIF files as applied to still pictures</p> <p>3.4 Determine the format of MPEG-2 and H.32x series multimedia protocols for motion pictures</p> <p>3.5 Evaluate the features of different of <i>multi-service protocols</i> and of different <i>email system protocols</i> in networking operations</p> <p>3.6 Produce a report on the features the different <i>web-based protocols</i> used in internetworking operations</p>
<p>4. Analyse features and types of network security</p>	<p>4.1 Analyse procedures and processes used for security attacks and use of protection mechanisms</p> <p>4.2 Research conventional <i>encryption algorithms</i> and determine possible locations of encryption devices</p> <p>4.3 Produce a report on conventional encryption key distribution problems and how message authentication and verification is achieved</p>

	<p>4.4 Research one-way hashing and secure <i>hashing functions</i></p> <p>4.5 Produce a report on digital signature standard (DSS) principles including <i>public key cryptography algorithms</i> for network security</p>
5. Research features of public key authentication and email network security protocols	<p>5.1 Research public key authentication using Kerberos</p> <p>5.2 Analyse how electronic mail security is achieved using pretty good privacy (PGP)</p> <p>5.3 Research and report on <i>IPSec</i> protocol security</p> <p>5.4 Produce a report on encapsulating security payload (ESP) including Internet <i>key management processes</i></p>
6. Research features of web, network management and system security	<p>6.1 Analyse how web threats and attacks occur in an IP network and determine system intruders and threats</p> <p>6.2 Research the operation of <i>transaction protocols</i></p> <p>6.3 Evaluate the processes used for selection and protection of system passwords</p> <p>6.4 Evaluate <i>system threats</i> and methods used to counter act the threats</p> <p>6.5 Produce a report on anti-virus protection strategies, including firewall design principles, types and configurations</p>
7. Document evaluation report	7.1 Present a final report to include research and evaluation of network security management principles and the application to the network in the workplace with enhancement recommendations

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate a range of complex technical data
- communication skills to work effectively within a group and present information
- information technology skills to use:
 - software for desktop research
 - statistical data
 - word processing software
- literacy skills to prepare reports given a specific format and read and interpret technical standards
- planning and organisational skills to manage own work in specific time frames
- research skills to gather and record data from measurements
- technical skills to:
 - operate test equipment
 - use telecommunications management networks.
 -

Required knowledge

- administrative network management systems
- algorithms
- cryptography
- encapsulation
- encryption
- enterprise solutions
- firewalls
- network topologies
- operations network management systems
- organisational policy and procedures
- protocols
- routing theory
- system threats
- transaction protocols
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse the operation of the Internet • implement Internet technology • select Internetwork protocols • research and report various internetwork operations • analyse features and types of network security methods and their weaknesses • analyse features of various cryptography systems • research and report the features of public key authentication and email network security protocols • research and report the features of web, network management and system security.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications operations site with a mentor or supervisor appropriately experienced in relevant telecommunications technology and infrastructure • networked computers and relevant software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral or written questioning to assess required knowledge • direct observation of the candidate carrying out relevant security checks within a networked communication system • review of reports completed by the candidate for different security breached scenarios.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG8143B Manage a telecommunications project

	<ul style="list-style-type: none">• ICTPMG8149B Evaluate and use telecommunications management networks. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Apply DSP design criteria to telecommunications system	1.1. Review <i>DSP criteria</i> applied to signal processing 1.2. Perform <i>frequency domain analysis</i> on telecommunications signals 1.3. Apply digital processing techniques to <i>DSP baseband communications signals</i> used in digital systems 1.4. Generate the output of a comb filter in <i>digital filtering</i> application using convolution theorem and autocorrelation
2. Determine linear time invariant (LTI) system properties	2.1. Simulate <i>telecommunication entities</i> using <i>simulation software functions</i> 2.2. Perform calculations to find numerical approximations of the continuous-time convolution process 2.3. Simulate echo cancellation by applying simulation software using <i>adaptive DSP algorithms</i> and an inverse filtering method
3. Analyse digital telecommunication signals processing	3.1. Analyse the result of digitally passing a signal through a first-order recursive discrete-time filter 3.2. Determine frequency response of a simple continuous-time system using Fourier transform 3.3. Analyse amplitude modulated signals using Fourier transform
4. Analyse time and frequency forms of signals by applying simulation of signal processing	4.1. Program a simulated software application to represent a comb filter with a signal applied from a <i>telecommunication system</i> 4.2. Produce a report analysing the simulated output results and relevance of a DSP filter to a telecommunications system

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate a range of complex technical data

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to work effectively within group
- information technology skills for word processing, using statistical data and desktop research
- literacy skills to:
 - read and interpret technical documentation
 - write reports including recommendations
- numeracy skills to perform mathematical calculations
- research skills to:
 - gather and record data from measurements
 - gather data, observe and analyse signal issues
- technical skills to :
 - apply simulation software
 - operate telecommunication test equipment
 - use telecommunications management networks

Required knowledge

- digital communications systems
- Fourier transforms
- LTI
- modulation methods, amplitude (AM), frequency (FM) and phase (PM) and digital formats
- organisational policy and procedures
- responses to non-compliance
- radio frequency (RF) awareness
- workplace and industry environment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Use advanced engineering mathematics for a range of complex engineering solutions	<p>1.1. Solve mathematical <i>functions</i> using <i>complex trigonometric ratios</i></p> <p>1.2. Solve mathematical functions using manipulation of <i>matrices and determinants</i> to perform <i>standard calculations</i></p> <p>1.3. Solve <i>trigonometric functions</i> using <i>operations on complex numbers</i></p> <p>1.4. Solve complex functions using <i>integral and differential calculus</i></p> <p>1.5. Solve mathematical functions using <i>ordinary differential equations (ODE)</i></p> <p>1.6. Solve mathematical equations using <i>Laplace transforms</i></p> <p>1.7. Solve mathematical problems using <i>algorithmic control structures</i></p> <p>1.8. Use software simulations where possible to produce <i>simulated calculations</i> for a range of <i>engineering solutions</i></p> <p>1.9. Analyse the results from the simulated solution and compare to the derived solutions to adjust any variables in the calculation process</p>
2. Design a simulation control system with queues	<p>2.1. Design a <i>simple control system</i> using simulation software</p> <p>2.2. Design a <i>queuing system</i> using simulation software</p> <p>2.3. Design a <i>stochastic system</i> using simulation software</p> <p>2.4. Document and present all numerical software simulations for the engineering problems</p>

Required Skills and Knowledge

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse and manipulate functions using symbolic and numerical software, including the operations of entering and manipulating polynomials in suitable software and then substitution of values and graphing • analyse and manipulate matrices and determinants, numerically with and without symbolic and numerical software • design and debug programs using algorithmic control structures and output the results to the screen, a graph and a file • analyse and manipulate complex numbers numerically and with symbolic software • determine and manipulate equations using the advanced calculus operations of differentiation and integration numerically and with symbolic software • determine and manipulate equations of the type called ODE met in telecommunications engineering applications numerically and with symbolic software • determine and manipulate Laplace transforms met in telecommunications engineering applications numerically and with symbolic software • design a simulation control system and simulate queues using software.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • networked computers • simulation software • relevant documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral questioning or written questioning to assess required knowledge • direct observation of the candidate carrying out

EVIDENCE GUIDE	
	<p>mathematical simulations</p> <ul style="list-style-type: none"> • review of simulation control system prepared by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN8180A Analyse a mobile network system • ICTRFN8181A Analyse a satellite communications system • ICTTEN8194A Analyse a telecommunications switching network • ICTTEN8195A Evaluate and apply network security • ICTTEN8196A Evaluate and apply digital signal processing to communications system. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Functions</i> may include:</p>	<ul style="list-style-type: none"> • $\cos(x)$ • $\text{exponential}(x)$ • $\ln(1+x)$ • $\sin(x)$.
<p><i>Complex trigonometric ratios</i> refer to:</p>	<ul style="list-style-type: none"> • analysing the elements of a vector 'term by term' with the operations of division, multiplication and exponentiation • analysing the series expansion of functions commonly used in telecommunications engineering problems • applying series expansion using Taylor and Maclaurins forms to simple formulae: <ul style="list-style-type: none"> • polynomials • exponentials • logarithmic functions • trigonometric functions • calculating a best fit polynomial of up to degree five for a set of at least ten data points using a least square method in software • calculating a line of best fit and plot the result given a set of at least ten data points using a least square method in software • complex trigonometric ratios: <ul style="list-style-type: none"> • cosh functions • sinh functions • tanh functions • interpolating data for a curve of best fit • performing calculations with a simulation package.
<p><i>Matrices and determinants</i> refer to:</p>	<ul style="list-style-type: none"> • analysing row and column vectors as a special case of a general matrix • applying symbolic software to perform standard calculations on a matrix • calculating the co-factor of a determinant given the desired row and column • calculating the eigen values and eigen vectors of a square matrix of three dimensions • calculating the numerical and symbolic addition and/or subtraction of commensurable matrices • calculating the numerical and symbolic inner product of

RANGE STATEMENT	
	<p>commensurable row and column vectors</p> <ul style="list-style-type: none"> • calculating the numerical and symbolic product of a matrix by a scalar • calculating the numerical product of a pair of commensurable matrices • calculating the numerical value for the inverse of a square matrix • converting a set of linear equations to Matrix form.
<i>Standard calculations</i> may include:	<ul style="list-style-type: none"> • determinant of a square matrix with up to 4x4 dimension • eigen values and eigen vectors of a square matrix with up to 4x4 dimension • solution of up to four simultaneous equations • symbolic product of a pair of commensurable matrices with outer dimensions not exceeding four.
<i>Trigonometric functions</i> include:	<ul style="list-style-type: none"> • cos • cosh • sin • sinh • tan • tanh.
<i>Operations on complex numbers</i> refer to:	<ul style="list-style-type: none"> • analysing the polar and rectangular forms of complex numbers • calculating complex variables with basic arithmetic operations • calculating the complex roots of polynomials with real coefficients up to third order • calculating the results of operations on complex numbers using complex forms of trigonometric functions • deriving the results for the complex operations of square root and multiple roots for up to sixth order • operations on complex numbers: <ul style="list-style-type: none"> • multiple roots • powers • square roots • solving an engineering problem using euler equation.
<i>Integral and differential calculus</i> refer to:	<ul style="list-style-type: none"> • calculating derivatives and integrals of a single variable using standard forms and with symbolic software • calculating maximum and minimum values of a differential function • calculating partial derivatives using standard forms of differentiation • calculating the numerical differential of an equation from the sample interval • calculating the numerical integration of an equation given the

RANGE STATEMENT	
	<ul style="list-style-type: none"> sample interval • differentiating implicitly defined functions by applying the chain rule and software solution • integrating and evaluating double integrals that use standard forms and substitution methods • integrating equations by applying integration methods.
<i>Ordinary differential equations (ODE)</i> refer to:	<ul style="list-style-type: none"> • solving first order ODE using standard methods • solving first and second order ODE equations using various ODE solutions methods: <ul style="list-style-type: none"> • applying software • numerical plot with constant coefficients • numerical solutions • trial exponential solutions determining the unknown constants.
<i>Laplace transforms</i> refer to:	<ul style="list-style-type: none"> • calculating Laplace transforms of relevant equations using standard forms: <ul style="list-style-type: none"> • exponential equations • telecommunications related equations with polynomials up to degree two • trigonometric equations • calculating partial fraction expansion of linear equations of one variable with constant coefficients of second order degree or less • calculating the inverse Laplace transform by arrangement, into standard forms • solving a telecommunications related first order ODE using Laplace transforms numerically and with symbolic software.
<i>Algorithmic control structures</i> may include:	<ul style="list-style-type: none"> • multi-way selection (switch) • post-test repetition (repeat until) • pre-test repetition (Do While) • program fragments that use algorithmic control structures • program to output calculated results • program to request data by command line prompting • sequence • solution expressed in an acceptable algorithmic form • two-way selection (IF then Else) • well structured program to obtain the solution to a given engineering problem.
<i>Simulated calculations</i> may include:	<ul style="list-style-type: none"> • manipulation of diary files • plotting the results of calculations with equations: <ul style="list-style-type: none"> • exponential

RANGE STATEMENT	
	<ul style="list-style-type: none"> • logarithmic • trigonometric functions • script to repeat previous calculations • simplification and expansion of symbolic equations and arithmetical expressions • symbolic variables, constants and equations • variable browsers window and command history screen • variables to store appropriate data for problem solving.
<i>Engineering solutions</i> may include:	<ul style="list-style-type: none"> • antenna performance and propagation evaluation • capacity predictions • data analysis • digital signal processing • forecasting • queuing systems • radio networks • traffic engineering.
<i>Simple control system</i> is based on:	<ul style="list-style-type: none"> • delay elements • feedback loop.
<i>Queuing system</i> includes:	<ul style="list-style-type: none"> • fixed arrival times • fixed processing delay • single queue • single server.
<i>Stochastic system</i> includes:	<ul style="list-style-type: none"> • random arrival times • random processing delay • single queue • single server.

ICTWHS2081A Work safely in a radio frequency electromagnetic radiation environment

Modification History

Release	Comments
Release 1	This unit of competency first released with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use organisational risk-control procedures when working with a risk of exposure to radio frequency (RF) electromagnetic radiation (EMR) hazards.

Note: In certain environments EMR may be referred to as electromagnetic emissions (EME). Users should confirm EMR regulatory requirements with the relevant federal, state or territory authority.

Application of the Unit

The unit applies to site maintenance staff, technicians and installers who install or maintain equipment at installations that are sources of RF EMR.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare to work in an RF EMR environment	<p>1.1 Identify <i>characteristics of RF EMR</i> and situations that can lead to exposure to <i>RF EMR hazards</i></p> <p>1.2 Identify <i>potential effects</i> of RF EMR on the human body and contributing factors that affect it</p> <p>1.3 Identify <i>relevant regulations and standards</i> that apply to working with and controlling RF EMR hazards</p> <p>1.4 Obtain and review RF EMR information required for work environment</p>
2. Assess RF EMR risks	<p>2.1 Assess potential RF EMR hazards in the telecommunications work environment</p> <p>2.2 Estimate the likely field strength pattern of a potential RF EMR hazard</p>
3. Control RF EMR risks	<p>3.1 Identify <i>typical organisational controls</i> to manage and control identified RF EMR hazards</p> <p>3.2 Choose and apply appropriate RF EMR controls</p> <p>3.3 Report EMR exposure that exceeds acceptable levels according to <i>organisational work health and safety (WHS) requirements</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - access information on organisational control measures for RF EMR hazards
 - determine response requirements
 - enable clear and direct communication to identify and confirm requirements and share information
 - follow instructions
 - report EMR exposure over acceptable levels
 - use language and concepts appropriate to cultural differences
- literacy skills to:
 - complete workplace documentation
 - document scope of work and work practices
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications relating to the work to be done
- numeracy skills to estimate and calculate measurements of ambient RF signals
- planning and organising skills to plan and set out work
- technical skills to:
 - access and understand site-specific instructions in a variety of media
 - use communications equipment.

Required knowledge

- characteristics of RF EMR and sources of RF EMR
- nature of work undertaken close to sources of RF EMR
- relevant statutory and regulatory requirements relating to working safely with RF EMR
- control processes for managing safe exposure to RF EMR.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply knowledge of the effect of RF EMR on the body • locate, interpret and apply relevant information, standards and specifications for working safely with RF EMR • identify organisational controls for exposure to RF EMR, including lock-out procedures and the use of personal protective equipment • carry out two risk assessments demonstrating: <ul style="list-style-type: none"> • correct identification of risks and safety requirements recorded in a job safety analysis (JSA) sheet or safe work method statement (SWMS) or similar record sheet • correct selection and use of appropriate processes, tools and equipment to minimise RF EMR risk • compliance with regulations, standards and organisational procedures and processes • communicating and working effectively and safely with others.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • induction procedures and requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • relevant regulations, standards, specifications and manuals, including industry-related systems information.
Method of assessment	<p>A range of assessment methods should be used to assess awareness of RF EMR hazards. The following examples are appropriate for this unit:</p>

	<ul style="list-style-type: none"> • direct observation of the candidate preparing and carrying out work close to sources of RF EMR • oral or written questioning of the candidate to assess awareness of RF EMR hazards • review of JSAs and documentation prepared by the candidate.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>This assessment may be carried out in a simulated environment to minimise risks of injury or loss.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Characteristics of RF EMR</i> include:</p>	<ul style="list-style-type: none"> • electrical fields • electromagnetic spectrum • energy • frequency • magnetic fields • non-ionising radiation • radiation • wavelength.
<p><i>RF EMR hazards</i> include:</p>	<ul style="list-style-type: none"> • air navigation aids • amateur and ham radio • broadcast radio and television • business services for voice and data • cordless phones • emergency services • marine safety and operations • mobile phones and associated towers • radar.
<p><i>Potential effects</i> relate to:</p>	<ul style="list-style-type: none"> • brain cancer • dysaesthesia (abnormal sensation) • eye damage • infertility • risk to pregnancy • tissue heating.
<p><i>Relevant regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • appropriate Australian Communications and Media Authority (ACMA) technical standard requirements relating to RF EMR and sources of RF EMR • Australian Communications Industry Forum (ACIF) standards and codes • Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) Radiation Protection Standard - Maximum Exposure Levels to Radiofrequency Fields - 3 kHz to 300 GHz.
<p><i>Typical organisational controls</i> may include:</p>	<ul style="list-style-type: none"> • appropriate signage • commitment to the exposure limits set out in the

	<p>ARPANSA Standard</p> <ul style="list-style-type: none"> • controlled access and sign-in at each site for employees, contractors and visitors • creation of locked out procedures and areas • identification of areas where equipment generates RF EMR • identification of the boundaries of RF EMR hazard areas • induction processes • placement assessments • prohibition of workers from any site where RF EMR hazard exceeds the limit for occupational exposure • provision of appropriate testing equipment, such as personal monitor or radiation meter • restricted access to the general public • secure barrier around the RF EMR hazard areas • training for staff and contractors.
<p><i>Organisational WHS requirements</i> relate to:</p>	<ul style="list-style-type: none"> • Australian standards • construction industry WHS standards and guidelines • duty of care • health and safety representatives, committees and supervisors • industry WHS standards and guidelines • licences, tickets and certificates of competency • National Code of Practice for Induction Training for Construction Work • national safety standards • person conducting a business or undertaking (PCBU) or officer of the PCBU safety codes of practice • WHS and Welfare Acts and regulations.

Unit Sector(s)

Work health and safety - Telecommunications

ICTWHS2170B Follow work health and safety and environmental policies and procedures

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>It is based on the superseded equivalent ICTWHS2170A.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to follow safe work practices and environmental policy in managing telecommunications workplace tasks. It involves awareness of the safe handling of active optical fibre, cabling, laser sources and equipment.

The unit requires the ability to apply work health and safety (WHS) requirements, the basic principles of risk management, and prevention of injury and illness on construction sites involving the NBN in particular, and all other locations where telecommunications work is performed.

This unit includes the ability to recognise asbestos hazards and take steps to minimise associated risks. Removal of asbestos is a licensed activity covered by the units of competency CPCCDE3014A Remove non-friable asbestos.

Some cabling and installation work may fall within the definition of construction work. People entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007), sometimes referred to as the 'White Card'.

The unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Application of the Unit

The unit applies to field officers deploying broadband access networks using optical technologies. They combine technical skills with specific WHS skills to work safely on live systems.

The unit also applies to telecommunications staff working under supervision in a technical environment. This includes school-based workers, entry-level workers, trainees and apprentices.

Licensing/Regulatory Information

Licensing requirements will apply to this unit of competency depending on the regulatory requirements of each jurisdiction. Users should confirm requirements with the relevant federal, state or territory authority.

Note: The terms occupational health and safety (OHS) and WHS are equivalent and generally either can be used. Western Australian and Victorian legislation uses OHS. Commonwealth, NSW, Queensland, Northern Territory, Tasmania and South Australia legislation uses WHS.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Apply WHS regulatory requirements	<p>1.1 Identify WHS requirements relevant to own work, role and responsibilities and comply with safe work practices</p> <p>1.2 Apply duty of care requirements</p>
2. Follow workplace procedures for identifying hazards and using control measures to control risk	<p>2.1 Identify and report common construction hazards in the work area to designated personnel according to workplace procedures</p> <p>2.2 Identify and follow WHS requirements, workplace procedures and work instructions to control hazards and risks</p> <p>2.3 Comply with safe work practices and principles of risk management</p> <p>2.4 Implement duty of care requirements</p> <p>2.5 Complete job safety analysis (JSA) sheet or safe work method statement (SWMS) according to work requirements, including hazard identification and risk assessment</p> <p>2.6 Use and complete checks to personal protective equipment according to work requirements</p> <p>2.7 Assess and test for harmful gases associated with the workplace</p>
3. Identify safety requirements for work with optical fibre equipment	<p>3.1 Identify safe work practices when handling optical fibre, lasers and optical connectors according to relevant Australian standards</p> <p>3.2 Identify safe work practices when handling and disposing of chemical waste</p>
4. Identify WHS communication and reporting processes	<p>4.1 Identify WHS communication processes, information and documentation</p> <p>4.2 Identify the role of designated WHS personnel and safety signs and symbols</p> <p>4.3 Identify procedures and relevant authorities for reporting hazards, incidents and injuries</p>
5. Identify WHS incident response procedures	<p>5.1 Identify general procedures for responding to incidents and emergencies</p> <p>5.2 Identify procedures for accessing first aid</p> <p>5.3 Identify and demonstrate requirements for selecting and using relevant personal protective equipment</p> <p>5.4 Identify fire safety equipment</p>
6. Contribute to WHS	<p>6.1 Discuss WHS and environmental issues with designated</p>

<p>and environmental issues in the workplace</p>	<p>personnel according to workplace procedures, and relevant WHS policies and <i>environmental requirements</i></p> <p>6.2 Contribute to <i>participative arrangements</i> for WHS and environmental management in the workplace within organisational procedures, scope of responsibilities and own competencies</p> <p>6.3 Record and report WHS issues, risks and hazards to designated personnel</p>
<p>7. Identify and respond to minor traffic management</p>	<p>7.1 Assess <i>traffic safety</i> requirements of the general location with respect to regulatory and organisational requirements</p> <p>7.2 Identify a safe work zone around vehicle and work space using traffic cones and signs according to regulatory requirements</p> <p>7.3 Identify and respond to changed traffic conditions</p>
<p>8. Identify and respond appropriately to a confined space</p>	<p>8.1 Identify a <i>confined space</i> in line with regulatory or organisational guidelines</p> <p>8.2 Refer the telecommunications work in the identified confined space to appropriate trained personnel</p>
<p>9. Identify and respond appropriately to asbestos hazards</p>	<p>9.1 Identify <i>asbestos hazards</i> or their likelihood</p> <p>9.2 <i>Respond to asbestos hazards</i> or their likelihood</p> <p>9.3 Report identified or suspected asbestos hazards to designated personnel according to workplace procedures</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - ask effective questions and clarify requirements
 - listen to, and liaise with, relevant personnel on technical and operational matters
 - raise and report WHS matters, discuss and relay WHS information to others
 - explain legislative requirements and principles of risk management, safety signs and symbols and common hazards in relation to own work
- literacy skills to:
 - interpret technical documentation and standards
 - incorporate technical language into written tasks, such as reporting on recommendations to minimise hazards and injury
- numeracy skills to interpret technical data, such as specifications of laser operations
- problem-solving skills to use methodology that minimises risk
- research skills to access technical information and sources to understand and report on safety requirements
- safety awareness skills to:
 - apply required precautions and action to minimise, control or eliminate hazards associated with work activities
 - recognise asbestos and the likelihood of asbestos in work area
 - select and use required personal protective equipment that conforms to industry and WHS standards
 - work systematically with required attention to detail without injury to self and others, and damage to goods or equipment
 - select and use appropriate methods for laser handling.
 -

Required knowledge

- applicable federal, state and territory WHS procedures, regulations, standards, codes of practice and industry standards and guidance notes relevant to own workplace, role and responsibilities
- differences between federal, state and territory WHS legislation and regulations
- common construction hazards
- asbestos hazards and their potential risk for workers and the community
- common construction hazards and common hazards in relation to own work
- general construction work activities that require licences, tickets or certificates of competency
- environmental control processes:
 - air quality management
 - disposal and handling of hazardous and dangerous substances
 - noise pollution
 - safe disposal of fibre offcuts

- stormwater and materials spillage
- waste disposal
- WHS responsibilities and rights of duty holders/workplace parties under environmental and WHS regulations and codes of practice, including:
 - persons in control of construction work or projects
 - employers and self-employed persons
 - persons conducting a business or undertaking (PCBUs) and their officers
 - supervisors
 - employees
 - designers
 - inspectors
 - manufacturers and suppliers
- optical fibres and equipment:
 - hazards relating to handling of optical fibre and laser light source in the workplace
 - injuries:
 - damage to retina from lasers
 - damage to lungs from inhalation of fibre offcuts and particles
 - needle stick injury from fibres and offcuts
 - laser warning signs and labels relating to optical fibre components and equipment
 - safety requirements when handling and working with:
 - devices
 - laser light sources
 - optical fibre connectors
 - optical fibres
 - patch cords
- own responsibilities to comply with safe work practices including those relating to:
 - asbestos hazards
 - confined spaces
 - housekeeping
 - identification of hazards
 - preventing bullying or harassment
 - smoking
 - use of amenities
 - use of drugs and alcohol
- principles of risk management for construction work, including:
 - hazard identification
 - risk assessment and control
- ways in which WHS is managed in the workplace, and activities required under WHS legislation, including:
 - hazard identification
 - hazards that exist in the workplace
 - WHS instruction
 - preferred order of ways to control risks (hierarchy of control)
 - risk assessment and controls
 - role of WHS committees and representatives

- training and provision of WHS information
- types of common personal protective equipment and fire safety equipment
- types of WHS information and documentation
- workplace environmental and WHS procedures relevant to the work being undertaken, including procedures for:
 - designated personnel responsible for WHS
 - employee/worker participation in WHS management
 - general first aid response requirements
 - general workers' compensation and injury management requirements
 - meaning of WHS symbols found on signs and labels in the workplace
 - raising WHS issues
 - recognising and reporting on:
 - accidents
 - asbestos hazards
 - dangerous occurrences
 - emergencies
 - hazards
 - incidents
 - injuries
 - near misses
 - responding to:
 - accidents
 - emergencies
 - evacuation procedures
 - fires
 - hazards
 - incidents
 - injuries
- work operations to control risks
- traffic control for a single vehicle
- risks associated with confined spaces and appropriate responses.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none">• recognise and report hazards to designated personnel• follow workplace procedures necessary to control risks in the workplace• identify and apply safe handling procedures for optical fibres and laser sources• identify and respond appropriately to asbestos, traffic and confined spaces hazards in the workplace.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none">• relevant WHS Acts, regulations and codes of practice• WHS implementation resources, such as sample forms, signs and procedures• personal protective equipment• first aid equipment• fire safety equipment• organisational WHS policies and procedures• relevant work areas for identification of hazards and control measures.• optic fibre cabling and equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none">• direct observation of the candidate applying safety aspects to the handling of optical fibres and lasers• direct observation of the candidate following or participating in common WHS workplace procedures• oral or written questioning to assess knowledge of WHS concepts and applications• evaluation of written reports on hazards and safety recommendations.

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>WHS requirements</i> include:</p>	<ul style="list-style-type: none"> • applicable and relevant national safety standards • construction industry WHS standards and guidelines • federal, state and territory WHS legislation, regulations, standards and codes of practice • industry standards, guidance notes, guidelines, Australian standards and other documents applicable to own workplace, work, role and responsibilities • National Code of Practice for Induction Training for Construction Work • requirements for licences, tickets and certificates of competency • responsibilities, duties and rights of duty holders and workplace parties (including health and safety representatives, committees and supervisors) under environmental and WHS Acts and regulations.
<p><i>Safe work practices</i> may relate to:</p>	<ul style="list-style-type: none"> • access to site amenities, including: <ul style="list-style-type: none"> • drinking water • toilets • appropriate warning labels on cabinets and enclosures • avoiding contact with hazardous chemicals, including not inhaling or swallowing such materials • avoiding drugs and alcohol at work • being aware of how to respond to potential accidents • ensuring manufacturer’s warnings and instruction labels in relation to the laser product are not damaged or obscured during installation • general requirements for: <ul style="list-style-type: none"> • safe use of plant and equipment • use of personal protective equipment and clothing • housekeeping to ensure a clean, tidy and safe work area • no hazardous chemicals, including fibre particles and solvents, left on site at the completion of the work • preventing bullying and harassment • relevant Australian standards relating to WHS • specific organisational safety requirements

	<ul style="list-style-type: none"> • smoking in designated areas only • storing and removing debris • using a wet cleaning process and making sure all solvent residues are disposed of according to environmental policy • warning labels used in conjunction with laser and optical fibre systems.
<p><i>Duty of care requirements</i> relate to:</p>	<ul style="list-style-type: none"> • legal responsibilities, duties and rights of duty holders and workplace parties as specified in WHS Acts, regulations and codes of practice • own duties to comply with safe work practices: <ul style="list-style-type: none"> • activities that require licences • tickets • certificates of competency • specific and general duties and responsibilities of particular individuals, workplace parties and others (as prescribed in applicable federal, state and territory WHS legislation and regulations), including: <ul style="list-style-type: none"> • construction and other supervisors • construction and other workers • designers • employers and self-employed persons • PCBUs and officers • WHS inspectors • manufacturers, importers, suppliers, installers and commissioners • persons in control of the work site • subcontractors.
<p><i>Common construction hazards</i> may include:</p>	<ul style="list-style-type: none"> • confined spaces • electricity • excavations, including trenches • falling objects • hazardous chemicals and dangerous goods • hot and cold working environments • manual handling • noise • operation of plant and equipment • traffic and mobile plant • unplanned collapse • ultraviolet (UV) radiation • working at heights.
<p><i>Designated personnel</i></p>	<ul style="list-style-type: none"> • managers • PCBUs and officers

<p>may include:</p>	<ul style="list-style-type: none"> • WHS personnel • worker health and safety representatives • other persons authorised or nominated by the organisation or industry to: <ul style="list-style-type: none"> • approve specified work • direct specified work • inspect specified work • perform specified work • supervisors • team leaders.
<p>Workplace procedures may include:</p>	<ul style="list-style-type: none"> • risk assessment • worker consultation and participation • hazard control • emergency responses to: <ul style="list-style-type: none"> • accidents • fires • other emergency incidents and events • identifying hazards • reporting WHS issues • resolving WHS issues • using personal protective equipment.
<p>Measures for controlling hazards and risk may include:</p>	<ul style="list-style-type: none"> • administrative controls • elimination • engineering controls • isolation • personal protective equipment • substitution.
<p>Hazards may include:</p>	<ul style="list-style-type: none"> • activating equipment without notifying other staff who may be working remotely on the network • hazardous chemicals, including: <ul style="list-style-type: none"> • cleaning alcohol and other solvents • epoxy resins and chemicals that cause cancer, allergies or that can damage health in any way • environmental hazards: <ul style="list-style-type: none"> • air pollution • damage to natural or heritage precincts • dangerous gases, heavy or noxious metals pollution, release of hydrochlorofluorocarbons (HCFC) • ground water contamination • noise • petrochemical spillage

	<ul style="list-style-type: none"> • flammable cleaning chemicals fluids and solvents • fibre offcut damage to eyes and skin • health hazards, including: <ul style="list-style-type: none"> • hazardous chemicals and dangerous goods • handling of optic fibres and lasers • infective agents, including viruses and bacteria • risk of sustained injury from repetitive tasks • inhalation of fibre offcuts and particles from vacuum cleaning of work site • laser damage to eyes • safety hazards: <ul style="list-style-type: none"> • manual handling (lifting, biomechanical) • tasks such as welding • working at heights • radio frequency (RF) radiation.
<i>Principles of risk management</i> include:	<ul style="list-style-type: none"> • identifying hazards • assessing the risks involved • worker participating in, and consulting on, all risk management activities • consulting and reporting to ensure involvement of relevant workers • controlling risks • monitoring the effectiveness of controls.
<i>Job safety analysis sheet or safe work method statement</i> may include:	<ul style="list-style-type: none"> • sheets to record the steps in the risk management process: <ul style="list-style-type: none"> • identification • assessment • control • monitoring • primary application of assessment • as specified in workplace procedures, policies and processes.
<i>Hazard identification</i> includes:	<ul style="list-style-type: none"> • checking equipment and work area: <ul style="list-style-type: none"> • before work commences • during work • housekeeping • reviewing accident or incident records • workplace inspections • as specified in workplace procedures, policies and processes
<i>Risk assessment</i>	<ul style="list-style-type: none"> • a scale: <ul style="list-style-type: none"> • low

includes:	<ul style="list-style-type: none"> • medium • high • awareness of likelihood and consequence factors • JSA • as specified in workplace procedures, policies and processes.
Personal protective equipment may include:	<ul style="list-style-type: none"> • breathing apparatus: <ul style="list-style-type: none"> • dust masks • respirators • clothing: <ul style="list-style-type: none"> • boots and other safety footwear • gloves • high visibility retro reflective vests • overalls • protective jackets or pants for preparing, cutting or jointing optical fibres • aprons • arm guards • eye protection: <ul style="list-style-type: none"> • protective eyewear designed specifically for laser • goggles • face and head protection: <ul style="list-style-type: none"> • face masks • helmets and hard hats • hearing protection • protective, well-fitting clothing • UV protective clothing and sunscreen • radiation detectors.
Assessing and testing for harmful gases include:	<ul style="list-style-type: none"> • using gas detection equipment • reporting and responding to a positive test for gases in line with organisational guidelines • following workplace procedures and complying with legislative and regulatory requirements.
Australian standards may include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) standards TS 14 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004

	<ul style="list-style-type: none"> • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Communications Cabling Manual (CCM) Volume 1 • Environmental Protection Acts • International Standards ISO 9000 and 9001 • International Telecommunications Union (ITU) recommendations • WHS Acts and relevant codes and standards • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006 • Telecommunications Act and relevant codes.
<i>WHS communication processes</i> may include:	<ul style="list-style-type: none"> • discussions with worker health and safety representatives • processes for raising WHS issues • toolbox talks • WHS meetings • WHS notices, newsletters, bulletins and correspondence • WHS participative arrangements • workplace consultation relating to WHS issues and changes.
<i>WHS information and documentation</i> may include:	<ul style="list-style-type: none"> • accident and incident reports • Australian standards • construction documentation and plans • emergency information contact • evacuation plans • guidance notes • job safety analyses • labels • proformas for reporting hazards, incidents and injuries • reports of near misses and dangerous occurrences • risk assessments • safe work method statements • safety data sheets (SDS) • safety meeting minutes • site safety inspection reports • WHS Acts, regulations and other codes of practice.
<i>Designated WHS</i>	<ul style="list-style-type: none"> • first aid officers • WHS committee members

<i>personnel</i> may include:	<ul style="list-style-type: none"> • WHS representatives • supervisors.
<i>Safety signs and symbols</i> may include:	<ul style="list-style-type: none"> • emergency information signs: <ul style="list-style-type: none"> • equipment • exits • first aid • fire signs and location of fire alarms and fire fighting equipment • hazard, danger and warning signs • regulatory signs: <ul style="list-style-type: none"> • mandatory • limitation or restriction • prohibition • safety tags and lockout: <ul style="list-style-type: none"> • danger tags • out of service tags.
<i>Relevant authorities</i> may include:	<ul style="list-style-type: none"> • emergency services: <ul style="list-style-type: none"> • ambulance • emergency rescue • fire brigade • police • supervisor • WHS regulatory authority.
<i>Incidents</i> may include:	<ul style="list-style-type: none"> • accidents resulting in personal injury or damage to property • near misses or dangerous occurrences which do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example: <ul style="list-style-type: none"> • breathing apparatus malfunctioning to the extent that the user's health is in danger • collapse of the floor, wall or ceiling of a building being used as a workplace • collapse or failure of an excavation more than 1.5 metres deep, including any shoring • collapse or partial collapse of a building or structure • collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment • damage to or malfunction of any other major plant • electric shock • electrical short circuit, malfunction or explosion

	<ul style="list-style-type: none"> • fire or escape of gas, hazardous substance or steam • any other unintended or uncontrolled incident or event arising from operations carried on at a workplace.
General procedures for responding to incidents and emergencies may include:	<ul style="list-style-type: none"> • basic emergency response: <ul style="list-style-type: none"> • keep calm • raise alarm • obtain help • evacuation • notification of designated WHS personnel and authorities • referring to site emergency plans and documentation • when and how to notify emergency services.
Emergencies may include:	<ul style="list-style-type: none"> • chemical spill • fire • injury to personnel • structural collapse • toxic and flammable vapours emission • vehicle and mobile plant accident.
Fire safety equipment may include:	<ul style="list-style-type: none"> • breathing apparatus • fire blankets • fire fighting equipment.
Environmental requirements must include:	<ul style="list-style-type: none"> • clean-up management • dust management • noise management • waste management.
Participative arrangements may include:	<ul style="list-style-type: none"> • arrangements for documenting, communicating and following up requests and suggestions relating to WHS issues • arrangements or processes for raising and communicating WHS concerns • electing worker health and safety representatives • informal WHS meetings • planning committees • purchasing committees • WHS committees • WHS reports and other processes for advising workers on WHS issues and matters.
Traffic safety applies to safety of:	<ul style="list-style-type: none"> • pedestrians passing an area where work is being conducted • vehicles passing an area where work is being conducted • workers working adjacent to traffic.
Confined spaces applies to:	<ul style="list-style-type: none"> • spaces clearly labelled as confined spaces • spaces that meet the general specifications for a confined

	space.
<i>Asbestos hazards</i> may be found in:	<ul style="list-style-type: none">• corrugated asbestos roofing• eaves of houses• meter boxes• pit and pipe infrastructure• wall cladding.
<i>Respond to asbestos hazards</i> may include:	<ul style="list-style-type: none">• notifying designated personnel and authorities• closing the worksite to further activity• barricading the work area• avoiding any disturbance of the work area• exercising a duty of care to self, fellow workers and the public.

Unit Sector(s)

Telecommunications - Work health and safety

ICTWOR2141A Work effectively in a telecommunications technology team

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to perform individual work and work with others in a telecommunications technology.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technical staff who work in telecommunications technology teams apply the skills and knowledge in this unit. They use enterprise information and work schedules for personal development and team work.</p>
--------------------------------	--

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan skills development	<p>1.1. Seek advice on future career directions with <i>appropriate people</i></p> <p>1.2. Identify possible career directions in industry or organisation for personal advancement</p> <p>1.3. Conduct self assessment of skills to identify skills gap and plan for further skills development</p> <p>1.4. Determine appropriate <i>methods to acquire additional skills</i></p> <p>1.5. Prepare <i>portfolio of evidence</i> to support the skills development plan</p>
2. Organise personal work priorities	<p>2.1. Ensure that <i>work goals and objectives</i> are understood, negotiated and agreed according to <i>organisational requirements</i></p> <p>2.2. Assess and <i>prioritise workload</i> to ensure tasks are completed within identified timeframes</p> <p>2.3. Monitor and adjust personal work performance to ensure achievement of tasks</p>
3. Participate in a team	<p>3.1. Consult team members to identify <i>team purpose, roles, responsibilities, goals, plans and objectives</i></p> <p>3.2. Develop strategies to support the team and seek assistance from team members when necessary to prevent conflict within the team</p> <p>3.3. Give and receive feedback to assist in meeting team and organisation goals</p> <p>3.4. Communicate <i>unresolved issues</i> to appropriate personnel to ensure action is taken in response to these matters</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - participate in open and constructive discussions

REQUIRED SKILLS AND KNOWLEDGE

- work collaboratively as part of a team
- learning skills to stretch boundaries of own knowledge and skills
- literacy skills to:
 - access information to draft a portfolio of evidence
 - identify career options and personal work goals
- planning and organisational skills to organise and prioritise work
- problem solving skills to solve routine problems related to the workplace, under direct supervision
- task management skills to work systematically with required attention to detail and adherence to all safety requirements

Required knowledge

- different roles that people may play within a team, how this impacts on the way a team works and what it might achieve
- legislation, codes of practice and other formal agreements that impact on the work activity
- organisational policies, plans and procedures
- skills development in career planning terms
- sources of advice on career planning and skill development
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- types of evidence and ways of creating portfolios of evidence
- typical issues and challenges that occur when working in teams

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop a career portfolio or similar information • prepare work schedule, prioritising urgent requests • actively participate in a team.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • telecommunications technology team • examples of resumes and career planning resources • relevant documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate actively participating in telecommunications team • review of career portfolio prepared by the candidate • review of documentation outlining further skills development needs • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be</p>

EVIDENCE GUIDE

	<p>combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Appropriate people may include:

- assessors
- colleagues
- mentors
- supervisors.

Methods to acquire additional skills may include:

- attendance at workshop or demonstration
- formal course participation
- on-the-job coaching or mentoring
- work experience.

Portfolio of evidence may relate to:

- types of evidence:
 - academic results including informal studies
 - personal interests and experiences
 - previous employment
 - recreational experiences
 - volunteer work
 - work experience
- purpose of evidence:
 - assessment of current competencies
 - building a picture of personal attributes
 - documentation of competencies relevant to

RANGE STATEMENT	
	<p>the workplace</p> <ul style="list-style-type: none"> • identification of areas for further skill development • identification of strengths and weaknesses.
<i>Work goals and objectives</i> may include:	<ul style="list-style-type: none"> • budgetary targets • production targets • reporting deadlines • sales targets • team and individual learning goals • team participation.
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • access and equity principles and practice • business and performance plans • defined resource parameters • ethical standards • goals and objectives • plans, systems and processes • legal and organisational policies, guidelines and requirements • OHS policies, procedures and programs • quality and continuous improvement processes and standards • quality assurance and procedures manuals.
<i>Prioritise workload</i> may include:	<ul style="list-style-type: none"> • logical sequencing of sub-tasks within a single task • sequencing of work over periods from several hours to several days • urgent requests acted on promptly.
<i>Team purpose, roles, responsibilities, goals, plans and objectives</i> may include:	<ul style="list-style-type: none"> • action plans, business plans and operational plans linked to strategic plans • expected outcomes and outputs • goals for individuals and the work team • individual and team performance • OHS responsibilities.
<i>Unresolved issues</i> may include:	<ul style="list-style-type: none"> • grievances and complaints • issues, concerns and tensions • matters affecting workplace relationships and team cohesion • problems related to work roles and responsibilities.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise for third party supply	1.1. Develop specifications and company criteria for material supply and purchasing and include in appropriate <i>tender</i> documents 1.2. Prepare tender documents according to company policy 1.3. Identify likely <i>material suppliers</i> and invite to tender and supply 1.4. <i>Evaluate and accept tenders</i> as appropriate to company policy 1.5. Negotiate price and conditions of purchase to company guidelines and satisfaction
2. Organise supply of equipment and material	2.1. Develop specifications detailing types and quantities of equipment and material 2.2. Notify supplier to deliver <i>equipment</i> and material to the designated location within the specified timeframe
3. Organise customer training	3.1. Ascertain detail of training required from the customer and establish timeframe for <i>customer training</i> 3.2. Determine and organise resources to undertake the level of training required
4. Assess and organise labour resources	4.1. Produce an estimate of total labour resources required using standard installation times and allowing for contingencies 4.2. Determine required <i>labour skills</i> to meet resource allocation for planned activities 4.3. Establish a workforce with required numbers and skills of staff to meet demand 4.4. Notify workforce of job requirements and organise priorities to ensure agreed timeframe with the customer is met

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to:
 - work in teams
 - convey information, including technical and operational matters to others
 - liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - interpret technical documentation such as equipment manuals and specifications
 - prepare and interpret work procedures
- numeracy skills to estimate materials and resource requirements
- planning and organisational skills to:
 - apply inventory analysis techniques and tools
 - organise, coordinate and sequence material supply requirements
- problem solving skills to:
 - analyse supply logistics
 - develop and implement a supply plan
 - solve civil and logistics problems
- project management skills to:
 - review job progress against agreed goals
 - set team goals
 - manage tasks
 - work systematically with required attention to detail and adhere to all safety requirements
- technical skills to:
 - assess requirements
 - interpret drawings related to supply of materials

Required knowledge

- appropriate engineering and design practices and procedures
- appropriate tools, equipment and materials required to do the work
- enterprise permit procedures
- enterprise recording procedures
- occupational health and safety (OHS) practices
- overview knowledge of work planning and organisation theory
- relevant plant and equipment operations
- relevant statutory requirements
- time management techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- develop tenders for customer premises equipment (CPE) products, equipment, peripherals and associated equipment
- assess tenders and provide a clear report outlining all options, including recommendations with supporting reasons
- organise supply of equipment and material to designated location to meet specified timeframe
- identify labour needs and organise labour to meet installation schedules
- determine customer training needs.

Context of, and specific resources for assessment

Assessment must ensure:

- site for organising resources for a telecommunications project
- enterprise and site related documentation
- regulatory, supplier and equipment documentation that impact on activities.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICTWOR3035A Organise material supply
- ICTWOR3041A Schedule resources.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

EVIDENCE GUIDE

	<p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Tender</i> may be invited by:	<ul style="list-style-type: none"> • letter and in the press • price and conditions of purchase according to company guidelines • procedures that are enterprise specific • supplier agreements.
<i>Material suppliers</i> may be:	<ul style="list-style-type: none"> • partner companies • preferred or approved suppliers • tenderers.
<i>Evaluate and accept tenders</i> may involve consideration of:	<ul style="list-style-type: none"> • ability to meet planned timeframe • capacity • company performance • delivery times • performance and quality • price • product type • quality assurance processes • reputation.

RANGE STATEMENT	
Equipment may include:	<ul style="list-style-type: none"> • asymmetrical digital subscriber line (ADSL) modem • data switch • network equipment • optical multiplexer • private automatic branch exchange (PABX) switch • peripherals • router • set top box • telephone systems.
Customer training may be undertaken by:	<ul style="list-style-type: none"> • a third party: <ul style="list-style-type: none"> • communications consultant • contractor to a major supplier • installation staff • specialist trainers.
Labour skills may include:	<ul style="list-style-type: none"> • construction • consultancy • design • human resources • marketing • planning • project management • sales • technical.

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine material needs	<p>1.1. <i>Assess material needs</i> from design plans and comply with <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2. Check availability of required materials within existing stock</p> <p>1.3. Assess the availability of material from <i>preferred suppliers</i></p>
2. Prepare and evaluate tenders	<p>2.1. Develop specifications and criteria for material supply and purchasing</p> <p>2.2. Prepare <i>tender</i> documents and invite quotes from material suppliers according to enterprise policy</p> <p>2.3. Evaluate tenders and accept according to enterprise procedures</p>
3. Organise delivery of equipment and material to site	<p>3.1. Select types and quantities of equipment available from existing stocks and pack for distribution</p> <p>3.2. Arrange delivery of equipment and material within the specified timeframe</p> <p>3.3. Organise third party supply according to agreed timeframe and supply agreements</p>
4. Undertake administrative tasks	<p>4.1. Record <i>warranty details</i> and distribute to relevant parties as required</p> <p>4.2. Issue relevant <i>financial documents</i> according to enterprise policy</p> <p>4.3. Record materials received in asset register according to enterprise procedures</p> <p>4.4. Complete administrative requirements according to enterprise procedures</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to: <ul style="list-style-type: none"> • communicate in a team

REQUIRED SKILLS AND KNOWLEDGE

- convey technical and operational information to others
- liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - interpret technical documentation, such as equipment manuals and specifications
 - read and interpret drawings related to supply of materials
 - prepare and interpret work procedures
- numeracy skills to estimate materials and resource requirements
- planning and organisational skills to:
 - organise, coordinate and sequence material supply requirements
 - apply inventory analysis techniques and tools
- problem solving skills to:
 - solve civil and logistics problems
 - develop and implement a supply plan
 - analyse supply logistics
- project management skills to:
 - manage tasks
 - review job progress
 - work systematically with required attention to detail
- technical skills to assess requirements

Required knowledge

- appropriate engineering and design practices and procedures
- enterprise permit and recording procedures
- occupational health and safety (OHS) practices
- overview knowledge of work planning and organisation theory
- relevant plant and equipment operations
- relevant statutory requirements
- time management techniques
- tools, equipment and materials required to do the work

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply the tender process according to both enterprise and legislative requirements • comply with all related OHS requirements and work practices • determine material needs: <ul style="list-style-type: none"> • from design plans • from relevant databases • beyond current holdings • organise supply of equipment and material to site • record materials received on asset register.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for ordering materials for a telecommunications project • relevant regulatory, enterprise, supplier and equipment documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate preparing and evaluating tenders received from third party suppliers • direct observation of the candidate organising resources for a telecommunications project • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3093A Manage spare parts • ICTWOR4041A Schedule resources.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assess material needs may relate to:

- analysis of needs against existing stocks and gaps determined
- determining the timeframe for material supply from project management briefs and associated time charts
- materials:
 - network switching
 - transmission

RANGE STATEMENT	
	<ul style="list-style-type: none"> • radio(fixed and mobile) systems and equipment including infrastructure • relevant installation and maintenance tools and test equipment.
Relevant legislation, codes, regulations and standards may include:	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards • International Standards ISO 9000 and ISO 9001 • International Telecommunications Union (ITU) recommendations • OHS Act • heritage legislation • industrial awards and conditions • Taxation Act and legislation • Customs Act.
Preferred suppliers may be:	<ul style="list-style-type: none"> • based on service agreement • existing suppliers • recommended.
Tender may include:	<ul style="list-style-type: none"> • invitations by letter and in the press • price and conditions of purchase according to company guidelines • procedures that are enterprise specific • supplier agreements • tender evaluation criteria: <ul style="list-style-type: none"> • ability to meet planned timeframe • capacity • company performance • delivery times • performance and quality • price • product type • quality assurance processes • spares availability.
Warranty details may be:	<ul style="list-style-type: none"> • distributed to: <ul style="list-style-type: none"> • finance groups • installers • maintainers • purchasing groups • sales and marketing staff

RANGE STATEMENT	
	<ul style="list-style-type: none"> • stored manually or electronically in enterprise databases.
<i>Financial documents</i> may include:	<ul style="list-style-type: none"> • bills • costing documents • internal financial information sheets • invoices.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope project resources	1.1. Collate and analyse <i>design and estimation documents</i> from <i>appropriate personnel</i> for resource needs, deadlines and comply with <i>relevant legislation, codes, regulations and standards</i> 1.2. Consult <i>interested parties</i> for input to schedule
2. Schedule resources for a project	2.1. Coordinate <i>resource requirements</i> for project to match available labour to quantity and type of work required 2.2. Schedule availability of resources to suit relevant interested parties and according to <i>works schedules</i> including start and finish dates 2.3. Document and clearly communicate resources schedule to appropriate personnel for approval
3. Monitor and coordinate resources schedule according to project progress	3.1. Monitor and coordinate quantity, quality and timing of supply of each input and service according to the progress of projects being undertaken 3.2. Reschedule resources based on priorities and report to the appropriate person according to enterprise guidelines 3.3. Complete administrative tasks

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to liaise with internal and external personnel on technical and operational matters • literacy skills to: <ul style="list-style-type: none"> • prepare and interpret work procedures • interpret technical documentation, equipment manuals and specifications • numeracy skills to estimate resource requirements • planning and organisational skills to organise, coordinate, sequence and monitor resources schedules • problem solving skills to solve logistics and scheduling problems

REQUIRED SKILLS AND KNOWLEDGE

- project management skills to:
 - develop and implement work plan
 - coordinate and sequence work requirements reviewing job progress against agreed goals
 - apply resource management techniques and tools
- technical skills to assess resource requirements

Required knowledge

- appropriate engineering and design practices and procedures
- enterprise permit procedures
- enterprise recording procedures
- industrial awards
- occupational health and safety (OHS) practices
- relevant plant and equipment operations
- relevant statutory requirements
- team communication processes and goal setting
- time management techniques
- tools, equipment and materials required to do the work
- work planning and organisation theory

Evidence Guide**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the ability to:

- identify resource requirements from plans, equipment and system manuals, specifications and relevant enterprise policy
- plan and provision to meet key dates and milestones for:
 - appropriately skilled labour
 - volume and type of material
- monitor work progress, coordinate and adjust resource requirements to meet both customer's needs

EVIDENCE GUIDE	
	and cost parameters.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • telecommunications operations site suitable for scheduling projects • equipment currently used in industry • relevant enterprise and site related documentation • relevant regulatory, supplier and equipment documentation that impact on scheduling activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of activities involving the scheduling of resources for a telecommunications project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate scheduling resources for a telecommunications project • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3028A Organise resources • ICTWOR3035A Organise material supply • ICTWOR3093A Manage spare parts • ICTWOR3127A Supervise worksite activities. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p>

EVIDENCE GUIDE

	<p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design and estimation documents may include:

- budget estimates
- design plans
- estimators list
- material list
- preferred supplier list
- project plans
- tender document
- works schedule.

Appropriate personnel may include:

- estimator
- project administrator
- project manager.

Relevant legislation, codes, regulations and standards may include:

- AS Communications Cabling Manual (CCM) Volume 1
- Australian Communications Industry Forum (ACIF) standards and codes
- ACMA technical standards
- Australian building codes and regulations
- Australian standards

RANGE STATEMENT	
	<ul style="list-style-type: none"> • enterprise standards • environmental protection • fire regulations • heritage legislation • industrial relations agreements including awards and enterprise • local government • manufacturer's enterprise operating policy and procedures • national code • OHS Act • power company requirements • Privacy Act • services and utilities codes of practice and standards: <ul style="list-style-type: none"> • electricity • gas • water • spectrum management regulations • statutory requirements • Trade Practices Act • traditional land owners.
<i>Interested parties</i> may include:	<ul style="list-style-type: none"> • local • managers • property owners • stakeholders • state and federal agencies • tenants • utilities.
<i>Resource requirements</i> may include:	<ul style="list-style-type: none"> • equipment: <ul style="list-style-type: none"> • installation • monitoring • test • labour • material • plant: <ul style="list-style-type: none"> • barriers • diggers • excavators

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage the receipt and dispatch of spare parts	1.1. Obtain relevant legislation, codes, regulations and standards and follow occupational health and safety (OHS) and environmental requirements for the given work 1.2. Identify hazards and make worksite safe according to relevant safety legislation and company work practices and use personal protective equipment 1.3. Unload, unpack and store incoming spare parts using appropriate methods and enterprise procedures, and check off delivered items on documentation 1.4. Package, label and relocate outgoing spare parts ready for dispatch using enterprise procedures 1.5. Update parts database to reflect current spare parts movements and holdings, following each dispatch or delivery and complete any other administrative task required by the enterprise
2. Store spare parts	2.1. Label spare parts using appropriate identification scheme and place in predefined storage locations 2.2. Observe anti-static precautions when handling equipment susceptible to damage by electrostatic discharge 2.3. Display, maintain and update material safety data sheets (MSDS) on site
3. Manage stock flow	3.1. Action spare parts requests by checking the database for availability and location and organise the dispatch 3.2. Monitor the levels of spare parts stock by examining database reports against enterprise usage and replenishing stock when necessary 3.3. Investigate and keep records of alternative suppliers of spare parts to minimise the impact of availability and cost issues with regular suppliers 3.4. Monitor spare parts with limited shelf life and dispose of and replace when necessary 3.5. Audit spare parts holdings for a ready supply of items to minimise disruptions to job completions 3.6. Update database from appropriate documentation each time a store's transaction occurs to maintain the validity of the data

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communications skills to efficiently deal with employees, customers, contractors and suppliers
- learning skills to pro-actively keep up to date with materials handling and storage identification techniques
- literacy skills read basic technical data and maintain electronic data base
- numeracy skills to estimate costs, depreciation, and undertake stocktake
- organisational skills to efficiently lay out a spare parts store
- planning and organisational skills to:
 - improve systems and procedures
 - prioritise and organise own work
- research skills to source alternate parts supplies

Required knowledge

- computer and database operation
- handling of:
 - chemicals and dangerous materials
 - sensitive electronic equipment using anti static procedures and safeguards
- modern storage practices and identification of parts location
- OHS procedures
- service level agreements
- stocktake and audit of spare parts holdings
- telecommunications components and assemblies

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • apply spare parts management procedures • arrange for efficient storage of spare parts • order spare parts • research alternative parts replacements • update spare parts management database.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where work may be conducted • use of equipment currently used in industry • database, relevant regulatory, organisational procedures, documentation and equipment documentation that impact on work.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate receiving, storing and dispatching parts • review of an oral and written report with completed documentation • direct observation of the candidate managing spare parts database.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3028A Organise resources • ICTWOR3035A Organise material supply. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- appropriate licensing
- AS/ACIF standards and codes
- AS/NZ standards
- Australian building codes and regulations
- compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5 or Category 6, 6A, 7 or 7A and unshielded twisted pair (UTP)
- Environmental Protection Acts
- fire regulations
- heritage legislation

RANGE STATEMENT	
	<ul style="list-style-type: none"> • noise abatement • OHS • WorkSafe Australia standards and codes of practice • Trade Practices Act.
<i>OHS and environmental requirements</i> may include:	<ul style="list-style-type: none"> • disposal of hazardous liquids • earmuffs • flashing lights • gas and other hazard detection equipment • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • MSDS • materials • oil spills • personal protective clothing: <ul style="list-style-type: none"> • protective suits • safe working practices such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • dangerous goods • hazardous substances • safety barriers • safety boots • safety equipment • safety glasses for laser work • special access requirements • suitable light and ventilation • tools and equipment • trench guards • warning signs and tapes • woggles hats • work platforms.
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • glass fibres • high voltages (HV) at electrical distribution

RANGE STATEMENT	
	substation <ul style="list-style-type: none"> • manual handling • natural gas and other gas build up • needle stick injury • optical fibre cables may contain hazardous light • radio frequency equipment emitting electromagnetic radiation.
<i>Personal protective equipment</i> may include:	<ul style="list-style-type: none"> • earmuffs • electrical isolators • gas detectors • gloves : <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • personal protective clothing: <ul style="list-style-type: none"> • protective suits • safety boots • safety glasses.
<i>Spare parts</i> may include:	<ul style="list-style-type: none"> • antennas • assemblies • batteries • cable • circuit cards • components • connectors • filters • module • panels • power equipment • software • sub racks • systems • tools • unit • wiring harnesses.

RANGE STATEMENT	
<i>Appropriate methods</i> may include:	<ul style="list-style-type: none"> • forklift • hoists • lifts • manual lifting and carrying • other mechanical lifting aids.
<i>Identification scheme</i> may include:	<ul style="list-style-type: none"> • adhesive labels • bar code • enterprise part numbers • radio frequency identification (RFID) tagging.
<i>Storage locations</i> may include:	<ul style="list-style-type: none"> • bins • carousels • floor area • racks • shelves.
<i>Antistatic precautions</i> may include:	<ul style="list-style-type: none"> • anti static bags • anti static heel strap • anti static work mat • anti static wrist strap • controlled climate.
<i>Parts with limited shelf life</i> may include:	<ul style="list-style-type: none"> • batteries • cleaning fluids • magnetic disks • magnetic tapes.
<i>Audit</i> may include:	<ul style="list-style-type: none"> • full stocktake • spot check.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • insurance details • invoice • purchase order • spare parts database • stock take records • supplier database • warranty details.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for worksite activities	1.1. Clarify requirements of job with customer and <i>project</i> personnel and arrange access to site 1.2. Confirm <i>resource requirements</i> and allocate time and schedule activities with project manager following <i>relevant legislation, codes, regulations and standards</i> and site specific safety requirements and enterprise procedures 1.3. Document or articulate worksite activities plan and verify with project manager 1.4. Source materials and equipment and place orders according to enterprise policy 1.5. Confirm <i>external agency licences and approvals</i> 1.6. Notify <i>affected parties</i> of works to be undertaken 1.7. Inform staff of their <i>responsibilities</i> on site
2. Supervise and monitor worksite activities	2.1. Direct and supervise staff in work activities following plan 2.2. Account for staff, activities and resource usage 2.3. Recognise contingency situations and take corrective actions in consultation with project manager
3. Perform administrative tasks	3.1. Undertake administrative tasks 3.2. Prepare simple <i>report</i> and present to project manager

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to liaise with internal and external personnel on technical and operational matters • literacy skills to: <ul style="list-style-type: none"> • prepare and interpret work procedures • read and interpret technical documentation, equipment manuals and specifications • numeracy skills to estimate variations in resource requirements

REQUIRED SKILLS AND KNOWLEDGE

- problem solving skills to:
 - organise and monitor worksite activities
 - deal with contingencies
 - arrange training
- project management skills to:
 - implement work plan
 - coordinate and sequence work activities
 - review job progress against agreed schedule
 - apply resource management techniques and tools
- technical skills to use materials and equipment

Required knowledge

- appropriate tools, equipment and materials required for the work
- enterprise permit procedures and recording procedures
- occupational health and safety (OHS) practices
- relevant plant and equipment operations
- relevant statutory requirements and industrial awards
- team communication processes
- typical worksite issues
- work planning and organisation theory

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan work activities • liaise with customer or project manager • prioritise and allocate tasks • monitor work progress and reallocate resources to meet completion requirements • supervise staff ensuring compliance with OHS and regulations • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • telecommunications operations site suitable for supervision activities • equipment currently used in industry • enterprise and site related documentation • agency licenses • relevant regulatory, supplier and equipment documentation that impact on worksite activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate supervising worksite activities • direct observation of the candidate liaising with project manager regarding resources and schedules for a telecommunications project • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3041A Schedule resources • ICTWOR3093A Manage spare parts.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTWOR3231A Resolve technical enquiries using multiple information systems

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to remotely support the resolution of complex technical enquiries related to a product or service. The enquiry may be the result of an escalation.</p> <p>The resolution of the enquiry requires the use of multiple information systems to both obtain and record customer information. The informant may be the customer or another party to the enquiry, such as a field technician.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technical staff who deal with customers and field technicians apply the skills and knowledge in this unit. This unit assumes a background in telecommunications with experience in customer access networks and customer infrastructure including equipment and cabling.</p>
--------------------------------	---

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Initiate contact with the customer	1.1. Apply all relevant <i>legislation, codes, regulations and standards</i> in the resolution process 1.2. Receive and analyse <i>enquiry</i> to efficiently select an initial course of action 1.3. Engage effectively with the <i>customer</i> to confirm initial referral details and propose an initial course of action
2. Obtain information from multiple information system	2.1. Identify information needs and the sources of this information 2.2. <i>Log on</i> to and navigate relevant <i>information systems</i> efficiently 2.3. Record details of the <i>informant</i> and the enquiry in <i>information</i> systems according to enterprise requirements 2.4. Identify and verify information relevant to the enquiry and its resolution with the informant
3. Develop a plan to resolve the enquiry	3.1. Review critical information with the informant and apply technical expertise to develop options for resolving the enquiry 3.2. Consider all inputs and recommend a course of action including <i>escalation</i> 3.3. Negotiate a suitable course of action with the informant 3.4. Record details of course of action as required by enterprise information systems
4. Implement a plan to resolve the enquiry	4.1. Confirm the negotiated course of action with the informant prior to initiating actions and seek agreement on a schedule of actions for longer term resolutions 4.2. Identify and initiate actions to be taken by the technical support operator, the informant or other parties 4.3. Contact informant to confirm the success of the planned actions 4.4. Record outcomes of resolution as required by information systems

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to provide advice and guidance to customers and technical field staff or to seek assistance
- literacy skills to read and interpret manuals, specifications, relevant enterprise policy and documentation
- negotiation skills to enable interaction with customer
- numeracy skills to interpret and evaluate different types of technical data
- planning and organisational skills to organise and prepare the resolution process
- problem solving skills to respond to complex customer challenges
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to advise on a range of customer equipment and environments and to perform diagnostic procedures

Required knowledge

- computer keyboard usage
- computer literacy
- conflict resolution skills
- database and spreadsheet concepts
- enterprise escalation policy and procedures
- enterprise information systems
- interpersonal skills
- legislation, codes of practice and other formal agreements that directly impact on resolution processes
- typical issues and challenges that occur when dealing with customers in a telecommunications environment

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • navigate relevant systems for the required information • develop a plan of action to deal with the enquiry • develop agreement to resolve enquiry • document all dealings for future reference • follow up resolution effectively.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • operational customer contact centre • customer contact technologies currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate developing a plan of action to deal with the enquiry • direct observation of the candidate negotiating with informant to resolve the enquiry • review of documented reports completed by the candidate for two different resolution issues • oral or written questioning of the candidate to assess knowledge of resolution practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3232A Collect and analyse technical information. <p>Aboriginal people and other people from a non-English speaking background may have second language issues</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- Australian Communications and Media Authority (ACMA) technical standards
- Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) electromagnetic radiation (EMR) standard
- Australian building codes and regulations
- Australian standards
- equal employment opportunity (EEO) and

RANGE STATEMENT	
	<ul style="list-style-type: none"> anti-discrimination legislation • enterprise standards • Privacy Act • Telecommunications Act • Telecommunications Industry Ombudsman • Trade Practices Act.
Enquiry may include:	<ul style="list-style-type: none"> • a request for help in using, a service, product or process from a: <ul style="list-style-type: none"> • customer • other party with an interest in the service, product or process • retail sales person • technician • complaints.
Customer may include:	<ul style="list-style-type: none"> • beneficiary of a service, product or process • parties external to the organisation • parties internal to the organisation • purchaser of a service, product or process • user of a service, product or process.
Log on may include use of:	<ul style="list-style-type: none"> • hardware • password • software features • user name.
Information systems may include:	<ul style="list-style-type: none"> • database application • spreadsheet application.
Informant may include:	<ul style="list-style-type: none"> • a buyer • current user • party external to the organisation • party internal to the organisation • technician maintaining a service • technician repairing a product.
Information may include:	<ul style="list-style-type: none"> • details required from core business systems • details required to complete a transaction or process • specific details requested by a customer • specific details requested by others.
Escalation may relate to:	<ul style="list-style-type: none"> • failure to resolve a complaint • further circumstances that need to be explored • lack of response to a complaint in given

RANGE STATEMENT	
	timeframe • previous investigation failed to bring resolution satisfactory to all parties.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Obtain recorded information	1.1. Apply all relevant <i>legislation, codes, regulations and standards</i> in the analysis process 1.2. Verify the situation to be investigated and identify appropriate <i>sources of information</i> for this situation 1.3. Obtain relevant information from computer systems and analyse and <i>record information</i>
2. Conduct a simple interview	2.1. Select interviewees with correct information about the matter being investigated and select an <i>interview process</i> to suit the circumstances of the interviewee 2.2. Prepare for an interview by performing preliminary research 2.3. Develop interview questions to identify key points for an effective interview 2.4. Conduct an interview using effective listening and questioning techniques and focus the interviewee on information relevant to the matter being investigated 2.5. Record information obtained in the interview
3. Analyse information	3.1. <i>Analyse</i> critical information by reviewing the situation being investigated 3.2. Assess between factual information and assumptions and make deductions based on factual critical information 3.3. Incorporate assumptions into the <i>reasoning process</i> where it assists in forming valid <i>inferences</i> 3.4. Analyse inferences from those deductions and assumptions and produce a resolution of the situation being investigated
4. Implement the outcomes of analysis	4.1. Identify practical actions based on inferences arising from the analysis process 4.2. Implement practical actions to resolve the situation 4.3. Review outcomes of practical action by assessing their impact on the situation

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to:
 - read and interpret manuals, specifications, relevant enterprise policy and documentation
 - accurately record interviews
 - write notes and text files
- negotiation skills to enable interaction with customer
- numeracy skills to interpret and evaluate different types of technical data
- planning and organisational skills to organise and prepare the resolution process
- problem solving skills to respond to complex customer challenges
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to advise on a range of customer equipment and environments and to perform diagnostic procedures

Required knowledge

- analytical techniques appropriate for information analysis, especially deductive reasoning
- computer keyboard usage
- computer literacy
- conflict resolution skills
- database and spreadsheet concepts
- enterprise information systems
- information types and their sources
- interpersonal skills
- legislation, codes of practice and other formal agreements that directly impact on resolution processes
- listening, questioning and interviewing
- privacy issues
- the influence of human factors on information analysis, e.g. prejudice, biases and fallacies in reasoning
- typical issues and challenges that occur when dealing with customers

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use a database • demonstrate listening, questioning and interviewing techniques • develop an accurate record of interview • integrate information from varied sources • draw logical inferences from information gathered • make sound recommendations for action based on inferences.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • operational customer contact centre • customer contact technologies currently used in industry • interview and evidence recording equipment • relevant regulatory and equipment documentation that impact on work activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate using a database to record information • direct observation of the candidate's questioning and interviewing techniques • review of records of interview completed by the candidate • oral or written questioning of the candidate to assess knowledge of information gathering practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3231A Resolve technical enquiries using multiple information systems.

Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for survey	1.1. Discuss detailed requirements and arrange access to site with <i>key stakeholders</i> 1.2. Examine regulatory and statutory requirements associated with the telecommunications project 1.3. Determine need for <i>specialist studies</i> for the site
2. Survey land, buildings and facilities	2.1. <i>Survey existing buildings</i> to assess capability of meeting changes required for the project 2.2. Collect information through <i>site survey</i> 2.3. Determine <i>environmental impact</i> of development 2.4. Estimate impact of prevailing <i>weather conditions</i> on planned changes 2.5. Assess and document <i>building options</i> should a new structure be necessary 2.6. Assess geographical nature of land and determine <i>barriers to signalling</i>
3. Report survey findings and recommendations	3.1. Outline survey findings and recommendations to accommodate project requirements on the site 3.2. Develop options to meet planned changes along with cost-benefit data 3.3. Complete report and forward to relevant stakeholders following relevant procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • communication skills to liaise with internal and external personnel on technical and operational matters • literacy skills to: <ul style="list-style-type: none"> • interpret technical telecommunications specifications • read and interpret drawings related to layouts, design, construction and project management • write reports • numeracy skills to take and analyse measurements

REQUIRED SKILLS AND KNOWLEDGE

- planning and organisational skills to organise and coordinate surveys
- problem solving skills to solve site problems for telecommunications projects
- task management skills to work systematically with required attention to detail and adherence to safety requirements
- technical skills to assess technical requirements compared to survey data

Required knowledge

- background information required to undertake a civil site survey
- meteorology and weather conditions
- features and operating requirements of construction equipment
- geographical barriers to signalling
- legislation, codes of practice and other formal agreements that impact on the work activity
- licensing and regulatory issues applying to a civil site survey on telecommunications sites
- soil testing methods and requirements
- specific knowledge of:
 - civil site safety practices
 - personal protective equipment for civil survey projects
 - occupational health and safety (OHS) requirements relating to surveys and site conditions
- typical issues and challenges that occur on-site

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • negotiate with key stakeholders, enterprise personnel, customers, community representatives, specialists and other contractors on environmental and network needs • undertake a survey of environmental conditions, land, buildings and facilities for a telecommunications project • apply legislative impacts on the project including relevant operational codes, OHS requirements and work practices • report survey findings outlining options and including recommendations with supporting reasons, coverage of existing and proposed needs.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for civil site survey • use of equipment currently used in industry • relevant regulatory and enterprise documentation that impacts on survey work.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing a civil site survey • review of reports completed by the candidate outlining survey findings, recommendations and options • oral or written questioning to assess knowledge of regulatory and enterprise requirements and survey methods.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG5031A Prepare a project brief.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify preventative maintenance program for customers	1.1. Verify details of <i>customer</i> system and equipment type to assess level of maintenance required 1.2. Determine type and extent of maintenance agreed against the existing <i>service level agreement</i> with the customer 1.3. Contact customer and agree on suitable time to carry out maintenance program
2. Plan maintenance and fault clearance activity	2.1. Verify details of warranties and service agreements for customer equipment and advise customer of <i>charging details</i> where warranty or agreement does not exist 2.2. Negotiate and agree on commitments and responsibility with the customer 2.3. Organise work priorities so that maintenance staff are available to meet scheduled commitments
3. Arrange allocation of labour resources	3.1. Evaluate the expertise and competencies of staff to meet skills required to maintain the equipment noted in the service level agreement 3.2. Allocate staff member with the appropriate skills and competency to the task to minimise risk of failure 3.3. Advise the designated repair officer of responsibilities, warranties and service agreements in conducting maintenance and fault repair 3.4. Prepare a <i>schedule</i> of the maintenance program and confirm with customer
4. Organise assistance to fault staff	4.1. Provide additional resources if required 4.2. Arrange delivery of additional materials and parts 4.3. Escalate fault to appropriate level when it cannot be rectified in specified timeframe 4.4. Organise product manufacturer support as appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to liaise with customers, vendors, internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, equipment manuals and specifications
- planning and organisational skills to schedule maintenance
- problem solving skills to solve resources and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements

Required knowledge

- electronic databases, spreadsheets and schedulers
- equipment to be maintained
- legislation, codes of practice and other formal agreements that impact on the work activity
- procurement of spare parts
- service level agreements
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- typical issues and challenges that occur on site
- vendor procedures

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> plan and organise preventive maintenance schedule according to vendor specified requirements and customer agreements negotiate fault clearance arrangements with customers applying related OHS requirements and work practices plan and schedule fault clearance activity allocating appropriately skilled repair officer to rectify faults.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> site where equipment maintenance may be conducted enterprise and site related documentation regulatory, enterprise, supplier and equipment documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate scheduling equipment maintenance review of schedule prepared by the candidate outlining maintenance and repairs required oral or written questioning assessing required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTTEN4080A Undertake preventative maintenance of systems and equipment ICTTEN4081A Locate, diagnose and rectify faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

BSBCUS201B Deliver a service to customers

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBCUS201A Deliver a service to customers</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to deliver all aspects of customer service at an introductory level. It includes creating a relationship with customers, identifying their needs, delivering services or products and processing customer feedback.

Application of the Unit

This unit applies to individuals who perform a range of routine tasks in the workplace using a limited range of practical skills and fundamental knowledge of customer service in a defined context under direct supervision or with limited individual responsibility.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Establish contact with customers	<p>1.1 Acknowledge and greet <i>customer</i> in a professional, courteous and concise manner according to <i>organisational requirements</i></p> <p>1.2 Maintain personal dress and presentation in line with organisational requirements</p> <p>1.3 Communicate using appropriate <i>interpersonal skills</i> to facilitate accurate and relevant exchange of information</p> <p>1.4 Maintain sensitivity to customer specific needs and any cultural, family and individual differences</p> <p>1.5 Establish rapport/relationship with customer and express a genuine interest in customer needs/requirements</p>
2. Identify customer needs	<p>2.1 Use appropriate questioning and active listening to determine customer needs</p> <p>2.2 Assess customer needs for urgency to identify priorities for service delivery</p> <p>2.3 Provide customer with information about available options for meeting customer needs and assist customer to identify preferred option/s</p> <p>2.4 Identify personal limitations in addressing customer needs and seek assistance from <i>designated persons</i> where required</p>
3. Deliver service to customers	<p>3.1 Provide prompt customer service to meet identified needs according to organisational requirements</p> <p>3.2 Provide information regarding problems and delays, and follow-up within appropriate timeframes as necessary</p> <p>3.3 Communicate with customers in a clear, concise and courteous manner</p> <p>3.4 Identify <i>opportunities</i> to enhance the quality of service and products, and take action to improve the service whenever possible</p>
4. Process customer feedback	<p>4.1 Promptly recognise <i>customer feedback</i> and handle sensitively according to organisational requirements</p> <p>4.2 Accurately record any feedback and communication between customers and the organisation according to organisational standards, policies and procedures</p> <p>4.3 Identify any unmet customer needs and discuss suitability of other products/services</p> <p>4.4 Support customers to make contact with other services according to organisational policies and procedures</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to convey meaning clearly, concisely and coherently
- literacy skills to communicate with customers and to develop required product knowledge
- numeracy skills to interpret customer requirements and to meet customer needs
- problem-solving skills to deal with customer enquiries or complaints
- self-management skills to:
 - comply with policies and procedures
 - seek learning and development opportunities.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - occupational health and safety (OHS)
- organisational policies and procedures relating to customer service and the customer service process.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • demonstrating all stages of customer service interactions • responding to customer feedback • demonstrating a range of interpersonal skills • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of customer complaints and policies relating to customer service.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • analysis of responses to case studies and scenarios • demonstration of techniques • observation of presentations • oral or written questioning to assess knowledge of customer service and communication techniques • review of information provided to customers about problems and delays, and customer follow-up • review of documentation recording feedback and communication between customers and the organisation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Customers</i> may include:	<ul style="list-style-type: none"> • contacts from other organisations • external customers • internal customers • members of the public • patients • service users.
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • access and equity principles and practice • anti-discrimination and related policy • following OHS procedures for dealing with customers • legal and organisational policies, guidelines and requirements • quality and continuous improvement processes and standards • quality assurance and/or procedures manual.
<i>Interpersonal skills</i> may include:	<ul style="list-style-type: none"> • listening actively to what the customer is communicating • providing an opportunity for the customer to confirm their request • questioning to clarify and confirm customer needs • seeking feedback from the customer to confirm understanding of needs • summarising and paraphrasing to check understanding of customer's message • using appropriate body language.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Determine the viability of basing a business in a home environment</p>	<p>1.1. Identify activities that will be undertaken by the business and what facilities and workspace are needed</p> <p>1.2. Identify what licences, permits, regulations or restrictions apply to operating a home-based business</p> <p>1.3. Identify the availability of services and infrastructure to support the business</p> <p>1.4. Calculate the costs of suitable fittings and equipment for the business and any modifications required to existing facilities and infrastructure in the home</p> <p>1.5. Determine access requirements of clients or delivery vehicles to the business premises</p> <p>1.6. Identify insurance requirements for operation of the business in the home</p>
<p>2. Plan the workplace in a home environment</p>	<p>2.1. Prepare a floor plan or layout that meets the needs of the business and the home occupants</p> <p>2.2. Prepare any concept plans for modifications to buildings or structures in accordance with local government requirements</p> <p>2.3. Obtain approvals from relevant authorities</p> <p>2.4. Identify occupational health and safety (OHS) issues and develop procedures to eliminate or minimise any risks</p> <p>2.5. Design the workplace to provide appropriate client access and facilities while retaining privacy for home occupants</p> <p>2.6. Allocate adequate and secure space for business machinery, equipment and storage of materials</p>
<p>3. Minimise potential sources of conflict</p>	<p>3.1. Identify possible sources of conflict with neighbours or home occupants</p> <p>3.2. Develop protocols for home occupants, visitors and clients to enable the business to successfully operate in the home environment</p> <p>3.3. Prepare a work schedule that identifies business and personal activities</p> <p>3.4. Establish contingency plans for unanticipated events</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to clarify restrictions and approvals; to negotiate with neighbours, home occupants, trades people and suppliers; to formulate questions to obtain quotes
- literacy skills to understand and complete any relevant forms relating to a home-based business
- research skills to locate and access sources of information relating to restrictions/approvals for a home-based business.

Required knowledge

- aspects of the business being proposed
- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to occupational health and safety (OHS) and environmental issues
- constraints of home-based businesses
- relevant services and infrastructure available.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identification of why the particular business is best established in the home • identification and selection of useful strategies in planning the set up of a home-based business • knowledge of constraints of home-based businesses.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of establishing or running a home-based business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including floor layout and quotes for work • oral or written questioning to assess knowledge of relevant legislation • review of access requirements determined for clients or delivery vehicles to the business premises • review of protocols developed for home occupants, visitors and clients • analysis of contingency plans established for unanticipated events.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB302A Develop a micro business proposal • BSBSMB304A Determine resource requirements for the micro business.

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and implement business legal requirements	1.1. Identify and research possible <i>options for the business legal structure</i> using <i>appropriate sources</i> 1.2. Determine <i>legislation and regulatory requirements</i> affecting the operations of the business under its chosen structure 1.3. Develop and implement procedures to ensure full compliance with relevant legislation and regulatory requirements
2. Comply with legislation, codes and regulatory requirements	2.1. Establish systems to ensure the <i>legal rights and responsibilities</i> of the business are identified and the business is adequately protected, specifically in relation to <i>occupational health and safety (OHS)</i> , business registration and environmental requirements 2.2. Identify <i>taxation principles and requirements</i> relative to the business and follow procedures to ensure compliance 2.3. Identify and carefully maintain <i>legal documents</i> and maintain and update relevant <i>records</i> to ensure their ongoing security and accessibility 2.4. Monitor the provision of products and services of the business to protect legal rights and to comply with legal responsibilities 2.5. Conduct investigations to identify areas of non-compliance with legal and regulatory requirements and take corrective action where necessary
3. Negotiate and arrange contracts	3.1. Seek legal advice on contractual rights and obligations, if required, to clarify business liabilities 3.2. Investigate and assess potential products/services to determine <i>procurement rights</i> and to ensure protection of business interests where applicable 3.3. Negotiate and secure contractual procurement rights for goods and services including <i>contracts with relevant people</i> , as required, in accordance with the business plan 3.4. Identify <i>insurance requirements</i> and acquire adequate cover 3.5. Identify options for leasing/ownership of business premises and complete contractual arrangements in accordance with the business plan

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, reporting, record keeping and consultation skills to operate the business
- literacy skills to interpret legal requirements, to develop policies and procedures and to analyse compliance information
- research skills to investigate legal structures, and taxation and insurance requirements
- time management skills to prioritise tasks and to meet key dates.

Required knowledge

- business registration and licensing requirements
- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations, anti-discrimination, taxation
- creation and termination of relevant legal contracts
- cultural differences and legal implications
- duty of care imposed by Law of Torts
- legal rights and obligations of alternative ownership structures
- record keeping to meet minimum legal and taxation requirements
- relevant consumer legislation
- relevant industry codes of practice
- relevant insurance requirements and products.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use	1.1. Identify workplace <i>environmental and resource efficiency issues</i> 1.2. Identify resources used in own work role 1.3. Document and measure current usage of resources using <i>appropriate techniques</i> 1.4. Record and file documentation measuring current usage, using technology (such as software systems) where applicable 1.5. Identify and report workplace environmental hazards to appropriate personnel
2. Comply with environmental regulations	2.1. Follow workplace procedures to ensure <i>compliance</i> 2.2. Report breaches or potential breaches to appropriate personnel
3. Seek opportunities to improve resource efficiency	3.1. Follow <i>organisational plans</i> to improve environmental practices and resource efficiency 3.2. Work as part of a team, where relevant, to identify possible areas for improvements to work practices in own work area 3.3. Make <i>suggestions</i> for improvements to workplace practices in own work area

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to comply with all relevant legislation associated with job specifications and procedures
- communication and problem-solving skills to question, seek clarification and make suggestions relating to work requirements and efficiency
- communication and teamwork skills to recognise procedures; to follow instructions; to respond to change, such as current workplace environmental/sustainability frameworks; and to support team work and participation in a sustainable organisation
- literacy, numeracy and technology skills to interpret workplace information in relation to work role, and to document and measure resource use
- technology skills to select and use technology appropriate for a task.

Required knowledge

- environmental and resource hazards/risks
- environmental or sustainability legislation, regulations and codes of practice applicable to own work role
- OHS issues and requirements
- organisational structure, and reporting channels and procedures
- relevant environmental and resource efficiency systems and procedures
- sustainability in the workplace
- terms and conditions of employment including policies and procedures, such as daily tasks, employee and employer rights, equal opportunity.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • accessing, interpreting and complying with a range of environment/sustainability legislation and procedural requirements relevant to daily responsibilities • accurately following organisational information to participate in and support an improved resource efficiency process and reporting as required • developing and/or using tools such as inspection checklists, to collect and measure relevant information on organisation resource consumption, within work role • identifying organisational improvements by applying efficient resource use to daily activities • knowledge of environmental and resource hazards/risks.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation • review of current work area directly relating to own work, to assess measurement of resources used, hazards and compliance • individual or team discussion about potential for increased resource efficiency within current work area • access to workplace documents, information and resources (such as compliance obligations, enterprise plans, work responsibilities).
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace

EVIDENCE GUIDE	
	<p>reports of on-the-job performance by the candidate</p> <ul style="list-style-type: none"> • observation of demonstrated techniques over time and in a range of situations • analysis of responses to case studies and scenarios • review of documentation measuring current resource usage • evaluation of techniques used to document and measure current usage of resources • review of identified and reported workplace environmental hazards • evidence of active participation in organisational plans to improve environmental practices and resource efficiency.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBINN201A Contribute to workplace innovation • BSBSMB301A Investigate micro business opportunities • BSBWOR202A Organise and complete daily work activities.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Environmental and resource efficiency issues</i> may include:</p>	<ul style="list-style-type: none"> • maximising opportunities to improve business environmental performance • minimising environmental risks • promoting more efficient production and consumption of natural resources, for example minimising waste by participating in or using a waste management system • using resources efficiently such as material usage, energy usage (seeking alternative sources of energy or energy conservation) or efficient water usage
<p><i>Appropriate techniques</i> may include:</p>	<ul style="list-style-type: none"> • examining and documenting resources in work area • examining invoices from suppliers • examining relevant information and data • measuring resource usage under different conditions • reports from other parties involved in the process of identifying and implementing improvements
<p><i>Compliance</i> may include:</p>	<ul style="list-style-type: none"> • meeting relevant laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act): <ul style="list-style-type: none"> • international • commonwealth • state/territory • local government • industry • organisation
<p><i>Organisational plans</i> may</p>	<ul style="list-style-type: none"> • documented policies and procedures • work plans to minimise waste or to increase

RANGE STATEMENT	
include:	efficiency of resources such as a green office program, supply chain program for purchasing sustainable products or an environmental management framework
<i>Suggestions</i> may include ideas that help to:	<ul style="list-style-type: none"> • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • maximise opportunities such as use of solar power or other alternative forms of energy, where appropriate • prevent and minimise risks • reduce emissions of greenhouse gases • reduce use of non-renewable resources

BSBSUS301A Implement and monitor environmentally sustainable work practices

Modification History

Release	Comments
Release 2	New release of this Unit with <i>version 7.0 of BSB07 Business Services Training Package</i> . Environmental assets italicised and bolded in PC 3.6 AND identified in Range Statement.
Release 1	Initial release of this Unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices and to implement improvements and monitor their effectiveness.

This unit requires the ability to access industry information, applicable legislative and occupational health and safety (OHS) guidelines.

Application of the Unit

Application of the unit	<p>This unit applies to those with responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools, such as:</p> <ul style="list-style-type: none"> • identifying areas for improvement • developing plans to make improvements • implementing and monitoring improvements in environmental performance. <p>A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation. Evidence must be strictly relevant to the particular workplace role.</p>
--------------------------------	--

Licensing/Regulatory Information

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit.

Pre-Requisites

Prerequisite units		

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Investigate current practices in relation to resource usage	<p>1.1 Identify environmental regulations applying to the enterprise</p> <p>1.2 Analyse procedures for assessing <i>compliance</i> with environmental/sustainability regulations</p> <p>1.3 Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate</p> <p>1.4 Collect, analyse and organise information from a range of <i>sources</i> to provide information/advice and tools/resources for improvement opportunities</p> <p>1.5 Measure and document current resource usage of members of the work group</p> <p>1.6 Analyse and document current <i>purchasing strategies</i></p> <p>1.7 Analyse current work processes to access information and data to assist in identifying areas for improvement</p>
2. Set targets for improvements	<p>2.1 Seek input from <i>stakeholders, key personnel and specialists</i></p> <p>2.2 Access external sources of information and data as required</p> <p>2.3 Evaluate alternative solutions to workplace environmental issues</p> <p>2.4 Set efficiency targets</p>
3. Implement performance improvement strategies	<p>3.1 Source and use appropriate <i>techniques and tools</i> to assist in achieving efficiency targets</p> <p>3.2 Apply continuous improvement strategies to own work area of responsibility, including ideas and possible solutions to communicate to the work group and management</p> <p>3.3 Implement and integrate <i>environmental and resource efficiency improvement plans</i> for own work group with other operational activities</p> <p>3.4 Supervise and support team members to identify possible areas for improved practices and resource efficiency in work area</p> <p>3.5 Seek <i>suggestions</i> and ideas about environmental and resource efficiency management from stakeholders and act upon where appropriate</p> <p>3.6 Implement costing strategies to fully utilise <i>environmental assets</i></p>
4. Monitor performance	<p>4.1 Use and/or develop evaluation and monitoring, tools and technology</p> <p>4.2 Document and communicate outcomes to report on efficiency</p>

	<p>targets to key personnel and stakeholders</p> <p>4.3 Evaluate strategies and improvement plans</p> <p>4.4 Set new efficiency targets, and investigate and apply new tools and strategies</p> <p>4.5 Promote successful strategies and reward participants where possible</p>
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse problems, to devise solutions and to reflect on approaches taken
- change management skills
- communication skills to answer questions, clarify and acknowledge suggestions relating to work requirements and efficiency
- communication/consultation skills to support information flow from stakeholders to the work group
- innovation skills to identify improvements, to apply knowledge about resource use to organisational activities and to develop tools
- literacy skills to comprehend documentation, to interpret environmental and energy efficiency requirements, to create tools to measure and monitor improvements and to report outcomes
- numeracy skills to analyse data on organisational resource consumption and waste product volumes
- planning and organising skills to implement environmental and energy efficiency management policies and procedures relevant to own work area
- problem-solving skills to devise approaches to improved environmental sustainability and to develop alternative approaches as required
- technology skills to operate and shut down equipment; where relevant, to use software systems for recording and filing documentation to measure current usage; and to use word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information
- supervisory skills to work effectively with a team.

Required knowledge

- best practice approaches relevant to own area of responsibility and industry
- compliance requirements within work area for all relevant environmental/sustainability legislation, regulations and codes of practice including resource hazards/risks associated with work area, job specifications and procedures
- environmental and energy efficiency issues, systems and procedures specific to industry practice
- external benchmarks and support for particular benchmarks to be used within organisation, including approaches to improving resource use for work area and expected outcomes
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- quality assurance systems relevant to own work area
- strategies to maximise opportunities and to minimise impact relevant to own work area
- supply chain procedures

- terms and conditions of employment including policies and procedures, such as daily tasks, work area responsibilities, employee, supervisor and employer rights, equal opportunity.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • knowledge of relevant compliance requirements within work area • developing plans to make improvements • planning and organising work group activities in relation to measuring current use and devising strategies to improve usage • monitoring resource use and improvements for environmental performance relative to work area and supervision • ensuring appropriate action is taken within work area in relation to environmental/sustainability compliance and potential hazards • implementing new approaches to work area in an effort to resolve and improve environmental and resource efficiency issues and reporting as required.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to a range of environment/sustainability legislation, standards, guidelines and procedural requirements relevant to specific work area, daily responsibilities and supervision • access to a range of information, workplace documentation and resources such as compliance obligations, organisation plans, work supervision and responsibilities • access to reports from other parties involved in the process of identifying and implementing improvements • evidence is relevant to the particular workplace role, including work area, staff, stakeholders, equipment, systems and documentation.

<p>Method of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • response to case studies • review of reports of activities of work group in relation to measuring resource use and developing improvement strategies • review of work plans outlining approaches to improved practices with documented benchmarks • analysis of the way in which advice is sought and suggestions are made about improvements • observation over time and in a range of situations in relation to review of overall work area and staff, to assess and measure resource use, hazards and compliance • review of checklists to identify and assess resource usage at the beginning and end of the unit; reports on meetings around procedures and improvement processes and monitoring within the workplace; lists of environmental hazards/risks or inefficiencies or opportunities for improvements identified in the workplace • analysis of implementation of programs such as a green office program, supply chain program for purchasing sustainable products, or an environmental management framework • oral or written questioning to assess knowledge of environmental and energy efficiency issues, systems and procedures specific to industry practice.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Compliance</i> may include:	<ul style="list-style-type: none"> • meeting relevant laws, by-laws and regulations or best practice or codes of practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act): <ul style="list-style-type: none"> • international • commonwealth • state/territory • industry • organisation.
<i>Sources</i> may include:	<ul style="list-style-type: none"> • organisation specifications • regulatory sources • relevant stakeholders • resource use.
<i>Purchasing strategies</i> may include:	<ul style="list-style-type: none"> • influencing suppliers to take up environmental sustainability approaches • researching and participating in programs such as a supply chain program to purchase sustainable products.
<i>Stakeholders, key personnel and specialists</i> may include:	<ul style="list-style-type: none"> • individuals and groups both inside and outside the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, including: <ul style="list-style-type: none"> • customers • employees at all levels of the organisation • government • investors • local community • other organisations • suppliers • key personnel within the organisation, and specialists outside the organisation who may have particular technical expertise.

<p><i>Techniques and tools</i> may include:</p>	<ul style="list-style-type: none"> • examination of invoices from suppliers • examination of relevant information and data • measurements made under different conditions • others as appropriate to the specific industry context.
<p><i>Environmental and resource efficiency improvement plans</i> may include:</p>	<ul style="list-style-type: none"> • addressing environmental and resource sustainability initiatives such as environmental management systems, action plans, green office programs, surveys and audits • applying the waste management hierarchy in the workplace • determining organisation’s most appropriate waste treatment including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment • initiating and/or maintaining appropriate organisational procedures for operational energy consumption, including stationary energy and non-stationary (transport) • preventing and minimising risks, and maximising opportunities such as: <ul style="list-style-type: none"> • improving resource/energy efficiency • reducing emissions of greenhouse gases • reducing use of non-renewable resources • referencing standards, guidelines and approaches such as: <ul style="list-style-type: none"> • ecological footprinting • Energy Efficiency Opportunities Bill 2005 • Global Reporting Initiative • green office program – a cultural change program • green purchasing • Greenhouse Challenge Plus (Australian government initiative) • ISO 14001:1996 Environmental management systems life cycle analyses • product stewardship • supply chain management • sustainability covenants/compacts • triple bottom line reporting.
<p><i>Suggestions</i> may include ideas that help to:</p>	<ul style="list-style-type: none"> • prevent and minimise risks and maximise opportunities such as: <ul style="list-style-type: none"> • usage of solar or renewable energies where

	<p>appropriate</p> <ul style="list-style-type: none"> • reducing emissions of greenhouse gases • reducing use of non-renewable resources • making more efficient use of resources, energy and water • maximising opportunities to re-use, recycle and reclaim materials • identifying strategies to offset or mitigate environmental impacts: <ul style="list-style-type: none"> • purchasing carbon credits • energy conservation • reducing chemical use • reducing material consumption • expressing purchasing power through the selection of suppliers with improved environmental performance e.g. purchasing renewable energy • eliminating the use of hazardous and toxic materials.
<p><i>Environmental assets</i> may include:</p>	<ul style="list-style-type: none"> • assets of the natural environment such as: <ul style="list-style-type: none"> • biological assets (produced or natural) • land • water areas with their ecosystems • subsoil, and • air.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop workplace sustainability policy	1.1. Define <i>scope</i> of sustainability policy 1.2. Gather information from a range of <i>sources</i> to plan and develop policy 1.3. Identify and consult <i>stakeholders</i> as a key component of the policy development process 1.4. Include appropriate <i>strategies</i> in policy at all stages of work for minimising resource use, reducing toxic material and hazardous chemical use, and employing life cycle management approaches 1.5. Make recommendations for policy options based on likely effectiveness, timeframes and cost 1.6. Develop policy that reflects the organisation's commitment to sustainability as an integral part of business planning and as a business opportunity 1.7. Agree to appropriate methods of implementation
2. Communicate workplace sustainability policy	2.1. Promote workplace sustainability policy, including its expected outcome to key stakeholders 2.2. Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned
3. Implement workplace sustainability policy	3.1. Develop and communicate procedures to help implement workplace sustainability policy 3.2. Implement strategies for continuous improvement in resource efficiency 3.3. Establish and assign responsibility to use recording systems for tracking continuous improvements in sustainability approaches
4. Review workplace sustainability policy implementation	4.1. Document outcomes and provide feedback to key personnel and stakeholders 4.2. Investigate successes or otherwise of policy 4.3. Monitor records to identify trends that may require remedial action and use to promote continuous improvement of performance 4.4. Modify policy and or procedures as required to ensure improvements are made

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to adjust communication to suit different audiences; to respond effectively to diversity; to work as a member of a team to consult on and validate policy
- literacy skills to read and evaluate complex and formal documents such as policy and legislation
- problem skills to effectively manage different points of view and dissenting stakeholders
- research, analytical and writing skills to research, analyse and present information; to prepare written reports requiring precision of expression and language and structures suited to the intended audience

Required knowledge

- best practice approaches relevant to own work area
- environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy being developed
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational policies, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- candidate's involvement as a key person in planning, developing and implementing organisational policy and that the developed policy complies with legislative requirements
- implementation strategy, as part of the policy, that has been devised, implemented and reviewed showing a measurable improvement utilising the chosen benchmark indicators
- communicating with stakeholders to discuss possible approaches to policy development and implementation, and contributing to the resolution of disputes among stakeholders
- developing and monitoring policies for analysing data on enterprise resource consumption
- using software systems for recording and filing documentation for measurement of current usage and using word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information
- reviewing and improving policies by identifying improvements and benchmarking against industry best practice and attempting new approaches continuously over time.

Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to relevant legislation/standards/guidelines
- access to a range of workplace documentation and personnel, information and resources (such as compliance obligations, organisational plans, work responsibilities)
- access to reports from other parties involved in the development and implementation of policy
- evidence is collected over time, involving both

EVIDENCE GUIDE	
	<p>formative and summative assessment</p> <ul style="list-style-type: none"> evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct questioning combined with review of portfolios of evidence and third party workplace reports of on the job performance by the candidate response to case studies review of policy developed and procedural documentation outlining the approach taken review of implementation strategy, plans and work plans analysis of methods used to involve stakeholders in policy development, implementation and review analysis of inefficiencies or opportunities for improvements identified in the workplace evaluation of participation in sustainability work practices and programs such as an environmental management framework observation over time in relation to review of work area relating to policy and procedures being developed to assess measurement of resources used, hazards and compliance.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> BSBATSIM419A Contribute to the development and implementation of organisational policies BSBHRM506A Manage recruitment, selection and induction processes BSBHRM602B Manage human resources strategic planning BSBINN502A Build and sustain an innovative work environment BSBMGT515A Manage operational plan BSBMGT516C Facilitate continuous improvement BSBMGT608C Manage innovation and continuous improvement BSBMGT616A Develop and implement strategic

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of workplace sustainability policy may include:

- addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
 - ecological foot printing
 - Energy Efficiency Opportunities Bill 20051
 - Global Reporting Initiative
 - green office program
 - green purchasing
 - Greenhouse Challenge Plus (Australian government initiative)
 - ISO 14001:1996 Environmental management systems life cycle analyses
 - life cycle analyses
 - product stewardship
 - supply chain management
 - sustainability covenants/compacts
 - triple bottom line reporting
- integrated approach to sustainability which includes environmental, economic and social aspects, or a specific approach that focuses on each aspect individually
- investigating particular business and market context of the industry/organisation
- meeting relevant laws, by laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act):
 - international
 - commonwealth
 - state/territory
 - industry

RANGE STATEMENT	
	<ul style="list-style-type: none"> • organisation • parts of the organisation to which it is to apply, including whether it is for the whole organisation, one site, one work area or a combination of these.
<i>Sources</i> may include:	<ul style="list-style-type: none"> • regulatory sources • relevant personnel • organisational specifications.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • individuals and groups both inside and outside the organisation who have some direct interest in the organisation's conduct, actions, products and services, including: <ul style="list-style-type: none"> • customers • employees at all levels of the organisation • government • investors • local community • other organisations • regulators • suppliers • key personnel within the organisation and specialists outside the organisation who may have particular technical expertise.
<i>Strategies</i> may include:	<ul style="list-style-type: none"> • promotional activities • raising awareness among stakeholders • training staff in sustainability principles and techniques.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Collect, analyse and communicate information and ideas	1.1. Collect relevant <i>information</i> from appropriate sources and analyse and share with the work team to improve work performance 1.2. Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the audience and any specific needs 1.3. Implement <i>consultation processes</i> to encourage employees to contribute to issues related to their work, and promptly relay feedback to the work team in regard to outcomes 1.4. Seek and value contributions from internal and external sources in developing and refining new ideas and approaches 1.5. Implement <i>processes</i> to ensure that issues raised are resolved promptly or referred to <i>relevant personnel</i> as required
2. Develop trust and confidence	2.1. Treat all internal and external contacts with integrity, respect and empathy 2.2. Use the <i>organisation's social, ethical and business standards</i> to develop and maintain effective relationships 2.3. Gain and maintain the trust and confidence of <i>colleagues, customers and suppliers</i> through competent performance 2.4. Adjust interpersonal styles and methods to meet organisation's social and cultural environment 2.5. Encourage other members of the work team to follow examples set, according to <i>organisation's policies and procedures</i>
3. Develop and maintain networks and relationships	3.1. Use <i>networks</i> to identify and build relationships 3.2. Use networks and other work relationships to provide identifiable benefits for the team and organisation
4. Manage difficulties into positive outcomes	4.1. Identify and analyse difficulties, and take action to rectify the situation within the requirements of the organisation and relevant legislation 4.2. Guide and support colleagues to resolve work difficulties 4.3. Regularly review and improve <i>workplace outcomes</i>

ELEMENT	PERFORMANCE CRITERIA
	<p>in consultation with relevant personnel</p> <p>4.4. Manage <i>poor work performance</i> within the organisation's processes</p> <p>4.5. Manage conflict constructively within the organisation's processes</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- coaching and mentoring skills to provide support to colleagues
- literacy skills to research, analyse, interpret and report information
- relationship management and communication skills to:
 - deal with people openly and fairly
 - forge effective relationships with internal and/or external people, and to develop and maintain these networks
 - gain the trust and confidence of colleagues
 - respond to unexpected demands from a range of people
 - use supportive and consultative processes effectively.

Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety (OHS), and environmental issues, equal opportunity, industrial relations and anti-discrimination
- theory associated with managing work relationships to achieve planned outcomes:
 - developing trust and confidence
 - maintaining consistent behaviour in work relationships
 - understanding the cultural and social environment
 - identifying and assessing interpersonal styles
 - establishing, building and maintaining networks
 - identifying and resolving problems
 - resolving conflict
 - managing poor work performance
 - monitoring, analysing and introducing ways to improve work relationships.

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • range of methods and techniques for communicating information and ideas to a range of stakeholders • range of methods and techniques for developing positive work relationships that build trust and confidence in the team • accessing and analysing information to achieve planned outcomes • techniques for resolving problems and conflicts and dealing with poor performance • knowledge of the theory associated with managing work relationships to achieve planned outcomes.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • demonstration of techniques in managing poor performance and communicating effectively • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • observation of performance in role plays • observation of presentations • oral or written questioning to assess knowledge of relevant legislation • review of consultation processes implemented to encourage employees to contribute to issues related to their work • review of documentation outlining reviewing of workplace outcomes.
Guidance information for	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

EVIDENCE GUIDE**assessment**

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Information</i> may include:</p>	<ul style="list-style-type: none"> • data appropriate to work roles and organisational policies that is shared and retrieved in writing or verbally, electronically or manually such as: <ul style="list-style-type: none"> • archived, filed and historical background data • individual and team performance data • marketing and customer related data • planning and organisational documents including the outcomes of continuous improvement and quality assurance • policies and procedures
<p><i>Consultation processes</i> may include:</p>	<ul style="list-style-type: none"> • feedback to the work team and relevant personnel in relation to outcomes of the consultation process • opportunities for all employees to contribute to ideas and information about organisational issues
<p><i>Processes</i> to ensure that issues raised are resolved promptly or referred may include:</p>	<ul style="list-style-type: none"> • conducting informal meetings • coordinating surveys or questionnaires • distributing newsletters or reports • exchanging informal dialogue with relevant personnel • participating in planned organisational activities
<p><i>Relevant personnel</i> may include:</p>	<ul style="list-style-type: none"> • managers • OHS committee and other people with specialist responsibilities • other employees • supervisors • union representatives/groups
<p><i>Organisation's social, ethical and business standards</i> may refer to:</p>	<ul style="list-style-type: none"> • implied standards such as honesty and respect relative to the organisational culture and generally accepted within the wider

RANGE STATEMENT	
	<ul style="list-style-type: none"> community • rewards and recognition for high performing staff • standards expressed in legislation and regulations such as anti-discrimination legislation • written standards such as those expressed in: <ul style="list-style-type: none"> • code of workplace conduct/behaviour • dress code • policies • statement of workplace values • vision and mission statements
<i>Colleagues, customers and suppliers</i> may include:	<ul style="list-style-type: none"> • both internal and external contacts • employees at the same level and more senior managers • people from a wide variety of social, cultural and ethnic backgrounds • team members
<i>Organisation's policies and procedures</i> may refer to:	<ul style="list-style-type: none"> • Materials Safety Data Sheets • organisational tasks and activities undertaken to meet performance outcomes • sets of accepted actions approved by the organisation • Standard Operating Procedures
<i>Networks</i> may be:	<ul style="list-style-type: none"> • established structures or unstructured arrangements and may include business or professional associations • informal or formal and with individuals or groups • internal and/or external
<i>Workplace outcomes</i> may include:	<ul style="list-style-type: none"> • OHS processes and procedures • performance of the work team
<i>Poor work performance</i> may refer to:	<ul style="list-style-type: none"> • individual team members • organisation as a whole • self • whole work team

CPCSUS4001A Implement and monitor environmentally sustainable work practices

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to effectively analyse, implement and monitor environmentally sustainable work practices and their effectiveness on a work site, including contributing to consumer environmental efficiency.

Application of the Unit

Application of the unit This unit of competency supports the needs of those with responsibility for a specific area or site of work, or those who lead a work group or team by using processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

The context of this competency applies to all sectors of the construction industry. It may be applied to all sections of an organisation, including a work site, designated work area, in transit and/or an office.

Licensing/Regulatory Information

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Investigate current practices in relation to resource usage.	<p>1.1. Environmental regulations applying to the organisation are identified.</p> <p>1.2. Procedures for ensuring <i>compliance</i> with environmental regulations are assessed.</p> <p>1.3. Information on <i>environmental and resource efficiency</i> systems and procedures are collected, and where appropriate, provided to <i>stakeholders, key personnel and specialists</i>.</p> <p>1.4. Current resource usage is measured and documented by members of the work group.</p> <p>1.5. Current <i>purchasing strategies</i> are analysed and documented.</p> <p>1.6. Current work processes and products are analysed to access information and data and to assist in identifying areas for improvement.</p>
2. Set targets for improvement.	<p>2.1. Input is sought from stakeholders, key personnel and specialists and shared with them as appropriate.</p> <p>2.2. External sources of information and data are accessed as required.</p> <p>2.3. Alternative solutions to work site environmental issues are evaluated.</p> <p>2.4. Efficiency targets are set.</p>
3. Implement performance improvement strategies.	<p>3.1. <i>Techniques and tools</i> are sourced to assist in achieving targets.</p> <p>3.2. Continuous improvement strategies are applied to work site, including ideas and possible solutions to communicate to stakeholders, key personnel and specialists.</p> <p>3.3. Environmental and resource efficiency improvement plans for work site and clients are integrated with other operational activities and implemented.</p> <p>3.4. <i>Suggestions</i> and ideas about environmental and resource efficiency management are sought from stakeholders, key personnel and specialists and shared with them to act on as appropriate.</p> <p>3.5. Costing strategies are implemented to fully value environmental assets and are shared with stakeholders, key personnel and specialists as necessary.</p>
4. Monitor performance.	<p>4.1. Outcomes are documented and reports on targets are</p>

ELEMENT

PERFORMANCE CRITERIA

-
- communicated to key personnel and stakeholders.
 - 4.2.Strategies are evaluated.
 - 4.3.New targets are set and new tools and strategies investigated and applied.
 - 4.4.Successful strategies are promoted and, where possible, participants rewarded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to source/identify the latest industry environmental sustainability concepts and technologies
- applying learning to future opportunities
- change management skills
- communication skills to:
 - answer questions
 - clarify and acknowledge suggestions relating to work requirements and environmental efficiency with stakeholders
 - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
 - read and interpret:
 - documentation
 - environmental and resource efficiency requirements
 - support information flow between various internal and external stakeholders to resolve and report on environmental and resource efficiency issues
 - use and interpret non-verbal communication
 - use language and concepts appropriate to cultural differences
- creating tools to measure and monitor improvements and report on outcomes to stakeholders
- innovation skills to identify improvements, apply knowledge about resource use to organisational activities and customer service, and develop resource efficiency tools
- numeracy skills to analyse data on company and stakeholder resource consumption and waste product volumes

REQUIRED SKILLS AND KNOWLEDGE

- problem solving skills to recognise and analyse problems, including:
 - devising approaches
 - implementing and reflecting on environmental and water, energy or resource efficiency management policies and procedures relevant to work site to improve environmental sustainability
 - share alternative approaches as required
- skills to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- technology skills, including the ability to:
 - operate and shut down equipment
 - where relevant, use software systems for recording and filing documentation for measurement and improvement of resource usage and consumption.

Required knowledge

Required knowledge for this unit is:

- how tradespersons can contribute to environmental sustainability
- knowledge of compliance requirements for all relevant environmental and sustainability legislation, regulations and codes of practice including resource hazards and risks associated with work site:
 - supervision
 - job specifications
 - strategies and procedures to maximise opportunities and minimise impacts relevant to stakeholders and personal area of responsibility
- relevant knowledge of environmental, resource and energy/water efficiency issues, systems and procedures specific to industry practice
- knowledge of best practice approaches and quality assurance systems relevant to area of responsibility and industry
- ability to identify and advise on water/energy efficiency opportunities for stakeholders and key personnel
- supply chain procedures
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- terms and conditions of employment, including policies and procedures, such as:
 - daily tasks
 - equal opportunity
 - work area responsibilities
 - worker, supervisor and employer rights.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by analysing and monitoring effective sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement and monitor integrated environmental and resource efficiency management policies and procedures within a work site, including:
 - access, collect, analyse and organise information from a number of sources to provide information, advice and tools or resources for improvement opportunities to stakeholders and key personnel
 - identify possible areas for improved practices and resource efficiency for stakeholders
 - communicate benefits of changing practices to work team and customers
 - implement new approaches and improvement plans, including planning and organising activities for staff and stakeholders in relation to:
 - measurement of current use
 - devising strategies to improve environmental and resource efficiency issues
 - reporting as required ensuring appropriate action is taken within work site in relation to environmental and sustainability compliance and potential

EVIDENCE GUIDE

hazards

- monitor and evaluate improvement plans and efficiency targets, using evaluation and monitoring tools and technology to potentially revise and adjust approaches and strategies to ensure continuous improvement.

Evidence that could be used, reflecting the requirements of the unit of competency and work being performed as evidence, include:

- reports of activities of work group in relation to:
 - measurement of resources and efficiency
 - development of improvement strategies
- work plans outlining approaches to improved practices, with documented benchmarks
- invoices from stakeholders specifying materials recommended for improved efficiency and those actually used
- quotes and tenders
- lists of environmental hazards, risks and inefficiencies, and opportunities for improvements identified in the work site
- work samples, tools, techniques or simulated activities and the outcomes.

Processes may include:

- relevant authenticated correspondence
- way in which advice is sought and suggestions made about improvements from stakeholders and key personnel
- evidence of implementation of programs, such as:
 - green building program
 - supply chain program for purchasing sustainable products
 - environmental site management framework or product recommendations
- notes on understanding external benchmarks and support for particular benchmarks to be used, with expected outcomes and including approaches to recommend products and practices to stakeholders for improving their resource use.

EVIDENCE GUIDE

Resource implications for assessment must include:

- observation by the assessor over a period of time and in a range of situations and/or evidence provided to the assessor in written or verbal form, including:
 - implementing tools and techniques
 - review of work site and stakeholders/key personnel to assess and measure resource use, hazards and compliance
 - application of learning to future activities
 - recommended products and practices to stakeholders
- access to a range of information and resources for assessment as listed in the range statement, such as:
 - environmental and sustainability legislation
 - compliance documentation
 - organisational and procedural requirements or organisation plans
 - work supervision and work site documentation, including personnel and responsibilities
 - quotes, tenders, invoices.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets

EVIDENCE GUIDE

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be

EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance includes:

- meeting relevant Acts, laws, by-laws and regulations, codes of practice or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act and Building Code of Australia)
- levels include:
 - federal
 - industry
 - international
 - local government
 - organisation
 - reporting breaches
 - state and territory.

Environmental and resource efficiency includes:

- approaches of industry associations, such as:
 - Australian Building Greenhouse Rating
 - green plumbers
 - green purchasing
 - Housing Industry Association (HIA) GreenSmart
 - ISO 14001 Environmental Management Systems
 - lifecycle thinking
 - Master Builders Association of Victoria

RANGE STATEMENT

- Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA) Green Star environmental rating system
- National Australian Building Environmental Rating Scheme (NABERS)
 - product stewardship
 - supply chain management
 - Victoria Stormwater Management Guidelines of the Environment Protection Authority (EPA)
 - implementing and using alternative practices, procedures or materials to reduce or eliminate resource consumption on work site
 - recommendations to stakeholders, including:
 - addressing environmental and resource sustainability initiatives, such as an environmental framework, action plan, recommendations, surveys and audits with stakeholders and key personnel
 - efficient water use (e.g. rainwater tanks, grey water sprinkler systems or timers)
 - energy use (e.g. equipment/appliances installed; equipment, appliance and tool maintenance; transporting materials; heating and cooling; and building efficiency)
 - environmental site management
 - evaluating and implementing most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment through site management
 - improving resource, energy and water efficiency
 - including environmental performance in tender and quote specifications
 - initiating and maintaining appropriate work site procedures for operational energy consumption, including stationary and non-stationary (transport) energy
 - preventing and minimising risks and maximising opportunities on work site and

RANGE STATEMENT

for stakeholders

- reducing emissions of greenhouse gases
- reducing material usage
- reducing stormwater pollution
- reducing use of non-renewable resources
- types of products and materials used
- reference to standards, guidelines, industry association standards, codes of practice and best practice approaches such as:
 - federal government standards, including five-star rating for all new homes.

Stakeholders, key personnel and specialists (individuals and groups) both within and external to the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, include:

- clients
- employees at all levels of the organisation
- government
- investors
- key personnel within the organisation
- local community
- specialists outside the organisation who may have particular technical expertise
- suppliers
- other organisations.

Purchasing strategies include:

- influencing stakeholders to take up environmental sustainability approaches and products
- researching and participating in programs, such as a supply chain program to purchase sustainable products (such as radial timber, sustainable timber, and low flow fittings and appliances).

Techniques and tools include:

- accessing the skills of others as appropriate to the specific industry context
- environmental site management plans
- examination of invoices from suppliers
- examination of relevant information and data
- integration of environmental and sustainability specifications in quotes and tenders
- measurements made under different conditions
- recommendation of sustainable products and practices to stakeholders.

Suggestions include:

- eliminating the use of hazardous and toxic materials

RANGE STATEMENT

- expressing green purchasing power through using and recommending a selection of suppliers with improved environmental performance (e.g. green power, lifecycle thinking, product stewardship, energy or water efficiency)
- ideas that help to improve energy and water efficiency
- making more efficient use of resources, materials, energy and water
- maximising opportunities to use renewable, recyclable, reusable and recoverable resources (energy, water, materials, products and waste)
- preventing and minimising risks and maximising opportunities, such as use of renewable energy such as solar or grey water, and other alternative forms of water, energy and resources
- recommending and using alternative sustainable products, materials, procedures, practices and installation techniques
- reducing emissions of greenhouse gases by reducing waste and transport
- reducing the consumption of non-renewable resources, such as water, fuel, and materials
- seeking alternative sources of water and energy or encouraging conservation.

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform slinging techniques, including the selection and inspection of lifting gear and/or the directing of the crane operator in the movement of the load when the load is out of view of the crane/ operator for licensing purposes.

Application of the Unit

Application of the unit This unit covers the scope of work to demonstrate competency in the application of slinging techniques, selection and inspection of lifting gear and/or the directing of the crane/ operator in the movement of the load.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	1.1. <i>Site information</i> is obtained and related to the task. 1.2. <i>Hazard</i> s and potential hazards associated with the slinging and directing of loads are identified. 1.3. <i>Hazard control measures</i> consistent with <i>appropriate standards</i> are identified to ensure the safety of personnel and equipment. 1.4. The weight, dimensions and centre of gravity of the load are identified and assessed. 1.5. Suitable lifting/slinging points on the load are identified. 1.6. Appropriate <i>lifting equipment</i> needs are assessed. 1.7. Appropriate <i>communication methods</i> are assessed with <i>crane/ operators</i> and other <i>appropriate personnel</i> . 1.8. Manufacturer's specifications/information is obtained for special loads where necessary.
2. Select and inspect equipment.	2.1. Lifting equipment appropriate to the task is selected. 2.2. Lifting equipment is inspected for serviceability. 2.3. Damaged or excessively worn lifting equipment is identified, labelled and rejected. 2.4. Appropriate communication methods for the crane/operator and appropriate personnel are selected. 2.5. Appropriate <i>communication equipment</i> is selected and its serviceability is checked. 2.6. Appropriate <i>personal protective equipment</i> (PPE) is selected and checked.
3. Prepare site and equipment.	3.1. Hazard prevention/control measures are applied consistent with appropriate standards to ensure the safety of personnel and equipment. 3.2. Appropriate slinging method is selected. 3.3. Lifting equipment is prepared and assembled where appropriate. 3.4. Load destination is prepared.
4. Perform task.	4.1. Lifting equipment is attached and secured to the lifting hook using appropriate techniques. 4.2. Lifting hook is positioned over the load centre of gravity. 4.3. Lifting equipment is attached and secured to the load

ELEMENT**PERFORMANCE CRITERIA**

	in an appropriate manner.
	4.4. Tag line is attached and secured where appropriate.
	4.5. Test lift is conducted to ensure security of load.
	4.6. Load is moved maintaining stability and control at all times.
	4.7. Appropriate communication methods and <i>communication signals</i> are applied to safely coordinate the load movement both within sight and out-of-sight of crane operator.
	4.8. The load is landed to ensure that it is stable and secure from movement.
	4.9. Lifting equipment is removed or disconnected from load and prepared for next task or storage.
5. Shut down job and clean up.	5.1. Unserviceable lifting equipment inspected and rejected.
	5.2. <i>Defective equipment</i> is isolated and tagged.
	5.3. Lifting equipment is stored in accordance with procedures and appropriate standards.
	5.4. Hazard prevention/control measures are removed where appropriate.
	5.5. Excess materials from the work area are removed (where applicable).
	5.6. Defects are reported and recorded according to procedures and appropriate action is taken.

Required Skills and Knowledge**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes

REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting

Context of and specific resources for assessment

EVIDENCE GUIDE

- Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities
- Applicants must have access to:
 - personal protective equipment (PPE) for the purpose of the performance assessment.
 - four different loads as prescribed in the endorsed assessment instrument
 - lifting and associated equipment
 - suitable slewing crane
 - communication equipment (eg. fixed channel, two-way radios) as applicable.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment.

Assessment may be in conjunction with the assessment of other units of competency.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site information may include but not be limited to

- local conditions such as access and egress
- work method statements.

Hazards may include but not limited to:

- ground stability (eg. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes, trees, buildings, etc)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- weather (e.g. wind, lightning, storms)
- other specific hazards (e.g. trip hazards, heights, radio interference, etc).

Hazard prevention/control measures

The systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of controls, including:

1. elimination.
2. substitution.
3. isolation.
4. engineered control measures.
5. safe work practices.
6. personal protective equipment.

Appropriate standard s may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards.

Lifting Equipment may include but not limited to:

- fibre ropes
- wire ropes
- chain

RANGE STATEMENT

- wire and synthetic slings
 - shackles
 - eyebolts
 - beam clamps
 - plate clamps
 - spreader beams
 - lifting beams
 - pallet forks and cages
 - concrete kibbles
 - personnel boxes.
- Communication Methods*** may include but are not limited to:
- written instructions
 - signage,
 - hand signals
 - listening
 - questioning to confirm understanding
 - appropriate worksite protocol.
- Cranes*** may include but not limited to:
- tower cranes (including self erecting)
 - portal boom cranes
 - vehicle loading cranes
 - slewing mobile cranes
 - non-slewing cranes
 - derrick cranes.
- Appropriate personnel*** may include but are not limited to:
- supervisors
 - colleagues
 - managers who are authorised to take responsibility for the workplace or operations.
- Communication Equipment*** may include but not limited to:
- fixed channel two-way radios
 - whistles
 - bells.
- Personal protective equipment (PPE)*** may include but not limited to:
- hard hat
 - safety boots
 - gloves
 - high visibility clothing
 - reflective vest
 - relevant breathing, hearing, sight, skin and sun protection.
- Load destination*** may include but not limited to:
- ground
 - loading platforms
 - suspended floors
 - vehicles.

RANGE STATEMENT

Communication signals may include but not limited to:

- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

Defective Equipment may include but not limited to:

- excessive wear
- damage
- stretched
- broken wires
- cut/damaged fibres.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	<p>1.1. Task to be undertaken is assessed.</p> <p>1.2. Potential workplace <i>hazards</i> are identified.</p> <p>1.3. <i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment.</p> <p>1.4. Site information is obtained.</p> <p>1.5. All <i>forces and loads</i> associated with erecting and dismantling <i>structures</i> and <i>associated plant</i> are considered in consultation with <i>appropriate personnel</i>.</p> <p>1.6. <i>Rigging equipment</i> and <i>associated equipment</i> are identified in consultation with appropriate personnel according to <i>procedures</i> and site information.</p> <p>1.7. <i>Safety equipment</i> is identified.</p> <p>1.8. Appropriate <i>communication methods</i> are identified with appropriate personnel.</p>
2. Select and inspect equipment.	<p>2.1. Rigging equipment and associated equipment are selected and inspected according to procedures and the appropriate standard.</p> <p>2.2. Safety equipment is selected and inspected according to procedures.</p> <p>2.3. All defective rigging equipment, associated equipment and safety equipment is isolated, reported and recorded according to procedures.</p> <p>2.4. <i>Communication equipment</i> is selected and inspected for serviceability (where applicable).</p>
3. Set up task.	<p>3.1. Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to procedures.</p> <p>3.2. <i>Ground suitability</i> is inspected and checked (where appropriate).</p> <p>3.3. Site information is reviewed, interpreted and communicated to appropriate personnel and <i>appropriate personnel</i>.</p> <p>3.4. All forces and loads associated with erecting and dismantling structures and associated plant are determined in consultation with appropriate personnel.</p> <p>3.5. Safety equipment is fitted and worn correctly (where appropriate).</p> <p>3.6. Rigging equipment and associated plant are</p>

ELEMENT	PERFORMANCE CRITERIA
4. Erect structures and plant.	<p>positioned for work application and stability according to procedures.</p> <p>3.7. Methods of applying <i>temporary connections</i> using fibre rope are applied according to procedures and the appropriate standard.</p> <p>4.1. Structures and associated plant are erected according to procedures and site information.</p> <p>4.2. Stability of structures and associated plant is maintained during erection according to procedures.</p> <p>4.3. Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>4.4. Appropriate communication methods and communication equipment, are used to co-ordinate the tasks.</p> <p>4.5. Associated plant and rigging equipment is used according to procedures and the appropriate standard.</p> <p>4.6. Temporary guys, ties, propping and shoring, including <i>flexible steel wire rope</i>, and tubing, are connected where required.</p> <p>4.7. Associated equipment is used in a safe and appropriate manner.</p> <p>4.8. The completed task is inspected according to the appropriate standard.</p> <p>4.9. Excess materials are removed from the work area (where applicable).</p>
5. Dismantle structures and plant.	<p>5.1. Structures and associated plant are dismantled according to procedures and the appropriate standard.</p> <p>5.2. Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>5.3. Stability of structures and associated plant is maintained during dismantling according to procedures.</p> <p>5.4. Rigging equipment, associated equipment, safety equipment and associated plant are inspected for damage and defects.</p> <p>5.5. All defective rigging equipment, associated equipment, associated plant and safety equipment are isolated reported and recorded according to procedures.</p> <p>5.6. Rigging equipment and associated equipment are</p>

ELEMENT**PERFORMANCE CRITERIA**

stored. according to procedures and the appropriate standard.

5.7. Hazard prevention/control measures are removed (where appropriate).

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging

REQUIRED SKILLS AND KNOWLEDGE

- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:-
 - inspection of all plant and equipment, and
 - installation of a fall arrest system (Static line), and
 - use of a safety harness / fall arrest system, and
 - installation of crane loading platforms and
 - installation of a safety net, and
 - installation of a shutter and safety screen, and
 - demonstrated ability to work safely at heights, and
 - erection of structural steel, and
 - erection of precast panel, and
 - set up and operation of a winch for load movement, and
 - installation of a materials hoist, or
 - installation of a mast climber.
- effectively demonstrate the following knots,

EVIDENCE GUIDE

bends and hitches:-

- Sheet bend,
- Becket hitch,
- Running bowline,
- Double bowline.
- effectively demonstrate the following splices and whippings:-
 - Eye splice,
 - Back splice,
 - Short splice,
 - Sail makers whipping,
 - Common whipping,
 - West countryman's

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with the requirements of any relevant Standards or operating procedures for basic rigging.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment.
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. two-way

EVIDENCE GUIDE

Method of assessment	<p>radios) where applicable</p> <ul style="list-style-type: none"> • appropriate materials as required for safe erection of structures • appropriate materials for conducting fibre rope slicing, whipping, knots, bends and hitches. <p>Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.</p> <p>The use of 'simulators' in the assessment of this unit of competency is not acceptable.</p> <p>Assessment may be in conjunction with the assessment of other units of competency.</p> <p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</p> <p>Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p>
Guidance information for assessment	<p>Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (**NB**: minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or

RANGE STATEMENT

electrical supply authority.)

- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not limited to:

- local conditions such as access and egress,
- work method statements,
- site specific job safety analyses and other site specific documentation as required.
- task plans / Schedules and structural plans.

Forces and Loads may include, but not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Structures may include but are not limited to:

- structural steel
- precast panels.

Associated plant may include but not limited to:

- static lines
- safety nets
- hoists

RANGE STATEMENT

- Appropriate personnel* may include:
- mast climbers
 - loading platforms.
 - engineers
 - supervisors
 - colleagues
 - managers who are authorised to take responsibility for the workplace or operations.
- Rigging Equipment* may include but is not limited to:
- scaffolds
 - elevated work platforms
 - personnel box
 - cantilevered crane loading platforms
 - mast climbers.
 - safety screens and shutters
 - cranes including but not limited to:
 - non-slewing cranes
 - mobile slewing cranes
 - vehicle loading cranes
 - tower cranes
 - self-erecting tower cranes
 - portal boom cranes
 - derrick cranes
 - bridge and gantry cranes.
- Associated equipment* may include but is not limited to:
- all types of power and manually operated lifting gear
 - fibre ropes
 - flexible steel wire rope (FSWR)
 - chains
 - wire and synthetic slings
 - shackles
 - terminations
 - wedge sockets
 - eye bolts
 - beam clamps
 - plate clamps
 - rope grips
 - turnbuckles
 - rigging screws
 - chain blocks
 - lever blocks
 - lever-action winches

RANGE STATEMENT

- sheaves
 - spreader bars
 - lifting beams
 - jacks
 - levers
 - skates
 - wedges
 - rollers
 - girder trolley
- Procedures** may include but is not limited to:
- manufacturer's guidelines (instructions, specifications or checklists)
 - industry operating procedures, relevant codes of practice
 - workplace procedures (work instructions, operating procedures, checklists).
- Safety Equipment** may include but not limited to:
- safety harness
 - energy absorber
 - lanyard
 - inertia reel
 - static safety lines
 - safety nets.
- Communication Methods** may include but is not limited to:
- verbal and non-verbal language
 - written instructions
 - signage
 - hand signals
 - listening,
 - questioning to confirm understanding, and appropriate worksite protocol.
- NB:** Mobile phones are not to be used for signalling purposes during the rigging process.
- Communication equipment** may include but is not limited to:
- fixed channel two-way radios
- Hazard prevention/control measures** may include but is not limited to:
- safety tags on electrical switches/isolators
 - powerlines are insulated
 - safety observer used inside exclusion zone
 - power disconnected
 - traffic barricades and control
 - pedestrian barricades
 - trench covers

RANGE STATEMENT

- movement of obstructions
 - personal protective equipment
 - adequate illumination
 - safety shutters and screens.
- Ground suitability* may include but is not limited to:
- rough uneven ground
 - backfilled ground
 - soft soils
 - hard compacted soil
 - rock
 - bitumen
 - concrete
 - suspended concrete floors
 - building roofs
 - landings
 - ground bearing pressure.
- Appropriate personnel* may include but not limited to
- other riggers
 - doggers
 - crane operators.
- Temporary connections* may include but not limited to:
- knots
 - bends
 - hitches
 - spicing
 - whipping.
- Flexible Steel Wire Rope (FSWR)* includes:
- identification, uses and connections.
- May include termination for:
- static lines,
 - guys,
 - purchase systems,
 - lashing,
 - cranes,
 - hoist and winch ropes.

Functional area

Functional area

CPCCLRG3002A Licence to perform rigging intermediate level

Modification History

Not Applicable

Unit Descriptor

Unit descriptor This unit specifies the outcomes required to perform rigging work at the intermediate level, which includes all the outcomes for rigging work at the basic level, and also includes rigging of cranes, rigging of conveyors, rigging of dredges and excavators, rigging associated with tilt slabs, rigging associated with demolition work, and dual lifts for licensing purposes.

Application of the Unit

Application of the unit This unit requires the applicant to be able plan the work, select and inspect equipment, set up task, erect structures and plant and dismantle structures and plant.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

This unit has a pre-requisite requirement. This requirement may be met by either the successful completion of the unit *CPCCLRG3001A Licence to perform rigging basic level* or holding a valid licence for basic rigging.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of structural charts and structural plans (site information)
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated

REQUIRED SKILLS AND KNOWLEDGE

ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
 - adding and removing a tower crane section, or
 - adding and removing a crane lattice boom section, or
 - erecting a non guyed tower (e.g. light tower, and
 - perform a multiple crane lift, or
 - a multiple winch lift, or
 - a combination of a crane and winch lift, and
 - lifting and installing a series of tilt-up panels, or
 - lifting and installing a series of scenery panels (i.e. entertainment industry), and
 - demolish/remove a series of tilt-up panel structures, or
 - demolish/remove a series of scenery panel structures, and
 - demolishing a concrete encased structural steel column and beam.
- **NB:** All specifications for these performance

EVIDENCE GUIDE

Context of and specific resources for assessment

tasks are detailed in the endorsed assessment instrument.

- effectively conduct pre and post operational checks of intermediate rigging equipment.

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. radios) where applicable
- appropriate materials as required for safe erection of structures.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

EVIDENCE GUIDE

	<p>Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.</p> <p>Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.</p>
Guidance information for assessment	<p>Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan job.	1.1. Task to be undertaken is assessed. 1.2. Potential workplace <i>hazards</i> are identified. 1.3. <i>Hazard control measures</i> are identified consistent with <i>appropriate standards</i> to ensure the safety of personnel and equipment. 1.4. Site information is obtained. 1.5. All <i>forces and loads</i> associated with erecting and dismantling <i>associated plant</i> are considered in consultation with <i>appropriate personnel</i> . 1.6. <i>Rigging equipment</i> and <i>associated equipment</i> are identified in consultation with appropriate personnel according to <i>procedures</i> and site information. 1.7. <i>Safety equipment</i> is identified. 1.8. Appropriate communication methods are identified with appropriate personnel.
2. Select and inspect equipment.	2.1. Rigging equipment and associated equipment are selected and inspected according to procedures and the appropriate standard. 2.2. Safety equipment is selected and inspected according to procedures. 2.3. All defective rigging equipment, associated equipment and safety equipment is isolated, reported and recorded according to procedures. 2.4. <i>Communication equipment</i> is selected and inspected for serviceability (where applicable)
3. Prepare site and equipment.	3.1. Appropriate <i>hazard prevention/control measures</i> are applied to the work area according to procedures. 3.2. <i>Ground suitability</i> is inspected and checked (where appropriate). 3.3. Site information is reviewed interpreted and communicated to appropriate personnel and appropriate personnel. 3.4. All forces and loads associated with erecting and dismantling associated plant are determined in consultation with appropriate personnel. 3.5. Safety equipment is fitted and worn correctly (where appropriate). 3.6. Rigging equipment and associated plant are positioned for work application and stability according to procedures.

ELEMENT	PERFORMANCE CRITERIA
4. Erect structures and plant.	<p>3.7. Methods of applying <i>temporary connections</i> using fibre rope are applied according to procedures and the appropriate standard.</p> <p>4.1. Associated plant is erected according to procedures and site information.</p> <p>4.2. Stability of associated plant is maintained during erection according to procedures.</p> <p>4.3. Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>4.4. Appropriate communication methods and communication equipment, are used to co-ordinate the tasks.</p> <p>4.5. Temporary guys, ties, propping and shoring, including <i>flexible steel wire rope</i>, and tubing, are connected where required.</p> <p>4.6. Associated plant and rigging equipment is used according to procedures and the appropriate standard.</p> <p>4.7. Associated equipment is used in a safe and appropriate manner.</p> <p>4.8. The completed task is inspected according to the appropriate standard.</p> <p>4.9. Excess materials are removed from the work area (where applicable)</p>
5. Dismantle structures and plant.	<p>5.1. Associated plant is dismantled according to procedures and the appropriate standard.</p> <p>5.2. Work is conducted safely at heights including safe and effective use of safety equipment.</p> <p>5.3. Stability of associated plant is maintained during dismantling according to procedures.</p> <p>5.4. Rigging equipment, associated equipment, safety equipment and associated plant are inspected for damage and defects</p> <p>5.5. All defective rigging equipment, associated equipment, associated plant and safety equipment are isolated reported and recorded according to procedures.</p> <p>5.6. Rigging equipment and associated equipment are stored according to procedures and the appropriate standard.</p> <p>5.7. Hazard prevention/control measures are removed (where appropriate)</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of structural charts and structural plans (Site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations
- organisational and workplace standards, requirements, policies and procedures for rigging
- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OHS matters

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:
 - rig a span rope, or
 - rig a flying fox, and
 - install a swinging stage, or
 - install a bosuns chair, and
 - set up a gin pole and conduct a lift with a powered winch, and
 - erect and dismantle a hung or suspended scaffold

NB: All specifications for these performance tasks are detailed in the endorsed assessment instrument.

- effectively demonstrate the following knots, bends and hitches:
 - Alpine hitch
 - Bosun chair hitch
 - Prusik hitch
 - Figure eight
- effectively conduct pre and post operational

EVIDENCE GUIDE

Context of and specific resources for assessment

checks of advanced rigging equipment.

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with relevant appropriate standard requirements.

Applicants must have access to:

- personal protective equipment (PPE) for the purpose of the Performance Assessment
- appropriate safety equipment in safe condition
- Appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. radios) where applicable
- appropriate materials as required for safe erection and dismantling of performance tasks
- appropriate materials for conducting fibre rope knots, bends and hitches.

Method of assessment

Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of '**simulators**' in the assessment of this unit of competency is **not acceptable**.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency

EVIDENCE GUIDE

and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (**NB:** Minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

RANGE STATEMENT

	<ul style="list-style-type: none"> • elimination • substitution • isolation • engineering control measures • using safe work practices • personal protective equipment.
<i>Appropriate standards</i> may include:	<ul style="list-style-type: none"> • codes of practice • legislation • Australian Standards • manufacturer's specifications • industry standards (where applicable).
<i>Site information</i> may include but is not limited to:	<ul style="list-style-type: none"> • local conditions such as access and egress • work method statements • site-specific job safety analyses and other site specific documentation as required • task plans /schedules and structural plans.
<i>Forces and loads</i> may include but are not limited to:	<ul style="list-style-type: none"> • dead loads • live loads • static load • dynamic loads • wind loads.
<i>Associated plant</i> may include but is not limited to:	<ul style="list-style-type: none"> • gin poles • flying foxes • shear legs • cable ways • guyed derricks • structures, and • suspended scaffolds • fabricated hung scaffolds.
<i>Appropriate personnel</i> may include but not limited to:	<ul style="list-style-type: none"> • engineers • supervisors • colleagues • managers who are authorised to take responsibility for the workplace or operations.
<i>Rigging equipment</i> may include but is not limited to:	<ul style="list-style-type: none"> • scaffolds • elevated work platforms • stages • personnel box • cantilevered crane loading platforms • mast climbers

RANGE STATEMENT

- safety screens and shutters
 - cranes including but not limited to:
 - non-slewing cranes
 - mobile slewing cranes
 - vehicle loading cranes
 - tower cranes
 - self-erecting tower cranes
 - portal boom cranes
 - derrick cranes
 - bridge and gantry.
- Associated equipment* may include but not limited to:
- all associated equipment at the basic and intermediate rigging level.
- Procedures* may include but not limited to:
- manufacturer's guidelines (instructions, specifications or checklists)
 - industry operating procedures, relevant codes of practice
 - workplace procedures (work instructions, operating procedures, checklists).
- Safety equipment* may include but not limited to:
- safety harness
 - energy absorber
 - lanyard
 - inertia reel
 - safety nets
 - static lines.
- Communication methods* may include but are not limited to:
- verbal and non-verbal language
 - written instructions
 - signage
 - hand signals
 - listening
 - questioning to confirm understanding
 - appropriate worksite protocol.
- NB:** Mobile phones are not to be used for signalling purposes during the rigging process.
- Appropriate personnel* may include but are not limited to:
- other riggers
 - doggers
 - crane operators.
- Communication equipment* may include but is not limited to:
- fixed channel two-way radios.

RANGE STATEMENT

Hazard prevention/control

measures may include but are not limited to:

- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination.

Ground suitability may include but not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete
- suspended concrete floors
- building roofs
- landings
- ground bearing pressure.

Temporary connections may include but not limited to:

- knots
- bends
- hitches
- whipping.

Flexible Steel Wire Rope (FSWR) includes:

- identification, uses and connections.

May include termination for:

- static lines
- guys
- purchase systems
- lashing
- cranes
- hoist and winch ropes.

CPCCOHS1001A Work safely in the construction industry

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to undertake Occupational Health and Safety (OHS) induction training within the construction industry.

It requires the ability to demonstrate personal awareness of OHS legislative requirements, and the basic principles of risk management and prevention of injury and illness in the construction industry.

Licensing requirements will apply to this unit of competency depending on the regulatory requirements of each jurisdiction.

Application of the Unit

Application of the unit

This unit of competency supports the attainment of the basic OHS knowledge required prior to undertaking designated work tasks within any of the sectors within the construction industry. The unit relates directly to the general induction training program specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify OHS legislative requirements.	1.1. Applicable <i>OHS legislative requirements</i> relevant to own work, role and responsibilities are identified and explained. 1.2. Duty of care requirements are identified. 1.3. Own responsibilities to comply with <i>safe work practices</i> are identified and explained.
2. Identify construction hazards and control measures.	2.1. Basic principles of risk management are identified. 2.2. <i>Common construction hazards</i> are identified and discussed. 2.3. <i>Measures for controlling</i> hazards and risks are identified.
3. Identify OHS communication and reporting processes.	3.1. OHS communication processes, information and documentation are identified and discussed. 3.2. Role of <i>designated OHS personnel</i> is identified and explained. 3.3. <i>Safety signs and symbols</i> are identified and explained. 3.4. Procedures and <i>relevant authorities</i> for reporting hazards, <i>incidents</i> and injuries are identified.
4. Identify OHS incident response procedures.	4.1. <i>General procedures</i> for responding to incidents and <i>emergencies</i> are identified and explained. 4.2. Procedures for accessing first aid are identified. 4.3. Requirements for the selection and use of relevant <i>personal protective equipment</i> are identified and demonstrated. 4.4. <i>Fire safety equipment</i> is identified and discussed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
 - clarify OHS legislative requirements

REQUIRED SKILLS AND KNOWLEDGE

- verbally report construction hazards and risks
- ask effective questions
- relay information to others
- discuss OHS issues and information
- comprehension skills to:
 - explain the basic OHS legislative requirements which will be applicable to own work
 - explain the meaning of safety signs and symbols
 - identify common construction hazards
 - discuss the basic principles of risk management.

Required knowledge

Required knowledge for this unit is:

- applicable Commonwealth, State or Territory OHS legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- basic principles of risk management and assessment for construction work
- common construction hazards
- common construction safety signage and its meanings
- general construction emergency response and evacuation procedures
- general construction work activities that require licenses, tickets or certificates of competency
- general first aid response requirements
- general procedures for raising OHS issues
- general procedures for reporting OHS hazards, accidents, incidents, emergencies, injuries, near misses and dangerous occurrences
- general procedures for responding to hazards, incidents and injuries
- general workers' compensation and injury management requirements
- OHS hierarchy of controls
- OHS responsibilities and rights of duty holders, including:
 - persons in control of construction work/projects
 - employers and self-employed persons
 - supervisors
 - employees
 - designers
 - inspectors
 - manufacturers and suppliers
- own responsibilities to comply with safe work practices relating to:
 - housekeeping

REQUIRED SKILLS AND KNOWLEDGE

- identification of hazards
- preventing bullying or harassment
- smoking
- use of amenities
- use of drugs and alcohol
- role of OHS committees and representatives
- types of common personal protective equipment and fire safety equipment
- types of OHS information and documentation.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence must confirm personal awareness of the following:

- applicable OHS legislative and safety requirements for construction work including duty of care
- the range of common construction hazards and procedures for the assessment of risk and application of the hierarchy of control
- OHS communication processes, information and documentation including the role of OHS committees and representatives, the meaning of common safety signs and symbols, and procedures for reporting hazards, incidents and injuries
- general procedures for responding to incidents and emergencies including evacuation, first aid, fire safety equipment and PPE.

Context of and specific resources for assessment

- Resources must be available to support the program including participant materials and other information or equipment related to the skills and knowledge covered by the program.
- It is recommended that the assessment tool designed specifically to support this unit of competency will provide consistency in assessment outcomes.
- Where applicable, physical resources should include equipment modified for people with disabilities
- Access must be provided to appropriate assessment support when required.
- Assessment processes and techniques must be culturally appropriate, and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed
- In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

EVIDENCE GUIDE

Questioning will be undertaken in such a manner as is appropriate to the oracy, language and literacy levels of the operator, any cultural issues that may affect responses to the questions, and reflecting the requirements of the competency and the work being performed.

Method of assessment

Assessment methods may include more than one of the following:

- practical assessment
- oral questioning
- written test
- work-based activities
- simulated project based activity

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS legislative requirements relate to:

- Australian standards
- construction industry OHS standards and guidelines
- duty of care
- health and safety representatives, committees and supervisors
- licences, tickets or certificates of competency
- National Code of Practice for Induction Training for Construction Work
- national safety standards
- OHS and welfare Acts and regulations
- safety codes of practice.

Duty of care requirements relate to:

- legal responsibility under duty of care to do everything reasonably practicable to protect others from harm

RANGE STATEMENT

- Safe work practices*** include:
- own responsibilities to comply with safe work practices, including activities that require licences, tickets or certificates of competency
 - relevant state OHS requirements, including employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors.
 - access to site amenities, such as drinking water and toilets
 - general requirements for safe use of plant and equipment
 - general requirements for use of personal protective equipment and clothing
 - housekeeping to ensure a clean, tidy and safer work area
 - no drugs and alcohol at work
 - preventing bullying and harassment
 - smoking in designated areas
 - storage and removal of debris.
- Risk*** relates to:
- likelihood of a hazard causing injury or harm.
- Principles of risk management*** include:
- assessing the risks involved
 - consulting and reporting ensuring the involvement of relevant workers
 - controlling the hazard
 - identifying hazards
 - reviewing to identify change or improvement.
- Hazard*** relates to:
- any thing (including an intrinsic property of a thing) or situation with the potential to cause injury or harm.
- Common construction hazards*** include:
- confined spaces
 - electrical safety
 - excavations, including trenches
 - falling objects
 - hazardous substances and dangerous goods
 - HIV and other infectious diseases
 - hot and cold working environments
 - manual handling
 - noise
 - plant and equipment

RANGE STATEMENT

Measures for controlling risk to eliminate or minimise hazards in accordance with the hierarchy of control include:

- traffic and mobile plant
- unplanned collapse
- ultraviolet (UV) radiation
- working at heights.

OHS communication processes include:

- elimination
- substitution
- isolation
- engineering control
- administrative control
- personal protective equipment.
- discussions with OHS representatives
- OHS meetings
- OHS notices, newsletters, bulletins and correspondence
- OHS participative arrangements
- processes for raising OHS issues
- toolbox talks
- workplace consultation relating to OHS issues and changes.

OHS information and documentation includes:

- accident and incident reports
- Acts and regulations
- Australian standards
- codes of practice
- construction documentation and plans
- emergency information contact
- evacuation plans
- guidance notes
- job safety analyses
- labels
- material safety data sheets (MSDS)
- proformas for reporting hazards, incidents and injuries
- reports of near misses and dangerous occurrences
- risk assessments
- safe work method statements
- safety meeting minutes
- site safety inspection reports.

Designated OHS personnel includes:

- first aid officers
- OHS committee members

RANGE STATEMENT

- Safety signs and symbols*** include:
- OHS representatives
 - supervisors.
 - emergency information signs (e.g. exits, equipment and first aid)
 - fire signs (e.g. location of fire alarms and firefighting equipment)
 - hazard signs (e.g. danger and warning)
 - regulatory signs (e.g. prohibition, mandatory and limitation or restriction)
 - safety tags and lockout (e.g. danger tags, out of service tags).
- Relevant authorities*** include:
- emergency services (e.g. police, ambulance, fire brigade and emergency rescue)
 - OHS regulatory authority
 - supervisor.
- Incidents*** include:
- accidents resulting in personal injury or damage to property
 - near misses or dangerous occurrences which do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:
 - breathing apparatus malfunctioning to the extent that the user's health is in danger
 - collapse of the floor, wall or ceiling of a building being used as a workplace
 - collapse or failure of an excavation more than 1.5 metres deep (including any shoring)
 - collapse or partial collapse of a building or structure
 - collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment
 - damage to or malfunction of any other major plant
 - electric shock.
 - electrical short circuit, malfunction or explosion
 - uncontrolled explosion, fire or escape of gas, hazardous substance or steam
 - any other unintended or uncontrolled incident or event arising from operations carried on at a

RANGE STATEMENT

	workplace.
<i>General procedures</i> for responding to incidents and emergencies include:	<ul style="list-style-type: none"> • basic emergency response (keep calm, raise alarm, obtain help) • evacuation • notification of designated OHS personnel and authorities • notification of emergency services (e.g. when and how) • referring to site emergency plans and documentation.
<i>Emergencies</i> include:	<ul style="list-style-type: none"> • chemical spill • fire • injury to personnel • structural collapse • toxic and/or flammable vapours emission • vehicle/mobile plant accident.
<i>Personal protective equipment</i> includes:	<ul style="list-style-type: none"> • aprons • arm guards • eye protection • gloves • hard hat • hearing protection • high visibility retro reflective vests • protective, well fitting clothing • respiratory protection • safety footwear • UV protective clothing and sunscreen.
<i>Fire safety equipment</i> includes:	<ul style="list-style-type: none"> • breathing apparatus • fire blankets • firefighting equipment.

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to operate equipment to gather information about persons, items or assets. It requires the ability to determine surveillance methods, operate surveillance equipment and document information. It also requires compliance with legislation applicable to investigation processes.

This unit may form part of the licensing requirements for persons engaged in investigative work in those states and territories where these are regulated activities.

Application of the Unit

Application of the unit This unit of competency has application in a range of work roles in investigative services. Work is performed under limited supervision and competency requires some judgement and decision-making. The knowledge and skills described in this unit are to be applied within relevant legislative guidelines.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the required skills and knowledge section and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Select equipment required.	<p>1.1 <i>Assignment instructions</i> are reviewed to identify <i>information gathering activities</i> and <i>equipment</i> needs in accordance with client and <i>legislative requirements</i>.</p> <p>1.2 Necessary equipment is <i>sourced</i> and accessed in accordance with assignment instructions.</p> <p>1.3 Routine <i>pre-operational checks</i> are carried out according to <i>manufacturer's instructions</i>.</p> <p>1.4 Faults and malfunctions are reported and action initiated to rectify problems or seek replacement as appropriate.</p>
2 Operate equipment.	<p>2.1 Training, licensing and legislative requirements are identified and complied with prior to and during equipment operation.</p> <p>2.2 Equipment is operated in a safe and controlled manner according to manufacturer's instructions.</p> <p>2.3 <i>Occupational Health and Safety (OHS) issues</i> are identified and appropriate risk control measures implemented.</p>
3 Maintain and store equipment.	<p>3.1 Cleaning and maintenance of equipment are conducted in accordance with manufacturer's instructions.</p> <p>3.2 Complex faults or repair requirements outside area of responsibility or competence are reported for specialist advice.</p> <p>3.3 Equipment is stored in a safe and secure area in accordance with manufacturer's instructions.</p> <p>3.4 Records and <i>documentation</i> are completed and maintained with due regard to client confidentiality.</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge and their level required for this unit.

Required skills

- apply safe workplace practices and procedures
- communicate in a clear and concise manner
- communicate using appropriate channels and communication modes
- identify and comply with applicable legal and procedural requirements, including licensing requirements relevant to information gathering activities

REQUIRED SKILLS AND KNOWLEDGE

- identify faults and determine appropriate repair or replacement action
- interpret and follow instructions and procedures
- maintain inventory of equipment and consumables
- measure and calculate consumption and servicing requirements
- operate a range of information gathering equipment
- organise equipment and resource requirements
- read and interpret basic technical information
- record, report and document information which may be used as evidence
- relate to people from a range of social, cultural and ethnic backgrounds and of varying physical and mental abilities
- risk assessment
- solve routine problems
- use and interpret maps and street directories.

Required knowledge

- applicable licensing and legal requirements relevant to investigative operations
- common and complex equipment faults
- configuration and operation of information gathering equipment used from a vehicle
- interviewing, reviewing and debriefing processes
- legal implications relating to use of ancillary equipment for listening, tracking, observation, record keeping associated with note taking
- observation and monitoring techniques
- operational functions of a range of investigative equipment
- pre-operational checking functions and procedures
- principles of effective communication including interpersonal techniques
- procedures for gathering information by factual investigation or surveillance
- reporting and documentation requirements
- requirements for the securing and storage of information gathering equipment and consumables
- routine maintenance procedures for investigative equipment.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- selecting information gathering equipment appropriate to the investigative operation based on information gathered and a review of client and assignment instructions
- carrying out pre-operational checks and identifying and reporting faulty, malfunctioning or damaged equipment for repair or replacement
- safely and effectively operating a range of information gathering equipment in compliance with applicable legislative and licensing requirements
- Cleaning, maintaining and storing information gathering equipment and completing and maintaining associated records and documentation.

Context of and specific resources for assessment

Context of assessment includes:

- a setting in the workplace or environment that simulates the conditions of performance described in the elements, performance criteria and range statement.

Resource implications for assessment include:

- access to a registered provider of assessment services
- access to a suitable venue and equipment
- access to plain English version of relevant statutes and procedures
- assessment instruments including personal planner and assessment record book
- work schedules, organisational policies and duty statements.

Reasonable adjustments must be made to assessment processes where required for people with disabilities. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

This unit of competency should be assessed using questioning of underpinning knowledge and skills.

Guidance information for assessment

Assessment processes and techniques must be culturally appropriate and suitable to the language, literacy and numeracy capacity of the candidate and the competency being assessed. In all cases where practical assessment is used, it should be combined with targeted questioning to assess the underpinning knowledge.

Oral questioning or written assessment may be used to assess underpinning knowledge. In assessment situations where the candidate is offered a choice between oral questioning and written assessment, questions are to be identical.

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assignment instructions may include:

- client identification information
- incident and security risk response procedures
- investigation purpose and objective
- investigation tasks and procedures
- investigation timeframe
- personal presentation requirements
- premises location and layout
- reporting and documentation requirements
- resource and equipment requirements
- surveillance plan
- travel routes and schedules.

Information gathering activities may include:

- mobile and static foot surveillance
- mobile and static vehicle surveillance
- use of 35mm camera
- use of electronic surveillance equipment
- use of video equipment.

Equipment for information gathering may include:

- audible and visual warning devices
- binoculars, telephoto lens, tripod
- detection devices
- electronic counter surveillance equipment
- electronic readers and recognition controls
- infra-red, night vision equipment
- measuring tape
- mirrors
- mobile phone and other means of communication
- scanners
- spares and consumables (notepads, guise, pens, film,

batteries, licences, street maps, telephone directories, light bulbs, credit cards, cash, protective clothing, public transport tickets, vehicle fuel)

Legislative requirements may relate to:

- torch
- videos, cameras, recorders
- voice recorders.
- applicable commonwealth, state and territory legislation which affects investigative work such as:
 - workplace safety
 - environmental issues
 - equal employment opportunity
 - industrial relations
 - anti-discrimination and diversity
- Australian standards and quality assurance
- authority to conduct investigation
- award and enterprise agreements
- evidence collection
- freedom of information
- licensing arrangements and certification requirements
- privacy requirements
- relevant industry codes of practice
- restrictions in the use of recording devices
- surveillance and listening devices
- trade practices.

Sources of information gathering equipment may include:

- data
- distributor
- internal records
- manufacturer
- market availability
- organisational stores
- publications such as industry newsletters, advertising brochures, magazines, professional association magazines
- retailer.

Routine pre-operational checks may include:

- checking log books and maintenance schedule
- cleaning, priming, tightening, basic repairs and adjustments
- identification and segregation of unsafe or faulty equipment for repair or replacement
- observing and monitoring noise levels for correct operation
- visual checks for wear and tear.

Manufacturer's

- attached to the equipment

instructions may be found in:

- equipment specifications
- operator manual
- plans and diagrams
- printed instruction leaflets
- warranty documents.

Occupational Health and Safety (OHS) issues may relate to:

- potential or existing hazards or risks
- safety of self and others.

Documentation may include:

- computer-based information
- diary logs
- inventory
- maintenance records
- original and back-up tapes
- original, copy and negative film or photographs
- record of usage of equipment (written, card, electronic).

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan preparation timetable	1.1. All critical milestones are identified to ensure financial <i>forecasts</i> and projections can be prepared within timeframes 1.2. Business plans, financial forecasting and processing systems are reviewed to identify timeframes and parameters and any potential conflicts
2. Identify assumptions and parameters	2.1. Business plans and exception reports are reviewed to identify and resolve conflicts in assumptions 2.2. Assumptions and parameters are reviewed to ensure compliance with <i>organisation policy and procedures</i> 2.3. <i>Current and historical financial reports</i> are analysed to establish trends and the <i>external environment</i> examined to gain an objective overview
3. Issue instructions and relevant aids for preparation of forecasts and projections	3.1. Instructions issued are clear and unambiguous and comply with organisation format to ensure ease of use and consistency of interpretation 3.2. Types of business are identified to enable effective <i>financial models</i> to be selected with training provided to ensure comprehensive understanding and effective use of the models by users
4. Collect, consolidate, model and analyse data	4.1. Data is reviewed to ensure consistency with actual results and model used with analysis results documented in a clear and unambiguous way 4.2. Data collected are reliable, valid, complete and comprehensive 4.3. Processing is completed in accordance with established timetable and data are consolidated in a logical structured format that enables ready analysis
5. Document results and obtain approval	5.1. Results are documented in a clear and understandable manner and in a format suitable to meet needs of target <i>users</i> 5.2. All approvals are obtained in accordance with management objectives, financial and organisation policies and the results distributed within the timetable

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- well-developed communication skills to:
 - determine and confirm forecasting and projection requirements, using questioning and active listening as required
 - negotiate timelines and responsibilities
 - liaise with others, share information, listen and understand
 - use language and concepts appropriate to cultural differences
- well-developed research and analysis skills for accessing, analysing and managing financial services information and analysing data
- well-developed literacy skills for preparing clear written reports for organisations and business units in required formats
- highly developed numeracy skills for financial calculations and analysis, estimating and forecasting
- IT skills for using integrated financial systems and using spreadsheets and databases and internet information
- learning skills to maintain knowledge of forecasting systems and best practice and procedures
- problem solving skills to identify any forecasting issues that have the potential to impact on organisations and to develop options to resolve these issues when they arise
- organisational skills, including the ability to plan and sequence work and correctly schedule reporting

Required knowledge

- financial industry codes of practice
- forecasting techniques, models and best practice
- organisation policy and procedures
- relevant Acts and regulations impacting on the financial services industry
- relevant legal systems and procedures impacting on the financial services industry

Evidence Guide

EVIDENCE GUIDE	
<p>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify, interpret and comply with organisation policies and procedures regarding preparing financial forecasts and projections • apply standard accounting principles and techniques • accurately identify assumptions and parameters of forecasts • collect, consolidate, model and analyse data in a timely manner, document results and obtain approval where required.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • competency is demonstrated in the context of the financial services work environment and conditions specified in the range statement either in a relevant workplace or a closely simulated work environment • access to and the use of a range of common office equipment, technology, software and consumables • access to an integrated financial software system and data • access to organisational policies and procedures documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples, in combination, are appropriate for this unit:</p> <ul style="list-style-type: none"> • evaluating an integrated activity which combines the elements of competency for the unit or a cluster of related units of competency • verbal or written questioning on underpinning knowledge and skills • setting and reviewing business simulations or scenarios • evaluating samples of work • accessing and validating third party reports.
Guidance information for assessment	

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Forecasts</i> may include:	<ul style="list-style-type: none"> • capital expenditure • claims • investment income • long-term (e.g. 5 year) • management expenses • premiums • reinsurance levels • short-term (e.g. 1 year).
<i>Organisation policy and procedures</i> may include:	<ul style="list-style-type: none"> • computer system documentation • internal control guidelines • operations manuals.
<i>Current and historical financial reports</i> may include:	<ul style="list-style-type: none"> • change in renewal date of policies • commission and charges ratios • customer retention • loss reports • new business reports.
<i>External environment</i> may include:	<ul style="list-style-type: none"> • activities of competitors • consumer activity • finance markets • government policy • inflation rates • market place • market conditions.
<i>Financial models</i> may include:	<ul style="list-style-type: none"> • account structure at summary level and key ratios • alternative scenarios • cost or profit centre analysis • format for calculations • standalone or be driven from computer ledgers • sensitivity analysis • simulations.
<i>Users</i> may include:	<ul style="list-style-type: none"> • Australian Bureau of Statistics (ABS) • banks

RANGE STATEMENT

	<ul style="list-style-type: none"> • branch managers • claims managers • directors • distribution stream managers • finance section • product managers • regional or state managers • shareholders • underwriting managers.

Co-requisite units		

ICASAS301A Run standard diagnostic tests

Modification History

Version	Comments
ICASAS301A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to troubleshoot problems and conduct diagnostic tests on a range of platforms.

Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to run diagnostics to determine the status of a computer.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<p><i>Elements describe the essential outcomes of a unit of competency.</i></p>	<p><i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i></p>

Elements and Performance Criteria

<p>1. Identify common symptoms and preventative maintenance techniques</p>	<p>1.1 Develop a <i>troubleshooting process</i> to help resolve problems</p> <p>1.2 Determine the <i>specific symptoms</i> relevant to different types of hardware, operating system and printer problems</p> <p>1.3 Identify <i>common preventative maintenance</i> techniques to support maintenance strategies</p>
<p>2. Operate system diagnostics</p>	<p>2.1 Run the system diagnostic program according to specification</p> <p>2.2 Modify the system configuration as indicated by the diagnostic program</p> <p>2.3 Carry out preventative maintenance in line with <i>organisational guidelines</i></p>
<p>3. Scan system for viruses</p>	<p>3.1 Scan the system to check and maintain virus protection</p> <p>3.2 Report identified viruses to an <i>appropriate person</i></p> <p>3.3 Remove virus infections found by the scan using <i>software</i> tools and procedures, or by restoring backups</p> <p>3.4 Document relevant symptom and removal information</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test results
- communication skills to present information
- literacy skills to interpret computer manuals
- numeracy skills to:
 - interpret results
 - take test measurements
- planning and organisational skills to plan, prioritise and monitor own work
- problem-solving skills for a defined range of predictable problems
- technical skills to use diagnostic tools.

Required knowledge

- client business domain, including client organisation structure and business functionality
- current industry-accepted hardware and software diagnostic tools, including products that manage:
 - backup procedures
 - configuration procedures
 - diagnostic software and hardware
 - hardware maintenance
 - organisational security procedures
- desktop applications and operating systems.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • troubleshoot hardware and OS problems • conduct diagnostic tests on a range of platforms according to preventative maintenance and diagnostic policy • identify the root causes of the problems • scan systems for computer viruses • remove viruses using software tools and procedures • remove viruses by restoring backups.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • security guidelines • backup procedures • diagnostic software • organisational guidelines • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate: <ul style="list-style-type: none"> • troubleshooting problems • conducting diagnostic tests • adhering to organisation's operational procedures • review of candidate's documented report of symptom and its removal • verbal or written questioning to assess candidate's knowledge of preventative maintenance within organisational guidelines.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and</p>

	<p>the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Troubleshooting process</i> may include:</p>	<ul style="list-style-type: none"> • identifying the problem by questioning the user and identifying user changes to computer • performing backups before making changes • establishing a theory of probable cause • testing the theory to determine cause: <ul style="list-style-type: none"> • once theory is confirmed determine next steps to resolve problem • if theory is not confirmed re-establish new theory or escalate • establishing a plan of action to resolve the problem and implement the solution • verifying full system functionality and if applicable implementing preventative measures • documenting findings, actions and outcomes.
<p><i>Specific symptoms</i> may include:</p>	<ul style="list-style-type: none"> • hardware-related symptoms: <ul style="list-style-type: none"> • alerts • excessive heat • noise • odours • status light indicators • visible damage to cable or plastic • laptop or mobile devices: <ul style="list-style-type: none"> • issues: <ul style="list-style-type: none"> • keyboard • pointer • power conditions • stylus • video • wireless card issues • methods: <ul style="list-style-type: none"> • check LCD cut-off switch • check switch for built-in wi-fi or external antennas • plug in external monitor • remove unneeded peripherals

	<ul style="list-style-type: none"> • toggle Fn keys or hardware switches • verify backlight functionality and pixilation • verify power (e.g. LEDs, swap AC adapter) • operating system (OS) related symptoms: <ul style="list-style-type: none"> • application install • bluescreen • incorrect or incompatible driver • input or output device • print spool stalled • start or load • system lock-up • Windows-specific printing problems • printers: <ul style="list-style-type: none"> • manage print jobs • failure to print a test page • print spooler • printer properties and settings • use documentation and resources: <ul style="list-style-type: none"> • internet or web-based • training materials • user or installation manuals.
<p><i>Common preventative maintenance</i> may include:</p>	<ul style="list-style-type: none"> • backup procedures • ensuring proper environment • optimising hard drives • power devices appropriate source: <ul style="list-style-type: none"> • power strip • surge protector • UPS • physical inspection • scanning for viruses • scheduling fault-finding • scheduling preventative maintenance: <ul style="list-style-type: none"> • check disk • defrag • scandisk • start-up programs • updates: <ul style="list-style-type: none"> • driver • firmware • OS

	<ul style="list-style-type: none"> • security • use of appropriate repair tools and cleaning materials: <ul style="list-style-type: none"> • compressed air • computer vacuum and compressors • lint-free cloth.
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> • communication methods • content of emails • dispute resolution • document procedures and templates • downloading information and accessing particular websites • financial control mechanisms • opening mail with attachments • personal use of emails and internet access • virus risk.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor.
<i>Software</i> may include:	<ul style="list-style-type: none"> • diagnostic tools • OS and modules for configuration • types of virus and impact • virus protection software.

Unit Sector(s)

Systems administration and support

ICAICT302A Install and optimise operating system software

Modification History

Version	Comments
ICAICT302A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit defines the performance outcomes, skills and knowledge required to install operating system (OS) software and to make adjustments as a means of optimising the system to accommodate business and client needs.

Application of the Unit

This unit applies to individuals in a technical support role who are required to identify the most suitable OS to meet organisational requirements. The unit develops the ability to install, configure and optimise the OS to identified vendor specifications.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine function of operating system	<p>1.1 Identify and demonstrate understanding of the purposes of <i>operating system</i></p> <p>1.2 Distinguish between batch system, real-time system, multi-tasking system</p> <p>1.3 Compare and contrast different operating systems and their features</p> <p>1.4 Identify and demonstrate knowledge of the basic functions of operating system, including file system, memory management, process scheduling</p> <p>1.5 Identify and demonstrate management of virtual memory</p>
2. Obtain operating system	<p>2.1 Contact operating system vendors to obtain technical specifications and system requirements</p> <p>2.2 Identify the process and steps required to install and configure the operating system using <i>installation components</i></p> <p>2.3 Document adjustment recommendations and provide to <i>appropriate person</i></p> <p>2.4 Determine and apply knowledge of licensing, hardware and security requirements</p>
3. Install, configure and optimise operating system	<p>3.1 Install, configure and test operating system using installation components and <i>boot-utility options</i></p> <p>3.2 Use the relevant <i>operating system user interface</i> to correctly configure the installation</p> <p>3.3 Optimise the system to meet <i>organisational requirements</i></p> <p>3.4 Document the system according to organisational requirements</p> <p>3.5 Install the operating system with minimal disruption to <i>client</i> or users</p>
4. Provide instruction to meet new software requirements	<p>4.1 Provide one-to-one instruction about changes to the client or users as required</p> <p>4.2 Obtain client evaluation about new system to ensure requirements are met, using appropriate <i>feedback mechanism</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with people working across different levels and in different contexts, such as operating system vendors and clients
- literacy skills to:
 - interpret technical computer installation manuals
 - obtain written and verbal feedback from clients
 - present information, such as the use of diagnostic tools
 - provide verbal instructions to client
- technical skills to:
 - install and configure operating system software
 - write instructions for clients.

Required knowledge

- current industry-accepted hardware and software products
- functions and features of operating systems used by the organisation
- installation and configuration of systems software
- architecture of current technical systems
- deployment of current organisational systems
- organisational requirements for operating system software
- prerequisites for system software installation
- set-up and configuration procedures
- software packages supported by the organisation
- system's current functionality
- system's diagnostic software
- vendor specifications and requirements for installation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> install, configure and test an operating system to improve system performance with minimum disruption to clients.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> personal computer where installation may be performed OS software and technical documentation organisational documentation appropriate learning and assessment support when required modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of candidate: <ul style="list-style-type: none"> questioning team members, supervisors and clients installing and testing an operating system review of candidate's practical assignments and reports.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Operating system</i> may include:</p>	<ul style="list-style-type: none"> • Linux: <ul style="list-style-type: none"> • Debian • Fedora • Google Chrome OS • Kubuntu • Linux Mint • Red Hat • Ubuntu • Mac OS X • Microsoft Windows: <ul style="list-style-type: none"> • Windows 2000 • Windows XP (32 bit versus 64 bit) • Windows Vista (32 bit versus 64 bit) • Windows 7 (32 bit versus 64 bit) • mobile operating systems: <ul style="list-style-type: none"> • Android • Blackberry • iPhone • Palm • Symbian • Windows Phone 7 series.
<p><i>Installation components</i> may include:</p>	<ul style="list-style-type: none"> • configure power management: <ul style="list-style-type: none"> • hibernate • sleep timers • standby • suspend • wake on local area network (LAN) • demonstrate safe removal of peripherals • device manager: <ul style="list-style-type: none"> • driver signing • install and update devices drivers • verify

	<ul style="list-style-type: none"> • directory structures: <ul style="list-style-type: none"> • create folders • navigate directory structures • disk preparation order: <ul style="list-style-type: none"> • format drive • partition • start installation • files: <ul style="list-style-type: none"> • attributes • creation • extensions • permissions • file systems, such as FAT32 versus new technology file system (NTFS) • installation methods: <ul style="list-style-type: none"> • boot media, such as DVD, CD, floppy or universal serial bus (USB) • factory recovery partition • install from image • network installation • recover CD • operating system installation options: <ul style="list-style-type: none"> • file system type • network configuration • repair install • user data migration - user state migration tool (USMT) • verification of hardware compatibility and minimum requirements • virtual memory.
Appropriate person may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor.
Boot-utility options may include:	<ul style="list-style-type: none"> • automated system recovery (ASR) • boot options • boot to restore point • disk boot order or device priority • emergency repair disk (ERD) • recovery console • recovery options • safe mode • types of boot devices (disk, network, USB).

<p><i>Operating system user interface</i> may include:</p>	<ul style="list-style-type: none"> • Windows-adopting interface to undertake similar tasks with chosen operating system: <ul style="list-style-type: none"> • administrative tools, such as performance monitor, event viewer, services and computer management • command prompt utilities, such as ipconfig, Ping and Telnet • control panel • location of basic network settings between OS versions • MMC • my computer • my network places or home group • run line utilities: <ul style="list-style-type: none"> • cmd • direct diagnostics (DXdiag) • msconfig • MSINFO32 • REGEDIT • start menu • task bar or systray • task manager • Windows Explorer - Libraries in Windows 7.
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • availability of system to be optimised • client support documentation • in-house or vendor • contracting arrangements relating to IT purchasing • IT policy and procedures relating to service levels and installation • level of complexity of technical manuals.
<p><i>Client</i> may include:</p>	<ul style="list-style-type: none"> • department within the organisation • person with special needs • person within a department • third party.
<p><i>Feedback mechanism</i> may include:</p>	<ul style="list-style-type: none"> • interview • meeting • questionnaire • survey.

Unit Sector(s)

General ICT

ICAICT303A Connect internal hardware components

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to modify and connect system hardware components according to client and user requirements.

Application of the Unit

This unit applies to support technicians who modify and connect system components. Ensuring the integrity of the system after the operation is critical in the context of minimising client disruption and need for continuing desktop operation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Identify, categorise and distinguish between the different types of internal hardware components	<p>1.1 Identify and categorise the different <i>internal hardware components</i></p> <p>1.2 Explain the purpose and characteristics of the different internal hardware component categories</p> <p>1.3 Distinguish between the different types of devices within each internal hardware component category</p>
2. Determine components required	<p>2.1 Identify and clarify user internal hardware component requirements according to <i>organisational guidelines</i></p> <p>2.2 Organise and record user component requirements, pass on to <i>appropriate person</i> for evaluation and vendor selection</p>
3. Obtain components	<p>3.1 Contact vendors to obtain technical specifications for the proposed components</p> <p>3.2 Assess the options and provide recommendations to the appropriate person for final analysis</p> <p>3.3 Obtain components to prepare for installation</p>
4. Install components	<p>4.1 Develop plans, with prioritised tasks and contingency arrangements, for the installation of selected components with minimum disruption to <i>clients</i></p> <p>4.2 Liaise with appropriate person to obtain approval for the plans</p> <p>4.3 Install and configure components according to plan, installation procedures and <i>organisational requirements</i></p> <p>4.4 Test components for error-free performance, using available technology</p> <p>4.5 Identify and resolve identified problems</p> <p>4.6 Test and enhance system performance, using knowledge of the system, to meet organisational benchmarks</p> <p>4.7 Document the installation and configuration process according to organisation guidelines</p>
5. Evaluate modified system	<p>5.1 Collect client or user feedback and analyse against client requirements</p> <p>5.2 Correct identified shortcomings in the system and record actions</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - consult with peers and supervisors, and internal and external clients
 - interpret technical computer installation manuals
 - interpret user manuals and help functions
- literacy skills to:
 - organise resources for one-to-one instruction
 - plan, prioritise and organise work
 - write technical reports and maintain records
- planning and organisational skills to address technical issues
- problem-solving skills to anticipate and respond to a range of driver-related errors that may arise
- technical skills to:
 - comprehend how the operating system will communicate with the installed component
 - install components
 - test components using available technology
 - test system performance.

Required knowledge

- areas of the operating system relevant to configuration and testing
- current industry-accepted hardware and software products
- environmental considerations in e-waste disposal
- organisational guidelines and organisational requirements with regard to safety, recycling and component installation
- system's diagnostic software and current functionality
- vendor specifications and requirements for component installation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify and categorise the different types of internal hardware components • modify system's hardware to meet client requirements • plan the modification and connect internal hardware components according to vendor and technical specifications • install components across a variety of situations and account for unexpected contingencies.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • personal computer and internal hardware components for installation • current industry standard performance testing software • documents detailing organisational guidelines and requirements • technical manuals and tools • appropriate learning and assessment support when required • modified equipment for people with special needs. <p>Note: The careful planning and promotion of hardware upgrades and changes are critical to the effective support of business functions. Hardware modifications need to be risk managed similar to other business processes. The effective management and execution of the component maintenance and replacement process may significantly determine the amount of downtime a company encounters.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of system diagnostic software and system functionality • direct observation of candidate connecting internal hardware components • evaluation of client requirements and candidate's final recommendations • review of candidate's written notes.

	<p>Note: Evidence for assessment from industry or vendor-certified training may be presented for the whole or part of this unit depending on the range of variables and performance criteria.</p>
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Internal hardware components</i> may include:</p>	<ul style="list-style-type: none"> • adapter card components: <ul style="list-style-type: none"> • communications: <ul style="list-style-type: none"> • modem • network interface card (NIC) • I/O: <ul style="list-style-type: none"> • parallel • small computer system interface (SCSI) • serial • universal serial bus (USB) • multimedia: <ul style="list-style-type: none"> • capture cards • sound card • TV tuner cards • video: <ul style="list-style-type: none"> • AGP • peripheral component interconnect (PCI) • PCIe • cooling system components: <ul style="list-style-type: none"> • CPU and case fans • heat sinks • liquid cooling systems • thermal compound • CPU components and features: <ul style="list-style-type: none"> • 32 bit versus 64 bit • hyper threading • identify CPU types: <ul style="list-style-type: none"> • AMD • Intel • multi-core: <ul style="list-style-type: none"> • dual core • quad core • triple core

Unit Sector(s)

General ICT

ICASAS305A Provide IT advice to clients

Modification History

Version	Comments
ICASAS305A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to provide IT advice and support to clients, including the communication of comprehensive technical information.

Application of the Unit

This unit applies to frontline technical support personnel responsible for providing technical support explained in terms that a user can understand.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Review client support issues	<p>1.1 Check for new problems logged by client</p> <p>1.2 Check previous logs for similar problems or requests from client</p> <p>1.3 Investigate and document the support issues affecting the client</p> <p>1.4 Notify client of the results of <i>investigation</i> and provide <i>advice and support</i> on findings</p> <p>1.5 Obtain client feedback and make changes</p>
2. Provide advice on software, hardware or network	<p>2.1 Confirm software, hardware or network requirements with client</p> <p>2.2 Investigate and document a <i>solution</i></p> <p>2.3 Document additional requirements identified in the investigation and refer them to the client</p> <p>2.4 Obtain approval from the client to implement the solution</p> <p>2.5 Investigate and document the amount of technical support the client may require</p> <p>2.6 Discuss and agree the level of technical support identified with the client</p> <p>2.7 Arrange a time with the client when support will take place</p> <p>2.8 Provide technical support as part of group or one-to-one instruction to the client</p> <p>2.9 Provide manuals and help <i>documentation</i> to the client</p>
3. Obtain client feedback	<p>3.1 Create an appropriate evaluation or feedback form or other mechanism to gather feedback about the solution and support provided</p> <p>3.2 Provide client with instructions on how to complete the form or use other means of providing feedback</p> <p>3.3 Distribute the evaluation or feedback to the client</p> <p>3.4 Review the feedback from the client to identify areas for improvement</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to review client requirements and provide advice and support on findings
- communication skills to:
 - convey and clarify complex information
 - investigate and assess client needs
 - provide one-to-one instruction to client
- customer-service skills to communicate with clients in a range of contexts at various levels
- literacy skills to:
 - develop reports
 - document:
 - additional requirements
 - amount of technical support the client may require
 - solutions
 - support issues affecting the client
 - interpret technical manuals
- technical communication skills to write macros and templates.

Required knowledge

- available in-house and vendor support
- contract and service agreements with vendors
- features of different types of hardware supported by the organisation
- information sources
- operating system (OS):
 - functions and basic features
 - supported by the organisation
- security and network guidelines and procedures
- software:
 - advanced features
 - functions
 - supported by the organisation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • investigate client support requests and provide a documented solution after consultation with client • convey comprehensive technical information to clients in a clear, concise, jargon-free and coherent manner • access technical manuals and ‘help’ documentation.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • sites, peers and supervisors for obtaining information • software, hardware and networks • help-desk repository, technical records and documentation • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate investigating and providing advice and support on findings • review of candidate’s documented investigation and solution • evaluation of client feedback.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Client</i> may include:	<ul style="list-style-type: none"> • employee • external organisation • individual • internal department.
<i>Investigation</i> may include:	<ul style="list-style-type: none"> • active listening to clients and colleagues • contacting vendor or maintenance organisations • on-site examination • questions and answers • reviewing technical advice about the organisation.
<i>Advice and support</i> may include:	<ul style="list-style-type: none"> • hardware supported by the organisation: <ul style="list-style-type: none"> • CD or DVD drives • laptops • notebooks • printers • reconfiguration of settings • scanners • screens • identification of training needs for referral to supervisor • manuals • one-to-one training • provision of client documentation • software supported by the organisation: <ul style="list-style-type: none"> • creation of templates • generation of a complex report on a database • password and log-on procedure • statistical functions of spreadsheets • use of macros • vendor documentation.
<i>Solution</i> may include:	<ul style="list-style-type: none"> • hardware: <ul style="list-style-type: none"> • new • upgrade • implementing a new system • software:

	<ul style="list-style-type: none"> • new • upgrade • user training.
<p><i>Documentation</i> may include:</p>	<ul style="list-style-type: none"> • additional support requirements • amount of technical support the client requires • client support solutions • collection of records for computer program, OS or hardware device • support issues affecting the client.

ICANWK305A Install and manage network protocols

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and manage network protocols in a networking environment.

Application of the Unit

This unit applies to network administrators who are required to ensure that appropriate protocols have been installed in networks to allow user functionality. The role will also involve the maintenance of installed protocols.

This unit requires the application of transmission control protocol or internet protocol (TCP/IP) and OSI models. Protocols transcend organisational size and network complexity.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Install and manage network protocols	1.1 Select, test and validate appropriate <i>network protocol services</i> 1.2 Design a <i>network</i> addressing system, with subnet and host IDs, including appropriate <i>devices</i> 1.3 Configure hosts and workstations to use IP addresses either manually or through automatic allocation of addresses, such as found with dynamic host configuration protocol (DHCP)
2. Identify network protocol applications	2.1 Review a range of well-known network protocol <i>applications</i> 2.2 Evaluate client user requirement and recommend network-protocol services 2.3 Apply IP addressing scheme according to approved policy and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to evaluate client user requirements and map to appropriate protocols
- learning skills to ensure currency with protocols development
- literacy skills to interpret technical manuals
- organisational skills to plan, prioritise and organise work
- problem-solving skills to develop and refine configuration protocols
- technical skills to:
 - configure workstations
 - develop strategic initiatives when designing a network addressing system
 - test components using available technology
 - write detailed technical notes.

Required knowledge

- client business domain, including client organisation structure and business functionality
- current communications technologies and their associated protocols
- current industry-accepted hardware and software products and general features and capabilities
- network protocols currently in use in organisation and industry
- vendor product range and development directions.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • configure, test and validate network protocols in order to facilitate interconnectivity • install and manage network protocols in a network, and troubleshoot when problems arise.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a live network • application software and operating system • appropriate learning and assessment support when required • modified equipment for people with special needs • networked computers • organisational guidelines • technical documentation and installation manuals • vendor software.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of communications technologies and network protocols • direction observation of candidate configuring network or application protocols • review of candidate's analysis of client user requirements and final recommendations • evaluation of performance test results conducted by candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Network protocol services may include:	<ul style="list-style-type: none"> • address resolution protocol (ARP) • DHCP • electronic mail protocols • file transfer protocol (FTP) • H.323 protocol • hypertext transfer protocol (HTTP) • internet protocol (IP) • internet protocol version 4 (IPv4) • internet protocol version 6 (IPv6) • simple network management protocol (SNMP) • simple object access protocol (SOAP) • TCP/IP • wireless application protocol (WAP).
Network may include:	<ul style="list-style-type: none"> • large and small local area networks (LANs) • virtual private networks (VPNs) • wide area networks (WANs) • wireless local area networks (WLANs).
Devices may include:	<ul style="list-style-type: none"> • emulators • gateways • routers.
Applications may include:	<ul style="list-style-type: none"> • FTP • HTTP • hypertext transfer protocol secure (HTTPS) • secure shell • secure socket layer (SSL) • simple mail transfer protocol (SMTP) • Telnet (not secure).

ICANWK406A Install, configure and test network security

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, configure and test network security in an information and communications technology (ICT) network.

Application of the Unit

This unit applies to information technology (IT) professionals who install, configure and test secure networks of any size.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Assess network security threats and vulnerabilities to identify risk</p>	<p>1.1 Assess and report on current <i>system</i> security, according to required <i>asset</i> security level</p> <p>1.2 Determine additional <i>network, software, hardware</i> and system <i>security threats</i> and <i>vulnerabilities</i></p> <p>1.3 Use identified threats and vulnerability information to identify security risks</p> <p>1.4 Make recommendations to management to address security deficiencies, according to current and future <i>commercial and business requirements</i></p>
<p>2. Implement countermeasures for identified vulnerabilities and threats</p>	<p>2.1 Implement required level of <i>perimeter security</i> based on current and future business needs</p> <p>2.2 Assess and implement best practice <i>server</i> and network <i>hardening techniques</i> and measures</p> <p>2.3 Implement secure authentication and user account controls</p> <p>2.4 Secure <i>data integrity</i> and transmission</p>
<p>3. Test and verify functionality and performance of security system implemented</p>	<p>3.1 Design test items to verify key function and performance measures against criteria</p> <p>3.2 Conduct function and performance tests recording results</p> <p>3.3 Modify and debug security system as necessary</p> <p>3.4 Develop documentation on current system settings and file for future reference</p>
<p>4. Provide systems for monitoring and maintaining security</p>	<p>4.1 Monitor current network security, including physical aspects, using appropriate third-party testing software where applicable</p> <p>4.2 Review logs and audit reports to identify and record security incidents, intrusions or attempts</p> <p>4.3 Carry out spot checks and audits to ensure that procedures are not being bypassed</p> <p>4.4 <i>Document</i> newly discovered security threats, vulnerabilities and risks in a report for presentation to <i>appropriate person</i> to gain approval for changes to be made</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse systems evaluation
 - review system security logs for breaches
- communication skills to liaise with clients
- literacy skills to write reports for evaluating system security status according to organisational security policies
- numeracy skills to undertake a cost-benefit comparison
- problem-solving skills to:
 - determine intrusion detection
 - troubleshoot and debug
- research skills to identify and analyse network security methodologies and technologies
- technical skills to:
 - develop enterprise policies strategies and procedures
 - implement local area network (LAN), wide area network (WAN), virtual private network (VPN) and wireless local area network (WLAN) solutions
 - implement security strategies and configure network security software and hardware
 - install hardware and software related to improving network security
 - undertake a network security risk assessment.

Required knowledge

- authentication issues
- overview knowledge of:
 - client business domain, including client organisation structure and business functionality
 - features and capabilities of networking technologies
 - privacy issues and privacy legislation
 - security information sources
 - risk analysis
- common VPN issues, including bandwidth and dynamic security environment
- configuring routers and switches
- current industry-accepted hardware and software security products, with broad knowledge of general features and capabilities
- function and operation of VPN concepts, including encryption, firewalls, packet tunnelling and authentication
- network protocols and operating systems
- organisational issues surrounding security
- security perimeters and their functions
- security protocols, standards and data encryption

- security threats, including eavesdropping, data interception, data corruption, data falsification
- types of VPNs, including site-to-site, user-to-site internet traffic and extranets
- systems and procedures related to:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - cryptography
 - LAN, WLAN and WAN
 - screened subnets
 - transmission control protocols or internet protocols (TCPs/IPs) and applications
 - use of virus detection software.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess and identify security threats, vulnerabilities and risks • determine appropriate countermeasure for threat, vulnerability or risk • implement countermeasure per threat or risk • install, configure and test network elements to ensure perimeter security • test and verify function and performance of selected security measures • monitor network for suspicious activity taking appropriate action where necessary • document newly discovered threats, vulnerabilities and risks, including change recommendations for approval.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site where secure network installation may be conducted • network security documentation • equipment specifications • network components • hardware and software • firewalls (hardware and software) • live network • organisational guidelines • networked (LAN) computers • WAN service point of presence • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • documentation of current system security analysis that outlines required enterprise security requirements • identification of additional security threats and vulnerabilities

	<ul style="list-style-type: none"> • verbal or written questioning to assess candidate’s knowledge of network security • direct observation of candidate performing tasks required to successfully install, configure and test a secure network • direct observation of candidate performing tasks required to successfully test function and performance of secure network • direct observation of candidate performing tasks required to successfully monitor and document newly discovered security threats, vulnerabilities and risks.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>System</i> may include:	<ul style="list-style-type: none"> • applications • databases • gateways • operating systems • servers • WAN communication links • workstations.
<i>Asset</i> may include:	<ul style="list-style-type: none"> • data and information • intellectual property • physical assets.
<i>Network</i> may include:	<ul style="list-style-type: none"> • intranets • large and small LANs • internet • VPNs • WANs • WLANs.
<i>Software</i> may include:	<ul style="list-style-type: none"> • applications: <ul style="list-style-type: none"> • commercial • customised • in-house • packaged • encryption modules • operating systems • security: <ul style="list-style-type: none"> • antivirus • firewall • spyware • utilities: <ul style="list-style-type: none"> • audit • network monitoring.
<i>Hardware</i> may include:	<ul style="list-style-type: none"> • analog modems • digital subscriber line (DSL) modems • firewall devices

	<ul style="list-style-type: none"> • network cabling • wired and wireless networks • notebooks • personal computers • routers • servers • switches • workstations.
<i>Security threats</i> may include:	<ul style="list-style-type: none"> • by-pass • denial of service • eavesdropping • elevation of privilege • hacking • impersonation • manipulation • penetration • repudiation • viruses or malicious code.
<i>Vulnerabilities</i> may relate to:	<ul style="list-style-type: none"> • application bugs • communications devices • firmware flaws • firewall misconfigurations • operating system bugs • poor bandwidth control measures • transmitting data in plain text • unnecessary services and protocols • weak authentication techniques • weak permissions • weak physical security.
<i>Commercial and business requirements</i> may include:	<ul style="list-style-type: none"> • availability • backup and recovery of data • confidentiality • firewalls • hacking prevention • integrity • password logons • remote access to internal network.
<i>Perimeter security</i> may include:	<ul style="list-style-type: none"> • access control • auditing • authentication • authorisation

	<ul style="list-style-type: none"> • hardware or software firewalls • identification • network address translation (NAT) • surveillance.
Server may include:	<ul style="list-style-type: none"> • application • web • email • file and print • firewall • file transfer protocol (FTP) • proxy, cache • voice over internet protocol (VoIP).
Hardening techniques may include:	<ul style="list-style-type: none"> • demilitarised zones (DMZ) • encryption • intrusion detection system (IDS) • operating system patch application and management • rigid shared resource permissions • service pack application • strong firewall configurations, including unused port blocking • strong physical security • strong user authentication techniques • unused services and protocols disablement.
Data integrity may include:	<ul style="list-style-type: none"> • encryption • hash encoding • protocol control • VPN.
Document may include:	<ul style="list-style-type: none"> • audit trails • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • naming standards • project management templates • report writing principles • security analysis report • version control.
Appropriate person may include:	<ul style="list-style-type: none"> • supervisor • authorised business representative • client.

Unit Sector(s)

Networking

ICANWK417A Build an enterprise wireless network

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build an enterprise, community or mesh wireless network within and outside buildings.

Application of the Unit

This unit applies to individuals working in senior design roles in the networking area who are required to develop complex wireless networks for organisations.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Confirm client requirements and network equipment required</p>	<p>1.1 Identify and clarify organisational requirements of the client</p> <p>1.2 Evaluate client requirements along with business needs in order to translate into technical requirements</p> <p>1.3 Review existing network design documentation to ensure it is authorised, current and complete</p> <p>1.4 Identify network topology</p> <p>1.5 Identify the components required to be installed to meet the technical requirements</p> <p>1.6 Contact vendors and service suppliers to obtain specifications and availability of identified components</p> <p>1.7 Ensure preliminary work is completed within the required timeframe</p>
<p>2. Prepare for installation</p>	<p>2.1 Ensure client and users are aware of date and time of installation</p> <p>2.2 Gather, prepare and check installation and safety equipment</p> <p>2.3 Assess on-site safety arrangements for installers and users</p>
<p>3. Select, install and configure access points and other wireless devices</p>	<p>3.1 Select appropriate hardware based on identified components</p> <p>3.2 Install and configure hardware to provide wireless access to network</p> <p>3.3 Ensure connections are secured against intrusion or data access by unauthorised persons, are safe for users, and are protected from the environment</p> <p>3.4 Configure security, monitoring, logging and quality of service features consistent with standards and protocols</p> <p>3.5 Ensure test equipment is calibrated</p> <p>3.6 Test wireless network systems performance and verify that it meets enterprise requirements and is consistent with standards and protocols</p>
<p>4. Select, install and configure antennas</p>	<p>4.1 Select appropriate antennas based on design plan</p> <p>4.2 Safely install and configure antennas to provide wireless access to network</p> <p>4.3 Measure and assess signal strength within and outside building</p>

	4.4 Resolve and report radio frequency interference issues
5. Secure wireless network	5.1 Identify possible security threats to <i>assets</i> 5.2 Configure client server and helper security devices 5.3 Configure associations and filters
6. Train users	6.1 Provide training for users to establish and manage network connections 6.2 Resolve pairing and log-on difficulties for users 6.3 Inform users of wireless network etiquette and traffic capacity issues 6.4 Advise users of help-desk contact details
7. Monitor and administer wireless network	7.1 Monitor wireless network performance using diagnostic <i>tools</i> , including appropriate software 7.2 Debug networking issues to maintain trouble-free wireless connection 7.3 Document current settings and store securely consistent with <i>commercial and business requirements</i>
8. Finalise build process	8.1 Review network for performance issues, planned maintenance or upgrade requirements 8.2 Report to client with network documentation and recommendations for performance issues 8.3 File documentation according to organisational outlines

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to design, develop and implement various wireless network solutions
- communication skills to:
 - communicate with users
 - liaise with vendors and obtain prices and product details
 - train users
- numeracy skills to prepare a cost-benefit analysis
- planning and organisational skills to plan and manage project according to time lines and cost schedules
- problem-solving skills to troubleshoot and debug
- technical skills to:
 - implement local area networks (LANs)
 - implement wireless networking strategies and configure wireless network software and hardware.

Required knowledge

- detailed knowledge of:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - bandwidth and quality of service
 - factors affecting signal quality
 - layer 2 and layer 3 design issues
 - small office home office (SOHO) and enterprise LANs
 - transmission control protocols or internet protocols (TCPs/IPs) and applications
 - wireless security strategies
 - wireless topologies
 - wireless local area network (WLAN) and wireless area network (WAN) solutions
- overview knowledge of:
 - features of security threats
 - network protocols and operating systems
 - security protocols, standards and data encryption.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop and maintain wireless networks.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • network technical requirements • network infrastructure, including wireless hardware and software • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <p>verbal or written questioning to assess candidate's knowledge of:</p> <ul style="list-style-type: none"> • wireless topologies • wireless security networks • wireless security strategies • review of candidate's client report and supporting documentation with recommendations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

<p>Requirements may include:</p>	<ul style="list-style-type: none"> • how and what the organisation wants in regard to work environment • preventative maintenance and diagnostic policy • problem solution processes • roles and technical responsibilities in network management • vendor and product service level support agreements.
<p>Client may include:</p>	<ul style="list-style-type: none"> • external organisations • individuals • internal departments • internal employees.
<p>Documentation may follow:</p>	<ul style="list-style-type: none"> • audit trails • client training • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • maintaining equipment inventory • naming standards • project-management templates and report writing • satisfaction reports • version control.
<p>Network topology may include:</p>	<ul style="list-style-type: none"> • cabled, connected or single zone • carrier links • free space optics • indoor and outdoor installations • local multi-point distribution service (LMDS) • multi-channel multi-point distribution service (MMDS) • multiple zone • satellite connections • stand-alone or multi-zone wireless networks.
<p>Components may include:</p>	<ul style="list-style-type: none"> • hardware, such as: <ul style="list-style-type: none"> • antennas and other connectivity devices • digital subscriber line (DSL) modems • mobile equipment • modem wireless access points

	<ul style="list-style-type: none"> • networks • personal computers • power controllers • remote sites • servers • uninterruptible power supplies (UPS) • workstations • cabling, such as: <ul style="list-style-type: none"> • category 5e, 6 and 7 • coaxial • fibre optic • software, such as: <ul style="list-style-type: none"> • commercial applications • customised • in-house • organisation specific • packaged • wireless access.
Users may include:	<ul style="list-style-type: none"> • community members • department • department within the organisation • third party.
Hardware may include:	<ul style="list-style-type: none"> • access points • bridges • other wireless devices.
Security may include:	<ul style="list-style-type: none"> • authentication, authorisation and accounting (AAA) • diameter • IP security (IPSec) • lightweight extensible authentication protocol (LEAP) • privacy key management (PKM) • secure sockets layer (SSL) • smart cards • tokens • wi-fi protected access (WPA) • wired equivalent privacy (WEP).
Standards may include:	<ul style="list-style-type: none"> • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC), Institute of Electrical and Electronics Engineers (IEEE), Internet Engineering Task Force (IETF), International Telecommunication Union (ITU) and Australian Standards (AS)

	<ul style="list-style-type: none"> • organisational • project.
<i>Assets</i> may include:	<ul style="list-style-type: none"> • data and information • intellectual property • physical assets.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • cable testing • carrier-connection tests • data and voice-integration measurements • equipment testing • frequency and spectrum analysers • network performance software • policing and shaping tools • power meters • radiation meter.
<i>Commercial and business requirements</i> may include:	<ul style="list-style-type: none"> • availability • backup and recovery of data • confidentiality • firewalls • hacking prevention • integrity • password logons • remote access to internal network.

Unit Sector(s)

Networking

TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release 2. This is the second release of this unit in the TLI10 Transport and Logistics Training Package Version 4.0.

In Release 2 the spelling of 'meters' has been changed to 'metres' throughout the unit (typo). Release 2 is equivalent to the previous release.

Unit Descriptor

This unit specifies the outcomes required to operate a boom-type elevating work platform (boom length 11 metres or more) for licensing purposes, and involves the operation of a telescoping device, hinged device, or articulated device or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work. The 11 metre boom length shall be taken to mean the greater of the following:

- (a) The vertical distance from the floor of the platform to the surface supporting the elevating work platform with the platform at its maximum height; or
- (b) The nominal reach, measured horizontally from the centre point of rotation to the outer edge of the platform in its most extended position.

Application of the Unit

This unit requires the operator to plan the work, conduct routine checks, set up elevating work platform, operate elevating work platform and shut down and secure elevating work platform. This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

- | | | |
|---------------------------------|------|--|
| 1 Plan work | 1.1 | Potential workplace hazards are identified |
| | 1.2 | Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment |
| | 1.3 | Elevating work platform is appropriate for the task |
| | 1.4 | Appropriate communication methods are identified |
| 2 Conduct routine checks | 2.1 | Service logbook for elevating work platform is checked for compliance |
| | 2.2 | Elevating work platform is visually checked for any defects or damage according to procedures |
| | 2.3 | Routine pre-operational checks are carried out according to procedures |
| | 2.4 | Safety equipment is inspected according to procedures |
| | 2.5 | Elevating work platform is accessed in a safe manner |
| | 2.6 | Fit safety equipment and secure to platform according to procedures |
| | 2.7 | All controls are located and identified |
| | 2.8 | Elevating work platform is started according to procedures |
| | 2.9 | All safety devices are identified and tested according to procedures |
| | 2.10 | Post-start operational checks are carried out according to procedures |
| | 2.11 | All communication equipment is checked (where applicable) |
| | 2.12 | All defects and damage are reported and recorded in according to procedures, and appropriate action is taken |

- 3 Set up elevating work platform**
 - 3.1 Ground suitability is inspected and checked
 - 3.2 Elevating work platform is driven to or located at work area according to procedures (where applicable)
 - 3.3 Elevating work platform is positioned for work application and stability according to procedures
 - 3.4 Appropriate hazard prevention/control measures are applied to the work area according to procedures
 - 3.5 Work gear and tools are stowed and secured
- 4 Operate elevating work platform**
 - 4.1 Elevating work platform is operated using all relevant plant movements according to procedures and the appropriate standards
 - 4.2 Elevating work platform is mobiled using best mobile practice and appropriate procedures
 - 4.3 Elevated working platform operations are monitored constantly ensuring safety of personnel and stability
 - 4.4 Unplanned and/or unsafe situations are responded to in line with procedures
- 5 Shut down and secure elevating work platform**
 - 5.1 Elevating work platform is lowered and stowed according to procedures
 - 5.2 All relevant motion locks and brakes are applied (where applicable)
 - 5.3 Safety equipment is disconnected from platform
 - 5.4 Egress from elevated work platform is conducted according to procedures
 - 5.5 Outriggers/stabilisers are stowed and secured according to procedures (where applicable)
 - 5.6 Plates or packing are stowed and secured (where applicable)
 - 5.7 Elevating work platform is shut down according to procedures
 - 5.8 Routine post-operational checks are carried out according to procedures
 - 5.9 All defects and damage are reported and recorded according to procedures, and appropriate action is taken

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Appropriate mathematical procedures for estimation of loads, to ensure that the elevating work platform is not overloaded
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for conducting elevating work platform operations
- Ability to read and comprehend manufacturer's instructions, procedures and safety signs
- Understanding of elevating work platform operations and operating techniques
- Emergency procedures and safety equipment, including the use of safety harness, energy absorber, lanyard and anchor points
- Understanding of organisational and workplace standards, requirements, policies and procedures for conducting elevating work platform operations
- Understanding of the hierarchy of hazard identification and control
- Procedures for the recording, reporting and maintenance of workplace records and information, including the use of the service logbook
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

Required skills:

- Accurately record and maintain information relating to elevating work platform operations
- Assess ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to extend and travel the elevating work platform
- Complete the positioning, stabilising, set up of elevating work platforms, including the use of outriggers/stabilisers and packing
- Operate mobile elevating work platform using best mobile practice
- Use communication skills at a level sufficient to communicate with other site personnel
- Operate and control an elevating work platform including all functions to their maximum extension within the safe working (rated) capacity
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the elevating work platform (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping)
- Use and interpret manufacturer's specifications and data
- Identify problems and equipment faults and where practicable demonstrate appropriate response procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Emergency procedures and safety equipment, including the use of safety harnesses, energy absorbers, lanyard and anchor points.
- Assessment of ground conditions to confirm that the site is suitable (e.g. firm, level and safe) to extend and travel the elevating work platform.
- Risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the elevating work platform (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, wind, pedestrians and tipping).
- Appropriate procedures for estimation of loads, to ensure that the elevating work platform is not overloaded.
- Positioning and operation of the elevating work platform to ensure that the safest lift is performed.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
 - Personal Protective Equipment (PPE) for the purpose of

the Performance Assessment

- appropriate safety equipment in safe condition
- appropriate elevated working platform and associated equipment in safe condition
- communication equipment (e.g. two-way radios, mobile phones etc.) where applicable.

Method of assessment

- Assessment must be conducted using the endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances.

Guidance information for assessment

- Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazards may include:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. powerlines, service pipes, trees, buildings etc.)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- environmental conditions (e.g. wind, lightning, storms, etc.)
- other specific hazards (e.g. tidal areas, chainsaws, pressure washers, dangerous materials)

Hazard control measures may include: Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls

It includes the application of the hierarchy of control - the six-step preference of control measures to manage and control risk:

- 2) 1. elimination
- 3) 2. substitution
- 4) 3. isolation
- 5) 4. engineering control measures
- 6) 5. using safe work practices
- 7) 6. personal protective equipment

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable)

Elevating work platform may include: The operation of a telescoping device, hinged device, or articulated device or any combination of these used to support a platform on which personnel, equipment and materials may be elevated to perform work. Excluded from this definition are platforms of less than 11 metres boom length.

The 11 metre boom length shall be taken to mean the greater of the following:

- (a) The vertical distance from the floor of the platform to the surface supporting the elevating work platform with the platform at its maximum height; or
- (b) The nominal reach, measured horizontally from the centre point of rotation to the outer edge of the platform in its most extended

- position
- Communication method may include:
- verbal and non-verbal language
 - written instructions
 - signage
 - hand signals
 - listening
 - questioning to confirm understanding
 - appropriate worksite protocol
- Service logbook may include:
- any logbook
 - service book
 - history record system where the service and maintenance history is kept
- Procedures may include:
- manufacturer's guidelines (instructions, specifications, operators manual or checklists)
 - industry operating procedures
 - workplace procedures (work instructions, operating procedures, checklists)
- Safety equipment may include:
- safety harness
 - energy absorber
 - lanyard
 - anchor points
- Safety devices may include:
- horns/sirens
 - audible and visual reversing devices
 - operator restraint devices (platform gate)
 - lights (where applicable)
- Communication equipment may include:
- two-way radios
 - mobile phone
- Ground suitability may include:
- rough uneven ground
 - backfilled ground
 - soft soils
 - hard compacted soil
 - rock
 - bitumen
 - concrete
- Stability may include:
- deploying outriggers
 - establishing correct size plates or packing
 - correctly positioning plates or packing
- Hazard prevention/control
- safety tags on electrical switches/isolators
 - insulated powerlines
 - safety observer used inside exclusion zone

- measures may include:
- disconnected power
 - traffic barricades and controls
 - illumination requirements
 - pedestrian controls
 - trench covers
 - movement of obstructions
 - personal protective equipment
 - suitable area for set-up
 - suitable firm and stable standing
- Relevant plant movements may include:
- raising boom
 - lowering boom
 - slewing
 - hinging
 - articulating
 - telescoping
- Best mobile practice may include:
- minimum speed
 - gentle acceleration and braking
 - minimum boom/jib length
 - avoiding ground depressions
- Unplanned and/or unsafe situations may include:
- loss of power
 - failure of controls
 - contact with overhead electrical conductors
 - damage caused by contact with obstructions
 - illness of personnel
- Shut down may include:
- retracting boom/jib (where applicable)
 - folding boom/jib into the transport position
 - retracting outriggers/stabilisers
 - idling engine to stabilise temperature
 - turning off engine (where applicable)
 - removing key from ignition (where applicable)

Unit Sector(s)

Not Applicable.
