ICT10 Integrated Telecommunications Training Package

Release: 3.0

CONTENTS

Training Package Details.....	17
Preliminary Information	20
History.....	21
List of AQF Qualifications	22
List of ALL Units within Training Package	24
List of Imported Units	40
Mapping to Previous Training Package.....	47
Overview	63
Historical and General Information.....	69
Introduction to the Industry	71
Qualifications Framework.....	72
Qualification Pathways.....	79
ICT10 Integrated Telecommunications Skill Sets.....	80
Industry Requirements for Employability Skills	81
Whole of Industry Qualification Information	86
Assessment Guidelines	88
Competency Standards - Industry Contextualisation.....	124
Examples from this Training Package of Employability Skills	129
Appendices.....	132
ICT20113 Certificate II in Telecommunications Technology	137
ICT20213 Certificate II in Telecommunications.....	142
ICT20313 Certificate II in Telecommunications Cabling	148
ICT20413 Certificate II in Telecommunications Digital Reception Technology	156
ICT20513 Certificate II in Telecommunications Fixed Wireless and Rigging Installation.....	163
ICT20613 Certificate II in National Broadband Network Construction.....	169
ICT30113 Certificate III in Broadband and Wireless Networks Technology	178
ICT30213 Certificate III in Telecommunications	188
ICT30313 Certificate III in Telecommunications Cabling.....	198
ICT30413 Certificate III in Telecommunications Digital Reception Technology	207
ICT30513 Certificate III in Telecommunications Rigging Installation	216
ICT30613 Certificate III in Broadband and Wireless Networks.....	225
ICT30713 Certificate III in National Broadband Network Construction	235
ICT30813 Certificate III in Telecommunications Fixed Wireless Installation.....	245
ICT40110 Certificate IV in Optical Networks.....	254
ICT40210 Certificate IV in Telecommunications Network Engineering.....	264
ICT40313 Certificate IV in Telecommunications Radio Communications	277
ICT40410 Certificate IV in Radio Frequency Networks	287
ICT40510 Certificate IV in Telecommunications Network Planning	296
ICT40613 Certificate IV in Telecommunications Networks Technology	304
ICT40713 Certificate IV in Telecommunications Network Design	316
ICT50110 Diploma of Optical Networks.....	326
ICT50210 Diploma of Telecommunications Network Engineering.....	333
ICT50310 Diploma of Telecommunications Management	343
ICT50410 Diploma of Radio Frequency Networks.....	351
ICT50513 Diploma of Telecommunications Planning and Design	359
ICT60110 Advanced Diploma of Optical Networks.....	368
ICT60210 Advanced Diploma of Telecommunications Network Engineering.....	375
ICT70110 Vocational Graduate Certificate in Telecommunications Network Engineering.....	384
ICT80110 Vocational Graduate Diploma of Telecommunications Network Engineering.....	393

ICTSS00003 Advanced ICT Sustainability Skill Set	400
ICTSS00004 Advanced Telecommunications Rigging Installation Skill Set	402
ICTSS00005 Basic ICT Sustainability Skill Set	404
ICTSS00006 Basic Telecommunications Rigging Installation Skill Set	406
ICTSS00009 Commercial Digital Television Antenna Systems Installation Skill Set	408
ICTSS00010 Convergent Technology installations for home and SME Skill Set	410
ICTSS00012 Domestic Digital Television Antenna Installation Skill Set	412
ICTSS00015 Installing NBN Wireless and infrastructure Skill Set	414
ICTSS00016 IP Convergence installations for home and SME Skill Set	416
ICTSS00017 Radio Technician Skill Set	418
ICTSS00019 Technical Help Desk Support Skill Set	420
ICTSS00020 Wireless LAN and IP Network installation Skill Set	422
ICTSS00021 Advanced Cabler Registration Skill Set	424
ICTSS00022 Basic Open Cabler Registration Skill Set	426
ICTSS00023 Basic Restricted Cabler Registration Skill Set	428
ICTSS00024 Civil Works - Installation of Pit and Pipe and FDH Skill Set	430
ICTSS00025 Designer Skill Set	432
ICTSS00026 ICT Access Senior Designer Skill Set	434
ICTSS00027 National Broadband Network Advanced Linesworker/Installer Skill Set	435
ICTSS00028 National Broadband Network Splicer Skill Set	437
ICTSS00029 Plan FTTP Access Network Skill Set	439
ICTSS00030 ICT Sustainability Planning Skill Set	440
BSBCUS402B Address customer needs	441
BSBPMG521A Manage project integration	448
BSBPMG522A Undertake project work	456
BSBSMB405B Monitor and manage small business operations	465
BSBWHS501A Ensure a safe workplace	472
BSBWHS504A Manage WHS hazards and risks	480
HLTAID001 Provide cardiopulmonary resuscitation	489
Assessment Requirements for HLTAID001 Provide cardiopulmonary resuscitation	492
HLTAID003 Provide first aid	495
Assessment Requirements for HLTAID003 Provide first aid	498
ICAICT206A Install software applications	503
ICAICT304A Implement system software changes	510
ICAICT306A Migrate to new technology	518
ICAICT401A Determine and confirm client business requirements	525
ICAICT405A Develop detailed technical design	532
ICAICT508A Evaluate vendor products and equipment	538
ICANWK410A Install hardware to a network	544
ICANWK411A Deploy software to networked computers	552
ICANWK416A Build security into virtual private networks	560
ICANWK502A Implement secure encryption technologies	567
ICANWK503A Install and maintain valid authentication processes	575
ICANWK509A Design and implement a security perimeter for ICT networks	583
ICANWK516A Determine best-fit topology for a local network	591
ICANWK517A Determine best-fit topology for a wide area network	596
ICANWK518A Design an enterprise wireless local area network	601
ICANWK520A Design IT system security controls	610
ICASAS203A Connect hardware peripherals	618
ICASAS303A Care for computer hardware	627
ICASAS304A Provide basic system administration	637
ICASAS409A Manage risks involving ICT systems and technology	646
ICASAS505A Review and update disaster recovery and contingency plans	652

ICTBWN3082B Perform tests on optical communication system and components	661
ICTBWN3088B Install optical fibre splitters in fibre distribution hubs	671
ICTBWN3090B Install lead-in module and cable for fibre to the premises	681
ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation	692
ICTBWN3205B Use optical and radio frequency measuring instruments.....	704
ICTCBL2005B Install customer cable support systems	712
ICTCBL2006B Place and secure customer cable.....	723
ICTCBL2008B Terminate metallic conductor customer cable	734
ICTCBL2012B Install functional and protective telecommunications earthing system ...	747
ICTCBL2016A Joint metallic conductor cable on customer premises	756
ICTCBL2017B Alter services to existing cable system.....	767
ICTCBL2064A Haul underground cable.....	776
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers	787
ICTCBL2066B Joint and terminate coaxial cable	799
ICTCBL2068A Install a telecommunications service to a building	809
ICTCBL2131A Install an above ground equipment enclosure.....	820
ICTCBL2132A Erect aerial cable supports.....	830
ICTCBL2133A Construct underground telecommunications infrastructure.....	841
ICTCBL2134A Fix aerial cable	850
ICTCBL2135A Joint metallic conductor cable in access network	862
ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule	871
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule.....	883
ICTCBL2138B Install, maintain and modify customer premises communications cabling: ACMA Lift Rule	899
ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits	912
ICTCBL2163A Install a cable lead-in	922
ICTCBL3009B Install, terminate and certify structured cabling installation	932
ICTCBL3010B Install and terminate optical fibre cable on customer premises	943
ICTCBL3011B Install and terminate coaxial cable	953
ICTCBL3013A Perform cable and system test on customer premises	964
ICTCBL3014A Hand over systems and equipment.....	974
ICTCBL3015A Locate and identify cable system faults.....	982
ICTCBL3018A Install underground enclosures and conduit.....	993
ICTCBL3019A Install underground cable	1003
ICTCBL3020A Construct aerial cable supports	1015
ICTCBL3021A Install aerial cable	1026
ICTCBL3049A Install systems and equipment on customer premises	1039
ICTCBL3052A Cut over new systems and equipment on customer premises	1050
ICTCBL3067A Modify and cut over cable	1062
ICTCBL3069A Install network cable equipment	1075
ICTCBL3103A Maintain cable network.....	1089
ICTCBL3240B Install ribbon fibre cable in the FTTX distribution network.....	1101
ICTCBL4002B Prepare design drawings and specification for a cable installation.....	1112
ICTCBL4004B Schedule and supply cabling installation	1121
ICTCBL4023B Supervise cabling project	1129
ICTCBL4057B Test cable bearers.....	1138
ICTCBL4099A Remotely locate and identify cable network faults	1148
ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards	1156

ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA	
Restricted Rule.....	1165
ICTCMP5176A Undertake radio communications site audit.....	1175
ICTDRE3156B Install digital reception equipment.....	1186
ICTDRE3157B Locate and rectify digital reception equipment faults.....	1196
ICTDRE3165A Install a complex digital reception system.....	1207
ICTDRE3248A Design communications wiring systems for customer premises.....	1218
ICTDRE3249A Develop integrated digital reception systems.....	1227
ICTDRE4166A Integrate customer digital reception equipment.....	1235
ICTDRE4167A Integrate data delivery modes.....	1246
ICTEDU3053A Train customers in new technology.....	1260
ICTEDU5025A Develop and deliver training associated with new and modified products.....	1268
ICTITU5144A Test telecommunications network using virtual instruments.....	1277
ICTITU7106B Manage automated ICT system applications using unix.....	1285
ICTNPL4107A Apply business acumen to network planning.....	1294
ICTNPL4108A Plan the deployment of access network architectures.....	1303
ICTNPL4109A Evaluate the capability of access networks.....	1315
ICTNPL4110A Evaluate the planning requirements for provisioning a telecommunications building facility.....	1325
ICTNPL4111A Develop provisioning of telecommunications building works project.....	1337
ICTNPL4112A Evaluate core network architectures.....	1348
ICTNPL4113A Plan the deployment of core network.....	1358
ICTNPL4114A Produce planning specifications for end to end service delivery.....	1371
ICTNPL4150A Apply knowledge of regulation and legislation for the telecommunications industry.....	1382
ICTNPL4151A Plan the telecommunications access network for an estate.....	1390
ICTNPL4247A Apply compliance requirements to telecommunications work.....	1402
ICTNPL5071A Develop planning strategies for core network design.....	1409
ICTNPL5096A Develop planning strategies for access network design.....	1423
ICTNPL5101A Apply service measures and demand forecasting to products and services planning.....	1437
ICTNPL5154A Develop planning strategies for building environment design.....	1450
ICTNPL6029A Plan the development and growth of the telecommunications network.....	1460
ICTNPL6030A Forecast service demand.....	1470
ICTNPL6046A Undertake network performance analysis.....	1479
ICTOHS2080A Provide telecommunications services safely on roofs.....	1491
ICTOHS2153B Work safely near power infrastructure.....	1506
ICTOPN4115B Install and test a dense wavelength division multiplexing system.....	1518
ICTOPN4116A Use advanced optical test equipment.....	1526
ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation.....	1539
ICTOPN5118A Plan and configure dense wavelength division multiplexing systems.....	1552
ICTOPN5119A Perform acceptance and commissioning tests on optical network.....	1565
ICTOPN5120A Plan for an optical system upgrade and cut over.....	1574
ICTOPN5121A Test and commission a dense wavelength division multiplexing transmission system.....	1586
ICTOPN5122A Test the performance of specialised optical devices.....	1595
ICTOPN5123A Analyse and integrate specialised optical devices in the network.....	1607
ICTOPN6124A Manage optical ethernet transmission.....	1619
ICTOPN6125A Manage dense wavelength division multiplexing transmission system.....	1627
ICTOPN6128A Design a dense wavelength division multiplexing system.....	1636
ICTOPN6129A Analyse optical transmission systems.....	1647
ICTPMG2130A Prepare site for support installation.....	1658
ICTPMG2173A Plan, organise and undertake work activities.....	1668

ICTPMG4048B	Schedule installation of customer premises equipment	1678
ICTPMG4152A	Manage the delivery of network infrastructure	1687
ICTPMG5027A	Develop customer premises equipment installation project plans	1697
ICTPMG5031A	Prepare a project brief	1706
ICTPMG5039A	Prepare project specifications.....	1715
ICTPMG6033A	Develop a project management plan	1724
ICTPMG6034A	Prepare a detailed design brief	1736
ICTPMG7145B	Undertake a telecommunications project	1747
ICTPMG8142A	Manage a telecommunications workplace	1757
ICTPMG8143B	Manage a telecommunications project.....	1766
ICTPMG8149B	Evaluate and use telecommunications management networks	1773
ICTPRO5026A	Develop training, marketing and sales resources for telecommunications products	1780
ICTRFN2163B	Install a satellite antenna	1789
ICTRFN2164B	Install a terrestrial antenna.....	1800
ICTRFN3055A	Install a radio communications antenna and feedline	1810
ICTRFN3070A	Install mobile telecommunications in motor vehicles	1821
ICTRFN3146A	Install WiMAX customer premises equipment broadband wireless access equipment	1833
ICTRFN3155A	Construct and test a radio communications device	1843
ICTRFN3175A	Operate and maintain radio communications technical instruments and field equipment.....	1854
ICTRFN4095A	Conduct radio frequency measurements	1865
ICTRFN4158A	Select an antenna system for radio communications	1876
ICTRFN4159A	Test and repair cellular network equipment.....	1885
ICTRFN4174A	Undertake radio communications signals monitoring.....	1893
ICTRFN4177A	Install radio communications base station equipment	1908
ICTRFN4178A	Maintain hybrid fibre coaxial broadband cable network	1917
ICTRFN5097A	Test cellular handset enhancements and international roaming agreements.....	1930
ICTRFN5148A	Test and measure cellular phone and network equipment performance.....	1939
ICTRFN5179A	Evaluate and analyse radio frequency signal coverage plots	1951
ICTRFN6098B	Monitor the capacity of and recommend changes to the cellular mobile network	1960
ICTRFN6171A	Produce and evaluate architecture designs for WiMAX networks	1967
ICTRFN7182B	Produce a radio link budget	1976
ICTRFN8180B	Analyse a cellular mobile network system	1983
ICTRFN8181B	Analyse a satellite communications system.....	1992
ICTSMB4160A	Set up and operate a contractor business.....	2001
ICTSMB4161A	Operate a contractor business with employees	2010
ICTSUS4183A	Install and test renewable energy system for ICT networks.....	2018
ICTSUS4184A	Install and test power saving hardware	2027
ICTSUS4185A	Install and test power management software	2035
ICTSUS4186A	Install thin client applications for power over ethernet	2042
ICTSUS5187A	Implement server virtualisation for a sustainable ICT system.....	2050
ICTSUS6233A	Integrate sustainability in ICT planning and design projects	2059
ICTSUS6234A	Establish a business case for sustainability and competitive advantage in ICT projects	2070
ICTSUS7235A	Use ICT to improve sustainability outcomes.....	2081
ICTSUS7236A	Manage improvements in ICT sustainability	2090
ICTSUS8237A	Lead applied research in ICT sustainability	2100
ICTSUS8238A	Conduct and manage a life cycle assessment for sustainability	2113

ICTTCR2188A Use rigging practices and systems on telecommunications network structures	2127
ICTTCR2189A Use operational safety in a telecommunications rigging environment...	2139
ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures	2153
ICTTCR3062A Build a telecommunications radio structure	2166
ICTTCR3191A Install radio plant and equipment on telecommunications structures...	2179
ICTTCR3192A Protect against electromagnetic radiation and system hazards when working on telecommunications radio sites.....	2192
ICTTEN2008A Use electrical skills in telecommunications work	2203
ICTTEN2140B Use hand and power tools.....	2212
ICTTEN2207A Install and configure a home or small office network	2222
ICTTEN2208A Install and configure a small to medium business network	2231
ICTTEN2209A Build and maintain a secure network	2240
ICTTEN2218A Operate new media software packages	2249
ICTTEN2219A Install and test internet protocol devices in convergence networks	2261
ICTTEN3054B Provide infrastructure for telecommunications network equipment.....	2272
ICTTEN3056A Install telecommunications network equipment	2283
ICTTEN3063A Locate, identify and rectify recurrent network faults	2295
ICTTEN3074A Recover customer premises equipment.....	2305
ICTTEN3075A Refurbish customer premises equipment	2316
ICTTEN3077B Commission an electronic unit	2324
ICTTEN3089A Repair and replace telecommunications network hardware	2334
ICTTEN3104A Maintain an electronic system	2347
ICTTEN3250B Provide infrastructure for telecommunications customer equipment ...	2356
ICTTEN4001B Identify requirements for customer telecommunications equipment.....	2368
ICTTEN4003B Estimate and quote for customer telecommunications equipment installation	2377
ICTTEN4040A Assign a transmission path.....	2386
ICTTEN4050A Install and configure a wireless mesh network.....	2395
ICTTEN4051A Install configuration programs on PC based customer equipment.....	2403
ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment	2412
ICTTEN4073A Cut over customer premises equipment major upgrades	2423
ICTTEN4076A Complete equipment and software upgrades	2434
ICTTEN4078A Commission an electronic system	2448
ICTTEN4081A Locate, diagnose and rectify faults	2460
ICTTEN4085A Monitor, analyse and action telecommunications network alarms	2471
ICTTEN4086A Undertake routine maintenance of the telecommunications network....	2480
ICTTEN4087A Undertake remote diagnosis and repair of network faults.....	2492
ICTTEN4102A Repair telecommunication system faults	2502
ICTTEN4126A Install and configure internet protocol TV in a home network	2514
ICTTEN4198A Install, configure and test an internet protocol network	2522
ICTTEN4199A Install, configure and test a router	2532
ICTTEN4202A Install and test a radio frequency identification system	2543
ICTTEN4210A Implement and troubleshoot enterprise routers and switches.....	2553
ICTTEN4211A Design, install and configure an internetwork	2563
ICTTEN4212A Apply advanced routing protocols to network design	2574
ICTTEN4213A Configure and troubleshoot advanced network switching.....	2583
ICTTEN4214A Install and maintain a wide area network	2591
ICTTEN4215A Install and configure internet protocol TV in a service provider network	2600
ICTTEN4229B Design, install and configure a customer smart technology network	2610
ICTTEN4241A Design network projects	2621

ICTTEN4242A Conduct site surveys to identify carrier installation requirements	2633
ICTTEN4243A Prepare design drawings and specifications for telecommunications installations.....	2643
ICTTEN4244A Estimate and quote for carrier telecommunications equipment installations.....	2652
ICTTEN4245A Design infrastructure for telecommunications network installations	2661
ICTTEN4246A Design dense wavelength division multiplexing installations	2673
ICTTEN5024A Provide consultancy and technical support in the customer premises equipment sector	2681
ICTTEN5037A Design a telecommunications project	2691
ICTTEN5038A Design an electronic system for a telecommunications network	2703
ICTTEN5058A Acceptance test new systems and equipment	2711
ICTTEN5059A Commission telecommunications network equipment	2719
ICTTEN5060A Integrate new systems and equipment into the telecommunications network	2730
ICTTEN5061A Cut over new and replacement network equipment.....	2740
ICTTEN5083A Locate, diagnose and rectify complex faults	2749
ICTTEN5084A Provide expert advice and support on complex faults	2760
ICTTEN5092A Undertake planned outage management	2771
ICTTEN5147A Administer a data communications network.....	2779
ICTTEN5168A Design and implement an enterprise voice over internet protocol and a unified communications network	2787
ICTTEN5200A Install, configure and test a local area network switch.....	2797
ICTTEN5201A Install, configure and test a server	2807
ICTTEN5203A Dimension and design a radio frequency identification system.....	2817
ICTTEN5204A Produce technical solutions from business specifications.....	2826
ICTTEN5217A Plan a wireless mesh network	2837
ICTTEN6036A Undertake qualification testing of new or enhanced equipment and systems	2846
ICTTEN6042A Undertake system administration.....	2856
ICTTEN6043A Undertake network traffic management.....	2867
ICTTEN6044A Coordinate fault rectification and restoration of service following network outages	2877
ICTTEN6045A Implement planned network changes with minimal impact to the customer	2887
ICTTEN6047A Manage a common channel signalling network	2898
ICTTEN6091A Analyse and organise repair of highly complex telecommunications network faults.....	2908
ICTTEN6094A Verify new software and hardware releases.....	2918
ICTTEN6169A Produce and evaluate architecture designs for convergent cellular mobile networks.....	2926
ICTTEN6172A Design and configure an IP-MPLS network with virtual private network tunnelling	2935
ICTTEN6206A Produce an ICT network architecture design	2944
ICTTEN6216A Design and manage internet protocol TV in a service provider network	2956
ICTTEN7193B Plan a transmission network	2968
ICTTEN7219A Manage alignment of systems with product and technology strategy	2981
ICTTEN7220A Translate domain and solution architectures into platform requirements and designs	2991
ICTTEN7221A Manage end to end architectural solutions across multiple domains.....	3000
ICTTEN7222A Manage solution architecture and impacts in line with organisational processes	3008
ICTTEN7223A Manage application layer solutions	3017
ICTTEN7224A Manage voice, data and internet protocol network solutions	3027

ICTTEN7225A Manage network testing strategies	3039
ICTTEN7226A Manage development and application of testing artefacts	3050
ICTTEN7227B Analyse business specifications to produce technical solutions.....	3061
ICTTEN7228A Manage project requirements and process implementations	3071
ICTTEN7230A Scope project requirements and process solutions	3083
ICTTEN8194A Investigate the application of cloud networks in telecommunications switching	3093
ICTTEN8195B Evaluate and apply network security	3104
ICTTEN8196A Evaluate and apply digital signal processing to communications system	3114
ICTTEN8197A Produce engineering solutions using numerical computations and simulation	3123
ICTWHS2081A Work safely in a radio frequency electromagnetic radiation environment	3135
ICTWHS2170B Follow work health and safety and environmental policies and procedures	3142
ICTWOR2141A Work effectively in a telecommunications technology team	3160
ICTWOR3028A Organise resources	3168
ICTWOR3035A Organise material supply	3178
ICTWOR3041A Schedule resources	3186
ICTWOR3093A Manage spare parts.....	3194
ICTWOR3127A Supervise worksite activities	3204
ICTWOR3231A Resolve technical enquiries using multiple information systems	3213
ICTWOR3232A Collect and analyse technical information	3221
ICTWOR4032A Undertake a civil site survey	3229
ICTWOR4079A Schedule equipment maintenance.....	3238
BSBCUS201B Deliver a service to customers.....	3245
BSBFIM501A Manage budgets and financial plans	3252
BSBINM302A Utilise a knowledge management system.....	3261
BSBMGT401A Show leadership in the workplace	3268
BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business	3274
BSBSMB306A Plan a home based business.....	3282
BSBSMB401A Establish legal and risk management requirements of small business ...	3289
BSBSMB407A Manage a small team	3298
BSBSUS201A Participate in environmentally sustainable work practices.....	3307
BSBSUS301A Implement and monitor environmentally sustainable work practices	3315
BSBSUS501A Develop workplace policy and procedures for sustainability	3328
BSBWOR401A Establish effective workplace relationships.....	3339
CPCSUS4001A Implement and monitor environmentally sustainable work practices ..	3348
CPCCLDG3001A Licence to perform dogging	3362
CPCCLRG3001A Licence to perform rigging basic level	3373
CPCCLRG3002A Licence to perform rigging intermediate level	3387
CPCCLRG4001A Licence to perform rigging advanced level	3400
CPCCOHS1001A Work safely in the construction industry	3413
CPPSEC3034A Operate information gathering equipment	3425
FNSORG506A Prepare financial forecasts and projections	3433
ICASAS301A Run standard diagnostic tests.....	3440
ICAICT302A Install and optimise operating system software	3448
ICAICT303A Connect internal hardware components.....	3457
ICASAS305A Provide IT advice to clients.....	3468
ICANWK305A Install and manage network protocols	3475
ICANWK406A Install, configure and test network security	3481
ICANWK417A Build an enterprise wireless network	3492
TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more).....	3502

Modification History

Version Modification History

The version details of this endorsed Training Package are in the table below. The latest information is at the top of the table.

Training Package Details

Training Package Code:	ICT10 V3.0
Training Package Name:	Integrated Telecommunications Training Package
First Published:	June 2010
AEShareNet Code:	
Print Version Number:	
Endorsed Date:	
Copyright Year:	2010
Training Package Review Date:	
ISC Name:	Innovation and Business Skills Australia
ISC Website URL:	www.ibsa.org.au

Training Package Volume Number 1	Training Package Volume Name
1	1 of 3
2	2 of 3
3	3 of 3

Training Package Volume Number 1	Training Package Volume Statement
1	Introduction, Qualifications Framework and Assessment Guidelines
2	ICT10 Units of competency
3	Imported units of competency

Training Package Volume Number 1	Training Package Volume Description
1	This document is Volume 1 of the Integrated Telecommunications Training Package endorsed components. As such it provides the introduction to the Training Package, including the Assessment Guidelines and the Qualification Framework. It should not be used in isolation; users will need to ensure they have the relevant volume or volumes for the particular industry sector containing the endorsed units of competency.
2	This volume contains the ICT10 units of competency. It is not to be used in isolation but must be used in conjunction with Volume 1 which includes the Qualifications Framework and Assessment Guidelines, and with Volume 3 which contains imported units of competency.
3	This volume contains imported units of competency. It is not to be used in isolation but must be used in conjunction with Volume 1 which includes the Qualifications Framework and Assessment Guidelines, and with Volume 2 which contains ICT10 units of competency.

Release Date: <February 2014>

Preliminary Information

Important Note to Users

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

Check the version number before commencing training or assessment

This Training Package is Version - check whether this is the latest version by going to the National Training Information Service (www.ntis.gov.au) and locating information about the Training Package. Alternatively, contact Innovation and Business Industry Skills Council at <http://www.ibsa.org.au> to confirm the latest version number.

Explanation of version number conventions

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Packages national code (which remains the same during its period of endorsement).

History

This submission puts forward the case for the endorsement of the ICT10 Integrated Telecommunications Training Package Version 3.0 (ICT10 V3.0); continuous improvement of the Training Package, which includes targeted revision of specific components of the ICT10 Telecommunication Training Package.

With the federal government driving the agenda of a number of initiatives in the telecommunications industry, including the NBN, Digital Education Revolution (DER) and sustainability practices to reduce carbon emissions and greenhouse effects on the environment, there has been major work to refresh this third version of ICT10 Integrated Telecommunications Training Package to meet the needs of the Australian industry and broader community.

Extensive industry consultation and research has identified a need for a new qualification and associated new competency units and a need to revise a number of qualifications and competency units.

The major changes introduced into Version 3 of ICT10 Integrated Telecommunications Training Package are the:

- NSSC endorsement for:
 - a new qualification for network design (ICT40713 Certificate IV in Telecommunications Network Design)
 - nine new and three revised recoded units of competency
 - revision of 12 recoded qualifications
- ISC upgrade of:
 - 17 qualifications
 - 52 units of competency
 - 15 Skill Sets

These new and revised qualifications and units of competency help to maintain the relevance of the Training Package.

List of AQF Qualifications

Qualification Code	Title
ICT20113	Certificate II in Telecommunications Technology
ICT20213	Certificate II in Telecommunications
ICT20313	Certificate II in Telecommunications Cabling
ICT20413	Certificate II in Telecommunications Digital Reception Technology
ICT20513	Certificate II in Telecommunications Fixed Wireless and Rigging Installation
ICT20613	Certificate II in National Broadband Network Construction
ICT30113	Certificate III in Broadband and Wireless Networks Technology
ICT30213	Certificate III in Telecommunications
ICT30313	Certificate III in Telecommunications Cabling
ICT30413	Certificate III in Telecommunications Digital Reception Technology
ICT30513	Certificate III in Telecommunications Rigging Installation
ICT30613	Certificate III in Broadband and Wireless Networks
ICT30713	Certificate III in National Broadband Network Construction
ICT30813	Certificate III in Telecommunications Fixed Wireless Installation
ICT40110	Certificate IV in Optical Networks
ICT40210	Certificate IV in Telecommunications Network Engineering
ICT40313	Certificate IV in Telecommunications Radio Communications
ICT40410	Certificate IV in Radio Frequency Networks
ICT40510	Certificate IV in Telecommunications Network Planning
ICT40613	Certificate IV in Telecommunications Networks Technology
ICT40713	Certificate IV in Telecommunications Network Design
ICT50110	Diploma of Optical Networks
ICT50210	Diploma of Telecommunications Network Engineering

Qualification Code	Title
ICT20113	Certificate II in Telecommunications Technology
ICT50310	Diploma of Telecommunications Management
ICT50410	Diploma of Radio Frequency Networks
ICT50513	Diploma of Telecommunications Planning and Design
ICT60110	Advanced Diploma of Optical Networks
ICT60210	Advanced Diploma of Telecommunications Network Engineering
ICT70110	Vocational Graduate Certificate in Telecommunications Network Engineering
ICT80110	Vocational Graduate Diploma of Telecommunications Network Engineering

List of ALL Units within Training Package

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTBWN3082B	Perform tests on optical communication system and components	
ICTBWN3088B	Install optical fibre splitters in fibre distribution hubs	
ICTBWN3090B	Install lead-in module and cable for fibre to the premises	
ICTBWN3100B	Work safely with live fibre to test and commission a fibre to the x installation	ICTWHS2170 B
ICTBWN3205B	Use optical and radio frequency measuring instruments	
ICTCBL2005B	Install customer cable support systems	
ICTCBL2006B	Place and secure customer cable	
ICTCBL2008B	Terminate metallic conductor customer cable	
ICTCBL2012B	Install functional and protective telecommunications earthing system	
ICTCBL2016A	Joint metallic conductor cable on customer premises	
ICTCBL2017B	Alter services to existing cable system	
ICTCBL2064A	Haul underground cable	
ICTCBL2065B	Splice and terminate optical fibre cable for carriers and service providers	
ICTCBL2066B	Joint and terminate coaxial cable	
ICTCBL2068A	Install a telecommunications service to a building	
ICTCBL2131A	Install an above ground equipment enclosure	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTCBL2132A	Erect aerial cable supports	
ICTCBL2133A	Construct underground telecommunications infrastructure	
ICTCBL2134A	Fix aerial cable	
ICTCBL2135A	Joint metallic conductor cable in access network	
ICTCBL2136B	Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule	
ICTCBL2137B	Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B
ICTCBL2138B	Install, maintain and modify customer premises communications cabling: ACMA Lift Rule	
ICTCBL2139B	Apply safe technical work practices for cabling registration when configuring ADSL circuits	
ICTCBL2163A	Install a cable lead-in	
ICTCBL3009B	Install, terminate and certify structured cabling installation	
ICTCBL3010B	Install and terminate optical fibre cable on customer premises	
ICTCBL3011B	Install and terminate coaxial cable	
ICTCBL3013A	Perform cable and system test on customer premises	
ICTCBL3014A	Hand over systems and equipment	
ICTCBL3015A	Locate and identify cable system faults	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTCBL3018A	Install underground enclosures and conduit	
ICTCBL3019A	Install underground cable	
ICTCBL3020A	Construct aerial cable supports	
ICTCBL3021A	Install aerial cable	
ICTCBL3049A	Install systems and equipment on customer premises	
ICTCBL3052A	Cut over new systems and equipment on customer premises	
ICTCBL3067A	Modify and cut over cable	
ICTCBL3069A	Install network cable equipment	
ICTCBL3103A	Maintain cable network	
ICTCBL3240B	Install ribbon fibre cable in the FTTX distribution network	ICTCBL2065B
ICTCBL4002B	Prepare design drawings and specification for a cable installation	
ICTCBL4004B	Schedule and supply cabling installation	
ICTCBL4023B	Supervise cabling project	
ICTCBL4057B	Test cable bearers	
ICTCBL4099A	Remotely locate and identify cable network faults	
ICTCMP2022B	Organise and monitor cabling to ensure compliance with regulatory and industry standards	
ICTCMP2239B	Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	ICTCBL2136B

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTCMP5176A	Undertake radio communications site audit	
ICTDRE3156B	Install digital reception equipment	
ICTDRE3157A	Locate and rectify digital reception equipment faults	
ICTDRE3165A	Install a complex digital reception system	
ICTDRE3248A	Design communications wiring systems for customer premises	ICTCBL2137B (ICTCBL2136 B)
ICTDRE3249A	Develop integrated digital reception systems	
ICTDRE4166A	Integrate customer digital reception equipment	
ICTDRE4167A	Integrate data delivery modes	
ICTEDU3053A	Train customers in new technology	
ICTEDU5025A	Develop and deliver training associated with new and modified products	
ICTITU5144A	Test telecommunications network using virtual instruments	
ICTITU7106B	Manage automated ICT system applications using unix	
ICTNPL4107A	Apply business acumen to network planning	
ICTNPL4108A	Plan the deployment of access network architectures	
ICTNPL4109A	Evaluate the capability of access networks	
ICTNPL4110A	Evaluate the planning requirements for provisioning a telecommunications building facility	
ICTNPL4111A	Develop provisioning of telecommunications building works project	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTNPL4112A	Evaluate core network architectures	
ICTNPL4113A	Plan the deployment of core network	
ICTNPL4114A	Produce planning specifications for end to end service delivery	
ICTNPL4150A	Apply knowledge of regulation and legislation for the telecommunications industry	
ICTNPL4151A	Plan the telecommunications access network for an estate	
ICTNPL4247A	Apply compliance requirements to telecommunications work	
ICTNPL5071A	Develop planning strategies for core network design	
ICTNPL5096A	Develop planning strategies for access network design	
ICTNPL5101A	Apply service measures and demand forecasting to products and services planning	
ICTNPL5154A	Develop planning strategies for building environment design	
ICTNPL6029A	Plan the development and growth of the telecommunications network	
ICTNPL6030A	Forecast service demand	
ICTNPL6046A	Undertake network performance analysis	
ICTOHS2080A	Provide telecommunications services safely on roofs	
ICTOHS2153B	Work safely near power infrastructure	
ICTOPN4115B	Install and test a dense wavelength division multiplexing system	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTOPN4116A	Use advanced optical test equipment	
ICTOPN4117A	Prepare activity plans and specifications for a fibre to the x installation	
ICTOPN5118A	Plan and configure dense wavelength division multiplexing systems	
ICTOPN5119A	Perform acceptance and commissioning tests on optical network	
ICTOPN5120A	Plan for an optical system upgrade and cut over	
ICTOPN5121A	Test and commission a dense wavelength division multiplexing transmission system	
ICTOPN5122A	Test the performance of specialised optical devices	
ICTOPN5123A	Analyse and integrate specialised optical devices in the network	
ICTOPN6124A	Manage optical ethernet transmission	
ICTOPN6125A	Manage dense wavelength division multiplexing transmission system	
ICTOPN6128A	Design a dense wavelength division multiplexing system	
ICTOPN6129A	Analyse optical transmission systems	
ICTPMG2130A	Prepare site for support installation	
ICTPMG2173A	Plan, organise and undertake work activities	
ICTPMG4048B	Schedule installation of customer premises equipment	
ICTPMG4152A	Manage the delivery of network infrastructure	
ICTPMG5027A	Develop customer premises equipment	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
	installation project plans	
ICTPMG5031A	Prepare a project brief	
ICTPMG5039A	Prepare project specifications	
ICTPMG6033A	Develop a project management plan	
ICTPMG6034A	Prepare a detailed design brief	
ICTPMG7145B	Undertake a telecommunications project	
ICTPMG8142A	Manage a telecommunications workplace	
ICTPMG8143B	Manage a telecommunications project	
ICTPMG8149B	Evaluate and use telecommunications management networks	
ICTPRO5026A	Develop training, marketing and sales resources for telecommunications products	
ICTRFN2163B	Install a satellite antenna	
ICTRFN2164B	Install a terrestrial antenna	
ICTRFN3055A	Install a radio communications antenna and feedline	
ICTRFN3070A	Install mobile telecommunications in motor vehicles	
ICTRFN3146A	Install WiMAX customer premises equipment broadband wireless access equipment	
ICTRFN3155A	Construct and test a radio communications device	
ICTRFN3175A	Operate and maintain radio communications technical instruments and field equipment	
ICTRFN4095A	Conduct radio frequency measurements	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTRFN4158A	Select an antenna system for radio communications	
ICTRFN4159A	Test and repair cellular network equipment	
ICTRFN4174A	Undertake radio communications signals monitoring	
ICTRFN4177A	Install radio communications base station equipment	
ICTRFN4178A	Maintain hybrid fibre coaxial broadband cable network	
ICTRFN5097A	Test cellular handset enhancements and international roaming agreements	
ICTRFN5148A	Test and measure cellular phone and network equipment performance	
ICTRFN5179A	Evaluate and analyse radio frequency signal coverage plots	
ICTRFN6098B	Monitor the capacity of and recommend changes to the cellular mobile network	
ICTRFN6171A	Produce and evaluate architecture designs for WiMAX networks	
ICTRFN7182B	Produce a radio link budget	
ICTRFN8180B	Analyse a cellular mobile network system	
ICTRFN8181B	Analyse a satellite communications system	
ICTSMB4160A	Set up and operate a contractor business	
ICTSMB4161A	Operate a contractor business with employees	
ICTSUS4183A	Install and test renewable energy system for ICT networks	
ICTSUS4184A	Install and test power saving hardware	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTSUS4185A	Install and test power management software	
ICTSUS4186A	Install thin client applications for power over ethernet	
ICTSUS5187A	Implement server virtualisation for a sustainable ICT system	
ICTSUS6233A	Integrate sustainability in ICT planning and design projects	
ICTSUS6234A	Establish a business case for sustainability and competitive advantage in ICT projects	
ICTSUS7235A	Use ICT to improve sustainability outcomes	
ICTSUS7236A	Manage improvements in ICT sustainability	
ICTSUS8237A	Lead applied research in ICT sustainability	
ICTSUS8238A	Conduct and manage a life cycle assessment for sustainability	
ICTTCR2188A	Use rigging practices and systems on telecommunications network structures	
ICTTCR2189A	Use operational safety in a telecommunications rigging environment	
ICTTCR2190A	Use safe rigging practices to climb and perform rescues on telecommunications network structures	
ICTTCR3062A	Build a telecommunications radio structure	ICTTCR2188 A ICTTCR2189 A ICTTCR2190 A
ICTTCR3191A	Install radio plant and equipment on	ICTTCR2188

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
	telecommunications structures	A ICTTCR2189 A ICTTCR2190 A
ICTTCR3192A	Protect against electromagnetic radiation and system hazards when working on telecommunications radio sites	
ICTTEN2008B	Use electrical skills in telecommunications work	
ICTTEN2140B	Use hand and power tools	
ICTTEN2207A	Install and configure a home or small office network	
ICTTEN2208A	Install and configure a small to medium business network	
ICTTEN2209A	Build and maintain a secure network	
ICTTEN2218A	Operate new media software packages	
ICTTEN2219A	Install and test internet protocol devices in convergence networks	
ICTTEN3054B	Provide infrastructure for telecommunications network equipment	
ICTTEN3056A	Install telecommunications network equipment	
ICTTEN3063A	Locate, identify and rectify recurrent network faults	
ICTTEN3074A	Recover customer premises equipment	
ICTTEN3075A	Refurbish customer premises equipment	
ICTTEN3077B	Commission an electronic unit	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTTEN3089A	Repair and replace telecommunications network hardware	
ICTTEN3104A	Maintain an electronic system	
ICTTEN3250B	Provide infrastructure for telecommunications customer equipment	
ICTTEN4001B	Identify requirements for customer telecommunications equipment	
ICTTEN4003B	Estimate and quote for customer telecommunications equipment installation	
ICTTEN4040A	Assign a transmission path	
ICTTEN4050A	Install and configure a wireless mesh network	
ICTTEN4051A	Install configuration programs on PC based customer equipment	
ICTTEN4072A	Effect changes to existing customer premises equipment systems and equipment	
ICTTEN4073A	Cut over customer premises equipment major upgrades	
ICTTEN4076A	Complete equipment and software upgrades	
ICTTEN4078A	Commission an electronic system	
ICTTEN4081A	Locate, diagnose and rectify faults	
ICTTEN4085A	Monitor, analyse and action telecommunications network alarms	
ICTTEN4086A	Undertake routine maintenance of the telecommunications network	
ICTTEN4087A	Undertake remote diagnosis and repair of network faults	
ICTTEN4102A	Repair telecommunication system faults	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTTEN4126A	Install and configure internet protocol TV in a home network	
ICTTEN4198A	Install, configure and test an internet protocol network	
ICTTEN4199A	Install, configure and test a router	
ICTTEN4202A	Install and test a radio frequency identification system	
ICTTEN4210A	Implement and troubleshoot enterprise routers and switches	
ICTTEN4211A	Design, install and configure an internet network	
ICTTEN4212A	Apply advanced routing protocols to network design	
ICTTEN4213A	Configure and troubleshoot advanced network switching	
ICTTEN4214A	Install and maintain a wide area network	
ICTTEN4215A	Install and configure internet protocol TV in a service provider network	
ICTTEN4229B	Design, install and configure a customer smart technology network	
ICTTEN4241A	Design network projects	
ICTTEN4242A	Conduct site surveys to identify carrier installation requirements	
ICTTEN4243A	Prepare design drawings and specifications for telecommunications installations	
ICTTEN4244A	Estimate and quote for carrier telecommunications equipment installations	
ICTTEN4245A	Design infrastructure for telecommunications	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
	network installations	
ICTTEN4246A	Design dense wavelength division multiplexing installations	
ICTNPL4247A	Apply compliance requirements to telecommunications work	
ICTTEN5024A	Provide consultancy and technical support in the customer premises equipment sector	
ICTTEN5037A	Design a telecommunications project	
ICTTEN5038A	Design an electronic system for a telecommunications network	
ICTTEN5058A	Acceptance test new systems and equipment	
ICTTEN5059A	Commission telecommunications network equipment	
ICTTEN5060A	Integrate new systems and equipment into the telecommunications network	
ICTTEN5061A	Cut over new and replacement network equipment	
ICTTEN5083A	Locate, diagnose and rectify complex faults	
ICTTEN5084A	Provide expert advice and support on complex faults	
ICTTEN5092A	Undertake planned outage management	
ICTTEN5147A	Administer a data communications network	
ICTTEN5168A	Design and implement an enterprise voice over internet protocol and a unified communications network	
ICTTEN5200A	Install, configure and test a local area network switch	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTTEN5201A	Install, configure and test a server	
ICTTEN5203A	Dimension and design a radio frequency identification system	
ICTTEN5204A	Produce technical solutions from business specifications	
ICTTEN5217A	Plan a wireless mesh network	
ICTTEN6036A	Undertake qualification testing of new or enhanced equipment and systems	
ICTTEN6042A	Undertake system administration	
ICTTEN6043A	Undertake network traffic management	
ICTTEN6044A	Coordinate fault rectification and restoration of service following network outages	
ICTTEN6045A	Implement planned network changes with minimal impact to the customer	
ICTTEN6047A	Manage a common channel signalling network	
ICTTEN6091A	Analyse and organise repair of highly complex telecommunications network faults	
ICTTEN6094A	Verify new software and hardware releases	
ICTTEN6169A	Produce and evaluate architecture designs for convergent cellular mobile networks	
ICTTEN6172A	Design and configure an IP-MPLS network with virtual private network tunnelling	
ICTTEN6206A	Produce an ICT network architecture design	
ICTTEN6216A	Design and manage internet protocol TV in a service provider network	
ICTTEN7193B	Plan a transmission network	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTTEN7219A	Manage alignment of systems with product and technology strategy	
ICTTEN7220A	Translate domain and solution architectures into platform requirements and designs	
ICTTEN7221A	Manage end to end architectural solutions across multiple domains	
ICTTEN7222A	Manage solution architecture and impacts in line with organisational processes	
ICTTEN7223A	Manage application layer solutions	
ICTTEN7224A	Manage voice, data and internet protocol network solutions	
ICTTEN7225A	Manage network testing strategies	
ICTTEN7226A	Manage development and application of testing artefacts	
ICTTEN7227B	Analyse business specifications to produce technical solutions	
ICTTEN7228A	Manage project requirements and process implementations	
ICTTEN7230A	Scope project requirements and process solutions	
ICTTEN8149A	Analyse business specifications to produce technical solutions	
ICTTEN8194A	Investigate the application of cloud networks in telecommunications switching	
ICTTEN8195B	Evaluate and apply network security	
ICTTEN8196A	Evaluate and apply digital signal processing to communications system	

Units of Competency in ICT10 Integrated Telecommunications Training Package and their Prerequisite Requirements		
Code	Title	Prerequisite units
ICTTEN8197A	Produce engineering solutions using numerical computations and simulation	
ICTWHS2081A	Work safely in a radio frequency electromagnetic radiation environment	
ICTWHS2170B	Follow work health and safety and environmental policies and procedures	
ICTWOR2141A	Work effectively in a telecommunications technology team	
ICTWOR3028A	Organise resources	
ICTWOR3035A	Organise material supply	
ICTWOR3041A	Schedule resources	
ICTWOR3093A	Manage spare parts	
ICTWOR3127A	Supervise worksite activities	
ICTWOR3231A	Resolve technical enquiries using multiple information systems	
ICTWOR3232A	Collect and analyse technical information	
ICTWOR4032A	Undertake a civil site survey	
ICTWOR4079A	Schedule equipment maintenance	

List of Imported Units

Unit Code and Title	Prerequisite	Origin
BSBCUS201B Deliver a service to customers	NA	BSB07 Business Services Training Package
BSBCUS402B Address customer needs	NA	BSB07 Business Services Training Package
BSBFIM501A Manage budgets and financial plans	NA	BSB07 Business Services Training Package
BSBINM302A Utilise a knowledge management system	NA	BSB07 Business Services Training Package
BSBMGT401A Show leadership in the workplace	NA	BSB07 Business Services Training Package
BSBOHS509B Ensure a safe workplace	NA	BSB07 Business Services Training Package
BSBPMG521A Manage project integration	NA	BSB07 Business Services Training Package
BSBPMG522A Undertake project work	NA	BSB07 Business Services Training Package
BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business	NA	BSB07 Business Services Training Package
BSBSMB306A Plan a home based business	NA	BSB07 Business Services Training Package

Unit Code and Title	Prerequisite	Origin
BSBSMB401A Establish legal and risk management requirements of small business	NA	BSB07 Business Services Training Package
BSBSMB405B Monitor and manage small business operations	NA	BSB07 Business Services Training Package
BSBSMB407A Manage a small team	NA	BSB07 Business Services Training Package
BSBSUS201A Participate in environmentally sustainable work practices	NA	BSB07 Business Services Training Package
BSBSUS301A Implement and monitor environmentally sustainable work practices	NA	BSB07 Business Services Training Package
BSBSUS501A Develop workplace policy and procedures for sustainability	NA	BSB07 Business Services Training Package
BSBWHS504A Manage WHS hazards and risks	NA	BSB07 Business Services Training Package
BSBWHS501A Ensure a safe workplace	NA	BSB07 Business Services Training Package
BSBWOR401A Establish effective workplace relationships	NA	BSB07 Business Services Training Package
CPCCOHS1001A Work safely in the construction industry	NA	CPC08 Construction, Plumbing and Services Training Package

Unit Code and Title	Prerequisite	Origin
CPCCLDG3001A Licence to perform dogging	NA	CPC08 Construction and Plumbing Services Integrated Framework Training Package
CPCCLRG3001A Licence to perform rigging basic level	NA	CPC08 Construction, Plumbing and Services Training Package
CPCCLRG3002A Licence to perform rigging intermediate level	NA	CPC08 Construction, Plumbing and Services Training Package
CPCCLRG4001A Licence to perform rigging advanced level	NA	CPC08 Construction, Plumbing and Services Training Package
CPCSUS4001A Implement and monitor environmentally sustainable work practices	NA	CPC08 Construction, Plumbing and Services Training Package
CPPSEC3034A Operate information gathering equipment	NA	CPP07 Property Services Training Package
FNSORG506A Prepare financial forecasts and projections	NA	FNS10 Financial Services Training Package
HLTAID001 Provide cardiopulmonary resuscitation	NA	HLT Health Training Package
HLTAID003 Provide first aid	NA	HLT Health Training Package
ICAICT206A Install software applications	NA	ICA11 Information and Communications Technology Training Package

Unit Code and Title	Prerequisite	Origin
ICAICT304A Implement system software changes	NA	ICA11 Information and Communications Technology Training Package
ICAICT306A Migrate to new technology	NA	ICA11 Information and Communications Technology Training Package
ICAICT401A Determine and confirm client business requirements	NA	ICA11 Information and Communications Technology Training Package
ICAICT405A Develop detailed technical design	NA	ICA11 Information and Communications Technology Training Package
ICAICT508A Evaluate vendor products and equipment	NA	ICA11 Information and Communications Technology Training Package
ICANWK305A Install and manage network protocols	NA	ICA11 Information and Communications Technology Training Package
ICANWK406A Install, configure and test network security	NA	ICA11 Information and Communications Technology Training Package
ICANWK416A Build security into virtual private networks	NA	ICA11 Information and Communications Technology Training Package
ICANWK417A Build an enterprise wireless	NA	ICA11 Information and

Overview

What is a Training Package?

A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:

- provides a consistent and reliable set of components for training, recognising and assessing peoples skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?

The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2007 (AQTF 2007), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?

Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?

Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained.

Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.

Who can deliver and assess using Training Packages?

Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2007.

Training Package Components

Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components

The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards

Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines

The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2007. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

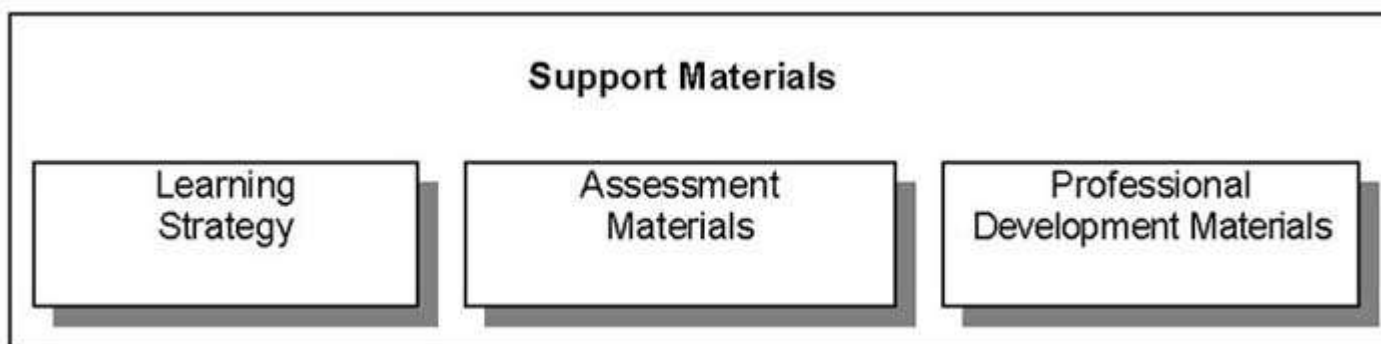

Qualifications Framework

Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the "packaging rules". The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials

The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.

Where such materials have been quality assured through a process of "noting" by the NQC, they display the following official logo. Noted support materials are listed on the National Training Information Service (NTIS), together with a detailed description and information on the type of product and its availability < www.ntis.gov.au >

It is not compulsory to submit support materials for noting; any resources that meet the requirements of the Training Package can be used.

Training Package, Qualification and Unit of Competency Codes

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, **and with the code always before the title.**

Training Package Codes

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example ICT10. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

Qualification Codes

Within each Training Package, each qualification has a unique eight-character code, for example ICT20110. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are **not** used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

Unit of Competency Codes

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in ICTBWN3082A;
- the first three characters signify the Training Package - ICT10 - in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;

- the last character is always a letter and identifies the unit of competency version. An "A" at the end of the code indicates that this is the original unit of competency. "B", or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

Training Package, Qualification and Unit of Competency Titles

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

Training Package Titles

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

Qualification Titles

The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words "in" for Certificates I to IV, and "of" for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- ICT20110 Certificate II in Telecommunications Technology.

Unit of Competency Titles

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- ICTBWN3082A Perform tests on optical communication system and components.

Historical and General Information

Background

It is generally accepted, and inescapably true, that the workforce of the telecommunications industry is ageing. Retirement of a growing number of existing employees will create a shortfall in the workforce and so it is essential to train new entrants to the industry, particularly with the NBN deployment.

Compounding these factors is the changing nature of the industry, increasing convergence of the 'T' and 'IT' sectors, the integration between optical and radio frequency (RF) networks and the rapid introduction of new IP technologies.

ICT10 Key revisions

Telecommunications regulator

The telecommunications regulator is the Australian Communications and Media Authority (ACMA). The legislation covering ACMA activities involves a broad range of national activities from carrier licensing to use of radio spectrum and the most relevant issue for ICT10 qualifications is the ACMA Cabling Provider Rules Registration.

Australian Communications and Media Authority Building Cabling Regulation CPR Registration – Ex-Licensing

The Cabling Provider Rules (CPR) benchmark units of competency ICTCBL2136B, ICTCBL2137B and ICTCBL2138B meet the ACMA requirements for a cabler 'registration' system involving accredited registrars.

ICTCBL2138B applies only to lift cabling for elevator industry, where other qualifications in 'electrical' are also needed. To be permitted to work with lift cabling, cablers are required to have completed the relevant Electrotechnology qualification such as the Certificate III in Electrotechnology Electrician or equivalent.'

In accordance with the ACMA policy, these are in ICT10 Integrated Telecommunications Training Package qualifications and are not treated as a completely separate requirement, as is often the case in some industries with licensing and registration.

Relationship between units linked to ACMA CPR requirements

Completion of the following six cabling units ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B exceeds the requirements of the benchmark units ICTCBL2136B and ICTCBL2137B. These two benchmark units are used in telecommunications for the purpose of registering with an accredited registrar of the telecommunications regulator ACMA, as a CPR registered cabler. All of these units appear in relevant qualifications in the ICT10 Integrated Telecommunications Training Package in accordance with Training Package guidelines.

An official reference document called 'Pathways to ACMA Cabling Provider Rules Cabler Registration' sets out the competency-based and other alternative ACMA authorised pathways. ACMA and registrars can provide access to this document, which is also available at www.acma.gov.au and www.citt.com.au.

ICTCBL2136B and ICTCBL2137B benchmark standards fulfil the requirements for ACMA Cabling Provider Rules Open Cabling registration and are generally regarded in the industry as a 'fast track' option to gain ACMA CPR registration for participants with some industry experience.

A new unit of competency relating to specialised broadband cabling (ICTCMP2239B) has been developed in response to a need for restricted CPR registered cablers who are required to work on specialised cabling for the broadband network. The new unit of competency applies to restricted CPR holders working on specialist cabling and is for point-to-point work only. It is not an "endorsement", such as those obtained by Open CPR holders for doing underground or aerial work.

ICTCBL2136A Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule is the prerequisite unit for ICTCBL2137A. ICTCBL2136A must be obtained before ICTCBL2137A can be credited. However, in some circumstances, assessment may be concurrent.

All pathways to CPR registration will now include explicit training for an endorsed Training Package unit of competency for work health and safety.

State/territory arrangements

The six unit of competency set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B that meets the ACMA requirements for CPR registration, is generally used as part of a more specialised customer cabling qualification. This set is usually regarded as more suitable for new entrants where limited industry experience has been obtained and forms the major part of specialised qualifications such as ICT20310 Certificate II in Telecommunications Cabling. When these six units are delivered as a set within state/territory funding approved programs, the two benchmark CPR units are not required.

NOTE ON CPR ENDORSEMENTS: gaining the ACMA CPR registration requirements by either the CPR benchmark units ICTCBL2136B and ICTCBL2137B, or the six unit set (ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B) which were the AUSTEL base cabling licence requirements, does not grant industry competency for specialised cabling activities known as 'endorsements', such as coaxial, optical fibre and structured cabling. The separate units for specialised cabling activities are outlined in this Training Package.

Introduction to the Industry

Acting on behalf of the Australian government, and working within the scope of vocational education and training (VET), the Department of Industry works to ensure that Australian industries have access to the people and skills they need, both to maintain existing operations, and to achieve competitive and opportunity-led change.

Innovation and Business Skills Australia, (IBSA) assists industry and governments to identify and coordinate activities directed towards meeting the people and skill needs of six key industry sectors of the Australian economy. These industry sectors include:

- business services
- cultural and creative industries
- education and training
- financial services
- ICT and telecommunications
- printing and graphic arts.

The telecommunications industry comprises cabling, wireless, switching, transmission, radio frequency (RF) and optical communications, media and IP networks. The construction of the national broadband network (NBN) with fibre technology has required the development of specific qualifications to meet the demands of the NBN construction process, as well as the installation of wireless technology for remote areas.

Advances in digital and IP networking technologies have had a dramatic effect on the demand for better, faster and more bandwidth for ICT communications to serve the Australian economy and community.

Increased demand for ICT communications includes:

- escalating use of social networking applications, such as Facebook, wikis and Twitter
- smart homes and home integration technologies
- increasing use of IP technologies, such as VoIP, IPTV and smart phones
- IP Core and Access Networks replacing traditional ICT networks
- Cloud Computing and Smart Grid technologies becoming the way the ICT industry is adapting globally
- the proliferation of home networks equipped with computer networks, home entertainment and smart home technologies
- small to medium enterprises (SME) and teleworkers using more elaborate teleconference facilities (telepresence) to work from home and reduce transport costs and improve efficiency
- superior and more advanced broadband networks from federal government initiatives to boost Australian economy and improve ways of operating, such as eHealth, eEducation, eTravel and hospitality
- a decline in sales of physical products, such as CDs, countered by a dramatic rise in digital sales through outlets such as iTunes and mobile phone companies
- new approaches to media distribution through the internet
- entry of new participants in the telecommunications mobile phone industry, such as Google and Microsoft.

•

Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the *AQF Implementation Handbook*. The 2007 version of the *AQF Implementation Handbook* is expected to be available on the Australian Qualifications Framework Advisory Board (AQFAB) website www.aqf.edu.au during September 2007, and in print in October 2007 (obtain the hard copy by contacting AQFAB on phone 03 9639 1606 or email at aqfab@curriculum.edu.au).

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

- Certificate I in ...
- Certificate II in ...
- Certificate III in ...
- Certificate IV in ...
- Diploma of ...
- Advanced Diploma of ...
- Vocational Graduate Certificate of ...
- Vocational Graduate Diploma of ...

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the *AQF Implementation Handbook* and the AQTF 2007 *Essential Standards for Registration*.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). Issuance of Statements of Attainment must comply with the advice provided in the current *AQF Implementation Handbook* and the *AQTF 2007 Essential Standards for Registration*.

Under the AQTF 2007, RTOs must recognise the achievement of competencies as recorded on a qualification or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The *AQF Implementation Handbook* provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.

Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

Certificate II

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

Certificate III

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the selection of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
- take responsibility for own outputs in work and learning
- take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature.

Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes

Do the competencies enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
- apply solutions to a defined range of unpredictable problems
- identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
- identify, analyse and evaluate information from a variety of sources
- take responsibility for own outputs in relation to specified quality standards
- take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.

The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.

Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
- analyse and plan approaches to technical problems or management requirements
- transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
- evaluate information, using it to forecast for planning or research purposes
- take responsibility for own outputs in relation to broad quantity and quality parameters
- take some responsibility for the achievement of group outcomes.

Advanced Diploma

Characteristics of Learning Outcomes

Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.

The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.

Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.

The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes

Do the competencies or learning outcomes enable an individual with this qualification to:

- demonstrate understanding of specialised knowledge with depth in some areas
- analyse, diagnose, design and execute judgements across a broad range of technical or management functions
- generate ideas through the analysis of information and concepts at an abstract level
- demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
- demonstrate accountability for personal outputs within broad parameters
- demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
- Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
- Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
- Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
- Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.

Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.

- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

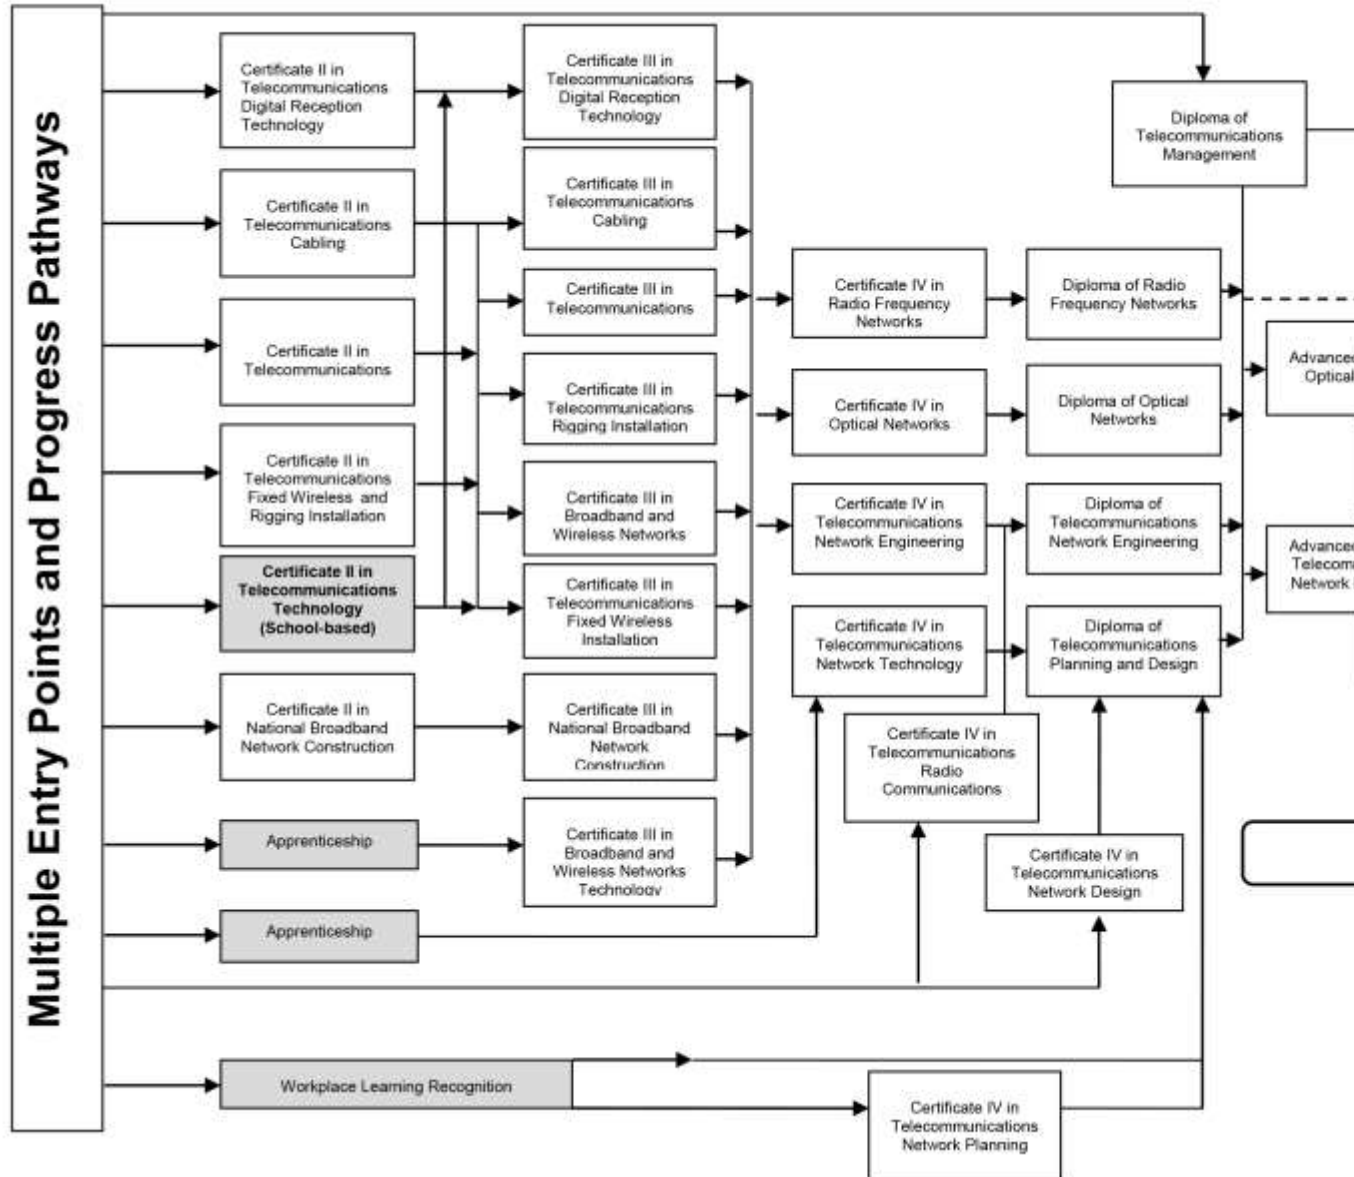

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.

Qualification Pathways

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package. For more information about qualifications and pathways contact Innovation and Business Industry Skills Council (<http://www.ibsa.org.au>).

Pathways for Telecommunications Qualifications Framework

ICT10 Integrated Telecommunications Skill Sets

Skill Sets

Definition

Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

Wording on Statements of Attainment

Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording "these competencies meet [insert skill set title or identified industry area] need" on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2007 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainmentthe updated version is expected to be available on the AQFAB website www.aqf.edu.au during September 2007 and in print in October 2007.

ICT10 Integrated Telecommunications Skill Sets

Skill sets are designed to be available to industry to train participants in a particular skill set that contains units of competency that will be awarded with a Statement of Attainment and are able to be counted towards a qualification.

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Industry Requirements for Employability Skills

Employability Skills replacing Key Competency information from 2006

In May 2005, the approach to incorporate Employability Skills within Training Package qualifications and units of competency was endorsed. As a result, from 2006 Employability Skills will progressively replace Key Competency information in Training Packages.

Background to Employability Skills

Employability Skills are also sometimes referred to as generic skills, capabilities or Key Competencies. The Employability Skills discussed here build on the Mayer Committee's Key Competencies, which were developed in 1992 and attempted to describe generic competencies for effective participation in work.

The Business Council of Australia (BCA) and the Australian Chamber of Commerce and Industry (ACCI), produced the Employability Skills for the Future report in 2002 in consultation with other peak employer bodies and with funding provided by the Department of Education, Science and Training (DEST) and the Australian National Training Authority (ANTA). Officially released by Dr Nelson (Minister for Education, Science and Training) on 23 May 2002, copies of the report are available from the DEST website at: http://www.dest.gov.au/archive/ty/publications/employability_skills/index.htm.

The report indicated that business and industry now require a broader range of skills than the Mayer Key Competencies Framework and featured an Employability Skills Framework identifying eight Employability Skills*:

- communication
- teamwork
- problem solving
- initiative and enterprise
- planning and organising
- self-management
- learning
- technology.
-

The report demonstrated how Employability Skills can be further described for particular occupational and industry contexts by sets of facets. The facets listed in the report are the aspects of the Employability Skills that the sample of employers surveyed identified as being important work skills. These facets were seen by employers as being dependent both in their nature and priority on an enterprise's business activity.

** Personal attributes that contribute to employability were also identified in the report but are not part of the Employability Skills Framework.*

Employability Skills Framework

The following table contains the Employability Skills facets identified in the report Employability Skills for the Future.

Skill	Facets <i>Aspects of the skill that employers identify as important. The nature and application of these facets will vary depending on industry and job type.</i>
Communication that contributes to productive	<ul style="list-style-type: none"> • listening and understanding • speaking clearly and directly
and harmonious relations across employees and customers	<ul style="list-style-type: none"> • writing to the needs of the audience • negotiating responsively • reading independently • empathising • using numeracy effectively • understanding the needs of internal and external customers • persuading effectively • establishing and using networks • being assertive • sharing information • speaking and writing in languages other than English
Teamwork that contributes to productive working relationships and outcomes	<ul style="list-style-type: none"> • working across different ages irrespective of gender, race, religion or political persuasion • working as an individual and as a member of a team • knowing how to define a role as part of the team • applying teamwork to a range of situations e.g. futures planning and crisis problem solving • identifying the strengths of team members • coaching and mentoring skills, including giving feedback
Problem solving that contributes to productive outcomes	<ul style="list-style-type: none"> • developing creative, innovative and practical solutions • showing independence and initiative in identifying and solving problems • solving problems in teams • applying a range of strategies to problem solving • using mathematics, including budgeting and financial management to solve problems • applying problem-solving strategies across a range of areas • testing assumptions, taking into account the context of data and circumstances • resolving customer concerns in relation to complex project issues
Initiative and	<ul style="list-style-type: none"> • adapting to new situations

<p>enterprise that contribute to innovative outcomes</p>	<ul style="list-style-type: none"> • developing a strategic, creative and long-term vision • being creative • identifying opportunities not obvious to others • translating ideas into action • generating a range of options • initiating innovative solutions
<p>Planning and organising that contribute to long and short-term strategic planning</p>	<ul style="list-style-type: none"> • managing time and priorities - setting time lines, coordinating tasks for self and with others • being resourceful • taking initiative and making decisions • adapting resource allocations to cope with contingencies • establishing clear project goals and deliverables • allocating people and other resources to tasks • planning the use of resources, including time management • participating in continuous improvement and planning processes • developing a vision and a proactive plan to accompany it • predicting - weighing up risk, evaluating alternatives and applying evaluation criteria • collecting, analysing and organising information • understanding basic business systems and their relationships
<p>Self-management that contributes to employee satisfaction and growth</p>	<ul style="list-style-type: none"> • having a personal vision and goals • evaluating and monitoring own performance • having knowledge and confidence in own ideas and visions • articulating own ideas and visions • taking responsibility
<p>Learning that contributes to ongoing improvement and expansion in employee and company operations and outcomes</p>	<ul style="list-style-type: none"> • managing own learning • contributing to the learning community at the workplace • using a range of mediums to learn - mentoring, peer support and networking, IT and courses • applying learning to technical issues (e.g. learning about products) and people issues (e.g. interpersonal and cultural aspects of work) • having enthusiasm for ongoing learning • being willing to learn in any setting - on and off the job • being open to new ideas and techniques • being prepared to invest time and effort in learning new skills • acknowledging the need to learn in order to accommodate change
<p>Technology that contributes to the effective carrying out of tasks</p>	<ul style="list-style-type: none"> • having a range of basic IT skills • applying IT as a management tool • using IT to organise data • being willing to learn new IT skills • having the OHS knowledge to apply technology

Employability Skills Summary

An Employability Skills Summary exists for each qualification. Summaries provide a lens through which to view Employability Skills at the qualification level and capture the key aspects or facets of the Employability Skills that are important to the job roles covered by the qualification. Summaries are designed to assist trainers and assessors to identify and include important industry application of Employability Skills in learning and assessment strategies.

The following is important information for trainers and assessors about Employability Skills Summaries.

Employability Skills Summaries provide examples of how each skill is applicable to the job roles covered by the qualification.

- Employability Skills Summaries contain general information about industry context which is further explained as measurable outcomes of performance in the units of competency in each qualification.
- The detail in each Employability Skills Summary will vary depending on the range of job roles covered by the qualification in question.
- Employability Skills Summaries are not exhaustive lists of qualification requirements or checklists of performance (which are separate assessment tools that should be designed by trainers and assessors after analysis at the unit level).
- Employability Skills Summaries contain information that may also assist in building learners' understanding of industry and workplace expectations.

Industry Requirements for Employability Skills

ICT10 Integrated Telecommunications Training Package seeks to ensure that industry-endorsed employability skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability skills are both explicit and embedded within units of competency. This means that employability skills are:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Package users to identify accurately the performance requirements of each unit with regards to employability skills.

ICT10 Integrated Telecommunications Training Package also seeks to ensure that employability skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

Whole of Industry Qualification Information

Packaging of qualifications to meet industry flexibility

The judicious packaging of core and elective units has provided great flexibility for participants to cross over from stream to stream with minimal disruptions. This has been possible by minimising the number of core units and allowing greater choice of elective units.

The mainstream is the Telecommunications/Telecommunications Network Engineering which leads to a Vocational Graduate Diploma.

The following are the Training Packages from which units have been imported to supplement those developed specifically for the telecommunications industry:

- BSB07 Business Services Training Package
- CPC08 Construction, Plumbing and Services Training Package
- CPP07 Property Services Training Package
- FNS04 Financial Services Training Package
- HLT07 Health Training Package
- ICA05 Information and Communications Technology Training Package
- ICA11 Information and Communications Technology Training Package

The importation of units from those Training Packages provides clear support to the telecommunications units in the area of sustainability, project management and IT convergence networks.

The ICT20113 Certificate II in Telecommunications Technology is an exception to the flexible packaging rule. This school-based entry qualification for VET in schools provides an innovative approach to a pathway model for use by schools as a recommended school model pathway. The ICT20113 provides Years 11 and 12 students with skills in Telecommunications Networks, Digital Reception Technology and IP networks in home and SME networks. It contains a core with a choice of three streams; the Cabling Technician stream that enables an ACMA CPR restricted registration, the Digital Reception stream that provides for work on digital reception equipment and the Networking stream that provides for work with IP home and small business networks. Due to the specialisation of the streams, the substitution of elective units is not permitted.

Work outcome

All VET qualifications must lead to a work outcome. The flexibility of ICT10 Integrated Telecommunications Training Package qualifications allows RTOs to vary programs to meet:

- the specific needs of learners and industry clients
- the needs of a locality or a particular industry application of skills
- greater employability of a group of students or an individual.

Maximising employability

In all cases, when packaging qualifications in ICT10 Integrated Telecommunications Training Package, RTOs must follow the principle of providing groups and individuals with the broadest possible combination of skills and attributes.

When combining units, therefore, choices must be exercised so that duplication of work outcomes does not occur either within the Integrated Telecommunications Training Package or among other Training Packages.

Titles of qualifications

Guidelines on issuing qualifications and the protocol defining the form of qualifications are contained in the *Australian Qualifications Framework (AQF) Implementation Handbook*.

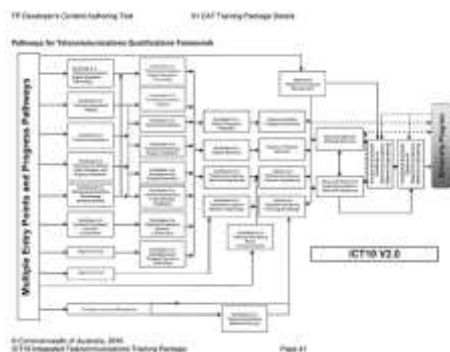

Qualifications in the ICT10 Integrated Telecommunications Training Package have industry descriptors only. There is no provision for nominating an occupational or functional stream in brackets after a title, such as ICT40210 Certificate IV in Telecommunications Network Engineering. In the context of telecommunications performance, an occupational stream could be seen as Telstra or Nokia specific. However, to specify such streams would narrow the focus of what students can achieve and would result in the addition of numerous qualifications to the Training Package without any actual change in their structure.

However, RTOs issuing qualifications may wish to describe the specialisation in which individuals achieve competence in performance or composition. For example, the transcript of units completed could be preceded by a short statement such as:

'The chosen job functions for this qualification was the 'installation and testing of optical networks'.

Any descriptive statement may nominate the individual specialisation (e.g. mobile telephony, satellite, microwave, broadcasting, etc.) where competence has been achieved. Note that candidates may achieve competence in one or more areas of specialisation.

Descriptive statements on certificates should always be written with reference to the overall guidelines in the *AQF Implementation Handbook*.

Assessment Guidelines

Introduction

These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the AQTF 2007. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview

This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF 2007 requirements; licensing/registration requirements; and assessment pathways.

Benchmarks for Assessment

Assessment within the National Skills Framework is the process of collecting evidence and making judgments about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

In the areas of work covered by this Training Package, the endorsed units of competency are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Australian Quality Training Framework Assessment Requirements

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2007 Essential Standards for Registration.

The AQTF 2007 Essential Standards for Registration can be downloaded from <www.training.com.au/aqtf2007>. The following points summarise assessment requirements.

Registration of Training Organisations

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering/Course Accrediting Body in accordance with the AQTF 2007 Essential Standards for Registration. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

Quality Training and Assessment

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2007 Essential Standards for Registration, Standard 1.

Assessor Competency Requirements

Each person involved in training, assessment or client service must be competent for the functions they perform. See the AQTF 2007 Essential Standards for Registration, Standard 1, for assessor (and trainer) competency requirements.

Assessment Requirements

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2007 Essential Standards for Registration, Standard 1.

Assessment Strategies

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2007 Essential Standards for Registration, Standard 1.

National Recognition

Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2007 Essential Standards for Registration, Condition of Registration 7: Recognition of qualifications issued by other RTOs.

Access and Equity and Client Outcomes

Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2007 Essential Standards for Registration, Standard 2.

Monitoring Assessments

Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the Essential Standards for Registration. See the AQTF 2007 Essential Standards for Registration, Standard 3.

Recording Assessment Outcomes

Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2007 Essential Standards for Registration, Standard 3.

Issuing AQF Qualifications and Statements of Attainment

Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/courses(s). See the AQTF 2007 and the 2007 edition of the AQF Implementation Handbook-available on the AQFAB website < www.aqf.edu.au>.

Licensing/Registration Requirements

This section provides information on licensing/registration for this Training Package, with the following important disclaimer.

Licensing and registration requirements that apply to specific industries, and vocational education and training, vary between each State and Territory, and can regularly change. The developers of this Training Package, and DEEWR, consider that the licensing/registration requirements described in this section apply to RTOs, assessors or candidates with respect to this Training Package. While reasonable care has been taken in its preparation, the developers of this Training Package and DEEWR cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis.

Contact the relevant State or Territory Department(s) to check if the licensing/registration requirements described below still apply, and to check if there are any others with which you must comply.

The Telecommunications Regulator is the Australian Communications and Media Authority (ACMA). The legislation covering ACMA activities involves a broad range of national activities, from carrier licensing to use of radio spectrum. The most relevant issue for ICT10 qualifications is the ACMA Cabling Provider Rules Registration. Prior to October 2000, Cabling Provider Rules (CPR) Registration was known as 'licensing' and included several levels, such as General Premises Cabling, Base Cabling and 'Endorsements', Domestic and Restricted Cabling licences.

In 2012 a new unit was introduced to specifically meet the requirements for restricted cablers and compliment the mandated ACMA requirements for work on broadband. Also introduced was the requirement to complete competency unit ICTWHS2170.

Units of competency included in the selections for the relevant ICT10 Integrated Telecommunications qualifications enable candidates to qualify for ACMA CPR registration either by gaining a full qualification, or the required set as a part qualification, skill set, or Statement of Attainment. The units of competency for ACMA CPR registration are:

Restricted Registration Either

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

and

ICTWHS2170B Follow occupational work health and safety (WHS) and environmental policy and procedures

OR

Restricted Registration

ICTCBL2005B Install customer cable support systems

ICTCBL2006B Place and secure customer cable

ICTCBL2008B Terminate metallic conductor customer cable

ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards

and

ICTWHS2170B Follow occupational work health and safety (WHS) and environmental policy and procedures

Broadband cabling work Registration

ICTCMP2239 Perform restricted custom premises broadband cabling work; ACMA

Restricted Rule

Open Registration

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCBL2137B Install, maintain and modify customer premises communications cabling:

ACMA Open Rule

and

ICTWHS2170B Follow occupational work health and safety (WHS) and environmental policy and procedures

OR

Open Registration

ICTCBL2005B Install customer cable support systems

ICTCBL2006B Place and secure customer cable

ICTCBL2008B Terminate metallic conductor customer cable

ICTCBL2012B Install functional and protective telecommunications earthing system

ICTCBL2017B Alter services to existing cable system

ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards

and

ICTWHS2170B Follow occupational work health and safety (WHS) and environmental policy and procedures

Lift Registration

ICTCBL2138A Install, maintain and modify customer premises communications cabling:

ACMA Lift Rule

The following guidance is provided in relation to regulatory requirements that may apply to people working in the Telecommunications industry.

National Standard for Licensing Persons Performing High Risk Work

The National Standard for Licensing Persons Performing High Risk Work applies to persons performing dogging and rigging work. Completion of the following units is required for certification at either basic, intermediate or advanced levels.

- CPCCLDG3001A Licence to perform dogging
- CPCCLRG3001A Licence to perform rigging basic level
- CPCCLRG3002A Licence to perform rigging intermediate level
- CPCCLRG4001A Licence to perform rigging advanced level

Information on occupational licensing and its intersection with vocational education and training can be found in *Licensing Line News* at www.licensinglinenews.com.

National Code of Practice for Induction for Construction Work

"This Code of Practice provides guidance to persons working in the general and residential construction sectors on the types of induction training that may be needed to provide construction workers with an awareness and understanding of common hazards on construction sites and how they should be managed." (Source: *Licensing Line News* at www.licensinglinenews.com).

Sets and staging for some performances or events may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit 'CPCCOHS1001A Work safely in the construction industry' from the CPC08 Construction, Plumbing and Services Integrated Framework Training Package fulfils this requirement.

Contact state or territory OHS authorities for information on RTOs approved to deliver the general induction training program.

Requirements for Assessors

In order to conduct assessment for statutory licensing or other industry registration requirements, assessors must meet the requirements outlined in the following table, in addition to the AQTF requirements.

LICENCE/ REGISTRATION	JURISDICTION	REQUIREMENTS
Restricted Registration ICTCBL2136B ICTWHS2170B	Australian Communications and Media Authority	Restricted Registered Cabler TITAB registered assessor
Open Registration ICTCBL2136B ICTCBL2137B	Australian Communications and Media Authority	Open Registered Cabler TITAB registered assessor

ICTWHS2170B		
Restricted Registration ICTCBL2005B ICTCBL2006B ICTCBL2008B ICTCMP2022B ICTWHS2170B	Australian Communications and Media Authority	Restricted Registered Cabler TITAB registered assessor
Open Registration ICTCBL2005B ICTCBL2006B ICTCBL2008B ICTCBL2012B ICTCBL2017B ICTCMP2022B ICTWHS2170B	Australian Communications and Media Authority	Open Registered Cabler TITAB registered assessor
Lift Registration ICTCBL2138A	Australian Communications and Media Authority	Lift Registered Cabler TITAB registered assessor
Endorsement – Structured Cabling ICTCBL3009B	Telecommunications industry preferred (previously mandated by ACMA)	Open Registered Cabler TITAB registered assessor Equivalent competency
Endorsement – Optical Fibre ICTCBL3010B	Telecommunications industry preferred (previously mandated by ACMA)	Open Registered Cabler TITAB registered assessor Equivalent competency
Endorsement – Coaxial Cable ICTCBL3011B	Telecommunications industry preferred (previously mandated by ACMA)	Open Registered Cabler TITAB registered assessor Equivalent competency
Endorsement – Aerial ICTCBL2016A ICTCBL3020A ICTCBL3021A	Telecommunications industry preferred (previously mandated by ACMA)	Open Registered Cabler TITAB registered assessor Equivalent competencies
Endorsement – Underground	Telecommunications industry	Open Registered Cabler

ICTCBL2016A ICTCBL3018A ICTCBL3019A	preferred (previously mandated by ACMA)	TITAB registered assessor Equivalent competencies
Endorsement – Cable and System Testing ICTCBL3013A	Telecommunications industry preferred (previously mandated by ACMA)	Open Registered Cabler TITAB registered assessor Equivalent competency

TITAB and TITAB REGISTERED ASSESSORS

Due to the regulatory aspects of the Telecommunications Training Package, it is vital that compliance is achieved in the areas of vocational education and training as well as sector specific ‘licensing’/registration requirements.

Prior to October 2000, the ‘ACMA Cabling Provider Rules Registration’ was known as ‘licensing’ and included several levels of cabling licences and ‘Endorsements’. Since 2000, the Australian Communications and Media Authority (ACMA) - the telecommunications regulator - has mandated that particular competencies apply to registration therefore this Training Package is now a combination of both mandatory and voluntary or industry requirements. Selected competencies within Training Package qualifications allow candidates to qualify for the ‘ACMA Cabling Provider Rules (CPR) Registration’, either by gaining a full or part qualification or a skill set or Statement of Attainment.

TITAB was funded by the Federal Government, through the ACMA, to provide Registered Assessors to assess telecommunications competency standards, as part of the statutory obligations and mandatory ‘licensing’/registration requirements. The management and co-ordination of the Registered Assessors was then delegated to TITAB as the industry moved to co-regulation.

The Registered Assessors are supported by TITAB and must fulfill a number of conditions to maintain current TITAB Assessor registration. This comprehensive network of skilled and knowledgeable TITAB Registered Assessors is used extensively by the telecommunications sector to implement both the ‘licensing’/registration and AQTF requirements.

TITAB’s contact details are:
 PO Box 348 Carlton South Victoria 3053
 Phone: 03 9349 4955
 Fax: 03 9349 4844
 Email: info@titab.com.au
 Website: www.titab.com.au

Assessor Competencies

The AQTF 2007 specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 Essential Standards for Registration follows:

1.4 Training and assessment are conducted by trainers and assessors who:

- a) have the necessary training and assessment competencies as determined by the National Quality Council or its successors
- b) have the relevant vocational competencies at least to the level being delivered or assessed
- c) continue developing their vocational and training and assessment competencies to support continuous improvements in delivery of the RTO's services.

Requirements for Candidates

English language, literacy and other skill requirements

It is part of an RTO's responsibility to provide appropriate information to candidates to ensure that candidates understand the requirements for language, literacy and other skill requirements prior to learning and assessment. Assessors carrying out this responsibility must ensure candidates or potential candidates are advised effectively of the underlying skill requirements. Candidates who may have difficulty meeting these requirements must be provided with advice and options, such as appropriate language, literacy and numeracy skills training. Technology applications are also required as part of the competency specifications of some ICT10 Integrated Telecommunications Training Package competency units. Further, complex cognitive skills in planning, research, interpretation, analysis and synthesis form part of the skills requirements of many units.

In a learning and assessment pathway, some of these skills can be developed through the learning process. However, this will depend on the approach adopted in the learning strategy and learning program content and the level of resourcing available.

In some situations, implementation may be based on an assumption that learners/candidates possess these skills. In these circumstances, and in an assessment-only pathway, candidates must be made aware of the specific skills that underpin the outcomes and performance requirements and ensure they are capable of demonstrating competence. Where essential skills need to be acquired, options for meeting these skill gaps must be provided.

Requirements for RTOs

Training and assessment in remote and regional areas

Training and assessing candidates in remote and regional areas present a range of challenges. These include:

- lack of numbers preventing the establishment of traditional class sizes
- physical remoteness of some communities, where access to training facilities is limited
- scarcity of teachers with the required industry experience
- scarcity of physical training resources (e.g. current and emerging technology).

Some options for overcoming these challenges include:

- partnerships between RTOs to establish classes, i.e. programs delivered on a regional rather than local basis
- delivering certain units by distance mode
- partnerships between industry and RTOs to share resources and personnel
- partnerships between schools and RTOs
- use of technology (e.g. email, CDs and internet) and self-paced resources.

Assessment in a simulated environment

Units of competency in the ICT10 Integrated Telecommunications Training Package may be assessed in the workplace or in a simulated environment.

The telecommunications industry by its nature involves the use of technologies and processes which have a potentially high impact on customers and a high cost of failure. Normal practice is to protect these technologies and processes from any risk. Therefore assessment of training candidates cannot be undertaken in normal operating environments in most circumstances.

In response to this, industry practice for many years has been to develop models and simulations on which assessments are conducted. These models and simulations are often costly in themselves and soon fall behind the rapidly advancing technology of the industry.

As a result, assessment of candidates for many of the units of competency in the ICT10 Integrated Telecommunications Training Package can only be undertaken using simulations. To maintain the integrity of these assessments RTOs and assessors need to be vigilant in keeping pace with the industry and in checking that assessment simulations accurately reflect workplace activities. RTOs will need regular contact with industry to ensure the currency and validity of assessment simulations.

To assist assessors, the following information provides a framework for conducting assessments in simulated environments.

Simulations must provide opportunities for integrated assessment of competence that includes:

- performing the task (task skills)
- managing a number of tasks (task management skills)
- dealing with workplace irregularities such as unexpected problems, breakdowns and changes in routine (contingency management skills)
- fulfilling the responsibilities and expectations of the job and workplace, including working with others (job/role environment skills)
- transferring competencies to new contexts.

All evidence from simulated activities must result from activities that have taken place in a realistic working environment which replicates the conditions and circumstances in which the candidate will usually be expected to work.

Working conditions should reflect those found in the workplace and include facilities, equipment and materials used in the workplace for the activities being assessed. Most importantly it should also include relationships, constraints and pressures met in the workplace.

The activity to which the candidate is required to demonstrate competence must be realistic and reasonable in terms of scale.

Any assessment conducted under simulated conditions must require the candidate to take into consideration what would be typical ambient conditions encountered in the normal workplace as well as reflect the typical workflow involved.

Workplace simulation criteria

In conducting an assessment using a simulation, assessors should review the process prior to its implementation. The simulation must give the candidate the opportunity to meet three critical criteria. These are:

- quality – the work is of the standard required for entry into the industry
- productivity – the work is performed within a time frame appropriate for entry to the industry
- safety – the work is performed in a manner that meets industry safety standards.

Where assessment simulations meet these criteria RTOs can be sure that candidates are ‘work ready’ on successful completion of the assessment task.

In addition, the assessment process should be reviewed to ensure that, wherever applicable, it:

- uses facilities and equipment that meet current industry standards
- includes typical customers, including difficult customers and diverse types of customers
- integrates of various types of work performance – multiple tasks, prioritisation, service standards and OHS
- requires allocation of time to tasks and deadlines
- measures consistent performance over time
- includes work with others in teams
- requires considerations of budget constraints
- includes use of operational procedures and guidelines.

To further enhance the validity of assessment process using simulation, the assessor should consider:

- assessments covering a range of interconnected units of competency
- use of assessment checklists to assist in identifying critical performance criteria
- use of self assessment, peer assessment and debriefing activities
- use of authentic documentation, e.g. workplace roles, OHS regulations, salary advice, marketing information, procedural manuals, policies, enterprise bargaining agreements.

Training and assessment issues for schools

Implementation of ICT10 Integrated Telecommunications Training Package within the school sector, while encouraged, needs to ensure the following:

- currency of skills and knowledge of those charged with training and assessing students
- access to industry-current equipment, facilities and training resources so that students acquire a realistic view of the realities and conditions within the workplace
- comprehensive coverage of underpinning skills and knowledge as delineated within the units of competency

- appropriateness of learning and assessment experiences to ensure that these are current and realistic.

The units of competency provide more detailed guidance for training and assessment purposes, as well as examples relevant to each unit, and schools are encouraged to use these guidelines when planning training and assessment.

It is recommended that delivery in schools should only include Certificate II level qualifications. The following qualification is recommended as most suitable for VET in schools programs:

- ICT20113 Certificate II in Telecommunications Technology

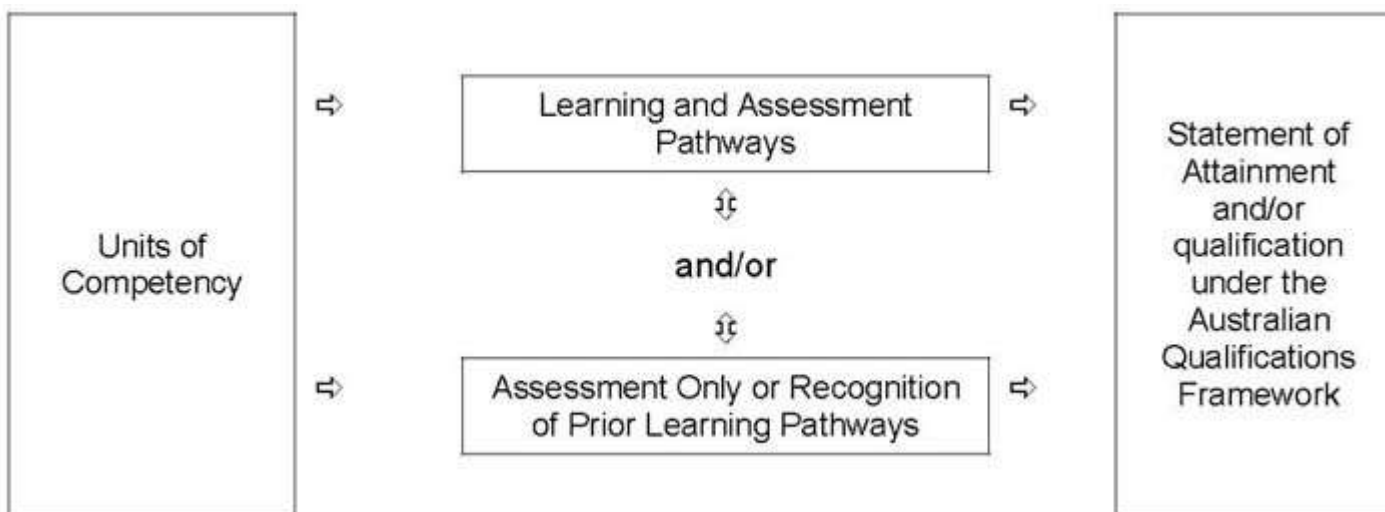

For more information on VET in Schools, please refer to Appendix A.

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

- formal or informal education and training
- experiences in the workplace
- general life experience, and/or
- any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.

Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package and the AQTF 2007.

Learning and Assessment Pathways

Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Assessment-Only or Recognition of Prior Learning Pathway

Competencies already held by individuals can be formally assessed against the units of competency in this Training Package, and should be recognised regardless of how, when or where they were achieved.

In an assessment-only or Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor, such as in the compilation of portfolios; or directed by the assessor, such as through observation of workplace performance and skills application, and oral and/or written assessment. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF 2007 must be met (Standard 1).

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, and work samples. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:

- authentic (the candidate's own work)
- valid (directly related to the current version of the relevant endorsed unit of competency)
- reliable (shows that the candidate consistently meets the endorsed unit of competency)
- current (reflects the candidate's current capacity to perform the aspect of the work covered by the endorsed unit of competency), and

- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

The assessment only or recognition of prior learning pathway is likely to be most appropriate in the following scenarios:

- candidates enrolling in qualifications who want recognition for prior learning or current competencies
- existing workers
- individuals with overseas qualifications
- recent migrants with established work histories
- people returning to the workplace, and
- people with disabilities or injuries requiring a change in career.

Combination of Pathways

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

Assessor Requirements

This section identifies the mandatory competencies for assessors, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

Assessor Competencies

The AQTF 2007 specifies mandatory competency requirements for assessors. For information, Standard 1, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

1.4		<i>Training and assessment is delivered by trainers and assessors who:</i>
	a)	<i>have the necessary training and assessment competencies as determined by the National Quality Council or its successors</i>
	b)	<i>have the relevant vocational competencies at least to the level being delivered or assessed</i>

	<i>c) continue developing their vocational and training and assessment competencies to support continuous improvements in the delivery of the RTO's services.</i>

Industry Assessment Contextualisation 1

Training and assessment for people with specific needs

Disability Standards for Education were formed under the Disability Discrimination Act 1992 and were introduced in August 2005. They clarify the obligations of education and training providers to ensure that students who have a disability are able to access and participate in education without experiencing discrimination.

The Department of Education, Employment and Workplace Relations (DEEWR) provides further information in the *Disability Standards for Education 2005 Guidance Notes*, accessible via the DEEWR website (www.deewr.gov.au/Schooling/DisabilityStandardsforEducation/Documents/Disability_Standards_Education_Guidance_Notes_pdf.pdf).

Good vocational training and assessment are often about making adjustments to what we do to meet the learning support needs of individuals. The information provided in this section is aimed at assisting teachers/trainers to meet the reasonable adjustment needs of people who have a disability.

According to the Australian Bureau of Statistics (ABS), 2003, *Survey of Disability, Ageing and Carers (SDAC)* in the section on education and employment:

'In 2003, one in four people (24%) aged 15-64 years with a profound or severe core-activity limitation, who were living in households, had completed Year 12. This compares to half (49%) of those without a disability. People with a profound or severe core-activity limitation were less likely to have completed a diploma or higher qualification (14%) than those without a disability (28%).'

Employment-related findings, for people aged 15-64 years living in households, from the ABS 2003 *SDAC* include:

- those with a profound level of core-activity limitation had a much lower labour force participation rate (15%) than people without a disability (81%)
- people with a disability who were employed were more likely to work part-time (37%)
- than those who were employed and did not have a disability (29%)
- people employed in agriculture, forestry and fishing (16%) had a relatively high disability rate compared to the overall rate for those employed (11%).'

Clearly there is much work still to be done to ensure that people who have a disability are able to participate in employment and vocational education and training as fully as possible.

What is a disability?

A disability presents some impairment to everyday activity. Some people with a disability do not have any impairments resulting from their disability. For example, a person who has a hearing impairment which is compensated for by a hearing aid may function without any adjustments. While some people with a disability may have an impairment because of the environment, not the disability itself. For example, hearing loss can be accentuated in a room with loud, competing noise and poor acoustics.

A disability may affect or relate to a range of human functions, including mobility, stamina, lifting ability, memory, vision, hearing, speech, comprehension and mood swings. This may be due to accidents, illnesses or birth.

According to the ABS 2003 *SDAC*:

'One in five people in Australia (3,958,300 or 20.0%) had a reported disability. This rate was much the same for males (19.8%) and females (20.1%). Disability was defined as any limitation, restriction or impairment, which has lasted, or is likely to last, for at least six months and restricts everyday activities. Examples range from hearing loss which requires the use of a hearing aid, to difficulty dressing due to arthritis, to advanced dementia requiring constant help and supervision.'

The ABS 2003 *SDAC* information also tells us that:

'15.2% (600,300) of people with a disability reported that the cause of their main health condition was accident or injury, 14% (557 300) that it was disease, illness or heredity, and 11% (423,500) that it was "working conditions, work or over-work".'

Health conditions can also be acquired through sporting accidents, repetitive or over-use (through regular or sporting activities), or the daily activities of life.

There are many resources available that provide information on how to adjust training and assessment for someone who has a disability; some of these are listed in the contacts section below.

Adjustments in training and assessment

An open mind, common sense and tailoring to individual circumstances will, as often as not, ensure individuals achieve the standards that employers and training providers expect. Reasonable adjustments need only be that - reasonable. It is about identifying what adjustments might reasonably be made and how they may be put into place.

Training and assessment can be made more appropriate and fairer for a person who has a disability through attitude, preparation and application.

Attitude

The attitude of others is often the greatest barrier for people who have a disability. While most people who have a disability will only ever require minor adjustments to ensure learning is positive, some will require additional support. There are many support agencies that can provide advice, however teachers/trainers may need to take additional time to ensure their teaching/training meets the learning support needs of the individual concerned.

Positive language creates an atmosphere of mutual respect, which is essential to learning. For example, using language that identifies learners as people rather than language that identifies them by one of their characteristics conveys that the person is more important than the characteristic, such as the difference between a 'person who has an intellectual disability' and an 'intellectually disabled person'. A person who has an intellectual disability could also be identified by a range of equally important characteristics - height, age, sporting interests, etc. However, the term 'intellectually disabled person' refers to the disability as the major, and often only, defining characteristic.

Preparation

It is important to identify any functional issues arising from the nature and extent of a person's disability. This can usually be done by discussing such issues with the individual. In most cases, this consultation will identify reasonable adjustment needs which can be put into place. There are many simple things that teachers/trainers can do to make reasonable adjustments to enable individuals who have a disability to succeed in training and assessment. In some cases, professional support may be required.

Application

Once reasonable adjustments have been implemented it is important to monitor and evaluate what has been done to ensure the best environment for continuous learning because:

- adjustments may only need to be temporary - i.e. mechanisms may only need to be in place during an induction period or due to a temporary disability, in which case evaluation will ensure appropriateness without the need for ongoing monitoring
- adjustments may need reinforcing - when adjustments need to be ongoing, monitoring may reinforce patterns of behaviour in order for them to become 'natural'
- adjustments may need improving - where adjustments are ongoing or substantial, a commitment to continuous improvement is recommended through monitoring.

In most cases an informal discussion with the person concerned may be all that is necessary. However, should adjustments be substantial, or a learner not be acquiring competence at a reasonable rate, a more formal process may be required. This may include:

- performance indicators - training providers, learners and employers should have agreed indicators of performance which can be measured and monitored
- independent support - a third party, independent of the training and/or assessment environment, may need to be involved
- experimentation - if existing adjustments are not proving satisfactory, creative solutions may be needed

- continuing review - formal monitoring is encouraged if adjustments are changed or if substantial adjustments are necessary.

For further information on training and assessment for people with specific needs, the DEEWR website has information about the National Disability Coordination Officer Programme, which 'provides information, co-ordination and referral services for people with a disability interested in or enrolled in post-school education and training' (www.deewr.gov.au).

Reasonable adjustment

Below are some of the practical things that can be done as part of providing reasonable adjustment to learners with specific support needs to enable them to undertake training and assessment. Clearly, each case will be different and will need to be discussed with the person and in some cases expert help will be needed, at least in the initial stages.

Type of disability	Reasonable adjustment
Acquired brain injury	<ul style="list-style-type: none"> • Memory aids (posters, notes, etc.) • Reflective listening skills • Stress minimisation • Time and patience
Hearing impairment	<ul style="list-style-type: none"> • Audio loops for people using hearing aids • Plain English documents • Fire and alarm systems with flashing lights • Sign language interpreters • Telephone typewriters
Intellectual disability	<ul style="list-style-type: none"> • Additional time • Assessment which is appropriate to the skill (i.e. avoiding written assessment for practical tasks) • Mentors • Plain English documents • Practical learning sessions • Repetition of learning exercises
Mobility impairment	<ul style="list-style-type: none"> • Access to aids, such as for holding documents • Adjustable tables • Lifting limits • Note-taking support • Verbal rather than written presentations • Personal computers • Wheelchair access
Psychiatric disability	<ul style="list-style-type: none"> • Identification and avoidance of stresses • Ongoing rather than formal assessments

	<ul style="list-style-type: none"> • Reflective listening skills • 'Time-out' breaks in assessment
Speech impairment	<ul style="list-style-type: none"> • Information summaries • Stress minimisation • Time and patience • Written rather than verbal opportunities
Vision impairment	<ul style="list-style-type: none"> • Additional writing time for assignments and tests • Audiotapes • Braille translations • Enlarged computer screen images • Enlarged text and images • Good lighting or reading lamps • Guide dog provision • Informing the person before moving furniture • Voice synthesisers on computers

Designing Assessment Tools

This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools

Assessment tools provide a means of collecting the evidence that assessors use in making judgments about whether candidates have achieved competency.

There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools

If using prepared assessment tools, assessors should ensure these are benchmarked, or mapped, against the current version of the relevant unit of competency. This can be done by checking that the materials are listed on the National Training Information Service < www.ntis.gov.au >. Materials on the list have been noted by the National Quality Council as meeting their quality criteria for Training Package support materials.

Developing Assessment Tools

When developing assessment tools, assessors must ensure that they:

- are benchmarked against the relevant unit or units of competency
- are reviewed as part of the continuous improvement of assessment strategies as required under Standard 1 of the AQTF 2007
- meet the assessment requirements expressed in Standard 1 of the AQTF 2007.

A key reference for assessors developing assessment tools is TAA04 Training and Assessment Training Package and the unit of competency TAAASS403A *Develop assessment tools*. There is no set format or process for the design, production or development of assessment materials.

Conducting Assessment

This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Assessment Requirements

Assessments must meet the criteria set out in the AQTF 2007 Essential Standards for Registration.

For information, the mandatory assessment requirements from Standard 1 from the AQTF 2007 *Essential Standards for Registration* are as follows:

1.5	<i>Assessment, including Recognition of Prior Learning:</i>
	<i>a) meets the requirements of the relevant Training Package or accredited course,</i>
	<i>b) is conducted in accordance with the principles of assessment and the rules of evidence, and</i>
	<i>c) meets workplace and, where relevant, regulatory requirements.</i>

Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.

Employability Skills are embedded and explicit within each unit of competency. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

Employability Skills in the Integrated Telecommunications context

ICT10 Integrated Telecommunications Training Package seeks to ensure that industry-endorsed employability skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability skills are both explicit and embedded within units of competency. This means that employability skills are:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Package users to identify accurately the performance requirements of each unit with regards to employability skills.

ICT10 Integrated Telecommunications Training Package also seeks to ensure that employability skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

For more information on Employability Skills in Innovation and Business Industry Skills Council Training Packages go to the Innovation and Business Industry Skills Council website at <http://www.ibsa.org.au>.

Access and Equity

An individual's access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia's VET clients and Australia's current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia's economic development and social and cultural life.

Reasonable adjustments

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability.

Under the Disability Standards for Education 2005, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While "reasonable adjustment" and "unjustifiable hardship" are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student's disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.

An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship.

See Part 4, Chapter 2 of the Training Package Development Handbook (DEST, September 2007) for more information on reasonable adjustment, including examples of adjustments.

Industry Assessment Contextualisation 2

Assessment for Indigenous organisations

Aboriginal and Torres Strait Islander people have expressed concern about the importance of developing appropriate assessment processes.

There are four main areas of concern:

- diversity
- cultural appropriateness
- community control
- accreditation.

Diversity

The term diversity is used to emphasise the wide range of opinions, aspirations, community circumstances, cultural practices, geographic locations, and social, economic and political conditions that exist throughout Australia and the need to guard against assumptions that all communities are the same.

One approach is to distinguish between remote, rural and urban settings. These settings suggest differences that may be relevant to Aboriginal and Torres Strait Islander organisations, including:

- culture
- language
- history
- social make-up
- geography
- social and economic infrastructure
- economy
- political structure.

These factors suggest that training and assessment, in order to be relevant to the needs of a particular Aboriginal and Torres Strait Islander organisation, should address each situation as unique.

Cultural appropriateness

The term culture is used in a broad sense, it refers to:

- values, social beliefs and customs, such as Aboriginal and Torres Strait Islander law, land, and family and kinship systems
- protocols of behaviour and interaction e.g. cultural authority, gender and kinship
- ways of thinking, including preferred learning styles
- language, both English and Aboriginal English
- lifestyles
- local history
- location, including region and place.

A particularly important aspect of cultural appropriateness is that of learning styles. There is evidence that Aboriginal and Torres Strait Islander people, both traditional and contemporary, approach learning differently from the Western intellectual tradition, which is relevant to effective training and assessment.

It is understood that Aboriginal and Torres Strait Islander people may:

- learn better in groups than individually

- learn better in the surroundings of their community than in an institutional environment
- prefer oral communications to written forms
- learn on the basis of trial and error in the presence of an experienced person in preference to concept building approaches
- have a highly-developed sense of spatial relations by which they learn; hence stories, maps and pictures would be preferable to oral explanations.

To be effective, it is necessary that training and assessment recognises, adopts and practises appropriate delivery and assessment approaches.

Trainers and assessors who are not Aboriginal or Torres Strait Islanders need information on aspects of Aboriginal and Torres Strait Islander culture. They need to work closely with Aboriginal and Torres Strait Islander people to adopt practices that reflect Aboriginal and Torres Strait Islander approaches. The community should be asked to identify experts to provide information and to assist with assessment of relevant protocols, for example, where required.

There are a number of ways an RTO can establish and maintain culturally appropriate training and assessment practices, including:

- ensuring a high proportion of Aboriginal and Torres Strait Islander participation in all aspects of planning, development, delivery and evaluation
- establishing and maintaining a collaborative relationship with local Aboriginal and Torres Strait Islander communities
- as a mainstream (non-Indigenous) RTO, establishing auspice relationships with Aboriginal and Torres Strait Islander organisations and individuals, including direct and indirect involvement of persons identified as appropriate by the local community
- ensuring ongoing training of non-Aboriginal and Torres Strait Islander staff at all levels of the RTO, delivered by Aboriginal and Torres Strait Islander personnel.

Community control

The term community control is synonymous with such things as self-determination and self-management, and underpins most community aspirations. It is of fundamental concern to people who see themselves as having been dispossessed by colonisation.

The essence of control is control of decision-making. In order to be able to do this, people need all relevant information, relevant competencies, and recognition of their own structures and processes.

Among other things, Aboriginal and Torres Strait Islander people seek control over their training. It is necessary, therefore, that they participate in meaningful ways in all stages of planning, development, delivery and evaluation. One way to achieve this is for communities to have control of the contract for training initiatives.

It is important that training providers and assessors respect and conform to the practice of community control which underpins this field within the ICT10 Integrated Telecommunications Training Package.

Accreditation

Aboriginal and Torres Strait Islander people have said for a long time that their involvement in training has not been formally recognised and that many of the skills they use in managing their organisations and delivering services to their communities have not been valued.

The first issue may have arisen because much of the training that has been delivered to communities has been customised to particular situations, has not been assessed on an individual basis if at all, and has been delivered by unregistered personnel. Secondly, until this time, recognition of current competencies (RCC) has been under-utilised.

Individuals may demonstrate competence in complete units of competency through formal training, informal training or the recognition of current competencies and skills, resulting in qualifications or statements of attainment being awarded.

In the community group setting, an important feature of likely relevance for assessment is that participants may vary with respect to previous education and training experience, which may result in diverse literacy and numeracy issues. However, literacy and numeracy skills are not a barrier to sophisticated thought, and care must be taken not to use assessment strategies that rely on a person having numeracy and literacy skills that are not intrinsically required by the unit of competency being assessed.

A flexible approach to assessment will be required by RTOs in order to meet the requirements of Aboriginal and Torres Strait Islander organisations and individuals under this domain within the ICT10 Integrated Telecommunications Training Package.

Assessment in Aboriginal and Torres Strait Islander communities

The guiding principles that underpin assessment include:

- assessment should be transparent, i.e. clearly seen and understood by the candidate and others
- assessment should empower the candidate on the basis of consent, self-assessment and responsibility for the process
- members or prospective members of community management committees should have opportunities to demonstrate their competencies and skills
- activities undertaken by the candidate in a community management role may be used as the context for assessment where possible (known as on-the-job assessment or workplace assessment); there may also be opportunities to include evidence from other relevant situations
- assessment should involve designated community experts working in collaboration with RTO assessors in order to provide appropriate recognition of cultural and community skills and knowledge

- assessments must provide constructive feedback to candidates and support for further competency development
- assessments must provide a statement of attainment or qualification, listing the units of competency achieved
- records of candidate achievement maintained by the RTO must include the statement of attainment, listing the units of competency or qualifications achieved as required by the AQTF 2007
- a record of demonstrated competencies will assist in role clarification and performance appraisals in the workplace.

Given the importance of the assessment to the candidate and community management committees, the assessor must make every effort to ensure that assessment is conducted with the highest level of professionalism and integrity.

Units of competency with cultural content, including the following of local protocols, will require the assessor to have knowledge of these cultural matters. As these matters are often governed by local rules regarding access to such knowledge, only those people with the knowledge can genuinely assess these aspects of the competency or provide guidance on their assessment.

Discussion must take place with the community and agreement must be reached on how these matters are assessed. For non-Aboriginal and Torres Strait Islander RTOs, this will usually mean the use of auspice arrangements with appropriate people or knowledge experts, identified by the community.

It should be noted that for Aboriginal and Torres Strait Islander people being assessed in aspects of competency, they will almost invariably have been attained through life experience. This must also be taken into account in the assessment procedures relating to cultural matters.

Assessors may exercise limited discretion in response to organisational or individual requirements, but any changes must not alter the meaning of the unit of competency or the elements of competency.

- Candidates must be informed of the right to access grievance procedures.

Further Sources of Information

The section provides a listing of useful contacts and resources to assist assessors in planning, designing, conducting and reviewing of assessments against this Training Package.

Australian Quality Training Framework 2007 (AQTF 2007) - for information and resources go to www.training.com.au/aqtf2007.

AQTF 2007 Essential Standards for Registration . Training organisations must meet these standards in order to deliver and assess nationally recognised training and issue nationally recognised qualifications. They include three standards, a requirement for registered training organisations to gather information on their performance against three quality indicators, and nine conditions of registration.

AQTF 2007 User's Guide to the Essential Standards for Registration . A Users' Guide for training organisations who must meet these standards in order to deliver and assess nationally recognised training and issue nationally recognised qualifications.

AQTF 2007 Standards for Accredited Courses . State and territory accrediting bodies are responsible for accrediting courses. This standard provides a national operating framework and template for the accreditation of courses.

TAA04 Training and Assessment Training Package . This is available from Innovation and Business Skills Australia (IBSA), the Innovation and Business Industry Skills Council, and can be viewed and components downloaded, from the National Training Information Service (NTIS).

National Training Information Service, an electronic database providing comprehensive information about RTOs, Training Packages and accredited courses (www.ntis.gov.au).

Training Package Development Handbook (DEST, August 2007). Can be downloaded from www.deewr.gov.au.

Assessment resources

Training Package Assessment Guides - a range of resources to assist RTOs in developing Training Package assessment materials (originally developed by ANTA with funding from the Department of Education, Training and Youth Affairs) and made up of 10 separate titles, as described at the publications page of www.deewr.gov.au. Go to www.resourcegenerator.gov.au.

Printed and/or CD versions of the guides can be purchased from Technical and Vocational Education and Training (TVET) Australia Limited. The resource includes the following guides:

- Training Package Assessment Materials Kit
- Assessing Competencies in Higher Qualifications
- Recognition Resource
- Kit to Support Assessor Training
- Candidates Kit: Guide to Assessment in New Apprenticeships
- Assessment Approaches for Small Workplaces
- Assessment Using Partnership Arrangements
- Strategies for ensuring Consistency in Assessment
- Networking for Assessors
- Quality Assurance Guide for Assessment.

An additional guide 'Delivery and Assessment Strategies' has been developed to complement these resources.

General Resources

Refer to <http://antapubs.dest.gov.au/publications/search.asp> to locate the following publications.

AQF Implementation Handbook, third Edition. Australian Qualifications Framework Advisory Board, 2002, aqf.edu.au

Australian Quality Training Framework 2007 (AQTF 2007) - for information and resources go to www.training.com.au/aqtf2007.

AQTF 2007 Essential Standards for Registration. Training organisations must meet these standards in order to deliver and assess nationally recognised training and issue nationally recognised qualifications. They include three standards, a requirement for registered training organisations to gather information on their performance against three quality indicators, and nine conditions of registration.

AQTF 2007 *User's Guide to the Essential Standards for Registration*. A Users' Guide for training organisations who must meet these standards in order to deliver and assess nationally recognised training and issue nationally recognised qualifications.

AQTF 2007 *Standards for Accredited Courses*. State and Territory accrediting bodies are responsible for accrediting courses. This standard provides a national operating framework and template for the accreditation of courses.

TAA04 *Training and Assessment Training Package*. This is available from the Innovation and Innovation & Business Skills Australia (IBSA) Industry Skills Council and can be viewed, and components downloaded, from the National Training Information Service (NTIS).

National Training Information Service, an electronic database providing comprehensive information about RTOs, Training Packages and accredited courses (www.ntis.gov.au).

Training Package Development Handbook (DEST, August 2007). Can be downloaded from www.dest.gov.au

Assessment resources

Training Package Assessment Guides - a range of resources to assist RTOs in developing Training Package assessment materials (originally developed by ANTA with funding from the Department of Education, Training and Youth Affairs) and made up of 10 separate titles, as described at the publications page of www.dest.gov.au. Go to www.resourcegenerator.gov.au/loadpage.asp?TPAG.htm

Printed and/or CD ROM versions of the Guides can be purchased from Technical and Vocational Education and Training (TVET) Australia Limited. The resource includes the following guides:

- Training Package Assessment Materials Kit
- Assessing Competencies in Higher Qualifications
- Recognition Resource
- Kit to Support Assessor Training
- Candidates Kit: Guide to Assessment in New Apprenticeships
- Assessment Approaches for Small Workplaces
- Assessment Using Partnership Arrangements
- Strategies for ensuring Consistency in Assessment
- Networking for Assessors
- Quality Assurance Guide for Assessment

An additional guide "Delivery and Assessment Strategies" has been developed to complement these resources.

Competency Standards - Industry Contextualisation

Competency Standards

What is competency?

The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.

Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself.

Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of Units of Competency by RTOs

Registered Training Organisation (RTOs) may contextualise units of competency to reflect local outcomes required. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.

Any contextualisation of units of competency in this endorsed Training Package must be within the bounds of the following advice. In contextualising units of competency, RTOs:

- must not remove or add to the number and content of elements and performance criteria
- may add specific industry terminology to performance criteria where this does not distort or narrow the competency outcomes
- may make amendments and additions to the range statement as long as such changes do not diminish the breadth of application of the competency and reduce its portability, and/or
- may add detail to the evidence guide in areas such as the critical aspects of evidence or resources and infrastructure required where these expand the breadth of the competency but do not limit its use.

Components of Units of Competency

The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title

The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor

The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of

competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills statement

A standard Employability Skills statement appears in each unit of competency. This statement directs trainers and assessors to consider the information contained in the Employability Skills Summary in which the unit of competency is packaged.

Prerequisite Units (optional)

If there are any units of competency that must be completed before the unit, these will be listed.

Application of the Unit

This sub-section fleshes out the unit of competency's scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

Competency Field (Optional)

The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

Sector (optional)

The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

Elements of Competency

The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

Performance Criteria

The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

Required Skills and Knowledge

The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

Range Statement

The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

Evidence Guide

The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:

- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment
- relationships with the assessment of any other units of competency
- suitable methodologies for conducting assessment including the potential for workplace simulation
- resource implications, for example access to particular equipment, infrastructure or situations
- how consistency in performance can be assessed over time, various contexts and with a range of evidence, and expectations at the AQF qualification level involved

Employability Skills in units of competency

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

How Employability Skills relate to the Key Competencies

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

Employability Skills	Mayer Key Competencies
Communication	Communicating ideas and information
Teamwork	Working with others and in teams
Problem solving	Solving problems Using mathematical ideas and techniques
Initiative and enterprise	
Planning and organising	Collecting, analysing and organising information Planning and organising activities
Self-management	
Learning	
Technology	Using technology

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

Explicitly embedding Employability Skills in units of competency

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.

Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole

- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

The following table contains examples of embedded Employability Skills for each component of a unit of competency. Please note that in the examples below the bracketed skills are provided only for clarification and will not be present in units of competency within this Training Package.

Competency Standards - Industry Contextualisation

As indicated elsewhere, RTOs may contextualise units of competency imported from other Training Packages to reflect outcomes relevant to the ICT10 Integrated Telecommunications Training Package industry. Units from the ICA05 Information and Communications Technology Training Package, ICA11 Information and Communications Technology Training Package BSB07 Business Services Training Package, CPP07 Property Services Training Package, HLT07 Health Training Package and FNS04 Financial Services Training Package have been imported into the telecommunications qualifications to support those units which address specific aspects of the ICT industry, such as computer networking and security, project management, small business needs and customer service.

Using 'BSBSUS501A Develop workplace policy and procedures for sustainability' as an example, RTOs could add the development of policies and procedures in sustainability whilst formulating planning and design specifications to ICT projects.

Similarly if 'ICASAS305A Provide IT advice to clients' were imported, examples of 'customer service and support' in the context of the ICT could be added.

This update to ICT10 Version 3.0 has retained the current versions of imported units for ICT10 qualifications that have not been updated. Current versions of imported units have been used in qualifications being submitted for endorsement to the NSSC in Version 3.

It is planned in the next version of ICT10 to update all imported units to current versions.

Examples from this Training Package of Employability Skills

Examples from this Training Package of Employability Skills embedded within unit components.

Analytical, literacy, numeracy and technical skills are obtained in unit ICTOPN5123A Analyse and integrate specialised optical devices in the network

Unit component	Example of embedded Employability Skill
Unit Title	Analyse and integrate specialised optical devices in the network.
Unit Descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to analyse and integrate specialised optical devices into existing optical networks to support the higher bandwidths associated with Next Generation Networks (NGN).</p> <p>Carriers and service providers regularly upgrade existing infrastructures and extend the length of their networks' optical links due to expansion of NGN services such as voice, data and video.</p> <p>Performance testing of specialised optical devices is covered in a separate unit ICTOPN5122A Test the performance of specialised optical devices.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
Element	2. Integrate the specialised optical device in the network.
Performance Criteria	<p>2.1. Install and integrate <i>specialised optical devices</i> into existing network according to design plan</p> <p>2.2. Test the network and evaluate the results to <i>verify optical network performance</i> with the integrated specialised optical devices in operation</p>
Range Statement	<p><i>Specialised optical devices</i> may include:</p> <ul style="list-style-type: none"> • Bragg grating • coupler

Examples from this Training Package of Employability Skills embedded within unit components.

Analytical, literacy, numeracy and technical skills are obtained in unit ICTOPN5123A Analyse and integrate specialised optical devices in the network

Unit component	Example of embedded Employability Skill
	<ul style="list-style-type: none"> • dispersion compensation device (DCD) • DWDM multiplexer • erbium doped fibre amplifier (EDFA) • gain equaliser • Raman amplifier • ROADM. <p><i>Verify optical network performance</i> may include:</p> <ul style="list-style-type: none"> • stability test • bit error ratio test (BERT).
<p>Required Skills and Knowledge</p>	<p>Required skills</p> <ul style="list-style-type: none"> • analytical skills to evaluate technical information and develop integration options <p>Required knowledge</p> <ul style="list-style-type: none"> • attenuation characteristics of optical fibres • dense wavelength division multiplexing (DWDM) principles of operation • features and operating requirements of test equipment including: <ul style="list-style-type: none"> • hand held optical power meter • optical spectrum analyser • transmission test set • dispersion characteristics of optical fibres • dispersion compensation devices • electrostatic discharge precaution • functions of optical add drop multiplexer (OADM) and reconfigurable optical add-drop

Examples from this Training Package of Employability Skills embedded within unit components.

Analytical, literacy, numeracy and technical skills are obtained in unit ICTOPN5123A Analyse and integrate specialised optical devices in the network

Unit component	Example of embedded Employability Skill
	<ul style="list-style-type: none"> • multiplexer (ROADM) • gain equalisation • ITU wavelength grid for DWDM • measurement of dispersion • optical amplifier operation • optical fibre connector types and characteristics • optical fibre types and characteristics • optical return loss (ORL) • path protection and protection switching • protocols used on optical DWDM systems • reflectance • ring topologies and linear network topologies • specific OHS requirements that impact on the safe inspection of optical connectors and the • safe measurement of optical power from laser transmission systems • tunable laser sources and their characteristics.
Evidence Guide	<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p> <p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse a specialised optical device and prepare a design to integrate it with a network • integrate and test the device • document the integration to the network and recommend enhancements.

Appendices

Appendix A: VET in Schools

What is VET in schools?

Vocational education and training in schools (VETiS) provides for nationally recognised vocational education and training undertaken as part of a senior secondary certificate and based on industry standards.

Successful completion of a VETiS program enables students to gain a nationally-recognised Australian Qualifications Framework (AQF) qualification, usually at the same time as their school-based qualification.

How are VET in schools programs structured?

VETiS programs are packaged and delivered in a variety of ways across Australia. There are three main types of delivery arrangements for VETiS programs:

- schools can be a registered training organisation (RTO) in their own right
- school sectoral bodies (such as Boards of Studies or regional offices) can hold RTO status on behalf of a group of schools
- schools can work together in a partnership with an RTO.

Appropriate qualifications for VET in schools

IBSA encourages links between schools, businesses and the community, and strongly supports young people combining schooling with VET and workplace learning.

It is essential that all VET qualifications gained through a VETiS program are consistent with the outcomes detailed in the Training Package.

The following qualification is recommended as most suitable for a VETiS program:

- ICT20113 Certificate II in Telecommunications Technology

The AQTF 2007 Standards for Registered Training Organisations set out minimum competency standards for staff responsible for the delivery of training and the conducting of assessments; and they ensure that VET specialists have skills and competencies consistent with Training Package requirements. All schools using their own teachers for VET delivery must also be aware of the AQTF 2007 requirement for assessors to hold relevant vocational competencies, at least equal to that being delivered and assessed, in addition to teaching and assessment competence.

Schools are encouraged to establish partnerships with industry and effective work placement arrangements to maximise the quality of outcomes for students and industry alike. Recognition of competence gained through voluntary, part-time or vacation work not directly related to the industry focus of the qualification should also be considered.

Work placement

Work placement usually involves students spending an extended period of time in a workplace gaining experience and skills, and undergoing an assessment process related to the attainment of a qualification in a specific occupational field.

An essential feature of school-industry programs is that they involve students spending some time learning in a workplace. In recent years an increasing number of effective structured workplace learning programs have made significant progress towards greater workplace integrity for those industry training programs that are delivered predominantly off-the-job. The implementation of Training Packages means that structured workplace learning must be a consideration for all RTOs, not only schools, in the delivery of training programs.

Principles for quality workplace learning

The Ministerial Council on Education, Employment, Training and Youth Affairs (MCEETYA) endorsed the Principles for Quality Workplace Learning for school students engaged in VET programs throughout Australia. All states and territories apply the principles to their work placement programs, although the nature and extent of work placement programs vary across states and territories.

The broad MCEETYA principles are documented below.

Quality workplace learning is integrated into a program

- It operates within a framework which provides the opportunity for all students to access it, though not all students may choose to do so; and
- It operates within the context of vocational courses, which are recognised by industry, are responsive to industry needs and forms part of a student's exit credential.

Quality workplace learning is structured

- It has a clearly articulated and documented purpose;
- There are clearly identified and documented learning outcomes for students within accredited programs, which are linked to post-school qualifications;
- They are of sufficient duration and depth to enable students to acquire a reasonable understanding of the enterprise/industry to demonstrate competence according to industry standards of at least level 1 of the AQF;
- There is a matching between the students' skills and interests and the work placements; and
- Students, teachers and employers are thoroughly prepared beforehand so that the expectations and outcomes of the work placement are clearly understood by all parties.

Quality workplace learning is monitored

- The learning is coordinated by personnel with appropriate expertise and adequate resources; and
- Support should be made available to students and employers throughout the course of the work placement.

Quality workplace learning is regulated

There are clearly stated procedures designed to ensure that:

- Students are protected from moral and physical danger;
- Students work in a non-discriminatory and harassment-free environment;
- Students receive appropriate training and instruction in occupational health and safety;
- Students are not exploited by being continuously engaged in a production or service capacity or used to substitute for the employment of employees and payment of appropriate wages; and
- Students are required to understand the roles and responsibilities of employees in the workplace and are expected to follow the directions of the workplace supervisors and other employees.

Quality workplace learning is assessed

- The assessment, according to industry standards, is of students' competencies achieved in the workplace which contributes to the overall assessment of the program; and
- There are mechanisms for the recording and reporting of students' competencies.

There is a strong correlation between these MCEETYA quality principles and the OECD characteristics of high quality learning programs detailed below.

The major 14-country study entitled *From Initial Education to Working Life: Making Transitions Work* by the OECD identified 10 characteristics of high quality workplace learning programs. These are:

1. Work placements that are long enough for real learning to take place.
2. Systematic analysis of the training capacity of the workplace, to see what it can realistically supply.
3. A formal training plan, setting out what has to be taught and learned, and clarifying the work-based and school-based parts of a student's program.
4. Employer involvement in student selection for work placements.
5. The presence of a trained program coordinator, able to liaise between the school and the firm and troubleshoot when problems occur.
6. The use of qualified, highly competent workers as workplace trainers or mentors.
7. Regular face-to-face contact between the coordinators and employers and in-firm supervisors.

8. Monitoring of the students on the job by the program coordinator.
9. The evaluation of student performance against the training plan at the end of the placement, with the evaluation carried out by the job supervisor and coordinator jointly.
10. Deliberate efforts by schools to relate what has been learned at work to students' school-based learning.¹

¹ OECD, 2000, *From Initial Education to Working Life: Making Transitions Work*. Organisation for Economic Cooperation and Development, Paris.

Effective work placement is characterised by:

- activities that complement off-the-job learning programs
- clearly articulated and documented purpose
- development of appropriate attitudes towards work
- development of competence in designated industry skills and employability skills
- facility for on-the-job practice of skills acquired in a classroom
- flexibility
- learning in a range of behaviours appropriate to the relevant industry
- opportunities for work-based assessment
- regular and frequent use of current technology and equipment
- relevance to the VET qualification being undertaken
- recognition of student readiness
- support of industry partners.

Beyond the above, a number of other provisions are necessary for a successful work placement program. The credibility of work placements and any resultant recognition of competence requires a degree of 'seriousness' if the outcomes are to be valued by individuals and industry clients of the VET system.

It is suggested that stakeholders involved in the planning and management of work placements carefully consider and implement the following general principles.

1. That the RTO assume responsibility for finding placements and validating the arrangements.
2. That the workplace has the appropriate resources, tools and staff to conduct the placement, with compliance with any legislative requirements.
3. That there be regular validation by the RTO that the student and assessor, where relevant, are operating according to RTO AQTF 2007 standards.
4. That a student on work placement must be covered by injury insurance.
5. That there is a formal contract setting out each party's responsibilities and obligations.
6. That, where possible, the workplace has on site a qualified workplace trainer and assessor in 'direct line' control of the student (to avoid training and assessment by 'proxy').
7. That if the placement is for assessment only then there must be clearly documented assessment tasks specifically related to the unit being assessed and evidence retained to support achievement of competence (for both best practice recording purposes and audit/appeal).

8. That if the placement also includes training, then any ‘academic pass’ cannot be bestowed prior to the placement as clearly all of the learning components have not been undertaken nor can they be assessed in advance if they have not been learned.
9. That the training be directly related to achievement of competence while recognising the likely acquisition of other skills and knowledge.
10. That where assessment occurs it be clearly related to a unit of competency relevant to the work placement.
11. That where more than one performance criterion (possibly over more than one unit) is being assessed there must be a clearly linked and documented relationship between the assessment and the performance criterion.
12. That the qualifications level be appropriate in context, i.e. if it is advanced programming there must be an advanced programming task observed and assessed.
13. That the actual variables of the performance criterion be documented for audit purposes and for verification of appropriateness of the range of activities in the work placement.

In some state and territory school systems, part-time student work in an appropriate workplace may be used to fulfil work placement requirements and virtual or simulated work placements may also be legitimate.

Appendix B: Australian Apprenticeships

All qualifications within ICT10 Integrated Telecommunications Training Package can be achieved by a variety of pathways and delivery methods – either on-the-job or through a combination of on- and off-the-job training and recognition processes.

Qualifications at AQF levels III to IV particularly facilitate Australian Apprenticeship pathways. The following qualifications are examples of those that can be achieved through contracted training as Apprenticeships:

- ICT30113 Certificate III in Broadband and Wireless Networks Technology
- ICT40613 Certificate IV in Telecommunication Network Engineering Technology

ICT20113 Certificate II in Telecommunications Technology

Modification History

Release	Comments
Release 2	This version first released with <i>ICA10 Integrated Telecommunications Training Package Version 3.0.</i> Change in WHS core unit.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i>

Description

This qualification has been designed as a pathway for students for entry to the industry.

This qualification provides students with skills and knowledge to enhance their entry-level employment prospects in apprenticeships and traineeships in a range of industries, including telecommunications, information technology and electronics.

Cabling Technician Stream

This qualification reflects the role of operators in the telecommunications industry who apply a broad range of competencies in a varied work context of installation of telecommunications and data cabling and cabling products on customer premises according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

Digital Reception Stream

This qualification reflects the role of operators in the telecommunications industry who apply a broad range of competencies in a varied work context of installation of a limited range of digital reception equipment for either a customer or an enterprise. They would perform limited fault finding on a range of digital reception equipment for both cable TV and free to air TV reception.

Networking Stream

This qualification reflects the role of operators in the telecommunications industry who apply a broad range of competencies of converging technologies in a varied work context to install and maintain IP networks with security in the home and small to medium enterprise networks. They would install software, and configure and test emerging technology network elements in IP networks, including secure wireless LANs, servers and routers for enterprise networks.

Job Roles

Job roles and titles vary across different industry sectors. Dependent on the stream completed, possible job titles relevant to a pathway for this qualification include:

- cabler and installer
- data cabler
- equipment installer
- IP-based network installer
- SME business network installer
- subscription TV installer
- telecommunications equipment operator
- TV and digital TV antenna installer.
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT20113 Certificate II in Telecommunications Technology, candidates may undertake ICT30213 Certificate III in Telecommunications, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Certificate III qualifications.

Licensing/Regulatory Information

The completion of unit ICTWHS2170B and the four unit set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B and ICTCMP2022B meets the ACMA requirements for Cabling Provider Rules (CPR) restricted registration.

All training programs are undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • documenting and communicating work-related information, including reporting of faults and problems
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict
Problem solving	<ul style="list-style-type: none"> • determining cable routes, taking into account building services, safety, industry codes and practices, and customer requirements • determining IP network configurations to suit the SME business requirements • assessing the compatibility and interoperability of proposed network installation to existing network • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • reading and understanding plans and designs to acknowledge local physical conditions • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • planning and organising installation and operation of telecommunications equipment and products • planning and setting up the addressing scheme to allow for enterprise network growth
Self-management	<ul style="list-style-type: none"> • relating own role to the industry and establishing own work schedule • applying all related WHS requirements and work practices
Learning	<ul style="list-style-type: none"> • seeking assistance from team members • giving and receiving feedback • interpreting technical information from vendor installation instructions
Technology	<ul style="list-style-type: none"> • configuring, installing and testing IP-based customer telecommunications network equipment • implementing security measures to meet the SME network requirements

Packaging Rules

Total number of units = 11

5 core units, plus

6 elective units from Group A, or

6 elective units from Group B, or

6 elective units from Group C

There is no substitution of elective units.

CORE UNITS

BSBSUS201A Participate in environmentally sustainable work practices

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2219A Install and test internet protocol devices in convergence networks

ICTTEN2140B Use hand and power tools

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Cabling Technician Stream (Restricted Registration)

BSBCUS201B Deliver a service to customers

ICTCBL2005B Install customer cable support systems

ICTCBL2006B Place and secure customer cable

ICTCBL2008B Terminate metallic conductor customer cable

ICTCBL3049A Install systems and equipment on customer premises

ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards

Group B - Digital Reception Stream

ICTCBL2163A Install a cable lead-in

ICTCBL3011B Install and terminate coaxial cable

ICTDRE3156B Install digital reception equipment

ICT20213 Certificate II in Telecommunications

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Change in WHS core unit.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies in a varied work context from installation to operation of telecommunications equipment and products.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

This qualification prepares an individual for entry to the industry.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- cabler and installer
- equipment installer
- security alarm installer
- telecommunications equipment operator
- telecommunications tradesperson.
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT20213 Certificate II in Telecommunications, candidates may undertake ICT30213 Certificate III in Telecommunications, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Certificate III qualifications.

Licensing/Regulatory Information

The completion of unit ICTWHS2170B and the four unit set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B and ICTCMP2022B that meets the ACMA requirements for Cabling Provider Rules (CPR) restricted registration, is generally used as a part of a more specialised customer cabling qualification. This set is regarded as more suitable for new entrants where limited or no industry experience has been obtained and forms the major part of specialised qualifications such as ICT20313 Certificate II in Telecommunications Cabling.

For cablers with restricted CPR qualifications there will be a requirement for the specialised competency unit ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule to be achieved when working on specialised broadband cabling.

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict
Problem solving	<ul style="list-style-type: none"> • determining network equipment power consumption and current from measurements and specification data • evaluating probable solutions to faults involving telecommunications networks and equipment
Initiative and enterprise	<ul style="list-style-type: none"> • reading and understanding plans and designs to acknowledge local physical conditions • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • planning and organising installation and operation of telecommunications equipment and products
Self-management	<ul style="list-style-type: none"> • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers
Learning	<ul style="list-style-type: none"> • seeking assistance from team members • giving and receiving feedback
Technology	<ul style="list-style-type: none"> • installing and operating telecommunications equipment and products

Packaging Rules

Total number of units = 11

5 core units, plus

1 elective unit from Group A workplace units, plus

5 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate II or Certificate III level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

If the four unit set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B and ICTCMP2022B has been selected, unit ICTCBL2136B cannot also be selected as an elective unit.

CORE UNITS

BSBSUS201A Participate in environmentally sustainable work practices

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTTEN2219A Install and test internet protocol devices in convergence networks

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ICT20313 Certificate II in Telecommunications Cabling

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Change in WHS core unit.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies in a varied work context of installation of telecommunications and data cabling and cabling products on customer premises.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

This qualification prepares an individual for entry to the industry.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- data cabler
- carrier services cabler
- security alarm cabler
- telecommunications access network cabler
- telecommunications tradesperson
- infrastructure cabler.
-

Prerequisite units

The following units within this qualification have prerequisites. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT20313 Certificate II in Telecommunications Cabling, candidates may undertake ICT30313 Certificate III in Telecommunications Cabling, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Certificate III qualifications.

Licensing/Regulatory Information

The completion of unit ICTWHS2170B and the six unit set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B that meets the Australian Communications and Media Authority (ACMA) requirements for Cabling Provider Rules (CPR) open registration, is generally used as a part of a more specialised customer cabling qualification. This set is regarded as more suitable for new entrants where limited or no industry experience has been obtained and forms the major part of specialised qualifications in this qualification.

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict
Problem solving	<ul style="list-style-type: none"> • determining cable routes, taking into account building services, safety, industry codes and practices, and customer requirements • evaluating earthing needs for cable systems on customer premises • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • reading and understanding plans and designs to acknowledge local physical conditions • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • planning and organising installation and operation of telecommunications equipment and products

ICTPMG2173A Plan, organise and undertake work activities

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Access network cabler

Core units plus one Group A workplace elective unit plus:

- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL2135A Joint metallic conductor cable in access network
- ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
- ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule
- ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits
- plus one additional unit from Group B general elective unit as appropriate to the specific job role

CPE cabler for Open Registration (new entrant)

Core units plus one Group A workplace elective unit plus:

- ICTCBL2005B Install customer cable support systems
- ICTCBL2006B Place and secure customer cable
- ICTCBL2008B Terminate metallic conductor customer cable
- ICTCBL2012B Install functional and protective telecommunications earthing system
- ICTCBL2017B Alter services to existing cable system
- ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards

CPE cabler for Open Registration

Core units plus one Group A workplace elective unit plus:

- ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
- ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule
- ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits
- plus three additional units from Group B general elective units, with a maximum of one of those units from Group A workplace elective units as appropriate to the specific job role

Network infrastructure or security cabler

Core units plus one Group A workplace elective unit plus:

- ICTCBL2066B Joint and terminate coaxial cable
- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL2136B Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule
- ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits
- plus one additional unit from Group B general elective units and one unit from Group A workplace elective units as appropriate to the specific job role.

ICT20413 Certificate II in Telecommunications Digital Reception Technology

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Change in WHS core unit.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies in a varied work context of installation of a limited range of digital reception equipment for either a customer or an enterprise. They would perform limited fault finding on a range of digital reception equipment for both cable TV and free to air TV reception.

Cabling at the customer premises must be carried out according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

This qualification prepares an individual for entry to the industry.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- TV and digital TV antenna installer
- subscription TV installer
- satellite TV installer
- free to air TV installer.
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT20413 Certificate II in Telecommunications Digital Reception Technology, candidates may undertake ICT30413 Certificate III in Telecommunications Digital Reception Technology, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Certificate III qualifications.

Licensing/Regulatory Information

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems • providing correct literature to the customer, including explanatory booklets, manuals, training aids, user guides, equipment plans and configuration • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors
Problem solving	<ul style="list-style-type: none"> • determining cable routes and antenna siting taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> • identifying issues and possible solutions within established guidelines • providing customers with temporary or replacement equipment similar to existing equipment • regularly verifying continued existence of problem
Planning and organising	<ul style="list-style-type: none"> • planning and organising installation and operation of TV equipment and products • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards • applying all related WHS requirements and work practices
Learning	<ul style="list-style-type: none"> • seeking assistance from team members • giving and receiving feedback

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none">• providing suitable training and assessment opportunities for work team members• providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none">• installing and operating TV equipment and products• checking tools and test equipment for accuracy• identifying, replacing or repairing faulty parts and equipment

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Antenna installer

Core units plus one Group A workplace elective unit plus:

- ICTRFN2164B Install a terrestrial antenna
- two Group C general elective units

Contractor

Core units plus one Group B specialist elective unit as appropriate to the specific job role plus:

- ICTSMB4160A Set up and operate a contractor business
- two Group C general elective units

Free to air TV installer

Core units plus one Group A workplace elective unit plus:

- ICTRFN2163B Install a satellite antenna
- two Group C general elective units

Subscription TV installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2163A Install a cable lead-in
- two Group C general elective units

ICT20513 Certificate II in Telecommunications Fixed Wireless and Rigging Installation

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This qualification first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies in a varied work context from installation and maintenance of telecommunications equipment installed in base stations or mounted on structures requiring rigging skills.

This qualification has two streams that prepare an individual for entry to the industry in a specialised area of installation of telecommunication equipment on high structures including radio towers or for installation and connection of wireless base stations.

An operator uses rigging skills to install and maintain radio antennas on radio towers and build and mount sections of radio masts for a complete radio structure.

Job roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- installer of radio telecommunications equipment on structures
- installer of radio equipment and cabling on radio towers
- installer of radio base stations
- telecommunications rigger tradesperson.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving the ICT20513 Certificate II in Telecommunications Rigging Installation, candidates may undertake the ICT30513 Certificate III in Telecommunications Rigging Installation, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Certificate III qualifications.

Licensing/Regulatory Information

Cabling

The completion of unit ICTWHS2170B, ICTWHS2170A or ICTOHS2170A and the set of the following four units ICTCBL2005B, ICTCBL2006B, ICTCBL2008B and ICTCMP2022B that meet the Australian Communications and Media Authority (ACMA) requirements for Cabling Provider Rules (CPR) restricted registration, is generally used as a part of a more specialised customer cabling qualification. This set is regarded as more suitable for new entrants where limited or no industry experience has been obtained and forms the major part of specialised qualifications such as ICT20310 Certificate II in Telecommunications Cabling.

For cablers with restricted CPR qualifications there will be a requirement for the specialised competency unit ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule, to be achieved when working on specialised broadband cabling.

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority for cabling (currently ACMA) and rigging.

National Standard for Licensing Persons Performing High Risk Work

The National Standard for Licensing Persons Performing High Risk Work applies to persons performing dogging and rigging work. Completion of the following units is required for certification at either basic, intermediate or advanced levels.

- CPCCLDG3001A Licence to perform dogging
- CPCCLRG3001A Licence to perform rigging basic level
- CPCCLRG3002A Licence to perform rigging intermediate level
- CPCCLRG4001A Licence to perform rigging advanced level

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Volume of Learning

The volume of learning of a Certificate II is typically 0.5 – 1 year.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict
Problem solving	<ul style="list-style-type: none"> • determining cable routes, taking into account building services, safety, industry codes and practices, and customer requirements • evaluating earthing needs for cable systems on customer premises
Initiative and enterprise	<ul style="list-style-type: none"> • reading and understanding plans and designs to acknowledge local physical conditions • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • planning and organising installation and operation of telecommunications equipment and products
Self-management	<ul style="list-style-type: none"> • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers
Learning	<ul style="list-style-type: none"> • seeking assistance from team members • giving and receiving feedback
Technology	<ul style="list-style-type: none"> • installing and operating telecommunications equipment and products

Packaging Rules

Total number of units = 13

6 core units, *plus*

7 elective units, *of which:*

- 4 units from Group A Fixed wireless or Group B Rigging installation
- 3 units must be from Group C General elective units, up to 2 of which may be substituted with two units from elsewhere in this Training Package, another Training Package or accredited course at Certificate II or III level.

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

If the four unit set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B and ICTCMP2022B has been selected, unit ICTCBL2136B cannot also be selected as an elective unit.

Core units

CPCCOHS1001A Work safely in the construction industry

ICTTCR2189A Use operational safety in a telecommunications rigging environment

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ICTWOR2141A Work effectively in a telecommunications technology team

Elective units

Group A Fixed wireless specialist stream

ICTCBL2012B Install functional and protective telecommunications earthing system

ICTRFN3055A Install a radio communications antenna and feedline

ICTRFN4177A Install radio communications base station equipment

ICTTEN2219A Install and test an internet protocol device in convergence networks

Group B Rigging installation specialist stream

CPCCLDG3001A Licence to perform dogging

CPCCLRG3001A Licence to perform rigging basic level

ICTTCR2188A Use rigging practices and systems on telecommunications network structures

ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures

Group C General elective units

BSBCUS201B Deliver a service to customers

BSBSUS201A Participate in environmentally sustainable work practices

CPCCLRG3002A Licence to perform rigging intermediate level

CPCCLRG4001A Licence to perform rigging advanced level
 ICTCBL2005B Install customer cable support systems
 ICTCBL2006B Place and secure customer cable
 ICTCBL2008B Terminate metallic conductor customer cable
 ICTCBL2016A Joint metallic conductor cable on customer premises
 ICTCBL2017A Alter services to existing cable system
 ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
 ICTCBL2066B Joint and terminate coaxial cable
 ICTCBL2068A Install a telecommunications service to a building
 ICTCBL2131A Install an above ground equipment enclosure
 ICTCBL2132A Erect aerial cable supports
 ICTCBL2133A Construct underground telecommunications infrastructure
 ICTCBL2134A Fix aerial cable
 ICTCBL2136B Install, maintain and modify customer premises communications cabling:
 ACMA Restricted Rule
 ICTCBL2139B Apply safe technical work practices for cabling registration
 ICTCBL2163A Install a cable lead-in
 ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards
 ICTOHS2080A Provide telecommunications services safely on roofs
 ICTOHS2153B Work safely near power infrastructure
 ICTPMG2130A Prepare site for support installation
 ICTPMG2173A Plan, organise and undertake work activities
 ICTRFN2163B Install a satellite antenna
 ICTRFN2164B Install a terrestrial antenna
 ICTWHS2081A Work safely in a radio frequency electromagnetic radiation environment

Prerequisite Units

The following units in this qualification have the prerequisite units detailed below.

Code and title	Prerequisite units require
CPCCLRG3002A Licence to perform rigging intermediate level	CPCCLRG3001A Licence to perform rigging basic level
CPCCLRG4001A Licence to perform rigging advanced level	CPCCLRG3002A Licence to perform rigging intermediate level

ICT20613 Certificate II in National Broadband Network Construction

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Units updated to current versions.</p>
Release 1	<p>This qualification first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i>.</p>

Description

This qualification has been designed as a pathway for entry into work on the National Broadband Network (NBN).

This qualification provides the skills and knowledge required to enhance entry-level employment prospects in apprenticeships and traineeships in a range of NBN industry occupations specifically for the national rollout of high speed broadband network infrastructure.

In conjunction with safe working practices, one of two specialist streams is to be undertaken as described:

Telecommunications linesworker

This stream reflects the role of operators in performing cable and infrastructure work underground. This involves safe civil and construction work in site preparation, building of enclosures, installing mounting brackets, hauling of underground cables and providing traffic management. It also reflects the role of operators in performing work safely aboveground to install fibre or metallic aerial cable and infrastructure. These will also include installation of aerial lead-in cables to customer premises.

Telecommunications installer

This stream reflects the role of operators in performing equipment and system installation work on customer network to enable efficient access and interconnection to the NBN services. This includes diagnosing and rectifying cable system faults to maximise benefits of the high speed broadband connection.

Job roles

Job roles and titles are dependent on the stream completed, possible job titles relevant to a pathway for this qualification include:

- telecommunications linesworker
- telecommunications broadband network installer.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving the ICT20613 Certificate II in National Broadband Network Construction, candidates may undertake the ICT30713 Certificate III in National Broadband Network Construction, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Certificate III qualifications.

Licensing/Regulatory Information

The completion of unit ICTWHS2170B, ICTWHS2170A or ICTOHS2170A and the unit set of ICTCBL2136B and ICTCBL2137B meets the ACMA requirements for Cabling Provider Rules (CPR) open registration.

All training programs are undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Much of the NBN cabling and installation work falls within the definition of construction work in a cable provisioning construction site. If so, anyone entering the construction site is required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package as part of the core group of this qualification, fulfils this requirement.

Note: ICTOHS2153A Work safely near power infrastructure should be included in the qualification packaging where there is a likelihood of working near power infrastructure. If state or territory law requires a licence to operate an elevated work platform (EWP), TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more) should be completed concurrently with ICTOHS2153A.

Volume of learning

The volume of learning of a Certificate II is typically 0.5 – 1 year.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicating benefits of high speed broadband to community for successful NBN rollout • notifying any safety aspects to supervisor • conducting and communicating traffic management instructions for improved public safety • documenting test methods and results • completing cable and equipment labelling and cable records • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • interpreting plan as a set of basic functions to be implemented • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems
Teamwork	<ul style="list-style-type: none"> • continually fostering effective teamwork for effective NBN rollout • identifying members and roles of team between management and workforce, between aerial and underground teams and between installation and testing teams • working with team members to work with clients and provide service • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking sequences of operations from site preparation to cabling to ensure a methodical and effective approach to NBN rollout • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • determining cable routes taking into account building services, safety, industry codes and practices, and customer

	<p>requirements</p> <ul style="list-style-type: none"> • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • continually suggesting ways for improving practices to suit specific site of NBN infrastructure rollout • prioritising urgent requests and acting according to organisational guidelines • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • developing NBN rollout plans to ensure minimal disruption to the workplace and the public • identifying realistic short and long-term career objectives • planning and provisioning to meet key milestones • gathering data for the installation of cable systems and NBN specific equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • identifying and setting realistic short and long-term career objectives • managing personal time to assist effective rollout • identifying work to be completed • checking that tools and equipment are in safe working order and comply to manufacturer specification • personally applying all related OHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • learning from previous experiences in order to improve future practices in NBN rollout • learning of methodologies of fibre splicing and adapting to current practices • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist with higher broadband speed offered by NBN and offering training information on upgrades and additional services

	<ul style="list-style-type: none">• seeking assistance from team members when necessary• providing suitable training and assessment opportunities for work team members on NBN technologies by equipment suppliers• providing training to customers on system, product, product features and facilities• relating current or intended role to career objectives in a positive manner
Technology	<ul style="list-style-type: none">• familiarising with new fibre technologies for NBN deployment• ensuring that range of technologies (optical & radio) used in NBN infrastructure rollout are effectively and efficiently deployed to manufacturers specifications• checking that advanced tools and equipment are in safe working order and adjusted to manufacturer specifications• testing and measuring of broadband network infrastructure• installing, configuring and operating NBN optical and radio equipment and products• identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 12

7 core units *plus*

5 elective units, *of which*:

- **3 units must be from Group A Telecommunications linesworker or Group B Telecommunications broadband network installer**
- **2 units must be from Group C General elective units or from elsewhere in this Training Package, another Training Package or accredited course at Certificate II or III level.**

Elective units chosen must be relevant to the work and industry context for project practice.

This qualification meets the requirements for the NBN infrastructure rollout and has been developed for specific occupational outcomes. Due to the specialised technical nature of the work, there is provision for choice of specialisation streams but there is no allowance for substitution of elective units in the specialised group. However, the two elective units from Group C can be selected to meet relevant national broadband work outcome and local industry requirements

Core units

CPCCOHS1001A Work safely in the construction industry

ICTCBL2064A Haul underground cable

ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers

ICTCBL2163A Install a cable lead-in

ICTTEN2008A Use electrical skills in telecommunications work

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ICTWOR2141A Work effectively in a telecommunications technology team

Elective units

Group A Telecommunications linesworker

ICTCBL2131A Install an above ground equipment enclosure

ICTCBL2133A Construct underground telecommunications infrastructure

ICTCBL2134A Fix aerial cable

Group B Telecommunications broadband network installer

ICTBWN3090B Install lead-in module and cable for fibre to the premises

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCBL2137B Install, maintain and modify customer premises communications cabling:

ACMA Open Rule

ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

Group C General elective units

BSBSUS201A Participate in environmentally sustainable work practices
 HLTAID001 Provide cardiopulmonary resuscitation
 HLTAID003 Provide first aid
 ICTOHS2153B Work safely near power infrastructure
 ICTTEN2219A Install and test an internet protocol device in convergence networks
 ICTTEN2140B Use hand and power tools
 TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Prerequisite Units

The following unit in this qualification has the prerequisite unit detailed below.

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
ICTCMP2239A Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICT30113 Certificate III in Broadband and Wireless Networks Technology

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Change in WHS core unit. Additional elective units included.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of a tradesperson with a range of telecommunications skills who can:

- install and maintain access network cabling and equipment for high speed broadband as part of the national network
- install and maintain optical and wireless equipment for high speed internet broadband network infrastructure
- install and maintain telecommunications, data cabling and cabling products on customer premises according to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner
- install voice and data telecommunications equipment
- install and maintain telecommunications access network cabling and infrastructure, systems and simple customer premises equipment.

This role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault-finding. It involves a degree of autonomy and may include limited supervision of others.

This qualification also introduces the skills required for the broadband deployment using fibre optic devices.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- broadband installer
- optical broadband installer
- wireless broadband network installer
- broadband network infrastructure installer
- access network cabling installer
- installer of telecommunications aerial cable access network
- installer of telecommunications underground cable access network.

Prerequisite Units

The following unit within this qualification has a prerequisite. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT30113 Certificate III in Broadband and Wireless Networks Technology, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • documenting test methods and results • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • interpreting plan as a set of functions to be implemented • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies

Employability Skill	Industry/enterprise requirements for this qualification include:
	to overcome them within time and budget restrictions <ul style="list-style-type: none"> • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • applying all related WHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisational goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications • testing and measuring of broadband network infrastructure • installing and operating telecommunications equipment and products

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none">• installing and operating equipment and products• installing and configuring access network devices• identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 15

6 core units, plus

1 elective unit from Group A workplace units, plus

8 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level. A minimum of five of these electives must be taken from Certificate III level.

A maximum of three units from Group B general elective units may be substituted with three units of competency from any endorsed Training Package or accredited course at Certificate III or Certificate IV level. One of those three units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBSUS301A Implement and monitor environmentally sustainable work practises

ICTBWN3205B Use optical and radio frequency measuring instruments

ICTCBL3015A Locate and identify cable system faults

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business

BSBSMB306A Plan a home based business

ICASAS305A Provide IT advice to clients

ICTEDU3053A Train customers in new technology

ICTWOR2141A Work effectively in a telecommunications technology team

ICTWOR3028A Organise resources

ICTWOR3035A Organise material supply

ICTWOR3041A Schedule resources

ICTWOR3093A Manage spare parts

ICTWOR3127A Supervise worksite activities

Group B - General elective units

Broadband and wireless networks

ICTBWN3082B Perform tests on optical communication system and components
ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
ICTBWN3090B Install lead-in module and cable for fibre to the premises
ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation

Cabling

ICTCBL2017B Alter services to existing cable system
ICTCBL2064A Haul underground cable
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL2066B Joint and terminate coaxial cable
ICTCBL2068A Install a telecommunications service to a building
ICTCBL2131A Install an above ground equipment enclosure
ICTCBL2132A Erect aerial cable supports
ICTCBL2133A Construct underground telecommunications infrastructure
ICTCBL2134A Fix aerial cable
ICTCBL2135A Joint metallic conductor cable in access network
ICTCBL2136B Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule
ICTCBL2137B Install, maintain and modify customer premises communications cabling:
ACMA Open Rule
ICTCBL2139B Apply safe technical work practices for cabling registration when configuring
ADSL circuits
ICTCBL2163A Install a cable lead-in
ICTCBL3009B Install, terminate and certify structured cabling installation
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3014A Hand over systems and equipment
ICTCBL3018A Install underground enclosures and conduit
ICTCBL3019A Install underground cable
ICTCBL3020A Construct aerial cable supports
ICTCBL3021A Install aerial cable
ICTCBL3067A Modify and cut over cable
ICTCBL3069A Install network cable equipment
ICTCBL3103A Maintain cable network

Occupational health and safety

ICTOHS2080A Provide telecommunications services safely on roofs
ICTOHS2153B Work safely near power infrastructure
CPCCOHS1001A Work safely in the construction industry

Radio frequency networks

ICTRFN3055A Install a radio communications antenna and feedline

ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment

ICTRFN4095A Conduct radio frequency measurements

ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Telecommunications engineering networks

ICTTEN3056A Install telecommunications network equipment

ICTTEN3063A Locate, identify and rectify recurrent network faults

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Aerial cable installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2017B Alter services to existing cable system
- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL2163B Install a cable lead-in
- ICTCBL3021A Install aerial cable
- four additional elective units from Group B general elective units, with a maximum of one those additional units from Group A workplace elective units as appropriate to the specific job role

Broadband network infrastructure installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL3011B Install and terminate coaxial cable
- ICTCBL3069A Install network cable equipment
- four additional elective units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Optical broadband network installer

Core units plus one Group A workplace elective unit plus:

- ICTBWN3082B Perform tests on optical communication system and components

- ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
- ICTBWN3090B Install lead-in module and cable for fibre to the premises
- ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation
- four additional elective units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Underground cable installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2064A Haul underground cable
- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL2133A Construct underground telecommunications infrastructure
- ICTCBL2163A Install a cable lead-in
- ICTCBL3018A Install underground enclosures and conduit
- ICTCBL3019A Install underground cable
- two additional elective units from Group B general elective units, with a maximum of one of those additional units from the Group A workplace elective units as appropriate to the specific job role

Wireless broadband network installer

Core units plus one Group A workplace elective unit plus:

- ICTRFN3055A Install a radio communications antenna and feedline
- ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment
- ICTRFN4095A Conduct radio frequency measurements
- ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network
- four additional elective units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

ICT30213 Certificate III in Telecommunications

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Change in WHS core unit. Additional elective units included.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies using a defined range of skills where some discretion and judgement is required in the selection, installation and configuration of equipment in convergence technologies that integrate radio, optical and internet protocol (IP) based applications.

This role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault finding. It involves a degree of autonomy and may include some supervision of others involving known routines and procedures and some accountability for the quality of outcomes.

This qualification prepares an individual for entry to the industry into the mainstream of telecommunications convergence technologies of radio, optical, data and IP networks.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- telecommunications network equipment installer
- telecommunications voice and data equipment installer
- IP-based security alarms installer
- telecommunications equipment operator
- telecommunications tradesperson.
-

Prerequisite units

The following units within this qualification have prerequisites. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
ICAICT304A Implement system software changes	ICAICT302A Install and optimise operating system software

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate II qualification from this or another accredited Training Package or accredited course
- or
- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving ICT30213 Certificate III in Telecommunications, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • communicating with customers to arrange time and access for the installation of systems and equipment • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • working with team members to work with clients and install equipment • relating personal role to the industry • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • gathering data for the installation of systems and equipment • developing a plan for the recovery of equipment from customer premises • planning the installation of cable, taking into account

Employability Skill	Industry/enterprise requirements for this qualification include:
	technical, scheduling and financial considerations <ul style="list-style-type: none"> • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • applying all related WHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • assessing customer's expertise and training needs and conducting training in the use of systems and equipment • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • giving and receiving feedback • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • installing and operating telecommunications broadband equipment and products • installing and operating CPE equipment and products • installing and configuring access network devices • checking tools and test equipment for accuracy • identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 12

6 core units, plus

1 elective unit from Group A workplace units, plus

5 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate III or Certificate IV level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBSUS301A Implement and monitor environmentally sustainable work practices
ICTCBL3015A Locate and identify cable system faults
ICTTEN2008A Use electrical skills in telecommunications work
ICTTEN2140B Use hand and power tools
ICTTEN3056A Install telecommunications network equipment
ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business
BSBSMB306A Plan a home based business
ICASAS305A Provide IT advice to clients
ICTEDU3053A Train customers in new technology
ICTSMB4160A Set up and operate a contractor business
ICTSMB4161A Operate a contractor business with employees
ICTWOR3028A Organise resources
ICTWOR3035A Organise material supply
ICTWOR3041A Schedule resources
ICTWOR3093A Manage spare parts
ICTWOR3127A Supervise worksite activities
ICTWOR3231A Resolve technical enquiries using multiple information systems
ICTWOR3232A Collect and analyse technical information

Group B - General elective units

Broadband and wireless networks

ICTBWN3082B Perform tests on optical communication system and components
ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
ICTBWN3090B Install lead-in module and cable for fibre to the premises
ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation
ICTBWN3205B Use optical and radio frequency measuring instruments

Cabling

ICTCBL2064A Haul underground cable
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule (where ACMA Restricted Registration is necessary)
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule
ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits
ICTCBL3009B Install, terminate and certify structured cabling installation
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3013A Perform cable and system test on customer premises
ICTCBL3014A Hand over systems and equipment
ICTCBL3018A Install underground enclosures and conduit
ICTCBL3019A Install underground cable
ICTCBL3020A Construct aerial cable supports
ICTCBL3021A Install aerial cable
ICTCBL3049A Install systems and equipment on customer premises
ICTCBL3052A Cut over new systems and equipment on customer premises
ICTCBL3067A Modify and cut over cable
ICTCBL3069A Install network cable equipment
ICTCBL3103A Maintain cable network

Digital reception technology

ICTDRE3156B Install digital reception equipment
ICTDRE3157B Locate and rectify digital reception equipment faults
ICTDRE3165A Install a complex digital reception system

ICT use

ICAICT302A Install and optimise operating system software
ICAICT303A Connect internal hardware components
ICAICT304A Implement system software changes
ICAICT306A Migrate to new technology
ICANWK305A Install and manage network protocols

ICASAS303A Care for computer hardware
ICASAS304A Provide basic system administration
ICASAS301A Run standard diagnostic tests

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry
ICTOHS2153B Work safely near power infrastructure
ICTOHS2080A Provide telecommunications services safely on roofs

Radio frequency networks

ICTRFN3055A Install a radio communications antenna and feedline
ICTRFN3070A Install mobile telecommunications in motor vehicles
ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment
ICTRFN3155A Construct and test a radio communications device
ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment

Telecommunications engineering networks

ICTTEN2219A Install and test internet protocol devices in convergence networks
ICTTEN3054B Provide infrastructure for telecommunications network equipment
ICTTEN3063A Locate, identify and rectify recurrent network faults
ICTTEN3074A Recover customer premises equipment
ICTTEN3075A Refurbish customer premises equipment
ICTTEN3077B Commission an electronic unit
ICTTEN3089A Repair and replace telecommunications network hardware
ICTTEN3104A Maintain an electronic system
ICTTEN4198A Install, configure and test an internet protocol network

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Broadband optical network installer

Core units plus one Group A workplace elective unit plus:

- ICTBWN3082B Perform tests on optical communication system and components
- ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
- ICTBWN3090B Install lead-in module and cable for fibre to the premises
- ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation

- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

Broadband wireless network installer

Core units plus one Group A workplace elective unit plus:

- ICTRFN3055A Install a radio communications antenna and feedline
- ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment
- ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Home network installer

Core units plus one Group A workplace elective unit plus:

- ICTDRE3156B Install digital reception equipment
- ICTDRE3157B Locate and rectify digital reception equipment faults
- ICTDRE3165A Install a complex digital reception system
- ICTTEN4198A Install, configure and test an internet protocol network
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

IP equipment installer

Core units plus one Group A workplace elective unit plus:

- ICAICT302A Install and optimise operating system software
- ICAICT304A Implement system software changes
- ICANWK305A Install and manage network protocols
- ICASAS301A Run standard diagnostic tests
- ICTTEN4198A Install, configure and test an internet protocol network

Network infrastructure installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL3011B Install and terminate coaxial cable
- ICTCBL3069A Install network cable equipment

- two additional units from Group B general elective units, with a maximum of one those additional units from Group A workplace elective units as appropriate to the specific job role

Technical support

Core units plus one Group A workplace elective unit plus:

- ICASAS304A Provide basic system administration
- ICASAS305A Provide IT advice to clients
- ICTWOR3231A Resolve technical enquiries using multiple information systems
- ICTWOR3232A Collect and analyse technical information
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

Voice and data installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL3010B Install and terminate optical fibre cable on customer premises
- ICTCBL3011B Install and terminate coaxial cable
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

ICT30313 Certificate III in Telecommunications Cabling

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Change in WHS core unit. Additional elective units included.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies in a varied work context from installation to operation of telecommunications equipment and products.

This qualification prepares an individual for entry to the industry.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- cabler and installer
- equipment installer
- security alarm installer
- telecommunications equipment operator
- telecommunications tradesperson.
-

Prerequisite units

The following units within this qualification have prerequisites. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
ICAICT304A Implement system software changes	ICAICT302A Install and optimise operating system software

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate II qualification from this or another accredited Training Package or accredited course
- or
- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving ICT30313 Certificate III in Telecommunications Cabling, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

The completion of unit ICTWHS2170B and the four unit set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B and ICTCMP2022B that meets the Australian Communications and Media Authority (ACMA) requirements for Cabling Provider Rules (CPR) restricted registration, is generally used as a part of a more specialised customer cabling qualification. This set is regarded as more suitable for new entrants where limited or no industry experience has been obtained and forms the major part of specialised qualifications, such as ICT20313 Certificate II in Telecommunications Cabling.

All training programs must be conducted with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • interpreting plan as a set of functions to be implemented • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • gathering data for the installation of systems and equipment • planning the installation of cable, taking into account technical, scheduling and financial considerations

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none"> • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • applying all related WHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • giving and receiving feedback • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • installing and operating telecommunications equipment and products • installing and operating CPE equipment and products • installing and configuring access network devices • checking tools and test equipment for accuracy • identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 12

6 core units, plus

1 elective units from Group A workplace units, plus

5 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level. A minimum of two of these electives must be taken from Certificate III level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate III or Certificate IV level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBSUS301A Implement and monitor environmentally sustainable work practices

ICTCBL3015A Locate and identify cable system faults

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTTEN3250A Provide infrastructure for telecommunications customer equipment

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business

BSBSMB306A Plan a home based business

ICASAS305A Provide IT advice to clients

ICTEDU3053A Train customers in new technology

ICTSMB4160A Set up and operate a contractor business

ICTSMB4161A Operate a contractor business with employees

ICTWOR3028A Organise resources

ICTWOR3035A Organise material supply

ICTWOR3041A Schedule resources

ICTWOR3093A Manage spare parts

ICTWOR3127A Supervise worksite activities

ICTWOR3231A Resolve technical enquiries using multiple information systems

ICTWOR3232A Collect and analyse technical information

Group B - General elective units

Broadband and wireless networks

ICTBWN3082B Perform tests on optical communication system and components
ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
ICTBWN3090B Install lead-in module and cable for fibre to the premises
ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation

Cabling

ICTCBL2017B Alter services to existing cable system
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL2136B Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule
ICTCBL2137B Install, maintain and modify customer premises communications cabling:
ACMA Open Rule
ICTCBL2139B Apply safe technical work practices for cabling registration when configuring
ADSL circuits
ICTCBL3009B Install, terminate and certify structured cabling installation
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3013A Perform cable and system test on customer premises
ICTCBL3014A Hand over systems and equipment
ICTCBL3018A Install underground enclosures and conduit
ICTCBL3019A Install underground cable
ICTCBL3020A Construct aerial cable supports
ICTCBL3021A Install aerial cable
ICTCBL3049A Install systems and equipment on customer premises
ICTCBL3052A Cut over new systems and equipment on customer premises
ICTCBL3067A Modify and cut over cable
ICTCBL3069A Install network cable equipment
ICTCBL3103A Maintain cable network

Digital reception technology

ICTDRE3156B Install digital reception equipment
ICTDRE3157B Locate and rectify digital reception equipment faults
ICTDRE3165A Install a complex digital reception system

ICT use

Telecommunications engineering networks

ICTTEN2219A Install and test internet protocol devices in convergence networks

ICTTEN3054B Provide infrastructure for telecommunications network equipment

ICTTEN3056A Install telecommunications network equipment

ICTTEN3063A Locate, identify and rectify recurrent network faults

ICTTEN3074A Recover customer premises equipment

ICTTEN3075A Refurbish customer premises equipment

ICTTEN3077B Commission an electronic unit

ICTTEN3104A Maintain an electronic system

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Access network installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL3020A Construct aerial cable supports
- ICTCBL3021A Install aerial cable
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

CPE installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL3010B Install and terminate optical fibre cable on customer premises
- ICTCBL3011B Install and terminate coaxial cable
- two additional units from Group B general elective units, with a maximum of one of those additional units from the workplace group as appropriate to the specific job role

Home network installer

Core units plus one workplace unit plus:

- ICTDRE3156B Install digital reception equipment
- ICTDRE3157B Locate and rectify digital reception equipment faults
- ICTDRE3165A Install a complex digital reception system
- two additional units from Group B general elective units, with a maximum of one of those additional units from the workplace group as appropriate to the specific job role

Network cable infrastructure installer

Core units plus one workplace unit plus:

- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL3011B Install and terminate coaxial cable
- ICTCBL3069A Install network cable equipment
- two additional units from Group B general elective units, with a maximum of one of those additional units from the workplace group as appropriate to the specific job role

Optical broadband network installer

Core units plus one workplace unit plus:

- ICTBWN3082B Perform tests on optical communication system and components
- ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
- ICTBWN3090B Install lead-in module and cable for fibre to the premises
- ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

Technical support

Core units plus one workplace unit plus:

- ICASAS304A Provide basic system administration
- ICASAS305A Provide IT advice to clients
- ICTWOR3231A Resolve technical enquiries using multiple information systems
- ICTWOR3232A Collect and analyse technical information
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role.

ICT30413 Certificate III in Telecommunications Digital Reception Technology

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i> Change in WHS core unit.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i>

Description

This qualification reflects the role of an individual in the telecommunications industry who can apply a broad range of competencies in a varied work context of installation of a limited range of digital reception equipment for either a customer or an enterprise. Fault-finding skills on a range of digital reception equipment for Subscription TV and Free-to-air TV reception are acquired.

Any cabling at the customer premises must be carried out in accordance to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- audiovisual systems integrator
- field service technician – RF services
- free to air TV installers – multiple services
- subscription TV installer – multiple services.
-

Prerequisite units

The following unit within this qualification has a prerequisite. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving ICT20413 Certificate II in Telecommunications Digital Reception Technology or another relevant accredited Training Package qualification or relevant accredited course

or

- providing evidence of competency in the core units required for ICT20413 Certificate II in Telecommunications Digital Reception Technology or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving ICT30413 Certificate III in Telecommunications Digital Reception Technology, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • reading drawings and recognising drawing symbols • interpreting plan as a set of functions to be implemented • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems • providing correct literature to the customer, including explanatory booklets, manuals, training aids, user guides, equipment plans and configuration • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes and antenna siting taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • providing customers with temporary or replacement equipment similar to existing equipment
Planning and organising	<ul style="list-style-type: none"> • interpreting design and relating to site characteristics • planning and organising installation and operation of TV equipment and products • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • applying all related WHS requirements and work practices,

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none"> including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • seeking assistance from team members when necessary • giving and receiving feedback • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • installing and operating TV equipment and products • installing and configuring passive and active devices • checking tools and test equipment for accuracy • identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 9

4 core units, plus

1 elective unit from Group A workplace units, plus

4 elective units from Group B general units

Units completed in ICT20413 Certificate II in Telecommunications Digital Reception Technology cannot be selected in this qualification.

Elective units must be relevant to the work outcome, local industry requirements and the qualification level. A minimum of 5 of these electives must be taken from Certificate III level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or any accredited course at Certificate III or Certificate IV level. The two units from Group B general elective units may be substituted with Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBSUS301A Implement and monitor environmentally sustainable work practices

ICTDRE3165A Install a complex digital reception system

ICTRFN2163B Install a satellite antenna

ICTRFN2164B Install a terrestrial antenna

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business

BSBSMB401A Establish legal and risk management requirements of small business

BSBSMB405B Monitor and manage small business operations

BSBSMB407A Manage a small team

ICASAS305A Provide IT advice to clients

ICTSMB4161A Operate a contractor business with employees

Group B - General elective units

Cabling

ICTCBL2017B Alter services to existing cable system

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCBL2137B Install, maintain and modify customer premises communications cabling:
ACMA Open Rule

ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits

ICTCBL2163A Install a cable lead-in

ICTCBL3015A Locate and identify cable system faults

Broadband and wireless networks

ICTBWN3082B Perform tests on optical communication system and components

ICTBWN3205B Use optical and radio frequency measuring instruments

Digital reception technology

ICTDRE3156B Install digital reception equipment

ICTDRE3157B Locate and rectify digital reception equipment faults

ICTDRE3248A Design communications wiring systems for customer premises

ICTDRE3249A Develop integrated digital reception systems

ICTDRE4166A Integrate customer digital reception equipment

ICTDRE4167A Integrate data delivery modes

ICTTEN4126A Install and configure internet protocol TV in a home network

ICT use

ICAICT302A Install and optimise operating system software

ICAICT303A Connect internal hardware components

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry

ICTOHS2080A Provide telecommunications services safely on roofs

ICTOHS2153B Work safely near power infrastructure

Radio frequency networks

ICTRFN4095A Conduct radio frequency measurements

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Audiovisual systems integrator – includes integration of diverse technologies including RF services, and telephony services in complex equipment systems

Core units plus one Group A workplace elective unit plus:

- ICTDRE3165A Install a complex digital reception system
- ICTDRE4166A Integrate customer digital reception equipment
- ICTDRE4167A Integrate data delivery modes
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Field service technician – ongoing maintenance of customer equipment

Core units plus one Group A workplace elective unit plus:

- ICTCBL3015A Locate and identify cable system faults
- ICTCBL2017B Alter services to existing cable system
- ICTRFN4095A Conduct radio frequency measurements
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Home network installer

Core units plus one Group A workplace elective unit plus:

- ICTDRE3156B Install digital reception equipment
- ICTDRE3157B Locate and rectify digital reception equipment faults
- ICTDRE3165A Install a complex digital reception system
- ICTDRE3248A Design communications wiring systems for customer premises
- ICTDRE3249A Develop integrated digital reception systems
- ICTTEN4126A Install and configure internet protocol TV in a home network
- one additional unit from Group B general elective units or from Group A workplace elective units as appropriate to the specific job role

Installer of free-to-air TV

Core units plus one Group A workplace elective unit plus:

- ICTBWN3205B Use optical and radio frequency measuring instruments
- ICTDRE3165A Install a complex digital reception system
- ICTRFN4095A Conduct radio frequency measurements
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Installer – subscription TV (multiple services) – includes campus installations

Core units plus one Group A workplace elective unit plus:

- ICTDRE3165A Install a complex digital reception system
- ICTDRE4166A Integrate customer digital reception equipment
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Small to medium contracting business operator

Core units plus one Group A workplace elective unit plus:

- ICTSMB4161A Operate a contractor business with employees
- four additional units from Group B general elective units, with a maximum of two of those additional units from Group A workplace elective units as appropriate to the specific job role

ICT30513 Certificate III in Telecommunications Rigging Installation

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This qualification first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies in a varied work context from installation and maintenance of telecommunications equipment mounted on structures requiring rigging skills.

This role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault-finding. It involves a degree of autonomy and may include some supervision of others involving known routines and procedures and some accountability for the quality of outcomes in a specialised area of installation of telecommunication equipment on high structures, including radio towers.

This qualification prepares an individual for entry to the industry into the mainstream of telecommunications convergence technologies of radio, optical, data and internet protocol (IP) networks.

An operator uses rigging skills to install and maintain radio antennas on radio towers and build and mount sections of radio masts for a complete radio structure.

Job roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- installer of telecommunications network equipment on structures
- installer of radio equipment and cabling on radio towers
- maintainer and tester of telecommunications radio network equipment on structures
- telecommunications rigger technician.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT20513 Certificate II in Telecommunications Rigging Installation or another relevant endorsed Training Package qualification or relevant endorsed course

or

- providing evidence of competency in the core units required for the ICT20513 Certificate II in Telecommunications Rigging Installation or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving the ICT30513 Certificate III in Telecommunications Rigging Installation, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

Cabling

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Standard for Licensing Persons Performing High Risk Work

The National Standard for Licensing Persons Performing High Risk Work applies to persons performing dogging and rigging work. Completion of the following units is required for certification at either basic, intermediate or advanced levels.

- CPCCLDG3001A Licence to perform dogging
- CPCCLRG3001A Licence to perform rigging basic level
- CPCCLRG3002A Licence to perform rigging intermediate level
- CPCCLRG4001A Licence to perform rigging advanced level
-

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Volume of learning

The volume of learning of a Certificate III is typically 1-2 years.

Up to 4 years may be required to achieve the learning outcomes through a program of indentured training/employment.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • communicating with customers to arrange time and access for the installation of systems and equipment • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • working with team members to work with clients and install equipment • relating personal role to the industry • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting a plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • gathering data for the installation of systems and equipment • developing a plan for the recovery of equipment from customer premises • planning the installation of cable, taking into account

	<ul style="list-style-type: none"> technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • applying all related OHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • assessing customer's expertise and training needs and conducting training in the use of systems and equipment • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • giving and receiving feedback • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • installing and operating telecommunications broadband equipment and products • installing and operating CPE equipment and products • installing and configuring access network devices • checking tools and test equipment for accuracy • identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 9

6 core units, *plus*

3 elective units, *of which*:

- 1 unit must be from Group A Workplace units
- 2 units must be from Group B General elective units, up to 2 of which may be substituted with units from elsewhere in this Training Package, another Training Package or accredited course at Certificate II, III or IV level.

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

Core units

CPCCLDG3001A Licence to perform dogging
CPCCLRG3001A Licence to perform rigging basic level
ICTBWN3205B Use optical and radio frequency measuring instruments
ICTTCR3191A Install radio plant and equipment on telecommunications structures
ICTTCR3192A Protect against electromagnetic radiation and system hazards when working on telecommunications radio sites
ICTWHS2170B Follow work health and safety and environmental policies and procedures

Elective units

Group A Workplace

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business
BSBSMB306A Plan a home based business
BSBSUS201A Participate in environmentally sustainable work practices
BSBSUS301A Implement and monitor environmentally sustainable work practices
ICASAS305A Provide IT advice to clients
ICTEDU3053A Train customers in new technology
ICTWOR3028A Organise resources
ICTWOR3035A Organise material supply
ICTWOR3041A Schedule resources
ICTWOR3093A Manage spare parts
ICTWOR3127A Supervise worksite activities

Group B General elective units

CPCCLRG3002A Licence to perform rigging intermediate level
CPCCLRG4001A Licence to perform rigging advanced level
CPCCOHS1001A Work safely in the construction industry
ICTCBL2017B Alter services to existing cable system
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers

ICTCBL2068A Install a telecommunications service to a building
ICTCBL2136B Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule
ICTCBL2137A Install, maintain and modify customer premises communications cabling:
ACMA Open Rule
ICTCBL2139B Apply safe technical work practices for cabling registration
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3013A Perform cable and system test on customer premises
ICTCBL3014A Hand over systems and equipment
ICTCBL3015A Locate and identify cable system faults
ICTCBL3020A Construct aerial cable supports
ICTCBL3021A Install aerial cable
ICTCBL3049A Install systems and equipment on customer premises
ICTCBL3052A Cut over new systems and equipment on customer premises
ICTCBL3069A Install network cable equipment
ICTCBL3103A Maintain cable network
ICTOHS2080A Provide telecommunications services safely on roofs
ICTOHS2153B Work safely near power infrastructure
ICTRFN3055A Install a radio communications antenna and feedline
ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access
equipment
ICTRFN3175A Operate and maintain radio communications technical instruments and field
equipment
ICTTCR2188A Use rigging practices and systems on telecommunications network structures
ICTTCR2189A Use operational safety in a telecommunications rigging environment
ICTTCR2190A Use safe rigging practices to climb and perform rescues on
telecommunications network structures
ICTTCR3062A Build a telecommunications radio structure
ICTTEN2008A Use electrical skills in telecommunications work
ICTTEN2140B Use hand and power tools
ICTTEN3054B Provide infrastructure for telecommunications network equipment
ICTTEN3056A Install telecommunications network equipment
ICTTEN3063A Locate, identify and rectify recurrent network faults
ICTTEN3077B Commission an electronic unit
ICTTEN3089A Repair and replace telecommunications network hardware
ICTTEN3104A Maintain an electronic system
ICTTEN3250B Provide infrastructure for telecommunications customer equipment

Prerequisite Units

The following units in this qualification have the prerequisite units detailed below.

Code and title	Prerequisite units required
CPCCLRG3002A Licence to perform rigging intermediate level	CPCCLRG3001A Licence to perform rigging basic level
CPCCLRG4001A Licence to perform rigging advanced level	CPCCLRG3002A Licence to perform rigging intermediate level
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
ICTTCR3062A Build a telecommunications radio structure	<p>ICTTCR2188A Use rigging practices and systems on telecommunications network structures</p> <p>ICTTCR2189A Use operational safety in a telecommunications rigging environment</p> <p>ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures</p>
ICTTCR3191A Install radio plant and equipment on telecommunications structures	<p>ICTTCR2188A Use rigging practices and systems on telecommunications network structures</p> <p>ICTTCR2189A Use operational safety in a telecommunications rigging environment</p> <p>ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures</p>

ICT30613 Certificate III in Broadband and Wireless Networks

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i> Change in WHS core unit.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i>

Description

This qualification reflects the role of a tradesperson with a range of telecommunications skills who can:

- install and maintain access network cabling and equipment for high speed broadband as part of the national network
- install and maintain optical and wireless equipment for high speed internet broadband network infrastructure
- install and maintain telecommunications, data cabling and cabling products on customer premises Cabling at the customer premises in accordance to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner
- install voice and data telecommunications equipment
- install and maintain telecommunications access network cabling and infrastructure, systems and basic customer premises equipment.

This role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault-finding. It involves a degree of autonomy and may include limited supervision of others.

This qualification also introduces the skills required for the broadband deployment using fibre optic devices.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- broadband installer
- optical broadband installer
- wireless broadband network installer
- broadband network infrastructure installer
- access network cabling installer
- installer of telecommunications and data cabling
- installer of telecommunications aerial cable access network
- installer of telecommunications underground cable access network.
-

Prerequisite units

The following unit within this qualification has a prerequisite. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises	ICTCBL2136B Install, maintain and modify customer premises communications cabling:

communications cabling: ACMA Open Rule	ACMA Restricted Rule
--	----------------------

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate II qualification from this or another accredited Training Package or accredited course
- or
- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving ICT30613 Certificate III in Broadband and Wireless Networks, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • documenting test methods and results • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • interpreting plan as a set of functions to be implemented • confirming approval for time and method of site access with customers • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies

Employability Skill	Industry/enterprise requirements for this qualification include:
	to overcome them within time and budget restrictions <ul style="list-style-type: none"> • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • applying all related WHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisational goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications • testing and measuring of broadband network infrastructure • installing and operating telecommunications equipment and products

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none">• installing and operating equipment and products• installing and configuring access network devices• identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 12

6 core units, plus

1 elective unit from Group A workplace units, plus

5 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate III or Certificate IV level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBSUS301A Implement and monitor environmentally sustainable work practises
ICTBWN3205B Use optical and radio frequency measuring instruments
ICTCBL3015A Locate and identify cable system faults
ICTTEN2008A Use electrical skills in telecommunications work
ICTTEN2140B Use hand and power tools
ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business
BSBSMB306A Plan a home based business
ICASAS305A Provide IT advice to clients
ICTEDU3053A Train customers in new technology
ICTWOR3028A Organise resources
ICTWOR3035A Organise material supply
ICTWOR3041A Schedule resources
ICTWOR3093A Manage spare parts
ICTWOR3127A Supervise worksite activities

Group B - General elective units

Broadband and wireless networks

ICTBWN3082B Perform tests on optical communication system and components

ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
ICTBWN3090B Install lead-in module and cable for fibre to the premises
ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation

Cabling

ICTCBL2017B Alter services to existing cable system
ICTCBL2064A Haul underground cable
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL2066B Joint and terminate coaxial cable
ICTCBL2131A Install an above ground equipment enclosure
ICTCBL2133A Construct underground telecommunications infrastructure
ICTCBL2136B Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule
ICTCBL2137B Install, maintain and modify customer premises communications cabling:
ACMA Open Rule
ICTCBL2139B Apply safe technical work practices for cabling registration when configuring
ADSL circuits
ICTCBL2163A Install a cable lead-in
ICTCBL3009B Install, terminate and certify structured cabling installation
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3013A Perform cable and system test on customer premises
ICTCBL3014A Hand over systems and equipment
ICTCBL3018A Install underground enclosures and conduit
ICTCBL3019A Install underground cable
ICTCBL3020A Construct aerial cable supports
ICTCBL3021A Install aerial cable
ICTCBL3049A Install systems and equipment on customer premises
ICTCBL3067A Modify and cut over cable
ICTCBL3069A Install network cable equipment
ICTCBL3103A Maintain cable network

ICT use

ICAICT302A Install and optimise operating system software
ICAICT303A Connect internal hardware components

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry
ICTOHS2153B Work safely near power infrastructure

Radio frequency networks

ICTRFN3055A Install a radio communications antenna and feedline

ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment

ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment

ICTRFN4095A Conduct radio frequency measurements

ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Telecommunications engineering networks

ICTTEN2219A Install and test internet protocol devices in convergence networks

ICTTEN3063A Locate, identify and rectify recurrent network faults

ICTTEN3074A Recover customer premises equipment

ICTTEN3075A Refurbish customer premises equipment

ICTTEN3077B Commission an electronic unit

ICTTEN3104A Maintain an electronic system

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Aerial cable installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2017B Alter services to existing cable system
- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL2163B Install a cable lead-in
- ICTCBL3021A Install aerial cable
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

Broadband Network Infrastructure Installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL3009B Install, terminate and certify structured cabling installation
- ICTCBL3011B Install and terminate coaxial cable
- ICTCBL3069A Install network cable equipment
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

Optical broadband network installer

Core units plus one Group A workplace elective unit plus:

- ICTBWN3082B Perform tests on optical communication system and components
- ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
- ICTBWN3090B Install lead-in module and cable for fibre to the premises
- ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

Underground cable installer

Core units plus one Group A workplace elective unit plus:

- ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
- ICTCBL2133A Construct underground telecommunications infrastructure
- ICTCBL2163B Install a cable lead-in
- ICTCBL3018A Install underground enclosures and conduit
- ICTCBL3019A Install underground cable

Wireless broadband network Installer

Core units plus one Group A workplace elective unit plus:

- ICTRFN3055A Install a radio communications antenna and feedline
- ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment
- ICTRFN4095A Conduct radio frequency measurements
- ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network
- one additional unit from Group B general elective units or Group A workplace elective units as appropriate to the specific job role

ICT30713 Certificate III in National Broadband Network Construction

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Units updated to current versions.</p>
Release 1	<p>This qualification first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0.</i></p>

Description

This qualification has been designed as a pathway for specialised work on the National Broadband Network (NBN).

This qualification provides students with skills and knowledge to enhance employment prospects in apprenticeships and traineeships in a range of specialised NBN industry occupations specifically for the national rollout of the high speed broadband infrastructure.

In conjunction with safe working practices, one of two specialist streams is to be undertaken as described:

Telecommunications linesworker/Installer

This stream reflects the role of operators in performing equipment and system installation work on customer network to enable efficient access and interconnection to the NBN services. This includes diagnosing and rectifying complex cable system faults to maximise benefits of the high speed broadband connection.

Telecommunications Fibre Splicer

This stream reflects the role of operators in applying optical fibre handling skills to splicing, testing and fault finding on live fibre cable in the fibre distribution network for NBN.

Job roles

Job roles and titles are dependent on the stream completed, possible job titles relevant to a pathway for this qualification include:

- Telecommunications installer
- Broadband network linesworker
- Broadband network fibre splicer
- Telecommunications customer network cable installer.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT20613 Certificate II in National Broadband Network Installation or equivalent qualification from this or another endorsed Training Package or endorsed course

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving the ICT30713 Certificate III in National Broadband Network Construction, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

The completion of unit ICTWHS2170B, ICTWHS2170A or ICTOHS2170A and the unit set of ICTCBL2136B and ICTCBL2137B meets the ACMA requirements for Cabling Provider Rules (CPR) open registration.

All training programs are undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Much of the NBN installation work falls within the definition of construction work in the context of infrastructure provisioning. If so, anyone entering the construction site is required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package as part of the core group of this qualification fulfils this requirement.

Note: ICTOHS2153A Work safely near power infrastructure should be included in the qualification packaging where there is a likelihood of working near power infrastructure. If state or territory law requires a licence to operate an elevated work platform (EWP), TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more) should be completed concurrently with ICTOHS2153A.

Volume of Learning

The volume of learning of a Certificate III is typically 1-2 years.

Up to 4 years may be required to achieve the learning outcomes through a program of indentured training/employment.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • communicating benefits of high speed broadband to community for successful NBN rollout • notifying any safety aspects to supervisor • documenting test methods and results • completing cable and equipment labelling and records in cabinets and distribution hubs • interpreting plan as a set of basic functions to be implemented • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • communicating with customers to arrange time and access for the installation of systems and equipment • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • continually fostering effective teamwork for effective NBN rollout • identifying members and roles of team between management and workforce, between cable and network equipment teams and between installation and testing teams • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • working with team members to work with clients and install equipment • relating personal role to the industry • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking sequences of operations from planning to site preparation to cabling to equipment installation in order to ensure a methodical and effective approach to NBN rollout • working out contingencies in event of problems arising • ensuring compatibility of technologies deployed by NBN rollout

	<ul style="list-style-type: none"> identifying barriers to installation and developing strategies to overcome them within time and budget restrictions identifying faults or optimisation options rectifying faults and adjusting system to optimal operation determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements following up promptly on difficulties and known problem areas ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> continually suggesting of ways for improving practices to suit specific site of NBN infrastructure rollout prioritising urgent requests and acting according to organisational guidelines identifying barriers to installation and developing strategies to overcome them within time and budget restrictions adapting plan to suit specific features of site identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> preparing project specifications for deployment of NBN access network organising work schedules for deployment of access network architectures developing NBN rollout plans to ensure minimal disruption to the workplace and the public identifying realistic short and long-term career objectives planning and provisioning to meet key milestones gathering data for the installation of systems and equipment developing a plan for the recovery of equipment from customer premises planning the installation of ribbon fibre cable, taking into account technical, scheduling and financial considerations interpreting design and relating to site characteristics prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> managing personal time to assist effective rollout identifying work to be completed identifying and setting realistic short and long-term career objectives developing installation plans to ensure minimal disruption to the workplace checking that tools and equipment are in safe working order and adjusted to manufacturer specification

	<ul style="list-style-type: none"> • personally applying all related OHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • learning from previous experiences in order to improve future practices in NBN rollout • learning of methodologies of new ribbon fibre splicing and adapting to current practices • assessing customer's expertise and training needs and conducting training in the use of systems and equipment • making clients aware of opportunities that exist for with higher broadband speed offered by NBN and offering training • seeking assistance from team members when necessary • giving and receiving feedback to assist in meeting team and organisation goals • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members on NBN technologies by equipment suppliers • providing training to customers on system, product, product features and facilities • relating current or intended role to career objectives in a positive manner
Technology	<ul style="list-style-type: none"> • familiarising with new ribbon fibre technologies for NBN deployment • ensuring that range of technologies used in NBN infrastructure rollout are effectively and efficiently deployed to manufacturers specifications • checking that advanced tools and equipment are in safe working order and adjusted to manufacturer specifications • testing and measuring of broadband network infrastructure • installing, configuring and operating NBN equipment and products • identifying, replacing or repairing faulty parts and equipment • ensuring compatibility and interoperability between newly deployed NBN infrastructure and existing customer network • providing solutions for improved compatibility

	<ul style="list-style-type: none">• identifying, replacing or repairing faulty parts and equipment
--	--

Packaging Rules

Total number of units = 14

9 core units *plus*

5 elective units, *of which*:

- **2 units must be from Group A Linesworker/installer or Group B Fibre splicer**
- **3 units from Group C General elective units or from elsewhere in this Training Package, another Training Package or endorsed course at Certificate II, III or IV level.**

Elective units chosen must be relevant to the work and industry context for project practice.

This qualification meets the requirements for the NBN infrastructure rollout and has been developed for specific occupational outcomes. Due to the specialised technical nature of the work, there is provision for choice of specialisation but there is no allowance for substitution of elective units in the specialised group. However, remaining elective units from Group C can be selected to meet relevant work outcome, local industry requirements and the qualification level.

Core units

CPCCOHS1001A Work safely in the construction industry
ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
ICTBWN3205B Use optical and radio frequency measuring instruments
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL3018A Install underground enclosures and conduit
ICTTEN2008A Use electrical skills in telecommunications work
ICTTEN3056A Install telecommunications network equipment
ICTWHS2170B Follow work health and safety and environmental policies and procedures
ICTWOR3127A Supervise worksite activities

Elective units

Group A Linesworker/installer

ICTBWN3090B Install lead-in module and cable for fibre to the premises
ICTCBL3019A Install underground cable

Group B Fibre splicer

ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation
ICTCBL3240B Install ribbon fibre cable in the FTTX distribution network

Group C General elective units

BSBSUS201A Participate in environmentally sustainable work practices
HLTAID001 Provide cardiopulmonary resuscitation

ICTBWN3090B Install lead-in module and cable for fibre to the premises
 ICTCBL2131A Install an above ground equipment enclosure
 ICTCBL2133A Construct underground telecommunications infrastructure
 ICTCBL2134A Fix aerial cable
 ICTCBL2136A Install, maintain and modify customer premises communications cabling:
 ACMA Restricted Rule
 ICTCBL2137B Install, maintain and modify customer premises communications cabling:
 ACMA Open Rule
 ICTCBL2162B Install a cable lead-in
 ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA
 Restricted Rule
 ICTOHS2153B Work safely near power infrastructure
 ICTTEN2219A Install and test an internet protocol device in convergence networks
 ICTTEN2140B Use hand and power tools
 TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11
 metres or more)

Prerequisite Units

The following units in this qualification have the prerequisite units detailed below.

Code and title	Prerequisite units required
ICTCBL3240B Install ribbon fibre cable in the FTTX distribution network	ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICT30813 Certificate III in Telecommunications Fixed Wireless Installation

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Units updated to current versions.</p>
Release 1	<p>This qualification first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0.</i></p>

Description

This qualification reflects the role of an operator in the telecommunications industry who can apply a broad range of competencies using a defined range of skills where some discretion and judgement is required in the selection, installation and configuration of equipment in convergence technologies that integrate radio, optical and internet protocol (IP) based applications.

This role includes assessing installation requirements, planning and performing installations, testing installed equipment and fault finding. It involves a degree of autonomy and may include some supervision of others involving known routines and procedures and some accountability for the quality of outcomes.

This qualification prepares an individual for entry to the industry into the mainstream of telecommunications convergence technologies of radio, optical, data and IP networks.

An operator uses skills to install and maintain radio antennas on domestic and commercial buildings for fixed wireless broadband services and install and maintain Network Terminal Devices in domestic and commercial premises connected to the radio antennas.

Job roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- telecommunications fixed wireless network equipment installer
- telecommunications voice and data equipment installer
- telecommunications tradesperson.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate II qualification from this or another endorsed Training Package or endorsed course

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving the ICT30813 Certificate III in Telecommunications Fixed Wireless Installation, candidates seeking to develop more specialised technical skills and knowledge, may select from a range of Certificate IV qualifications in the ICT10 Integrated Telecommunications Training Package.

Licensing/Regulatory Information

The completion of units ICTWHS2170B, ICTWHS2170A or ICTOHS2170A and ICTCBL136B meets the ACMA requirements for Cabling Provider Rules (CPR) restricted registration.

For cablers with restricted CPR qualifications there will be a requirement for the specialised unit ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule, to be achieved when working on specialised broadband cabling.

All training programs must be undertaken with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Note: ICTOHS2153A Work safely near power infrastructure should be included in the qualification packaging where there is a likelihood of working near power infrastructure. If state or territory law requires a licence to operate an elevated work platform (EWP), TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more) should be completed concurrently with ICTOHS2153A.

Volume of Learning

The volume of learning of a Certificate III is typically 1-2 years.

Up to 4 years may be required to achieve the learning outcomes through a program of indentured training/employment.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • conveying information to clients, colleagues and other site personnel • completing job reports and compliance forms • communicating with customers to arrange time and access for the installation of systems and equipment • documenting and communicating work-related information, including reporting of faults and problems • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • working with team members to work with clients and install equipment • relating personal role to the industry • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas • ranking likely causes of fault in order of probability to ensure a methodical approach to fault identification
Initiative and enterprise	<ul style="list-style-type: none"> • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting a plan to suit specific features of site • identifying issues and possible solutions within established guidelines
Planning and organising	<ul style="list-style-type: none"> • gathering data for the installation of systems and equipment • developing a plan for the recovery of equipment from customer premises • planning the installation of cable, taking into account

	<ul style="list-style-type: none"> technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines
Self-management	<ul style="list-style-type: none"> • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • applying all related OHS requirements and work practices, including job safety analysis (JSA), protective clothing and personal safety items • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • assessing customer's expertise and training needs and conducting training in the use of systems and equipment • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • giving and receiving feedback • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • installing and operating telecommunications broadband equipment and products • installing and operating CPE equipment and products • installing and configuring access network devices • checking tools and test equipment for accuracy • identifying, replacing or repairing faulty parts and equipment

Packaging Rules

Total number of units = 12

5 core units, *plus*

7 elective units, *of which*:

- 1 unit must be from Group A Workplace
- 3 units must be from Group B Fixed wireless installer, one of which may be substituted with a Group A unit if required by a specific job role
- 3 units must be from Group C General elective units, up to two of which may be from elsewhere in this Training Package, another Training Package or endorsed course at Certificate II, III or IV level.

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

Core units

ICTBWN3205A Use optical and radio frequency measuring instruments

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTTEN3056A Install telecommunications network equipment

ICTWHS2170B Follow work health and safety and environmental policies and procedures

Elective units

Group A Workplace

BSBSMB305A Comply with regulatory, taxation and insurance requirements for the micro business

BSBSMB306A Plan a home based business

BSBSUS201A Participate in environmentally sustainable work practices

BSBSUS301A Implement and monitor environmentally sustainable work practices

ICASAS305A Provide IT advice to clients

ICTEDU3053A Train customers in new technology

ICTSMB4160A Set up and operate a contractor business

ICTSMB4161A Operate a contractor business with employees

ICTWOR3028A Organise resources

ICTWOR3035A Organise material supply

ICTWOR3127A Supervise worksite activities

Group B Fixed wireless installer

ICTDRE3156B Install digital reception equipment

ICTDRE3157B Locate and rectify digital reception equipment faults

ICTDRE3165A Install a complex digital reception system

ICTRFN3055A Install a radio communications antenna and feedline

Group C General elective units

CPCCOHS1001A Work safely in the construction industry
ICAICT302A Install and optimise operating system software
ICAICT303A Connect internal hardware components
ICANWK305A Install and manage network protocols
ICANWK417A Build an enterprise wireless network
ICASAS301A Run standard diagnostic tests
ICTBWN3082B Perform tests on optical communication system and components
ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
ICTBWN3090B Install lead-in module and cable for fibre to the premises
ICTBWN3100A Work safely with live fibre to test and commission a fibre to the x installation
ICTCBL2064A Haul underground cable
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule (where ACMA Restricted Registration is necessary)
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule
ICTCBL2139B Apply safe technical work practices for cabling registration
ICTCBL3009B Install, terminate and certify structured cabling installation
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3013A Perform cable and system test on customer premises
ICTCBL3014A Hand over systems and equipment
ICTCBL3015A Locate and identify cable system faults
ICTCBL3018A Install underground enclosures and conduit
ICTCBL3019A Install underground cable
ICTCBL3020A Construct aerial cable supports
ICTCBL3021A Install aerial cable
ICTCBL3049A Install systems and equipment on customer premises
ICTCBL3052A Cut over new systems and equipment on customer premises
ICTCBL3067A Modify and cut over cable
ICTCBL3069A Install network cable equipment
ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards
ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule
ICTOHS2080A Provide telecommunications services safely on roofs
ICTOHS2153B Work safely near power infrastructure
ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment
ICTRFN3155A Construct and test a radio communications device
ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment
ICTTEN2219A Install and test an internet protocol device in convergence networks
ICTTEN3054B Provide infrastructure for telecommunications network equipment
ICTTEN3063A Locate, identify and rectify recurrent network faults

ICTTEN3074A Recover customer premises equipment
 ICTTEN3075A Refurbish customer premises equipment
 ICTTEN3077B Commission an electronic unit
 ICTTEN4198A Install, configure and test an internet protocol network
 TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more).

Prerequisite Units

The following unit in this qualification has the prerequisite unit detailed below.

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

ICT40110 Certificate IV in Optical Networks

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of a technician with a range of telecommunications skills who can:

- install and maintain switching and transmission optical equipment in the enterprise network
- install and maintain optical and wireless equipment for high speed broadband network infrastructure
- install and maintain telecommunications, data cabling and cabling products on customer premises Cabling at the customer premises in accordance to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner
- install and maintain internet protocol (IP) based network telecommunications equipment
- install and maintain telecommunications access network cabling and infrastructure, systems and basic customer premises equipment using optical networking technology
- assess installation requirements of converging voice, video and data IP networks
- plan and perform installations
- test installed equipment and fault find.

This role also involves a degree of autonomy and may include limited supervision of others.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- customer equipment installer
- IP based network installer
- optical network infrastructure installer
- optical network technician
- secure IT network installer
- telecommunications technician.
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT30110 Certificate III in Broadband and Wireless Networks Technology or ICT30210 Certificate III in Telecommunications or ICT30310 Certificate III in Telecommunications Cabling or ICT30610 Certificate III in Broadband and Wireless Networks or another relevant accredited Training Package qualification or relevant accredited course

or

- providing evidence of competency in the core units required for the ICT30110 Certificate III in Broadband and Wireless Networks Technology or ICT30210 Certificate III in Telecommunications or ICT30310 Certificate III in Telecommunications Cabling or ICT30610 Certificate III in Broadband and Wireless Networks or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving the ICT40110 Certificate IV in Optical Networks, candidates may undertake the ICT50110 Diploma of Optical Networks, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction and Plumbing Services Integrated Framework Training Package fulfils this requirement.

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related OHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities

Technology	<ul style="list-style-type: none">• checking that tools and equipment are in safe working order and adjusted to manufacturer specifications• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria
------------	---

Packaging Rules

Total number of units = 11

6 core units, plus

1 elective unit from Group A workplace units, plus

4 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units from any endorsed Training Package or accredited course at Certificate IV or Diploma level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTOPN4115B Install and test a dense wavelength division multiplexing system

ICTOPN4116A Use advanced optical test equipment

ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation

ICTPMG4152A Manage the delivery of network infrastructure

ICTSUS4185A Install and test power management software

ICTTEN4081A Locate, diagnose and rectify faults

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB401A Establish legal and risk management requirements of small business

BSBSMB405B Monitor and manage small business operations

BSBSMB407A Manage a small team

ICAICT401A Determine and confirm client business requirements

ICTTEN4003B Estimate and quote for customer telecommunications equipment installation

Group B - General elective units

Cabling

ICTCBL4002B Prepare design drawings and specification for a cable installation

ICTCBL4004B Schedule and supply cabling installation

ICTCBL4023B Supervise cabling project

ICTCBL4057B Test cable bearers

ICTCBL4099A Remotely locate and identify cable network faults

Digital reception technology

ICTDRE4166A Integrate customer digital reception equipment
ICTDRE4167A Integrate data delivery modes

ICT use**IP networks**

ICAICT405A Develop detailed technical design
ICANWK406A Install, configure and test network security
ICANWK416A Build security into virtual private networks
ICANWK417A Build an enterprise wireless network
ICANWK410A Install network hardware to a network
ICANWK411A Install software to networked computers

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry
ICTOHS2153B Work safely near power infrastructure

Project management

ICTPMG4048B Schedule installation of customer premises equipment

Radio frequency networks

ICTRFN4095A Conduct radio frequency measurements
ICTRFN4158A Select an antenna system for radio communications
ICTRFN4159A Test and repair cellular network equipment
ICTRFN4174A Undertake radio communications signals monitoring
ICTRFN4177A Install radio communications base station equipment
ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Sustainability

ICTSUS4183A Install and test renewable energy system for ICT networks
ICTSUS4184A Install and test power saving hardware
ICTSUS4186A Install thin client applications for power over ethernet

Telecommunications engineering networks

ICTTEN4001B Identify requirements for customer telecommunications equipment
ICTTEN4040A Assign a transmission path
ICTTEN4051A Install configuration programs on PC based customer equipment
ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment
ICTTEN4073A Cut over customer premises equipment major upgrades

ICTTEN4076A Complete equipment and software upgrades
ICTTEN4078A Commission an electronic system
ICTTEN4085A Monitor, analyse and action telecommunications network alarms
ICTTEN4086A Undertake routine maintenance of the telecommunications network
ICTTEN4087A Undertake remote diagnosis and repair of network faults
ICTTEN4102A Repair telecommunication system faults

Emerging technologies

ICTTEN4050A Install and configure a wireless mesh network
ICTTEN4126A Install and configure internet protocol TV in a home network
ICTTEN4202A Install and test a radio frequency identification system
ICTTEN4215A Install and configure internet protocol TV in a service provider network
ICTTEN4229B Design, install and configure a customer smart technology network

IP networks

ICTTEN4198A Install, configure and test an internet protocol network
ICTTEN4199A Install, configure and test a router
ICTTEN4210A Implement and troubleshoot enterprise routers and switches
ICTTEN4211A Design, install and configure an internetwork
ICTTEN4212A Apply advanced routing protocols to network design
ICTTEN4213A Configure and troubleshoot advanced network switching
ICTTEN4214A Install and maintain a wide area network

ICT40210 Certificate IV in Telecommunications Network Engineering

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of a technician with a range of telecommunications skills who can:

- install and maintain enterprise network in emerging and converging technologies
- install and maintain optical and wireless equipment for high speed broadband network infrastructure
- install and maintain internet protocol (IP) based network telecommunications equipment
- install IP based networks in home networks and small and medium enterprises
- install and maintain telecommunications, data cabling and cabling products on customer premises Cabling at the customer premises in accordance to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner
- install and maintain telecommunications access network cabling and infrastructure, systems and basic customer premises equipment
- assess installation requirements of converging voice, video and data IP networks
- plan and perform installations
- test installed equipment and fault find.

This role also involves a degree of autonomy and may include limited supervision of others.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- customer computer system installer
- customer premises equipment installer
- home network installer
- IP based network installer
- network security equipment installer
- optical network equipment installer
- radio technician
- RFID system installer
- secure IT network installer
- SME network installer
- sustainability network equipment installer
- telecommunications network technician
- wireless LAN installer
- wireless network equipment installer.
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Qualification Pathways

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT30110 Certificate III in Broadband and Wireless Networks Technology or ICT30210 Certificate III in Telecommunications or ICT30310 Certificate III in Telecommunications Cabling or ICT30610 Certificate III in Broadband and Wireless Networks or another relevant accredited Training Package qualification or relevant accredited course

or

- providing evidence of competency in the core units required for the ICT30110 Certificate III in Broadband and Wireless Networks Technology or ICT30210 Certificate III in Telecommunications or ICT30310 Certificate III in Telecommunications Cabling or ICT30610 Certificate III in Broadband and Wireless Networks or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving the ICT40210 Certificate IV in Telecommunications Network Engineering, candidates may undertake the ICT50210 Diploma of Telecommunications Network Engineering, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification considerations

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate IV or Diploma level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTPMG4152A Manage the delivery of network infrastructure

ICTTEN4081A Locate, diagnose and rectify faults

ICTSUS4185A Install and test power management software

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB401A Establish legal and risk management requirements of small business

BSBSMB405B Monitor and manage small business operations

BSBSMB407A Manage a small team

ICAICT401A Determine and confirm client business requirements

ICTTEN4003B Estimate and quote for customer telecommunications equipment installation

Group B - General elective units

Cabling

ICTCBL4002B Prepare design drawings and specification for a cable installation

ICTCBL4004B Schedule and supply cabling installation

ICTCBL4023B Supervise cabling project

ICTCBL4057B Test cable bearers

ICTCBL4099A Remotely locate and identify cable network faults

Digital reception technology

ICTDRE4166A Integrate customer digital reception equipment

ICTDRE4167A Integrate data delivery modes

ICT use

IP networks

ICAICT405A Develop detailed technical design

ICANWK406A Install, configure and test network security

ICANWK410A Install network hardware to a network

ICANWK411A Install software to networked computers

ICANWK416A Build security into virtual private networks

ICANWK417A Build an enterprise wireless network

ICASAS301A Run standard diagnostic tests

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry

ICTOHS2153B Work safely near power infrastructure

Optical networks

ICTOPN4115B Install and test a dense wavelength division multiplexing system

ICTOPN4116A Use advanced optical test equipment

ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation

Project management

ICTPMG4048B Schedule installation of customer premises equipment

Radio frequency networks

ICTRFN4095A Conduct radio frequency measurements

ICTRFN4158A Select an antenna system for radio communications

ICTRFN4159A Test and repair cellular network equipment

ICTRFN4174A Undertake radio communications signals monitoring

ICTRFN4177A Install radio communications base station equipment

ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Sustainability

ICTSUS4183A Install and test renewable energy system for ICT networks

ICTSUS4184A Install and test power saving hardware

ICTSUS4186A Install thin client applications for power over ethernet

Telecommunications engineering networks

ICTTEN3056A Install telecommunications network equipment

ICTTEN4001B Identify requirements for customer telecommunications equipment

ICTTEN4040A Assign a transmission path
ICTTEN4051A Install configuration programs on PC based customer equipment
ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment
ICTTEN4073A Cut over customer premises equipment major upgrades
ICTTEN4076A Complete equipment and software upgrades
ICTTEN4078A Commission an electronic system
ICTTEN4085A Monitor, analyse and action telecommunications network alarms
ICTTEN4086A Undertake routine maintenance of the telecommunications network
ICTTEN4087A Undertake remote diagnosis and repair of network faults
ICTTEN4102A Repair telecommunication system faults

Emerging technologies

ICTTEN4050A Install and configure a wireless mesh network
ICTTEN4126A Install and configure internet protocol TV in a home network
ICTTEN4202A Install and test a radio frequency identification system
ICTTEN4215A Install and configure internet protocol TV in a service provider network
ICTTEN4229B Design, install and configure a customer smart technology network

IP networks

ICTTEN4198A Install, configure and test an internet protocol network
ICTTEN4199A Install, configure and test a router
ICTTEN4210A Implement and troubleshoot enterprise routers and switches
ICTTEN4211A Design, install and configure an internetwork
ICTTEN4212A Apply advanced routing protocols to network design
ICTTEN4213A Configure and troubleshoot advanced network switching
ICTTEN4214A Install and maintain a wide area network
ICTTEN5201A Install, configure and test a server

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Customer computer system installer

Core units plus one Group A workplace elective unit plus:

- ICAICT405A Develop detailed technical design
- ICTTEN4076A Complete equipment and software upgrades
- ICTTEN4198A Install, configure and test an internet protocol network
- four additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Customer premises equipment installer

Core units plus one Group A workplace elective unit plus:

- ICTTEN4051A Install configuration programs on PC based customer equipment
- ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment
- ICTTEN4073A Cut over customer premises equipment major upgrades
- ICTTEN4078A Commission an electronic system
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Emerging technology installer

Core units plus one Group A workplace elective unit plus:

- ICTTEN4050A Install and configure a wireless mesh network
- ICTTEN4126A Install and configure internet protocol TV in a home network
- ICTTEN4198A Install, configure and test an internet protocol network
- ICTTEN4202A Install and test a radio frequency identification system
- ICTTEN4229B Design, install and configure a customer smart technology network
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Home network installer

Core units plus one Group A workplace elective unit plus:

- ICTTEN4126A Install and configure internet protocol TV in a home network
- ICTDRE4166A Integrate customer digital reception equipment
- ICTDRE4167A Integrate data delivery modes
- ICTTEN4198A Install, configure and test an internet protocol network
- ICTTEN4229B Design, install and configure a customer smart technology network
- two additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Optical network equipment installer

Core units plus one Group A workplace elective unit plus:

- ICTOPN4115B Install and test a dense wavelength division multiplexing system

- ICTOPN4116A Use advanced optical test equipment
- ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation
- ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Network Security equipment installer

Core units plus one Group A workplace elective unit plus:

- ICANWK406A Install, configure and test network security
- ICANWK416A Build security into virtual private networks
- ICTTEN4198A Install, configure and test an internet protocol network
- ICTTEN4199A Install, configure and test a router
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

RFID system installer

Core units plus one Group A workplace elective unit plus:

- ICANWK411A Install software to networked computers
- ICTTEN4078A Commission an electronic system
- ICTTEN4198A Install, configure and test an internet protocol network
- ICTTEN4202A Install and test a radio frequency identification system
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

SME network installer

Core units plus one Group A workplace elective unit plus:

- ICTTEN4210A Implement and troubleshoot enterprise routers and switches
- ICTTEN4211A Design, install and configure an internetwork
- ICTTEN4212A Apply advanced routing protocols to network design
- ICTTEN4213A Configure and troubleshoot advanced network switching
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Sustainability network equipment installer

Core units plus one Group A workplace elective unit plus:

- ICTSUS4183A Install and test renewable energy system for ICT networks
- ICTSUS4184A Install and test power saving hardware
- ICTSUS4186A Install thin client applications for power over ethernet
- four additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Wireless LAN installer

Core units plus one Group A workplace elective unit plus:

- ICANWK416A Build security into virtual private networks
- ICANWK417A Build an enterprise wireless network
- ICANWK411A Install software to networked computers
- ICTTEN4198A Install, configure and test an internet protocol network
- three additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Wireless network equipment installer

Core units plus one Group A workplace elective unit plus:

- ICTRFN4158A Select an antenna system for radio communications
- ICTRFN4159A Test and repair cellular network equipment
- ICTRFN4177A Install radio communications base station equipment
- four additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

ICT40313 Certificate IV in Telecommunications Radio Communications

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>ICTWOR2141 Work effectively in a telecommunications technology team moved to elective bank. Elective unit requirement increased by one.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Description

This qualification reflects the role of a technician with a range of telecommunications skills who can:

- install and maintain digital radio telecommunications equipment
- conduct field operations of radio networks
- install and maintain worldwide interoperability for microwave access (WiMAX) and wireless fidelity (WiFi) networks for high speed broadband network infrastructure
- monitor radio frequency (RF) operation and conduct field audits for compliance.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- radio communications technician
- radio frequency technician
- radio frequency field technician
- radio frequency compliance officer
- radio frequency auditor
- telecommunications radio technician
- WiMAX or WiFi system installer
- wireless system installer.
-

Prerequisite requirements

The following unit within this qualification have prerequisites. This is detailed as follows:

Code and title	Prerequisite unit required
ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT40313 Certificate IV in Telecommunications Radio Communications, candidates may undertake ICT50210 Diploma of Telecommunications Network Engineering, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining radio interference problems and conducting compliance audits • following up promptly on difficulties and known problem areas

Employability Skill	Industry/enterprise requirements for this qualification include:
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related WHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisational goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities

Employability Skill	Industry/enterprise requirements for this qualification include:
	for work team members <ul style="list-style-type: none">• providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none">• checking that tools and equipment are in safe working order and adjusted to manufacturer specifications• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria

Packaging Rules

Total number of units = 17

9 core units, plus

8 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level. All these electives must be taken from Certificate IV level.

A maximum of three elective units may be substituted with three units of competency from any endorsed Training Package or any accredited course at Certificate IV or Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTCBL2066B Joint and terminate coaxial cable

ICTRFN3055A Install a radio communications antenna and feedline

ICTRFN3155A Construct and test a radio communications device

ICTSUS4185A Install and test power management software

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTTEN3104A Maintain an electronic system

ICTTEN4081A Locate, diagnose and rectify faults

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Cabling

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCBL2137B Install, maintain and modify customer premises communications cabling:

ACMA Open Rule

ICTCBL4004B Schedule and supply cabling installation

ICTCBL4099A Remotely locate and identify cable network faults

Compliance

ICTCMP5176A Undertake radio communications site audit

Customer Service

BSBCUS402B Address customer needs

First aid

HLTAID003 Provide first aid

ICT use

IP networks

ICANWK410A Install network hardware to a network

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry

CPPSEC3034A Operate information gathering equipment

ICTOHS2153B Work safely near power infrastructure

Project management

ICTPMG4048B Schedule installation of customer premises equipment

ICTPMG4152A Manage the delivery of network infrastructure

Radio frequency networks

ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment

ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment

ICTRFN4095A Conduct radio frequency measurements

ICTRFN4158A Select an antenna system for radio communications

ICTRFN4159A Test and repair cellular network equipment

ICTRFN4174A Undertake radio communications signals monitoring

ICTRFN4177A Install radio communications base station equipment

ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

ICTRFN5148A Test and measure cellular phone and network equipment performance

Telecommunications engineering networks

ICTTEN3054B Provide infrastructure for telecommunications network equipment

ICTTEN3056A Install telecommunications network equipment

ICTTEN3077B Commission an electronic unit

ICTTEN3089A Repair and replace telecommunications network hardware

ICTTEN3104A Maintain an electronic system

ICTTEN4001B Identify requirements for customer telecommunications equipment

ICTTEN4003B Estimate and quote for customer telecommunications equipment installation

ICTTEN4040A Assign a transmission path

ICTTEN4051A Install configuration programs on PC based customer equipment

ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment

ICTTEN4073A Cut over customer premises equipment major upgrades

ICTTEN4076A Complete equipment and software upgrades
ICTTEN4078A Commission an electronic system
ICTTEN4086A Undertake routine maintenance of the telecommunications network
ICTTEN4087A Undertake remote diagnosis and repair of network faults
ICTTEN4102A Repair telecommunication system faults

Emerging technologies

ICTTEN4050A Install and configure a wireless mesh network
ICTTEN4126A Install and configure internet protocol TV in a home network
ICTTEN4202A Install and test a radio frequency identification system
ICTTEN4215A Install and configure internet protocol TV in a service provider network
ICTTEN4229B Design, install and configure a customer smart technology network

IP networks

ICTTEN4198A Install, configure and test an internet protocol network
ICTTEN4199A Install, configure and test a router
ICTTEN4210A Implement and troubleshoot enterprise routers and switches

Small and micro business

BSBSMB401A Establish legal and risk management requirements of small business
BSBSMB405B Monitor and manage small business operations
BSBSMB407A Manage a small team

Sustainability

ICTSUS4183A Install and test renewable energy system for ICT networks
ICTSUS4184A Install and test power saving hardware
ICTSUS4186A Install thin client applications for power over ethernet

Workplace effectiveness

ICTWOR2141A Work effectively in a telecommunications technology team
ICTWOR4032A Undertake a civil site survey
ICTWOR4079A Schedule equipment maintenance

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Radio Installation

Core units plus:

- ICTTEN3056A Install telecommunications network equipment
- ICTTEN3077B Commission an electronic unit
- ICTTEN3089A Repair and replace telecommunications network hardware
- ICTTEN4078A Commission an electronic system
- ICTTEN4102A Repair telecommunication system faults
- two additional units from elective units as appropriate to the specific job role

Radio field operations

Core units plus:

- CPPSEC3034A Operate information gathering equipment
- HLTFA311A Apply first aid
- BSBCUS402B Address customer needs
- four additional units from elective units as appropriate to the specific job role

Field monitoring and compliance

Core units plus:

- ICTCMP5176A Undertake radio communications site audit
- ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment
- ICTRFN4174A Undertake radio communications signals monitoring
- four additional units from elective units as appropriate to the specific job role

Wireless network equipment installer

Core units:

- ICTRFN3146A Install WiMAX customer premises equipment broadband wireless access equipment
- ICTRFN4158A Select an antenna system for radio communications
- ICTRFN4159A Test and repair cellular network equipment
- ICTRFN4177A Install radio communications base station equipment
- three additional units from elective units as appropriate to the specific job role

ICT40410 Certificate IV in Radio Frequency Networks

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of a technician with a range of telecommunications skills who can:

- install and maintain switching and transmission radio frequency (RF) equipment in the enterprise network
- install and maintain RF and wireless equipment for high speed broadband network infrastructure
- install and maintain telecommunications, data cabling and cabling products on customer premises Cabling at the customer premises in accordance to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner
- install and maintain internet protocol (IP) based network telecommunications equipment
- install and maintain telecommunications access network cabling and infrastructure, systems and basic customer premises equipment using optical networking technology
- assess installation requirements of converging voice, video and data IP networks
- plan and perform installations
- test installed equipment and fault find.

This role also involves a degree of autonomy and may include limited supervision of others.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- customer equipment installer
- IP based network installer
- RF network infrastructure installer
- RF network technician secure IT network installer
- telecommunications radio technician
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Preferred pathways for candidates considering this qualification include:

- after achieving ICT30113 Certificate III in Broadband and Wireless Networks Technology or ICT30213 Certificate III in Telecommunications or ICT30313 Certificate III in Telecommunications Cabling or ICT30613 Certificate III in Broadband and Wireless Networks or another relevant accredited Training Package qualification or relevant accredited course

or

- providing evidence of competency in the core units required for ICT30113 Certificate III in Broadband and Wireless Networks Technology or ICT30213 Certificate III in Telecommunications or ICT30313 Certificate III in Telecommunications Cabling or ICT30613 Certificate III in Broadband and Wireless Networks or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving ICT40410 Certificate IV in Radio Frequency Networks, candidates may undertake ICT50410 Diploma of Radio Frequency Networks, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction and Plumbing Services Integrated Framework Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining coaxial and optical fibre cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related OHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities

Technology	<ul style="list-style-type: none">• checking that tools and equipment are in safe working order and adjusted to manufacturer specifications• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria

Packaging Rules

Total number of units = 11

5 core units, plus

1 elective unit from Group A workplace units, plus

5 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or any accredited course at Certificate IV or Diploma level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTPMG4152A Manage the delivery of network infrastructure

ICTRFN4095A Conduct radio frequency measurements

ICTRFN4158A Select an antenna system for radio communications

ICTSUS4185A Install and test power management software

ICTTEN4081A Locate, diagnose and rectify faults

ELECTIVE UNITS

Group A- Workplace elective units

BSBSMB401A Establish legal and risk management requirements of small business

BSBSMB405B Monitor and manage small business operations

BSBSMB407A Manage a small team

ICAICT401A Determine and confirm client business requirements

ICTTEN4003B Estimate and quote for customer telecommunications equipment installation

Group B - General elective units

Cabling

ICTCBL4002B Prepare design drawings and specification for a cable installation

ICTCBL4004B Schedule and supply cabling installation

ICTCBL4023B Supervise cabling project

ICTCBL4057B Test cable bearers

ICTCBL4099A Remotely locate and identify cable network faults

Digital reception technology

ICTDRE4166A Integrate customer digital reception equipment

ICTDRE4167A Integrate data delivery modes

ICT use

IP networks

ICAICT405A Develop detailed technical design
ICANWK406A Install, configure and test network security
ICANWK416A Build security into virtual private networks
ICANWK417A Build an enterprise wireless network
ICANWK410A Install network hardware to a network
ICANWK411A Install software to networked computers

Occupational health and safety

ICTOHS2153B Work safely near power infrastructure
CPCCOHS1001A Work safely in the construction industry

Optical networks

ICTOPN4115B Install and test a dense wavelength division multiplexing system
ICTOPN4116A Use advanced optical test equipment
ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation

Project management

ICTPMG4048B Schedule installation of customer premises equipment

Radio frequency networks

ICTRFN4159A Test and repair cellular network equipment
ICTRFN4174A Undertake radio communications signals monitoring
ICTRFN4177A Install radio communications base station equipment
ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Sustainability

ICTSUS4183A Install and test renewable energy system for ICT networks
ICTSUS4184A Install and test power saving hardware
ICTSUS4186A Install thin client applications for power over ethernet

Telecommunications engineering networks

ICTTEN4001B Identify requirements for customer telecommunications equipment
ICTTEN4040A Assign a transmission path
ICTTEN4051A Install configuration programs on PC based customer equipment
ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment
ICTTEN4073A Cut over customer premises equipment major upgrades
ICTTEN4076A Complete equipment and software upgrades
ICTTEN4078A Commission an electronic system
ICTTEN4085A Monitor, analyse and action telecommunications network alarms
ICTTEN4086A Undertake routine maintenance of the telecommunications network
ICTTEN4087A Undertake remote diagnosis and repair of network faults
ICTTEN4102A Repair telecommunication system faults

Emerging technologies

ICTTEN4050A Install and configure a wireless mesh network

ICTTEN4126A Install and configure internet protocol TV in a home network

ICTTEN4202A Install and test a radio frequency identification system

ICTTEN4215A Install and configure internet protocol TV in a service provider network

ICTTEN4229B Design, install and configure a customer smart technology network

(IP networks)

ICTTEN4198A Install, configure and test an internet protocol network

ICTTEN4199A Install, configure and test a router

ICTTEN4210A Implement and troubleshoot enterprise routers and switches

ICTTEN4211A Design, install and configure an internetwork

ICTTEN4212A Apply advanced routing protocols to network design

ICTTEN4213A Configure and troubleshoot advanced network switching

ICTTEN4214A Install and maintain a wide area network

ICT40510 Certificate IV in Telecommunications Network Planning

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of a technician with a range of telecommunications skills and extensive knowledge of the core and access network capabilities of the service provider who can:

- plan the development of the customer access network infrastructure
- plan the development of the core network for the service provider and asst owner
- plan network capacity for new technology in products and services
- analyse demand data and evaluate network growth and impact on the network.

This qualification prepares an individual for entry in planning and design for network additions and implementations to accommodate network growth and new technologies within the industry. This is required for the national broadband infrastructure network planning.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- access network planner
- telecommunications technician planner.
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate III qualification from this or another accredited Training Package or accredited course

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving the ICT40510 Certificate IV in Telecommunications Network Planning, candidates may undertake the ICT50513 Diploma of Telecommunications Planning and Design, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • liaising with market research to determine existing capacity and capability of network • liaising with survey researchers to determine potential network growth • documenting survey methods and results • reading, interpreting and using statistical network reports • conveying information to clients, colleagues and other site personnel • providing feedback to customers on market research surveys
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying planning scenarios or optimisation options • determining transmission routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions

	<ul style="list-style-type: none"> • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related OHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications • converging many integrated and emerging technologies • testing and measuring of broadband network infrastructure • installing and operating telecommunications equipment and products

	<ul style="list-style-type: none">• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria
--	---

Packaging Rules

Total number of units = 11

6 core units, plus

1 elective unit from Group A workplace units, plus

2 elective units from Group B specialist units, plus

2 elective units from Group C general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group C general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate IV or Diploma level. One of those two units from Group C general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBINM302A Utilise a knowledge management system

ICTNPL4107A Apply business acumen to network planning

ICTNPL4114A Produce planning specifications for end to end service delivery

ICTNPL4150A Apply knowledge of regulation and legislation for the telecommunications industry

ICTPMG4152A Manage the delivery of network infrastructure

ICTSUS4185A Install and test power management software

ELECTIVE UNITS

Group A - Workplace elective units

BSBMGT401A Show leadership in the workplace

BSBWOR401A Establish effective workplace relationships

BSBWOR4032A Undertake a civil site survey

Group B - Specialist elective units

ICTNPL4108A Plan the deployment of access network architectures

ICTNPL4109A Evaluate the capability of access networks

ICTNPL4110A Evaluate the planning requirements for provisioning a telecommunications building facility

ICTNPL4111A Develop provisioning of telecommunications building works project

ICTNPL4112A Evaluate core network architectures

ICTNPL4113A Plan the deployment of core network

ICTNPL4151A Plan the telecommunications access network for an estate

Group C - General Elective Units

Project management

BSBSMB407A Manage a small team

ICTPMG4048B Schedule installation of customer premises equipment

Telecommunications engineering networks

ICTTEN4040A Assign a transmission path

ICTTEN4085A Monitor, analyse and action telecommunications network alarms

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Access Network

Core units plus one Group A workplace elective unit plus:

- ICTNPL4108A Plan the deployment of access network architectures
- ICTNPL4109A Evaluate the capability of access networks
- two additional units from Group C general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role.

Building Infrastructure

Core units plus one workplace unit plus:

- ICTNPL4110A Evaluate the planning requirements for provisioning a telecommunications building facility
- ICTNPL4111A Develop provisioning of telecommunications building works project
- two additional units from Group C general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role.

Core Network

Core units plus one Group A workplace elective unit plus:

- ICTNPL4112A Evaluate Core Network architectures
- ICTNPL4113A Plan the deployment of Core Network

- two additional units from Group C general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role.

ICT40613 Certificate IV in Telecommunications Networks Technology

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Change in WHS core unit. Additional elective units included.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Description

This qualification reflects the role of a technician with a range of telecommunications skills who can:

- install and maintain enterprise network in emerging and converging technologies
- install and maintain optical and wireless equipment for high speed broadband network infrastructure
- install and maintain internet protocol (IP) based network telecommunications equipment
- install IP-based networks in home networks and small and medium enterprises
- install and maintain telecommunications, data cabling and cabling products on customer premises Cabling at the customer premises in accordance to requirements of the Australian Communications and Media Authority (ACMA) and relevant industry registration bodies, and in line with the specifications of the access network owner
- install and maintain telecommunications access network cabling and infrastructure, systems and basic customer premises equipment
- assess installation requirements of converging voice, video and data IP networks
- plan and performing installations
- test installed equipment and fault find.

This role involves a degree of autonomy and may include limited supervision of others.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- customer computer system installer
- customer premises equipment installer
- home network installer
- IP-based network installer
- network security equipment installer
- optical network equipment installer
- radio technician
- RFID system installer
- secure IT network installer
- SME network installer
- sustainability network equipment installer
- telecommunications network technician
- wireless LAN installer wireless network equipment installer.
-

Prerequisite requirements

The following unit within this qualification have prerequisites. This is detailed as follows:

Code and title	Prerequisite unit required
----------------	----------------------------

ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule	ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
---	---

Pathways Information

Pathways into the qualification

Candidates may enter this qualification with limited or no vocational experience and without a relevant lower level qualification.

Pathways from the qualification

After achieving ICT40613 Certificate IV in Telecommunications Networks Technology, candidates may undertake ICT50210 Diploma of Telecommunications Network Engineering, a qualification for those seeking to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Employability Skill	Industry/enterprise requirements for this qualification include:
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related WHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisational goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities

Employability Skill	Industry/enterprise requirements for this qualification include:
	for work team members <ul style="list-style-type: none">• providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none">• checking that tools and equipment are in safe working order and adjusted to manufacturer specifications• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria

Packaging Rules

Total number of units = 17

8 core units, plus

1 elective unit from Group A workplace units, plus

8 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of three units from Group B general elective units may be substituted with three units of competency from any endorsed Training Package or any accredited course at Certificate IV or Diploma level. One of those three units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTBWN3205B Use optical and radio frequency measuring instruments

ICTPMG4152A Manage the delivery of network infrastructure

ICTSUS4185A Install and test power management software

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN2140B Use hand and power tools

ICTTEN2219A Install and test internet protocol devices in convergence networks

ICTTEN4081A Locate, diagnose and rectify faults

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Workplace elective units

BSBSMB401A Establish legal and risk management requirements of small business

BSBSMB405B Monitor and manage small business operations

BSBSMB407A Manage a small team

ICAICT401A Determine and confirm client business requirements

ICTTEN4003B Estimate and quote for customer telecommunications equipment installation

Group B - General elective units

Cabling

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCBL2137B Install, maintain and modify customer premises communications cabling:
ACMA Open Rule
ICTCBL4002B Prepare design drawings and specification for a cable installation
ICTCBL4004B Schedule and supply cabling installation
ICTCBL4023B Supervise cabling project
ICTCBL4057B Test cable bearers
ICTCBL4099A Remotely locate and identify cable network faults

Digital reception technology

ICTDRE4166A Integrate customer digital reception equipment
ICTDRE4167A Integrate data delivery modes

ICT use

IP networks

ICAICT405A Develop detailed technical design
ICANWK406A Install, configure and test network security
ICANWK416A Build security into virtual private networks
ICANWK417A Build an enterprise wireless network
ICANWK410A Install network hardware to a network
ICANWK411A Install software to networked computers
ICASAS301A Run standard diagnostic tests

Occupational health and safety

CPCCOHS1001A Work safely in the construction industry
ICTOHS2153B Work safely near power infrastructure

Optical networks

ICTOPN4115B Install and test a dense wavelength division multiplexing system
ICTOPN4116A Use advanced optical test equipment
ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation

Project management

ICTPMG4048B Schedule installation of customer premises equipment

Radio frequency networks

ICTRFN4095A Conduct radio frequency measurements
ICTRFN4158A Select an antenna system for radio communications
ICTRFN4159A Test and repair cellular network equipment
ICTRFN4174A Undertake radio communications signals monitoring
ICTRFN4177A Install radio communications base station equipment
ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network

Sustainability

ICTSUS4183A Install and test renewable energy system for ICT networks
ICTSUS4184A Install and test power saving hardware
ICTSUS4186A Install thin client applications for power over ethernet

Telecommunications engineering networks

ICTTEN2209A Build and maintain a secure network
ICTTEN3056A Install telecommunications network equipment
ICTTEN4001B Identify requirements for customer telecommunications equipment
ICTTEN4040A Assign a transmission path
ICTTEN4051A Install configuration programs on PC based customer equipment
ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment
ICTTEN4073A Cut over customer premises equipment major upgrades
ICTTEN4076A Complete equipment and software upgrades
ICTTEN4078A Commission an electronic system
ICTTEN4085A Monitor, analyse and action telecommunications network alarms
ICTTEN4086A Undertake routine maintenance of the telecommunications network
ICTTEN4087A Undertake remote diagnosis and repair of network faults
ICTTEN4102A Repair telecommunication system faults

Emerging technologies

ICTTEN4050A Install and configure a wireless mesh network
ICTTEN4126A Install and configure internet protocol TV in a home network
ICTTEN4202A Install and test a radio frequency identification system
ICTTEN4215A Install and configure internet protocol TV in a service provider network
ICTTEN4229B Design, install and configure a customer smart technology network

(IP networks)

ICTTEN4198A Install, configure and test an internet protocol network
ICTTEN4199A Install, configure and test a router
ICTTEN4210A Implement and troubleshoot enterprise routers and switches
ICTTEN4211A Design, install and configure an internetwork
ICTTEN4212A Apply advanced routing protocols to network design
ICTTEN4213A Configure and troubleshoot advanced network switching
ICTTEN4214A Install and maintain a wide area network
ICTTEN5201A Install, configure and test a server

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Customer computer system installer

Core units plus one Group A workplace elective unit plus:

- ICAICT405A Develop detailed technical design
- ICTTEN4076A Complete equipment and software upgrades
- ICTTEN4198A Install, configure and test an internet protocol network
- five additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Customer premises equipment installer

Core units plus one Group A workplace elective unit plus:

- ICTTEN4051A Install configuration programs on PC based customer equipment
- ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment
- ICTTEN4073A Cut over customer premises equipment major upgrades
- ICTTEN4078A Commission an electronic system
- four additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Home network installer

Core units plus Group A workplace elective unit plus:

- ICTDRE4166A Integrate customer digital reception equipment
- ICTDRE4167A Integrate data delivery modes
- ICTTEN4126A Install and configure internet protocol TV in a home network
- ICTTEN4198A Install, configure and test an internet protocol network
- ICTTEN4229B Design, install and configure a customer smart technology network
- three additional units Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Network security equipment installer

Core units plus Group A workplace elective unit plus:

- ICANWK406A Install, configure and test network security
- ICANWK416A Build security into virtual private networks
- ICTTEN4198A Install, configure and test an internet protocol network

- ICTTEN4199A Install, configure and test a router
- four additional units Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Optical network equipment installer

Core units plus Group A workplace elective unit plus:

- ICTOPN4115B Install and test a dense wavelength division multiplexing system
- ICTOPN4116A Use advanced optical test equipment
- ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation
- ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network
- four additional units Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

RFID System installer

Core units plus Group A workplace elective unit plus:

- ICANWK411A Install software to networked computers
- ICTTEN4202A Install and test a radio frequency identification system
- ICTTEN4198A Install, configure and test an internet protocol network
- ICTTEN4078A Commission an electronic system
- four additional units Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

SME network installer

Core units plus one Group A workplace elective unit plus:

- ICTTEN4210A Implement and troubleshoot enterprise routers and switches
- ICTTEN4211A Design, install and configure an internet network
- ICTTEN4212A Apply advanced routing protocols to network design
- ICTTEN4213A Configure and troubleshoot advanced network switching
- four additional units Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Sustainability Network equipment installer

Core units plus Group A workplace elective unit plus:

- ICTSUS4183A Install and test renewable energy system for ICT networks
- ICTSUS4184A Install and test power saving hardware
- ICTSUS4186A Install thin client applications for power over ethernet
- five additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Wireless LAN installer

Core units plus Group A workplace elective unit plus:

- ICANWK411A Install software to networked computers
- ICANWK416A Build security into virtual private networks
- ICANWK417A Build an enterprise wireless network
- ICTTEN4198A Install, configure and test an internet protocol network
- four additional units from Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

Wireless network equipment installer

Core units plus Group A workplace elective unit plus:

- ICTRFN4095A Conduct radio frequency measurements
- ICTRFN4158A Select an antenna system for radio communications
- ICTRFN4159A Test and repair cellular network equipment
- ICTRFN4177A Install radio communications base station equipment
- four additional units Group B general elective units, with a maximum of one of those additional units from Group A workplace elective units as appropriate to the specific job role

ICT40713 Certificate IV in Telecommunications Network Design

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i>

Description

This qualification reflects the role of a technician with a range of telecommunications skills and extensive knowledge of the access, building and core networks and client capabilities of the service provider, who can:

- design the customer access network
- design the building network
- design the core network for the service provider and asset owner
- design carrier equipment infrastructure.

This qualification prepares an individual for entry into design for network additions and implementations to accommodate network growth and new technologies within the industry. This is required for the national broadband infrastructure network design.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- access, building or core network designer
- telecommunications technician designer
- estimator, surveyor (scoper), or design draftsman.
-

Prerequisite units

The following units within this qualification have prerequisites. This is detailed as follows:

Code and title	Prerequisite units required
ICTTCR3062A Build a telecommunications radio structure	ICTTCR2188A Use rigging practices and systems on telecommunications network structures ICTTCR2189A Use operational safety in a telecommunications rigging environment ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures
ICTTCR3191A Install radio plant and equipment on telecommunications structures	ICTTCR2188A Use rigging practices and systems on telecommunications network structures ICTTCR2189A Use operational safety in a telecommunications rigging environment ICTTCR2190A Use safe rigging practices to

	climb and perform rescues on telecommunications network structures
--	--

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate III in Telecommunications qualification from this Training Package or accredited course

or

- with vocational experience and completion of units ICTCBL2133A, ICTCBL2136B, ICTCBL2137B, ICTCBL3021A and ICTBWN3090B

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

After achieving ICT40713 Certificate IV in Telecommunications Network Design, candidates may undertake ICT50513 Diploma of Telecommunications Planning and Design, a qualification for those seeking to enter management or to develop more specialised technical skills and knowledge, or a range of other Diploma qualifications.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

National Code of Practice for Induction for Construction Work

Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).

Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction, Plumbing and Services Training Package fulfils this requirement.

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • liaising with client, suppliers and consultants for the supply of non-standard services and materials • negotiating with land and premises owners for the location of plant and equipment • negotiating with land and premises owners for the timing and location of installation and activities • negotiating with constructors on installation requirements • documenting survey methods and results • reading, interpreting and using statistical network reports • conveying information to clients, colleagues and other site personnel
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying design scenarios or optimisation options • determining transmission routes, taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none"> • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying non-standard or special order services and materials • planning timing and installation activities to meet client and other stakeholder requirements • planning to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the design of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisational guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related WHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisational goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and are adjusted to manufacturer specifications

Employability Skill	Industry/enterprise requirements for this qualification include:
	<ul style="list-style-type: none">• converging many integrated and emerging technologies• testing and measuring broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing and repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria

1 elective unit from Group A workplace units, plus

5 elective units from Group B general units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two units from Group B general elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Certificate IV or Diploma level. One of those two units from Group B general elective units may be substituted from Group A workplace elective units where required by a specific job role.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

CPCCOHS1001A Work safely in the construction industry

ICTTEN4241A Design network projects

ICTTEN4242A Conduct site surveys to identify carrier installation requirements

ICTTEN4243A Prepare design drawings and specifications for telecommunications installations

ICTTEN4244A Estimate and quote for carrier telecommunications equipment installations

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ELECTIVE UNITS

Group A - Workplace elective units

BSBMGT401A Show leadership in the workplace

BSBWOR401A Establish effective workplace relationships

ICAICT401A Determine and confirm client business requirements

Group B – General elective units

Broadband and wireless networks

ICTBWN3090B Install lead-in module and cable for fibre to the premises

Network Planning

ICTNPL4111A Develop provisioning of telecommunications building works project

ICTNPL4112A Evaluate core network architectures

ICTNPL4113A Plan the deployment of core network

ICTNPL4247A Apply compliance requirements to telecommunications work
ICTNPL4151A Plan the telecommunications access network for an estate

Radio frequency networks

ICTRFN4095A Conduct radio frequency measurements
ICTRFN4158A Select an antenna system for radio communications
ICTRFN4174A Undertake radio communications signals monitoring
ICTRFN4178A Maintain hybrid fibre coaxial broadband cable network
ICTRFN5148A Test and measure cellular phone and network equipment performance

Optical networks

ICTOPN4115B Install and test a dense wavelength division multiplexing system
ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation

Project management

BSBSMB407A Manage a small team
ICTPMG4048B Schedule installation of customer premises equipment
ICTPMG4152A Manage the delivery of network infrastructure

Sustainability

BSBSUS201A Participate in environmentally sustainable work practices
BSBSUS301A Implement and monitor environmentally sustainable work practices
CPCSUS4001A Implement and monitor environmentally sustainable work practices

Workplace Effectiveness

ICTWOR4032A Undertake a civil site survey

Telecommunications rigging installation

ICTTTCR2188A Use rigging practices and systems on telecommunications network structures
ICTTTCR2189A Use operational safety in a telecommunications rigging environment
ICTTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures
ICTTTCR3062A Build a telecommunications radio structure
ICTTTCR3191A Install radio plant and equipment on telecommunications structures

Telecommunications engineering networks

ICTTEN4001B Identify requirements for customer telecommunications equipment
ICTTEN4003B Estimate and quote for customer telecommunications equipment installation
ICTTEN4040A Assign a transmission path
ICTTEN4072A Effect changes to existing customer premises equipment systems and equipment

ICTTEN4073A Cut over customer premises equipment major upgrades
ICTTEN4198A Install, configure and test an internet protocol network
ICTTEN4199A Install, configure and test a router
ICTTEN4211A Design, install and configure an internetwork
ICTTEN4212A Apply advanced routing protocols to network design
ICTTEN4229B Design, install and configure a customer smart technology network
ICTTEN4245A Design infrastructure for telecommunications network installations
ICTTEN4246A Design dense wavelength digital multiplexing installations

ICT use

ICAICT405A Develop detailed technical design

ICT50110 Diploma of Optical Networks

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an individual involving a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems who can:

- install, test and commission voice and data optical communications networks in medium to large enterprises using next generation networks technologies
- provide specialist technical support in monitoring and administering the installation and upgrade of large telecommunications optical networks
- install and maintain IP based optical network telecommunications equipment.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- installer of emerging technologies
- IP based optical network installer
- specialised optical network infrastructure planner
- telecommunications technical specialist
-

Prerequisite requirements

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT40110 Certificate IV in Optical Networks or another relevant accredited Training Package qualification or relevant accredited course
- or
- providing evidence of competency in the core units required for the ICT40110 Certificate IV in Optical Networks or equivalent units with vocational experience
- or
- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

For candidates seeking to develop more specialised technical skills and knowledge, the electives selected in the ICT50110 Diploma of Optical Networks should be considered with a view to meeting pathways into the ICT60110 Advanced Diploma of Optical Networks qualification or the ICT60210 Advanced Diploma of Telecommunications Network Engineering or a range of other Advanced Diploma qualifications or University programs.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • Determining options to rectify faults and discussing them with customer so that necessary action is determined • Documenting test methods and results • Making a complete check of installation against installation plans • Reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related ohs requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications

	<ul style="list-style-type: none">• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria
--	---

Packaging Rules

Total number of units = 10

6 core units, plus

4 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Diploma or Advanced Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBSUS501A Develop workplace policy and procedures for sustainability

ICTOPN5118A Plan and configure dense wavelength division multiplexing systems

ICTOPN5119A Perform acceptance and commissioning tests on optical network

ICTOPN5120A Plan for an optical system upgrade and cut over

ICTOPN5121A Test and commission a dense wavelength division multiplexing transmission system

ICTOPN5123A Analyse and integrate specialised optical devices in the network

ELECTIVE UNITS

Compliance

ICTCMP5176A Undertake radio communications site audit

Education

ICTEDU5025A Develop and deliver training associated with new and modified products

ICT use

IP networks

ICAICT508A Evaluate vendor products and equipment

ICANWK516A Determine best-fit topology for a local network

Optical networks

ICTOPN5122A Test the performance of specialised optical devices

Product skills and advice

ICTPRO5026A Develop training, marketing and sales resources for telecommunications products

Project management

BSBPMG522A Undertake project work

ICTPMG5027A Develop customer premises equipment installation project plans

ICTPMG5031A Prepare a project brief

ICTTEN5037A Design a telecommunications project

ICTPMG5039A Prepare project specifications

Sustainability

ICTSUS5187A Implement server virtualisation for a sustainable ICT system

Telecommunications engineering networks

ICTITU5144A Test telecommunications network using virtual instruments

ICTTEN5038A Design an electronic system for a telecommunications network

ICTTEN5058A Acceptance test new systems and equipment

ICTTEN5059A Commission telecommunications network equipment

ICTTEN5060A Integrate new systems and equipment into the telecommunications network

ICTTEN5061A Cut over new and replacement network equipment

ICTTEN5083A Locate, diagnose and rectify complex faults

ICTTEN5084A Provide expert advice and support on complex faults

ICTTEN5092A Undertake planned outage management

ICTTEN5204A Produce technical solutions from business specifications

Emerging technologies

ICTTEN5203A Dimension and design a radio frequency identification system

ICTTEN5217A Plan a wireless mesh network

IP networks

ICTTEN5147A Administer a data communications network

ICTTEN5168A Design and implement an enterprise voice over internet protocol and a unified communications network

ICTTEN5201A Install, configure and test a server

ICT50210 Diploma of Telecommunications Network Engineering

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of individuals involving a high level of specialist technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems who can:

- install, test and commission voice and data communications networks in medium to large enterprises using Next Generation Networks (NGN) technologies
- provide specialist technical support in monitoring and administering the installation and upgrade of large telecommunications and IT networks
- cover local area networks (LAN) and wide area networks (WAN), IP based protocol systems, voice over internet protocol (VoIP) and unified communications networks, secured networks, 3G/4G cellular mobile networks, microwave systems, wireless and wired line networks, databases, routers, switches and servers
- install and maintain IP based network telecommunications equipment.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- installer of emerging technologies
- IP based network installer
- specialised network infrastructure installer
- secure IT network installer
- telecommunications technical specialist.
-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT40210 Certificate IV in Telecommunications Network Engineering or another relevant accredited Training Package qualification or relevant accredited course

or

- providing evidence of competency in the core units required for the ICT40210 Certificate IV in Telecommunications Network Engineering or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

For candidates seeking to develop more specialised technical skills and knowledge, the electives selected in the ICT50210 Diploma of Telecommunications Network Engineering, should be considered with a view to meeting pathways into the ICT60110 Advanced Diploma of Optical Networks qualification or the ICT60210 Advanced Diploma of Telecommunications Network Engineering or a range of other Advanced Diploma qualifications or University programs.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

4 core units, plus

6 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Diploma or Advanced Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBPMG522A Undertake project work

BSBSUS501A Develop workplace policy and procedures for sustainability

ICTPMG5031A Prepare a project brief

ICTTEN5037A Design a telecommunications project

ELECTIVE UNITS

Compliance

ICTCMP5176A Undertake radio communications site audit

Education

ICTEDU5025A Develop and deliver training associated with new and modified products

ICT use

(IP networks)

ICAICT508A Evaluate vendor products and equipment

ICANWK516A Determine best-fit topology for a local network

Network planning

ICTNPL5071A Develop planning strategies for core network design

ICTNPL5096A Develop planning strategies for access network design

ICTNPL5101A Apply service measures and demand forecasting to products and services planning

ICTNPL5154A Develop planning strategies for building environment design

Optical networks

ICTOPN5118A Plan and configure dense wavelength division multiplexing systems
ICTOPN5119A Perform acceptance and commissioning tests on optical network
ICTOPN5120A Plan for an optical system upgrade and cut over
ICTOPN5121A Test and commission a dense wavelength division multiplexing transmission system
ICTOPN5122A Test the performance of specialised optical devices
ICTOPN5123A Analyse and integrate specialised optical devices in the network

Project management

ICTPMG5027A Develop customer premises equipment installation project plans
ICTPMG5039A Prepare project specifications

Product specific skills and advice

ICTPRO5026A Develop training, marketing and sales resources for telecommunications products

Radio frequency networks

ICTRFN5097A Test cellular handset enhancements and international roaming agreements
ICTRFN5148A Test and measure cellular phone and network equipment performance
ICTRFN5179A Evaluate and analyse radio frequency signal coverage plots

Sustainability

ICTSUS5187A Implement server virtualisation for a sustainable ICT system

Telecommunications engineering networks

ICTITU5144A Test telecommunications network using virtual instruments
ICTTEN5024A Provide consultancy and technical support in the customer premises equipment sector
ICTTEN5038A Design an electronic system for a telecommunications network
ICTTEN5058A Acceptance test new systems and equipment
ICTTEN5059A Commission telecommunications network equipment
ICTTEN5060A Integrate new systems and equipment into the telecommunications network
ICTTEN5061A Cut over new and replacement network equipment
ICTTEN5083A Locate, diagnose and rectify complex faults
ICTTEN5084A Provide expert advice and support on complex faults
ICTTEN5092A Undertake planned outage management
ICTTEN5204A Produce technical solutions from business specifications

Emerging technologies

ICTTEN5203A Dimension and design a radio frequency identification system

ICTTEN5217A Plan a wireless mesh network

IP networks

ICTTEN5147A Administer a data communications network

ICTTEN5168A Design and implement an enterprise voice over internet protocol and a unified communications network

ICTTEN5200A Install, configure and test a local area network switch

ICTTEN5201A Install, configure and test a server

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Customer business

Core units plus:

- ICAICT508A Evaluate vendor products and equipment
- ICTPMG5027A Develop customer premises equipment installation project plans
- ICTPMG5039A Prepare project specifications
- ICTTEN5024A Provide consultancy and technical support in the customer premises equipment sector
- ICTTEN5204A Produce technical solutions from business specifications
- one additional unit from elective units as appropriate to the specific job role

IP Networks

Core units plus:

- ICANWK516A Determine best-fit topology for a local network
- ICTTEN5147A Administer a data communications network
- ICTTEN5168A Design and implement an enterprise voice over internet protocol and a unified communications network
- ICTTEN5200A Install, configure and test a local area network switch
- ICTTEN5201A Install, configure and test a server
- one additional unit from elective units as appropriate to the specific job role

Emerging technologies

Core units plus:

- ICTSUS5187A Implement server virtualisation for a sustainable ICT system

- ICTTEN5203A Dimension and design a radio frequency identification system
- ICTTEN5217A Plan a wireless mesh network
- three additional units from elective units as appropriate to the specific job role

Broadband infrastructure

Core units plus:

- ICTOPN5118A Plan and configure dense wavelength division multiplexing systems
- ICTOPN5120A Plan for an optical system upgrade and cut over
- ICTOPN5121A Test and commission a dense wavelength division multiplexing transmission system
- ICTRFN5179A Evaluate and analyse radio frequency signal coverage plots
- two additional units from elective units as appropriate to the specific job role

Workplace development

Core units plus:

- ICTEDU5025A Develop and deliver training associated with new and modified products
- ICTPRO5026A Develop training, marketing and sales resources for telecommunications products
- ICTTEN5084A Provide expert advice and support on complex faults
- three additional units from elective units as appropriate to the specific job role

ICT50310 Diploma of Telecommunications Management

Release	Comments
Release 3	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Units updated to current versions, including core unit ICTTEN2219A which was updated ICTTEN2219A Install and test internet protocol devices in convergence networks.</p>
Release 2	<p>This version released with <i>ICT10 Integrated Telecommunications Training Package v2.0</i>. Updated imported units <i>FNSICORG517B</i> to <i>FNSORG517B</i>.</p> <p>Qualification outcomes remain unchanged.</p>
Release 1	<p>This qualification first released with <i>ICT10 Integrated Telecommunications Training Package v1.0</i>.</p>

Description

This qualification reflects the role of a qualified industry manager entering the telecommunications industry with a potential role involving a fundamental level of technical skills and knowledge in telecommunications and IT networks using internet protocol (IP) systems who can:

- install and test a simple IP device in convergence networks
- apply business acumen to telecommunications network planning
- develop project management plan to appreciate the operational issues of a service provider.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- human resources (HR) manager
- recruitment manager
- customer service manager
- accounts manager
- finance manager
- operations manager.
-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving a Certificate IV or higher level qualification from an endorsed Training Package qualification or accredited course

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

For candidates seeking to develop more specialised technical skills and knowledge, the electives selected in the ICT50310 Diploma of Telecommunications Management should be considered with a view to meeting pathways into the ICT60210 Advanced Diploma of Telecommunications Network Engineering or a range of other Advanced Diploma qualifications or University programs.

Licensing/Regulatory Information

All training programs must be conducted with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related OHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications

	<ul style="list-style-type: none">• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria

Description

This qualification reflects the role of an individual involving a high level of specialist technical skills and knowledge in telecommunications radio frequency (RF) and IT networks using internet protocol (IP) systems who can:

- install, test and commission voice and data RF communications networks in medium to large enterprises using next generation networks technologies
- provide specialist technical support in monitoring and administering the installation and upgrade of large telecommunications RF networks
- install and maintain IP based RF network telecommunications equipment.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- telecommunications technical specialist
- planner of specialised RF network infrastructure
- installer of IP based RF networks
- installer of emerging technologies.
-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving the ICT40410 Certificate IV in Radio Frequency Networks or another relevant accredited Training Package qualification or relevant accredited course
- or
- providing evidence of competency in the core units required for the ICT40410 Certificate IV in Radio Frequency Networks or equivalent units with vocational experience
- or
- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

For candidates seeking to develop more specialised technical skills and knowledge, the electives selected in the ICT50410 Diploma of Radio Frequency Networks, should be considered with a view to meeting pathways into the ICT60110 Advanced Diploma of Optical Networks qualification or the ICT60210 Advanced Diploma of Telecommunications Network Engineering or a range of other Advanced Diploma qualifications or University programs.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related OHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications

	<ul style="list-style-type: none">• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria
--	---

Packaging Rules

Total number of units = 10

6 core units, plus

4 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Diploma or Advanced Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBPMG522A Undertake project work

BSBSUS501A Develop workplace policy and procedures for sustainability

ICTPMG5031A Prepare a project brief

ICTTEN5037A Design a telecommunications project

ICTTEN5217A Plan a wireless mesh network

ICTRFN6171A Produce and evaluate architecture designs for WiMAX networks

ELECTIVE UNITS

Compliance

ICTCMP5176A Undertake radio communications site audit

Education

ICTEDU5025A Develop and deliver training associated with new and modified products

ICT use

IP networks

ICAICT508A Evaluate vendor products and equipment

ICANWK516A Determine best-fit topology for a local network

IT use

ICTITU5144A Test telecommunications network using virtual instruments

Product skills and advice

ICTPRO5026A Develop training, marketing and sales resources for telecommunications products

Project management

ICTPMG5027A Develop customer premises equipment installation project plans
ICTPMG5039A Prepare project specifications

Radio frequency networks

ICTRFN5097A Test cellular handset enhancements and international roaming agreements
ICTRFN5148A Test and measure cellular phone and network equipment performance
ICTRFN5179A Evaluate and analyse radio frequency signal coverage plots
ICTRFN6098B Monitor the capacity of and recommend changes to the cellular mobile network

Sustainability

ICTSUS5187A Implement server virtualisation for a sustainable ICT system

Telecommunications

ICTTEN5038A Design an electronic system for a telecommunications network
ICTTEN5058A Acceptance test new systems and equipment
ICTTEN5059A Commission telecommunications network equipment
ICTTEN5060A Integrate new systems and equipment into the telecommunications network
ICTTEN5061A Cut over new and replacement network equipment
ICTTEN5083A Locate, diagnose and rectify complex faults
ICTTEN5084A Provide expert advice and support on complex faults
ICTTEN5092A Undertake planned outage management
ICTTEN5204A Produce technical solutions from business specifications

Emerging technologies

ICTTEN5203A Dimension and design a radio frequency identification system

IP networks

ICTTEN5147A Administer a data communications network
ICTTEN5168A Design and implement an enterprise voice over internet protocol and a unified communications network
ICTTEN5201A Install, configure and test a server

ICT50513 Diploma of Telecommunications Planning and Design

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Additional elective units included.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an individual involving a technical specialist with a range of telecommunications skills and extensive knowledge of the core and access network capabilities of the service provider who can:

- plan the development of the customer access network infrastructure
- plan the development of the core network for the service provider and asset owner
- plan network capacity for new technology in products and services
- analyse demand data and evaluate network growth and impact on the network.

This qualification prepares individuals for the industry in planning and design for network additions and implementations to accommodate network growth and new technologies.

This is required for the national broadband infrastructure network planning.

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- service provider network planner
- service provider network designer
- telecommunications planning specialist.
-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Preferred pathways for candidates considering this qualification include:

- after achieving ICT40510 Certificate IV in Telecommunications Network Planning or another relevant accredited Training Package qualification or relevant accredited course
- or
- providing evidence of competency in the core units required for ICT40510 Certificate IV in Telecommunications Network Planning or equivalent units with vocational experience
- or
- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

For candidates seeking to develop more specialised technical skills and knowledge, the electives selected in ICT50513 Diploma of Telecommunications Planning and Design should be considered with a view to meeting pathways into ICT60110 Advanced Diploma of Optical Networks or ICT60210 Advanced Diploma of Telecommunications Network Engineering or a range of other Advanced Diploma qualifications or university programs.

Licensing/Regulatory Information

All training programs must be conducted with reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisational goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Employability Skill	Industry/enterprise requirements for this qualification include:
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related WHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisational goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product

	features and facilities
Technology	<ul style="list-style-type: none">• checking that tools and equipment are in safe working order and adjusted to manufacturer specifications• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria

Packaging Rules

Total number of units = 10

6 core units, plus

4 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two elective units may be substituted with two units of competency from any endorsed Training Package or accredited course at Diploma or Advanced Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

BSBPMG521A Manage project integration

BSBSUS501A Develop workplace policy and procedures for sustainability

ICTNPL5071A Develop planning strategies for core network design

ICTNPL5096A Develop planning strategies for access network design

ICTNPL5101A Apply service measures and demand forecasting to products and services planning

ICTNPL5154A Develop planning strategies for building environment design

ELECTIVE UNITS

Education

ICTEDU5025A Develop and deliver training associated with new and modified products

Financial management

BSBFIM501A Manage budgets and financial plans

FNSORG506A Prepare financial forecasts and projections

Product skills and advice

ICTPRO5026A Develop training, marketing and sales resources for telecommunications products

Project management

ICTPMG5031A Prepare a project brief

ICTPMG5039A Prepare project specifications

ICTPMG6033A Develop a project management plan

Network planning

ICTNPL6029A Plan the development and growth of the telecommunications network

Sustainability

ICTSUS5187A Implement server virtualisation for a sustainable ICT system

Telecommunications engineering networks

ICTTEN4241A Design network projects

ICTTEN4242A Conduct site surveys to identify carrier installation requirements

ICTTEN4243A Prepare design drawings and specifications for telecommunications installations

ICTTEN4244A Estimate and quote for carrier telecommunications equipment installations

ICTTEN5024A Provide consultancy and technical support in the customer premises equipment sector

(Emerging technologies)

ICTTEN5217A Plan a wireless mesh network

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Commercial business

Core units plus:

- BSBFIM501A Manage budgets and financial plans
- FNSORG506A Prepare financial forecasts and projections.
- two additional units from elective units as appropriate to the specific job role

Project management

Core units plus:

- BSBFIM501A Manage budgets and financial plans
- ICTPMG5039A Prepare project specifications
- two additional units from elective units as appropriate to the specific job role

Customer focus

Core units plus:

ICTEDU5025A Develop and deliver training associated with new and modified products

ICTPRO5026A Develop training, marketing and sales resources for telecommunications products

two additional units from elective units as appropriate to the specific job role

ICT60110 Advanced Diploma of Optical Networks

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an individual involving a high level of specialist technical skills and knowledge in optical telecommunications and IT networks using internet protocol (IP) systems who can:

- forecast network growth for enterprise network planning
- design and manage IP based optical network telecommunications equipment
- implement convergence technologies in enterprise telecommunications networks
- design and manage optical and wireless network telecommunications architectures for high speed broadband capability.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- telecommunications network manager
- optical network designer
- IP based convergence integrator
- IP based optical network designer
- network security manager.
-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification through a number of entry points demonstrating potential to undertake vocational education and training at advanced diploma level, including:

- after achieving the ICT50110 Diploma of Optical Networks or another relevant accredited Training Package qualification or relevant accredited course

or

- providing evidence of competency in the core units required for the ICT50110 Diploma of Optical Networks or equivalent units with vocational experience

or

- with substantial vocational experience but without a formal qualification.

Pathways from the qualification

For candidates seeking to develop more specialised technical skills and knowledge, the electives selected in the ICT60110 Advanced Diploma of Optical Networks should include ICTPMG6034A and ICTTEN6206A with a view to undertaking the ICT70110 Vocational Graduate Certificate in Telecommunications Network. Or, after achieving the ICT60110 Advanced Diploma of Optical Networks, candidates may seek articulation into a University program.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment

Units selected from other Training Packages or accredited courses must not duplicate units selected from or are available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTOPN6124A Manage optical ethernet transmission

ICTOPN6125A Manage dense wavelength division multiplexing transmission system

ICTOPN6128A Design a dense wavelength division multiplexing system

ICTOPN6129A Analyse optical transmission systems

ICTPMG6033A Develop a project management plan

ICTSUS6233A Integrate sustainability in ICT planning and design projects

ELECTIVE UNITS

ICT use

IP networks

ICANWK502A Implement secure encryption technologies

ICANWK503A Install and maintain valid authentication processes

ICANWK517A Determine best-fit topology for a wide area network

ICANWK518A Design an enterprise wireless local area network

ICANWK509A Design and implement a security perimeter for ICT networks

ICASAS409A Manage risks involving ICT systems and technology

ICASAS505A Review and update disaster recovery and contingency plans

Network planning

ICTNPL6029A Plan the development and growth of the telecommunications network

ICTNPL6030A Forecast service demand

ICTNPL6046A Undertake network performance analysis

Occupational health and safety

BSBWHS501A Ensure a safe workplace
BSBWHS504A Manage WHS hazards and risks

Project management

ICTPMG6034A Prepare a detailed design brief

Radio frequency networks

ICTRFN6098B Monitor the capacity of and recommend changes to the cellular mobile network
ICTRFN6171A Produce and evaluate architecture designs for WiMAX networks

Sustainability

ICTSUS6234A Establish a business case for sustainability and competitive advantage in ICT projects

Telecommunications engineering networks

ICTTEN6036A Undertake qualification testing of new or enhanced equipment and systems
ICTTEN6042A Undertake system administration
ICTTEN6043A Undertake network traffic management
ICTTEN6044A Coordinate fault rectification and restoration of service following network outages
ICTTEN6045A Implement planned network changes with minimal impact to the customer
ICTTEN6047A Manage a common channel signalling network
ICTTEN6091A Analyse and organise repair of highly complex telecommunications network faults
ICTTEN6094A Verify new software and hardware releases
ICTTEN6169A Produce and evaluate architecture designs for convergent cellular mobile networks
ICTTEN6206A Produce an ICT network architecture design

Emerging technologies

ICTTEN6216A Design and manage internet protocol TV in a service provider network

IP networks

ICTTEN6172A Install and configure an IP-MPLS network with virtual private network tunnelling

ICT60210 Advanced Diploma of Telecommunications Network Engineering

ICTTEN6216A Design and manage internet protocol TV in a service provider network

IP networks

ICTTEN6172A Install and configure an IP-MPLS network with virtual private network tunnelling

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Network manager

Core units plus:

- ICTOPN6124A Manage optical ethernet transmission
- ICTTEN6042A Undertake system administration
- ICTTEN6043A Undertake network traffic management
- ICTSUS6234A Establish a business case for sustainability and competitive advantage in ICT projects
- two additional units from elective units as appropriate to the specific job role

Network designer

Core units plus:

- ICTOPN6128A Design a dense wavelength division multiplexing system
- ICTRFN6171A Produce and evaluate architecture designs for WiMAX networks
- ICTTEN6169A Produce and evaluate architecture designs for convergent cellular mobile networks
- ICTTEN6216A Design and manage internet protocol TV in a service provider network
- ICTSUS6234A Establish a business case for sustainability and competitive advantage in ICT projects
- one additional unit from elective units as appropriate to the specific job role

Network planner

Core units plus:

- ICTNPL6029A Plan the development and growth of the telecommunications network
- ICTRFN6098B Monitor the capacity of and recommend changes to the cellular mobile network
- ICTTEN6045A Implement planned network changes with minimal impact to the customer
- ICTSUS6234A Establish a business case for sustainability and competitive advantage in ICT projects
- two additional units from elective units as appropriate to the specific job role

IP convergence integrator

Core units plus:

- ICTOPN6124A Manage optical ethernet transmission

- ICTTEN6169A Produce and evaluate architecture designs for convergent cellular mobile networks
- ICTTEN6172A Install and configure an IP-MPLS network with virtual private network tunnelling
- ICTTEN6216A Design and manage internet protocol TV in a service provider network
- ICTSUS6234A Establish a business case for sustainability and competitive advantage in ICT projects
- one additional unit from elective units as appropriate to the specific job role

Network security manager

Core units plus:

- ICASAS505A Review and update disaster recovery and contingency plans
- ICANWK509A Design and implement a security perimeter for ICT networks
- ICANWK502A Implement secure encryption technologies
- ICANWK503A Install and maintain valid authentication processes
- ICANWK520A Design IT system security controls
- one additional unit from elective units as appropriate to the specific job role

Wireless network designer

Core units plus:

- ICANWK518A Design an enterprise wireless local area network
- ICTRFN6171A Produce and evaluate architecture designs for WiMAX networks
- ICTTEN6169A Produce and evaluate architecture designs for convergent cellular mobile networks
- three additional units from elective units as appropriate to the specific job role

Optical networks designer

Core units plus:

- ICTOPN6128A Design a dense wavelength division multiplexing system
- ICTOPN6129A Analyse optical transmission systems
- ICTTEN6036A Undertake qualification testing of new or enhanced equipment and systems
- three additional units from elective units as appropriate to the specific job role

ICT70110 Vocational Graduate Certificate in Telecommunications Network Engineering

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an individual involving a high level of technical management skills and knowledge in telecommunications networks and systems who can:

- plan changes and analyse network problems over a wide range of telecommunications technologies at managerial/supervisory levels
- diagnose problems and provide network management support
- plan a project from a design specification, research telecommunications technologies to meet the required specifications and report on the implementation of the project plan
- research and analyse the key concepts in design, construct and modify network management databases
- evaluate management systems and procedures used by the telecommunications industry.
-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- system engineer
- solutions architect
- applications technology specialist
- network technology specialist
- network testing specialist
- requirements manager.
-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification through a number of entry points demonstrating potential to undertake study at graduate level, including from:

- the ICT60110 Advanced Diploma of Optical Networks or the ICT60210 Advanced Diploma of Telecommunications Network Engineering or another relevant accredited Training Package qualification or relevant accredited course

or

- a relevant Advanced Diploma or Diploma, or a relevant Certificate IV or Certificate III together with significant relevant vocational practice

or

- a higher education qualification, together with relevant vocational practice

or

- relevant extensive vocational practice, without formal qualifications.

Pathways from the qualification

After achieving the ICT70110 Vocational Graduate Certificate of Telecommunications Network Engineering, candidates seeking to develop more specialised technical skills and knowledge may undertake the ICT80110 Vocational Graduate Diploma of Telecommunications Network Engineering qualification or seek articulation into a university program.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem areas

Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements
Self-management	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • identifying work to be completed • complying with all related OHS requirements and work practices • developing installation plans to ensure minimal disruption to the workplace • checking that tools and equipment are in safe working order and adjusted to manufacturer specification • relating own role to the industry and establishing own work schedule • using strategies to present a professional image to customers • interpreting and applying relevant regulations and standards
Learning	<ul style="list-style-type: none"> • relating current or intended role to career objectives in a positive manner • giving and receiving feedback to assist in meeting team and organisation goals • making clients aware of opportunities that exist for system upgrades, additional services and training • seeking assistance from team members when necessary • providing suitable training and assessment opportunities for work team members • providing training to customers on system, product, product features and facilities
Technology	<ul style="list-style-type: none"> • checking that tools and equipment are in safe working order and adjusted to manufacturer specifications

	<ul style="list-style-type: none">• converging many integrated and emerging technologies• testing and measuring of broadband network infrastructure• installing and operating telecommunications equipment and products• installing and operating equipment and products• identifying, replacing or repairing faulty parts and equipment• undertaking relevant acceptance tests and analysing results against specified performance criteria
--	---

Packaging Rules

Total number of units = 6

3 core units, plus

3 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two elective units may be substituted with two units of competency from any currently endorsed Training Package or accredited course at Vocational Graduate Certificate or Vocational Graduate Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTPMG7145B Undertake a telecommunications project

ICTPMG8142A Manage telecommunications workplace

ICTSUS7235A Use ICT to improve sustainability outcomes

ELECTIVE UNITS

IT use

(IP networks)

ICTITU7106B Manage automated ICT system applications using Unix

Project management

ICTPMG8143B Manage a telecommunications project

Sustainability

ICTSUS7236A Manage improvements in ICT sustainability

Radio frequency networks

ICTRFN7182B Produce a radio link budget

Telecommunications engineering networks

ICTTEN7193B Plan a transmission network

ICTTEN7219A Manage alignment of systems with product and technology strategy

ICTTEN7220A Translate domain and solution architectures into platform requirements and designs

ICTTEN7221A Manage end to end architectural solutions across multiple domains

ICTTEN7222A Manage solution architecture and impacts in line with organisational processes

ICTTEN7223A Manage application layer solutions

ICTTEN7224A Manage voice, data and internet protocol network solutions

ICTTEN7225A Manage network testing strategies

ICTTEN7226A Manage development and application of testing artefacts

ICTTEN7227B Analyse business specifications to produce technical solutions

ICTTEN7228A Manage project requirements and process implementations

ICTTEN7230A Scope project requirements and process solutions

Selecting electives for different outcomes

The context of this qualification varies and this must guide the selection of elective units.

The following examples are designed to assist in the selection of appropriate electives for particular outcomes at this level but they are in no way prescriptive.

Systems engineer

Core units plus:

- ICTTEN7219A Manage alignment of systems with product and technology strategy
- ICTTEN7220A Translate domain and solution architectures into platform requirements and designs
- one additional unit from elective units as appropriate to the specific job role.

Solutions architect

Core units plus:

- ICTTEN7221A Manage end to end architectural solutions across multiple domains
- ICTTEN7222A Manage solution architecture and impacts in line with organisational processes
- one additional unit from elective units as appropriate to the specific job role.

Technology specialist (application)

Core units plus:

- ICTTEN7223A Manage application layer solutions
- ICTTEN7227B Analyse business specifications to produce technical solutions
- one additional unit from elective units as appropriate to the specific job role.

Technology specialist (network)

Core units plus:

- ICTTEN7224A Manage voice, data and internet protocol network solutions
- ICTTEN7227B Analyse business specifications to produce technical solutions
- one additional unit from elective units as appropriate to the specific job role.

Network testing specialist

Core units plus:

- ICTTEN7225A Manage network testing strategies
- ICTTEN7226A Manage development and application of testing artefacts
- one additional unit from elective units as appropriate to the specific job role.

Requirements manager

Core units plus:

- ICTTEN7228A Manage project requirements and process implementations
- ICTTEN7230A Scope project requirements and process solutions
- one additional unit from elective units as appropriate to the specific job role.

ICT80110 Vocational Graduate Diploma of Telecommunications Network Engineering

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This qualification reflects the role of an individual involving a very high level of technical management skills and knowledge in telecommunications networks and systems who can:

- apply numerical computations and simulation to produce engineering solutions
- investigate the application of cloud networks in telecommunications switching
- evaluate and apply digital signal processing (DSP) to communications system
- analyse cellular and satellite systems
- evaluate and use telecommunications management networks diagnose problems and provide network management support.

-

Job Roles

Job roles and titles vary across different sectors of the industry. Possible job titles relevant to this qualification include:

- network specialist
- network technology specialist
- solutions engineer
- system engineer
- telecommunications manager
- telecommunications network engineer.

-

Prerequisite units

There are no prerequisite requirements for individual units of competency.

Pathways Information

Pathways into the qualification

Candidates may enter this qualification through a number of entry points demonstrating potential to undertake study at graduate level, including from:

- the ICT70110 Vocational Graduate Certificate in Telecommunications Network Engineering or another relevant accredited Training Package qualification or relevant accredited course

or

- a relevant Advanced Diploma or Diploma, or a relevant Certificate IV or Certificate III together with significant relevant vocational practice

or

- a higher education qualification, together with relevant vocational practice

or

- relevant extensive vocational practice, without formal qualifications.

Pathways from the qualification

After achieving the ICT80110 Vocational Graduate Diploma of Telecommunications Network Engineering, candidates seeking to develop more specialised technical skills and knowledge may seek articulation into a university program.

Licensing/Regulatory Information

All training programs must be conducted with the reference to the regulatory regime of the prevailing statutory authority (currently ACMA).

Entry Requirements

There are no entry requirements for this qualification.

Employability Skills Summary

Employability Skill	Industry/enterprise requirements for this qualification include:
Communication	<ul style="list-style-type: none"> • determining options to rectify faults and discussing them with customer so that necessary action is determined • documenting test methods and results • making a complete check of installation against installation plans • reading, interpreting and using equipment/system manuals and specifications and relevant enterprise policy and documentation • conveying information to clients, colleagues and other site personnel • providing feedback to customers on operating the equipment
Teamwork	<ul style="list-style-type: none"> • identifying members and roles of team • identifying and contributing to team tasks and goals • recognising and responding positively to conflict within team • working with team members to work with clients and install equipment • relating personal role to the industry • participating in a team structure by identifying team members, tasks and goals and recognising and responding positively to conflict • applying interpersonal skills with clients, employer, supervisors, work associates, team members and other contractors • giving and receiving feedback to assist in meeting team and organisation goals
Problem solving	<ul style="list-style-type: none"> • ranking causes of problems, working from system-wide impacts to specific impacts • diagnosing network security problems to secure the network • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • identifying faults or optimisation options • rectifying faults and adjusting system to optimal operation • determining cable routes taking into account building services, safety, industry codes and practices, and customer requirements • following up promptly on difficulties and known problem

	areas
Initiative and enterprise	<ul style="list-style-type: none"> • prioritising urgent requests and acting according to organisational guidelines • identifying barriers to installation and developing strategies to overcome them within time and budget restrictions • adapting plan to suit specific features of site • identifying issues and possible solutions within established guidelines • interacting with enterprise personnel, customers and other contractors keeping a customer focus and considering customer needs
Planning and organising	<ul style="list-style-type: none"> • identifying realistic short and long-term career objectives • planning and provision to meet key dates and milestones • gathering data for the installation of systems and equipment • planning the installation of fibre cable, taking into account technical, scheduling and financial considerations • interpreting design and relating to site characteristics • prioritising work according to organisation guidelines • running a test of network security arrangements

Packaging Rules

Total number of units = 6

3 core units, plus

3 elective units

Elective units must be relevant to the work outcome, local industry requirements and the qualification level.

A maximum of two elective units may be substituted with two units of competency from any currently endorsed Training Package or accredited course at Vocational Graduate Diploma level.

Units selected from other Training Packages or accredited courses must not duplicate units selected from or available within the ICT10 Integrated Telecommunications Training Package.

CORE UNITS

ICTPMG8143B Manage a telecommunications project

ICTTEN8197A Produce engineering solutions using numerical computations and simulation

ICTSUS8237A Lead applied research in ICT sustainability

ELECTIVE UNITS

Project management

ICTPMG8142A Manage telecommunications workplace

ICTPMG8149B Evaluate and use telecommunications management networks

Radio frequency networks

ICTRFN8180B Analyse a cellular mobile network system

ICTRFN8181B Analyse a satellite communications system

Sustainability

ICTSUS8238A Conduct and manage a life cycle assessment for sustainability

Telecommunications engineering networks

ICTTEN8194A Investigate the application of cloud networks in telecommunications switching

ICTTEN8195B Evaluate and apply network security

ICTTEN8196A Evaluate and apply digital signal processing to communications system

ICTSS00003 Advanced ICT Sustainability Skill Set

ICTSS00004 Advanced Telecommunications Rigging Installation Skill Set

Modification History

Release	Comments
Release 3	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> . Unit ICTTEN3056A replaced by unit ICTCBL2065A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This skill set is for personnel experienced in basic rigging practices and the installation of telecommunications network infrastructure on structures.

Pathways Information

This skill set provides credit towards ICT30513 Certificate III in Telecommunications Rigging Installation.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTTCR3062A Build a telecommunications radio structure
ICTTCR3191A Install radio plant and equipment on telecommunications structures
ICTTCR3192A Protect against electromagnetic radiation and system hazards when working on telecommunications radio sites
ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers

Target Group

This skill set is for personnel experienced in basic rigging practices and the installation of telecommunications network infrastructure on structures.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of a more advanced range of telecommunications network equipment and prepare the participant to work in the practical application of radio network equipment for carriers on structures.

ICTSS00005 Basic ICT Sustainability Skill Set

Modification History

Release	Comments
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> . Inclusion of unit BSBSUS301A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 1.0</i> .

Description

Not Applicable

Pathways Information

This skill set provides credit towards ICT40210 Certificate IV in Telecommunications Network Engineering.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTSUS4183A Install and test renewable energy system for ICT networks

ICTSUS4184A Install and test power saving hardware

ICTSUS4185A Install and test power management software

BSBSUS301A Implement and monitor environmentally sustainable work practices

Target Group

This skill set is for experienced personnel in the installation of modern ICT networks using technologies to reduce energy consumption for sustainability.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of a limited range of ICT network equipment. It prepares the participant to work in the practical application of technologies for sustainability in reducing energy consumption of ICT networks.

ICTSS00006 Basic Telecommunications Rigging Installation Skill Set

Modification History

Release	Comments
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> . Unit ICTRFN2105A replaced with ICTRFN3055A. Inclusion of CPCCLDG3001A and CPCCLRG3001A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 1.0</i> .

Description

Not Applicable

Pathways Information

This skill set provides credit towards ICT20513 Certificate II in Telecommunications Fixed Wireless and Rigging Installation.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTRFN3055A Install a radio communications antenna and feedline
 ICTTCR2188A Use rigging practices and systems on telecommunications network structures
 ICTTCR2189A Use operational safety in a telecommunications rigging environment
 ICTTCR2190A Use safe rigging practices to climb and perform rescues on telecommunications network structures
 CPCCLDG3001A Licence to perform dogging
 CPCCLRG3001A Licence to perform rigging basic level

Target Group

This skill set is for designed for personnel to work in the installation of telecommunications network infrastructure on structures.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of a limited range of telecommunications network equipment and prepare the participant to work in the practical application of installing radio network equipment for carriers on structures.

ICTSS00009 Commercial Digital Television Antenna Systems Installation Skill Set

Modification History

Release	Comments
Release 3	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i> Units updated to current versions.
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package Version 2.0.</i> Addition of units ICTRFN4095A and ICTWHS2170A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i>

Description

This skill set is for experienced personnel who may have undertaken the domestic antenna installation program or similar wanting to install commercial antenna installation for the digital reception telecommunications industry.

The more complex antenna installations include Master Antenna TV (MATV) and Communal Antenna TV (CATV) systems.

This set of units has been approved by the Department of Broadband for the antenna installer endorsement.

Pathways Information

This skill set provides credit towards ICT30413 Certificate III in Telecommunications Digital Reception Technology.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTCBL2017B Alter services to existing cable system

ICTCBL3015A Locate and identify cable system faults

ICTDRE3165A Install a complex digital reception system

ICTWHS2170B Follow work health and safety and environmental policies and procedures

ICTRFN4095A Conduct radio frequency measurements

Target Group

This skill set is for experienced personnel who may have undertaken the domestic antenna installation program or similar wanting to install commercial antenna installation for the digital reception telecommunications industry.

The more complex antenna installations include Master Antenna TV (MATV) and Communal Antenna TV (CATV) systems.

This set of units has been approved by the Department of Broadband for the antenna installer endorsement.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for antenna installation and prepare the participant in the practical application of providing digital reception services. They install and maintain digital reception equipment for free-to air and subscription TV in customer and enterprise networks.

ICTSS00010 Convergent Technology installations for home and SME Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This skill set is for experienced personnel in the installation of modern ICT networks using IP converging technologies in home and small to medium enterprises.

Pathways Information

This skill set provides credit towards ICT40210 Certificate IV in Telecommunications Network Engineering.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTTEN4050A Install and configure a wireless mesh network

ICTTEN4126A Install and configure internet protocol TV in a home network

ICTTEN4198A Install, configure and test an internet protocol network

ICTTEN4202A Install and test a radio frequency identification system

ICTTEN4229B Design, install and configure a customer smart technology network

Target Group

This skill set is for experienced personnel in the installation of modern ICT networks using IP converging technologies in home and small to medium enterprises.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of IP networking telecommunications equipment.

Participants can work in the practical technology convergence application to install and maintain emerging technology networks in the home and small to medium enterprises.

ICTSS00012 Domestic Digital Television Antenna Installation Skill Set

Modification History

Release	Comments
Release 3	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> . Unit ICTOHS2170A replaced by unit ICTWHS2170A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This skill set is for personnel wanting to install basic terrestrial antenna system in single dwelling installation for the digital reception telecommunications industry.

This set of units has been approved by the Department of Broadband for the antenna installer endorsement.

Pathways Information

This skill set provides credit towards ICT20413 Certificate II in Telecommunications Digital Reception Technology and the ICT30410 Certificate III in Telecommunications Digital Reception Technology.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTCBL3011B Install and terminate coaxial cable

ICTDRE3156B Install digital reception equipment

ICTRFN2164B Install a terrestrial antenna

ICTRFN4095A Conduct radio frequency measurements

ICTTEN2140B Use hand and power tools

ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for personnel wanting to install basic terrestrial antenna system in single dwelling installation for the digital reception telecommunications industry.

This set of units has been approved by the Department of Broadband for the antenna installer endorsement.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for antenna installation and prepare the participant in the practical application of providing digital reception services. They install and maintain digital reception equipment for free-to air and subscription TV in customer and enterprise networks.

ICTSS00015 Installing NBN Wireless and infrastructure Skill Set

Modification History

Release	Comments
Release 3	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> . Unit ICTOHS2170A replaced by unit ICTWHS2170A. Deletion of units ICTBWN3088A and ICTCBL2017A and ICTRFN3146A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This skill set is for open CPR registered customer premises cablers working in the telecommunications industry on specialised cabling for broadband applications in accordance with ACMA requirements.

Pathways Information

This skill set provides credit towards ICT30110 Certificate III in Broadband and Wireless Networks Technology and ICT30610 Certificate III in Broadband and Wireless Networks.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTBWN3090B Install lead-in module and cable for fibre to the premises

ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation

ICTOHS2153B Work safely near power infrastructure

ICTRFN3055A Install a radio communications antenna and feedline

ICTWHS2170B Follow Occupational Health and Safety and environmental policy and procedures

Target Group

This skill set is for experienced personnel in the installation of optical FTTx network and wireless equipment for national broadband implementation in the carrier access network.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of FTTP equipment and prepare the participant to work in the practical application of optical and wireless broadband technologies for the NBN implementation of carrier network.

ICTSS00016 IP Convergence installations for home and SME Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Description

This skill set is to develop personnel to work in the installation of modern telecommunications networks using IP converging technologies in small to medium enterprises.

Pathways Information

This skill set provides credit towards ICT20213 Certificate II in Telecommunications.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTTEN2207A Install and configure a home or small office network
 ICTTEN2208A Install and configure a small to medium business network
 ICTTEN2209A Build and maintain a secure network
 ICTTEN2218A Operate new media software packages
 ICTTEN2219A Install and test internet protocol devices in convergence networks

Target Group

This skill set is to develop personnel to work in the installation of modern telecommunications networks using IP converging technologies in small to medium enterprises.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of IP networking telecommunications equipment.

Participants can work in the practical application of converging technologies to install and maintain IP networks with security in the home and small to medium enterprise networks.

ICTSS00017 Radio Technician Skill Set

Modification History

Release	Comments
Release 3	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> . Unit ICTOHS2170A replaced by unit ICTWHS2170A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 1.0</i> .

Description

This skill set is for new entrants learning radio fundamentals.

Pathways Information

This skill set provides credits towards ICT40313 Certificate IV in Telecommunications Radio Communications.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTRFN3055A Install a radio communications antenna and feedline

ICTRFN3155A Construct and test a radio communications device

ICTTEN2008A Use electrical skills in telecommunications work

ICTTEN3056A Install telecommunications network equipment

ICTTEN4081A Locate, diagnose and rectify faults

ICTTEN4102A Repair telecommunication system faults

ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for personnel who have no experience in the Telecommunications Industry want to work designing ICT access networks.

Suggested words for Statement of Attainment

These units of competency meet industry requirements in applying radio communications technician fundamentals.

They can install, maintain and modify basic radio communications networks for a range of industries.

ICTSS00019 Technical Help Desk Support Skill Set

Modification History

Release	Comments
Release 2	New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> . Unit ICAS303B replaced by unit ICASAS305A.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 1.0</i> .

Description

Not Applicable

Pathways Information

This skill set provides credit towards ICT30210 Certificate III in Telecommunications.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICASAS305A Provide IT advice to clients

ICTWOR3231A Resolve technical enquiries using multiple information systems

ICTWOR3232A Collect and analyse technical information

Target Group

This skill set is for experienced personnel in the provision of technical help desk to customers and access network contractors.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the provision of technical support of ICT networks.

ICTSS00020 Wireless LAN and IP Network installation Skill Set

Release 3	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Units updated to current versions.</p>
Release 2	<p>New release of this skill set with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i>.</p> <p>ICAB4240C replaced by ICANWK417A and ICAB4235B replaced by ICANWK406A.</p>
Release 1	<p>This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Description

This skill set is for experienced personnel in the installation of modern ICT networks using converging technologies of wireless and IT networks.

Pathways Information

This skill set provides credit towards ICT40210 Certificate IV in Telecommunications Network Engineering.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICANWK406A Install, configure and test network security
ICANWK417A Build an enterprise wireless network
ICTTEN3056A Install telecommunications network equipment
ICTTEN4198A Install, configure and test an internet protocol network
ICTTEN4199A Install, configure and test a router
ICTWHS2170B Follow Occupational Health and Safety and environmental policy and procedures

Target Group

This skill set is for experienced personnel in the installation of modern ICT networks using converging technologies of wireless and IT networks.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for work in the installation of a wireless LAN with IP security and associated networking elements in the practical application of converging technologies.

ICTSS00021 Advanced Cabler Registration Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This skill set is for open CPR registered customer premises cablers working in the telecommunications industry on specialised cabling for broadband applications in accordance with ACMA requirements.

Pathways Information

This skill set provides credit towards ICT30213 Certificate III in Telecommunications.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTCBL3009B Install, terminate and certify structured cabling installation
ICTCBL3010B Install and terminate optical fibre cable on customer premises
ICTCBL3011B Install and terminate coaxial cable
ICTCBL3013A Perform cable and system test on customer premises

Target Group

This skill set is for CPR registered customer premises cablers.

Suggested words for Statement of Attainment

These units of competency meet the Australian Communications and Media Authority requirements for registration as an open CPR cabler.

Cablers work on installation, maintenance and modification of telecommunications cabling, on customer premises.

ICTSS00022 Basic Open Cabler Registration Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This skill set is for customer premises cablers working in the telecommunications industry in accordance with ACMA requirements.

Pathways Information

This skill set provides credit towards ICT20213 Certificate II in Telecommunications.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCBL2137B Install, maintain and modify customer premises communications cabling:

ACMA Open Rule

ICTTEN2140B Use hand and power tools

ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for customer premises cablers working in the telecommunications industry in accordance with ACMA requirements.

Suggested words for Statement of Attainment

These units of competency meet the Australian Communications and Media Authority requirements for registration as an 'open' CPR cabler.

Cablers work on installation, maintenance and modification of telecommunications cabling on customer premises.

ICTSS00023 Basic Restricted Cabler Registration Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> .

Description

This skill set is for open CPR registered customer premises cablers working in the telecommunications industry on specialised cabling for broadband applications in accordance with ACMA requirements.

Pathways Information

This skill set provides credit towards ICT30213 Certificate III in Telecommunications.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTCBL2136B Install, maintain and modify customer premises communications cabling:

ACMA Restricted Rule

ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA

Restricted Rule

ICTTEN2140B Use hand and power tools

ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for customer premises cablers working in the telecommunications industry on specialised cabling for simple point to point broadband applications in accordance with ACMA requirements.

Suggested words for Statement of Attainment

These units of competency meet the Australian Communications and Media Authority requirements for registration as an open CPR cabler.

Cablers work on installation, maintenance and modification of telecommunications cabling, on customer premises.

ICTSS00024 Civil Works - Installation of Pit and Pipe and FDH Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This skill set is for those working in NBN construction.

Pathways Information

This skill set provides credit towards the ICT20613 Certificate II in National Broadband Network Construction.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

CPCCOHS1001A Work safely in the construction industry
 HLTAID001 Provide cardiopulmonary resuscitation
 ICTCBL2131A Install an above ground equipment enclosure
 ICTCBL2133A Construct underground telecommunications infrastructure
 ICTPMG2130A Prepare site for support installation
 ICTTEN2140B Use hand and power tools
 ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for those working in NBN construction.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the installation of pit and pipe and FDH cabinets.

ICTSS00025 Designer Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This skill set is for personnel who have no experience in the Telecommunications Industry want to work designing ICT access networks.

Pathways Information

This skill set provides credit towards ICT40510 Certificate IV in Telecommunications Network Planning.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTBWN3090B Install lead-in module and cable for fibre to the premises
 ICTCBL2133A Construct underground telecommunications infrastructure
 ICTCBL3021A Install aerial cable
 ICTNPL4108A Plan the deployment of access network architectures
 ICTPMG5039A Prepare project specifications

Target Group

This skill set is for personnel who have no experience in the Telecommunications Industry want to work designing ICT access networks.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the design of access networks.

ICTSS00026 ICT Access Senior Designer Skill Set

Modification History

Release	Comments
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> .

Description

Not applicable.

Pathways Information

This skill set provides credit towards ICT50210 Diploma of Telecommunications Network Engineering.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTTEN5037A Design a telecommunications project

ICTPMG6034A Prepare a detailed design brief

Target Group

This skill set is for experienced personnel who want to work designing complex ICT access networks.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the design of complex access networks.

ICTSS00027 National Broadband Network Advanced Linesworker/Installer Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This skill set is for personnel engaged in advanced lineswork or installation of cable fibre on the National Broadband Network and includes relevant levels of safety and awareness training.

Pathways Information

This skill set provides credit towards the ICT30213 Certificate III in Telecommunications and ICT30713 Certificate III in National Broadband Network Construction.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

CPCCOHS1001A Work safely in the construction industry
 ICTBWN3090B Install lead-in module and cable for fibre to the premises
 ICTCBL3018A Install underground enclosures and conduit
 ICTCBL3019A Install underground cable
 ICTTEN3056A Install telecommunications network equipment
 ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for personnel engaged in advanced lineswork or installation of cable fibre on the National Broadband Network and includes relevant levels of safety and awareness training.

Suggested words for Statement of Attainment

These units of competency are recommended for advanced linesworkers and installers who perform work on the National Broadband Network.

ICTSS00028 National Broadband Network Splicer Skill Set

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . Units updated to current versions.
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package Version 2.0</i> .

Description

This skill set is for personnel engaged in the splicing of cable fibre on the National Broadband Network and includes relevant levels of safety and awareness training.

Pathways Information

This skill set provides credit towards ICT30213 Certificate III in Telecommunications and ICT30713 Certificate III in National Broadband Network Construction.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

CPCCOHS1001A Work safely in the construction industry
 ICTBWN3088B Install optical fibre splitters in fibre distribution hubs
 ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation
 ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers
 ICTCBL3240B Install ribbon fibre cable in the FTTX distribution network
 ICTWHS2170B Follow work health and safety and environmental policies and procedures

Target Group

This skill set is for personnel engaged in the splicing of cable fibre on the National Broadband Network and includes relevant levels of safety and awareness training.

Suggested words for Statement of Attainment

These units of competency are recommended for splicers who perform work on the National Broadband Network.

ICTSS00029 Plan FTTP Access Network Skill Set

Modification History

Release	Comments
Release 1	This skill set first released with <i>ICT10 Integrated Telecommunications Training Package version 2.0</i> .

Description

Not applicable.

Pathways Information

This skill set provides credit towards ICT40510 Certificate IV in Telecommunications Network Planning.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

ICTNPL4151A Plan the telecommunications access network for an estate
ICTOPN4117A Prepare activity plans and specifications for a fibre to the x installation
ICTWOR4032A Undertake a civil site survey

Target Group

This skill set is for experienced personnel in the provision of access network civil construction services for access network contractors.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for providing access network services.

ICTSS00030 ICT Sustainability Planning Skill Set

Modification History

Not applicable.

Description

Not Applicable

Pathways Information

This skill set provides credit towards ICT60110 Advanced Diploma of Optical Networks, ICT60210 Advanced Diploma of Telecommunications Network Engineering and ICT70110 Vocational Graduate Certificate in Telecommunications Network Engineering.

Licensing/Regulatory Information

Not Applicable

Skill Set Requirements

ICTSUS6233A Integrate sustainability in ICT planning and design projects

ICTSUS6234A Establish a business case for sustainability and competitive advantage in ICT projects

ICTSUS7235A Use ICT to improve sustainability outcomes

ICTSUS7236A Manage improvements in ICT sustainability

Target Group

This skill set is for experienced personnel who want to integrate sustainability in the planning of ICT networks.

Suggested words for Statement of Attainment

These units of competency meet industry requirements for the integration of sustainability practices in the planning of ICT networks. It prepares the participant to justify and plan practical applications of sustainability in ICT network in a competitive and innovative environment.

BSBCUS402B Address customer needs

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i>.</p> <p>Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</p> <p>Replaces BSBCUS402A Address customer needs</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the ongoing relationship with a customer, which includes assisting the customer to articulate their needs, meeting customer needs and managing networks to ensure customer needs are addressed. The customer relationship would typically involve direct interaction a number of times over an extended period.

This unit is appropriate to workers who are expected to have detailed product knowledge in order to recommend customised solutions. They would be expected to apply organisational procedures and be aware of, and apply as appropriate, broader factors involving ethics, industry practice and relevant government policies and regulations.

Application of the Unit

This unit applies to workers required to be familiar with a product and service that varies widely and is capable of significant customisation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Assist customer to articulate needs	<p>1.1 Ensure <i>customer</i> needs are fully explored, understood and agreed</p> <p>1.2 Explain and match available services and products to customer needs</p> <p>1.3 Identify and communicate <i>rights and responsibilities of customers</i> to the customer as appropriate</p>
2. Satisfy complex customer needs	<p>2.1 Explain possibilities for meeting customer needs</p> <p>2.2 Assist customers to evaluate service and/or product options to satisfy their needs</p> <p>2.3 Determine and prioritise preferred actions</p> <p>2.4 Identify potential areas of difficulty in customer service delivery and take appropriate actions in a positive manner</p>
3. Manage networks to ensure customer needs are addressed	<p>3.1 Establish <i>effective regular communication</i> with customers</p> <p>3.2 Establish, maintain and expand relevant networks to ensure appropriate referral of customers to products and services from within and outside the organisation</p> <p>3.3 Ensure procedures are in place to ensure that decisions about targeting of customer services are based on up-to-date information about the customer, and the <i>products and services</i> available</p> <p>3.4 Ensure procedures are put in place to ensure that referrals are based on the matching of the assessment of customer needs and availability of products and services</p> <p>3.5 Maintain records of customer interaction in accordance with <i>organisational procedures</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to relate to people from diverse backgrounds and people with diverse abilities.
- information management skills to summarise information verbally and non-verbally
- literacy and numeracy skills to:
 - interpret product and service features or sales data
 - read a variety of texts to prepare general information and papers
 - summarise information obtained from a variety of verbal and non-verbal sources
 - write formal and informal text
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- problem-solving skills to develop solutions unique to a customer
- self-management skills to:
 - comply with policies and procedures
 - seek learning and development opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
 - anti-discrimination legislation
 - ethical principles
 - codes of practice
 - privacy laws
 - environmental issues
 - occupational health and safety
- organisational procedures and standards for customer service relationships
- detailed product and service knowledge which may:
 - be of significant breadth so as to propose alternative products and services, or
 - of significant depth so as to propose variations within a limited product and service range.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • assisting customers to articulate their needs • documenting processes used and customer satisfaction with the products/services offered • assisting customers to address their needs.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to an actual workplace or simulated environment • access to office equipment and resources • examples of products/services and promotional strategies.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate • review of documentation prioritising preferred actions • analysis of responses to case studies and scenarios • demonstration of techniques • observation of presentations • assessment of written reports • evaluation of communication established with customers • review of customer interaction records.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customers may include:	<ul style="list-style-type: none"> • customers with routine or specific requests • in person, computer-based and telephone customers • internal and external customers • people from a range of social, cultural or ethnic backgrounds • people who may be unwell, drug affected or emotionally distressed • people with varying physical and mental abilities • regular and new customers.
Rights and responsibilities of customers may include:	<ul style="list-style-type: none"> • fulfilment of external obligations • informed consent.
Effective regular communication may include:	<ul style="list-style-type: none"> • giving customers full attention • handling sensitive and confidential issues • maintaining eye-contact (for face-to-face interactions), except where eye-contact may be culturally inappropriate • speaking clearly and concisely • using active listening techniques • using appropriate language and tone of voice • using clearly written information/communication • using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions) • using open and/or closed questions.
Products and services may include:	<ul style="list-style-type: none"> • either products or services • goods • ideas • infrastructure • private or public sets of benefits.
Organisational procedures may include:	<ul style="list-style-type: none"> • procedural manuals • quality systems, standards and guidelines.

BSBPMG521A Manage project integration

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Services Training Package Version 8.0</i>.</p> <p>Replaces BSBPMG501A Manage application of project integrative processes.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to integrate and balance the overall project management functions of scope, time, cost, quality, human resources, communications, risk and procurement across the project life cycle; and to align and track the project objectives to comply with organisational goals, strategies and objectives.

Application of the Unit

This unit applies to those responsible for managing and leading a project in an organisation, business or as a consultant.

The project manager operates within assigned authority levels, and is responsible for own performance and the performance of others.

The project manager may undertake the work in the context of an organisational program and/or portfolio of projects.

This unit has generic application for projects in a range of industries, organisations and contexts.

In the context of this unit a project is defined as involving:

- a comprehensive, detailed and integrated project management plan
- a formal communications plan
- a dedicated and project-based budget
- formal and planned engagement with a wide range of stakeholders
- a documented risk, issues and change-management methodology
- a quality plan with assurance and control processes
- a project team-based environment.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Establish project</p>	<p>1.1 Identify, clarify and prepare project initiation documentation</p> <p>1.2 Identify the relationship between the project and broader organisational strategies and goals</p> <p>1.3 Negotiate and document project objectives, outcomes and benefits</p> <p>1.4 Negotiate the project governance structure with relevant authorities and stakeholders</p> <p>1.5 Prepare and submit project charter for approval by relevant authorities</p>
<p>2. Undertake project planning and design processes</p>	<p>2.1 Establish and implement a methodology to disaggregate project objectives into achievable project deliverables</p> <p>2.2 Identify project stages and key requirements for stage completion against client requirements and project objectives</p> <p>2.3 Analyse project management functions to identify interdependencies and the impact of the triple constraints</p> <p>2.4 Develop a project management plan that integrates all project-management functions with associated plans and baselines</p> <p>2.5 Establish designated mechanisms to monitor and control planned activity</p> <p>2.6 Negotiate approval of project plan with relevant stakeholders and project authority</p>
<p>3. Execute project in work environment</p>	<p>3.1. Manage the project in an established internal work environment to ensure work is conducted effectively throughout the project</p> <p>3.2. Maintain established links to align project objectives with organisational objectives throughout the project life cycle</p> <p>3.3. Within authority levels, resolve conflicts that may negatively affect project objectives</p>
<p>4. Manage project control</p>	<p>4.1. Ensure project records are updated against project deliverables and plans at required intervals</p> <p>4.2. Analyse and submit status reports on project progress and identified issues with stakeholders and relevant authorities</p> <p>4.3. Analyse and submit impact analysis on change requests for approval where required</p> <p>4.4. Maintain relevant project logs and registers accurately and regularly to assist with project audit</p> <p>4.5. Ensure associated plans are updated to reflect project progress</p>

	against baselines and approved changes
5. Manage project finalisation	<p>5.1. Identify and allocate <i>project finalisation activities</i></p> <p>5.2. Ensure project products and <i>associated documentation</i> are prepared for handover to client in a timely manner</p> <p>5.3. Finalise financial, legal and contractual obligations</p> <p>5.4. Undertake <i>project review assessments</i> as input to future projects</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- decision-making skills between competing interests and priorities
- literacy skills to interpret and develop complex project plans and documentation
- negotiating skills to work with stakeholders and project authorities on agreed plans and processes
- numeracy skills to conduct complex forecasting
- planning and organising skills to:
 - plan, monitor and respond to project issues
 - measure progress against agreed plans
- team leadership and communication skills to liaise with other members of the project team
- technology skills to use common software and work office products for documentation and analysis
- time-management skills to ensure priorities are addressed.

Required knowledge

- project governance models
- project knowledge areas
- project life cycle stages, phases and structures relevant to industry and project context
- types of organisational documentation for strategies and goals.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • identifying and aligning project with organisational objectives • conducting project establishment processes • managing preparation of a project management plan for a project of sufficient complexity to demonstrate the full range of performance requirements • ensuring project registers and logs are maintained • analysing project reports • undertaking impact analysis • preparing strategy for project finalisation.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • project documentation, which includes information about participation in life cycle and integration processes.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • analysis of responses addressing different project scenarios • oral or written questioning to assess knowledge of project life cycle processes relevant to the industry sector and project context • assessment of management of the project life cycle processes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Project initiation documentation</i> may include:</p>	<ul style="list-style-type: none"> • agreed project management framework • agreed project methodology • client or customer requirements • concept proposal • contract documentation • executive team instructions • feasibility study • life cycle approval gateways • output from prior project.
<p><i>Broader organisational strategies and goals</i> may include:</p>	<ul style="list-style-type: none"> • market focus • organisational mission statement • strategy plans • values and ethics
<p><i>Objectives, outcomes and benefits</i> may include:</p>	<ul style="list-style-type: none"> • expected benefits to be achieved for organisation and business • measurable project product statement • short and long-term outcomes for the organisation.
<p><i>Project governance structure</i> may include:</p>	<ul style="list-style-type: none"> • boards, committees, working groups, reference groups, advisory groups, sponsors, project managers, project team members and stakeholders • identified authority levels assigned to groups and individuals • issue-escalation procedures • project organisation chart • statements of roles for project management bodies and participants.
<p><i>Project charter</i> may include:</p>	<ul style="list-style-type: none"> • approvals and sign-off • broad stakeholder identification • consolidated project initiation documentation (PID) • documented objectives • high-level product deliverables • high-level risk assessment • project assumptions and constraints • project mandate • source of project authority.

<i>Project deliverables</i> may include:	<ul style="list-style-type: none"> • definable product, service or document • discrete components of the overall project outputs • specified products of the project • time, quality and cost.
<i>Project management functions</i> involve all nine functions:	<ul style="list-style-type: none"> • communications • cost • human resources • procurement and contracting • project integration • quality • risk • scope • time.
<i>Triple constraints</i> include:	<ul style="list-style-type: none"> • cost • scope and quality • time.
<i>Project management plan</i> may be:	<ul style="list-style-type: none"> • a covering document that integrates the planning requirements of the nine functions of project management • in single or multiple document format.
<i>Integrates</i> may include:	<ul style="list-style-type: none"> • decisions that: • determine comparative value • evaluate competing interests • make trade-offs • processes and activities that: • combine • coordinate • define • identify • unify
<i>Associated plans and baselines</i> may include:	<ul style="list-style-type: none"> • communications plan (stakeholders and information) • human resources plan • procurement plan • project budget • project schedule • quality-management plan • risk plan • scope-management plan.
<i>Internal work environment</i> may include:	<ul style="list-style-type: none"> • organisational policy and procedures • organisational culture and style • physical working conditions • geographic location and/or dispersion

	<ul style="list-style-type: none"> • team dynamics.
<i>Status reports</i> may include:	<ul style="list-style-type: none"> • client progress reports • internal or external • regular consolidated reports to project authority • reports under contractual obligations • specific budget and schedule reports.
<i>Impact analysis</i> may include:	<ul style="list-style-type: none"> • assessment against project quality requirements • forecasting against triple constraints (scope, time and cost) • review of project baselines against proposed change.
<i>Project logs and registers</i> may include:	<ul style="list-style-type: none"> • change log • daily log • issues log • quality log • risk register • task-completion log • version-control log.
<i>Project finalisation activities</i> may include:	<ul style="list-style-type: none"> • completing financial transactions • consolidating and storing project data • documenting outstanding project issues • obtaining or providing certifications • preparing final project reports • updating organisation knowledge management.
<i>Associated documentation</i> may include:	<ul style="list-style-type: none"> • 'as built' design specifications • certificates, guarantees, indemnities and warranties • product or service specifications • user, training and installation manuals.
<i>Project review assessments</i> may include:	<ul style="list-style-type: none"> • benefits realisation review • outcomes evaluation • post-implementation review • project lessons learned.

Management and Leadership – Project Management

BSBPMG522A Undertake project work

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Services Training Package Version 8.0</i>.</p> <p>Replaces BSBPMG510A Manage projects.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake a straightforward project or a section of a larger project. This unit addresses the management of projects, including developing a project plan, administering and monitoring the project, finalising the project, and reviewing the project to identify lessons learned for application to future projects.

Application of the Unit

The unit focuses on the application of project-management skills and the requirement to meet timelines, quality standards, budgetary limits and other requirements set for the project.

The unit does not apply to specialist project managers. For specialist project managers, the other units of competency in the project management field (BSBPMG) will be applicable.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Define project	<p>1.1 Access <i>project scope and other relevant documentation</i></p> <p>1.2 Define project stakeholders</p> <p>1.3 Seek clarification from <i>delegating authority</i> of issues related to project and <i>project parameters</i></p> <p>1.4 Identify limits of own responsibility and reporting requirements</p> <p>1.5 Clarify relationship of project to other projects and to the organisation's objectives</p> <p>1.6 Determine and access available resources to undertake project</p>
2. Develop project plan	<p>2.1 Develop <i>project plan</i> in line with the project parameters</p> <p>2.2 Identify and access appropriate <i>project-management tools</i></p> <p>2.3 Formulate risk-management plan for project, including work health and safety (WHS)</p> <p>2.4 Develop and approve project budget</p> <p>2.5 Consult team members and take their views into account in planning the project</p> <p>2.6 Finalise project plan and gain necessary approvals to commence project according to documented plan</p>
3. Administer and monitor project	<p>3.1 Take action to ensure project team members are clear about their responsibilities and the project requirements</p> <p>3.2 Provide <i>support for project team members</i>, especially with regard to specific needs, to ensure that the quality of the expected outcomes of the project and documented time lines are met</p> <p>3.3 Establish and maintain <i>required record-keeping systems</i> throughout the project</p> <p>3.4 Implement and monitor plans for managing project finances, <i>resources</i> and quality</p> <p>3.5 Complete and forward project reports as required to stakeholders</p> <p>3.6 Undertake <i>risk management</i> as required to ensure project outcomes are met</p> <p>3.7 Achieve project deliverables</p>
4. Finalise project	<p>4.1 Complete financial record keeping associated with project and check for accuracy</p> <p>4.2 Ensure transition of staff involved in project to new roles or reassignment to previous roles</p>

	4.3 Complete project documentation and obtain <i>necessary sign-offs</i> for concluding project
5. Review project	<p>5.1 Review project outcomes and processes against the project scope and plan</p> <p>5.2 Involve team members in the project review</p> <p>5.3 Document lessons learned from the project and report within the organisation</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and negotiation skills to work with team members and other stakeholders to maintain project schedules
- communication skills to relate to people with diverse abilities and from diverse backgrounds in a culturally appropriate way
- literacy skills to read, write and review a range of documentation
- numeracy skills to:
 - analyse data
 - compare time lines and promotional costs against budgets
- planning and organising skills to develop, monitor and maintain implementation schedules.

Required knowledge

- organisation's mission, goals, objectives and operations and how the project relates to them
- organisational structure, and lines of authority and communication in the organisation
- relevant legislation and codes from all levels of government that may affect aspects of business operations, including:
 - anti-discrimination legislation
 - codes of practice
 - environmental issues
 - ethical principles
 - WHS
 - privacy laws.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing a project plan • examples of monitoring arrangements and evaluation of the efficacy of the project plan in addressing project time lines and budget • knowledge of relevant legislation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to workplace project documentation • demonstration of all required skills, knowledge and performance in a workplace-based project.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • observation of presentations • oral or written questioning to assess knowledge of the organisation's mission, goals, objectives and operations and how the project relates to them • review of project risk-management plan and project plan • evaluation of project reports forwarded to stakeholders • analysis of documentation reviewing project outcomes and processes against the project scope and plan • evaluation of documentation outlining lessons learned from the project.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • other project management units.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Project scope and other relevant documentation</i> may include:</p>	<ul style="list-style-type: none"> • contract or other agreement • project brief • project plan or summary • other documents outlining: <ul style="list-style-type: none"> • expected outcomes of the project • inclusions and exclusions from project • project resources • quality standards for project • timeframes for project.
<p><i>Stakeholders</i> may include:</p>	<ul style="list-style-type: none"> • clients or customers (internal and external) • funding bodies • management, employees and relevant key personnel (internal and external) with special responsibilities • project sponsor.
<p><i>Delegating authority</i> may include:</p>	<ul style="list-style-type: none"> • customer or client • funding body • manager or management representative • project sponsor.
<p><i>Project parameters</i> may include:</p>	<ul style="list-style-type: none"> • project finances or budget • integration of project within organisation • legislative and quality standards • physical, human and technical resources available or required for project • procurement requirements associated with project • reporting requirements • risks associated with project, including WHS • scope of project • time lines.
<p><i>Project plan</i> may include:</p>	<ul style="list-style-type: none"> • details of how the project will be managed • roles and responsibilities • time lines • work breakdown structure.
<p><i>Project management</i></p>	<ul style="list-style-type: none"> • cost schedule control system

tools may include:	<ul style="list-style-type: none"> • Critical Path Method • Gantt and bar charts • life cycle cost analysis • logistics support analysis • PERT charts • project management software • risk and issues logs • spreadsheets • technical resources required for the project, for example WHS management-system tools.
Support for project team members may include:	<ul style="list-style-type: none"> • additional physical, human and technical resources (within allocated budget) if and as required • encouragement • feedback • learning and development • regular project team meetings • supervision, mentoring and coaching.
Required record-keeping systems may include systems for:	<ul style="list-style-type: none"> • correspondence • financial data, including costs, expenditure, income generated and purchases • project outcomes • quality data, including any test results • recording of time spent on project and progress in completing project • samples, prototypes and models.
Resources may include:	<ul style="list-style-type: none"> • human • physical • technical.
Risk management may include:	<ul style="list-style-type: none"> • changing roles and responsibilities in project team • negotiating an extension of deadline, or redefining completion or quantity or quality of outcomes • outsourcing some aspects of the project • reducing costs • researching and applying more efficient methods for completing project tasks • seeking further resources to meet deadline • sharing ideas to gain improvements to work undertaken in the project.
Necessary sign-offs may be required by:	<ul style="list-style-type: none"> • clients • funding body • management • project sponsor.

BSBSMB405B Monitor and manage small business operations

Modification History

Release	Comments
Release 1	<p>This version first released with <i>BSB07 Business Training Package version 6.0</i></p> <p>Revised unit. Required knowledge and Range Statement changed to include environmentally sustainable practices</p> <p>Replaces BSBSMB405A Monitor and manage small business operations</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate a small business and to implement a business plan. The strategies involve monitoring, managing and reviewing operational procedures.
Specific legal requirements apply to the management of a small business.

Application of the Unit

This work is undertaken by individuals who operate a small business.
The unit is suitable for existing micro and small businesses or a department in a larger organisation.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Develop <i>operational strategies and procedures</i>	<p>1.1 Develop an action plan to provide a clear and coherent direction, in accordance with the <i>business goals and objectives</i></p> <p>1.2 Identify <i>occupational health and safety (OHS) and environmental issues</i> and implement strategies to minimise risk factors</p> <p>1.3 Develop a <i>quality system</i> for the business in line with industry standards, compliance requirements and cultural criteria</p> <p>1.4 Develop performance measures and <i>operational targets</i> to conform with the business plan</p> <p>1.5 Develop strategies for innovation, including the utilisation of existing, new or emerging technologies, where practicable, to optimise business performance</p>
2. Implement operational strategies and procedures	<p>2.1 Implement systems and key performance indicators/targets to monitor business performance and customer satisfaction</p> <p>2.2 Implement systems to control stock, expenditure/cost, wastage/shrinkage and risks to health and safety in accordance with the business plan</p> <p>2.3 Maintain staffing requirements, where applicable, within budget to maximise productivity</p> <p>2.4 Carry out the provision of goods/services in accordance with established legal, ethical cultural and <i>technical standards</i></p> <p>2.5 Provide goods/services in accordance with time, cost and quality specifications, and customer requirements</p> <p>2.6 Apply quality procedures to address product/service and customer requirements</p>
3. Monitor business performance	<p>3.1 Regularly monitor/review the achievement of operational targets to ensure optimum business performance, in accordance with the business plan goals and objectives</p> <p>3.2 Review systems and structures, with a view to more effectively supporting business performance</p> <p>3.3 Investigate and analyse operating problems to establish causes and implement changes as required as part of the business quality system</p> <p>3.4 Amend operational policies and procedures to incorporate corrective action</p>
4. Review business operations	<p>4.1 Review and adjust business plan, as required, to maintain business viability, in accordance with business goals and objectives</p>

	<p>4.2 Clearly record proposed changes to aid future planning and evaluation</p> <p>4.3 Undertake ongoing research into new business opportunities and adjust business goals and objectives as new business opportunities arise</p>
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to develop criteria and targets for the business plan
- communication skills to question, clarify and report
- literacy skills to interpret legal requirements, company policies and procedures
- numeracy skills to manage performance information and to control the finances
- technology skills to use relevant business equipment.

Required knowledge

- methods for developing and maintaining networks
- methods for implementing operation and revenue control systems
- methods for monitoring performance and implementing improvements
- OHS responsibilities and procedures for managing hazards
- principles of risk management relevant to the business, including risk assessment
- quality system principles and methods
- relevant industry codes of practice
- relevant marketing, sales and financial concepts
- relevant performance measures
- role of innovation
- systems to manage staff, stock, expenditure, services and customer service
- environmentally sustainable business practice and operation
- technical or specialist skills relevant to the business operation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • developing strategies and procedures to successfully manage the operation of the business • making appropriate adjustments to the business operations as required • knowledge of quality system principles and methods.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to relevant documentation • candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • portfolio of evidence including operational strategies and procedures • oral or written questioning to assess knowledge of principles of risk management relevant to the business, including risk assessment • review of analysis of operating problems (establishing causes and implementing changes as required as part of the business quality system) • review of records proposing changes to the business operations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • BSBSMB406A Manage small business finances • BSBSMB407A Manage a small team.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Operational strategies and procedures</i> may be determined by:</p>	<ul style="list-style-type: none"> • business premises (size, location, layout) • financial control systems and procedures • management and administrative systems and procedures • methods/techniques/technology • physical and natural resources • plant and equipment , including OHS requirements • premises, plant and equipment, which may be new or previously owned • purchase (sole or shared ownership) or leasing • raw materials • requirements, which may be one-off requirements or recurrent requirements (such as equipment maintenance) specific to the nature of the business • technology • environmentally sustainable principles of business operation • use of existing, new and emerging technologies including e-commerce.
<p><i>Business goals and objectives</i> may include:</p>	<ul style="list-style-type: none"> • customer needs/marketing projections • family or community benefits • financial projections • goals, objectives, plans, systems and processes • lifestyle issues • proposed size and scale of the business, market focus of the business • short-, medium- or long-term goals • social responsibility.
<p><i>Occupational health and safety and environmental issues</i> must include:</p>	<ul style="list-style-type: none"> • controls, which may include instructions to workplace personnel concerning site hazards and controls, material safety data sheets, use of personal protective equipment, vehicle access, signs and barricades, traffic control, outside contractors • establishment and maintenance of procedures for assessing and controlling risks • establishment and maintenance of procedures for

	<ul style="list-style-type: none"> identifying risks to health and safety • environmentally sustainable purchase and supply of goods and services • waste and by-products.
<i>Quality system</i> may include:	<ul style="list-style-type: none"> • manual or computer quality control systems • quality assurance/management approaches • random inspections and assessments of goods and services against predetermined standards • random inspections and assessments of processes against predetermined standards • random sampling and follow-up of customers.
<i>Operational targets</i> may include:	<ul style="list-style-type: none"> • external targets, which may relate to market share and positioning and may involve exploring new markets, building national or international trade links • internal targets, which may relate to size, quality, quantity and diversity, wages to sales, sales to area/stock levels/stock turnover/average debtor payment periods and levels • staffing level and skills mix • targets, which may be short-, medium- or long-term.
<i>Technical standards</i> may include:	<ul style="list-style-type: none"> • current and generally agreed descriptions of what the product/service is, how it should be produced/delivered and the environmental sustainability, quality, safety, efficiency or other measures to determine the activity is done effectively.

BSBWHS501A Ensure a safe workplace

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>BSB07 Business Training Package version 7.0</i>.</p> <p>Replaces and is equivalent to BSBOHS509A Ensure a safe workplace.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to establish, maintain and evaluate the organisation's work health and safety (WHS) policies, procedures and programs in the relevant work area according to WHS legislative requirements.

Application of the Unit

This unit applies to managers working in a range of contexts. It takes a systems approach and addresses compliance with relevant legislative requirements.

Those who have or are likely to have responsibility for WHS as part of their broader management role should undertake this unit.

The unit is relevant for people with obligations under WHS legislation, for example persons conducting a business or undertaking (PCBUs) or their officers (as defined by relevant legislation).

NOTE: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Establish and maintain a WHS management system</p>	<p>1.1 Locate, adapt, adopt and communicate WHS policies that clearly define the organisation's commitment to complying with WHS legislation</p> <p>1.2 Identify duty holders and define WHS responsibilities for all workplace personnel according to WHS legislation, policies, procedures and programs</p> <p>1.3 Identify and approve financial and human resources required by the WHS management system (WHSMS)</p>
<p>2. Establish and maintain effective and compliant participation arrangements for managing WHS</p>	<p>2.1 Work with workers and their representatives to set up and maintain participation arrangements according to relevant WHS legislation</p> <p>2.2 Appropriately resolve issues raised through participation and consultation arrangements according to relevant WHS legislation</p> <p>2.3 Promptly provide information about the outcomes of participation and consultation to workers and ensure it is easy for them to access and understand</p>
<p>3. Establish and maintain procedures for effectively identifying hazards, and assessing and controlling risks</p>	<p>3.1 Develop procedures for ongoing hazard identification, and assessment and control of associated risks</p> <p>3.2 Include hazard identification at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created by the proposed changes and existing hazards are controlled</p> <p>3.3 Develop and maintain procedures for selecting and implementing risk controls according to the hierarchy of control and WHS legislative requirements</p> <p>3.4 Identify inadequacies in existing risk controls according to the hierarchy of control and WHS legislative requirements, and promptly provide resources to enable implementation of new measures</p> <p>3.5 Identify requirements for expert WHS advice, and request this advice as required</p>
<p>4. Evaluate and maintain a WHS management system</p>	<p>4.1 Develop and provide a WHS induction and training program for all workers as part of the organisation's training program</p> <p>4.2 Use a system for WHS recordkeeping to allow identification of patterns of occupational injury and disease in the organisation, and to maintain a record of WHS decisions made, including reasons for the decision</p> <p>4.3 Measure and evaluate the WHSMS in line with the organisation's quality systems framework</p>

	<p>4.4 Develop and implement improvements to the WHSMS to achieve organisational WHS objectives</p> <p>4.5 Ensure compliance with the WHS legislative framework so that, as a minimum, WHS legal requirements are achieved</p>
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical and problem solving skills to examine relevant workplace information and data to identify hazards, and to assess and control risks
- communication skills to consult with staff and to promote a safe workplace
- information technology skills to store and retrieve relevant workplace information and data
- literacy skills to adapt and communicate WHS policies that reflect WHS legislative requirements
- problem-solving skills to deal with complex and non-routine difficulties.

Required knowledge

- hazard identification and risk-management processes
- hierarchy of risk control
- in-house and WHS legislative reporting requirements
- relevant WHS Acts, regulations and codes of practice that apply to the business operation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • detailed knowledge and application of all relevant WHS Acts, regulations and codes of practice • establishing and maintaining arrangements for managing WHS within the organisation's business systems and practices • identifying requirements for expert WHS advice.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • appropriate documentation and resources normally used in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of written reports • demonstration of techniques • direct questioning combined with review of portfolios of evidence and third-party workplace reports of on-the-job performance by the candidate • review of WHS policies, information provided on the WHSMS, and information about the outcomes of participation and consultation provided to workers • oral or written questioning to assess knowledge of WHS and WHS legislation • evaluation of WHS induction and training • review of WHS recordkeeping system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>WHS legislation may include:</p>	<ul style="list-style-type: none"> • applicable commonwealth and state or territory WHS Acts, regulations and codes of practice • common law duties to meet general duty of care requirements • WHS legislative and regulatory requirements for: <ul style="list-style-type: none"> • effectively managing hazards • establishing consultation arrangements, including those for health and safety representatives and health and safety committees • providing information and training, including training in safe operating procedures; procedures for workplace hazards; hazard identification, risk assessment and risk control; and emergency and evacuation procedures • WHS legislative, regulatory and other requirements for the maintenance and confidentiality of records of occupational injury and disease.
<p>Duty holders may include:</p>	<ul style="list-style-type: none"> • as specified in WHS Acts: <ul style="list-style-type: none"> • officers • PCBUs or their officers • workers • other persons at a workplace.
<p>Control of associated risks may include:</p>	<ul style="list-style-type: none"> • administrative • as specified in WHS Acts, regulations and codes of practice • counselling/disciplinary processes, such as those associated with alcohol and other drugs • education about alcohol and other drugs work-related issues • engineering • hazard elimination • housekeeping and storage • issue resolution • personal protective equipment

	<ul style="list-style-type: none"> • purchasing of supplies and equipment • workplace inspections, including plant and equipment.
WHS recordkeeping may relate to:	<ul style="list-style-type: none"> • audit and inspection reports • consultation, such as: <ul style="list-style-type: none"> • meetings of health and safety committees • work team meeting agendas, including WHS items and actions • first aid/medical post records • hazardous chemicals registers • induction, instruction and training • manufacturer and supplier information, including dangerous goods storage lists • plant and equipment maintenance and testing reports • workers' compensation and rehabilitation records • workplace environmental monitoring records.

Regulation, Licensing and Risk – Work Health and Safety

BSBWHS504A Manage WHS hazards and risks

Modification History

Release	Comments
Release 1	<p>This Unit first released with <i>BSB07 Business Training Package version 7.0</i>.</p> <p>Replaces but is not equivalent to BSBOHS505C Manage hazards in the work environment AND BSBOHS507B Facilitate the application of principles of occupational health to control OHS risk.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage work health and safety (WHS) hazards and risks.

Application of the Unit

This unit applies to individuals who contribute to the management of WHS hazards and risks. This management is based on the organisation's WHS management system (WHSMS), WHS information system (WHSIS) and risk-management approach (as covered in BSBWHS503A Contribute to the systematic management of WHS risk).

The unit applies to people who work in a range of WHS roles across all industries and who apply a substantial knowledge base and well-developed skills in a wide variety of WHS contexts.

NOTE: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Access information and data on WHS hazards and risks</p>	<p>1.1 Identify <i>sources of information and data</i></p> <p>1.2 Obtain information and data to determine the nature and scope of <i>hazards and risks</i>, the range of harms they may cause, and how these harms happen</p> <p>1.3 Obtain information and data to determine techniques, tools and processes to assess risk associated with identified hazards and risk control options</p>
<p>2. Prepare to manage WHS hazards and risks</p>	<p>2.1 Apply knowledge of the organisation's WHSMS and WHSIS to identify requirements for managing WHS hazards and risks</p> <p>2.2 Apply knowledge of <i>WHS legislation</i> to identify <i>duty holders</i> and legislative requirements for managing WHS hazards and risks</p>
<p>3. Develop and implement WHS hazard and risk-management processes</p>	<p>3.1 Apply techniques, tools and processes to assess risks associated with hazards and risk control options</p> <p>3.2 Apply knowledge of hazards and risks to develop appropriate risk controls</p> <p>3.3 Develop and implement a risk control plan and evaluate risk controls</p> <p>3.4 Carry out hazard identification and risk management according to organisational and legal requirements, adopting a risk-management approach</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse relevant workplace information and data
 - contribute to the assessment of resources needed to manage risk and where appropriate access these resources
 - identify areas for WHS improvement
- communication skills to:
 - conduct effective formal and informal meetings and communicate effectively with personnel at all levels of the organisation
 - use language appropriate to the work team and the task
- consultation and negotiation skills to:
 - develop plans
 - implement and monitor designated actions
- information technology skills to:
 - access and download internal and external information and data on WHS
 - use a range of communication media
- literacy skills to prepare plans and reports for a range of target groups, including health and safety committees, health and safety representatives, managers, supervisors, and persons conducting businesses or undertakings (PCBUs) or their officers
- organisational skills to manage own tasks within a timeframe
- project-management skills to achieve change in WHS matters
- research skills to:
 - access relevant WHS information and data
 - identify areas for improvement
 - interpret information and data.

Required knowledge

- basic principles of incident causation and injury processes
- difference between hazard and risk
- formal and informal communication and consultation processes, and key personnel related to communication
- how the characteristics and composition of the workforce impact on WHS risk and the management of WHS, including:
 - communication skills
 - cultural background and diversity
 - gender
 - labour market changes
 - language, literacy and numeracy levels of the workforce

- structure and organisation of the workforce, including part time, casual and contract workers; shift rosters; and geographical location
- workers with specific needs and limitations
- workplace culture towards alcohol and other drug use
- internal and external sources of WHS information and data, and how to access them
- limitations of generic hazard identification and risk assessment checklists, and risk ranking processes
- methods for providing evidence of compliance with WHS legislation
- nature of workplace processes (work flow, planning and control) and hazards relevant to the workplace
- organisational culture as it impacts on the work team
- organisational WHS policies, procedures, processes and systems
- other functional areas that impact on the management of WHS
- principles and practices of a systematic approach to managing WHS
- relevant commonwealth and state or territory WHS Acts, regulations, codes of practice, standards and guidance material, and other relevant publications
- risk as the effect of uncertainty on objectives
- risk management as a duty of PCBUs or their officers under WHS legislation
- roles and responsibilities of individuals and parties under WHS legislation
- standard industry controls for a range of hazards
- techniques, tools and processes for identifying and controlling health and safety hazards and risks, including:
 - hazard and risk checklists
 - hazard hunts
 - job safety analyses
 - manifests and registers, including for dangerous goods, hazardous chemicals and plant
 - safe work method statements
 - surveys using questionnaires, interviews and other survey techniques
 - workplace inspections and walk throughs.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the following is essential:</p> <ul style="list-style-type: none"> • complete risk assessment using a range tools and processes • outline risk factors and recommended risk controls for a hazard • action plan to implement risk controls and risk-management processes, including positive performance indicators to monitor implementation • knowledge of relevant WHS Acts, regulations, codes of practice, standards and guidance material.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • a workplace or simulated workplace • workplace documentation • office equipment and resources • relevant Acts, regulations, codes of practice, standards and guidelines relating to risks found in the workplace.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • analysis of responses to case studies and scenarios • assessment of written reports on the effectiveness of hazard identification, risk assessment, and control and management actions taken • demonstration of techniques used to identify hazards, to assess associated risks, and to control, monitor and evaluate risks • direct questioning combined with review of portfolios of evidence and third-party reports of on-the-job performance by the candidate • observation of performance in role plays

	<ul style="list-style-type: none">• observation of presentations• oral or written questioning to assess knowledge• review of action plans• written reports on hazard-identification and risk-management activities.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• BSBWHS503A Contribute to the systematic management of WHS risk• BSBWHS506A Contribute to developing, implementing and maintaining WHS management systems• BSBWHS507A Contribute to managing WHS information systems• BSBWHS508A Manage WHS hazards associated with plant.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Sources of information and data</i> may include:</p>	<ul style="list-style-type: none"> • Australian and international standards • industry bodies and groups • unions • websites, journals and newsletters • WHS Acts, regulations, codes of practice, guidelines and other information issued by WHS regulators • WHS specialists • workers' compensation insurance agents • workplace policies, procedures, processes and systems.
<p><i>Hazards and risks</i> may include:</p>	<ul style="list-style-type: none"> • hazards and risks associated with particular industries and/or occupations • hazards and risks determined by: <ul style="list-style-type: none"> • needs of the workplace, local industry and regional contexts • how common they are or could be • how big a problem they are or could be, in terms of severity of actual or potential harm, and numbers of workers they may harm • potential or actual costs, impacts on the organisation/industry, and requirements to comply with hazard and industry-specific WHS regulations and codes of practice • commonly occurring hazards: <ul style="list-style-type: none"> • biological hazards, such as viruses, bacteria, hepatitis, legionnaires' disease, Q fever, brucellosis, leptospirosis, HIV and fungi • electrical • extreme temperature • hazardous chemicals • ionising and non-ionising radiation • machinery and equipment • manual tasks • noise and vibration

	<ul style="list-style-type: none">• psychosocial hazards, such as work-related stress and fatigue, bullying and violence• working at height, falling objects, falls, slips and trips.
<i>WHS legislation</i> may include:	<ul style="list-style-type: none">• Acts• regulations• codes of practice.
<i>Duty holders</i> may include:	<ul style="list-style-type: none">• as specified in WHS Acts:<ul style="list-style-type: none">• PCBUs or their officers• workers• other persons at a workplace.

Regulation, Licensing and Risk – Work Health and Safety

HLTAID001 Provide cardiopulmonary resuscitation

Modification History

Release	Notes
Release 3	Updated mapping information. Equivalent outcome.
Release 2	Updated mapping information. Equivalent outcome.
Release 1	<p>This version was released in <i>HLT Health Training Package release 1.0</i> and meets the requirements of the New Standards for Training Packages.</p> <p>Significant changes to elements and performance criteria</p> <p>Revised evidence requirements, including volume and frequency of assessment</p>

Application

This unit of competency describes the skills and knowledge required to perform cardiopulmonary resuscitation (CPR) in line with the Australian Resuscitation Council (ARC) Guidelines.

This unit applies to all workers who may be required to provide CPR in a range of situations, include community and workplace settings.

Specific licensing requirements relating to this competency, including requirements for refresher training should be obtained from the relevant state/territory Work Health and Safety Regulatory Authority.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

Elements define the essential outcomes.

Performance criteria specify the level of performance needed to demonstrate achievement of the element.

1. Respond to an emergency situation

- 1.1 Recognise an emergency situation
- 1.2 Identify, assess and minimise immediate hazards to health and safety of self and others
- 1.3 Assess the casualty and recognise the need for CPR
- 1.4 Seek assistance from emergency response services

2. Perform CPR procedures

- 2.1 Perform CPR
- 2.2 Display respectful behaviour towards casualty
- 2.3 Operate automated external defibrillator (AED) according to manufacturer's instructions

ELEMENT**PERFORMANCE CRITERIA**

Elements define the essential outcomes.

Performance criteria specify the level of performance needed to demonstrate achievement of the element.

3. Communicate details of the incident

3.1 Accurately convey incident details to emergency response services

3.2 Report details of incident to workplace supervisor as appropriate

3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

Foundation Skills

The Foundation Skills described those required skills (language, literacy and numeracy) that are essential to performance.

- *Oral communication* – in order to make an accurate verbal report to supervisor and emergency response services

The remaining foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTAID001 Provide cardiopulmonary resuscitation

Modification History

Release	Notes
Release 1	<p>This version was released in <i>HLT Health Training Package release 1.0</i> and meets the requirements of the New Standards for Training Packages.</p> <p>Significant changes to elements and performance criteria. Revised evidence requirements, including volume and frequency of assessment</p>

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory regulations, first aid codes of practice, ARC guidelines and workplace procedures:

- conducted a hazard assessment and identified strategies to minimise risk
- demonstrated safe manual handling techniques
- assessed airway, breathing and responsiveness of casualty
- performed at least four minutes of uninterrupted CPR on both an adult and an infant resuscitation manikin placed on the floor, demonstrating the following techniques on each:
 - checking for response and normal breathing
 - recognising abnormal breathing
 - opening and clearing the airway
 - using correct hand location, compression depth rate in line with the ARC recommended ratio of compressions and ventilations
 - acting in the event of regurgitation or vomiting
 - following single rescuer procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
- followed the prompts of an Automated External Defibrillator (AED)
- provided an accurate verbal report of the incident
- responded to at least one simulated resuscitation scenario contextualised to the candidate's workplace/community setting.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- state/territory regulations, first aid codes of practice and workplace procedures including:
 - ARC Guidelines relevant to the provision of CPR
 - safe work practices to minimise risks and potential hazards
 - infection control principles and procedures, including use of standard precautions
 - requirements for currency of skill and knowledge
- legal, workplace and community considerations, including:
 - need for stress-management techniques and available support following an emergency situation
 - duty of care requirements
 - respectful behaviour towards a casualty
 - own skills and limitations
 - consent
 - privacy and confidentiality requirements
 - importance of debriefing
- considerations when providing CPR, including:
 - airway obstruction due to body position
 - appropriate duration and cessation of CPR
 - appropriate use of an AED
 - chain of survival
 - standard precautions
- basic anatomy and physiology relating to:
 - absence of normal breathing
 - anatomy of the external chest
 - physiology relating to response/consciousness
 - upper airway anatomy and effect of positional change.

Assessment Conditions

Skills must be demonstrated working individually:

- in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates' skills and knowledge.

In addition, assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- equipment, including:
- an Automated External Defibrillator (AED) training device.

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors. In addition, assessors must hold:

- a current advanced first aid certificate

OR

- at least three years' experience as a health professional, nurse or emergency services provider

HLTAID003 Provide first aid

Modification History

Release	Comments
Release 4.0	Updated mapping information. Equivalent outcome.
Release 3.0	Updated mapping information.
Release 2.0	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1.0	<p>This version was released in <i>HLT Health Training Package release 1.0</i> and meets the requirements of the New Standards for Training Packages.</p> <p>Significant changes to elements and performance criteria, changes to scope of unit. New evidence requirements for assessment. Removal of prerequisite unit</p>

Application

This unit of competency describes the skills and knowledge required to provide a first aid response to a casualty. The unit applies to all workers who may be required to provide a first aid response in a range of situations, include community and workplace settings.

Specific licensing requirements relating to this competency, including requirements for refresher training, should be obtained from the relevant state/territory Work Health and Safety Regulatory Authority.

Elements and Performance Criteria

ELEMENT

PERFORMANCE CRITERIA

Elements define the essential outcomes.

Performance criteria specify the level of performance needed to demonstrate achievement of the element.

1. Respond in an emergency situation

- 1.1 Recognise an emergency situation
- 1.2 Identify, assess and manage immediate hazards to health and safety of self and others
- 1.3 Assess the casualty and recognise the need for first aid response
- 1.4 Assess the situation and seek assistance from emergency response services where required

2. Apply appropriate first aid procedures

- 2.1 Perform cardiopulmonary resuscitation (CPR)
- 2.2 Provide first aid in accordance with established first aid principles
- 2.3 Display respectful behaviour towards casualty
- 2.4 Obtain consent from casualty where possible
- 2.5 Use available resources and equipment to make the casualty as comfortable as possible
- 2.6 Operate first aid equipment according to manufacturer's instructions
- 2.7 Monitor the casualty's condition and respond in accordance with first aid principles

3. Communicate details of the incident

- 3.1 Accurately convey incident details to emergency response services
- 3.2 Report details of incident to workplace supervisor as appropriate
- 3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

ELEMENT**PERFORMANCE CRITERIA**

Elements define the essential outcomes.

Performance criteria specify the level of performance needed to demonstrate achievement of the element.

4. Evaluate own performance

4.1 Recognise the possible psychological impacts on self and other rescuers involved in critical incidents

4.2 Participate in debriefing to address individual needs

Foundation Skills

The Foundation Skills described those required skills (language, literacy and numeracy) that are essential to performance.

- Oral communication – in order to make an accurate verbal report to emergency response services and workplace supervisor

The remaining foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTAID003 Provide first aid

Modification History

Release	Comments
Release 1.1	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1.0	This version was released in <i>HLT Health Training Package release 1.0</i> and meets the requirements of the New Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. New evidence requirements for assessment. Removal of prerequisite unit

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- conducted a hazard assessment and identified strategies to minimise risk
- demonstrated safe manual handling techniques
- assessed airway, breathing and responsiveness of casualty
- performed at least four minutes of uninterrupted CPR on both an infant resuscitation manikin and an adult resuscitation manikin placed on the floor, demonstrating the following techniques on each:
 - checking for response and normal breathing
 - recognising abnormal breathing
 - opening and clearing the airway
 - using correct hand location, compression depth rate in line with the ARC recommended ratio of compressions and ventilations
 - acting in the event of regurgitation or vomiting
 - following single rescuer procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
- followed the prompts of an Automated External Defibrillator (AED)
- conducted a verbal secondary survey
- applied first aid procedures for the following:
 - allergic reactions

- anaphylaxis
 - asthma
 - basic wound care
 - severe bleeding
 - burns
 - cardiac arrest
 - choking and airway obstruction
 - convulsions
 - envenomation (using pressure immobilisation)
 - fractures, sprains and strains (using arm slings, roller bandages or other appropriate immobilisation techniques)
 - poisoning
 - respiratory distress
 - shock
- provided an accurate verbal report of the incident
 - responded to at least two simulated emergency scenarios contextualised to the candidate's workplace/community setting.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- state/territory regulations, first aid codes of practice and workplace procedures including:
 - ARC Guidelines relevant to provision of CPR and first aid
 - safe work practices to minimise risks and potential hazards
 - infection control principles and procedures, including use of standard precautions
 - requirements for currency of skill and knowledge
- legal, workplace and community considerations including:
 - need for stress-management techniques and available support following an emergency situation
 - duty of care requirements
 - respectful behaviour towards a casualty
 - own skills and limitations
 - consent
 - privacy and confidentiality requirements
 - importance of debriefing
- considerations when providing first aid including:
 - airway obstruction due to body position
 - appropriate duration and cessation of CPR
 - appropriate use of an AED
 - standard precautions and infection control
- principles and procedures for first aid management of the following scenarios:
 - abdominal injuries
 - allergic reactions
 - anaphylaxis
 - bleeding control
 - burns
 - cardiac conditions
 - choking and airway obstruction
 - cold and crush injuries
 - diabetes
 - dislocations
 - drowning
 - envenomation
 - environmental impact (including hypothermia, hyperthermia, dehydration and heat stroke)
 - epilepsy
 - eye and ear injuries
 - fractures
 - head, neck and spinal injuries
 - minor skin injuries
 - needle stick injuries
 - poisoning and toxic substances

- respiratory distress, including asthma and other respiratory conditions
- seizures
- severe allergic and anaphylactic reactions
- shock
- soft tissue injuries
- unconsciousness, abnormal breathing or not breathing
- basic anatomy and physiology relating to:
 - absence of normal breathing
 - anatomy of the external chest
 - physiology relating to response/consciousness
 - upper airway anatomy and effect of positional change
 - anatomy and physiology considerations in provision of first aid for specified conditions

Assessment Conditions

Skills must be demonstrated working individually:

- in an environment that provides realistic in-depth, industry-validated scenarios and simulations to enable assessment of candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- first aid equipment including
 - roller bandages
 - triangular bandages cloth
 - trauma dressings
 - placebo bronchodilator and spacer device
 - adrenalin auto-injector training device
 - an AED training device
 - emergency rescue blanket
 - workplace first aid kit.

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

In addition, assessors must hold:

- a current advanced first aid certificate

OR

- at least three years' experience as a health professional, nurse or emergency services provider.

ICAICT206A Install software applications

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to select, install or upgrade basic commercial software applications.

Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to select, install and upgrade basic commercial software applications within a small to large office environment. Communicating effectively and supporting software application packages are key components of any ICT business or office environment.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine software or software upgrade requirements	<p>1.1 Document <i>client</i> requirements and report to <i>appropriate person</i></p> <p>1.2 Act on instructions to meet client requirements, according to <i>organisational requirements</i></p>
2. Obtain software or software upgrade	<p>2.1 Investigate and select a <i>software application program</i> that best conforms to requirements and organisational policies</p> <p>2.2 Obtain application program under instruction from appropriate <i>person</i></p> <p>2.3 Determine <i>licensing requirements</i> and record, according to organisational guidelines</p> <p>2.4 Ensure target <i>computer</i> conforms to the minimum hardware and <i>operating system</i> requirements of the <i>application program</i></p>
3. Install or upgrade software	<p>3.1 Install new or upgraded <i>software application program</i> according to <i>appropriate person</i> or organisational instructions</p> <p>3.2 Complete the installation process efficiently and effectively to minimise disruption</p> <p>3.3 Carry out testing and acceptance, according to corporate guidelines, paying particular attention to possible <i>effect</i> on other systems</p> <p>3.4 Ensure client requirements are satisfied</p> <p>3.5 Refer outstanding <i>client</i> issues to <i>appropriate person</i> as necessary</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - communicate with peers and supervisors
 - support software application deployment
- literacy skills to:
 - interpret user manuals and help functions
 - make decisions about licensing requirements
 - read and write basic workplace documents
 - seek assistance and expert advice
- technical skills to:
 - carry out testing
 - upload and install software
 - use computer hardware.

Required knowledge

- broad general knowledge of:
 - client business domain
 - hardware storage devices
 - input and output devices
 - licensing arrangements and responsibilities
 - operating systems supported by the organisation
 - organisational guidelines for purchasing
 - software application packages
 - software copyright responsibilities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install software applications through operating system instructions • configure computer to accept new software or upgrade • carry out testing and acceptance according to corporate guidelines.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • PC where software installation may be performed • use of application software currently used in industry • documents detailing organisational testing and acceptance policy and procedures • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's underpinning knowledge of software upgrade requirements, current industry standard application software and acceptance testing procedures • direct observation of candidate upgrading or installing new software.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Client</i> may include:	<ul style="list-style-type: none"> • employees • external organisations • individuals • internal departments.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor.
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • budget • corporate purchasing • guidelines • licensing arrangements.
<i>Software application program</i> may include:	<ul style="list-style-type: none"> • database programs • email programs • internet browsers • spreadsheets • system browsers • word processing.
<i>Licensing requirements</i> may include:	<ul style="list-style-type: none"> • cost of licence • number of licences required • support provided • type of licence.
<i>Computer</i> may include:	<ul style="list-style-type: none"> • laptops • servers • workstations.
<i>Operating system</i> may include:	<ul style="list-style-type: none"> • Mac OS X • Linux • Windows.
<i>Effect</i> may relate to:	<ul style="list-style-type: none"> • data entry • effect on normal business • installation time • problems.

Unit Sector(s)

General ICT

ICAICT304A Implement system software changes

Modification History

Version	Comments
ICAICT304A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement system software changes and to hand over the modified system to the client's operational area.

Application of the Unit

This unit applies to those working in support roles who are required to update operating systems on client computers with the latest technology fixes.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine system changes required	<p>1.1 Determine and record required changes to <i>system</i></p> <p>1.2 Ensure that documentary evidence exists to support changes and evaluate changes required</p> <p>1.3 Complete <i>documentation</i> required according to maintenance methodologies</p> <p>1.4 Clarify and confirm the nature of the changes with the <i>client</i></p> <p>1.5 Obtain technical data from reliable sources and request other resources that may be required to complete the changes</p>
2. Carry out system changes	<p>2.1 Plan the procedure to effect intended changes</p> <p>2.2 Consult with colleagues and <i>users</i> involved in the proposed changes and agree a mutually acceptable timeline and method of implementation</p> <p>2.3 Copy initialisation or configuration files prior to implementation</p> <p>2.4 Create a roll-back path in the event of failure</p> <p>2.5 Ensure that changes required in <i>software</i> are made according to project or <i>organisational guidelines</i></p> <p>2.6 Test and verify that the changes have been made according to implementation guides and <i>organisational standards</i></p>
3. Present changes to client	<p>3.1 Demonstrate changes to the client and explain the impact of these changes</p> <p>3.2 Work towards making these changes acceptable to the client if changes are rejected, or making further modifications if required</p> <p>3.3 Update documentation and repositories according to standards and update modifications made to the change-management system</p>
4. Perform handover to client	<p>4.1 Update documentation and client procedures to reflect changes made</p> <p>4.2 Secure sign-off of acceptance documents by client</p> <p>4.3 Facilitate handover of modified system to client's operational area</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - consult with colleagues and users
 - evaluate client user requirements
- literacy skills to:
 - interpret organisational guidelines and standards
 - interpret policy and procedures
 - interpret technical manuals
 - write documentation and client procedures
- planning and organisational skills to:
 - effect intended changes
 - prioritise and organise own work
 - technical skills to install and configure system software.

Required knowledge

- business scheduling requirements
- change control procedures
- client business domain
- current industry-accepted hardware and software products
- emerging standards for data and voice communications
- system's current functionality
- features of system under modification
- organisational policy and procedures with regard to system changes
- vendor software services with regard to system changes.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate, document and implement changes to the system with minimum disruption to the system and client users.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • computer • system software currently used in industry • technical manuals and tools • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of the system's functionality • direct observation of candidate implementing software change • evaluation of candidate's change process and updated modifications • review reports prepared by candidate, including log books and test results.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>System</i> may include:	<ul style="list-style-type: none"> • application • business • computers • financial system • information system • management system • mobile equipment • network • software.
<i>Documentation</i> for version control may follow:	<ul style="list-style-type: none"> • audit trails • client training • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • maintaining equipment inventory • naming standards • project-management templates and report writing • satisfaction reports • version control.
<i>Client</i> may include:	<ul style="list-style-type: none"> • customer • external organisation • individual • internal department • internal employee.
<i>Users</i> may include:	<ul style="list-style-type: none"> • department within the organisation • person within a department • third party.
<i>Implementation</i> may include:	<ul style="list-style-type: none"> • formulating methods for standby operations or contingency plans • implementing the entire system.
<i>Software</i> may include:	<ul style="list-style-type: none"> • commercial software applications • in-house or customised software • organisation-specific software • packaged software.

<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none">• communication methods• content of emails• dispute resolution• document procedures and templates• downloading information and accessing particular websites• financial control mechanisms• making voice or video calls• opening mail with attachments• personal use of emails and internet access• virus risk.
<i>Organisational standards</i> may include:	<ul style="list-style-type: none">• communication with stakeholders• dispute resolution and modification procedures• formal procedures that must be adhered to, such as check points and sign-offs with documented procedures and templates• implementation of financial control mechanisms• processes for determining size and cost.

General ICT

ICAICT306A Migrate to new technology

Modification History

Version	Comments
ICAICT306A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use upgraded technology. It includes testing and evaluating new technologies to improve the organisation's performance.

Application of the Unit

This unit applies to individuals engaged in ongoing review and research in order to identify and apply new technology or techniques to improve aspects of the organisation's activities. The unit emphasises the importance of constantly reviewing work processes, skills and techniques to ensure that the quality of the entire business process is maintained at the highest level possible through the appropriate application of new technology.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare to use new technology	1.1 Review organisation's goals and activities 1.2 Research new operational technologies that will advance the organisation's goals and activities 1.3 Prepare evaluation checklist 1.4 Evaluate and select the most appropriate technologies 1.5 Acquire selected <i>technology</i> 1.6 Identify and use new or upgraded <i>equipment</i> where appropriate, for the benefit of the organisation
2. Use technology to assist in solving organisational problems	2.1 Conduct testing of new or upgraded equipment 2.2 Use features and functions of new or upgraded equipment and <i>software</i> within the organisation 2.3 Access and use <i>sources of information</i> relating to new or upgraded equipment
3. Evaluate new or upgraded technology performance	3.1 Evaluate new or upgraded equipment for performance and usability against <i>OHS standards</i> and evaluation criteria 3.2 Determine <i>environmental considerations</i> from new or upgraded equipment 3.3 Seek <i>feedback</i> from users, where appropriate 3.4 Document new technology in a method consistent with organisation's guidelines

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate features and functions of new equipment and software
- communication skills to:
 - communicate with peers and supervisors
 - seek assistance and expert advice
 - seek feedback from users
- literacy skills to interpret technical documentation, equipment manuals and specifications
- planning and organisational skills to prioritise and monitor own work
- safety awareness skills to work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- research skills to locate appropriate sources of information regarding IT and new technologies
- technical skills to:
 - assist in the decision-making process
 - identify features of new technologies
 - test and evaluate new software and equipment.

Required knowledge

- current technology trends and directions in IT:
 - hardware
 - new developments
 - new protocols
 - services
 - software
- current industry hardware and software products, with broad knowledge of general features and capabilities
- information-gathering techniques
- vendor product directions relating to specified technology.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify new and emerging technology in IT • conduct testing and evaluate new equipment for the benefit of the organisation • use features and functions of new technologies, including software and equipment.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site where new technology may be used • new equipment and software currently used in industry • documents detailing OHS standards, environmental guidelines and organisational requirements • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of features and functions of new technology • direct observation of candidate using new technology • review of evaluation prepared by candidate evaluating upgraded technology performance • evaluation of currency of appropriate technology.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Technology</i> may include:	<ul style="list-style-type: none"> • communications equipment • hardware • networks • personal computers (PCs) • storage.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • hard drives • hubs • tablet • modems and other connectivity devices, such as digital subscriber line (DSL) modems • monitors • other peripheral devices • PCs • personal digital assistant (PDA) • printers • switches • workstations.
<i>Software</i> may include:	<ul style="list-style-type: none"> • commercial software packages • customer relationship management • enterprise systems (corporate systems) • integrated services: <ul style="list-style-type: none"> • banking • financial services • user-based software for new business processes.
<i>Sources of information</i> may include:	<ul style="list-style-type: none"> • appliance software and technical connections guidance and other outputs supplied by vendors and manufacturers • documents • test pages • web pages.
<i>OHS standards</i> may relate to:	<ul style="list-style-type: none"> • correct lifting methods • correct posture • length of time in front of computer • light position

	<ul style="list-style-type: none"> • lighting • physical safety considerations: <ul style="list-style-type: none"> • general electrical safety and cabling • power supply and leads applying to computer and peripheral installations • repetitive strain injury prevention • style of chair • type of desk • type of monitor • typing position • ventilation.
<i>Environmental considerations</i> may include:	<ul style="list-style-type: none"> • correct disposal by an authorised body of redundant hardware: <ul style="list-style-type: none"> • circuit boards • hard drives • motherboards • recycling • safe disposal of packaging: <ul style="list-style-type: none"> • cardboard • paper • plastic • polystyrene.
<i>Feedback</i> may include:	<ul style="list-style-type: none"> • interviews • meetings • questionnaires • surveys.

ICAICT401A Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to determine client business requirements and verify the accuracy of the information gathered.

Application of the Unit

This unit applies to information technology (IT) personnel who are required to gather information to determine business system requirements to meet client expectations and needs.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine context of business need or problem	<p>1.1 Establish the business <i>problem</i> to be investigated, including determining <i>system</i> boundaries, scope and the development methodology to be used</p> <p>1.2 Choose <i>information-gathering method</i> and develop questions appropriate to business problem</p> <p>1.3 Develop objectives and identify expected outcomes to be achieved</p> <p>1.4 Document the business problem</p> <p>1.5 Submit <i>documentation</i> to <i>appropriate person</i> for substantiation</p>
2. Gather information	<p>2.1 Use chosen information-gathering method to identify <i>clients</i> of the system and problems they encounter</p> <p>2.2 Record client responses</p> <p>2.3 Analyse gathered information to identify new <i>system requirements</i> and establish problem specifications</p> <p>2.4 Document system requirements and problems</p> <p>2.5 Analyse physical requirements and identify changes required to implement new systems</p>
3. Confirm system specifications	<p>3.1 Check documentation to ensure it meets client business needs</p> <p>3.2 Submit documentation to the client for verification of accuracy and approval</p> <p>3.3 Make changes to the documentation as necessary and indicated by the client</p> <p>3.4 Submit documentation to client for final approval or sign-off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - collect and present information
 - liaise and negotiate with internal and external personnel
 - participate in teams
- initiative and enterprise skills to identify, analyse and evaluate information from a variety of sources
- literacy skills to:
 - gather, analyse and evaluate information
 - prepare documentation
- problem-solving skills to:
 - participate in the development of strategic initiatives and contribute to solutions
 - troubleshoot common system problems
- research skills to specify, analyse and evaluate broad features of a particular business domain
- technical skills to provide current advice on systems and data-gathering products.

Required knowledge

- data-gathering techniques
- detailed knowledge in areas related to client business
- functional organisational charts and their interpretation
- physical requirements of the client's business, taking into account current system functionality, geography, environment, client user and cost constraints
- products related to data capture
- role of stakeholders and the degree of stakeholder involvement.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use investigative techniques to interview and document • produce a clear statement of business expectations and needs, including critical business requirements.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • current business needs • a client expectations brief • business objectives • systems, data gathering and appropriate software products • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate documenting a business problem • verbal or written questioning to assess candidate's knowledge of techniques for gathering, analysing and documenting information • review of documented system specifications developed by candidate for approval by client.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined</p>

	with targeted questioning to assess required knowledge.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Problem</i> may refer to:	<ul style="list-style-type: none"> • application • business • network • system.
<i>System</i> may include:	<ul style="list-style-type: none"> • application • business • cabling infrastructure • computers • financial information • management • network equipment • software.
<i>Information-gathering method</i> may include:	<ul style="list-style-type: none"> • focus groups or observation • interviews • physical-site surveys • questionnaires • surveys • vendor offerings.
<i>Documentation</i> may include:	<ul style="list-style-type: none"> • audit trails • standards: <ul style="list-style-type: none"> • Australian Standards (AS) • Institute of Electrical and Electronics Engineers (IEEE) • International Electrotechnical Commission (IEC) • International Organization for Standardization (ISO) • Internet Engineering Task Force (IETF) • naming • project management templates • report writing principles • version control.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor.

<i>Clients</i> may include:	<ul style="list-style-type: none">• customers• employees• external organisations• individuals• internal departments.
<i>System requirements</i> may include:	<ul style="list-style-type: none">• client user• cost constraints• environment• geography• system functionality.

Unit Sector(s)

General ICT

ICAICT405A Develop detailed technical design

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to assist in the development of a detailed technical design.

Application of the Unit

This unit applies to individuals performing systems design tasks who are required to review and update technical design documents.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Assist in selecting technical design features	1.1 Select and revise design model based on iteration and design changes 1.2 Incorporate outstanding design points according to <i>acceptance criteria</i> 1.3 Distribute reports identifying changes and implications to <i>appropriate person</i> for review
2. Contribute to design review	2.1 Compare design against <i>requirements</i> and fix as necessary 2.2 Confirm design with appropriate person 2.3 Use <i>feedback mechanisms</i> to gather information on design changes from <i>client</i> 2.4 Incorporate design changes where required
3. Contribute to development of program specifications	3.1 Implement modules by incremental development techniques 3.2 Identify user authority for each module 3.3 Prepare detailed specifications of module implementation for each module that will not be incrementally built 3.4 Prepare documentation according to requirements of the <i>project</i>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with client when:
 - transferring and collecting information
 - presenting information and gaining consensus on concepts
- literacy skills to prepare technical documentation
- problem-solving skills to:
 - develop algorithms
 - participate in the development of strategic initiatives
 - revise the design model
- technical skills to incorporate required changes to model.

Required knowledge

- client business domain and client's critical business functions and processes
- current various life cycle options
- design fundamentals and refinement
- design quality metrics.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • design and prepare a clear and best-fit technical design for a set project, incorporating: <ul style="list-style-type: none"> • changes to design model based on user requirements • detailed specification of modules • updated documentation to reflect changes.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • requirements model • business requirements • project deliverables • acceptance criteria • current information technology (IT) blueprint • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of the principles of technical designs • review of project documentation, particularly including design model and module specifications • review of client-feedback mechanisms.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p>

	In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Acceptance criteria</i> may include:	<ul style="list-style-type: none"> • cost implications • logistical considerations • technical • timeframe.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor.
<i>Requirements</i> may relate to:	<ul style="list-style-type: none"> • application • business • network • people in the organisation • system.
<i>Feedback mechanisms</i> may include:	<ul style="list-style-type: none"> • interviews • meetings • questionnaires • surveys.
<i>Client</i> may include:	<ul style="list-style-type: none"> • clubs • external organisations • individuals • internal departments • internal employees.
<i>Project</i> may include:	<ul style="list-style-type: none"> • business improvement process • business involved in a total organisational change • ebusiness solution involving the total organisation or part of the organisation • systems-only change.

ICAICT508A Evaluate vendor products and equipment

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to evaluate and test a range of vendor products and equipment against a client's business requirements.

Application of the Unit

This unit applies to individuals in a range of information and communications technology (ICT) areas who are required to assess hardware and software products.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Establish business requirements	<p>1.1 Identify and prioritise business requirements</p> <p>1.2 Identify conflicting or overlapping business requirements</p> <p>1.3 Specify budget and available resources</p> <p>1.4 Validate business requirements, budget and resource needs with client</p>
2. Identify vendor products and equipment	<p>2.1 Investigate a representative range of vendor products and equipment</p> <p>2.2 Identify and document interdependencies</p> <p>2.3 Specify and document technical alternatives available to the business</p> <p>2.4 Determine and document availability of products and equipment</p> <p>2.5 Ensure vendor products and equipment meet Australian or other standards</p>
3. Test vendor products and services	<p>3.1 Develop valid and reliable test regime with appropriate measurements</p> <p>3.2 Establish test environment, including calibrated measuring equipment</p> <p>3.3 Undertake testing of products or equipment and document results</p> <p>3.4 Undertake revised testing where initial tests are inconclusive or where alternative product configuration may meet business requirements</p>
4. Evaluate vendor products, services and equipment	<p>4.1 Rate vendor products for quality, performance and support</p> <p>4.2 Rate vendor products for fit with client needs</p> <p>4.3 Establish product limitations, performance, integration capabilities and costs and compare with established business requirements</p> <p>4.4 Prepare cost-benefit analysis</p>
5. Prepare evaluation report	<p>5.1 Document product information in order of preference</p> <p>5.2 Recommend preferred product, including the reasoning behind recommendations</p> <p>5.3 Prepare a report containing solution details</p> <p>5.4 Submit report to client for approval</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to compare and contrast similar products from different vendors
- communication skills to effectively communicate with vendors
- literacy skills to identify key sources of product information, summarise and document technical information
- numeracy skills to compare prices on different products.

Required knowledge

- broad knowledge of:
 - Australian Computer Society Code of Ethics
 - client business domain
 - copyright and intellectual property
 - current industry-accepted hardware and software products, including their general features and capabilities
- detailed knowledge of current and future technical systems
- features and function of relevant hardware components and software products and the interaction between these
- vendor product and international standards.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate a range of vendor products and equipment against a client's functional requirements • choose the most appropriate products • document the selected items and selection rationale.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • client functional requirements • hardware and software specifications from vendors • test procedures and activities. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of client business domain and appropriate selection criteria • review of reports prepared by candidate showing selected items and selection rationale.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Business requirements</i> may relate to:	<ul style="list-style-type: none"> • application • business • network • people in the organisation • system.
<i>Client</i> may include:	<ul style="list-style-type: none"> • employees • external organisations • individuals • internal departments.
<i>Standards</i> may include:	<ul style="list-style-type: none"> • Australian Standards (AS) • Institute of Electrical and Electronics Engineers (IEEE) • International Electrotechnical Commission (IEC) • International Organization for Standardization (ISO) • International Telecommunications Union (ITU) • Internet Engineering Task Force (IETF) • organisational • project.
<i>Rate</i> process may include:	<ul style="list-style-type: none"> • evaluation of: <ul style="list-style-type: none"> • customer testimonies • support documents.
<i>Solution</i> may include:	<ul style="list-style-type: none"> • hardware upgrades • implementing a new system • new hardware • new software • software upgrades • user training.

Unit Sector(s)

General ICT

ICANWK410A Install hardware to a network

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan, manage and install new hardware components in a network.

Application of the Unit

This unit applies to those employed in technical information technology (IT) support roles, such as network administrators, who are required to install and support network hardware in a peer-to-peer or client-server networked environment.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine network hardware requirements	<p>1.1 Assess client network hardware and cabling requirements, considering compatibility with existing application software and operating system</p> <p>1.2 Analyse requirements against local area network (LAN), wide area network (WAN), wireless networks, and mobile equipment access design limitations and organisational guidelines</p> <p>1.3 Evaluate client requirements according to organisational guidelines, corporate purchasing procedures, licensing arrangements and budget</p>
2. Obtain network hardware	<p>2.1 Contact vendors and obtain technical specifications</p> <p>2.2 Evaluate or test hardware according to client requirements and organisational guidelines</p> <p>2.3 Document recommendations and provide copies to appropriate person</p> <p>2.4 Determine and document licensing requirements and security issues</p> <p>2.5 Acquire hardware according to recommendations and organisational procedures</p> <p>2.6 Organise cabling infrastructure where required</p>
3. Install network hardware	<p>3.1 Conduct installation with minimal disruption to clients</p> <p>3.2 Install hardware according to appropriate installation procedures</p> <p>3.3 Configure and test the installation to ensure that it meets client needs</p>
4. Provide instruction and support for installed products	<p>4.1 Determine and document client instructions and needs</p> <p>4.2 Provide one-to-one or group instruction to client and users, as required</p> <p>4.3 Obtain client evaluation and feedback, to ensure that client requirements have been met</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to assess current client hardware and future requirements
- communication skills to:
 - discuss client requirements and specifications
 - interpret client budget requirements
 - interpret technical and hardware installation manuals
 - provide client instruction
- literacy skills to write technical notes and reports
- numeracy skills to plan, prioritise and organise work
- planning and organisational skills to maintain the continuity of network operations and business functions during network installation tasks
- research skills to document licensing requirements and security issues
- technical skills to:
 - evaluate client equipment for requirements
 - use application and diagnostic software.

Required knowledge

- overview knowledge of:
 - current industry, data and voice networking, security products, devices and procedures
 - current industry-accepted network protocols
 - organisational contracting procedures and responsibilities
 - system diagnostic software
- current industry-accepted network hardware and software products
- hardware and software installation procedures
- LAN capabilities and characteristics, such as network type, IP addressing, switch or hub operation
- network connections, including types of cables and cabling distance limitations and wireless connections
- operating systems sufficient to enable basic installation
- set-up and configuration procedures
- software packages supported by the organisation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate client user requirements and hardware installation • install a range of network hardware by planning, managing and supporting the installation of new components in a network, according to organisational policies and procedures.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • vendor hardware and software components • application software and operating system • hardware maintenance tools • live network • networked computers • organisational guidelines • technical documentation and installation manuals • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's underpinning knowledge • direct observation of candidate installing network devices • review of instructional guides for client or group presentation prepared by candidate • evaluation of performance test results prepared by candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking</p>

	<p>background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Network hardware</i> may include:</p>	<ul style="list-style-type: none"> • access points • firewalls • gateways • hubs • IP cameras • mobile phones • modems • network bridges • network interface cards • network printers • network scanners or multifunction devices • network-attached storage (NAS) • personal digital assistants (PDAs) • print servers • routers • switches.
<p><i>Application software</i> may include:</p>	<ul style="list-style-type: none"> • database programs to handle data and voice functionality • email programs • internet browsers • spreadsheets • system browsers • word processing.
<p><i>Operating system</i> may include:</p>	<ul style="list-style-type: none"> • Linux • Mac • Windows.
<p><i>Organisational guidelines</i> may include:</p>	<ul style="list-style-type: none"> • communication methods • content of emails • dispute resolution • document procedures and templates • downloading information and accessing particular websites • financial control mechanisms • opening mail with attachments • personal use of emails and internet access • virus risk.

<i>Client</i> may include:	<ul style="list-style-type: none">• clubs• external organisations• individuals• internal departments• internal employees.
<i>Appropriate person</i> may include:	<ul style="list-style-type: none">• authorised business representative• client• supervisor.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Determine operating system and software and hardware requirements</p>	<p>1.1 Assess <i>client</i> software and licensing requirements, considering compatibility with existing application software and operating system</p> <p>1.2 Assess <i>hardware</i> requirements</p> <p>1.3 Analyse requirements against local area network (LAN), wide area network (WAN), and wireless networks within organisational guidelines</p> <p>1.4 Evaluate client requirements according to organisational guidelines, corporate purchasing procedures and budget</p>
<p>2. Obtain deployment software to automate deployment</p>	<p>2.1 Evaluate <i>deployment software</i> according to client requirements and organisational guidelines</p> <p>2.2 Contact <i>vendors</i> and obtain technical specifications, including support arrangements and licensing</p> <p>2.3 Acquire software and licences, according to organisational procedures</p> <p>2.4 Store software licences and manuals, according to organisational guidelines</p>
<p>3. Automate installation of operating system via network</p>	<p>3.1 Plan and deploy <i>operating system</i> according to appropriate vendor installation procedures with minimal disruption to network and clients</p> <p>3.2 Configure and test installation to ensure that it meets client needs and vendor specifications</p> <p>3.3 Install updates and patches</p>
<p>4. Automate installation of software packages via network</p>	<p>4.1 Plan and deploy <i>software packages</i> according to appropriate vendor installation procedures with minimal disruption to network and clients</p> <p>4.2 Configure and test installation to ensure that it meets client needs and vendor specifications</p> <p>4.3 Install updates and patches</p>
<p>5. Test and sign off</p>	<p>5.1 Test installed operating system and software for error-free performance, identifying and resolving problems</p> <p>5.2 Determine and document security and licensing issues</p> <p>5.3 Obtain client evaluation and feedback, to ensure that client requirements have been met</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with a client to determine functional requirements of network
- literacy skills to document client requirements
- problem-solving skills to troubleshoot and debug:
 - deployment issues
 - configuration issues
- research skills to determine most suitable solution for client
- technical skills to:
 - implement LANs
 - implement various software deployment solutions.

Required knowledge

- overview knowledge of:
 - network protocols and operating systems
 - organisational contracting procedures and responsibilities
 - software licensing requirements and documentation
 - transmission control protocols or internet protocols (TCPs/IPs) and applications
- detailed knowledge of:
 - current industry standards related to software deployment
 - deployment software configuration
 - configuration of automated deployment processes
 - operating system deployment
 - software package deployment
 - troubleshooting deployment processes.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify client software requirements • plan and deploy automatic installation of operating system and software • configure and test installation, ensuring client needs are met.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site or prototype where deployment processes may be implemented • live network • software tools to support implementation of deployment processes • technical documentation and installation manuals • organisational guidelines • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of underpinning knowledge and skills • direct observation of candidate performing the tasks required to successfully implement automated deployment processes • documentation produced in a small project environment that reflects the understanding of client and technical skills required.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill</p>

	<p>level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Client</i> may include:	<ul style="list-style-type: none"> • external organisations • individuals • internal departments • internal employees.
<i>Hardware</i> may include:	<ul style="list-style-type: none"> • networks • network interface card (NIC) • personal computers • servers • workstations.
<i>Deployment software</i> may include:	<ul style="list-style-type: none"> • Acronis • Altiris • Ghost • remote installation services (RIS) and wireless distribution system (WDS) • Windows Server tools.
<i>Vendors</i> may include:	<ul style="list-style-type: none"> • Adobe • Apple • Citrix • Linux or Unix • Microsoft • Novell • open source.
<i>Operating system</i> may include:	<ul style="list-style-type: none"> • Linux • Mac • Unix • Windows.
<i>Software packages</i> may include:	<ul style="list-style-type: none"> • office applications • utilities.

Unit Sector(s)

Networking

ICANWK416A Build security into virtual private networks

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build security into a virtual private network (VPN).

Application of the Unit

This unit applies to networking staff who are required to ensure that VPNs contain required security.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Configure router to provide for network security monitoring and management	<p>1.1 Create and apply audit rules consistent with <i>policies, standards, protocols and management systems</i></p> <p>1.2 Configure router to provide appropriate level of asset security and monitoring of security consistent with <i>commercial and business requirements</i></p> <p>1.3 Monitor and manage system to assess the level of security and attempts to breach security of <i>framework components</i></p> <p>1.4 Employ appropriate <i>hardware</i> and <i>software</i> to monitor and address security issues and provide VPN solutions</p>
2. Secure a site-to-site VPN	<p>2.1 Configure internet key exchange (IKE) and internet protocol security (IPSec)</p> <p>2.2 Configure site-to-site IPSec VPN using pre-shared keys</p> <p>2.3 Configure site-to-site IPSec VPN using digital certificates</p>
3. Secure a remote access VPN	<p>3.1 Configure a VPN server</p> <p>3.2 Install and administer a router-management console</p> <p>3.3 Develop documentation on current <i>system</i> settings and framework components and file securely for future reference</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to undertake a network security risk assessment
- initiative and enterprise skills to develop enterprise policies, strategies and procedures
- literacy skills to:
 - interpret audit rules
 - produce security documentation
- numeracy skills to undertake a cost-benefit comparison
- technical skills to:
 - implement LAN, WLAN, VPN and WAN solutions
 - implement security strategies and configure network security software and hardware.

Required knowledge

- characteristics of:
 - auditing and penetration testing techniques
 - configuration of routers and switches
 - security protocols, standards and data encryption
- detailed knowledge of:
 - authentication issues
 - network protocols and operating systems
 - processes and techniques related to security perimeters and their functions
 - security threats, including eavesdropping, data interception, data corruption and data falsification
 - transmission control protocol or internet protocol (TCP/IP) protocols and applications
 - VPNs features, issues and functions
- overview knowledge of:
 - audit and intrusion detection systems
 - LAN, WLAN and WAN
 - organisational issues surrounding security cryptography
 - screened subnets
 - virus detection software.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • develop basic security functionality for either VPN, LANs, WANs or WLANs • implement such security • maintain such security • document the security implemented and its maintenance.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • network technical requirements • network infrastructure, including servers and security hardware and software • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> • VPNs • WANs • security protocols • review of candidate's documentation of installed security and its maintenance • evaluation of candidate's security implementation on a VPN.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be</p>

	combined with targeted questioning to assess required knowledge.
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Policies</i> may include:	<ul style="list-style-type: none"> • audit systems • incident response procedures • network intrusion detection systems.
<i>Standards, protocols and management systems</i> may include:	<ul style="list-style-type: none"> • AAA security • access control lists, context-based control lists • data over cable service interface specification • domain name system security extensions • generic routing encapsulation • IEEE 802.11 Protocol standard for secure wireless local area network products • internet group management protocol • IP security protocol • network port addresses translation (NAT or PAT) • point-to-point network tunnelling protocol • secure: <ul style="list-style-type: none"> • electronic transactions • multi-purpose internet mail extensions • shell • socket layer and transport layer security.
<i>Commercial and business requirements</i> may include:	<ul style="list-style-type: none"> • availability • backup • confidentiality • firewalls • hacking prevention • integrity • password logons.
<i>Framework components</i> may include:	<ul style="list-style-type: none"> • deployment of public key infrastructure (PKI), CA and key management services • firewall technologies • multi-platform directory services supporting relevant standards • operating system capable of providing access control, audit services • support for generalised security services interfaces,

	<p>personnel security</p> <ul style="list-style-type: none"> • trusted hardware and operating system at selective desktops, servers, network points and mainframes.
Hardware may include:	<ul style="list-style-type: none"> • desktop and laptop computers, networked and stand-alone • firewall devices • network-monitoring appliances • routers • switches • wired and wireless networks.
Software may include:	<ul style="list-style-type: none"> • audit • encryption modules • operating system • packaged software but can be supplied from many varying vendors and can include security • virus checking.
System may include:	<ul style="list-style-type: none"> • applications • databases • external service providers, such as internet service providers (ISPs) and digital certification suppliers • gateways • operating system • servers.

Networking

ICANWK502A Implement secure encryption technologies

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to ensure secure encryption is selected, implemented and monitored in an information and communications technology (ICT) network, either locally or both.

Application of the Unit

This unit applies to information technology (IT) professionals who may select, implement and monitor a secure encryption environment in any size enterprise. The encryption system may include local file encryption and encryption across computer networks.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine encryption methods	1.1 Analyse enterprise data security requirements 1.2 Create a new or review an existing security plan to determine appropriate encryption methods 1.3 Review a range of encryption technologies and rank the most appropriate options 1.4 Assess the costs associated with each encryption option 1.5 Document encryption options and costs and forward to appropriate person for decision
2. Implement encryption	2.1 Apply encryption technologies to the enterprise system 2.2 Analyse effect of encryption technologies on user roles and responsibilities 2.3 Inform user of new encryption technologies and effect it has on their responsibilities
3. Monitor encryption	3.1 Analyse implementation of the encryption technologies, confirming function and performance 3.2 Review help-desk records for problems concerning implementation and take appropriate action 3.3 Review system logs for encryption issues and compromises 3.4 Document encryption issues and compromises, notifying appropriate person

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse enterprise data security requirements and help-desk records
 - monitor and assess encryption systems
 - review a range of encryption software and tools
 - review security plan and conduct a detailed survey, including effect on user
 - review system security logs for breaches
- communication skills to:
 - convey and clarify complex information
 - liaise with users and clients
- literacy skills to:
 - create and interpret a data security analysis report
 - interpret an enterprise security plan
 - interpret and prepare technical documentation that includes encryption options and costs
- numeracy skills to make estimates and comparison of costs (cost-benefit analysis)
- planning and organisational skills to analyse effect on user and plan for organisational change
- problem-solving skills to troubleshoot, debug and correct connectivity and security issues
- research skills to:
 - assess and compare encryption options
 - determine data security threats, risks and countermeasures
- technical skills to:
 - develop enterprise policy and procedures
 - implement best practice encryption systems
 - implement local area network (LAN) or wireless local area network (WLAN), virtual private network (VPN) or wide area network (WAN) solutions
 - monitor encryption system for issues and compromises
 - test and prove function of chosen encryption system
 - undertake a network security risk assessment.

Required knowledge

- certificate-related infrastructure (certificate authorities, registration authorities, repository services)
- common asymmetric key algorithms and their usage
- common symmetric key algorithms and their usage, such as:
 - advanced encryption standard (AES)
 - data encryption standard (DES)
 - triple data encryption algorithm (triple DES)

- Blowfish
- encryption strength
- encryption types (public key, secret key, hash key)
- functions and features of:
 - access control permissions
 - digital signatures
 - symmetric encryption, asymmetric encryption and one-way encryption
 - timestamps
- one-way message digests, such as message digest algorithm 5 (MD5) and secure hash algorithm (SHA)
- public key infrastructure (PKI), pretty good privacy (PGP) and GNU Privacy Guard (GnuPG)
- replay security
- sources of security threats, including eavesdropping, data interception, data corruption, data falsification and authentication issues
- transmission control protocol or internet protocol (TCP/IP) protocols and applications
- security problems and challenges that arise from organisational issues
- wired equivalent privacy (WEP), wi-fi protected access (WPA) and wi-fi protected access 2 (WPA2).

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse enterprise data security requirements • create new or review existing security plan to determine the appropriate encryption methods • rank and document appropriate encryption methods • implement encryption systems informing users of any affects • monitor and document encryption issues and compromises notifying appropriate person.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site where encryption installation may be conducted • live network • servers • encryption software • encryption tools • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of security analysis and planning report that outlines enterprise security requirements and security plan, including challenges faced and how these were addressed • evaluation of documentation demonstrating review of suitable encryption systems, ranking the most appropriate • verbal or written questioning to assess candidate's knowledge of encryption types, algorithms, functions and features • direct observation of candidate performing tasks required to successfully implement and monitor a chosen encryption system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Unit Sector(s)

Networking

ICANWK503A Install and maintain valid authentication processes

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design, develop, install and maintain authentication processes. Security of information and personnel is of increasing importance to organisations. Authentication is a control or protective measure put into place by an organisation to reduce the vulnerability of the system.

Authentication controls include passwords, personal identification numbers (PINs), smart cards, biometric devices and other Authentication protocols.

Application of the Unit

This unit applies to middle managers, such as information security managers, network engineers or security analysts, responsible for implementing and monitoring the organisational security management system.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine authentication requirements	<p>1.1 Determine user and enterprise security requirements with reference to enterprise security plan</p> <p>1.2 Identify and analyse authentication options according to user and enterprise requirements</p> <p>1.3 Select the most appropriate authentication and authorisation processes</p>
2. Configure authentication software or tools	<p>2.1 Create an authentication realm and reuse as required to protect different areas of <i>server</i></p> <p>2.2 Add <i>users</i> and authorisation rules to new realm according to business needs</p> <p>2.3 Describe user attributes and user attribute set-up</p> <p>2.4 Set up an authentication filter and authorisation parameters on the appropriate server according to business requirements</p>
3. Apply authentication methods	<p>3.1 Develop or obtain authentication <i>protocols</i> as required</p> <p>3.2 Develop and distribute related <i>methods</i> to users according to business need</p> <p>3.3 Brief user on authentication system and their responsibilities according to enterprise security plan</p> <p>3.4 Apply authentication system to <i>network</i> and user according to system product requirements</p> <p>3.5 Record and store permission and configuration information in a secure central location</p>
4. Monitor authentication system	<p>4.1 Review the authentication system according to user and enterprise security and quality of service requirements</p> <p>4.2 Ensure ongoing security monitoring using incident management and reporting processes, according to enterprise security plan</p> <p>4.3 Adjust authentication system if required</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - analyse network information
 - plan approaches to technical problems or management requirements
- communication skills to:
 - convey and clarify complex information
 - liaise with clients
- literacy skills to interpret and prepare technical documentation, including recording authentication events related to network security design and incident response
- planning skills to plan control methods for managing authentication processes
- problem-solving skills to:
 - apply solutions in complex networks, including systems processes
 - instigate rapid deployment of solutions to problems involving authentication failure and security incidents
- technical skills to apply best practice to systems authentication methodologies and technologies.

Required knowledge

- overview knowledge of:
 - problems and challenges dealing with organisational authentication issues
 - resource accounting through authentication
 - common virtual private network (VPN) issues, including quality of service (QoS) considerations, bandwidth, dynamic security environment
 - function and operation of VPN concepts
- authentication adaptors
- biometric authentication adaptors
- digital certificates, such as VeriSign, X.509, and SSL
- function and operation of authentication
- network authentication services, such as Kerberos and NT LAN Manager (NTLM)
- features of common password protocols, such as:
 - challenge handshake authentication protocol (CHAP)
 - challenge phrases
 - password authentication protocol (PAP)
 - remote authentication dial-in user service (RADIUS) authentication
- token cards.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • design and deploy authentications solutions to the business technology environment and business needs • configure authentication software or tools • monitor and test authentication process after implementation • ensure authentication solutions are current.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site or prototype where network authentication may be implemented and managed • network support tools currently used in industry • organisational security policies related to authentication, manufacturer recommendations and current authentication standards, including biometric authentication adaptors • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> • current and emerging authentication processes • features and limitations in vendor solutions, operating systems and software • direct observation of candidate demonstrating management of authentication processes in a range of complex systems • review of documentation prepared by candidate to manage authentication processes.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the</p>

	<p>work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Networking

ICANWK509A Design and implement a security perimeter for ICT networks

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to build a high performance, high security, failure resistant security perimeter for an enterprise information and communications technology (ICT) network.

Application of the Unit

This unit applies to middle managers, such as information security managers, network engineers, network technicians or security analysts, responsible for implementing and managing the organisational network security.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Plan and design firewall solution	<p>1.1 Determine level and nature of security needed to meet enterprise requirements</p> <p>1.2 Identify security threats</p> <p>1.3 Research available perimeter security options</p> <p>1.4 Design security perimeter to meet identified enterprise requirements</p>
2. Configure perimeter to secure network	<p>2.1 Deploy perimeter devices according to design</p> <p>2.2 Configure <i>perimeter topology</i></p> <p>2.3 Configure <i>basic functionality</i> of <i>devices</i> to allow access</p> <p>2.4 Configure <i>advanced functions</i></p>
3. Plan, design and configure network devices to provide secure fallover and redundancy	<p>3.1 Back up device configuration</p> <p>3.2 Design and configure perimeter to enable continuity of service during upgrade of devices</p> <p>3.3 Design and configure perimeter to enable continuity of service in the event of device failure</p>
4. Plan, design and configure a VPN solution	<p>4.1 Configure perimeter for site to site virtual private networks (VPNs)</p> <p>4.2 Configure perimeter as a remote access VPN server</p> <p>4.3 Configure perimeter to allow <i>VPN tunnel</i> forwarding</p> <p>4.4 Diagnose and resolve VPN connectivity issues</p>
5. Test and verify design performance	<p>5.1 Test functionality of basic features</p> <p>5.2 Test functionality of advanced features</p> <p>5.3 Perform penetration testing to verify perimeter meets security requirements</p> <p>5.4 Monitor perimeter device performance</p> <p>5.5 Monitor security breaches</p> <p>5.6 Document test results and report to appropriate person</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse network information and plan approaches to technical problems or management requirements
- communication skills to:
 - convey and clarify complex information
 - liaise with clients
- literacy skills to interpret and prepare technical documentation, including recording security incidents and developing security policies
- planning skills to plan deployment of the perimeter solution
- problem-solving skills to:
 - design perimeter solution to meet security requirements
 - resolve technical problems
- technical skills to:
 - configure firewalls
 - configure routers
 - deploy perimeter devices to a network
 - test performance of security perimeter to current industry standards.

Required knowledge

- overview knowledge of:
 - emerging security issues
 - emerging security policies
- detailed knowledge of:
 - auditing and penetration testing techniques
 - capabilities of software and hardware perimeter solutions
 - logging analysis techniques
 - organisational network infrastructure
 - security technologies, according to perimeter design
 - weaknesses of installed perimeter design.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify threats to perimeter security • develop design for a secure perimeter • deploy perimeter to meet security requirements • design and configure advanced features of perimeter devices to provide additional services • design and configure an integrated VPN solution • conduct exhaustive testing of perimeter.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • site or prototype where perimeter security may be implemented and managed • perimeter devices • organisational security requirements • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of emerging security issues, security features of hardware and software, limitations in vendor solutions, operating systems and software • direct observation of candidate demonstrating deployment and configuration of a security perimeter • direct observation of candidate conducting testing of secure perimeter • evaluation of report that outlines testing procedures, test results and changes made as a result of testing • evaluation of design and implementation of system in terms of performance and suitability for business needs.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Perimeter topology</i> may include:	<ul style="list-style-type: none"> • 3 legged • back-to-back private • back-to-back public.
<i>Basic functionality</i> may include:	<ul style="list-style-type: none"> • access control lists (ACLs) • dynamic host configuration protocol (DHCP) • routing • secure network address translation (NAT).
<i>Devices</i> may include:	<ul style="list-style-type: none"> • Cisco PIX • Cisco router ACLs • ClearOS • Linux iptables • Microsoft ISA Firewall • SmoothWall • Untangle.
<i>Advanced functions</i> may include:	<ul style="list-style-type: none"> • automated web-client configuration • content filtering • demilitarised zone (DMZ) hosting • firewall policies • forward and reverse caching • load balancing • port forward rules • quality of service (QOS) • server publishing • stateful packet inspection.
<i>VPN tunnel</i> may include:	<ul style="list-style-type: none"> • IPSec • layer 2 tunnelling protocol (L2TP) • point-to-point tunnelling protocol (PPTP) • secure socket tunnelling protocol (SSTP).

Unit Sector(s)

Networking

ICANWK516A Determine best-fit topology for a local network

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to determine the most appropriate way of networking computers to meet user needs and business requirements.

Network topologies include large and small local area networks (LANs), wide area networks (WANs), virtual private networks (VPNs), virtual local area networks (VLANs) and wireless local area networks (WLANs).

Application of the Unit

This unit applies to individuals in senior roles in the networking area who are required to plan the most appropriate topology for a proposed network.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Determine user needs	<p>1.1 Identify the different segments of the proposed network based on business requirements</p> <p>1.2 Determine segment needs, using network functional analysis</p> <p>1.3 Estimate traffic content and volumes based on business requirements</p> <p>1.4 Develop a prioritised organisational network functional matrix</p>
2. Develop local area network specification	<p>2.1 Determine the resource requirements for each network segment on the basis of functional analysis</p> <p>2.2 Analyse features of the physical environment for the effect on network design</p> <p>2.3 Conduct a costing process for possible topology options</p> <p>2.4 Consider topology options with reference to available resources and network functional matrix</p> <p>2.5 Select and document appropriate network topology based on business requirements and functional analysis</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to determine features of the physical environment for the effect on network design
- literacy skills to produce network recommendations
- numeracy skills to conduct a costing process
- technical skills to:
 - conduct basic traffic analysis
 - connect networks and keep cables tidy
 - use LAN functional matrices
 - use network protocols
 - use traffic simulation tools.

Required knowledge

- detailed knowledge of:
 - adaptor cards
 - bridges
 - constraints, including costs and queuing
 - ethernet
 - gateways
 - growth projections and capacity planning
 - high and low-speed links
 - hubs
 - protocols
 - redundancy paths
 - response time and reliability requirements
 - routers
 - scope of operation
 - security
 - transmission control protocol or internet protocol (TCP/IP)
 - traffic flow patterns
 - traffic load
 - users applications requirements
- overview knowledge of:
 - cabling, particularly unshielded twisted pair (UTP), shielded twisted pair (STP) or optic fibre
 - characteristics and relative strengths and weaknesses of LAN network topologies
 - features and capabilities of current industry-accepted hardware and software products
 - features of line sharing protocols.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse business or organisational needs • identify the most appropriate LAN, VPN or WLAN topology • document the recommendation.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • business requirements • equipment specifications • organisational and industry costing • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess knowledge of: <ul style="list-style-type: none"> • network segments • network traffic • different topologies • review of candidate's network functional matrix • evaluation of candidate's documented topology recommendation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Network</i> may include:	<ul style="list-style-type: none"> • data • large and small LANs • private lines • public switched telephone network (PSTN) for dial-up modems only • VLANs • VPNs • voice • WANs • WLANs.
<i>Requirements</i> may be in reference to:	<ul style="list-style-type: none"> • application • business • network • people in the organisation • system.
<i>Traffic</i> may include:	<ul style="list-style-type: none"> • data • video • voice.

Unit Sector(s)

Networking

ICANWK517A Determine best-fit topology for a wide area network

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify the best way computers and local area networks (LANs) can be connected to make a wide area network (WAN).

Application of the Unit

This unit applies to individuals in networking areas who are required to research and recommend the most appropriate topology for a wide area network.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Identify WAN needs	<p>1.1 Identify the different LAN, or wireless local area network (WLAN) or virtual private network (VPN) segments of the proposed WAN</p> <p>1.2 Determine segment needs using functional analysis</p> <p>1.3 Estimate traffic content and volumes according to expected organisational usage, by examining telecommunications infrastructure</p> <p>1.4 Develop an organisational WAN functional matrix</p>
2. Create WAN specification	<p>2.1 Determine resource requirements for each LAN or WLAN or VPN segment on the basis of functional analysis</p> <p>2.2 Consider and report how features of the physical environment affect WAN design</p> <p>2.3 Choose a WAN service appropriate to the amount and type of traffic expected to access the WAN</p> <p>2.4 Include redundant links in the proposed WAN connectivity for link backup purposes, in case the main link is disrupted</p> <p>2.5 Document appropriate WAN service</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify WAN needs
- literacy skills to compile reports
- numeracy skills to estimate traffic needs and compare costs
- technical skills to use:
 - functional matrices
 - LAN functional matrices
 - network protocols
 - traffic simulation tools.

Required knowledge

- detailed knowledge of:
 - concepts and types of modems
 - internet protocol (IP) addressing
 - packet switching
 - routed or routable protocols, including IP, IPX and AppleTalk
 - router operations, including DDR
 - routing protocols, including RIP, EIGRP and OSPF
 - transmission control protocols or internet protocols (TCPs/IPs)
 - relationship of asynchronous and synchronous communication
 - use of microwave and satellite communication in networking
- overview knowledge of:
 - constraints and costs
 - features of telecommunications infrastructure, including the difference between digital and analog networks
 - growth projections and capacity planning
 - high or low-speed links
 - protocols
 - redundancy paths
 - response time and reliability requirements
 - scope of operation
 - security
 - traffic flow patterns
 - traffic load
 - users and the applications expected.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • consider budget constraints and business needs • identify the configuration for connecting a LAN or WLAN or VPN into a WAN • document the configuration.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • design documents relating to LANs to be incorporated into the WAN • equipment specifications • costings • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> • network segments • telecommunications infrastructure • review of candidate's WAN functional matrix • evaluation of documented recommendation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Traffic may include:	<ul style="list-style-type: none"> • data • video • voice.
Telecommunications infrastructure may include:	<ul style="list-style-type: none"> • asymmetrical digital subscriber line (ADSL) • high speed digital subscriber line (HDSL) • integrated services digital network (ISDN) • leased lines • switched circuits (permanent virtual circuits (PVCs) and switched virtual circuits (SVCs) • symmetrical digital subscriber line (SDSL) • T-carriers, synchronous optical network (SONET) technologies.
Resource requirements may include:	<ul style="list-style-type: none"> • average transaction and file transfer size • nature of WAN traffic (i.e. constant, steady, flows or communication in bursts) • number of users • telecommunications links • type of applications using the link.
WAN service may include:	<ul style="list-style-type: none"> • bandwidth • cost structure • reliability.

Unit Sector(s)

Networking

ICANWK518A Design an enterprise wireless local area network

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIT Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to conduct an internal and outdoor site survey and design a complex wireless local area network (LAN).

Application of the Unit

This unit applies to individuals in the networking area who are required to evaluate client requirements and design an appropriate wireless local area network.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Document current network configuration	<p>1.1 Obtain details of current network layout and parameters</p> <p>1.2 Hold consultations with key stakeholders</p> <p>1.3 Document the current network configuration, network topology and links to carrier</p>
2. Research client needs	<p>2.1 Identify the client's current needs</p> <p>2.2 Determine future needs</p> <p>2.3 Document current and future needs according to organisational requirements</p>
3. Implement site survey	<p>3.1 Select the appropriate diagnostic tools and measurement processes</p> <p>3.2 Select test equipment and ensure calibration</p> <p>3.3 Undertake site survey with minimum disruption to client and ensure safe working environment for users and survey personnel</p> <p>3.4 Record physical infrastructure, building use, aesthetics and other issues that will impact on future network performance and client acceptance</p> <p>3.5 Record radio frequency interference issues, sources and possible resolution</p> <p>3.6 Document results of site survey</p>
4. Develop specifications for upgrade of wireless network	<p>4.1 Document the current network performance equipment and capacity for the expanded network</p> <p>4.2 Assess interference issues relating to existing radio frequency, topographic barriers, climate, obstacles, transmission distances and construction materials</p> <p>4.3 Assess optimum location and position of access points, repeaters, routers and other equipment</p> <p>4.4 Develop cabling plans and repeater links, including power requirements</p> <p>4.5 Determine frequency to be used based on client and user requirements</p>
5. Model network	<p>5.1 Determine appropriate test and modelling routines</p> <p>5.2 Determine estimated network traffic and planned growth</p> <p>5.3 Test planned network using modelling tools and techniques</p> <p>5.4 Document outcome of tests and revise design where</p>

	required
6. Determine components for network	<p>6.1 Select and test vendor products and equipment where appropriate</p> <p>6.2 Consult others, including emerging industry bodies, for sustainable compatibility and economic running costs and user connectivity access</p> <p>6.3 Finalise components list for suitability and vendor claims</p> <p>6.4 Prepare <i>implementation plans</i></p>
7. Present design to client	<p>7.1 Present the design in a clear and logical fashion</p> <p>7.2 Provide advice to client on reasons for design choice</p> <p>7.3 Inform the client of design limitations, performance expectations and possible unanticipated outcomes, including <i>security</i> threats</p> <p>7.4 Obtain feedback from client</p> <p>7.5 Undertake modifications to design if required</p> <p>7.6 Complete final design documentation and seek client endorsement</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with stakeholders, users and industry bodies
- literacy skills to write technical documentation and record user requirements
- numeracy skills to undertake a cost-benefit comparison
- technical skills to:
 - analyse wireless network performance
 - design, develop and implement various wireless network solutions
 - implement wireless networking strategies and configure wireless network software and hardware
 - implement WLAN and WMAN
 - produce wireless network designs.

Required knowledge

- detailed knowledge of:
 - audit and intrusion detection systems
 - auditing and penetration testing techniques
 - bandwidth and quality of service
 - factors affecting signal quality
 - features of antenna design
 - layer 2 and layer 3 design issues
 - radio frequency theory and practice
 - small office home office (SOHO) and enterprise LANs
 - transmission control protocols or internet protocols (TCP/IP) and applications
 - problems associated with topography and obstacles in radio transmission path
 - wireless security strategies
 - wireless topologies
 - WLAN and WMAN solutions
- overview knowledge of:
 - network protocols and operating systems
 - security protocols, standards and data encryption
 - security threats.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess wireless network performance • produce wireless network designs appropriate to client requirements • document design.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • network infrastructure, including wireless hardware and software • network technical requirements • real or simulated wireless networks • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate's knowledge of: <ul style="list-style-type: none"> • wireless networks • wireless security • review of candidate's completed design documentation • evaluation of candidate's implementation plan • direct observation of candidate briefing client and obtaining feedback.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required</p>

	knowledge.
--	------------

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Networks</i> may include:	<ul style="list-style-type: none"> • domestic • large enterprise WLANs • medium • small.
<i>Network topology</i> may include:	<ul style="list-style-type: none"> • cabled connected single zone • carrier links • Free Space Optics • indoor and outdoor installations • LMDS • MMDS • multiple zone • satellite connections • stand-alone multi-zone wireless networks.
<i>Client</i> may include:	<ul style="list-style-type: none"> • communities • external organisations • individuals • internal departments • internal employees.
<i>Document</i> may follow:	<ul style="list-style-type: none"> • audit trails • client training • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • maintaining equipment inventory • naming standards • project management templates and report writing • satisfaction reports • version control.
<i>Organisational requirements</i> may include:	<ul style="list-style-type: none"> • how and what the organisation wants in regard to work environment • preventative maintenance and diagnostic policy • problem solution processes • roles and technical responsibilities in network management • vendor and product service level support agreements.

Tools may include:	<ul style="list-style-type: none"> • cable testing • carrier connection tests • data and voice integration measurements • equipment testing • frequency and spectrum analysers • modelling tools for network performance software • power meters • radiation meter.
Site survey may include:	<ul style="list-style-type: none"> • building plans • GPS measurements • indoor propagation analysis • path loss measurements • physical inspection • satellite mapping.
Users may include:	<ul style="list-style-type: none"> • department within the organisation • person within a department • third party.
Cabling may include:	<ul style="list-style-type: none"> • category 5e, 6 and 7 cable • coaxial cable • fibre optic cable.
Implementation plans may include:	<ul style="list-style-type: none"> • cabling • construction requirements • cut-over arrangements • service suppliers.
Security may include:	<ul style="list-style-type: none"> • authentication, authorisation and accounting (AAA) • diameter • IP security (IPSec) • lightweight eXtensible authentication protocol (LEAP) • privacy key management (PKM) • secure sockets layer (SSL) • smart cards • tokens • wi-fi protected access (WPA) • wired equivalent privacy (WEP).

Networking

ICANWK520A Design IT system security controls

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design the security controls that ensure an IT system is secure, both physically and legally. It involves developing the organisational policy and procedures for information security, process security, internet technology security, communications security, wireless security and overall physical security.

Application of the Unit

This unit applies to individuals in a range of information and communications technology (ICT) areas who are required to guarantee the security of IT systems.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Review organisational security policy and procedures	<p>1.1 Review business environment to identify existing requirements</p> <p>1.2 Determine organisational goals for legal and security requirements</p> <p>1.3 Verify security needs in a policy document</p> <p>1.4 Determine legislative impact on business domain</p> <p>1.5 Gather and document objective evidence on current security threats</p> <p>1.6 Identify options for using internal and external expertise</p> <p>1.7 Establish and document a standard methodology for performing security tests</p>
2. Develop security plan	<p>2.1 Investigate theoretical attacks and threats on the business</p> <p>2.2 Evaluate risks and threats associated with the investigation</p> <p>2.3 Prioritise assessment results and write security policy</p> <p>2.4 Document information related to attacks, threats, risks and controls in a security plan</p> <p>2.5 Review the security strategy with security-approved key stakeholders</p> <p>2.6 Integrate approved changes into business plan and ensure compliance with statutory requirements</p>
3. Design controls to be incorporated into system	<p>3.1 Implement controls in a procedurally organised manner to ensure minimum risk of security breach in line with organisational guidelines</p> <p>3.2 Monitor each phase of the implementation to determine the impact on the business</p> <p>3.3 Take corrective action on system implementation breakdown</p> <p>3.4 Record implementation process</p> <p>3.5 Evaluate corrective actions for risk</p> <p>3.6 Plan risk assessment review process</p> <p>3.7 Take action to ensure confidentiality throughout all phases of design</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to undertake risk assessment of data-gathering techniques
- communication skills to manage group facilitation and presentation related to transferring and collecting information
- literacy skills to produce business reports
- planning and organisational skills to provide accurate and concise insights to possible security threats for all levels of staff, both technical and managerial
- problem-solving skills to identify and remedy evolving and complex security threat scenarios.

Required knowledge

- detailed knowledge of:
 - communications security, including human organisational interactions
 - how to conduct an information security risk assessment
 - internet technology security, including firewalls
 - physical security
 - security testing methods for performing security tests
 - wireless security
- overview knowledge of:
 - current industry-accepted security processes, including general features and capabilities of software and hardware solutions
 - ethics in IT
 - general features of specific security technology
 - privacy issues and legislation
 - process security for policy and procedures.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • confirm sufficient knowledge of security products and organisational security policy • establish realistic ground rules for security product procedures • design security controls for a system • incorporate these into a security strategy.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • IT security assurance specifications • probability, frequency and severity of direct and indirect harm, loss or misuse of the IT system • risk analysis tools and methodologies • risks to the mission or business resulting from IT-related risks • security environment, which also includes the threats to security that are, or are held to be, present in the environment • security environment relating to laws and legislation, existing organisational security policies and organisational expertise • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess knowledge of: <ul style="list-style-type: none"> • layered security • risk management • security issues • statutory requirements • review of documented security, including: <ul style="list-style-type: none"> • policy • plan • strategy.
Guidance information	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

for assessment	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
-----------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Requirements</i> may relate to:	<ul style="list-style-type: none"> • application • business • network • people in the organisation • system.
<i>Security threats</i> may include:	<ul style="list-style-type: none"> • by-pass actions • data tampering and manipulation • eavesdropping • impersonation • keyboard logging • local applications or local area network (LAN) connections • penetration • weaknesses in internet networks.
<i>Security policy</i> may relate to:	<ul style="list-style-type: none"> • audits and alerts • privacy • standards, including: <ul style="list-style-type: none"> • archival • backup • network • theft • viruses.
<i>Security plan</i> may include:	<ul style="list-style-type: none"> • logical controls • physical controls • social controls.
<i>Security strategy:</i>	<ul style="list-style-type: none"> • may include: <ul style="list-style-type: none"> • authentication • authorisation and integrity • privacy • usually forms part of the overall objectives of the organisation.
<i>Stakeholders</i> may include:	<ul style="list-style-type: none"> • development team • project team • sponsor

	<ul style="list-style-type: none"> • user.
<i>Organisational guidelines</i> may include:	<ul style="list-style-type: none"> • communication methods • content of emails • dispute resolution • document procedures • downloading information and accessing particular websites • financial control mechanisms • opening mail with attachments • personal use of emails and internet access • templates • virus risk.
<i>Risk assessment</i> may include:	<ul style="list-style-type: none"> • developing risk plans • developing scenarios • evaluating threats • following up • gathering information • identifying counter measures • identifying threats • ranking risk • reporting.

ICASAS203A Connect hardware peripherals

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to connect hardware peripherals according to instructions.

Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to connect a variety of hardware peripherals to different configurations and types of ICT equipment. Communicating effectively, and simplifying and solving technical incompatibility conflicts and problems are key components of this ICT support role.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Confirm client requirements</p>	<p>1.1 Identify and confirm <i>peripheral</i> requirements of <i>client</i> according to <i>organisational standards</i></p> <p>1.2 Document client requirements and peripherals needed and report findings to the appropriate person according to organisational standards</p> <p>1.3 Verify client requirements with <i>appropriate person</i> according to organisational standards and reporting procedures</p> <p>1.4 Take action to ensure client support expectations are covered by vendor warranty and support services</p>
<p>2. Obtain required peripherals</p>	<p>2.1 Obtain peripherals under instruction from appropriate person</p> <p>2.2 Enter details of peripherals into <i>equipment inventory</i> according to organisational standards</p> <p>2.3 Validate that contents of delivered components and physical contents match the packing list and resolve discrepancies if necessary</p> <p>2.4 <i>Store</i> peripherals according to vendors guidelines</p>
<p>3. Connect hardware peripherals</p>	<p>3.1 Verify timeframe for installation schedule with client</p> <p>3.2 Remove old peripherals with minimal disruption to clients if they are to be replaced, taking into account <i>environmental considerations</i> and <i>OHS standards</i></p> <p>3.3 Connect new peripherals with minimum disruption to clients, taking into account <i>operating system</i> procedures</p> <p>3.4 Configure computer to accept new peripherals</p> <p>3.5 Test hardware peripherals and confirm client satisfaction, paying particular attention to possible effect on other systems and making adjustments as required</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service and conflict-resolution skills to:
 - ensure proposed actions are consistent with client's expectations
 - transfer and collect information
- literacy skills to:
 - document client requirements
 - follow vendor guidelines
 - present information
 - update equipment inventory
- negotiation skills to interact with other team members and clients
- problem-solving skills to resolve routine installation and configuration issues
- technical skills and decision-making skills to:
 - ensure compatibility of peripherals with operating system
 - remove and install peripherals
 - undertake maintenance procedures.

Required knowledge

- broad general knowledge of:
 - computer operating systems
 - help desk and maintenance practices
 - peripheral devices
 - OHS procedures for electrical equipment
 - interconnectivity of technical system components
- current industry-accepted hardware and software products
- detailed knowledge of inventory procedures
- organisational guidelines relating to external suppliers and vendors.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • safely connect several different types of hardware peripherals to the system according to vendor instructions with a minimum of downtime using known routines and procedures • locate, interpret and use vendor documentation related to connection and storage of hardware peripherals • test operation of newly installed hardware peripherals and confirm client satisfaction • adhere to OHS regulations when working with electrical equipment.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • sites with a representative range of workstations, hardware peripherals, internet connections, cabling, and software to be installed, interconnected and configured • hardware and software currently used in industry • technical documentation, including organisational hardware blueprint • vendor support • appropriate learning and assessment support when required. <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate installing, connecting and configuring hardware peripheral devices • review of reports that document client requirements and peripherals completed for different scenarios and situations • verbal or written questioning to assess candidate’s ability to locate, use and interpret vendor documentation • direct observation of candidate testing hardware peripherals added to a system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where</p>

	<p>appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Peripheral may include:	<ul style="list-style-type: none"> • Bluetooth device • firewire (IEEE 1394) device • hard drive • keyboard • laptop • mobile phone • modem • mouse • multimedia kit • pen • personal digital assistant (PDA), such as palmtop • printer • scanner • speaker • tape cartridge • touch pad • universal serial bus (USB) device • wireless fidelity (wi-fi) router.
Client may include:	<ul style="list-style-type: none"> • external organisations • individuals • internal departments.
Organisational standards may include:	<ul style="list-style-type: none"> • communication methods • content of emails • dispute resolution • document procedures and templates • downloading information and accessing particular websites • financial control mechanisms • opening mail with attachments • personal use of emails and internet access • virus risk.
Appropriate person may include:	<ul style="list-style-type: none"> • authorised business representative • client • help-desk person • subject matter expert

	<ul style="list-style-type: none"> • supervisor • system administrator.
<p><i>Equipment inventory</i> may include detailed lists of peripherals, including:</p>	<ul style="list-style-type: none"> • hard drives • hubs • modems or other connectivity devices • monitors • other peripheral devices • personal computers • PDA • printers • switches.
<p><i>Store</i> may include:</p>	<ul style="list-style-type: none"> • anti-static packaging • controlled humidity • controlled temperature • secure storage area • shock and vibration minimisation • silica gel desiccant • stacking limits.
<p><i>Environmental considerations</i> may include:</p>	<ul style="list-style-type: none"> • recycling of packaging: <ul style="list-style-type: none"> • cardboard • paper • polystyrene • recycling or disposal of ewaste: <ul style="list-style-type: none"> • cathode ray tube (CRT) monitors • printed circuit boards • redundant hardware.
<p><i>OHS standards</i> may include:</p>	<ul style="list-style-type: none"> • electrical safety • safe lifting methods • ventilation.
<p><i>Operating system</i> may include:</p>	<ul style="list-style-type: none"> • GNUs Not Unix (GNU) • Linux • Mac OS X • Microsoft Windows • Unix-like operating systems: <ul style="list-style-type: none"> • HP-UX • IBM AIX • Silicon Graphics IRIX • Sun Solaris.

Unit Sector(s)

Systems administration and support

ICASAS303A Care for computer hardware

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage the maintenance and location of hardware.

Application of the Unit

This unit applies to frontline technical support personnel who are required to manage organisational hardware assets, maintaining both them and their records.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Establish safe work practices</p>	<p>1.1 Determine, record and apply relevant legal requirements and <i>OHS standards</i> to the installation and maintenance of computer <i>hardware</i></p> <p>1.2 Determine, record and apply requirements specified by hardware manufacturers</p> <p>1.3 Determine, record and apply <i>safe work practices</i>, taking into account legal and manufacturer requirements</p>
<p>2. Establish location requirements for hardware and peripherals</p>	<p>2.1 Determine and apply suitable <i>environmental conditions</i> for hardware and peripherals</p> <p>2.2 Determine and apply <i>system protection devices</i> where appropriate</p> <p>2.3 Determine and apply requirements when moving hardware</p> <p>2.4 Determine and apply suitable storage principles for hardware and associated <i>peripherals</i> and media</p>
<p>3. Establish maintenance practices</p>	<p>3.1 Determine maintenance requirements specified by the <i>equipment</i> manufacturer</p> <p>3.2 Produce <i>maintenance</i> schedules</p> <p>3.3 Perform diagnostic functions, including replacing suspect <i>components</i> with other serviceable components and reloading associated <i>software</i></p> <p>3.4 Determine whether unserviceable components are replaceable through warranty, replacement or upgrade</p> <p>3.5 Perform diagnostic functions using the <i>operating system</i> (OS) and third-party diagnostic tools</p>
<p>4. Determine appropriate hardware quality standards</p>	<p>4.1 Consider and apply <i>business requirements</i> in respect of hardware matters</p> <p>4.2 Determine and apply quality standards to the selection of appropriate hardware and associated peripherals</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to provide advice and guidance to others
- literacy skills to:
 - comprehend basic workplace documents and technical information
 - determine whether unserviceable components are replaceable through warranty, replacement or upgrade
 - interpret user manuals and help functions
- problem-solving skills to address common operational problems with computer hardware
- safety-awareness skills to work safely in regard to the specific hardware
- technical skills to:
 - diagnose hardware problems
 - reload software
 - replace suspect components
 - reload associated software
 - select appropriate hardware for a given situation
 - set up and maintain hardware
 - undertake diagnostic procedures using OS and third-party diagnostic tools.

Required knowledge

- range of quality levels in current common hardware
- importance of maintenance
- OHS principles specific to mains-powered equipment
- potential environmental effects of common types of hardware
- security issues:
 - viruses
 - worms
- software related to hardware operations
- system hardware and associated peripherals' functions.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • perform diagnostic functions by replacing components, reloading software and by using operating system and other diagnostic tools • establish siting requirements for system hardware and associated peripheral devices • implement safe work practices • determine maintenance requirements and establish maintenance schedule • apply appropriate quality standards to computer hardware and peripherals.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • computer hardware • software and diagnostic tools • warranty records and reports, maintenance schedules, vendor documentation and safe work practices • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate performing a range of diagnostic tasks • review of maintenance schedule documentation completed by candidate • verbal or written questioning to assess candidate’s knowledge of: <ul style="list-style-type: none"> • quality standards applied to computer hardware and peripherals • safe work practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>OHS standards</i> may include:</p>	<ul style="list-style-type: none"> • electrical safety • ergonomics in the workplace: <ul style="list-style-type: none"> • correct posture • style and adjustments of chair • type of desk • type of monitor • working position • length of time in front of computer • lighting level • placement of light fittings • repetitive strain injury (RSI) prevention • safe lifting methods • ventilation.
<p><i>Hardware</i> may include:</p>	<ul style="list-style-type: none"> • communications equipment: <ul style="list-style-type: none"> • modems or other connectivity devices, including digital subscriber line (DSL) modems • wireless access points • network equipment: <ul style="list-style-type: none"> • cables • hubs • racks • routers • servers • switches • personal computers (PCs) • remote sites • servers • workstations.
<p><i>Safe work practices</i> may include:</p>	<ul style="list-style-type: none"> • codes of practice • hazards and hazardous material • manual handling • physical separation of data cables and mains cables • reporting and following OHS procedures

	<ul style="list-style-type: none"> • testing and tagging electrical mains cables.
Environmental conditions may include:	<ul style="list-style-type: none"> • air circulation • dust • extreme cold • heat • moisture • temperature stability.
System protection devices may include:	<ul style="list-style-type: none"> • line conditioning • surge protection • uninterruptible power supplies (UPS).
Peripherals may include:	<ul style="list-style-type: none"> • Bluetooth device • Firewire (IEEE 1394) device • keyboard • laptop • mobile phone • modem • mouse • multimedia kit • pen • personal digital assistant (PDA), such as palmtop • printer • scanner • speaker • tape cartridge • touch pad • universal serial bus (USB) device • wi-fi router.
Equipment may include:	<ul style="list-style-type: none"> • DSL modems • hard drives • hubs • modems or other connectivity devices • monitors • other peripheral devices • PCs • PDA • printers • switches • workstations.
Maintenance may include:	<ul style="list-style-type: none"> • faulty components returned to depot • on-site response • planned maintenance:

	<ul style="list-style-type: none"> • dust and grease removal from filters and components • lubrication of fan and blower bearings • remote diagnostics.
Components may include:	<ul style="list-style-type: none"> • CD and DVD drives • central processing unit (CPU) • complementary metal oxide semiconductor (CMOS) battery • fax or modem cards • interface cards • motherboards • power supply • random access memory (RAM).
Software may include:	<ul style="list-style-type: none"> • application: <ul style="list-style-type: none"> • database • internet browser • spreadsheet • word-processing • commercial • customised • in-house • programming: <ul style="list-style-type: none"> • assembler • compiler • development tools • system: <ul style="list-style-type: none"> • computer security software • device drivers • OS.
Operating systems may include:	<ul style="list-style-type: none"> • GNU and Linux • Mac OS X • Microsoft Windows • Unix-like operating systems: <ul style="list-style-type: none"> • HP-UX • IBM AIX • Silicon Graphics IRIX • Sun Solaris.
Business requirements may include:	<ul style="list-style-type: none"> • capability for further system upgrades • cost and quality • existing facilities • industry standard components • installation:

	<ul style="list-style-type: none"> • ease • lead time • licensing issues • reliability • robustness • service level agreements (SLAs) • technical support required: <ul style="list-style-type: none"> • in-house • vendor.

Unit Sector(s)

Systems administration and support

ICASAS304A Provide basic system administration

Modification History

Version	Comments
ICASAS304A	This version first released with <i>ICAI1 Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement components of systems backup, restore, security and licensing in a stand-alone or client server environment.

Application of the Unit

Frontline technical support personnel apply the skills and knowledge in this unit, and generally work under limited supervision with experienced IT support staff. Support personnel at this level use known routines and procedures where some discretion and judgement are required, and provide technical advice and some leadership in resolution of specified problems. More complex or non-routine activities involving individual responsibility may be performed as part of a group or team and the role may involve some responsibility for others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Record security access</p>	<p>1.1 Obtain <i>client</i> access requirements and clearance levels according to <i>organisational requirements</i></p> <p>1.2 Issue computer or network user account and password details to client</p> <p>1.3 Provide security <i>documentation</i> and access to client</p> <p>1.4 Record user account and security access details to maintain system integrity and assist later auditing</p>
<p>2. Record software licences</p>	<p>2.1 Determine what licensed <i>software</i> is used within the organisation</p> <p>2.2 Maintain <i>records</i> of licence number and location</p> <p>2.3 Check personal computers and network for illegal software</p> <p>2.3 Report illegal software to <i>appropriate person</i></p>
<p>3. Carry out system backup</p>	<p>3.1 Create or review organisational backup schedule</p> <p>3.2 Complete file backups according to schedule</p> <p>3.3 Label and store backups according to organisational requirements</p> <p>3.4 Maintain record of backups</p>
<p>4. Restore system backup</p>	<p>4.1 Determine and test restore procedures according to <i>organisational guidelines</i></p> <p>4.2 Complete a restore under supervision of an appropriate person</p> <p>4.3 Record completed restore according to organisational guidelines</p>
<p>5. Apply security access controls</p>	<p>5.1 Document security access as per clearance guidelines set by management</p> <p>5.2 Maintain a security access register in line with organisational guidelines to record which client or groups have access to which resources</p> <p>5.3 Identify the security controls on the file system provided by the <i>operating system</i></p> <p>5.4 Apply effective access control on files and directories</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to:
 - interpret user manuals, technical documentation and help functions
 - maintain inventory records
 - record software licence records
- communication skills to:
 - communicate with peers and supervisors
 - present and explain information
 - seek assistance and expert advice
- planning and organisational skills to plan and develop a backup and restore strategy
- technical skills to:
 - configure user account and security access details
 - identify unlicensed software
 - record user account and security access details.

Required knowledge

- backup procedures
- operating systems used by the organisation
- organisational security procedures
- organisational standards to:
 - carry out backup and restore operations
 - label and store backups
- selection, functions and features of appropriate diagnostic tools
- software copyright responsibilities
- system's current functionality.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> perform systems backup, restore and maintain correct usage according to licensing agreements in a stand-alone or client server environment maintain software licence records and check for copyright compliance within the system maintain security access details in a register and apply access controls on (network) resources.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> sites with a representative range of stand-alone and networked client-server environments and operating systems software licence records technical records and documentation organisational backup and restore procedures organisational security guidelines appropriate learning and assessment support when required modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of candidate undertaking file backup and restoration review of records on backup results and backup schedules review of software licence records review of the event viewer verbal or written questioning to assess candidate’s knowledge of software copyright compliance.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level,</p>

	<p>language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Client</i> may include:</p>	<ul style="list-style-type: none"> • employee • external organisation • individual • internal department.
<p><i>Organisational requirements</i> may include:</p>	<ul style="list-style-type: none"> • availability of system to be optimised • client-support documentation • complexity of technical manuals • information and communications technology (ICT) policy and procedures relating to service levels and installation • in-house or vendor ICT purchasing arrangements • register of licences • security procedures • storage of ICT documentation • system administration and backup procedures • type of product licences.
<p><i>Documentation</i> may follow:</p>	<ul style="list-style-type: none"> • audit trails • client training • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • maintaining equipment inventory • naming standards • project-management templates and report writing • satisfaction reports • version control.
<p><i>Software</i> may include:</p>	<ul style="list-style-type: none"> • application: <ul style="list-style-type: none"> • database • internet browser • spreadsheet • word-processing • commercial applications • customised • in-house

	<ul style="list-style-type: none"> • programming: <ul style="list-style-type: none"> • assembler • Java, VB, C++, Visual Fox Pro • compiler • development tools • system: <ul style="list-style-type: none"> • computer security • operating system.
Records may include:	<ul style="list-style-type: none"> • databases • spreadsheets • vendor tools to create, modify and document user accounts • access to computer or network resources.
Appropriate person may include:	<ul style="list-style-type: none"> • authorised business representative • client • supervisor • system administrator.
Organisational guidelines may include:	<ul style="list-style-type: none"> • communication methods • content of emails • dispute resolution • document procedures and templates • downloading information and accessing particular websites • financial control mechanisms • opening mail with attachments • personal use of emails and internet access • virus risk.
Operating systems may include:	<ul style="list-style-type: none"> • GNU and Linux • Mac OS X • Microsoft Windows • Unix-like operating systems: <ul style="list-style-type: none"> • HP-UX • IBM AIX • Silicon Graphics IRIX • Sun Solaris.

Unit Sector(s)

Systems administration and support

ICASAS409A Manage risks involving ICT systems and technology

Modification History

Release	Comments
Release 1	This Unit first released with <i>ICAIL Information and Communications Technology Training Package version 1.0</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to implement procedures that identify, analyse, evaluate and monitor risks involving information and communications technology (ICT) systems and technology. This includes the development and management of contingency plans.

Application of the Unit

This unit applies to individuals in senior roles in various ICT areas who are required to manage risk in ICT systems.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Establish risk context</p>	<p>1.1 Review and document organisational and technical environment</p> <p>1.2 Establish and document risk boundaries according to the business operating and strategic environment</p>
<p>2. Identify risk factors</p>	<p>2.1 Develop or acquire a measurement scale for project risk which includes importance, complexity, time and resources required</p> <p>2.2 Identify project risks based on the measurement scale developed and document according to business requirements</p> <p>2.3 Identify the business impact of changes and document according to current and future business directions</p>
<p>3. Implement contingency plans</p>	<p>3.1 Classify each risk and create contingency plans that address how the risk will be monitored and overcome, if possible</p> <p>3.2 Identify measurable benchmarks to track the treatment of risks to the new system</p> <p>3.3 Identify risk-management intervention points according to benchmarked performance tolerances</p> <p>3.4 Demonstrate use of phased implementation and piloting to reduce risk factors</p>
<p>4. Monitor, update and report risk profile</p>	<p>4.1 Conduct regular risk updates to add new risks and remove old risks</p> <p>4.2 Update contingency plans when appropriate to incorporate new information</p> <p>4.3 Conduct risk reviews at major project milestones and document outcomes</p> <p>4.4 Establish feedback processes to provide warning of potential new risks according to business requirements</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse the risk associated with ICT systems and technologies
- communication skills to work with project teams on risk reviews
- literacy skills to:
 - disseminate and document technical specifications
 - write policy
- numeracy skills to scale risks
- planning and organisational skills to:
 - manage risk
 - plan for contingencies.

Required knowledge

- detailed knowledge of risk management
- overview knowledge of:
 - Australian Computer Society Code of Ethics
 - business process design
 - how business sites fit into corporate strategy
 - copyright and intellectual property in relation to IT systems and technology
 - privacy legislation relating to IT systems and technology
 - technology updating guidelines
 - business supply chain
 - user analysis and the CRM.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify where risk occurs • highlight the measures that will mitigate or obviate risk • set up procedures for regular risk reviews.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • analysis software • business website • networks • requirements documentation • risk management plan • site server • site server software • software applications • updated or new technology • user analysis • web servers • appropriate learning and assessment support when required • modified equipment for people with special needs.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate’s knowledge of: <ul style="list-style-type: none"> • risk management • business process design • review of candidate’s documented outcomes of risk assessment process • evaluation of candidate’s documented contingency plans • direct observation of candidate conducting risk reviews at project milestones.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Evaluate impact of system on business continuity</p>	<p>1.1 Identify business critical functions and the security environment from documentation and from discussion with business area and project team</p> <p>1.2 Identify critical data and software from documentation</p> <p>1.3 Assess potential impact of business risk and threats on IT systems</p> <p>1.4 Identify and evaluate statutory requirements, commercial requirements and contingency possibilities according to specifications and cost constraints</p>
<p>2. Evaluate threats to system</p>	<p>2.1 Identify threats to the system, considering security analysis and internal and external business environment</p> <p>2.2 Evaluate risk minimisation alternatives against specifications and cost constraints</p>
<p>3. Formulate prevention and recovery strategy</p>	<p>3.1 Evaluate prevention and recovery options to support critical business functions against business specifications and cost constraints</p> <p>3.2 Review current operational procedures to ensure that adequate risk safeguards and contingency plans are in place</p> <p>3.3 Submit disaster recovery and prevention strategy to appropriate person for approval</p>
<p>4. Develop disaster recovery plan to support strategy</p>	<p>4.1 Identify and document resources required for disaster recovery according to specifications and cost constraints</p> <p>4.2 Identify and document processes required for disaster strategy according to project standards</p> <p>4.3 Identify cut-over criteria before initiating disaster plan</p> <p>4.4 Document disaster recovery plan and submit to appropriate person for review and sign-off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - gain consensus on concepts when disaster recovery plan is submitted to higher authorities for review and sign-off
 - negotiate with client business area and project team when business critical functions are identified from project documentation
- literacy skills to interpret statutory requirements
- planning and organisational skills to:
 - manage logistics for resources and procedures required for disaster recovery
 - scope project, and plan time, cost, and quality
 - scope communications, risk analysis and management
- research skills to:
 - follow best practice in system development
 - specify, analyse and evaluate broad features of a particular business domain.

Required knowledge

- backup methodologies
- business planning process relevant to the development of IT business solutions
- client business domain
- disaster recovery plan strategies and components, including:
 - physical security
 - system failure, accident or sabotage (hackers)
 - denial of service
 - virus attack
 - cyber attack
 - telecommunications failure
- OHS
- legislative and organisational requirements
- system's current functionality
- systems engineering.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • specify contingencies that minimise down time for business critical functions • clearly specify directions on how to handle serious down time • coordinate, plan and articulate flexible logistics requirements.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • appropriate learning and assessment support when required • modified equipment for people with special needs • vulnerability assessment and general definition of requirements • acceptance test plan • business impact analysis • information technology security assurance specifications • relevant statutory documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • verbal or written questioning to assess candidate’s knowledge of the disaster recovery or contingency plan to ensure the following is covered: <ul style="list-style-type: none"> • defined recovery requirements from the perspective of business functions • impact of an extended loss on operations and key business functions • contingency plan is understandable, and easy to use and maintain • contingency planning considerations may be integrated into ongoing business planning and system development processes • disaster recovery plan is not a one-off activity, but rather an ongoing process • review of disaster recovery plan developed by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate.</p> <p>Assessment processes and techniques must be culturally</p>

	<p>appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.</p> <p>Indigenous people and other people from a non-English speaking background may need additional support.</p> <p>In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Business critical functions</i> may include:	<ul style="list-style-type: none"> • customer service functions • financial systems • payroll.
<i>Documentation</i> may relate to:	<ul style="list-style-type: none"> • audit trails • client training • International Organization for Standardization (ISO), International Electrotechnical Commission (IEC) and Australian Standards (AS) standards • maintaining equipment inventory • naming standards • project management templates and report writing • satisfaction reports • version control.
<i>Project team</i> may include:	<ul style="list-style-type: none"> • different businesses working in partnership • individual business analysts • solution developers and business clients working together • third-party solution developers working together.
<i>Software</i> may include:	<ul style="list-style-type: none"> • commercial • in-house • packaged or customised software.
<i>Threats</i> may include:	<ul style="list-style-type: none"> • accident • cyber attack • denial of service • espionage • information technology failure • sabotage • security • telecommunications network failure • virus attack • weather, such as storms and earthquake.
<i>Systems</i> may include:	<ul style="list-style-type: none"> • application service provider • applications • databases • gateways

	<ul style="list-style-type: none"> internet service provider (ISP) operating systems servers.
Statutory requirements may include:	<ul style="list-style-type: none"> industry imposed controls and standards legislation, such as Privacy Act laws regarding confidentiality and reporting of data in organisations, such as health and banking.
Commercial requirements may include:	<ul style="list-style-type: none"> access to internal network availability backup confidentiality encryption firewalls hacking integrity passwords and logons storage and data recovery.
Constraints may include:	<ul style="list-style-type: none"> budget hardware legal constraints policy resource software time.
Specifications may include:	<ul style="list-style-type: none"> current system functionality technical requirements user-problem statement.
Contingency plans will typically:	<ul style="list-style-type: none"> identify weaknesses and provide for the implementation of a disaster prevention program minimise disruption to business operations provide a coordinated approach to the disaster recovery process vary in format and content detail.
Appropriate person may include:	<ul style="list-style-type: none"> authorised business representative client supervisor.
Standards may include:	<ul style="list-style-type: none"> ISO, IEC and AS standards organisational standards project standards.
Cut-over criteria may include:	<ul style="list-style-type: none"> actual system down time authorisations to cut-over estimate of business impact, including

	<ul style="list-style-type: none">• time before system is operational• cut-over plan refresher.

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to test optical communication systems and components in the field using portable test instruments.

It covers testing of point-to-point networks as well as next generation optical fibre networks which use passive optical network (PON) technologies in fibre to the home (FTTH) deployment.

Application of the Unit

Installation contractors, technical staff and field officers from telecommunications service providers or other private and public organisations or regulatory authorities apply the skills and knowledge in this unit.

They combine technical skills with organisational and administrative skills to perform tests on broadband passive optical networks (PON), fibre to the x (FTTx) networks, hybrid fibre coaxial (HFC) networks and dense wavelength division multiplexing (DWDM) systems during installation, maintenance, commissioning and troubleshooting phases.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.

If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to use optical measuring instruments</p>	<p>1.1 Obtain relevant legislation, codes, regulations and standards and prepare for the given work</p> <p>1.2 Notify customer for site access, security arrangements and location details of optical system and test purpose</p> <p>1.3 Identify site hazards and notify appropriate personnel to make site safe</p> <p>1.4 Devise and implement risk control measures of hazards with handling optical fibres and lasers in consultation with appropriate personnel</p> <p>1.5 Prepare a testing plan indicating the type of measurement at the nominated wavelength and seek approval from customer</p> <p>1.6 Select the appropriate tools and test instruments according to the required measurement and enterprise practice</p>
<p>2. Conduct optical measurements</p>	<p>2.1 Set up test instrument according to manufacturer's instructions according to occupational health and safety (OHS) and environmental requirements</p> <p>2.2 Perform measurement using knowledge of appropriate testing techniques and in a safe manner to assess the performance of optical system and component</p> <p>2.3 Record test results and compare with standard test specifications from manufacturer and enterprise guidelines</p> <p>2.4 Evaluate the test results and report on the functionality of the optical component or equipment and the performance of the optical system</p>
<p>3. Document measurement results</p>	<p>3.1 Document test results for future reference and make recommendations on optimising component and system performance</p> <p>3.2 Clean work site and make safe according to the enterprise requirements and to customer satisfaction</p> <p>3.3 Notify appropriate personnel of job completion for sign off and present test documentations</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and enterprise staff
- literacy skills to read and interpret work instructions and document work
- numeracy skills to gather and record data from measurements
- planning and organisational skills to plan, prioritise and manage own work
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - clean an optical connector to an acceptable industry standard
 - safely inspect an optical connector for contamination and determine if cleaning is necessary
 - safely operate:
 - optical loss test set (OLTS)
 - optical time domain reflectometer (OTDR)
 - PON power meter.
 -

Required knowledge

- consequences of mating contaminated optical connectors
- downstream and upstream signals
- DWDM metro and long haul system architecture
- HFC architecture (optical section)
- logarithmic power levels (decibels, dBm)
- optical connector types
- optical fibre safety, practices, handling and theory
- optical spectrum limits, wavelengths used in various applications and International Telecommunications Union (ITU) grid
- optical transmitters and receivers
- PON architecture
- safe handling procedures with optical fibres
- transmission system line rates:
 - optical Ethernet
 - synchronous digital hierarchy (SDH)
- wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles and optical multiplexers.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • measure optical power level • measure insertion loss of a passive device • measure end-to-end fibre loss (bi-directional) • measure splice loss • measure distance to fault, event, end of fibre using OTDR • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which optical measurements can be conducted • tools and equipment required for measurements • manufacturer's documentation for test instruments and equipment under test.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing optical measurements • review of a written reports and test results completed by the candidate • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation • ICTBWN3205B Use optical and radio frequency measuring instruments.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • crane • EWP • forklift • winch • Australian Construction Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p>Customer may be:</p>	<ul style="list-style-type: none"> • asset manager • installation manager • maintenance manager • nominated customer representative • outage manager • project manager.
<p>Optical system may contain:</p>	<ul style="list-style-type: none"> • add-drop multiplexer • DWDM system • fibre hub • HFC network • optical line termination (OLT) • optical network termination (ONT)

	<ul style="list-style-type: none"> • optical amplifier • optical splitter.
Hazards may include:	<ul style="list-style-type: none"> • building debris • earth potential rise • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage • vermin.
Testing plan may include:	<ul style="list-style-type: none"> • correct test set-up • recording and evaluation of measurements • test layout • test procedures • test purpose • test sites and location • type of measurements • use of appropriate test equipment.
Type of measurement may include:	<ul style="list-style-type: none"> • end-to-end continuity using visual fault locator • fibre loss (bi-directional) • insertion loss: <ul style="list-style-type: none"> • coupler • filter • optical splitter • WDM • optical power level at: <ul style="list-style-type: none"> • drop terminal • OLT • ONT • optical transmitter • patch panel • optical return loss (ORL) • splice loss • total end-to-end loss, including splices and connectors.
Wavelengths may include:	<ul style="list-style-type: none"> • 850 nm • 1310 nm • 1490 nm

	<ul style="list-style-type: none"> • 1550 nm.
Tools may include:	<ul style="list-style-type: none"> • alcohol swabs • dry type cleaning cassette for optical connectors • hand tools • lint-free dry wipes • microscope for examining optical connector with: <ul style="list-style-type: none"> • integral safety infra-red filter • video microscope display • optical connector adaptors <ul style="list-style-type: none"> • FC to LC • FC to SC • FC to ST • SC to ST • optical reference cable • optical termination.
Test instruments may include:	<ul style="list-style-type: none"> • bi-directional automated optical loss test set • hand-held optical power meter • hand-held optical source • launch cable for OTDR • OFI-FTTx active ONT detector • OLTS • ORL test set • OTDR multimode • OTDR single mode • PON – OTDR • PON meter • visual fault locator (VFL).
OHS and environmental requirements may include:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas • personal protective equipment: <ul style="list-style-type: none"> • earmuffs • gloves • head protection • masks • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • chemicals

Unit Sector(s)

Telecommunications - Broadband and wireless networks

ICTBWN3088B Install optical fibre splitters in fibre distribution hubs

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Minor editorial change to performance criterion.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install optical fibre splitters in fibre distribution hubs (FDH) as part of a fibre to the premises (FTTP) network.

Optical networks and FTTP are part of the strategies by service providers using wave division multiplexing (WDM) to deliver very high speed broadband capacity through the access network for the National Broadband Network (NBN) initiative.

Assessment by a TITAB-registered assessor is recommended.

Application of the Unit

Technicians and cable installers who install and maintain optical network cables and equipment in access networks apply the skills and knowledge in this unit to provide services in Next Generation Networks (NGN) using emerging technologies.

NGN services include internet protocol TV (IPTV), video on demand (VoD), interactive TV, mesh networks and cloud computing.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Set up and prepare for installation</p>	<p>1.1 Review preparation to ensure work complies with requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Scope the work by obtaining project plan from <i>appropriate personnel</i> and arrange for site access to comply with security arrangements</p> <p>1.3 Notify appropriate personnel of identified <i>safety hazards</i> at the work site</p> <p>1.4 Determine type of <i>FDH enclosure</i> and <i>optical splitter module</i> from project plan and identify splitter installation requirements using work instructions</p> <p>1.5 Obtain <i>tools and safety equipment</i> and material to perform tasks safely and efficiently</p> <p>1.6 Select and use required protective equipment and make site safe and secure for installation work</p> <p>1.7 Obtain splitter module and visually inspect for <i>splitter module damage</i> and replace if necessary</p>
<p>2. Install splitter module in FDH</p>	<p>2.1 Follow occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> for the given work and identify and avoid <i>other services</i></p> <p>2.2 Open the enclosure and assess the suitability of the FDH according to the project plan</p> <p>2.3 Locate next available slot in splitter module area of FDH for installation</p> <p>2.4 Insert splitter module and secure according to manufacturer specifications</p> <p>2.5 Inspect installed splitter module and surrounding area for completeness of job</p>
<p>3. Prepare and connect splitter input fibres to feeder cable</p>	<p>3.1 Locate feeder port to be connected and remove protective cover in preparation</p> <p>3.2 Use an optical power meter to verify feeder port is not active</p> <p>3.3 Clean the adapter according to manufacturer specifications and route splitter input fibre to correct feeder port</p> <p>3.4 Remove dust cap and clean end face according to manufacturer specifications to prevent possible damage from mating <i>contaminated connectors</i></p> <p>3.5 Connect input fibre to feeder port and record connection</p>

	according to organisational policy
4. Connect output fibres and test splitter	<p>4.1 Determine output fibre to be connected and required adapter in distribution field</p> <p>4.2 Clean adapter and fibre end-face according to manufacturer specifications</p> <p>4.3 Route output fibre and connect with adapter in distribution field</p> <p>4.4 Test operation of optical splitter for optical power levels at the operating WDM optical wavelengths</p> <p>4.5 Record connections, test results and park unused fibre leads for safety reasons according to organisational policy</p>
5. Clean up work site	<p>5.1 Seal any internal enclosures and close FDH</p> <p>5.2 Remove installation waste and debris from work site and dispose of according to environmental requirements</p> <p>5.3 Notify appropriate personnel of job completion and obtain sign-off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work effectively within a group
- literacy skills to interpret work instructions
- numeracy skills to gather and record data from measurements
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - clean optical end face
 - connect optical fibre to feeder port
 - operate WDM test equipment and optical power meter
 - recognise optical devices in a communication system
 -

Required knowledge

- organisational policy and procedures
- personal safety issues
- propagation of light in optical communication systems
- role of transmitters and receivers in optical communication systems
- site engineering
- specific OHS requirements relating to the handling of optical fibre and the use of laser light sources
- WDM applications
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use optical power test equipment • measure optical signals at three WDM wavelengths • install splitter in the enclosure • connect input and out optical fibres to the splitter • test optical splitter • complete connection recording • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications operations site where installation of optical fibre splitters in FDH may be conducted • a fibre distribution hub and relevant optical splitter • use of tools, equipment and personal protective equipment currently used in industry • relevant regulatory and equipment documentation that impacts on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of candidate installing optical fibre splitters in FDH • direct observation of candidate applying all related OHS requirements and work practices • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, e.g.</p> <ul style="list-style-type: none"> • ICTBWN3090B Install lead-in module and cable for fibre

	<p>to the premises</p> <ul style="list-style-type: none">• ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install a lead-in module and its associated cable for a fibre to the premises (FTTP) installation.

Optical networks and FTTP are part of the strategies by service providers using wave division multiplexing (WDM) to deliver very high speed broadband capacity through the Access Network for the National Broadband Network (NBN) initiative.

FTTP services can be underground or aerial and may include hybrid fibre coaxial (HFC) installations.

Assessment by a TITAB registered assessor is recommended.

Application of the Unit

Technicians and cable installers who install and maintain optical network cables and equipment in Access Networks apply the skills and knowledge in this unit to provide services in Next Generation Networks (NGN) using emerging technologies.

NGN services include internet protocol TV (IPTV), video on demand (VoD), interactive TV, mesh networks and cloud computing.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.

If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Set up and prepare for installation</p>	<p>1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work</p> <p>1.2 Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements</p> <p>1.3 Notify appropriate personnel of identified safety hazards at the work site</p> <p>1.4 Determine type of lead-in module and cable from project plan and identify installation requirements using work instructions</p> <p>1.5 Obtain tools and safety equipment and material to perform tasks safely and efficiently</p> <p>1.6 Select and use required protective equipment and make site safe and secure for installation work</p> <p>1.7 Obtain lead-in module and visually inspect for lead-in module damage and replace if necessary</p>
<p>2. Install lead-in module in enclosure</p>	<p>2.1 Follow occupational health and safety (OHS) and environmental requirements for the given work and identify and avoid other services</p> <p>2.2 Identify position in enclosure to secure module and install mounting bracket according to manufacturer's specifications</p> <p>2.3 Splice lead-in module tail to distribution joint</p> <p>2.4 Attach lead-in module to mounting bracket and secure in position</p>
<p>3. Install optical fibre lead-in cable to premises</p>	<p>3.1 Unpack and prepare lead-in cable according to manufacturer's specifications</p> <p>3.2 Haul optical fibre lead-in cable to premises observing maximum strain on cable for underground installation</p> <p>3.3 Coil excess cable length within enclosure</p> <p>3.4 Install aerial lead-in using catenary and bearer wire to meet relevant height and minimum sag requirements</p>
<p>4. Terminate the lead-in cable at the premises</p>	<p>4.1 Access the optical network terminating (ONT) unit to expose lead-in cable to retrieve fibre and connector</p> <p>4.2 Clean ONT adapter and connector according to manufacturer's specifications</p> <p>4.3 Mate fibre connector with ONT adapter ensuring free of contaminants</p>

	<p>4.4 Route fibre cable within ONT and secure in position</p> <p>4.5 Test operation of lead-in at the ONT for optical power levels at the designated operating WDM optical wavelength</p> <p>4.6 Record connections, test results and park unused fibre leads for safety reasons according to organisational policy</p>
5. Clean up work site	<p>5.1 Seal ONT and enclosure</p> <p>5.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements</p> <p>5.3 Notify appropriate personnel of job completion and obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work effectively within a group
- literacy skills to interpret work instructions
- numeracy skills to gather and record data from measurements
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - clean optical end face
 - connect optical fibre to feeder port
 - operate WDM test equipment and optical power meter
 - recognise optical devices in a communication system
 - splice optical fibre lead in tail to distribution joint.
 -

Required knowledge

- licence requirements for working at heights
- organisational policy and procedures
- personal safety issues
- propagation of light in optical communication systems
- role of transmitters and receivers in optical communication systems
- site engineering
- specific OHS requirements relating to the handling of optical fibre and the use of laser light sources
- WDM applications
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use optical power test equipment • measure optical signals at three WDM wavelengths • install lead-in module in the enclosure for both an aerial and underground installation • demonstrate successful completion of the procedures • complete connection recording • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to a telecommunications operations site where installation of lead-in module and cable for FTTP may be conducted • a fibre lead-in module, distribution pit, premises conduit and relevant ONT • use of tools, equipment and personal protective equipment currently used in industry • relevant regulatory and equipment documentation that impacts on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing lead-in module and cable for FTTP applying all related OHS requirements and work practices • direct observation of the candidate measuring optical signals at three WDM wavelengths • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• ICTBWN3088B Install optical fibre splitters in fibre distribution hubs• ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • winch • crane • forklift • EWP • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p><i>Appropriate personnel</i> may be:</p>	<ul style="list-style-type: none"> • consultant • project engineer • project supervisor • site supervisor.
<p><i>Safety hazards</i> may refer to:</p>	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light (non-visible laser) • radio frequency (RF) emission • active lasers with no safety labels • active optical fibres • contact with remote power feed • electrical supply that require mandatory separation from

	<p>communications cable</p> <ul style="list-style-type: none"> • exposed fibres • unsafe support structures • unsafe weather: <ul style="list-style-type: none"> • heavy rains • high winds • severe heat or cold • thunderstorms.
Lead-in module may include:	<ul style="list-style-type: none"> • 1310 nm • 1490 nm • 1550 nm.
Installation requirements may refer to:	<ul style="list-style-type: none"> • aerial • underground • combination of underground and aerial.
Tools and safety equipment may include:	<ul style="list-style-type: none"> • personal protective equipment • safety equipment • test equipment: <ul style="list-style-type: none"> • passive optical network (PON) meter • optical time domain reflectometer (OTDR) • local area network (LAN) Cat tester • network analyser • tools: <ul style="list-style-type: none"> • fibre cleaning kit • fibre splicer • labeller • screw drivers • spanners • tagging tool.
Lead-in module damage may include:	<ul style="list-style-type: none"> • cuts in fibre sheathing • end caps on connectors • kinks in fibre leads • physical damage to module body.
OHS and environmental requirements may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas • personal protective equipment: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber

	<ul style="list-style-type: none"> • head protection • masks • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • chemicals • materials • tools and equipment • safety equipment: <ul style="list-style-type: none"> • flashing lights • safety barriers • warning signs and tapes • witches hats • special access requirements • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Other services</i> may include:	<ul style="list-style-type: none"> • alarms • electrical services • fire sprinkler systems • gas and water mains • high voltage (HV) power • other service provider networks.
<i>Enclosure</i> may include:	<ul style="list-style-type: none"> • cabinet • FTTP cabinet • HFC housing • housing • pit.
<i>Maximum strain</i> may relate to:	<ul style="list-style-type: none"> • typically 600 nm • verify with manufacturer's for specific value.
<i>Clean ONT adapter and connector</i> may use:	<ul style="list-style-type: none"> • dry clean • lint-free swabs • lint-free wipes • wet clean.
<i>Contaminants</i> may include:	<ul style="list-style-type: none"> • chips • dry residue • dust • liquids

	<ul style="list-style-type: none">• scratches.
<i>WDM Optical wavelength</i> is one of:	<ul style="list-style-type: none">• 1310 nm• 1490 nm• 1550 nm.

ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to work safely on a live optical fibre installation to test and commission a wave division multiplexing (WDM) system or connect a splitter for fibre to the x (FTTx) deployment.

Optical networks and FTTx are part of the strategies by service providers using WDM to deliver very high speed broadband capacity through the access network for the National Broadband Network (NBN) initiative.

Application of the Unit

Technicians and cable installers who install and maintain optical network cables and equipment in Access Networks apply the skills and knowledge in this unit to provide services in Next Generation Networks (NGN) using emerging technologies.

NGN services include internet protocol TV (IPTV), video on demand (VoD), interactive TV, mesh networks and cloud computing.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

ICTWHS2170B Follow work health and safety and environmental policy and procedures

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Set up and prepare for working with live fibre</p>	<p>1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work</p> <p>1.2 Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements</p> <p>1.3 Notify appropriate personnel of identified safety hazards at the worksite</p> <p>1.4 Determine type of FTTx equipment, components of optical distribution network (ODN) and WDM components from project plan for testing and commissioning</p> <p>1.5 Obtain tools and safety equipment and materials to perform tasks safely and efficiently</p> <p>1.6 Select and use required protective equipment and make site safe and secure for commissioning work</p> <p>1.7 Create a safe working environment by following safe work practices and identifying optical fibre hazards that could cause possible injuries when handling optical fibres and laser-based equipment</p>
<p>2. Connect a splitter input fibre to the feeder cable</p>	<p>2.1 Follow occupational health and safety (OHS) and environmental requirements for the given work and identify and avoid other services</p> <p>2.2 Locate the feeder fibre port to be connected</p> <p>2.3 Determine the state (live or not) of the fibre port to be connected and notify transmitter to ensure that power is turned off at the source if the fibre port is live</p> <p>2.4 Connect up connectorised splitter input fibres as instructed by the manufacturer</p> <p>2.5 Arrange for power to be turned back on to the newly connected feeder port</p>
<p>3. Perform live WDM commission testing of a ODN installation used in FTTx network</p>	<p>3.1 Locate the appropriate test points in the ODN from manufacturer's instructions for WDM testing</p> <p>3.2 Test live wavelengths for the WDM tests following safety precautions</p> <p>3.3 Test the optical signal strengths for the operating wavelengths incoming into the optical network termination (ONT) and determine if signal strengths are within the range of acceptable power levels</p> <p>3.4 Test the losses between the WDM outputs and the individual LM for each wavelength and determine if within</p>

	<p><i>maximum and minimum power losses</i></p> <p>3.5 Conduct all <i>acceptance tests</i> as specified by manufacturer</p> <p>3.6 Record and tabulate all tests results for commissioning requirements</p>
4. Clean up work site	<p>4.1 Seal and secure any enclosures and cabinets</p> <p>4.2 Remove waste and debris from worksite and dispose of according to environmental requirements</p> <p>4.3 Notify appropriate personnel of job completion and obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to work effectively within a group
- literacy skills to interpret work instructions
- numeracy skills to gather and record data from measurements
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - clean optical end face
 - connecting optical fibre to feeder port
 - operate WDM test equipment and optical power meter
 - recognise optical devices in a communication system.
 -

Required knowledge

- organisational policy and procedures
- personal safety issues
- propagation of light in optical communication systems
- role of transmitters and receivers in optical communication systems
- site engineering
- specific OHS requirements relating to the handling of optical fibre and the use of laser light sources
- WDM applications
- workplace and industry environment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use optical power test equipment • evaluate tests results • connect input and output optical fibres to the splitter • conduct live tests measuring optical signals at three WDM wavelengths on optical devices • conduct acceptance tests for commissioning • demonstrate successful completion of the procedures • complete connection recording • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications operations site where an FTTP installation may be tested and commissioned • access to a WDM system and relevant optical splitter • use of tools, equipment and personal protective equipment currently used in industry • relevant regulatory and equipment documentation that impacts on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate using optical power test equipment applying all related OHS requirements and work practices • direct observation of the candidate conducting live tests measuring optical signals at three WDM wavelengths • direct observation of the candidate conducting acceptance tests for commissioning • oral or written questioning to assess required knowledge.

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTBWN3082B Perform tests on optical communication system and components• ICTBWN3088B Install optical fibre splitters in fibre distribution hubs• ICTBWN3090B Install lead-in module and cable for fibre to the premises. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

include:	<ul style="list-style-type: none"> • fire sprinkler systems • gas and water mains • high voltage power • other service provider networks.
Operating wavelengths may include:	<ul style="list-style-type: none"> • 1310 nm • 1490 nm • 1550 nm.
Range of acceptable power levels may include:	<ul style="list-style-type: none"> • -2 to + 2 dBm @ 1310 nm • -26 to -6 dBm @ 1490 nm • -11.5 to +5 dBm @ 1550 nm.
Maximum and minimum power losses may include:	<ul style="list-style-type: none"> • 23.3 dB to 15.0 dB @1310 nm • 21.6 dB to 8.0 dB @1490 nm • 20.9 dB to 9.5 dB @1550 nm.
Acceptance tests may include:	<ul style="list-style-type: none"> • delay • dispersion • optical attenuation and loss measurements • optical power levels • phase.

Unit Sector(s)

Telecommunications - Broadband and wireless networks

ICTBWN3205B Use optical and radio frequency measuring instruments

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to set up and use hand-held optical and radio frequency (RF) communications instruments in order to perform installations, upgrades and fault-finding on optical and RF equipment.

The complexity of the measurements performed is suitable for entry-level practitioners.

Application of the Unit

Installation contractors, technical staff and field officers from telecommunications carriers, other private and public organisations and regulatory authorities apply the skills and knowledge in this unit. They combine technical skills with organisational and administrative skills.

Field officers may be responsible for small projects such as forming routine field measurements on optical fibres in broadband optical networks, RF cables and equipment in broadband cable networks and satellite and terrestrial television systems.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare to use measuring instruments	<p>1.1 Obtain approval for site access with customer or site owner prior to site entry</p> <p>1.2 Identify the purpose of the test and the <i>type of measurement</i> required</p> <p>1.3 Select the appropriate <i>tools</i> and <i>instruments</i> according to the required measurement</p> <p>1.4 Check tools and instruments and calibrate to ensure accuracy</p> <p>1.5 Obtain resources required</p> <p>1.6 Devise and implement risk control measures in consultation with appropriate personnel and document safety hazards</p>
2. Conduct measurements	<p>2.1 Follow site-specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures</p> <p>2.2 Set up test equipment according to manufacturer's instructions and safe industry practice</p> <p>2.3 Perform measurement using knowledge of appropriate testing techniques to assess the overall system performance</p> <p>2.4 Record and interpret test results and compare with standard test specifications</p> <p>2.5 Clean work area and make safe according to established procedures</p>
3. Document measurement results	<p>3.1 Document test results and make recommendations to achieve optimum performance</p> <p>3.2 Notify customer of work completion</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to interpret technical documentation such as manufacturer's instructions
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - clean an optical connector to an acceptable industry standard
 - inspect an optical connector for contamination and determine if cleaning is necessary
 - operate a digital signal level meter (SLM) to measure RF signals on a broadband network or on a satellite or terrestrial television installation
 - operate a passive optical network (PON) power meter to measure PON signals of various wavelengths on fibre to the home (FTTH) and fibre to the premises (FTTP) network
 - operate optical loss test set (OLTS) to measure loss of a fibre.
 -

Required knowledge

- consequences of mating contaminated optical connectors
- decibels, dBm and dBmV
- optical and RF connector types
- RF awareness and RF safety
- RF spectrum and optical spectrum limits and allocations
- safe handling procedures with optical fibres.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • check and calibrate tools and instruments • perform optical measurements using hand-held instrument • perform RF measurements using hand-held instrument • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which optical and RF measurements installations can be conducted • tools and equipment, currently used in industry, required for measurements.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing an optical measurement using a hand-held instrument • direct observation of the candidate performing an RF measurement using a hand-held instrument • review of an oral and written report with completed documentation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation • ICTBWN3082B Perform tests on optical communication system and components • ICTRFN3055A Install a radio communications antenna and feedline

	<ul style="list-style-type: none">• ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Type of measurement</i> may include:</p>	<ul style="list-style-type: none"> • optical measurement: <ul style="list-style-type: none"> • detecting the presence of an active optical network terminal (ONT) • determining absolute optical power (in dBm) • determining insertion loss (in dB) • determining relative optical power level (in dB) • RF measurement: <ul style="list-style-type: none"> • determining absolute RF power (in dBm) • determining relative RF power level (in dB) • determining relative RF voltage (in dBmV).
<p><i>Tools</i> may include:</p>	<ul style="list-style-type: none"> • alcohol swabs • dry type cleaning cassette for optical connectors • electrical attenuators with suitable connectors • lint free dry wipes • metallic test leads and RF cables • microscope for examining optical connector face • optical connector adaptors: <ul style="list-style-type: none"> • FC to LC • FC to SC • FC to ST • SC to ST • optical launch cable • optical reference cable • optical termination • resistive termination • RF connector adaptors: <ul style="list-style-type: none"> • BNC to F type • N type to BNC • N type to SMA • test leads.
<p><i>Instruments</i> may include:</p>	<ul style="list-style-type: none"> • hand-held optical power meter • hand-held optical source • OFI-FTTx active ONT detector

	<ul style="list-style-type: none">• OLTS• PON meter• signal level meter (SLM).

ICTCBL2005B Install customer cable support systems

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install support systems for cable infrastructure. It involves planning cable routes and selecting and installing a support structure.

The activity may be for a new cable installation, upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to Next Generation Networks (NGN).

Assessment by a TITAB registered assessor is recommended.

The six unit competency set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B. that meets the Australian Communications and Media Authority's (ACMA) requirements for Cabling Provider Registration (CPR), is generally used as part of a more specialised customer cabling qualification. This set is usually regarded as more suitable for new entrants where limited industry experience has been obtained and forms the major part of specialised qualifications, such as ICT203103 Certificate II in Telecommunications Cabling. When these six units are undertaken as a set within state and territory funding approved programs, the two benchmark CPR units (ICTCBL2136B and ICTCBL2137B) are not required.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who install and provide cabling infrastructure for customer premises and equipment apply the skills and knowledge in this unit.

They may be required to do new installations, upgrades or maintain existing networks in domestic, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

This unit applies to indoor and outdoor cable and systems within customer premises.

Licensing/Regulatory Information

Refer to unit descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare cable support installation</p>	<p>1.1 Arrange access to the site according to required procedure and comply with <i>site security arrangements</i> and <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Confirm site capacities for storage and location of cable feeders or establish alternative methods</p> <p>1.3 Determine customer specifications, manufacturer's and enterprise requirements for cable support</p> <p>1.4 Notify appropriate personnel of identified <i>safety hazards</i> at the cabling worksite</p> <p>1.5 Plan cable route identifying and avoiding <i>other services</i> and remote power feeding services operating at above telecommunications network voltage (TNV) on site in commercial buildings</p> <p>1.6 Select <i>tools</i> and materials for installation of support system from work specifications and schedules</p>
<p>2. Determine cable routes</p>	<p>2.1 Review relevant <i>plans</i> and verify cable locations</p> <p>2.2 Select <i>cable routes</i> appropriate to the location of building services providing access to all outlets and enabling <i>cable</i> to be supported to the outlet point</p> <p>2.3 Plan safe and efficient installation by accurate identification of structural building requirements and identified site constraints</p> <p>2.4 Identify cable and services segregation clearances to ensure cable route complies with manufacturers, enterprise, legislative and industry codes of practice</p>
<p>3. Determine support method</p>	<p>3.1 Select an appropriate <i>support system</i> for the planned cable route and identified site constraints</p> <p>3.2 Prepare the support system for capability to meet the planned concentration of cable in any location to facilitate ready access for maintenance and to allow for future expansion</p>
<p>4. Mark out and install fixings and support structure</p>	<p>4.1 Mark out and install fixings and structures securely in a <i>safe manner</i> to manufacturer's specifications ensuring cable weight can be supported in all operating conditions</p> <p>4.2 Align support structure correctly to enable cable to be installed evenly, in order and without damage</p> <p>4.3 Install protective earthing to industry standards</p> <p>4.4 Conduct work with minimal disruption to ongoing customer activity</p>

5. Complete support installation	5.1 Check and adjust installed supports to ensure cable will not be exposed to damage during installation and operation 5.2 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions 5.3 Complete <i>documentation</i>
----------------------------------	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - arrange site access
 - interpret and apply relevant regulations and standards
 - organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

technical skills to:

- read and interpret drawings related to:
 - cable coding system
 - cable layouts
 - frame locations
 - identifiers
 - outlet locations
- use correct methods of running and fastening cables in commercial buildings
- use hand and power tools.
-

Required knowledge

- building construction of commercial buildings
- cable and services segregation clearances to ensure cable route complies with manufacturer's, enterprise, legislative and industry codes of practice
- features and operating requirements of equipment
- information required to operate appropriate equipment according to specifications
- installation methods and performance requirements
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan a cable route and cable support system • interpret related floor plans, building plans, reflected ceiling plans and schematic drawings • install three different support structures: <ul style="list-style-type: none"> • catenary wire • ducts and or trays • frame back-mounts • complete support installation applying relevant regulations and standards • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where customer cable support systems may be installed • use of equipment currently used in industry • relevant regulatory and equipment documentation that impact on cable installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate installing a cable support system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3009B Install, terminate and certify structured

	<p>cabling installation.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for task and identify cable route</p>	<p>1.1 Arrange access to the site according to required procedure and comply with <i>site security arrangements</i> and <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Notify appropriate personnel of identified <i>safety hazards</i> at the cabling work site</p> <p>1.3 Plan cable route identifying and avoiding <i>other services</i> and remote power feeding services operating at above telecommunications network voltage (TNV) on site in commercial buildings</p> <p>1.4 Select cable route to maintain required clearances and segregations according to cable plan and complying with relevant industry standards</p> <p>1.5 Confirm <i>cable route</i> and requirements with customer</p> <p>1.6 Select <i>tools</i>, equipment and <i>cables</i> for installation of support system from <i>work specifications</i> and schedules</p>
<p>2. Set up cable dispensers</p>	<p>2.1 Determine feeder locations to minimise wastage of cable and efficiency</p> <p>2.2 Set up <i>feeders</i> in locations to provide ease of access during hauling of cable</p> <p>2.3 Secure feeder locations to minimise safety risks during installation</p> <p>2.4 Label hauling end of the cable with unique identifier prior to placement</p>
<p>3. Place and secure cable</p>	<p>3.1 <i>Haul and place cable</i> in a <i>safe manner</i> within clearances required by industry standards, manufacturer's and work specifications</p> <p>3.2 Place cable in a neat, orderly and methodical manner, allowing sufficient excess at cable ends to facilitate termination</p> <p>3.3 Inspect cable to maintain separations to comply with regulations</p> <p>3.4 Install barriers to achieve <i>separations</i> where sufficient spatial separation cannot be met with other services</p> <p>3.5 Install and trim <i>securing anchors</i> promptly to restrain cable movement to manufacturer's specifications</p>
<p>4. Complete cable installation</p>	<p>4.1 Update <i>records and cable plans</i> promptly and accurately</p> <p>4.2 Store records and plans according to customer and company requirements</p>

	4.3 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - arrange site access
 - interpret and apply relevant regulations and standards
 - organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - read and interpret drawings related to:
 - cable coding system
 - cable layouts
 - frame locations
 - identifiers
 - outlet locations
 - use correct methods of running and fastening cables in commercial buildings
 - use hand and power tools.
 -

Required knowledge

- building construction of commercial buildings
- cable and services segregation clearances to ensure cable route complies with manufacturer's, enterprise, legislative and industry codes of practice
- features and operating requirements of equipment
- information required to operate appropriate equipment according to specifications
- installation methods and performance requirements
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • place and secure cables on support structures and building faces for both internal and external locations avoiding cable damage • plan cable placement and set up cable dispensers for structured, aerial and underground cabling • haul and install cables on support structures and building faces for both internal and external locations applying relevant regulations and standards • install securing methods for above locations • complete records and TCA forms • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where placing and securing customer cable may be conducted • use of equipment currently used in industry • relevant regulatory and equipment documentation that impact on cable installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate placing and securing cable for three different situations.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

	<ul style="list-style-type: none">• ICTCBL2005B Install customer cable support systems. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Telecommunications - Cabling

ICTCBL2008B Terminate metallic conductor customer cable

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to terminate metallic conductor cable for indoor and outdoor installations within customer premises. It also applies to joining cable in a terminating block.

The activity may be a new cable installation or upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to Next Generation Networks (NGN).

Assessment by a TITAB registered assessor is recommended.

The six unit competency set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B, that meets the Australian Communications and Media Authority's (ACMA) requirements for Cabling Provider Registration (CPR), is generally used as part of a more specialised customer cabling qualification. This set is usually regarded as more suitable for new entrants where limited industry experience has been obtained and forms the major part of specialised qualifications, such as ICT20313 Certificate II in Telecommunications Cabling. When these six units are undertaken as a set within state and territory funding approved programs, the two benchmark CPR units (ICTCBL2136B and ICTCBL2137B) are not required.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who terminate metallic conductor cable apply the skills and knowledge in this unit.

This unit applies to all communications applications, digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia. It may be applied to domestic, commercial or industrial installations.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare cable termination</p>	<p>1.1 Arrange access to the site according to required procedure</p> <p>1.2 Prepare for <i>cable terminating work</i> within the <i>regulatory environment, cabling environment, cable type, cable identification, termination systems, earthing and protection, records</i> and <i>relevant legislation, codes, regulations and standards</i></p> <p>1.3 Select correct <i>termination</i> for installation according to <i>strategies to manage infrastructure</i> and relevant legislation, codes, regulations and standards</p> <p>1.4 Notify appropriate personnel of identified <i>safety hazards</i> at cabling worksite</p> <p>1.5 Identify remote power feeding services which operate at above telecommunications network voltage (TNV) inside customer premises and risks posed by contact with remote power feed</p> <p>1.6 Remove all <i>contaminants</i> from worksite that may adversely affect termination and prepare worksite to ensure adequate visibility to minimise errors and reduce eye strain</p> <p>1.7 Design <i>cable and block</i> location within frame with capacity for expansion where possible</p> <p>1.8 Segregate incoming and outgoing cables for ease of access and to minimise overlaying and backtracking of cable</p>
<p>2. Terminate cable</p>	<p>2.1 Remove cable sheath to allow for conductor length and installation requirements</p> <p>2.2 Layer out cable to manufacturer's <i>coding system</i> to ensure correct terminating sequence and unique identification where appropriate</p> <p>2.3 Install over-voltage protection devices to all cables with metallic component where required</p> <p>2.4 Install terminating modules to frame according to manufacturer's specifications</p> <p>2.5 Fan cable pairs neatly to termination equipment to facilitate accurate termination</p> <p>2.6 Terminate cable following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> to manufacturer's specifications using correct tool</p> <p>2.7 Earth cable shield to manufacturer's specifications and industry standards</p>

3. Test termination	3.1 Conduct a visual inspection to confirm that the termination colour code sequence has been followed 3.2 Test termination to satisfy performance specifications and record results
4. Complete records and clean up site	4.1 Label cable pairs clearly to provide an accurate identification according to manufacturer's, industry and client standards 4.2 Update records and plans with <i>cabling details</i> to provide an accurate record according to industry codes of practice and AS/ACIF S009:2006 4.3 Complete telecommunications cabling advice (TCA) forms and notify customer 4.4 Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with work associates, supervisors, team members and clients
- literacy skills to interpret:
 - technical documentation, such as equipment manuals, specifications and requirements for metallic cable termination
 - related regulations and industry codes
 - review relevant plans to identify and verify cable terminations
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - check environmental conditions are suitable for termination
 - identify remote power feeding services in a range of commonly encountered circumstances
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to:
 - work systematically with required attention to detail and adherence to all safety requirements
 - confirm an inventory of tools and materials necessary to terminate cable according to work specifications and schedules
- technical skills to:
 - perform fault clearance
 - read and interpret drawings related to:
 - cable coding system and identifiers
 - cable locations
 - frame locations
 - layouts and terminations
 - outlet location
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- features and operating requirements of testing equipment

- information required to operate appropriate terminating and testing equipment according to specifications
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- termination methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • terminate systems at both distributor and outlet locations • terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater and one non-jumperable distributor (local distributor) and a patch panel • terminate at least one 50 pair, one 4 pair, and one Ethernet cables; including accurate completion of installation records, drawing alterations and compliance forms • use correct methods to terminate a range of cables • conduct and interpret cable test results and a minimum of three different lead-in fault remediation • interpret and apply relevant legislation, codes, regulations and standards • update records and plans to show pair locations • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where metallic conductor cable may be terminated • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on cable terminating activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral or written report with completed documentation • direct observation of the candidate terminating at least one 50 pair, one 4 pair, and one Ethernet cables.

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTCBL2006B Place and secure customer cable. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Cable terminating work</i> refers to:</p>	<ul style="list-style-type: none"> • cabling work: <ul style="list-style-type: none"> • aerial and underground • performed only in relation to a customer’s premises • customer metallic cabling that terminates on a socket or network termination device or patch panel.
<p><i>Regulatory environment</i> refers to:</p>	<ul style="list-style-type: none"> • accredited registrars and registration • ACMA • Certified Components List • Communications Alliance • labelling requirements • Telecommunications Act 1997.
<p><i>Cabling environment</i> may refer to:</p>	<ul style="list-style-type: none"> • indoor environments, including concealed locations: <ul style="list-style-type: none"> • ceilings and false ceilings • internal wall space • modular workstations • under floor • outdoor environments ,including cable installations: <ul style="list-style-type: none"> • aerial telecommunications cabling for restricted cabling work but does not include installations on poles shared with low voltage (LV) or high voltage (HV) electrical power cables or terminations • external walls • underground cabling in an exclusive trench or shared trench with electrical LV cables and other utilities.
<p><i>Cable type</i> may include:</p>	<ul style="list-style-type: none"> • aerial or underground • coaxial cable • copper twisted pair • indoor or external • structured data cable: <ul style="list-style-type: none"> • Category 5, 6, 6A, 7 or 7A
<p><i>Cable identification</i> refers to:</p>	<ul style="list-style-type: none"> • cable conductor identification codes: <ul style="list-style-type: none"> • banded • colour coded

	<ul style="list-style-type: none"> • lettered • numbered.
Termination systems may include:	<ul style="list-style-type: none"> • distribution frames • Krone block • patch panel • socket • termination strip.
Earthing and protection must include:	<ul style="list-style-type: none"> • earthing for protection • surge suppression.
Records may include:	<ul style="list-style-type: none"> • building, cabling and equipment location plans • cable plans • labelling of: <ul style="list-style-type: none"> • distributor pairs • distributor verticals • equipment closets • network termination device (NTD) record cards • patch panels • rooms • telecommunication outlets • record books and cards: <ul style="list-style-type: none"> • campus distributors (CD) • building distributors (BD) • floor distributors (FD) • local distributors (LD) • TCA conforming with AS/ACIFS009:2006: <ul style="list-style-type: none"> • cable drawings • record books • record cards • TCA1 sign off form • TCA2 form.
Relevant legislation, codes, regulations and standards may include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006

	<ul style="list-style-type: none"> • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian Standard: AS/ACIF S008:2006 and Australian Standard: AS/ACIF S009:2006 • cabling security codes and regulations • communications cabling manual (restricted) • ISO Draft 11801 (International) • regulated or industry codes of practice and appropriate ACMA technical standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
Termination may include:	<ul style="list-style-type: none"> • cable termination at a frame or outlet location • cable termination usually done individually • termination systems that may be manufacturer's proprietary systems.
Strategies to manage infrastructure may refer to:	<ul style="list-style-type: none"> • appropriate separations, fastening techniques and correct use of cable trays and support systems • back-mount or outlet layout conforms to manufacturer's specifications • layout allows for adequate workspace to ensure ease of access for installation and service purposes • terminating equipment layout systematically and following relevant industry codes of practice, standards and customer requirements where appropriate.
Safety hazards may refer to:	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light (non-visible laser) • radio frequency (RF) emission • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from communications cable • hazardous conduit as according to AS 1345:1995 conduit colours associated with a hazardous service.
Contaminants may include:	<ul style="list-style-type: none"> • asbestos • building debris • dust • paint • water.
Cable and block include:	<ul style="list-style-type: none"> • cable support bock • mounting bracket • terminating block • ropes and anchors.

<i>Coding system</i> may be:	<ul style="list-style-type: none"> • banded • colour coded • lettered • numbered.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas • need for decommissioning and isolating worksite and lines prior to commencement • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safety harness • safety line • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • tools and equipment • materials • chemicals • work platforms • asbestos • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.

<i>Cabling details</i> may include:	<ul style="list-style-type: none">• cable location and type• cable infrastructure pair locations• interconnections• pair numbering and labelling.

ICTCBL2012B Install functional and protective telecommunications earthing system

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install telecommunications earthing system to metallic frames.

Assessment by a TITAB registered assessor is recommended.

Licensing, legislative, regulatory and certification requirements apply to telecommunications earthing systems.

The six unit competency set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B. that meets the Australian Communications and Media Authority's (ACMA) requirements for Cabling Provider Registration (CPR), is generally used as part of a more specialised customer cabling qualification. This set is usually regarded as more suitable for new entrants where limited industry experience has been obtained and forms the major part of specialised qualifications such as ICT20313 Certificate II in Telecommunications Cabling. When these six units are undertaken as a set within state and territory funding approved programs, the two benchmark CPR units (ICTCBL2136B and ICTCBL2137B) are not required.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Telecommunications technicians and field officers who install earthing systems apply the skills and knowledge in this unit.

This unit may be applied to domestic, small office home office (SOHO), commercial or industrial installations and covers multi-storey and multi-site locations. It applies to indoor and outdoor installation of cabling and equipment within customer premises.

Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, LANs and WANs and multimedia.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to install telecommunications earthing system</p>	<p>1.1 Prepare for given work according to relevant legislation, codes, regulations and standards</p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Calculate earthing requirements using relevant cable characteristics</p> <p>1.4 Calculate the upper and lower limits of resistance for cable system earths</p> <p>1.5 Establish location of earthing applications, minimising the risks posed by contact with remote power feeding services</p> <p>1.6 Select route to minimise interference to system performance and according to safe working practices</p> <p>1.7 Select earthing materials to comply with relevant industry standards</p>
<p>2. Install and secure earth cable</p>	<p>2.1 Maintain cable separations to meet performance requirements of application environment</p> <p>2.2 Check earth cable insulation is undamaged to ensure integrity of earth provided</p> <p>2.3 Isolate protective and functional earths at all times to ensure operation according to industry standards</p> <p>2.4 Install and secure cable following occupational health and safety (OHS) and environmental requirements meeting manufacturer's specifications and industry standards</p>
<p>3. Terminate and test earth cable installation</p>	<p>3.1 Terminate earth with connectors recommended by manufacturer and according to industry standards</p> <p>3.2 Maintain earth continuity at all times to ensure safe and reliable system operation</p> <p>3.3 Maintain correct interface requirements with electrical systems according to industry standards</p> <p>3.4 Test the earthing system according to manufacturer's specifications in a safe manner</p> <p>3.5 Rectify earth system faults, where required, prior to re-testing</p>
<p>4. Complete task and documentation</p>	<p>4.1 Label earthing systems according to industry regulations</p> <p>4.2 Complete documentation, including test records</p> <p>4.3 Clean up and restore worksite</p> <p>4.4 Notify customer and obtain sign off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications, competency requirements for telecommunications earthing systems
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail
- technical skills to use hand and power tools, diagnostic equipment and perform fault clearance.
-

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000, legislation, codes of practice and other formal agreements that impact on the work activity
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate earthing needs for cable systems on customer premises and apply related OHS requirements • determine potential earthing locations • determine earth route and support system • install functional earth installations including equi-potential bonding • test and label earth installation • manage remote power feed services.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation of functional and protective telecommunications earthing system may be conducted • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation, such as test results, updated cable plans and records • direct observation of the candidate installing a functional and protective telecommunications earthing system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS 3260:1993 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • Environmental Protection Acts • fire regulations • National Association of Testing Authorities (NATA) requirements • OHS • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p>Earthing requirements refers to:</p>	<ul style="list-style-type: none"> • provision of safe operation of the installation and includes: <ul style="list-style-type: none"> • lightning conductor • link to multiple earth neutral (MEN) • over voltage • screening • surges and spikes.
<p>Location refers to:</p>	<ul style="list-style-type: none"> • cable routes • cable trays • communications earthing terminal (CET) • cross connects • data cabinets • final distribution point (FDP)

	<ul style="list-style-type: none"> • intermediate distribution frame (IDF) • main distribution frame (MDF) • telecommunications closures • telecommunications reference conductor (TRC).
<p><i>Earthing applications</i> may include:</p>	<ul style="list-style-type: none"> • barriers • data rack • distributor (MDF) bonding • equipment earthing • exposed metal work • screen earth • TRC • telex earth (single function earth).
<p><i>Functional earths</i> refer to:</p>	<ul style="list-style-type: none"> • earth systems with functionality to: <ul style="list-style-type: none"> • eliminate interference from electromagnetic, radio frequency (RF) and power sources • reduce interference from electromagnetic RF and power sources.
<p><i>OHS and environmental requirements</i> may relate to:</p>	<ul style="list-style-type: none"> • identifying other services, including power and gas • need for decommissioning and isolating worksite and lines prior to commencement • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment <ul style="list-style-type: none"> • woggles hats • flashing lights • safety barriers • trench guards • warning signs and tapes • gas and other hazard detection equipment • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste management.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for jointing	1.1. Arrange access to the site according to required procedures 1.2. Inform appropriate personnel of identified <i>hazards</i> on worksite 1.3. Organise tools, equipment and materials for given work 1.4. Review <i>site plans and documentation</i> 1.5. Select <i>cable type</i> and requirements for <i>cable joint</i>
2. Joint cable and test joint	2.1. Joint metallic cable following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> and complying with manufacturer's requirements and relevant <i>industry standards</i> 2.2. Perform relevant cable tests to ensure joint complies with site specifications, <i>manufacturer's specifications</i> and <i>relevant legislation, codes, regulations and standards</i> 2.3. Rectify any cable faults 2.4. Make a visual inspection of the joint to confirm soundness and completeness
3. Complete records and clean up site	3.1. Complete required records and notify customer 3.2. Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions 3.3. Reinststate site according to customer and company requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications for jointing metallic conductor cable
- numeracy skills to take and analyse measurements

REQUIRED SKILLS AND KNOWLEDGE

- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000, legislation, codes of practice and other formal agreements that impact on the work activity
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • joint at least one 20 pair (or greater) cable • test joint • interpret test results • rectify cable faults • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where jointing metallic conductor cable may be conducted • use of joint testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on cable jointing and testing activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of hands-on project completed by the candidate • review of oral and written report with test results • direct observation of the candidate jointing cable and testing joint.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3015A Locate and identify cable system faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include:

- building debris
- earth potential rise (EPR):
 - event at a site, such as an electrical distribution substation, may expose telecommunications personnel, users or plant to hazardous voltages
- glass fibre
- live power lines
- manual handling
- mud and water
- natural gas and other gas build up
- needle stick injury

RANGE STATEMENT	
	<ul style="list-style-type: none"> • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
<i>Site plans and documentation</i> may include:	<ul style="list-style-type: none"> • access location • cable coding system and identifiers • cable plan.
<i>Cable type</i> may include:	<ul style="list-style-type: none"> • copper: <ul style="list-style-type: none"> • 20 pair • 50 pair • 100 pair • Category 5 • Category 6 • metallic.
<i>Cable joint</i> may involve:	<ul style="list-style-type: none"> • additional service points for connection • jointing enclosures • joints due to: <ul style="list-style-type: none"> • access points requirements • cable damage • fault rectification • long cable runs • stub joints • underground pits.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas • need for decommissioning and isolating worksite and lines prior to commencement • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • plastic • rubber • leather • head protection • kneepads • masks

RANGE STATEMENT	
	<ul style="list-style-type: none"> • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Industry standards</i> refer to:	<ul style="list-style-type: none"> • regulated or industry codes of practice and include appropriate ACMA technical standards • joints are waterproof and vermin proof • jointed cable supported for effective curing and alignment • requirement to be compliant with appropriate ACMA technical standard requirements: <ul style="list-style-type: none"> • aerial • Category 5, 6, 6A, 7 or 7A • Unshielded twisted pair (UTP) • underground • requirement for all cabling products to be ACMA-approved.
<i>Manufacturer's specifications</i> may include:	<ul style="list-style-type: none"> • diagnostic procedures • installation instructions • maintenance schedule

RANGE STATEMENT	
	<ul style="list-style-type: none"> warranty conditions.
<p><i>Relevant legislation, codes, regulations and standards include:</i></p>	<ul style="list-style-type: none"> Australian Communications Industry Forum (ACIF) standards and codes AS Communications Cabling Manual (CCM) Volume 1 AS/NZS 3000:2007 AS/NZS 3080:2003 AS/NZS 3084:2003 AS/NZS 3085.1:2004 AS/NZS IEC 61935.1:2006 AS/NZS IEC 61935.2:2006 AS/NZS ISO/IEC 14763.3:2007 AS/NZS ISO/IEC 15018:2005 AS/NZS ISO/IEC 24702:2007 cabling security codes and regulations Environmental Protection Acts OHS technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.

ICTCBL2017B Alter services to existing cable system

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor changes to range statement to reflect changed terminology.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to alter services to an existing voice or data cable system within customer premises.

Assessment by a TITAB-registered assessor is recommended.

The six unit competency set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B, that meets the Australian Communications and Media Authority's (ACMA) requirements for Cabling Provider Registration (CPR), is generally used as part of a more specialised customer cabling qualification. This set is usually regarded as more suitable for new entrants where limited industry experience has been obtained and forms the major part of specialised qualifications, such as ICT20313 Certificate II in Telecommunications Cabling. When these six units are undertaken as a set within state and territory funding approved programs, the two benchmark Cabling Provider Rules units (ICTCBL2136B and ICTCBL2137B) are not required.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who alter services to existing cable systems apply the skills and knowledge in this unit.

This unit applies to indoor and outdoor installation within a customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

They may make use of formal documentation, such as accurate completion of a telecommunications cabling advice form (TCA1 form), test routines and databases.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare to alter services to existing cable system	<p>1.1 Survey the site to determine <i>system alteration</i> requirements to <i>existing cable system</i></p> <p>1.2 Inform appropriate personnel of identified <i>hazards</i> on work site</p> <p>1.3 Organise equipment and materials to meet required industry standards and ensure compatibility with existing system</p> <p>1.4 Arrange <i>access to site</i> according to required procedures</p>
2. Alter cable system	<p>2.1 Follow <i>occupational health and safety (OHS) and environmental requirements</i> for the given work and according to industry standards</p> <p>2.2 Alter system so that it conforms to <i>client system specifications</i> according to requirements of <i>relevant legislation, codes, regulations and standards</i></p>
3. Restore and test cable system	<p>3.1 Confirm compatibility of alterations with existing systems</p> <p>3.2 Test new work in isolation and when integrated with existing systems</p> <p>3.3 Rectify any faults</p>
4. Complete records and clean up site	<p>4.1 Update plans and documents to show revised systems accurately and clearly, or create new plans as appropriate</p> <p>4.2 Remove installation waste and debris from work site and dispose of according to environmental requirements to maintain safe work site conditions</p> <p>4.3 Reinstate site according to customer and company requirements</p> <p>4.4 Complete TCA1 form and sign off with customer to record satisfaction</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and service orders
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- task-management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools
 -

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- legislation, codes of practice and other formal agreements that impact on the work activity
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • estimate requirements and document specifications and cable plan for alteration • alter, restore and test cable system according to industry standards • rectify faults • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessments must ensure:</p> <ul style="list-style-type: none"> • sites on which alterations to existing cable system may be conducted • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impacts on alteration activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation, such as TCA1 form • direct observation of the candidate altering services to an existing cable system.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2005B Install customer cable support systems • ICTCBL2006B Place and secure customer cable • ICTCBL2008B Terminate metallic conductor customer cable

	<ul style="list-style-type: none">• ICTCBL2012B Install functional and protective telecommunications earthing system• ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for safe underground cable hauling	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Inform appropriate personnel of identified hazards on worksite 1.4. Confirm hauling location of proposed cable according to the appropriate plan specifications obtained from authorised personnel 1.5. Obtain information on proposed locations of other services from relevant authorities 1.6. Set up tools and equipment required for safe work practice according to enterprise guidelines 1.7. Verify air pressure in drum cables before hauling to ensure integrity of the cable 1.8. Check for dangerous gases and place guards around open manholes following occupational health and safety (OHS) and environmental requirements
2. Haul cable	2.1. Handle existing cables in a manner that avoids cable damage 2.2. Use roping techniques to prove that conduit is clear for hauling 2.3. Attach cable to rope and haul cable into and out of pits and manholes ensuring no sheath damage 2.4. Lubricate cable and haul at correct tension maintaining smooth passage between dispenser and hauler 2.5. Maintain cable and services separations in parallel runs and crossovers to meet manufacturer's and regulation requirements 2.6. Maintain sufficient cable length allowance for jointing and ensure cable is laid up and bent within bending radius tolerance for cable materials in underground enclosure 2.7. Seal and pressurise cables according to enterprise requirements to ensure no sheath damage 2.8. Tag cable for future identification
3. Complete works on site	3.1. Record any approved alteration to the original design using correct symbols and return to appropriate personnel

ELEMENT	PERFORMANCE CRITERIA
	3.2. Complete and sign reports, where required, according to enterprise policy 3.3. Reinststate the site to customer's satisfaction and dispose of wastes in an environmentally safe manner 3.4. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters and work in teams
- literacy skills to interpret technical documentation, such as cable plans, equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - diagnostic equipment
 - perform fault clearance
 - use hand and power tools

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification

REQUIRED SKILLS AND KNOWLEDGE

- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's recommendations for correct hauling optical fibre cables
- safety precautions when working with laser based systems
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> haul cable applying related OHS requirements and work practices, including those related to dangerous gases and air pressures in existing and new cable use cable dispensing equipment use specialised hand or power tools and equipment for hauling cable safely read and interpret drawings comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where installation of underground cable may be conducted use of installation equipment currently used in industry relevant regulatory and equipment documentation that impact on cable installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of a hands-on project completed by the candidate review of an oral and written report with completed documentation, including updated cable plans and records direct observation of the candidate hauling underground cable.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTCBL2133A Construct underground telecommunications infrastructure.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Addition to application. Minor changes to knowledge requirements and range statement to reflect changed terminology.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to splice and terminate optical fibre cable within an optical telecommunications transmission environment.

This work is essential in provisioning of National Broadband Network (NBN) infrastructure for high speed and high bandwidth transmissions.

Assessment by a TITAB-registered assessor is recommended.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA)-accredited registrar.

Application of the Unit

Technical staff who splice and terminate optical fibre cable for telecommunications projects apply the skills and knowledge in this unit.

They may carry out new installations, upgrade an optical backbone or access network provisioning for greater bandwidth and capacity required by emerging technology convergence for Next Generation Networks (NGN).

This unit may be applied to commercial or industrial fibre to the premises (FTTP) installations.

This unit does not include consideration of mechanical splicing. For mechanical splicing, refer to ICTCBL3010B Install and terminate optical fibre cable on customer premises.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for splicing	<p>1.1 Select safety equipment to protect self and public according to enterprise guidelines and <i>occupational health and safety (OHS) practices</i></p> <p>1.2 Confirm layout of job using installation according to <i>physical conditions</i> at site and requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.3 Inform appropriate personnel of identified <i>hazards</i> on work site</p> <p>1.4 Locate other services from <i>relevant authorities</i> according to enterprise guidelines and safe practices</p> <p>1.5 Test for <i>dangerous gases</i> and place <i>guards</i> around open manholes following <i>OHS and environmental requirements</i></p> <p>1.6 Obtain approval for alterations to the design according to enterprise guidelines</p>
2. Check existing optical fibre cable	<p>2.1 Verify that cable was installed according to the installation plan and visually inspect <i>cable</i> for signs of sheath damage</p> <p>2.2 Maintain minimum bend ratios according to manufacturer specifications to prevent cable damage and signal degradation</p> <p>2.3 Secure cable according to safe industry practice to avoid cable and sheath damage</p>
3. Splice optical fibre cable	<p>3.1 Verify fibre is not live using <i>appropriate equipment</i> to maintain safe work practices, and ensure correct fibre has been identified</p> <p>3.2 Prepare cable end to expose <i>optical fibres</i> according to splicing method and manufacturer specifications</p> <p>3.3 Prepare and <i>splice fibres</i> using safe industry practice according to enterprise specifications</p> <p>3.4 Test splice joint to manufacturer and design requirements</p>
4. Terminate optical fibre cable	<p>4.1 Select connector unit to suit terminating frame according to design specifications</p> <p>4.2 Terminate the cable using <i>type of termination</i> specified in the plan and according to manufacturer specifications</p> <p>4.3 Test termination for transmission loss and strength and re-terminate if transmission loss exceeds the manufacturer specifications</p> <p>4.4 Install protection devices on connectors and fibres to protect from exposure and contaminants</p>

	4.5 Label and lay up cables in enclosure according to manufacturer's instructions and enterprise guidelines
5. Finish job and report	5.1 Remove waste and reinstate site according to enterprise guidelines 5.2 Prepare reports, including test results and alterations to plans, according to enterprise policy 5.3 Notify client of work completion and obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and requirements for optical fibre cable installation
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - apply work site OHS
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work safely with optical fibre and lasers
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - install customer access network (CAN) cable
 - operate test equipment to perform measurements on optical fibre
 - perform fault clearance
 - use diagnostic equipment
 - use optical fibre jointing techniques
 - use specialised tools and test equipment
 - use hand and power tools
 -

Required knowledge

- causes of signal strength loss in optical fibre
- colour coding of fibres
- detailed knowledge of AS/NZS 2211:2006 Safety of laser products (parts 1 and 2)
- features and operating requirements of test equipment for optical fibre cable
- industry and organisational policy and procedures when splicing optical fibre cable
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of optical fibre equipment
- safety precautions when working with laser-based systems
- specific OHS requirements relating to the activity and site conditions
- techniques for types of termination, including:
 - direct termination
 - fusion splicing

- test methods and performance requirements
- types of optical cable and termination
- workplace and industry environment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> splice, terminate and test optical fibre cable applying safety precautions when working with laser-based systems splice at least 12 fibres and house them in splicing cassettes and trays within industry recognised enclosures according to manufacturer's instructions install a mechanical connector and a fusion, spliced pigtail type connector complete relevant documentation to manufacturer and design requirements provide report documenting installation and test results to client comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where splicing and termination of optical fibre cable may be conducted use of optical fibre testing equipment currently used in industry relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of a hands-on project completed by the candidate review of an oral and written report, including installation and test results direct observation of the candidate carrying out splicing of optical fibre within an optical communication system.
Guidance information	Holistic assessment with other units relevant to the industry

for assessment	<p>sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTCBL3010B Install and terminate optical fibre cable on customer premises. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
-----------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>OHS practices</i> may relate to:</p>	<ul style="list-style-type: none"> • determining that optical fibre cable is not live according to guidelines and standards • handling optical fibre cable in a safe manner to avoid risk of injury • labelling fibre cable and laser devices • locating and identifying adjoining services according to enterprise guidelines and OHS practices • observing AS/NZS 2211:2006 Safety of laser products (parts 1 and 2) • testing for presence of dangerous gases according to enterprise guidelines.
<p><i>Physical conditions</i> may relate to:</p>	<ul style="list-style-type: none"> • above ground • in cabinet • in joint enclosure.
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 2211:2006 Safety of laser products (parts 1 and 2) • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • OHS Acts and relevant codes and standards • regulated or industry codes of practice, including ACMA technical standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p><i>Hazards</i> may include:</p>	<ul style="list-style-type: none"> • earth potential rise (EPR) • optical cable: <ul style="list-style-type: none"> • bare fibres

	<ul style="list-style-type: none"> • hazardous laser light • remote power feeding.
Relevant authorities may include:	<ul style="list-style-type: none"> • cable location services (Dial Before You Dig) • environment protection • local government • private owners • utility providers, such as: <ul style="list-style-type: none"> • electricity • fire services • gas • water • other telecommunications providers.
Dangerous gases may include:	<ul style="list-style-type: none"> • asphyxiating gas • carbon dioxide • carbon monoxide • combustible • natural gas • noxious gas.
Guards may include:	<ul style="list-style-type: none"> • barricades • plates • temporary fencing.
OHS and environmental requirements may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas • need to decommission and isolate work site and lines before beginning work • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safe work practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials

	<ul style="list-style-type: none"> • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • suitable light and ventilation • special access requirements • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
Cable may include:	<ul style="list-style-type: none"> • air blown • armoured • external • internal • loose tube • tight buffered.
Appropriate equipment may include:	<ul style="list-style-type: none"> • hand-held optical power meter • OFI-fibre to the x (FTTx) active optical network terminal (ONT) detector • passive optical network (PON) meter • optical time domain reflectometer (OTDR).
Optical fibres may include:	<ul style="list-style-type: none"> • multi-mode • polymer • single mode.
Splice fibres may relate to:	<ul style="list-style-type: none"> • fusion splice • preparing connection ends to a smooth flat surface to ensure no optical path redirection from joint • removing all coatings from exposed optical fibre and removing all possible contaminants.
Type of termination may include:	<ul style="list-style-type: none"> • direct termination • fusion splicing.

Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Minor change to element 5.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install, joint and terminate coaxial cable on customer premises.

Coaxial cables are used in all telecommunications applications, including convergence technologies of telephony, data, video and multimedia as part of Next Generation Networks (NGN).

Application of the Unit

Technical staff whose work involves jointing and terminating coaxial cable apply the skills and knowledge in this unit.

They install and terminate coaxial cable in the customer access network (CAN) environment for emerging technologies using high speed broadband and the delivery of cable television services.

This unit applies to domestic, commercial or industrial installations.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare to install and joint coaxial cable	<p>1.1 Confirm approval for site access with customer prior to site entry and comply with <i>site security arrangements</i> and requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Read and interpret <i>customer's installation specifications</i> and physical conditions at site to determine layout of job</p> <p>1.3 Locate and identify adjoining <i>other services</i> according to enterprise guidelines and occupational health and safety (<i>OHS</i>) practices</p> <p>1.4 Test for presence of dangerous gases in underground enclosures according to enterprise guidelines</p> <p>1.5 Undertake approved alterations to the design according to enterprise guidelines</p>
2. Verify placement and secure coaxial cable	<p>2.1 Use safety equipment to protect self and public according to enterprise guidelines and OHS requirements</p> <p>2.2 Maintain <i>coaxial cable</i> segregation to industry standard requirements</p> <p>2.3 Protect integrity of the coaxial shield cable to ensure no loss of performance</p> <p>2.4 Place cable in position with sufficient slack to allow termination and to maintain minimum bend radius according to <i>manufacturer specifications</i></p> <p>2.5 Follow installation designs to install cable safely without damage to cable or customer's premises</p> <p>2.6 Maintain radio frequency (RF) signal strength by installing cable lengths within manufacturer and design specifications</p> <p>2.7 Locate securing hardware to reduce the cumulative effect on cable wave shape properties and attach cable ties to minimise cable damage</p>
3. Joint coaxial cable	<p>3.1 Strip coaxial cable according to specifications to required length using appropriate <i>tools</i></p> <p>3.2 Select appropriate kit to match the type of coaxial cable in use and the jointing method according to manufacturer recommendations</p> <p>3.3 Joint cable and ensure jointing fitting retains the segregation of conductor and shield</p> <p>3.4 Seal all joints according to manufacturer specifications</p>
4. Terminate coaxial	4.1 Prepare coaxial cable for termination according to

cable	<p>specifications using appropriate tool</p> <p>4.2 Select connectors to match the type of coaxial cable in use and use terminating method recommended by manufacturer</p> <p>4.3 Verify that connector fitting retains the segregation of conductor and shield</p> <p>4.4 Terminate connectors to torque as recommended by manufacturer to prevent RF leakage</p> <p>4.5 Test connectors to mating specifications using gauge tester</p> <p>4.6 Maintain a continuous ground on the terminations and waterproof seal to preserve cable integrity</p>
5. Complete installation operation	<p>5.1 Place cables in enclosure and lay up according to manufacturer's instructions and enterprise guidelines, and check that no safety hazards are evident</p> <p>5.2 Place other services according to enterprise guidelines</p> <p>5.3 Reinststate site and remove waste and debris for disposal according to environmental requirements and to maintain safe work site conditions</p>
6. Complete installation administration	<p>6.1 Complete reports according to enterprise policy</p> <p>6.2 Note alterations to plans using appropriate symbols</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- task-management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - use hand and power tools
 - use diagnostic equipment.
 -

Required knowledge

- information required to operate equipment according to a test specification
- features and operating requirements of test equipment
- manufacturer requirements for safe operation of equipment
- test methods and performance requirements
- typical issues and challenges that occur on site
- requirements of legislation, codes of practice and other formal agreements that impact on the work activity
- specific OHS requirements relating to the activity and site conditions.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • joint and terminate coaxial cable using specialised hand or power tools and equipment • apply related OHS requirements and work practices • conduct signal strength tests and interpret results.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where jointing metallic conductor cable may be conducted • use of joint testing equipment currently used in industry • relevant regulatory and equipment documentation that impacts on cable jointing and testing activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of hands-on project completed by the candidate • review of oral and written report with test results • direct observation of the candidate jointing and terminating cables and testing joints.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2005B Install customer cable support systems • ICTCBL2006B Place and secure customer cable. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment</p>

	<p>support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTCBL2068A Install a telecommunications service to a building

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to install a telecommunications service to a building. It involves bringing a telecommunications service from the broader network to a customer's premises using metallic or optical cable or wireless connection.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.</p> <p>If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff whose work involves installing telecommunications service to a building to provide a new service or an upgrade apply the skills and knowledge in this unit.</p> <p>Cable installers provide new services in emerging technologies, such as internet protocol TV (IPTV) and fast broadband for converging technology applications.</p> <p>A wireless access point or a world interoperability for microwave access (WiMAX) customer premises equipment (CPE) unit could also be an installation to the building to provide the new services.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare service installation	1.1. Arrange access to the site with the <i>customer</i> and obtain job specifications 1.2. Notify supervisor of identified <i>safety hazards</i> at the worksite according to occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> 1.3. Use <i>installation specifications</i> to determine type of services, network cables and equipment required for the installation 1.4. Select cables and equipment that comply with functionality and compatibility of existing installation 1.5. Select and obtain <i>tools and equipment</i> to carry out installation activity
2. Install cable and equipment to building	2.1. Locate, connect, and check cables at entry into network for transmission quality and continuity where service to building exists 2.2. Install cable and equipment and seal cable entry to the building in a safe manner according to installation plans and Australian Communications and Media Authority (ACMA) standards 2.3. Test overall functionality of the new service to meet installation specifications 2.4. Rectify faults if required and minimise interruption to existing service in agreement with customer 2.5. Install <i>lightning protection</i> , where required, according to enterprise guidelines and industry practice
3. Complete records and clean up site	3.1. Label cable pairs clearly to provide an accurate identification according to manufacturer's, industry and client standards 3.2. Update records and plans with <i>installation details</i> to provide an accurate record according to industry codes of practice and AS/ACIF S009:2006 3.3. Remove installation waste and debris from worksite and dispose of according to environmental requirements to maintain safe worksite conditions 3.4. Complete telecommunications cabling advice (TCA) forms and notify customer to obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - perform fault clearance
 - read and interpret:
 - building plans
 - construction plans
 - site layout drawings
 - site plans
 - street plans
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- information required to operate equipment according to a test specification
- features and operating requirements of test equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- OHS requirements and work practices associated with cable provision including:
 - adequate warning signs
 - protective clothing and personal safety items
 - safety devices

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to construct and install enclosure	1.1. Obtain construction plan from <i>appropriate personnel</i> to scope the work and arrange for site access 1.2. Notify appropriate personnel of identified <i>safety hazards</i> and <i>other services</i> at the worksite 1.3. Obtain <i>plant, tools, safety equipment</i> and material to perform tasks safely and efficiently 1.4. Determine the location and type of <i>above ground enclosure</i> specified in the construction plan that is required for the project
2. Build enclosure	2.1. Use tools according to enterprise guidelines and occupational health and safety (<i>OHS</i>) <i>regulations</i> 2.2. Construct footings or foundations to the construction design specifications 2.3. Construct enclosure to specifications given in the construction design 2.4. Connect enclosure to earth according to construction plan and industry practice
3. Complete project	3.1. Complete reports according to enterprise policy and record alterations to plans using appropriate symbols 3.2. Recover obsolete materials and equipment and return to appropriate point for disposal 3.3. Restore site according to the requirements of enterprise or approving authority and to customer satisfaction 3.4. Notify appropriate personnel of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> communication skills to liaise with internal and external personnel on technical and operational matters literacy skills to interpret plans and specifications

REQUIRED SKILLS AND KNOWLEDGE

- numeracy skills to take and analyse measurements for construction work
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve logistics problems on site
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail
- technical skills to:
 - construct footings and foundations
 - construct earthing enclosures
 - use hand and power tools in civil construction work

Required knowledge

- civil construction:
 - construction plant, tools and equipment operation
 - enclosure construction methods
 - footings and foundations
 - plans
- legislation, codes of practice and other formal agreements that impact on the work activity
- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare to install an enclosure using construction plans with necessary tools and equipment • construct and connect an enclosure according to plans, specifications and OHS requirements • complete reports and document alterations to plans.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where enclosure construction and connection may be conducted • use of construction equipment currently used in industry • relevant regulatory and equipment documentation that impact on construction.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of an enclosure constructed by the candidate • review of an oral and written report with completed documentation, including reports and records of alterations • direct observation of the candidate installing an above ground equipment enclosure • oral or written questioning to assess required knowledge .
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2133A Construct underground telecommunications infrastructure. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Appropriate personnel</i> may include:	<ul style="list-style-type: none"> • customer representative • project manager • site manager.
<i>Safety hazards</i> may refer to:	<ul style="list-style-type: none"> • contact with remote power feed • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from cable work • hazardous conduit as in conduit colours according to AS 1345:1995 associated with a hazardous service

RANGE STATEMENT	
	<ul style="list-style-type: none"> • unstable ground.
<i>Other services</i> may include:	<ul style="list-style-type: none"> • fire services • gas and water mains • high voltage (HV) power.
<i>Plant, tools, safety equipment</i> may include:	<ul style="list-style-type: none"> • equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • plant: <ul style="list-style-type: none"> • back hoe • bobcat • excavator • trencher • safety equipment: <ul style="list-style-type: none"> • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves • head protection • kneepads • masks • protective suits • safety boots • safety glasses • tools: <ul style="list-style-type: none"> • concrete tool • diggers • jack-hammers • power tools: <ul style="list-style-type: none"> • cutters • drills • saws • shovels.
<i>Above ground enclosure</i> may include:	<ul style="list-style-type: none"> • conduit and pipe • enclosure constructed of: <ul style="list-style-type: none"> • fibreglass • metal

RANGE STATEMENT	
	<ul style="list-style-type: none"> • plastic • fibre hub • hybrid fibre coaxial (HFC) cabinet.
<i>OHS regulations</i> may include:	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • crane • EWP • forklift • winch • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.

ICTCBL2132A Erect aerial cable supports

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to erect cable supports in small aerial customer installations and access networks.</p> <p>Aerial cables are needed for telecommunication applications including voice, video and data.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.</p> <p>If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Telecommunications linesmen and line installers apply the skills and knowledge in this unit. They make use of aerial support structures and specialist tools.</p> <p>They may be required to do new installations, upgrades or maintain existing networks in domestic, commercial and industrial installations to deliver services in xdigital subscriber lines (xDSL), fibre to the home (FTTH) and hybrid fibre coaxial (HFC) networks.</p>
---------------------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to install aerial cable structure	1.1. Obtain construction plan from <i>appropriate personnel</i> to scope the work and arrange for site access 1.2. Notify appropriate personnel of identified <i>safety hazards</i> at the cabling worksite 1.3. Determine cable route from construction plan identifying and avoiding <i>other services</i> 1.4. Obtain <i>plant, tools, safety equipment</i> and material to perform tasks safely and efficiently
2. Install aerial support structures	2.1. Use tools according to enterprise guidelines and occupational health and safety (<i>OHS regulations</i>) 2.2. Erect safety barriers according to enterprise guidelines to secure the site 2.3. Excavate a hole to specifications and according to enterprise guidelines for the erection of mounting pole 2.4. Install a <i>pole</i> using mechanical lifting devices according to enterprise guidelines 2.5. Install fixing structures on pole securely according to manufacturer's specifications 2.6. Install <i>aerial fixing devices</i> where the support is other than a pole according to enterprise guidelines
3. Complete project	3.1. Complete reports according to enterprise policy and record alterations to plans using appropriate symbols 3.2. Recover obsolete materials and equipment and return to appropriate point for disposal 3.3. Restore site according to the requirements of enterprise or approving authority and to customer satisfaction 3.4. Notify appropriate personnel of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

REQUIRED SKILLS AND KNOWLEDGE**Required skills**

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - complete reports in a given format
 - read and interpret drawings, plans and specifications
- numeracy skills to take and use measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - use hand and power tools
 - use mechanical lifting devices

Required knowledge

- features and operating requirements of equipment
- information required to operate equipment according to a specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- licence requirements for working at heights
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> install a pole and aerial fixing device after relevant authorities have been notified and approvals obtained prior to commencement use specialised hand or power tools and equipment for the installation of aerial cable supports safely apply OHS requirements and work practices associated with the installation of aerial cable supports, including protective clothing and personal safety items, adequate warning signs and safety devices comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where aerial cable supports may be installed use of plant, tools and equipment to erect aerial supports currently used in industry relevant regulatory and equipment documentation that impact on aerial support erection activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of an aerial erected by candidate the direct observation of the candidate erecting an aerial support structure oral or written questioning to assess required knowledge and skill.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTCBL2134A Fix aerial cable. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to construct underground work	1.1. Obtain construction design plan from appropriate personnel to scope the work and arrange for site access 1.2. Notify appropriate personnel of identified safety hazards and other services 1.3. Obtain plant, tools and safety equipment to perform tasks safely and efficiently 1.4. Determine the type of underground enclosure specified in the construction design plan that is required for the project
2. Install enclosure	2.1. Use tools according to enterprise guidelines and occupational health and safety (OHS regulations) 2.2. Place a foundation of suitable material to provide a safe and stable footing prior to installing an underground enclosure in an excavation 2.3. Place a recognised barrier over the construction where an enclosure is to be installed over power cables according to enterprise requirements or agreements with other authorities 2.4. Install an enclosure specified in the construction design plan to manufacturer's specifications using the specified materials 2.5. Install an earth mat facility under the enclosure where specified and required by the enterprise
3. Install connecting pipe works	3.1. Install conduit in trench to enterprise specifications 3.2. Connect conduit to an enclosure according to manufacturer's specification and industry practice
4. Complete project	4.1. Complete reports according to enterprise policy and record alterations to plans using appropriate symbols 4.2. Recover obsolete materials and equipment and return to appropriate point for disposal 4.3. Restore site according to the requirements of enterprise or approving authority and to customer satisfaction 4.4. Notify appropriate personnel of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret plans and specifications
- numeracy skills to take measurements for construction work
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail
- technical skills to:
 - apply regulations and standards related to the installation of the enclosures
 - install earth mat facility and conduits
 - interpret drawings
 - lay foundations
 - use hand and power tools in civil construction work

Required knowledge

- civil construction:
 - construction plant, tools and equipment operation
 - enclosure construction methods
 - foundations
 - plans
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install enclosures including pipe, pit and prefabricated manhole • construct in two different soil types: sand, rock, soil or combination soil types, and shore an excavation site to meet enterprise and regulatory requirements • use specialised hand or power tools and equipment normally used for excavation, pipe, conduit installation and site restoration safely • apply related OHS requirements and work practices associated with excavation, enclosure installation and site restoration.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where enclosure construction and may be conducted • use of construction equipment currently used in industry • relevant regulatory and equipment documentation that impact on construction.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of an enclosure constructed by the candidate • review completed documentation including reports and records of alterations • direct observation of the candidate constructing an underground telecommunications infrastructure • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2131A Install an above ground equipment

EVIDENCE GUIDE

	<p>enclosure.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for aerial cable installation	1.1. Obtain construction plan from appropriate personnel to scope the work and arrange for site access 1.2. Notify appropriate personnel of identified safety hazards at the cabling worksite 1.3. Determine cable route and type of cable from construction plan identifying and avoiding other services 1.4. Obtain plant, tools, safety equipment and material to perform tasks safely and efficiently
2. Install aerial cable	2.1. Use tools according to enterprise guidelines and occupational health and safety (OHS) regulations 2.2. Install catenary wire or gantry wire or integral bearer cable (IBC) and tension to required specifications 2.3. Install cable according to manufacturer's and enterprise guidelines ensuring that no damage is caused and that the physical characteristics of the cable are maintained 2.4. Secure cable permanently to support structure using aerial fixing devices according to manufacturer's and enterprise guidelines 2.5. Number the cables on towers according to enterprise guidelines
3. Terminate, seal and secure aerial cable	3.1. Terminate and seal cables according to manufacturer's specifications 3.2. Joint cable in suitable closures using enterprise guidelines 3.3. Loop and secure cable on support structure with bending radius tolerance for cable materials to reduce damage to conductors 3.4. Test cable for continuity and rectify fault if required 3.5. Record test results for future reference
4. Complete project	4.1. Complete reports on installation and design amendments and file according to enterprise requirements 4.2. Recover obsolete materials and equipment and return to appropriate point for disposal 4.3. Restore site according to the requirements of enterprise or approving authority and to customer

ELEMENT	PERFORMANCE CRITERIA
	satisfaction 4.4. Notify appropriate personnel of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - complete reports in a given format
 - read and interpret drawings, plans and specifications
- numeracy skills to take and use measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - use hand and power tools
 - use diagnostic equipment
 - rectify fault

Required knowledge

- features and operating requirements of cable test equipment
- information required to operate equipment according to a test specification
- installation of a range of aerial cable types
- legislation, codes of practice and other formal agreements that impact on the work activity
- licence requirements for working at heights
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> install an aerial cable, including hauling aerial cable, cable securing and sealing identify safe support structures from pole status markings, visual inspection or approved testing procedures use specialised hand or power tools and equipment for installing aerial cable safely apply all related OHS requirements and work practices associated with installing aerial cable pole and ladder safety comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where aerial cable may be installed use of plant, tools and equipment to erect aerial cable currently used in industry relevant regulatory and equipment documentation that impact on aerial cable installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of an aerial cable installed by the candidate direct observation of the candidate installing aerial cables oral or written questioning to assess required knowledge and skill.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTCBL2132A Erect aerial cable supports. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Appropriate personnel may include:

- customer representative
- project manager
- site manager.

Safety hazards may refer to:

- access points that may contain:
 - hazardous light (non-visible laser)
 - radio frequency (RF) emission
- contact with remote power feed
- electrical supply and areas of earth potential

RANGE STATEMENT	
	<p>rise that require mandatory separation from communications cable</p> <ul style="list-style-type: none"> • hazardous conduit as according to AS 1345:1995 conduit colours associated with a hazardous service • unsafe support structures: <ul style="list-style-type: none"> • condemned poles • visible signs of decay or stress • unsafe weather: <ul style="list-style-type: none"> • heavy rains • high winds • severe heat or cold • thunderstorms.
<i>Cable</i> may include:	<ul style="list-style-type: none"> • coaxial • data cabling • distribution cable • lead-in cable • multi-pair copper • optical fibre • radio feeder.
<i>Other services</i> may include:	<ul style="list-style-type: none"> • availability and suitability of existing cabling trays and fixing systems • fire sprinkler systems • gas and water mains • high voltage (HV) power.
<i>Plant, tools, safety equipment</i> may include:	<ul style="list-style-type: none"> • plant: <ul style="list-style-type: none"> • cherry picker • elevated platform vehicle • ladders • scissor lifts • wire raising tool (insulated) • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • fall arrest systems • gloves • head protection

RANGE STATEMENT

	<ul style="list-style-type: none"> • kneepads • masks • protective suits • safety boots • safety glasses • safety barriers • trench guards • warning signs and tapes • test equipment: <ul style="list-style-type: none"> • cable tester • continuity tester • local area network (LAN) Cat tester • passive optical network (PON) meter • tools: <ul style="list-style-type: none"> • auger • cable tensioner • fixing brackets • height measuring device • spanner.

ICTCBL2135A Joint metallic conductor cable in access network

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to joint metallic conductor cable on the service provider side of the network boundary in communications applications.</p> <p>All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA)-accredited registrar.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>Technical staff who joint metallic conductor cable for indoor and outdoor installation apply the skills and knowledge in this unit.</p> <p>They may be required to do new installations, cable upgrades and maintain infrastructure in domestic, commercial and industrial situations for service providers and asset owners. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN) wide area networks (WAN) and multimedia.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for jointing metallic conductor cable for Access Network	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Inform appropriate personnel of existing and potential hazards on worksite 1.4. Review site plans and documentation 1.5. Select cable type and appropriate connectors for cable joint 1.6. Set up tools and equipment , and materials required for safe work practice 1.7. Obtain information on location of other services from relevant authorities
2. Joint metallic conductor cable for Access Network	2.1. Joint metallic cable following occupational health and safety (OHS) and environmental requirements 2.2. Perform relevant cable tests to ensure joint complies with site specifications, manufacturer's specifications, and relevant legislation, codes, regulations and standards 2.3. Rectify any cable faults 2.4. Record cable tests and any modifications required 2.5. Label and tag the cable joint according to enterprise guidelines and industry practice
3. Protect and alarm cable	3.1. Pressurise cable and check for any leakage 3.2. Reconnect alarms, if applicable, according to enterprise guidelines 3.3. Remove waste and debris from work site and disposed of according to environmental requirements and to maintain safe worksite conditions
4. Complete records and clean up site	4.1. Complete required records including alterations and notify customer 4.2. Reinstate site according to customer and company requirements 4.3. Present all records to customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and requirements for jointing metallic conductor cable
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- safety precautions when working with cables
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> joint cable with appropriate connectors and according to specifications perform relevant cable tests to comply with site specifications and industry standards rectify any cable faults.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where jointing metallic conductor cable may be conducted use of cable testing equipment currently used in industry relevant regulatory and equipment documentation that impact on cable jointing activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of a hands-on project completed by the candidate review of an oral and written report with test results direct observation of the candidate jointing metallic conductor cable.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTCBL2133A Construct underground telecommunications infrastructure ICTCBL3067A Modify and cut over cable. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Addition to required knowledge. Minor changes to knowledge requirements and range statement to reflect changed terminology.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to safely install, maintain and modify the customer premises communications cabling required according to the Australian Communications and Media Authority's (ACMA) 'Restricted' Cabling Provider Rule.

Restricted cabling is used in typical domestic premises, small offices, home offices and small business premises. Restricted cablers can install cable in large commercial and industrial premises provided the cabling is behind a compliant device and is not via jumperable distributors or patch panels.

The Telecommunications Cabling Provider Rules (CPRs) 2000 place various limitations on Restricted cablers. These include a prohibition on them performing cabling work where they may have access to a reticulated electrical supply that exceeds typical domestic single-phase and three-phase electrical supply voltages – nominally 240 volts AC (for single phase) or 415 volts AC (for three-phase).

Assessment by a TITAB-registered assessor is recommended.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

This unit applies to customer cabling terminated on sockets and network termination devices (NTD). It applies to the installation, maintenance and modification of indoor and external cabling.

Customer cabling, for the purpose of the 'Restricted' Cabling Provider Rule, may be used to connect devices for a range of applications, including telecommunications, simple data and computer use, security alarm panels and fire control panels.

Cabling may be metallic or optical fibre and may be aerial or underground.

The cabling task may be a new cable installation or upgrade of cable capacity for an existing network or subsystem for convergence to Next Generation Networks (NGN) applications.

The cabling installer may provide services in telephony, voice over internet protocol (VoIP), internet protocol TV (IPTV) and computer data over a single metallic customer cable or optical fibre cable in a specific customer location.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Work within the constraints imposed by customer premises and ACMA regulatory environment</p>	<p>1.1 Prepare for <i>restricted cabling work</i> within the <i>regulatory and cabling environment, cable type, cable identification, termination systems, earthing and protection, records</i> and according to requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Identify <i>building infrastructure</i> that places critical constraints on <i>cabling</i></p> <p>1.3 Develop <i>strategies to manage other infrastructure</i> in relation to cabling</p> <p>1.4 Notify appropriate personnel of <i>safety hazards</i> at the cabling work site</p>
<p>2. Manage remote power feed</p>	<p>2.1 Identify and avoid the risks posed by contact with remote power feeding services when performing cabling activity</p> <p>2.2 Make site safe by identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises</p>
<p>3. Install cables and protective earth wires</p>	<p>3.1 Install cables according to manufacturer's application specifications, including tension and bending stress requirements</p> <p>3.2 Identify and avoid sources of possible damage to cable, including hot pipes, sharp edges and cable burn</p> <p>3.3 Allow sufficient excess at cable ends to facilitate <i>termination</i></p> <p>3.4 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards</p> <p>3.5 Install cable ties with correct tension to prevent cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage</p> <p>3.6 Install underground cables to minimum depth of cover and segregation from hazardous electrical and other services according to AS/CA TS009:2013</p> <p>3.7 Install underground cables excluding blown fibre tube systems to incorporate a blocking agent within the cable to prevent the ingress of water</p> <p>3.8 Install aerial cables to minimum clearance, segregation from hazardous electrical and other services and minimum height requirements according to AS/CA TS009:2013</p> <p>3.9 Install over-voltage protection devices according to AS/CA TS009:2013 to all cable pairs, where required, to suppress</p>

	<p>voltage surges and protect from earth potential rise (EPR) hazards and protectively earth the devices</p> <p>3.10 Protect earth wire insulation against damage and segregate protective earths according to relevant legislative and industry standards</p>
4. Terminate and test cables and earth wires	<p>4.1 Remove cable sheath to allow for correct termination length and without damage to underlying conductors and their insulation</p> <p>4.2 Install NTD terminating modules according to manufacturer specifications and with cable pairs neatly and sequentially fanned for termination</p> <p>4.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner</p> <p>4.4 Earth cable shield, if applicable, to manufacturer specifications, relevant industry codes of practice and AS/CA TS009:2013</p> <p>4.5 Conduct visual inspection to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity</p> <p>4.6 Terminate earth wires with connectors recommended by manufacturers according to accepted industry codes of practice and AS/CA TS009:2013</p> <p>4.7 Maintain earth wire continuity throughout and observe interface requirements with electrical systems</p> <p>4.8 Test earthing installation for continuity, insulation resistance and conductive resistance according to accepted industry standards, including AS/CA TS009:2013</p> <p>4.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems</p>
5. Inspect cable route to ensure correct separations	<p>5.1 Inspect <i>separations</i> along the entirety of the cable route and rectify separations that do not comply with regulations</p> <p>5.2 Install barriers to achieve separations where sufficient spatial separation cannot be met</p>
6. Create records	<p>6.1 Provide the client with a job sign-off and telecommunications cabling advice form, at the completion of each cabling task</p> <p>6.2 Complete NTD record cards for the work undertaken</p>
7. Monitor work	<p>7.1 Supervise cablers not holding appropriate registration for</p>

activity	the task to ensure cabling activity is according to legislative requirements for safety and network integrity, including AS/ACIF S008:2006 and AS/CA TS009:2013
----------	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with work associates, supervisors, team members and clients
- literacy skills to interpret:
 - requirements of related legislation, codes regulations and standards
 - technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - check environmental conditions are suitable for termination
 - make site safe and secure for cable installation
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task-management skills to:
 - apply work practices that avoid cable damage
 - conform to work specifications and relevant industry standards
- technical skills to:
 - check cable route for obstructions and make clear, using suitable methods
 - handle cable according to manufacturer specifications so that conductors, sheath and insulation are not damaged during installation
 - select cabling system to meet customer performance needs
 - read and interpret drawings related to:
 - cable coding system, identifiers and distributor locations
 - cable layouts
 - outlet location
 - terminate copper twisted pair, including indoor, external, aerial and underground cabling
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- basic electrical principles relating to insulation, resistance, capacitance and induction, as causes of impedance, attenuation and cross-talk
- ACMA cabling provider rules, cabler registration rules, regulations and standards
- features and operating requirements of recognised cabling specific industry test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment

- requirements of legislation, codes of practice and other formal agreements that impact on the work activity
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • complete a cabling installation and termination: <ul style="list-style-type: none"> • three different types of telephone sockets: <ul style="list-style-type: none"> • Australian modular socket • Mode 3 alarm socket • United States modular socket • one NTD • one alarm panel, including completion of a TCA compliance form and NTD records • one Ethernet cable • apply cable conductor identification codes • conduct and interpret cable test results • interpret and apply standards and regulations • comply with all related OHS requirements and work practices.
<p>Context of and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site on which communications cabling activities may be carried out • use of cabling and field equipment currently used in industry • licensing requirements and other site-related documentation.
<p>Method of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking cabling installations and tests, and applying cable conductor identification codes • oral or written questioning to assess knowledge of test results, standards requirements and specific technical procedures.
<p>Guidance information</p>	<p>Holistic assessment with other units relevant to the industry</p>

for assessment	<p>sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
-----------------------	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Restricted cabling work</i> refers to:	<ul style="list-style-type: none"> • aerial and underground cabling work on private property • cabling work that is performed only in relation to a customer's premises • customer cabling that terminates directly at the network boundary on a socket or network termination device.
<i>Regulatory environment</i> refers to:	<ul style="list-style-type: none"> • accredited registrars and registration • ACMA • Certified Components List • Communications Alliance • labelling requirements • Telecommunications Act 1997.
<i>Cabling environment</i> may refer to:	<ul style="list-style-type: none"> • indoor environments, including concealed locations: <ul style="list-style-type: none"> • ceilings and false ceilings • internal wall space • modular workstations • under floor • outdoor environments, including cable installations: <ul style="list-style-type: none"> • aerial telecommunications cabling for restricted cabling work, which does not include installations on poles shared with low voltage (LV) or high voltage (HV) electrical power cables or terminations • external walls • underground cabling in an exclusive trench or shared trench with electrical LV cables and other utilities.
<i>Cable type</i> may include:	<ul style="list-style-type: none"> • aerial • coaxial • copper twisted pair • data cables: Category 5, 6, 6A, 7 or 7A • external • indoor • optic fibre cable • underground.
<i>Cable identification</i>	<ul style="list-style-type: none"> • cable conductor identification codes:

refers to:	<ul style="list-style-type: none"> • banded • colour coded • lettered • numbered.
Termination systems must include:	<ul style="list-style-type: none"> • network termination device • socket types: <ul style="list-style-type: none"> • Australian modular socket • Mode 3 alarm socket • United States modular socket. <p>Note: Jumperable distributors are not included in this requirement.</p>
Earthing and protection must include:	<ul style="list-style-type: none"> • earthing for protection • surge suppression.
Records may include:	<ul style="list-style-type: none"> • NTD record cards • telecommunication cabling advice forms TCA1 and TCA2.
Relevant legislation, codes, regulations and standards may include:	<ul style="list-style-type: none"> • accredited registrars and registration • Australian Communications Industry Forum (ACIF) standards and codes • ACMA • AS/NZS 3000:2007 • AS/ACIF S008:2006 and AS/CA TS009:2013 • Certified Components List (CCL) • AS Communications Cabling Manual (CCM) – Restricted • labelling • overview of Telecommunications Act 1997.
Building infrastructure may include:	<ul style="list-style-type: none"> • availability and suitability of existing cabling trays and fixing systems • building hazards • elevated working • high voltage (HV) power • restricted access.
Cabling may include:	<ul style="list-style-type: none"> • aerial customer • external customer • indoor customer • underground customer.
Strategies to manage other infrastructure may include:	<ul style="list-style-type: none"> • appropriate separations • correct use of cable trays and support systems • fastening techniques.
Safety hazards may	<ul style="list-style-type: none"> • access points that may contain:

refer to:	<ul style="list-style-type: none"> • hazardous light or non-visible laser • radio frequency (RF) emission • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from communications cable • hazardous conduit as according to AS 1345:1995 conduit colours associated with a hazardous service.
<i>Termination</i> may include:	<ul style="list-style-type: none"> • Australian modular socket • Ethernet connectors terminated at both ends of an Ethernet cable and tested • Mode 3 alarm socket • NTD • United States modular socket <p>Note: Jumperable distributors are not included in this requirement.</p>
<i>Separations</i> refer to:	<ul style="list-style-type: none"> • correct separations between communications cable and other services: <ul style="list-style-type: none"> • LV • HV single core • HV multi-core • open terminations • separations covered by AS/CA TS009:2013.

ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i></p> <p>Minor additional to critical evidence.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0.</i></p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to safely install, maintain and modify customer premises communications cabling required according to the Australian Communications and Media Authority's (ACMA) 'Open' Cabling Provider Rule.

This rule is associated with small installations connected to sockets and larger commercial and industrial installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and more complicated termination modules and distributors.

The cabling activity may be a new cable installation or an upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to Next Generation Networks (NGN).

Convergence in the telecommunications and IT areas is the emergence of a single infrastructure for a range of telephony and IT services. Telephone, voice over internet protocol (VoIP), internet protocol TV (IPTV) and computer data may all travel over a single metallic customer cable, optical fibre cable or wireless link in a specific location.

Assessment by a TITAB-registered assessor is recommended.

This unit meets the minimum ACMA prescribed level of knowledge and skill that safeguards matters of health, safety and network integrity, and addresses matters of interoperability where customer equipment and standard telephone service are involved only.

Note:

- Completion of this unit does not imply industry competency using specialised cabling, such as coaxial, optical fibre and structured cabling
- Completion of the following six cabling units: ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B exceed the requirements of this standard and fulfil the requirements for ACMA Cabling Provider Rules: Open Cabling Category for Cabler Registration
- To be permitted to work with lift cabling, cablers are required to have completed the relevant Electrotechnology qualification, such as the Certificate III in Electrotechnology Electrician or equivalent.

Application of the Unit

This unit applies to customer cabling terminated on distributors. It applies to installation, maintenance and modification of indoor, external, underground cabling on private and public property.

Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including telecommunications, Ethernet, video and multimedia, security and alarms, and fire protection.

The cabling task may be a new cable installation or upgrade of cable capacity for an existing network or subsystem for convergence to NGN applications.

Cabling installers providing services in telephony, VoIP, IPTV and computer data over a single metallic customer cable or optical fibre cable in a specific customer location apply the skills and knowledge in this unit.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Work within the constraints imposed by customer premises and ACMA regulatory environment</p>	<p>1.1 Prepare for <i>open cabling work</i> according to the <i>regulatory and cabling environment, cable type, cable identification, termination systems, earthing and protection, records</i> and according to requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Identify <i>building infrastructure</i> that places critical constraints on <i>cabling</i></p> <p>1.3 Develop <i>strategies to manage other infrastructure</i> in relation to cabling</p> <p>1.4 Notify appropriate personnel of identified <i>safety hazards</i> at cabling work site</p>
<p>2. Manage remote power feed</p>	<p>2.1 Identify and avoid the risks posed by contact with remote power feeding services when performing cabling activity</p> <p>2.2 Make site safe, identifying remote power feeding services that operate at above telecommunications network voltage (TNV) inside customer premises</p>
<p>3. Install and modify cable support, earthing and termination infrastructure</p>	<p>3.1 Install fixings and <i>cable support structures</i> of adequate strength safely and aligned with the environment according to manufacturer and customer specifications</p> <p>3.2 Secure catenary supports to building structure and tension, where necessary, to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained, including adherence to AS/CA TS009:2013</p> <p>3.3 Install protective earthing of metal work to industry standards where required</p> <p>3.4 Inspect installed support structure to ensure cable will not be exposed to damage during installation and general operation</p> <p>3.5 Position terminating equipment and fixing to accepted industry codes of practice, standards and customer requirements</p> <p>3.6 Inspect back-mount and outlet layout for compliance to manufacturer specifications and allow adequate work space for ease of access and avoid overlaying</p> <p>3.7 Segregate incoming and outgoing cables for ease of access and avoid overlaying</p>
<p>4. Install cables and earth wires</p>	<p>4.1 Install cables according to manufacturer's application specifications, including tension and bending stress requirements</p> <p>4.2 Identify and avoid sources of possible damage to cable,</p>

	<p>including hot pipes, sharp edges and cable burn</p> <p>4.3 Allow sufficient excess at cable ends to facilitate termination</p> <p>4.4 Label telecommunication outlet ends of cable uniquely to match identifier at originating location</p> <p>4.5 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards</p> <p>4.6 Install cable ties with correct tension to prevent cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage</p> <p>4.7 Install aerial cables supported by catenaries in external environment to meet minimum above ground clearances and clearances from hazardous electrical services according to AS/CA TS009:2013</p> <p>4.8 Install underground cables to minimum depth of cover and segregation from hazardous electrical and other services according to AS/CA TS009:2013</p> <p>4.9 Install cables underground (excluding blown fibre tube systems) to incorporate a blocking agent within the cable to prevent the ingress of water</p> <p>4.10 Install over-voltage protection devices to all cable pairs, where required, according to AS/CA TS009:2013, to suppress voltage surges with the devices protectively earthed</p> <p>4.11 Conduct a visual inspection to verify telecommunications reference conductor (TRC)/ communications earthing system (CES)/ earth wire insulation is protected against damage and TRC/CES/protective earth is segregated according to relevant industry and legislative standards and AS/CA TS009:2013</p>
<p>5. Terminate and test cables and earth wires</p>	<p>5.1 Remove cable sheath to allow for correct termination length and without damage to underlying conductors and their insulation</p> <p>5.2 Install terminating modules according to manufacturer specifications and with cable pairs neatly and sequentially fanned for termination</p> <p>5.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner</p> <p>5.4 Earth cable shield, if applicable, to manufacturer specifications, relevant industry codes of practice and AS/CA TS009:2013</p> <p>5.5 Conduct visual inspection to confirm termination colour</p>

	<p>code sequence has been followed prior to end-to-end testing of wire and pair termination integrity</p> <p>5.6 Terminate TRC/CES/earth wires with connectors recommended by manufacturers according to accepted industry codes of practice and AS/CA TS009:2013</p> <p>5.7 Maintain TRC/CES/earth wire continuity throughout to meet interface requirements with electrical systems</p> <p>5.8 Test TRC/CES/earthing installation for continuity, insulation resistance and conductive resistance according to accepted industry standards, including AS/CA TS009:2013</p> <p>5.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems</p> <p>5.10 Test cable according to performance specifications</p>
6. Inspect cable route to ensure correct separations	<p>6.1 Inspect <i>separations</i> along the entirety of the cable route and rectify separations that do not comply with regulations</p> <p>6.2 Install barriers to achieve separations where sufficient spatial separation cannot be met</p>
7. Evaluate earthing needs for cable systems on customer premises	<p>7.1 Locate existing earthing systems in customer premises and analyse the earthing needs of cable systems in a range of building types</p> <p>7.2 Calculate the upper and lower limits of resistance for a variety of cable system earths using relevant cable characteristics</p>
8. Label earthing systems	<p>8.1 Identify label requirements for all types of earthing systems</p> <p>8.2 Attach label to earthing systems according to industry regulations</p>
9. Create or update cable plans and records	<p>9.1 Document <i>installation details</i> on record sheets and plans and store according to customer requirements</p> <p>9.2 Label cable pairs clearly to provide an accurate identification according to manufacturer, industry and client standards</p> <p>9.3 Record <i>cabling details</i> in cable pair record books to provide an accurate record according to industry codes of practice and AS/CA TS009:2013</p> <p>9.4 Complete telecommunications cabling advice (TCA) form</p>
10. Monitor work activity	<p>10.1 Maintain close supervision of cablers not holding appropriate registration for the task to ensure installation and maintenance activity is strictly according to legislative</p>

	requirements and industry standards for safety and network integrity including AS/ACIF S008:2006 and AS/CA TS009:2013
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with team members, supervisors and customers on technical and operational matters
- interpersonal skills related to work associates, supervisors, team members and clients
- literacy skills to interpret:
 - requirements of relevant legislation, codes, regulations and standards
 - technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - check environmental conditions are suitable for installation
 - make site safe and secure for cable installation
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task-management skills to:
 - apply work practices that avoid cable damage
 - conform to work specifications and relevant industry standards
- technical skills to:
 - check cable route for obstructions and make clear, using suitable methods
 - handle cable according to manufacturer specifications so that conductors, sheath and insulation are not damaged during installation
 - read and interpret drawings related to:
 - cable coding system, identifiers and distributor locations
 - cable layouts
 - outlet location
 - select cabling system to meet customer performance needs and conform to work specifications and relevant industry standards
 - terminate copper twisted pair, including indoor, external, aerial and underground cabling
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- ACMA cabling provider rules, cabler registration rules, regulations and standards
- features and operating requirements of recognised cabling specific industry test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- protection earthing

- requirements of legislation, codes of practice and other formal agreements that impact on the work activity
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Overview of assessment</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • terminate systems at both distributor and outlet locations • install and terminate one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater • terminate one non-jumperable distributor (LD) and a patch panel • terminate at least one 50 pair, one 4 pair and one Ethernet cable, including accurate completion of installation records, drawing alterations and compliance forms • place cables on support structures and building faces for both internal and external locations • secure methods for the above locations • demonstrate work practices that avoid cable damage • install the three common types of earthing system used in customer premises for cabling systems • read and interpret drawings related to cable layouts, outlet location, cable coding system, and identifiers and distributor locations • conduct and interpret cable test results • interpret and apply requirements of relevant legislation, codes, regulations and standards • comply with all OHS requirements and work practices • meet ACMA knowledge test requirements.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site on which communications cabling activities may be carried out • use of cabling and field equipment currently used in industry • licensing requirements and other site-related documentation.

Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none">• direct observation of the candidate terminating:<ul style="list-style-type: none">• systems at both distributor and outlet locations• one jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater• one non-jumperable distributor (LD) and a patch panel• at least one 50 pair, one 4 pair and one Ethernet cable• review of completed documentation prepared by the candidate, including accurate completion of installation records, drawing alterations and compliance forms• oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <p>ICTCBL2138B Install, maintain and modify customer premises communications cabling: ACMA Lift Rule.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment</p>

	modified for people with special needs.
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Open cabling work</i> refers to:</p>	<ul style="list-style-type: none"> • aerial and underground cabling work on private and public property • customer cabling that terminates directly at the network boundary on a socket, network termination device (NTD) or a distributor.
<p><i>Regulatory environment</i> refers to:</p>	<ul style="list-style-type: none"> • accredited registrars and registration • ACMA • Certified Components List (CCL) • Communications Alliance • labelling requirements • Telecommunications Act 1997.
<p><i>Cabling environment</i> may refer to:</p>	<ul style="list-style-type: none"> • indoor environments, including concealed locations: <ul style="list-style-type: none"> • ceilings and false ceilings • internal wall space • modular workstations • under floor • outdoor environments, including cable installations: <ul style="list-style-type: none"> • aerial telecommunications cabling for restricted cabling work, which does not include installations on poles shared with low voltage (LV) or high voltage (HV) electrical power cables or terminations • external walls • underground cabling in an exclusive trench or shared trench with electrical LV cables and other utilities.
<p><i>Cable type</i> may include:</p>	<ul style="list-style-type: none"> • aerial • coaxial • copper twisted pair • data cables: Category 5, 6, 6A, 7 or 7A • external • indoor • optic fibre cable • underground.
<p><i>Cable identification</i></p>	<ul style="list-style-type: none"> • cable conductor identification codes: <ul style="list-style-type: none"> • banded

refers to:	<ul style="list-style-type: none"> • colour coded • lettered • numbered.
Termination systems may include:	<ul style="list-style-type: none"> • jumperable distributor (campus distributor or building distributor) • non-jumperable distributor (local distributor) and a patch panel.
Earthing and protection may include:	<ul style="list-style-type: none"> • earthing of screened cable, barriers and cable trays for the reduction or elimination of interference from electromagnetic, radio frequency (RF) and power sources • equipotential bonding conductors to multiple earth neutral (MEN) and use of earth stakes • functional earths, including TRC and CES types to provide customer switching system facilities • protective earth barriers for segregation, cable tray, duct and metal equipment enclosures • protective earths for over-voltage and surge or spike suppression according to AS/CA TS009:2013.
Records may include:	<ul style="list-style-type: none"> • building, cabling and equipment location plans • labelling of: <ul style="list-style-type: none"> • distributor pairs • distributor verticals • equipment closets • NTD record cards • patch panels • rooms • telecommunication outlets • record books and cards: <ul style="list-style-type: none"> • building distributors (BD) • campus distributors (CD) • floor distributors (FD) • local distributors (LD) • TCA forms (TCA1 and TCA2).
Relevant legislation, codes, regulations and standards may include:	<ul style="list-style-type: none"> • accredited registrars and registration • AS Communications Cabling Manual (CCM) – Open • Australian Communications Industry Forum (ACIF) standards and codes • ACMA technical standards • AS/ACIF S008:2006 • AS/CA TS009:2013 • AS/NZS 3000:2007

	<ul style="list-style-type: none"> • cabling security codes and regulations • CCL • labelling • overview of Telecommunications Act 1997.
Building infrastructure may include:	<ul style="list-style-type: none"> • availability and suitability of existing cabling trays and fixing systems • building hazards • elevated working • HV power • restricted access.
Cabling may include:	<ul style="list-style-type: none"> • aerial customer • external customer • indoor customer • underground customer.
Strategies to manage other infrastructure may include:	<ul style="list-style-type: none"> • appropriate separations • correct use of cable trays and support systems • fastening techniques.
Safety hazards may refer to:	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light or non-visible laser • RF emission • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from communications cable • hazardous conduit as according to AS 1345:1995 conduit colours associated with a hazardous service.
Cable support structures may include:	<ul style="list-style-type: none"> • cable ducts may be closed or open • cable trays may be: <ul style="list-style-type: none"> • galvanised steel or PVC • perforated with low or high side • single or multi-channel • line poles • pits and pipes • suspension catenary wire • wall and island mounted patched and jumperable distributors: <ul style="list-style-type: none"> • BD • CD • FD • LD.
Termination may include:	<ul style="list-style-type: none"> • Australian modular socket • Ethernet connectors terminated at both ends of an Ethernet

	<p>cable</p> <ul style="list-style-type: none"> • jumperable distributor (campus distributor or building distributor) with a capacity of 100 pair or greater • Mode 3 alarm socket • NTD • non-jumperable distributor (local distributor) and a terminated patch panel • United States modular socket.
<i>Separations</i> refer to:	<ul style="list-style-type: none"> • correct separations between communications cable and other services: <ul style="list-style-type: none"> • LV • HV single core • HV multi-core • open terminations • separations covered by AS/CA TS009:2013.
<i>Installation details</i> may include:	<ul style="list-style-type: none"> • cable infrastructure • cable location and type.
<i>Cabling details</i> may include:	<ul style="list-style-type: none"> • interconnections • pair locations • pair numbering and labelling.

Telecommunications - Cabling

ICTCBL2138B Install, maintain and modify customer premises communications cabling: ACMA Lift Rule

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to safely install, maintain and modify customer premises communications cabling required according to Australian Communications and Media Authority's (ACMA) 'Lift' Cabling Provider Rule.

To be permitted to work with lift cabling, cablers are required to have completed the relevant Electrotechnology qualification such as the Certificate III in Electrotechnology Electrician or equivalent.

Lift cabling is used between the local distributor (LD) adjacent to the lift machine or motor room and the lift control cubicle and lift cars.

It involves customer cabling terminated on LDs in the installation, maintenance and modification of lift cabling.

Assessment by a TITAB registered assessor is recommended.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff whose work involves customer cabling in relation to lift installations apply the skills and knowledge in this unit.

Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications including telecommunications phones, data including video, audio and alarms.

The cabling task may be a new cable installation or upgrade of cable capacity for an existing network or subsystem for convergence to Next Generation Networks (NGN) applications.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Work within the constraints imposed by customer premises and ACMA regulatory environment</p>	<p>1.1 Prepare for <i>lift cabling work</i> according to the <i>regulatory environment, cabling environment, cable type, cable identification, termination systems, earthing and protection, records</i> and <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Identify <i>building infrastructure</i> which places critical constraints on cabling when undertaking a typical lift cabling installation from LD to lift car socket</p> <p>1.3 Develop strategies to manage other infrastructure in relation to cabling</p> <p>1.4 Notify appropriate personnel of identified <i>safety hazards</i> at cabling worksite</p>
<p>2. Manage remote power feed</p>	<p>2.1 Identify and avoid the risks posed by contact with remote power feeding services when performing cabling activity</p> <p>2.2 Make site safe by identifying remote power feeding services which operate at above telecommunications network voltage (TNV) inside customer premises</p>
<p>3. Install and modify cable support, earthing and termination infrastructure</p>	<p>3.1 Install fixings and <i>cable support structures</i> of adequate strength safely and align with the environment according to manufacturer's and customer's specifications</p> <p>3.2 Secure catenary supports to building structure and tension where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained including adherence to AS/ACIF S009:2006</p> <p>3.3 Install protective earthing of metal work to industry standards where required</p> <p>3.4 Inspect installed support structure to ensure cable will not be exposed to damage during installation and general operation</p> <p>3.5 Position terminating equipment and fixing to accepted industry codes of practice, AS/ACIF S009:2006 and customer requirements</p> <p>3.6 Inspect control cubicles, travelling cable supports, junction boxes, line isolator units, back-mount and outlet layout complying to manufacturer's specifications and allow adequate work space for ease of access and avoid overlaying</p> <p>3.7 Segregate incoming and outgoing cables to ensure ease of access and avoid overlaying</p>
<p>4. Install cables and earth wires</p>	<p>4.1 Install a lift cable from LD to lift car socket</p> <p>4.2 Install cables according to manufacturer's application</p>

	<p>specifications including tension and bending stress requirements</p> <p>4.3 Identify and avoid sources of possible damage to cable including hot pipes, sharp edges and cable burn</p> <p>4.4 Allow sufficient excess at cable ends to facilitate termination</p> <p>4.5 Place and secure cable to maintain safety and interference segregation according to legislative and industry standards</p> <p>4.6 Install cable ties with correct tension to prevent cable sheath damage or transmission impairment and trimmed flush to prevent risk of personal damage</p> <p>4.7 Install aerial cables supported by catenaries in external environment to meet minimum above ground clearances and clearances from hazardous electrical services according to AS/ACIF S009:2006</p> <p>4.8 Install and secure travelling cables to maintain safety and according to relevant legislative, industry and manufacturer's standards</p> <p>4.9 Install local isolation units (LIU) as required by TS001 and AS/ACIF S009:2006</p> <p>4.10 Install over-voltage protection devices to all cable pairs, where required, to suppress voltage surges, with the devices protectively earthed, and according to AS/ACIF S009:2006</p> <p>4.11 Protect earth wire insulation against damage with protective earths segregated according to relevant industry and legislative standards</p>
<p>5. Terminate and test cables and earth wires</p>	<p>5.1 Remove cable sheath to allow for correct termination length and without damage to underlying conductors and their insulation</p> <p>5.2 Install terminating modules according to manufacturer's specifications ensuring cable pairs are neatly and sequentially fanned for termination</p> <p>5.3 Terminate conductors according to recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner</p> <p>5.4 Earth cable shield, if applicable, to manufacturer's specifications and relevant industry codes of practice, including AS/ACIF S009:2006</p> <p>5.5 Undertake visual inspection to confirm termination colour code sequence has been followed, prior to end to end testing of wire and pair termination integrity</p>

	<p>5.6 Terminate earth wires with connectors recommended by manufacturer according to relevant industry codes of practice including AS/ACIF S009:2006</p> <p>5.7 Maintain earth wire continuity throughout to meet interface requirements with electrical systems</p> <p>5.8 Test earthing installation for continuity, insulation resistance and conductive resistance according to relevant industry standards including AS/ACIF S009:2006</p> <p>5.9 Confirm compatibility of alterations with existing systems and test new work both in isolation and when integrated with existing systems</p>
6. Inspect cable route to ensure correct separations	<p>6.1 Inspect <i>separations</i> along entire cable route and rectify separations which do not comply with regulations</p> <p>6.2 Install barriers to achieve separations where sufficient spatial separation cannot be met</p>
7. Evaluate earthing needs for cable systems on customer premises	<p>7.1 Locate existing customer earthing systems and analyse the earthing needs of cable systems</p> <p>7.2 Calculate the upper and lower limits of resistance for a variety of cable system earths using relevant cable characteristics</p>
8. Label earthing systems	<p>8.1 Identify label requirements for all types of earthing systems</p> <p>8.2 Attach label to earthing systems according to industry regulations</p>
9. Create or update cable plans and records	<p>9.1 Document <i>installation details</i> on record sheets and plans and store according to customer requirements</p> <p>9.2 Label cable pairs clearly to provide accurate identification according to manufacturer's, industry and client standards</p> <p>9.3 Record <i>cabling details</i> in cable pair record books to provide an accurate record according to industry codes of practice and AS/ACIF S009:2006</p> <p>9.4 Complete telecommunications cabling advice (TCA) form</p>
10. Monitor work activity	<p>10.1 Maintain close supervision of cablers not holding appropriate registration for the task to ensure installation and maintenance activity is strictly according to legislative requirements and industry standards for safety and network integrity including AS/ACIF S008:2006 and AS/ACIF S009:2006</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with team members, supervisors and customers on technical and operational matters
- literacy skills to interpret:
 - relevant legislation, codes, regulations and standards
 - technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - check environmental conditions are suitable for installation
 - make site safe and secure for cable installation
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to:
 - apply work practices which avoid cable damage
 - conform to work specifications and relevant industry standards
- technical skills to:
 - check cable route for obstructions and make clear using suitable methods
 - handle cable according to manufacturer's specifications so that conductors, sheath and insulation are not damaged during installation
 - read and interpret drawings related to:
 - cable coding system, identifiers and distributor locations
 - cable layouts
 - outlet location
 - select cabling system to meet customer performance needs and conform to work specifications and relevant industry standards
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- ACMA regulations and standards on lifts cabling
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- protection earthing
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions

- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install a lift cabling system from LD to lift car socket, including accurate completion of installation records, drawing alterations and compliance forms • read and interpret cable drawings and plans for locations and terminations • apply cable conductor identification codes • conduct and interpret cable test results • interpret and apply related regulations and industry codes • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site on which lift communications cabling activities may be carried out • use of cabling and field equipment currently used in industry • licensing requirements and other site related documentation.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking a lift cabling installation from LD to lift car socket • direct observation of the candidate applying cable conductor identification codes • oral or written questioning to assess interpretation of cable drawings and plans for locations and terminations • oral or written questioning to assess knowledge of cable test results, standards requirements and specific technical procedures.

Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, e.g.</p> <ul style="list-style-type: none">• ICTCBL2137B Install, maintain and modify customer premises communications cabling: ACMA Open Rule. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Lift cabling work</i> refers to:	<ul style="list-style-type: none"> • cabling used between the LD adjacent to the lift machine or motor room and the lift control cubicle and lift cars • communications cabling of the lift travelling cables and connections • communications customer cabling in lift installation.
<i>Regulatory environment</i> refers to:	<ul style="list-style-type: none"> • accredited registrars and registration • ACMA • AS 1979:1976 Travelling cables • Certified Components List • Communications Alliance • labelling requirements • Telecommunications Act 1997.
<i>Cabling environment</i> may include:	<ul style="list-style-type: none"> • inside and outside the lift car • lift machine or motor room • lift shaft.
<i>Cable type</i> may include:	<ul style="list-style-type: none"> • coaxial • copper twisted pair • data cables: <ul style="list-style-type: none"> • Category 5, 6, 6A, 7 or 7A • optical fibre cable • travelling cable complying to Australian standards: <ul style="list-style-type: none"> • circular • flat.
<i>Cable identification</i> refers to:	<ul style="list-style-type: none"> • cable conductor identification codes: <ul style="list-style-type: none"> • banded • colour coded • lettered • numbered.
<i>Termination systems</i> may include:	<ul style="list-style-type: none"> • connectors • distributors • modules • sockets • travelling cable terminations.

<p><i>Earthing and protection</i> may include:</p>	<ul style="list-style-type: none"> • earthing of screened cable, barriers and cable trays for the reduction or elimination of interference from electromagnetic, radio frequency (RF) and power sources • equi-potential bonding conductors to multiple earth neutral (MEN) and use of earth stakes • functional earths, including telecommunications reference conductor (TRC) and communications earthing system (CES) types to provide customer switching system facilities • protective earth barriers for segregation, cable tray, duct and metal equipment enclosures • protective earths for over voltage and surge or spike suppression according to AS/ACIF S009:2006.
<p><i>Records</i> may include:</p>	<ul style="list-style-type: none"> • building, cabling and equipment location plans • labelling of: <ul style="list-style-type: none"> • distributor pairs • distributor verticals • equipment closets • network termination device (NTD) record cards • patch panels • rooms • telecommunication outlets • record books and cards: <ul style="list-style-type: none"> • campus distributors (CD) • building distributors (BD) • floor distributors (FD) • local distributors (LD) • TAC forms (TCA1 and TCA2).
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • accredited registrars and registration • Australian Communications Industry Forum (ACIF) standards and codes • ACMA technical standards • AS/ACIF S008:2006 and AS/ACIF S009:2006 • AS/NZS 3000:2007 • AS1979:1976 Travelling cables • cabling security codes and regulations • Certified Components List (CCL) • labelling • Overview Telecommunications Act 1997 • AS Communications Cabling Manual (CCM) –Open.
<p><i>Building infrastructure</i></p>	<ul style="list-style-type: none"> • availability and suitability of existing cabling trays and fixing systems

may include:	<ul style="list-style-type: none"> • building hazards • elevated working • high voltage (HV) power • restricted access.
Strategies to manage infrastructure may include:	<ul style="list-style-type: none"> • appropriate separations • correct use of cable trays and support systems • fastening techniques.
Safety hazards may refer to:	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light or non-visible laser • RF emission • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from communications cable • hazardous conduit as according to AS 1345:L1995 conduit colours associated with a hazardous service.
Cable support structures may include:	<ul style="list-style-type: none"> • cable ducts may be closed or open • cable trays may be: <ul style="list-style-type: none"> • galvanised steel or PVC • perforated with low or high side • single or multi-channel • line poles • pits and pipes • suspension catenary wire • wall and island mounted patched and jumperable distributors: <ul style="list-style-type: none"> • BD • CD • FD • LD.
Termination may include:	<ul style="list-style-type: none"> • a jumperable distributor CD or BD • a non-jumperable distributor LD and a terminated patch panel • Ethernet connectors terminated at both ends of an Ethernet cable • travelling cable terminations.
Separations refer to:	<ul style="list-style-type: none"> • correct separations between communications cable and other services: <ul style="list-style-type: none"> • HV single core • HV multi-core • low voltage • open terminations

	<ul style="list-style-type: none">• separations covered by AS/ACIF S009:2006.
<i>Installation details</i> may include:	<ul style="list-style-type: none">• cable infrastructure• cable location and type.
<i>Cabling details</i> may include:	<ul style="list-style-type: none">• interconnections• pair locations• pair numbering and labelling.

Telecommunications - Cabling

ICTCBL2139B Apply safe technical work practices for cabling registration when configuring ADSL circuits

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor change to title, descriptor and performance criterion.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to gain proficiency in current work practices and methodologies used for Open and Restricted Cabling Registration.

It covers safe installation and alteration practices for configuring the Carrier NTD/ADSL Filter and Modem/Mode 3 socket/cabling for an alarm system connected to a monitoring station using a carrier line supporting an asymmetric digital subscriber line (ADSL) modem service.

Application of the Unit

Cablers, installers and technicians in the field apply the skills and knowledge in this unit in the context of technology convergence and digital subscriber lines (DSL) technologies as applied in the telecommunications industry.

It can be applied to installation, maintenance or upgrades of existing systems in voice, data or security systems.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Build and test DC and AC circuits and telephone earthing</p>	<p>1.1 Identify any hazards and occupational health and safety (OHS) issues for a safe work site and notify appropriate personnel</p> <p>1.2 Connect a series and a parallel <i>DC and AC circuit configuration</i> following <i>safe work practices</i></p> <p>1.3 Choose the appropriate <i>test equipment</i> and measure the values of <i>electrical quantities</i> of the circuits</p> <p>1.4 Use <i>calculations</i> to verify the measured values of the electrical quantities in a series and in a parallel circuit configuration</p> <p>1.5 Compare measured values to calculated values and determine the reasons for any variations</p> <p>1.6 Evaluate results and determine the <i>probable faults</i> if relevant</p> <p>1.7 Measure voltages present on a telephone line and compare to exchange battery voltage</p> <p>1.8 Measure resistance to earth, ensuring an electrical earth in a telecommunications installation</p>
<p>2. Configure a safe ADSL circuit configuration with Mode 3 connection</p>	<p>2.1 Determine the effects of bandwidth, frequency and attenuation on <i>xDSL circuits</i> as used for broadband customer access</p> <p>2.2 Design and configure an <i>ADSL circuit</i> from network boundary through to Mode 3 socket for an alarm system connected to a monitoring station</p> <p>2.3 Configure connection to ensure that an ADSL circuit is not disconnected for safety reasons when an alarm activation in conjunction with a Mode 3 socket disconnects the plain old telephone service (POTS) circuit</p> <p>2.4 Use a <i>level 3 tester</i> to verify correct termination and installation practices on a digital transmission line</p>
<p>3. Diagnose and rectify faults</p>	<p>3.1 Determine urgency and impact of faults and required response timeframe for clearance</p> <p>3.2 Identify <i>type of fault</i> and determine most probable causes of fault from data and historical trends where available</p> <p>3.3 Select tools and test equipment relevant to the system and type of fault</p> <p>3.4 Diagnose fault in a methodical and safe manner using suitable <i>fault-finding technique</i></p>

	<p>3.5 Isolate fault progressively to remove likely variables from diagnostic</p> <p>3.6 Determine options to rectify the fault and present to customer for decision on rectification</p> <p>3.7 Document test methods and results and file with other system installation records</p>
4. Alter existing services	<p>4.1 Identify existing and proposed cable systems for <i>altering services</i> to an existing installation</p> <p>4.2 Plan alterations to cause minimal disruption to ongoing client activity</p> <p>4.3 Use <i>appropriate tools</i> to safely <i>terminate telecommunications cables and outlets</i></p> <p>4.4 Identify and rectify any <i>cable fault</i></p> <p>4.5 Carry out alterations in a safe manner and according to both mandatory and recommended industry standards</p> <p>4.6 Identify risks posed by contact with remote power feeding services</p> <p>4.7 Test alteration and obtain sign-off from customer</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to listen and liaise with clients on technical and operational matters related to sign-off for alteration of services
- literacy skills to interpret technical documentation and incorporate technical language into written tasks, such as reporting on recommendations to minimise recurrent fault occurrence
- numeracy skills to:
 - interpret technical data, such as specifications of telecommunications networks
 - perform mathematical problem solving in AC and DC tasks and fault-finding
- problem-solving skills to apply AC and DC fault-finding techniques to different situations
- research skills to access technical information and sources to understand fundamental principles of telecommunication networks
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - select and use appropriate test equipment and practices to perform basic AC and DC testing
 - perform fault-finding tasks
 - alter services.
 -

Required knowledge

- application of binary number conversion and interpretation
- AC and DC electrical quantities, including SI units, OHS issues and the application of Ohm's law
- fault-finding techniques and use of testing equipment, including:
 - multimeter to measure DC voltage, current and resistance
 - continuity tester to check continuity wiring
 - testing of open circuits and short circuits
- overview of:
 - ADSL circuitry and configurations
 - digital transmission concepts, including installation practices and testing
 - procedures in altering existing services, including sign-off
 - difference between analog and digital signals.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use concepts of ADSL application and design • use fault-finding techniques to locate cabling faults in telecommunications networks • use Ohm’s law to solve DC and AC electrical problems • apply digital transmission principles and testing • use test equipment • alter existing customer services complying with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a site where altering existing services for a customer may be conducted • appropriate AC and DC testing equipment • manufacturer’s documentation and equipment • correct tools and measuring equipment currently used in industry.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking AC and DC measurements and fault-finding • oral or written questioning to assess knowledge of fundamental concepts of telecommunications practices and recurrent fault-finding techniques • evaluation of written ADSL design concepts • direct observation of visual checks and evaluation of written procedures in altering existing services • direct observation of the candidate altering existing customer services.
Guidance information	Holistic assessment with other units relevant to the industry

for assessment	<p>sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule• ICTTEN2140B Use hand and power tools• ICTWHS2170B Follow work health and safety and environmental policies and procedures. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
-----------------------	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>DC and AC circuit configuration</i> may include:</p>	<ul style="list-style-type: none"> • DC circuit: <ul style="list-style-type: none"> • resistances • single DC voltage source: <ul style="list-style-type: none"> • battery • DC voltage supply • solar panel • AC circuit: <ul style="list-style-type: none"> • inductors, capacitors and resistances • single AC voltage source: <ul style="list-style-type: none"> • AC generator • AC voltage supply • alternator • low voltage (LV) AC source.
<p><i>Safe work practices</i> may relate to:</p>	<ul style="list-style-type: none"> • component tolerances are not exceeded • correct use of power supply and test equipment • identifying any electrical safety hazards • isolation from main supply • overdrawing of current • power down during set-up procedure • well laid out circuitry: <ul style="list-style-type: none"> • avoid contact with external sources • avoid shorting of components.
<p><i>Test equipment</i> may include:</p>	<ul style="list-style-type: none"> • digital multimeter • multimeter • ohmmeter • voltmeter.
<p><i>Electrical quantities</i> may include:</p>	<ul style="list-style-type: none"> • current • power • voltage.
<p><i>Calculations</i> may include:</p>	<ul style="list-style-type: none"> • application of Ohm's law • engineering notation • power calculations

	<ul style="list-style-type: none"> • power consumption and efficiencies • voltage dividers • voltage, resistance and current calculations.
Probable faults may include:	<ul style="list-style-type: none"> • faulty component • faulty source voltage • open circuits • short circuits.
xDSL circuits may include:	<ul style="list-style-type: none"> • ADSL • ADSL2 • ADSL2+.
ADSL circuit may include:	<ul style="list-style-type: none"> • ADSL filters connected at a main distribution frame (MDF) • central filters and splitters installed at a network termination device (NTD) • central filters and splitters installed internally • domestic installations and small shops that use a telecommunications outlet (TO) or NTD as a network boundary • DSL and Mode 3 connections.
Level 3 tester may include:	<ul style="list-style-type: none"> • continuity • F set • local area network (LAN) Cat tester • split pair • wire map.
Type of fault may include:	<ul style="list-style-type: none"> • cable • electrical • hardware • software • system.
Fault-finding technique may include:	<ul style="list-style-type: none"> • half term testing • isolation of sections • logical mapping • using testing equipment.
Altering services may include:	<ul style="list-style-type: none"> • changing cable installation • client interaction • identifying mission critical services • identifying remote power feeding • upgrading a service.
Appropriate tools may include:	<ul style="list-style-type: none"> • basic hand tools • F sets for cable identification • Krone termination tool

	<ul style="list-style-type: none">• multimeter• wire strippers.
<i>Terminate telecommunications cables and outlets</i> may include:	<ul style="list-style-type: none">• stripping a:<ul style="list-style-type: none">• 2 pair internal rated• 3 pair external rated cable• 4 pair Category 5 unshielded twisted pair (UTP) cable• terminating a TO• termination using screw terminals.
<i>Cable fault</i> may include:	<ul style="list-style-type: none">• earth contact• foreign battery• no voltage• open circuit• short circuit• split pair.

Unit Sector(s)

Telecommunications - Cabling

ICTCBL2163A Install a cable lead-in

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install indoor and outdoor aerial and underground cable lead-ins. It involves digital reception installation, broadband and customer installations.

The brief may be for a new metallic or optical cable installation, or an upgrade of cable capacity for an existing network or subsystem, or cabling infrastructure for convergence to Next Generation Networks (NGN).

Application of the Unit

Technical staff who haul underground or fix aerial cable lead-in apply the skills and knowledge in this unit. They may make use of tension meters and hauling equipment.

The unit can be applied to new installations and upgrades of telecommunications cabling projects in domestic, commercial and industrial installations.

Licensing/Regulatory Information

Users should confirm licensing requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for cable installation	<p>1.1 Prepare for given work according to <i>industry standards</i></p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Inform <i>appropriate personnel</i> of identified <i>hazards and constraints</i> on work site</p> <p>1.4 Obtain <i>cable</i> installation plan and set up installation equipment according to manufacturer requirements</p> <p>1.5 Select suitable <i>protective clothing, tools and equipment, and safety equipment, and confirm support structures are safe</i></p>
2. Install aerial cable lead-in	<p>2.1 Identify and use safe support structures</p> <p>2.2 Select type of cable bearer and determine need for separate catenary wire installation</p> <p>2.3 Secure catenary wire or bearer wire permanently to support structure using <i>aerial fixing devices</i>, and adjust tension to meet relevant height and minimum sag requirements to required specifications</p> <p>2.4 Secure cable safely to catenary wire, leaving cable loop on support structure</p> <p>2.5 Terminate cable in customer enclosure and aerial enclosure</p>
3. Install underground cable lead-in	<p>3.1 Run push rod through pipe and attach cable for hauling</p> <p>3.2 Haul cable using lubricant, cable slippers or rollers to ensure no sheath damage when hauling at correct tension into and out of enclosures</p> <p>3.3 Provide sufficient cable allowance in enclosures for jointing and maintenance requirements</p> <p>3.4 Terminate cable in customer enclosure and pit enclosure</p>
4. Seal and secure cable	<p>4.1 Seal cable ends to prevent ingress of foreign material</p> <p>4.2 Secure cable loop on support structure to minimise damage to conductors</p> <p>4.3 Weather seal building entry points where appropriate</p> <p>4.4 Fit over voltage protection devices to all cables with metallic component where required</p>
5. Complete tasks on site	<p>5.1 Record any approved alteration to the original design and return to appropriate personnel</p> <p>5.2 Complete <i>appropriate records</i> and sign reports where required according to enterprise policy</p>

	<p>5.3 Restore the site to original condition and dispose of waste in an environmentally safe manner</p> <p>5.4 Notify customer and obtain sign-off</p>
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with work associates, supervisors, team members and clients
- literacy skills to interpret:
 - technical documentation, such as equipment manuals, specifications and requirements for aerial and underground installation
 - requirements of relevant legislation, codes, regulations and standards
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and work health and safety (WHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - read and interpret drawings related to:
 - cable coding system and identifiers
 - cable layouts
 - frame locations
 - outlet location
 - use hand and power tools.
 -

Required knowledge

- features and operating requirements of testing equipment
- manufacturer requirements for safe operation of equipment
- specific WHS requirements relating to the activity and site conditions
- termination methods and performance requirements
- typical issues and challenges that occur on site
- workplace procedures reflecting the requirements of legislation, codes of practice and other formal agreements that impact on the work activity

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install at least one type of aerial cable and one type of underground cable, including placing and securing cables on support structures and building faces for both internal and external locations to industry standards; applying related WHS requirements and work practices • haul, secure and seal cable • identify safe support structures from pole status markings and visual inspection • terminate cables at the customer and network ends of aerial and underground installations • document installation and test results and provide report to client • comply with all related WHS requirements and work practices.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where aerial and underground cable lead-ins may be conducted • use of equipment and personal protective equipment currently used in industry • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impacts on work activities.
<p>Methods of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation • direct observation of the candidate terminating cables.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, e.g.</p>

	<ul style="list-style-type: none">• ICTCBL2008B Terminate metallic conductor customer cable. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTCBL3009B Install, terminate and certify structured cabling installation

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor changes to an element, a performance criterion and range statement.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to place, secure and terminate structured cabling and to certify installation.

Assessment by a TITAB-registered assessor is recommended.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media (ACMA)-accredited registrar.

Application of the Unit

Technical staff who install, terminate and certify structured cabling installation apply the skills and knowledge in this unit.

This unit applies to indoor and outdoor installation within customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for the installation of structured cabling</p>	<p>1.1 Confirm <i>customer requirements</i> and ensure compliance with requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Inform appropriate personnel of identified <i>hazards</i> on work site</p> <p>1.4 Organise <i>tools and equipment</i> for given work</p> <p>1.5 Erect <i>barriers</i> according to safety requirements</p> <p>1.6 Select <i>cable type</i> and match <i>structured cabling</i> to installation environment and customer requirements</p> <p>1.7 Verify proposed route to meet manufacturer specifications and industry standards</p>
<p>2. Install structured cable</p>	<p>2.1 Place and secure the correct type of cable following <i>occupational health and safety (OHS) and environmental requirements</i> and according to accepted industry practice and standards</p> <p>2.2 Maintain cable and services separations in runs and cross overs to meet manufacturer and industry standards</p> <p>2.3 Install structured cabling to <i>industry standards</i></p> <p>2.4 Minimise twist ratio defects to avoid accumulation effect on structured cable performance</p> <p>2.5 Fit <i>over-voltage protection devices</i> to all cables and metallic components where required</p>
<p>3. Terminate structured cable</p>	<p>3.1 Terminate the cable according to accepted industry practice and standards</p> <p>3.2 Maintain correct twist ratio to optimise system performance at rated level</p> <p>3.3 Use correctly rated <i>termination hardware</i> with appropriate termination tool to ensure integrity and performance of termination</p> <p>3.4 Earth cable shield to manufacturer specifications and relevant industry standards if applicable</p>
<p>4. Certify system performance to required level and complete customer documentation</p>	<p>4.1 Test installation and termination to comply with <i>certification requirements</i></p> <p>4.2 Record and verify system performance promptly where required</p> <p>4.3 Authorise and issue appropriate documentation to client to</p>

	<p>certify system performance and complete <i>records</i> where required</p> <p>4.4 Reinststate site to original condition and dispose of waste in an environmentally safe manner</p> <p>4.5 Notify customer and obtain sign-off</p>
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to read and interpret:
 - technical documentation, such as equipment manuals and specifications
 - drawings related to:
 - cable coding system and identifiers
 - cable layouts
 - frame locations
 - outlet location
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task-management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - use hand and power tools
 - use diagnostic equipment
 - perform fault clearance.
 -

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of equipment
- requirements of legislation, codes of practice and other formal agreements that impact on the work activity
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install, terminate and certify structured cabling installation to industry standards applying related OHS requirements and work practices • install termination hardware • conduct and interpret test results • determine compliance with manufacturer’s certification and warranties • provide report documenting installation and test results to client.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation, termination and certification of structured cabling may be conducted • use of testing equipment currently used in industry • relevant regulatory and equipment documentation that impacts on installation and certification activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation, including test results • direct observation of the candidate installing, terminating and certifying customer premises structured cabling installation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3049A Install systems and equipment on customer

	<p>premises.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Customer requirements</i> may include:</p>	<ul style="list-style-type: none"> • ACMA telecommunication cabling advice forms TCA1 and TCA2 • cable plans and designs • contract documents • specification schedules • test results • timelines.
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • winch • crane • forklift • elevated work platform (EWP) • Australian Communications Industry Forum (ACIF) standards and codes • ACMA Cabling Provider Rules • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environment Protection Acts • OHS Acts and relevant codes and standards • ISO Draft 11801 (International) • regulated or industry codes of practice, including appropriate ACMA and AS/ACIF technical standards • relevant Institute of Electrical and Electronics Engineers (IEEE) standards • road and traffic control legislation and codes

	<ul style="list-style-type: none"> technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
Hazards may include:	<ul style="list-style-type: none"> building debris earth potential rise (EPR) glass fibre live power lines manual handling mud and water natural gas and other gas build-up needle stick injury radio frequency equipment emitting radiation remote power feeding services that operate at above telecommunications network voltage (TNV) slippery surfaces vermin.
Tools and equipment may include:	<ul style="list-style-type: none"> tools: <ul style="list-style-type: none"> cable ties crimping tool drills hammers labeller ladders saws terminating tool equipment: <ul style="list-style-type: none"> continuity tester LAN Cat tester multimeter test equipment: <ul style="list-style-type: none"> conforming to AS/NZS IEC 61935.1:2006.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and test optical fibre cable on customer premises for communications applications.

Assessment by a TITAB-registered assessor is recommended.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA)-accredited registrar.

Application of the Unit

Technical staff who place, secure and terminate optical fibre cable apply the skills and knowledge in this unit. Types of termination include direct termination, fusion splicing and mechanical splicing.

They may be required to do new installations or upgrades, or maintain existing networks in domestic, commercial and industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for installation of optical fibre cable</p>	<p>1.1 Prepare for given work according to requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Inform appropriate personnel of identified <i>hazards</i> on work site</p> <p>1.4 Organise tools, equipment and materials for given work</p> <p>1.5 Match <i>optical fibre cable type</i> and <i>connectors</i> to installation environment and <i>customer requirements</i></p> <p>1.6 Check proposed route and bend ratios to meet manufacturer specifications and industry standards</p> <p>1.7 Test cable on drum for optical continuity</p>
<p>2. Install, terminate and test the optical fibre cable</p>	<p>2.1 Install cable following <i>occupational health and safety (OHS) and environmental requirements</i> and complying with manufacturer specifications and industry standards</p> <p>2.2 Join cable and perform the <i>type of termination</i> specified in the plan using safe work practices and according to manufacturer specifications</p> <p>2.3 Test joint for transmission loss and strength, and re-terminate joint if transmission loss exceeds manufacturer specifications</p> <p>2.4 Record all measurements</p>
<p>3. Remove fibre hazards from work area</p>	<p>3.1 Clean work area thoroughly to minimise risk of injury from loose glass fibre</p> <p>3.2 Dispose of waste safely and according to relevant environmental requirements</p> <p>3.3 Restore work site to original condition</p>
<p>4. Document installation</p>	<p>4.1 Update plans and records with details of installation and test results</p> <p>4.2 Notify client of work completion and obtain sign-off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and requirements for optical fibre cable installation
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task-management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- detailed knowledge of:
 - AS/NZS 3080:2003 Telecommunications Installations – Generic cabling for commercial premises, clause 10.3.2
 - ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
 - AS/NZS 2211:2006 Safety of laser products (parts 1 and 2)
- features and operating requirements of test equipment for optical fibre cable
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of optical fibre equipment
- safety precautions when working with laser-based systems
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- techniques for types of termination including:
 - direct termination
 - fusion splicing

- mechanical splicing
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install, terminate and test optical fibre cable applying safety precautions when working with laser-based systems • install a connector type for fusion, mechanical splicing and direct terminations • complete relevant documentation to manufacturer and design requirements • provide report documenting installation and test results to client • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation and termination of optical fibre cable may be conducted • use of optical fibre testing equipment currently used in industry • relevant regulatory and equipment documentation that impacts on optical fibre cable installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report prepared by candidate outlining installation and test results • direct observation of the candidate placing, securing and terminating customer premises optical fibre cable.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

- ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule
- ICTCBL3013A Perform cable and system test on customer premises.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) Standards and Codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 Telecommunications Installations – Generic cabling for commercial premises, clause 10.3.2 includes: <ul style="list-style-type: none"> • colour codes used to identify the various types of fibre • signals these cables would normally carry • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702 :2007 • cabling security codes and regulations • OHS Acts and relevant codes and standards • regulated or industry codes of practice, including appropriate ACMA technical standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p>Hazards may include:</p>	<ul style="list-style-type: none"> • earth potential rise (EPR) • optical cable: <ul style="list-style-type: none"> • bare fibres • hazardous laser light • remote power feeding • radio frequency (RF) emission.
<p>Optical fibre cable type may include:</p>	<ul style="list-style-type: none"> • air blown • armour plated • compliance with appropriate ACMA technical standard requirements for: <ul style="list-style-type: none"> • aerial • underground • designed for different environments and intended uses • external

	<ul style="list-style-type: none"> • internal • loose tube • multi-mode • single mode • tight buffered • various grades.
Connectors may include:	<ul style="list-style-type: none"> • any approved or specified fibre connector for MM or SM • ACMA approved • either epoxy, anaerobic, hot melt glue or mechanical splice style • either OM1, 2, 3 or 4 or OS1 • fusion splicing (cable to cable fibre splice or cable to pigtail splice).
Customer requirements may be:	<ul style="list-style-type: none"> • advised in on-site meetings • found in: <ul style="list-style-type: none"> • cable plans and designs • contract documents • specification schedules.
OHS and environmental requirements may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas • need for decommissioning and isolating work site and lines before beginning work • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • plastic • rubber • leather • head protection • kneepads • masks • protective suits • safety boots • safety glasses for laser work • safe work practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment:

	<ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • noise, dust and clean-up management • stormwater protection • waste management • waste disposal containers: <ul style="list-style-type: none"> • drop sheets • sharps containers.
<i>Type of termination</i> may include:	<ul style="list-style-type: none"> • direct termination • fusion splicing • mechanical splicing.

Elements and Performance Criteria

<p>1. Prepare to install and terminate coaxial cable</p>	<p>1.1 Prepare for given work according to requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Arrange access to the site according to required procedure</p> <p>1.3 Inform appropriate personnel of identified <i>hazards</i> on work site</p> <p>1.4 Select <i>coaxial cable type, connectors and manufacturer's tool</i> to comply with installation environment and customer requirements</p> <p>1.5 Check proposed route and bend radius to meet <i>manufacturer specifications</i> and industry standards</p> <p>1.6 Test cable on drum for continuity and inspect visually for crushing and kinks</p> <p>1.7 Discuss proposed method of installation and cable route with customer and adjust if necessary</p>
<p>2. Install, terminate and test coaxial cable</p>	<p>2.1 Maintain cable segregation to industry standards</p> <p>2.2 Protect integrity of coaxial shield cable to ensure no loss of signal during operation and maintain bend ratios to not exceed manufacturer specifications and industry standard</p> <p>2.3 Install cable securing hardware to ensure cable is not crushed or kinked while maintaining cable manufacturer's bend radius</p> <p>2.4 Install cable following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> and complying with manufacturer specifications and industry standards</p> <p>2.5 Terminate the cable and perform the type of termination specified in the plan using safe work practices and according to manufacturer specifications</p> <p>2.6 Test termination for transmission loss and strength and re-terminate the coaxial cable if transmission loss exceeds manufacturer specifications</p> <p>2.7 Record all measurements</p> <p>2.8 Fit <i>over-voltage protection devices</i> to all cables with metallic component where required</p>
<p>3. Remove termination waste from work area</p>	<p>3.1 Clean work area thoroughly to minimise risk of injury from loose metal strands</p> <p>3.2 Dispose of waste safely and according to relevant environmental requirements</p>

	3.3 Restore work site to original condition
4. Document installation	4.1 Update plans and records with details of installation and test results 4.2 Show customer completed work and ensure work matches agreed method of installation and cable route 4.3 Notify client of work completion and obtain sign-off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and requirements for coaxial cable installation
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task-management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - read and interpret drawings related to:
 - cable coding system and identifiers
 - cable layouts
 - frame locations
 - outlet location
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- detailed knowledge of:
 - AS/NZS 1367:2007 Coaxial cable and optical fibre systems for the RF distribution of analog and digital television and sound signals in single and multiple dwelling installations
 - ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment for coaxial cable
- information required to operate equipment according to a test specification
- manufacturer requirements for safe operation of coaxial cable equipment
- safety precautions when working with coaxial cable and RF-based systems

- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- techniques for types of termination, including:
 - direct termination
 - crimp termination
 - mechanical connectorisation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> install and terminate coaxial cable types, including hard line (internal or external) and flexible (internal or external) to industry standards, applying related OHS requirements and work practices install different connector types conduct and interpret test results determine compliance with manufacturer's certification and warranties provide report documenting installation and test results to client comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where installation and termination of coaxial cabling may be conducted use of equipment and personal protective equipment currently used in industry use of testing equipment currently used in industry relevant regulatory and equipment documentation that impacts on installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of a hands-on project completed by the candidate review of an oral and written report with completed documentation, including test results direct observation of the candidate installing and terminating coaxial cable.
Guidance information	Holistic assessment with other units relevant to the industry

for assessment	<p>sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none">• ICTCBL3009B Install, terminate and certify structured cabling installation. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to test the performance of equipment on customer premises for the purpose of commissioning, fault identification or routine maintenance. It includes ensuring a safe and secure work environment while work is being undertaken.</p> <p>Assessment by a TITAB registered assessor is recommended.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Field officers, technicians or technical supervisors from carriers, contractors or other service providers may apply the skills and knowledge in this unit.</p> <p>This unit applies to indoor and outdoor cable and systems within customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.</p>
---------------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cable and system test	1.1. Establish <i>purpose of the test</i> to be conducted on <i>cables and systems</i> with <i>customer</i> 1.2. Confirm <i>customer's requirements</i> and methods to comply with <i>relevant legislation, codes, regulations and standards</i> 1.3. Select <i>required tests</i> according to site conditions, client documentation and <i>manufacturer's specifications</i> 1.4. Arrange access to site and confirm service is available for testing 1.5. Select <i>test equipment</i> , tools and materials to meet required industry standards
2. Perform tests	2.1. Use tools and test equipment according to manufacturer's specifications 2.2. Perform work safely to remove risk of injury to operator, other users and equipment 2.3. Perform checks and adjustments to ensure operating <i>environmental factors</i> will not prejudice test results
3. Interpret test results and determine action	3.1. Read <i>test results</i> accurately and compare with manufacturer's and site specifications for cable performance 3.2. Evaluate test results taking into account measurement error margins against a known reference where appropriate 3.3. Assess test results fairly and accurately using verifiable data 3.4. Rectify any faults or escalate to the appropriate level
4. Complete records and clean up site	4.1. Document test results and ensure test results remain current 4.2. Verify test results and provide to client where required 4.3. Update site and installation files to ensure information on system performance is traceable 4.4. Reinstate site according to customer and company requirements 4.5. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations and necessary calibration changes
- planning and organisation skills to arrange site access and equipment delivery arrangements according to schedule
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and occupational health and safety (OHS) standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technology skills to correctly handle, connect and calibrate test equipment

Required knowledge

- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- electrical and/or optical properties to be measured
- overview knowledge of customer premises equipment
- typical performance parameters and typical faults that may be encountered in customer equipment and related connection and transmission media
- various test equipment types suitable for tests to be made

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • perform tests on cable and equipment • use a range of test devices • interpret test results • rectify a range of faults and escalate to the appropriate level if required • report on the completed cable and system test.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where cable and system tests may be conducted • use of cable and system testing equipment currently used in industry • relevant regulatory and equipment documentation that impact on cable and system testing installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing cable and system test on customer premises • review of reports completed by the candidate for different test examples and situations • oral or written questioning to assess knowledge of cable and systems tests.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3015A Locate and identify cable system faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Purpose of the test</i> may relate to :	<ul style="list-style-type: none"> • commissioning • extent of functionality • fault identification • need to assess continuity • poor performance.
<i>Cables and systems</i> may include:	<ul style="list-style-type: none"> • cable types: <ul style="list-style-type: none"> • coaxial • copper (all categories) • optical fibre • compliance with ACMA technical standard requirements for cable:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Category 5, 6, 6A, 7 or 7A • aerial • underground • unshielded twisted pairs (UTP) • requirement that all cabling products other than cable must be ACMA approved • systems: <ul style="list-style-type: none"> • LAN or WAN equipment • modems • private branch exchange (PBX) • related cabling and management systems • transmission equipment.
Customer may include:	<ul style="list-style-type: none"> • building owner • clients • consultants • end user • supervisor.
Customer's requirements may include:	<ul style="list-style-type: none"> • special access to worksites, such as: <ul style="list-style-type: none"> • chemical plant • radio hazard situations • rail corridor • under high voltage (HV) power lines.
Relevant legislation, codes, regulations and standards include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS IEC 61935.1:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • National Association of Testing Authorities (NATA) requirements • OHS • technical standards AS/ACIF S009:2006 and AS/ACIF S008:2006.
Required tests may be:	<ul style="list-style-type: none"> • addressing the following:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • attenuation • balance • expected response times • insulation resistance • length • near end cross talk • noise levels • open circuits • pair assignment • reflection • reversals • short circuits • signal loss • speed balanced • between a site and other customers equipment • between sites • one or two directional • unbalanced • within a building.
<i>Manufacturer's specifications</i> may include:	<ul style="list-style-type: none"> • diagnostic procedures • installation instructions • maintenance schedule • warranty conditions.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • hand-held cable testers • insulation resistance tester • multimeter • oscillator and probe set • optical time domain reflectometer (OTDR) • proprietary devices • pulse echo • signal generator • signal level meter • spectrum analyser • time domain reflectometer (TDR).
<i>Environmental factors</i> may include:	<ul style="list-style-type: none"> • dirt • dust • humidity • magnetic radiation • radio frequency (RF)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • safety of electrical equipment • temperature • trip hazards • vibration.
<i>Test results</i> may include:	<ul style="list-style-type: none"> • distortion measurements • end to end transmissions • insertion loss measurements • optical continuity • return loss measurements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Inform client of system functions and capacities	1.1. Provide <i>client</i> with <i>cables and systems</i> information 1.2. Demonstrate physical installation and answer client queries on <i>system functions</i> 1.3. Confirm variations to specifications with client
2. Hand over records and documentation	2.1. Update <i>documentation</i> and plans 2.2. Present complete and orderly <i>records and system documentation</i> to client 2.3. Adhere to all relevant company policies and <i>relevant legislation, codes, regulations and standards</i>
3. Complete contract documentation	3.1. Provide guarantees to client in the required format where work is subject to guarantee 3.2. Present invoices to client to complete contractual arrangements 3.3. Obtain client's sign off to confirm acceptance of cabling work completed where required 3.4. Advise the client of opportunities for system upgrades, additional services and training where appropriate

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> • computer skills for communicating and data entry if required • communication skills to: <ul style="list-style-type: none"> • liaise with customers to ensure requirements are known and can be met within timeframes • demonstrate processes • literacy skills to interpret technical specifications and related documentation • numeracy skills to make calculations, where necessary, to account for variations in costs and quantities • planning and organisation skills to make site access and client meeting arrangements

REQUIRED SKILLS AND KNOWLEDGE

- technical skills to operate and configure equipment

Required knowledge

- cabling types, connectors and cabling structures
- overview knowledge of customer premise equipment
- typical performance parameters and typical faults that may be encountered in customer equipment
- various test equipment types suitable for tests to be made
- warranty information for equipment supplied and contractor work guarantees

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • demonstrate and explain system to the customer • document instructions on system, including maintenance • complete relevant documentation • respond to client requests.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where system and equipment has been installed or upgraded • relevant regulatory and equipment documentation that impact on system and equipment installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing a hand over of systems and equipment • oral or written questioning to assess knowledge of equipment, cabling types, connectors and cabling structures • review of reports completed by the candidate outlining instructions provided to client including system functions..
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3049A Install systems and equipment on customer premises. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to locate and rectify cable fault	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Inform appropriate personnel of existing and potential hazards on worksite 1.3. Arrange access to the site according to required procedure 1.4. Establish the type of cable and nature of fault from the customer for the cable system 1.5. Select suitable testing tools and equipment and personal protective equipment to meet required industry standards
2. Locate and diagnose the cable fault	2.1. Conduct appropriate test following occupational health and safety (OHS) and environmental requirements to identify type of cable fault 2.2. Isolate the fault progressively to remove likely variables from assessment 2.3. Locate the cable fault without undue interruptions to the customer activity in the shortest possible time 2.4. Notify the customer of the findings
3. Rectify the fault	3.1. Present customer with options to rectify the fault 3.2. Advise the customer of the costs of any repair not covered by service agreement 3.3. Conduct the fault rectification, if the customer agrees, in a manner which is safe to the repair team and the customer 3.4. Escalate any unresolved faults to other parties for resolution if required
4. Complete documentation and clean up worksite	4.1. Advise the customer of successful fault clearance and obtain sign off 4.2. Complete all records 4.3. Complete reports to justify the fault diagnosis and rectification methodology if required 4.4. Remove all waste and debris from worksite and dispose of according to environmental requirements 4.5. Restore any changes made to the worksite during fault repair to the client's satisfaction

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to:
 - solve equipment and logistics problems
 - provide solutions on fault rectification to customer
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of testing tools and equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify different faults using simple checks, tests and fault-finding methodology • determine and rank likely causes of fault • provide fault rectification solutions to customer • rectify faults • escalate unresolved faults to other parties for resolution • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where cable system tests may be conducted • use of fault-finding equipment currently used in industry • relevant regulatory and equipment documentation that impact on cable system testing and fault-finding activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report, including test results and fault-finding methodologies • direct observation of the candidate locating and identifying cable system faults.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2016A Joint metallic conductor cable on customer premises.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Contract Law • National Association of Testing Authorities (NATA) requirements • OHS • regulated or industry codes of practice including appropriate ACMA technical standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006 • Trade Practices Act.
Hazards may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR): <ul style="list-style-type: none"> • event at a site, such as an electrical distribution substation, may expose telecommunications personnel, users or plant to hazardous voltages • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • needle stick injury • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
Type of cable may include:	<ul style="list-style-type: none"> • access cable • coaxial cable • customer cable • data cable • optical fibre cable.

RANGE STATEMENT	
<i>Nature of fault</i> may include:	<ul style="list-style-type: none"> • distortion • earth hum • interference • intermittent • low signal level • noise • poor signal quality.
<i>Customer</i> may include:	<ul style="list-style-type: none"> • fault centre • individual reporting the fault • network manager • network operations centre staff • site manager.
<i>Cable system</i> may include:	<ul style="list-style-type: none"> • access network cabling • coaxial cabling • data cabling: <ul style="list-style-type: none"> • Category 5, 6E or 7 • lead-in cable • optical network cabling • structured cabling.
<i>Testing tools and equipment</i> may include:	<ul style="list-style-type: none"> • bridge set • cable locator • cable test set • digital fault test set • Megger • optical time domain reflectometer (OTDR) • pulse echo test set.
<i>Personal protective equipment (PPE)</i> may include:	<ul style="list-style-type: none"> • electrical isolators • gas detectors • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • plastic • rubber • leather • head protection • kneepads • masks • protective suits • safety boots

RANGE STATEMENT	
	<ul style="list-style-type: none"> • safety glasses.

ICTCBL3018A Install underground enclosures and conduit

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to install underground enclosures and conduit for new or cable maintenance tasks in access networks or customer premises.</p> <p>Assessment by a TITAB registered assessor is recommended.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff who install underground infrastructure for new and upgrades of telecommunications cabling apply the skills and knowledge in this unit.</p> <p>This unit applies to indoor and outdoor installation within customer premises. It may be applied to domestic, commercial or industrial installations.</p>
---------------------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation of underground enclosure and conduit	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Inform appropriate personnel of existing and potential hazards on worksite 1.4. Verify location of proposed installation according to the appropriate plans obtained from authorised personnel 1.5. Obtain information on location of other services from relevant authorities 1.6. Organise tools and equipment for given work and safe work practice 1.7. Erect barriers according to safety requirements
2. Install enclosure and conduit	2.1. Excavate site maintaining stability and allowing ease of access 2.2. Construct or install enclosure according to design specifications and following occupational health and safety (OHS) and environmental requirements 2.3. Install conduit to specifications and manufacturer's requirements ensuring that internal surfaces are free from impediments to cable hauling 2.4. Seal conduit entry into enclosure against ingress of foreign matter 2.5. Install cable support structure and access facilities in enclosures to specifications
3. Restore site and complete documentation	3.1. Complete backfill safely using suitable spoil and materials that ensures conduit protection 3.2. Reinststate site to identified requirements 3.3. Complete reports on installation and design amendments accurately and file promptly according to enterprise requirements 3.4. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and service orders
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use excavation machinery
 - use hand and power tools

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> excavate for installation of an enclosure and conduit to industry standards applying related OHS requirements and work practices install enclosure and conduit according to specifications and industry standards restore site and complete documentation.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> sites where installation of underground enclosures and conduit may be conducted use of installation equipment currently used in industry relevant regulatory and equipment documentation that impact on cable installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of a hands-on project completed by the candidate review of an oral and written report with completed documentation outlining design amendments direct observation of the candidate installing underground enclosures and conduit.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTCBL3019A Install underground cable. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE

	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- appropriate licences:
 - crane
 - forklift
 - winch
- Australian Communications Industry Forum (ACIF) Standards and Codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS Acts • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006and, AS/ACIF S009:2006.
Hazards may include:	<ul style="list-style-type: none"> • building debris • earth potential rise (EPR): <ul style="list-style-type: none"> • event at a site, such as an electrical distribution substation, may expose telecommunications personnel, users or plant to hazardous voltages • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • needle stick injury • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
Plans may include:	<ul style="list-style-type: none"> • building • constructions • design • site layout drawings • street.
Authorised personnel may include:	<ul style="list-style-type: none"> • construction manager • project manager • site manager • site supervisor.
Relevant authorities may include:	<ul style="list-style-type: none"> • cable location services (Dial Before you Dig)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for underground cable hauling	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards including cable installation standards 1.2. Arrange access to the site according to required procedure 1.3. Verify cable installation requirements from plan and recognise constraints 1.4. Inform appropriate personnel of existing and potential hazards on worksite 1.5. Obtain information on location of other services from relevant authorities 1.6. Select suitable tools and equipment and protective equipment to meet required industry standards 1.7. Erect barriers according to safety requirements 1.8. Set up cable installation equipment according to manufacturer's requirements and enterprise guidelines 1.9. Clean debris and obstructions from conduit using suitable safe methods 1.10. Seal cable ends to exclude ingress of foreign matter
2. Haul underground cable	2.1. Run hauling feeder through conduit to enable cable hauling following occupational health and safety (OHS) and environmental requirements 2.2. Attach cable to hauling feeder according to manufacturer's specifications 2.3. Employ cable slippers or rollers to ensure no sheath damage when hauling into and out of enclosures 2.4. Lubricate cable and haul evenly at correct tension to reduce risk of cable damage 2.5. Maintain sufficient cable length allowance for jointing
3. Seal and secure cable and complete all documentation	3.1. Tag all cables to enable future identification 3.2. Seal cable ends to prevent ingress of foreign material 3.3. Place cable on supports in enclosures to reduce damage to conductors and enable ease of access for maintenance 3.4. Fit over voltage protection devices to all cables with metallic component where required

ELEMENT	PERFORMANCE CRITERIA
	3.5. Complete reports on installation and design amendments accurately and file promptly according to customer requirements 3.6. Reinstall site to identified requirements if required 3.7. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as cable plans, equipment manuals, specifications and service orders
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task management skills to work systematically with required attention
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use excavation machinery
 - use hand and power tools

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification

REQUIRED SKILLS AND KNOWLEDGE

- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

ICTCBL3021A Install aerial cable

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to install aerial cable in all communications applications.</p> <p>Assessment by a TITAB registered assessor is recommended.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP.</p> <p>If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff who install aerial cable for customer and hybrid fibre coaxial (HFC) networks apply the skills and knowledge in this unit. They use basic rigging procedures, methods and equipment for working safely at height.</p> <p>It may make use of formal documentation such as accurate completion of a telecommunications cabling advice (TCA) form (TCA1 form) and cable records.</p> <p>This unit applies to outdoor installation within a customer premises.</p> <p>It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for aerial cable installation	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Verify location of proposed aerial cable installation requirements according to the appropriate plans and recognise constraints 1.4. Obtain information on location of other services from relevant authorities 1.5. Inform appropriate personnel of existing and potential hazards on worksite 1.6. Select tools and equipment required for safe work practice 1.7. Erect barriers according to safety requirements 1.8. Assess support structure as safe for normal working conditions 1.9. Set up cable installation equipment according to manufacturer's requirements and enterprise guidelines
2. Attach aerial cable to catenary	2.1. Select type of cable bearer for catenary wire installation 2.2. Use basic rigging procedures, methods and equipment for working safely at heights 2.3. Secure catenary wire or bearer wire permanently to support structure using safe installation practices according to specifications 2.4. Haul and secure cable to catenary wire following occupational health and safety (OHS) and environmental requirements
3. Seal and secure aerial cable	3.1. Seal cable ends to prevent ingress of foreign material 3.2. Secure cable loop on support structure to reduce damage to conductors and to enable ease of access for maintenance 3.3. Weather seal building entry points where appropriate 3.4. Fit over-voltage protection devices to all cables with metallic component where required 3.5. Complete reports on installation and design amendments accurately and file promptly according

ELEMENT	PERFORMANCE CRITERIA
	to enterprise requirements
4. Restore site and complete documentation	4.1. Restore worksite to the customer's satisfaction 4.2. Complete <i>reports</i> on installation 4.3. Notify customer and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - liaise with internal and external personnel on technical and operational matters
 - relate to work associates, supervisors, team members and clients
- literacy skills to interpret technical documentation, such as equipment manuals, specifications and requirements for aerial cable installation
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to use:
 - hand and power tools, diagnostic equipment and perform fault clearance
 - basic rigging procedures, methods and equipment for working safely at heights

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity

REQUIRED SKILLS AND KNOWLEDGE

- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare site for installation ensuring all relevant authorities have been notified and approvals obtained prior to commencement • install aerial cable using effective practices • use basic rigging procedures, methods and equipment for working safely at heights • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where aerial cable installation may be conducted • use of aerial installation equipment currently used in industry • relevant regulatory and equipment documentation that impact on aerial cable installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation, including updated cable plans and records • direct observation of the candidate installing aerial cable.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3020A Construct aerial cable supports. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- appropriate licences:
 - crane
 - EWP
 - forklift
 - winch
- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM)

RANGE STATEMENT	
	<p>Volume 1</p> <ul style="list-style-type: none"> • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Aerial cable installation requirements</i> may include:	<ul style="list-style-type: none"> • approvals from relevant authorities • details of: <ul style="list-style-type: none"> • location of other services • location of plant and equipment • proposed route • reinstatement requirements • site access requirements • joint use with electrical services • regulated or industry codes of practice and include appropriate ACMA technical standards • structures that may be public or private • use of: <ul style="list-style-type: none"> • pole • tower • wall.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for customer premises systems and equipment installation	1.1. Prepare for given work according to relevant legislation, codes, regulations and standards 1.2. Arrange access to the site according to required procedure 1.3. Inform appropriate personnel of existing and potential hazards on worksite 1.4. Verify location of proposed customer communications equipment installation according to plans obtained from authorised personnel 1.5. Develop installation plans to ensure minimal disruption to the workplace and according to standards 1.6. Select suitable tools and equipment
2. Install system hardware	2.1. Install network equipment following occupational health and safety (OHS) and environmental requirements according to manufacturer's instructions 2.2. Confirm service interruption is within limits agreed with the customer 2.3. Complete cable jumpering to distribution infrastructure and terminal equipment to specification 2.4. Document all installation drawings for the customer
3. Configure and test the system	3.1. Install software and configure the system according to specifications 3.2. Test to verify system performance according to customer requirements 3.3. Record all test results
4. Clean up worksite and complete documentation	4.1. Remove and dispose of installation waste and debris from worksite according to environmental requirements 4.2. Restore worksite to customer's satisfaction 4.3. Complete all installation documents and present to the customer 4.4. Notify the customer and obtain signoff

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make:
 - calculations
 - necessary calibration changes
- planning and organisation skills to arrange site access and equipment delivery
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technology skills to:
 - accomplish termination of telecommunications media
 - correctly handle, connect and calibrate test equipment for physical installation of equipment and related media

Required knowledge

- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- electrical and or optical properties to be measured
- OHS considerations including:
 - electrical safety, lifting hazards
 - manufacturer's requirements for safe operation of equipment
- overview knowledge of customer premise equipment
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • read and interpret: <ul style="list-style-type: none"> • related floor plans • building plans • reflected ceiling plans • schematic drawings • install customer premises equipment • configure and test systems and equipment • apply relevant regulations and standards • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation of systems and equipment may be conducted • use of installation equipment currently used in industry • relevant regulatory and equipment documentation that impact on installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing customer premises systems and equipment • review of reports completed by the candidate outlining installation drawings and test results • oral or written questioning to assess knowledge of planning, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3013A Perform cable and system test on customer premises.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare the system and equipment cut over	1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> 1.2. Scope the work by obtaining project plan from <i>appropriate personnel</i> and arrange for site access to comply with security arrangements 1.3. Notify appropriate personnel of identified <i>safety hazards</i> at the worksite 1.4. Determine cable route and type of <i>cable and equipment</i> from project plan and identify and avoid <i>other services</i> 1.5. Obtain <i>plant, tools and safety equipment</i> and material to perform tasks safely and efficiently 1.6. Prepare an implementation plan with <i>cut over tasks</i> based on identified nature of job and seek customer approval 1.7. Notify customer and network carrier of proposed <i>cut over details</i> and arrange for customer representation
2. Cut over the system or equipment into service	2.1. Perform cut over tasks and connect network facilities as with approved plan following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> for the given work 2.2. Test all cable connections, equipment and facilities as instructed in technical manuals and specifications 2.3. Evaluate <i>test</i> results to ensure proper system operation and performance and rectify if required
3. Complete project documentation	3.1. Record test results for future reference and complete reports on cut over installation and design amendments according to enterprise requirements 3.2. Recover obsolete materials and equipment and return to appropriate point for disposal 3.3. Restore site according to the requirements of enterprise or approving authority and to customer satisfaction 3.4. Notify appropriate personnel of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate test results
- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - organise and maintain equipment
 - scope work and develop implementation plan for cut over project
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technology skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- cabling types, connectors and cabling structures
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- overview knowledge of customer premise equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements, including features and operating requirements of test equipment
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • read and interpret plans • develop and implement a cut over work plan • install customer premises equipment • configure and test systems and equipment • apply relevant regulations and standards.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation of systems and equipment involving cut over may be conducted • use of installation equipment currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing cut over of systems and equipment • review of plans and reports completed by the candidate outlining system and equipment cut over and test results • oral or written questioning to assess knowledge of planning, types of systems and issues associated with cut over.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2068A Install telecommunications service to a building • ICTCBL3067A Modify and cut over cable. <p>Aboriginal people and other people from a non-English</p>

EVIDENCE GUIDE

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- appropriate licences:
 - crane
 - EWP
 - forklift
 - winch
- AS Communications Cabling Manual (CCM)

RANGE STATEMENT	
	<p>Volume 1</p> <ul style="list-style-type: none"> • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • ISO Draft 11801 (International) • OHS • regulated or industry codes of practice and include appropriate ACMA standards • relevant Institute of Electrical and Electronics Engineers (IEEE) standards • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Appropriate personnel</i> may be:	<ul style="list-style-type: none"> • consultant • project engineer • site supervisor.
<i>Safety hazards</i> may refer to:	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light (non-visible laser) • radio frequency (RF) emission • contact with remote power feed • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from communications cable • hazardous conduit as according to AS 1345: 1995 conduit colours associated with a hazardous service • unsafe support structures: <ul style="list-style-type: none"> • condemned poles • visible signs of decay or stress • unsafe weather: <ul style="list-style-type: none"> • heavy rains • high winds

RANGE STATEMENT	
	<ul style="list-style-type: none"> • severe heat or cold • thunderstorms.
<i>Cable</i> may include:	<ul style="list-style-type: none"> • coaxial • data cabling • distribution cable • lead-in cable • multipair copper • optical fibre • radio feeder.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • cable TV (CATV) unit • internet protocol TV (IPTV) unit • network equipment: <ul style="list-style-type: none"> • data switch • gateway • router • server • private automatic branch exchange (PABX) • pay TV unit • RFID unit • security panel • wireless access point.
<i>Other services</i> may include:	<ul style="list-style-type: none"> • availability and suitability of existing cabling trays and fixing systems • fire sprinkler systems • gas and water mains • high voltage (HV) power.
<i>Plant, tools and safety equipment</i> may include:	<ul style="list-style-type: none"> • plant: <ul style="list-style-type: none"> • elevated platform vehicle • ladders • scissor lifts • wire raising tool (insulated) • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • fall arrest systems • gloves

RANGE STATEMENT	
	<ul style="list-style-type: none"> • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safety barriers • trench guards • warning signs and tapes • test equipment: <ul style="list-style-type: none"> • cable tester • continuity tester • LAN Cat tester • network analyser • passive optical network (PON) meter • protocol analyser • tools: <ul style="list-style-type: none"> • auger • fixing brackets • spanner.
<i>Cut over tasks</i> may include:	<ul style="list-style-type: none"> • cable jumpering of distribution frames • installing new cable and equipment • job preparation for cut over activity • loading of new software • saving and backing up existing system configurations • splicing new optical fibre.
<i>Cut over details</i> may include:	<ul style="list-style-type: none"> • back up support from vendor or supplier • contingency plan • date, time and duration • nature and type of work involved • request for customer representation.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • decommissioning and isolating worksite and lines prior to commencement • identifying other services, including power and gas • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves:

RANGE STATEMENT

	<ul style="list-style-type: none"> • leather • plastic • rubber • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safety harness • safety line • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • trench guards • warning signs and tapes • witches hats • special access requirements • suitable light and ventilation • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Test</i> may include:	<ul style="list-style-type: none"> • ability to make and receive a call • connectivity • end to end performance test • programme checks • qualitative test • software diagnostics • toll and metering functions

RANGE STATEMENT	
	• traffic flow.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to modify an infrastructure to cut over new cables into an existing cabling installation.</p> <p>This may include communications applications in telephony, broadband, data, video, radio frequency identification (RFID), security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.</p> <p>If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Field officers, technicians or lineman installers from carriers, contractors or other service providers apply the skills and knowledge in this unit.</p> <p>They may upgrade coaxial or optical fibre cables as part of a hybrid fibre coaxial (HFC) network, a broadband Access Network or a large customer private network.</p> <p>Cabling can be for indoor and outdoor installation within a customer premises or a service provider Access Network and may be a domestic, commercial or industrial installation.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cable modification and cut over	<p>1.1. Obtain relevant legislation, codes, regulations and standards for the given work</p> <p>1.2. Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements</p> <p>1.3. Notify appropriate personnel of identified safety hazards at the worksite</p> <p>1.4. Determine cable route and type of cable from project plan and identify and avoid other services</p> <p>1.5. Obtain plant, tools and safety equipment and material to perform tasks safely and efficiently</p> <p>1.6. Prepare an implementation plan with cut over tasks based on identified nature of job and seek customer approval</p> <p>1.7. Notify customer and network carrier of proposed cut over details and proposed disruption to services</p> <p>1.8. Undertake additional preparatory non-jointing work, as required, according to enterprise guidelines and site conditions</p> <p>1.9. Select labour support required according to cut over tasks and available skills</p> <p>1.10. Select technical equipment for cut over to suit materials being used, cable type and joint enclosure</p>
2. Joint and cut over cable	<p>2.1. Follow occupational health and safety (OHS) and environmental requirements for the given work</p> <p>2.2. Joint cable according to sequencing plan, materials, joint type, location, and enterprise and manufacturer's guidelines</p> <p>2.3. Test cable for performance and rectify any faults relating to the cut over according to location, materials available, and industry practise</p> <p>2.4. Seal all joints according to the cable type, location, and enterprise and manufacturer's guidelines</p>
3. Complete project documentation	<p>3.1. Record test results for future reference and complete reports on cut over installation and design amendments to reflect existing cable layout according to enterprise requirements</p> <p>3.2. Recover obsolete materials and return to appropriate point for disposal</p>

ELEMENT	PERFORMANCE CRITERIA
	3.3.Restore site according to the requirements of enterprise or approving authority and to customer satisfaction 3.4.Notify appropriate personnel completion of cut over and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate test results
- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to:
 - organise and maintain equipment
 - scope work and develop implementation plan for cut over project
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technology skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- cabling types, connectors and cabling structures
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment

REQUIRED SKILLS AND KNOWLEDGE

- overview knowledge of customer premises equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements, including features and operating requirements of test equipment
- typical issues and challenges that occur on site
- warranties and service level agreements (SLAs)

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare for cut over • rearrange cable • conduct tests to determine success of cut over • interpret results and rectify faults occurring as a result of cut over • apply regulations and standards related to the cable rearrangement • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • systems and equipment involving cut over • use of installation equipment currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing cut over into an existing cabling installation • review of plans and reports completed by the candidate outlining system and equipment cut over and test results • oral or written questioning to assess knowledge of planning, types of systems and issues associated with cut over.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2068A Install a telecommunications service to a building • ICTCBL3052A Cut over new systems and equipment

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for installation	1.1. Obtain <i>relevant legislation, codes, regulations and standards</i> for the given work 1.2. Scope the work by obtaining project plan from <i>appropriate personnel</i> and arrange for site access to comply with security arrangements 1.3. Notify appropriate personnel of identified <i>safety hazards</i> at the worksite 1.4. Determine cable route and type of <i>network cable equipment</i> from project plan and identify and avoid <i>other services</i> 1.5. Obtain <i>plant, tools and safety equipment</i> and material to perform tasks safely and efficiently 1.6. Evaluate nature of job and infrastructure hierarchy from plan and obtain approval from customer on key features of installation to meet <i>customer requirements</i> 1.7. Coordinate <i>other parties</i> to minimise disruption to services and down time 1.8. Segregate incoming and outgoing cables to facilitate access and avoid overlaying and backtracking of cable
2. Install required cable and equipment support structure	2.1. Evaluate existing equipment support structure and develop a plan for additional support structure provisioning 2.2. Install additional cable support, equipment support structure and cable runs according to manufacturer's specifications, industry practice and occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> 2.3. Determine cable route between <i>rack</i> and sub-rack and cable termination point to comply with customer requirements, site limitations, equipment specifications and regulations 2.4. Install <i>cabling infrastructure</i> to interface rack and subrack according to installation instructions 2.5. Complete <i>cabling requirements</i> to support installation of equipment
3. Install equipment and earthing protection	3.1. Install lightning protection equipment where required, according to manufacturer's specifications and industry practice 3.2. Install <i>earthing protection</i> and line conditioning

ELEMENT	PERFORMANCE CRITERIA
	<p>where required, according to relevant Australian Communications and Media Authority (ACMA), local power company and industry practice</p> <p>3.3. Install equipment component into rack and sub-rack and complete connections according to manufacturer's specifications and compliance with warranty requirements</p>
4. Perform tests	<p>4.1. Power-on test individual equipment items</p> <p>4.2. Visually check that all connections and interconnections are firm and sound</p> <p>4.3. Electrically test all terminations for continuity according to enterprise guidelines</p>
5. Complete project documentation	<p>5.1. Install labels to new equipment and radiation warning signs, where required, according to enterprise guidelines practice</p> <p>5.2. Record test results for future reference, complete reports on equipment installation and amend design to reflect existing cable layout and equipment according to enterprise requirements</p> <p>5.3. Recover obsolete materials and return to appropriate point for disposal</p> <p>5.4. Restore site according to the requirements of enterprise or approving authority and to customer satisfaction</p> <p>5.5. Notify appropriate personnel of job completion and obtain sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations

REQUIRED SKILLS AND KNOWLEDGE

- planning and organisation skills to arrange site access and equipment delivery
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - correctly handle and connect test equipment for physical installation of equipment and related media

Required knowledge

- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- customer premises equipment
- electrical and or optical properties to be measured
- OHS considerations including:
 - electrical safety and lifting hazards
 - manufacturer's requirements for safe operation of equipment
- test methods and performance requirements
- typical issues and challenges that occur on site
- warranties and service level agreement

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare for installation of network cable equipment • provide cable infrastructure • install cable equipment support structure for power, alarms and interrogation requirements • install equipment, test and interpret test results • label equipment correctly • safely use any specialised hand or power tools and equipment • apply regulations and standards related to the installation • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where installation of network cable equipment may be conducted • use of installation equipment currently used in industry • relevant regulatory and equipment documentation that impact on installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing cable and equipment support structure • direct observation of the candidate installing network cable equipment and earthing protection • review of reports completed by the candidate outlining amended design of cable layout and test results • oral or written questioning to assess required knowledge.
Guidance information for	Holistic assessment with other units relevant to the

EVIDENCE GUIDE**assessment**

industry sector, workplace and job role is recommended, for example:

- ICTCBL3049A Install systems and equipment on customer premises.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may

- Australian Communications Industry Forum (ACIF) standards and codes

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • crane • EWP • forklift • winch • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • ISO Draft 11801 (International) • OHS • regulated or industry codes of practice and include appropriate ACMA and AS/ACIF technical standards • relevant Institute of Electrical and Electronics Engineers (IEEE) standards • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Appropriate personnel</i> may be:	<ul style="list-style-type: none"> • cable administrator • consultant • project engineer • project manager • site supervisor.
<i>Safety hazards</i> may refer to:	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light (non-visible laser) • radio frequency (RF) emission • contact with remote power feed • electrical supply and areas of earth potential rise (EPR) that require mandatory separation from communications cable

RANGE STATEMENT	
	<ul style="list-style-type: none"> • hazardous conduit as according to AS 1345:1995 conduit colours associated with a hazardous service • unsafe support structures: <ul style="list-style-type: none"> • condemned poles • visible signs of decay or stress • unsafe weather: <ul style="list-style-type: none"> • heavy rains • high winds • severe heat or cold • thunderstorms.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to maintain cable network in customer premises or service provider access networks. This may include communications applications in telephony, broadband, data, video, radio frequency identification (RFID), security and computer networks, including local area networks (LAN), wide area networks (WAN) and multimedia.</p> <p>Cable equipment is used for line and signal conditioning and may use optical or electronic technology in optical fibre hubs or hybrid fibre coaxial (HFC) housings.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.</p> <p>If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technicians and lineman installers who install and maintain network cable equipment within the broadband infrastructure deployment apply the skills and knowledge in this unit.</p> <p>They may upgrade a coaxial or optical fibre cable as part of a HFC network, a broadband access network or a large customer private network.</p> <p>A cable network can be for indoor and outdoor installations within a customer premises or a service</p>
---------------------------------------	--

	provider access network and may be a domestic, commercial or industrial installation.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for cable maintenance	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Scope the work by obtaining project plan from appropriate personnel and arrange for site access to comply with security arrangements 1.3. Notify appropriate personnel of identified safety hazards at the worksite 1.4. Determine cable route and type of cable from schedule and identify and avoid other services 1.5. Obtain plant, tools and safety equipment and material to perform tasks safely and efficiently
2. Maintain cables, cable supports and enclosures	2.1. Follow occupational health and safety (OHS) and environmental requirements for the given work and avoid contact with other services 2.2. Clean area of debris, vegetation and foreign matter if required 2.3. Conduct visual inspections on cable infrastructure for assessment of evident damages according to enterprise guidelines and notify appropriate personnel 2.4. Undertake remedial action on damages according to warranties and service level agreements prior to maintenance routine 2.5. Perform maintenance tasks and tests in a safe manner and note activities on maintenance schedule
3. Complete maintenance documentation	3.1. Record test results, maintenance activities and corrective actions for future reference and complete maintenance schedule attendance chart according to enterprise requirements 3.2. Recover obsolete materials and return to appropriate point for disposal 3.3. Restore site according to the requirements of enterprise or approving authority and to customer satisfaction 3.4. Notify appropriate personnel of job completion and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret test equipment settings and readings
- communication skills to liaise with customers to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- planning and organisation skills to arrange site access and monitor own work
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - correctly handle and connect test equipment
 - repair damage to cable networks

Required knowledge

- cabling types, connectors and cabling structures
- connections to carrier infrastructure or equipment, such as main distribution frame (MDF) or customer interface units (CIU)
- customer premises equipment
- electrical and optical properties to be measured
- OHS considerations including:
 - electrical safety and lifting hazards
 - manufacturer's requirements for safe operation of equipment
- test methods and performance requirements
- typical issues and challenges that occur on site
- warranties and service level agreement

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • maintain cables, cable supports and enclosures • test and interpret results • undertake remedial action on damages • safely use specialised hand or power tools and equipment • apply regulations and standards related to the maintenance • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where maintenance of network cable may be conducted • use of equipment currently used in industry • relevant regulatory and equipment documentation that impact on maintenance activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit.</p> <ul style="list-style-type: none"> • direct observation of the candidate visually inspecting cable infrastructure • direct observation of the candidate undertaking remedial action • review of reports completed by the candidate outlining test results, maintenance activities and corrective action taken • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWOR3127A Supervise work site activities.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTCBL3240B Install ribbon fibre cable in the FTTX distribution network

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install ribbon cable in the fibre access node (FAN) site and also distribution, local and access underground enclosure joints. Cables range from 12 fibre to 576 fibre cables.

For splicing and terminating of optical fibre, the following unit of competency should be completed based on the needs of the work environment: ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers.

For more comprehensive safe work practices on optical installations, particularly on live fibre, the following unit of competency should be completed based on the needs of the work environment: ICTBWN3100B Work safely with live fibre to test and commission a fibre to the x installation.

Network owner specifications will apply to this work and should be checked and confirmed before undertaking work on National Broadband Network (NBN) sites.

Application of the Unit

The unit applies to optical fibre cable installers and splicers deploying broadband access networks using optical technologies. They combine technical skills with specific work health and safety skills to work safely on ribbon fibre.

This unit is written in the context of the technology used for the NBN and may be adapted to suit other situations using ribbon fibre cable.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

ICTCBL2065B Splice and terminate optical fibre cable for carriers and service providers

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for installation of ribbon fibre</p>	<p>1.1 Select safety equipment to protect self, co-workers and public in line with <i>work health and safety (WHS) and environmental requirements</i></p> <p>1.2 Identify and obtain tools and <i>appropriate equipment</i> required for the installation</p> <p>1.3 Check <i>physical conditions</i> relevant to the installation and confirm layout of equipment to be installed</p> <p>1.4 Inform appropriate personnel of identified <i>hazards</i> on work site</p> <p>1.5 Locate other services from <i>relevant authorities</i></p> <p>1.6 Secure the work site with tests for <i>dangerous gases</i> and <i>guards</i> around open manholes</p> <p>1.7 Obtain approval for alterations to the design within organisational guidelines</p>
<p>2. Check and secure existing optical fibre cable</p>	<p>2.1 Following <i>WHS practices</i>, verify that cable was installed according to the installation plan and inspect cable for signs of sheath damage</p> <p>2.2 Maintain minimum bend ratios of cable according to manufacturer specifications while manoeuvring into position</p> <p>2.3 Secure cable according to safe industry practice, avoiding damage to cable and sheath</p>
<p>3. Install ribbon fibres into high density drawers and/or pivot sub-racks in internal cabinets</p>	<p>3.1 Introduce cable into <i>cabinet</i> rack through appropriate route</p> <p>3.2 Remove cable sheath and lay up ribbon loose tubes into sub-racks without damage to fibre</p> <p>3.3 Remove loose tubes, clean ribbon fibres and prepare for splicing using organisational techniques</p> <p>3.4 <i>Splice ribbon fibres</i> and secure into splice holders</p> <p>3.5 Confirm that fibres are accurately spliced according to organisational specifications</p>
<p>4. Install and splice ribbon cable in underground enclosures</p>	<p>4.1 Select appropriate <i>enclosure</i> for function and cable type</p> <p>4.2 Prepare cables for mid-span and butt splicing following vendor guidelines</p> <p>4.3 Feed cable accurately into enclosure according to network owner guidelines</p> <p>4.4 Lay up ribbon fibre in enclosure splice tray to allow accurate and efficient splicing</p>

	<p>4.5 Cross-reference fibre numbering to match fibres accurately</p> <p>4.6 Strip ribbon fibres to specifications</p> <p>4.7 Splice ribbon fibres accurately</p> <p>4.8 Apply heat-shrink sleeves to ensure protection of spliced ribbon fibres</p> <p>4.9 Secure spliced ribbon fibres in splice holders</p>
<p>5. Close and seal enclosure</p>	<p>5.1 Check cable and ribbon fibre placement in splice trays conform to vendor and network owner specifications and adjust if necessary</p> <p>5.2 Close and secure splice trays and fit enclosure cap</p> <p>5.3 Heat shrink seals around cable entry ports when using heat shrinking techniques, according to vendor and network owner guidelines</p> <p>5.4 Close and tighten seals around ribbon fibre cables when using mechanical sealing techniques according to vendor and network owner guidelines</p> <p>5.5 Check for signs of effective seal and re-seal if necessary</p>
<p>6. Complete site reinstatement, reporting and sign-off requirements</p>	<p>6.1 Place sealed enclosure in pit and secure to vendor and network owner specifications</p> <p>6.2 Identify signs of damage or potential damage to pit and cable and take steps to mitigate</p> <p>6.3 Reinstatement site to network owner specifications</p> <p>6.4 Prepare and finalise reports, including test results and alterations to plans, according to network owner requirements</p> <p>6.5 Advise client of work completion and obtain sign-off</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - ask effective questions and clarify requirements
 - listen to, and liaise with, relevant personnel on technical and operational matters
 - identify, raise and report WHS matters, discussing and relaying WHS information to others
 - communicate job-related hazards and risk-management approaches to colleagues
- literacy skills to:
 - interpret technical documentation and standards, and safety signs and symbols
 - use technical language in written tasks, such as reports or recommendations, to optimise cable installation
- numeracy skills to interpret technical data, such as specifications for cable installation
- problem-solving skills to detect and rectify cable installation failures
- research skills to access technical information and sources to understand and report on installation issues
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards associated with work activities
 - select and use required personal protective equipment that conforms to industry and WHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
 - select and use appropriate methods for cable installation
- technical skills to:
 - install customer access network (CAN) cable
 - use correct installation practices
 - use diagnostic equipment
 - use optical fibre jointing techniques
 - use specialised tools and equipment
 - use hand and power tools
 - work with ribbon fibre cables to:
 - lay up ribbon fibre cables in pits and cabinets to network owner specifications
 - strip protective coating on small and large (576 fibre) cables
 - clean gel coats from fibre casings
 - install ribbon fibre into enclosures according to network owner specifications
 - seal enclosures with heat seals and mechanical seals
 - perform ribbon fibre splicing.
 -

Required knowledge

- applicable network owner standards, specifications and procedures for cable installation
- cable installation knowledge, including:
 - causes of signal strength loss in optical fibre
 - colour coding and numerical coding of fibres
 - detailed knowledge of AS/NZS 2211:2006 Safety of laser products (Parts 1 and 2)
 - industry and organisational policies and procedures when splicing optical fibre cable
 - manufacturer requirements for safe operation of optical fibre equipment
- common construction site hazards
- health, safety and environmental control processes, including WHS and environmental responsibilities and duty of care
- optical fibres and equipment:
 - hazards relating to handling of optical fibre and laser light source in the workplace
 - injuries:
 - damage to retina from lasers
 - damage to lungs from inhalation of fibre offcuts and particles
 - needle stick injury from fibres and offcuts
 - laser warning signs and labels relating to optical fibre components and equipment
 - safety requirements when handling and working with:
 - devices
 - laser light sources
 - optical fibre connectors
 - optical fibres
 - patch cords
- traffic control for a single vehicle
- ribbon fibre knowledge, including:
 - bend ratios for ribbon fibre
 - procedures for handling and placing ribbon fibre in enclosures
 - procedures for physical handling of ribbon fibre cables
 - structure of ribbon fibre cables
 - splicing techniques for ribbon fibre
 - types and functions of ribbon fibre enclosures
- risks associated with confined spaces and appropriate responses.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • prepare cable for mid-span splicing – strip and coil • prepare cable for butt end splicing – strip and coil • install cable into: <ul style="list-style-type: none"> • three types of enclosures • two types of FAN cabinet racks and sub-racks • splice ribbon fibre according to specifications • observe all network owner requirements and product practices to ensure optimal performance of cable systems • adapt techniques to a range of technical and environmental conditions.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • optic fibre cabling and equipment • a range of cabinet types and other housings requiring cable-handling techniques • personal protective equipment • first aid and fire safety equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing cable into: <ul style="list-style-type: none"> • enclosures • cabinets • direct observation of the candidate following network owner and product-specific instructions • oral questioning to assess knowledge of installation principles and practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>WHS and environmental requirements may relate to:</p>	<ul style="list-style-type: none"> • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management • identifying other services, including power and gas • need to decommission and isolate work site and lines before beginning work • personal protective clothing and equipment • safe work practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment: <ul style="list-style-type: none"> • flashing lights • gas and other hazard detection equipment • safety barriers • traffic cones • trench guards • warning signs and tapes • special access requirements • suitable light and ventilation.
<p>Appropriate equipment may include:</p>	<ul style="list-style-type: none"> • hand-held optical power meter • OFI-FTTx network terminal detector • optical time domain reflectometer (OTDR) • passive optical network (PON) meter.
<p>Physical conditions relate to:</p>	<ul style="list-style-type: none"> • access to the site • equipment at the site • other construction activities at or adjacent to the site • road and other traffic conditions • weather.

<i>Hazards</i> may include:	<ul style="list-style-type: none"> • earth potential rise (EPR) • optical cable: <ul style="list-style-type: none"> • bare fibres • hazardous laser light • remote power feeding.
<i>Relevant authorities</i> may include:	<ul style="list-style-type: none"> • cable location services (Dial Before You Dig) • environment protection • local government • private owners • utility providers, such as: <ul style="list-style-type: none"> • electricity • fire services • gas • other telecommunications providers • water.
<i>Dangerous gases</i> may include:	<ul style="list-style-type: none"> • asphyxiating gas • carbon dioxide • carbon monoxide • combustible gas • natural gas • noxious gas.
<i>Guards</i> may include:	<ul style="list-style-type: none"> • barricades • plates • temporary fencing.
<i>WHS practices</i> may relate to:	<ul style="list-style-type: none"> • determining that optical fibre cable is not live according to guidelines and standards • handling optical fibre cable in a safe manner to avoid risk of injury • labelling fibre cable and laser devices • locating and identifying adjoining services according to organisational guidelines and WHS practices • observing AS/NZS 2211:2006 Safety of laser products (Parts 1 and 2) • testing for presence of dangerous gases according to organisational guidelines.
<i>Cabinets</i> may include:	<ul style="list-style-type: none"> • FAN distribution cabinets • fibre distribution hub (FDH) cabinets • distribution cabinets.

Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to prepare design drawings and specification for a cable installation.

Cable used must be compliant with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements (e.g. for underground, aerial, Category 5, 6, 6A, 7 or 7A, or unshielded twisted pairs (UTP)).

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who prepare design drawings and specifications for a cable installation apply the skills and knowledge in this unit.

This unit applies to indoor and outdoor installation within a customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Gather information on existing and proposed installation	1.1 Confirm cable installation requirements with the customer 1.2 Inspect site to confirm building plans where possible 1.3 Review existing cable <i>plans and drawings</i>
2. Determine installation options	2.1 Assess available installation options against customer requirements and <i>relevant legislation, codes, regulations and standards</i> 2.2 Establish and assess the cost of options against customer's budget 2.3 Select most suitable option based on function and cost considerations and present to customer
3. Prepare suitable drawings	3.1 Prepare clear and accurate cable installation drawings indicating proposed outlets and services 3.2 Provide drawings to relevant parties and file copies for later reference according to <i>company policies</i>
4. Prepare cabling specifications	4.1 Prepare detailed <i>cabling specifications</i> for the <i>cabling system</i> 4.2 Prepare accurate costing from detailed specification, including equipment and material required
5. Verify specifications with customer	5.1 Verify prepared documentation with customer 5.2 Obtain authorisation and sign off from the customer to proceed according to company policy

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret drawings related to:
 - cable coding system and identifiers
 - cable layouts
 - frame locations
 - outlet location
- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to:
 - take and analyse measurements
 - prepare accurate costing
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to prepare design drawings and specification.
-

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- information required to operate equipment according to a test specification
- features and operating requirements of test equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine installation options • produce amended schematic and floor plan drawings • produce amended specifications • verify specifications with customer.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where cable installation may be conducted • use of equipment currently used in industry • relevant regulations, company policies and cabling specifications that impact on cable installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • oral or written questioning to assess knowledge of installation options • direct observation of the candidate assessing installation requirements • review of design drawings and specification for a cable installation, including costings prepared by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL4004B Schedule and supply cabling installation. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Plans and drawings</i> may include:</p>	<ul style="list-style-type: none"> • design drawings covering: <ul style="list-style-type: none"> • floor plan drawings • schematic • floor plan drawings which may be formal or informal, and may include: <ul style="list-style-type: none"> • box locations • cable routes • frame location • location and entry points of risers • location of existing cabling • service delivery points • support systems • schematic drawings which may be formal or informal, and may include: <ul style="list-style-type: none"> • box input and output • frame capacities • frame locations • proposed cable routes • site locations • other drawing terminology in use, including: <ul style="list-style-type: none"> • cable plan • reflected ceiling plans • termination drawing • specifications, which may include: <ul style="list-style-type: none"> • capacity of cable • estimated labour hours • proprietary system requirements • support requirements • termination system • type of cable • volume of cable.
<p><i>Relevant legislation,</i></p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes

<p><i>codes, regulations and standards</i> include:</p>	<ul style="list-style-type: none"> • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • fire regulations • industry drafting codes of practice • mining legislation • noise abatement and heritage legislation • OHS • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.

Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to schedule and supply cabling installation.

Cable used must be compliant with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5, 6, 6A, 7 or 7A, or unshielded twisted pairs (UTP). Cabling products must be ACMA-approved.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who schedule and supply cabling installations apply the skills and knowledge in this unit. Appropriate ACMA, Australian standards and Australian Communications Industry Forum (ACIF) technical standards apply to this unit.

This unit applies to indoor and outdoor installation within a customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area networks (LAN), wide area networks (WAN) and multimedia.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Schedule supply and installation events</p>	<p>1.1 Confirm cabling installation requirements and project specifications from the customer</p> <p>1.2 Prepare work schedules and installation plans identifying <i>key dates and milestones</i></p> <p>1.3 Obtain information on location of other services from <i>relevant authorities</i></p> <p>1.4 Prepare a schedule of <i>material supplies</i> to be available when required for installation</p>
<p>2. Monitor and adjust supply requirements</p>	<p>2.1 Adjust labour load variations to meet installation needs to enable completion within budget and timeframes</p> <p>2.2 Prepare a quote and confirm additional work requests with customer prior to commencement</p> <p>2.3 Monitor work progress against project schedules and budgets</p> <p>2.4 Monitor compliance regularly with customer specification, <i>licensing, relevant legislation, codes, regulations and standards</i></p> <p>2.5 Prepare a report detailing project scheduling and supply requirements</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret drawings related to:
 - cable coding system and identifiers
 - cable layouts
 - frame locations
 - outlet location
- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to:
 - take and analyse measurements
 - prepare quotes
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- research skills to source labour and material supplies
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to schedule and monitor work.
-

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- information required to operate equipment according to a test specification
- knowledge of safety standards and practice to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use occupational health and safety (OHS) standards
 - specific OHS requirements relating to the activity and site conditions
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- typical issues and challenges that occur in scheduling and on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan and provide appropriately skilled labour, volume and type of material to meet key dates and milestones for installations • identify labour and material sources and negotiate with contractors, suppliers and other service providers to meet installation deadlines for installations • monitor work progress and adjustment of resource requirements to meet both customer's needs and costing parameters in installations.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites and equipment where cabling installation may be conducted • relevant regulatory and equipment documentation that impact on installation activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of report prepared by the candidate detailing project scheduling and supply requirements • direct observation of the candidate scheduling and supplying a cabling installation.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3009B Install, terminate and certify structured cabling installation.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to supervise a cabling project. It requires planning, preparing financial budgets and monitoring of cabling work.

Cable used must be compliant with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for underground, aerial, Category 5, 6, 6A, 7 or 7A, or unshielded twisted pairs (UTP). Cabling products must be ACMA-approved.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA-accredited registrar.

Application of the Unit

Technical staff who supervise a cabling project apply the skills and knowledge in this unit. Their job roles combine technical and organisational skills to ensure an effective outcome for the client.

This unit applies to indoor and outdoor installation within a customer premises. It may be applied to domestic, commercial or industrial installations. Communications applications include digital and analog, telephony, data, video, digital broadcasting, computer networks, local area network (LAN), wide area networks (WAN) and multimedia.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Plan and organise cabling activities	<p>1.1 Obtain cabling installation specifications and project specifications from the customer</p> <p>1.2 Prepare work schedules and installation plans identifying key dates and milestones</p> <p>1.3 Organise resource requirements</p> <p>1.4 Verify location of proposed installation according to the plans obtained from authorised personnel</p> <p>1.5 Obtain information on location of other services from relevant authorities</p> <p>1.6 Document plans for cabling project and advise relevant parties</p>
2. Prepare financial budgets	<p>2.1 Prepare budget identifying cost and expenditure items from scheduling and planning documentation</p> <p>2.2 Advise relevant personnel of purchasing and other delegations within budget allocations</p> <p>2.3 Prepare budget projections within estimated and approved contract pricing</p>
3. Source human resource requirements for cabling	<p>3.1 Estimate number and determine availability of suitable human resources according to contract requirements and relevant industrial and enterprise policy</p> <p>3.2 Establish necessary competency and licence requirements of project personnel prior to recruitment</p> <p>3.3 Schedule personnel workloads and allocate within industrial and enterprise requirements</p>
4. Monitor cabling works	<p>4.1 Follow occupational health and safety (OHS) processes and site-specific safety requirements according to plan</p> <p>4.2 Monitor compliance regularly with customer specification, relevant legislation, codes, regulations and standards</p> <p>4.3 Notify customer promptly on difficult or known problem areas</p> <p>4.4 Reallocate work as required to meet client and company requirements</p> <p>4.5 Monitor costs and time schedules to identify and resolve any potential problem</p> <p>4.6 Provide a report on work progress activity and schedule</p>
5. Evaluate outcomes of	5.1 Review cabling projects to identify areas where

cabling projects	performance has been below client and enterprise expectations 5.2 Implement recommendations to ensure effective improvements
6. Complete administrative tasks	6.1 Complete documentation 6.2 Notify customer and obtain sign off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to read and interpret drawings related to:
 - cable coding system and identifiers
 - cable layouts
 - frame locations
 - outlet location
- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to:
 - interpret technical documentation, such as equipment manuals and specifications
 - prepare reports and document work
- numeracy skills to:
 - identify cost and expenditure from specifications
 - prepare budget
- planning and organisational skills to monitor progress of project
- problem solving skills to:
 - anticipate and respond to issues in project progress
 - solve equipment and logistics problems
- research skills to source labour and material supplies
- task management skills to:
 - adhere to all safety requirements
 - reprioritise work as required
 - work systematically with required attention to detail
- technical skills to schedule and monitor work.
-

Required knowledge

- features and operating requirements of test equipment
- information required to advise operation of equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • complete all appropriate plans and financial budgets for cabling activities • supervise cabling project applying human resource policies including awards and conditions and all related OHS and work practices • monitor and implement alternate plans where necessary to meet work schedules and customer requirements • complete a project report on a cabling projects detailing recommendations for improvement.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site with cabling project • access to human resource policies, including awards and conditions and all related OHS and work practices • relevant regulatory and equipment documentation that impact on monitoring activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report prepared by the candidate, including completed documentation • direct observation of the candidate supervising a cabling project.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL3009B Install, terminate and certify structured cabling installation.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTCBL4057B Test cable bearers

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to test cable bearers. It involves setting up, testing, interpreting test results and determining appropriate action.

This unit applies to the testing of all cable types (metallic, optical fibre and coaxial).

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA)-accredited registrar.

Application of the Unit

Technicians and line installers whose work involves testing cable bearers apply the skills and knowledge in this unit for customer cable and service provider networks.

They may use cable test routines for testing connections, signal strength or loss of cable links to manufacturer's and design specifications.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.

If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training package fulfils this requirement.

Pre-Requisites

Not applicable.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare and set up for cable test</p>	<p>1.1 Obtain <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Scope the work by obtaining project plan from <i>appropriate personnel</i> and arrange for site access to comply with security arrangements</p> <p>1.3 Notify appropriate personnel of identified <i>safety hazards</i> at the worksite</p> <p>1.4 Determine type of <i>cable bearer</i> and cable route from project plan and identify test requirements using work instructions</p> <p>1.5 Obtain <i>tools and safety equipment</i> and material to perform tasks safely and efficiently</p> <p>1.6 Select and use required protective equipment and make site safe and secure for testing work</p> <p>1.7 Determine need for outage, extent, location and timing, if required. and negotiate with appropriate personnel</p> <p>1.8 Select and set up suitable test equipment according to manufacturer's specifications for the <i>cable tests</i> to be performed to ensure relevance of test data</p> <p>1.9 Ensure equipment calibration certification is current to reduce possibility of unreliable test data and ensure traceability where appropriate</p>
<p>2. Perform cable tests</p>	<p>2.1 Follow occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> for the given work and identify and avoid <i>other services</i></p> <p>2.2 Determine and record <i>cable parameters</i> for consideration in assessment of performance</p> <p>2.3 Conduct <i>performance tests</i> as required by both equipment and enterprise specification for the specific cable type and purpose</p>
<p>3. Interpret test results and determine action</p>	<p>3.1 Record test results for evaluation and compare against manufacturer's and site specifications</p> <p>3.2 Analyse test results and evaluate cable performance with consideration of recorded cable parameters</p> <p>3.3 Diagnose problems to determine cable faults and make arrangements for repairs or modifications</p> <p>3.4 Retest faulty cable after the faults have been rectified</p>
<p>4. Document test results</p>	<p>4.1 Produce evaluated test results according to enterprise guidelines and without delay to ensure test results remain</p>

and clean up site	<p>current</p> <p>4.2 Update site and installation files to ensure traceability of information on system performance is maintained</p> <p>4.3 Archive test records details for the life of the cable according to enterprise guidelines</p> <p>4.4 Remove waste and debris from worksite and dispose of according to environmental requirements</p> <p>4.5 Notify appropriate personnel of job completion and obtain sign off</p>
-------------------	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to use hand and power tools, diagnostic equipment and perform fault clearance.
-

Required knowledge

- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • perform tests on cable bearers • use a range of tests • interpret test results • rectify a range of faults • report on the completed tests • comply with all related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where testing may be conducted • use of cabling and equipment currently used in industry • relevant regulatory and equipment documentation that impact on testing cable bearers.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing cable test on customer premises • review of reports completed by the candidate for different test examples and situations • oral or written questioning to assess knowledge of cable bearer tests.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL4023B Supervise cabling project. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • appropriate licences: <ul style="list-style-type: none"> • crane • EWP • forklift • winch • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • OHS • road and traffic control legislation and codes • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p>Appropriate personnel may be:</p>	<ul style="list-style-type: none"> • asset manager • network operations centre (NOC) • project supervisor • site supervisor.
<p>Safety hazards may refer to:</p>	<ul style="list-style-type: none"> • access points that may contain: <ul style="list-style-type: none"> • hazardous light (non-visible laser) • radio frequency (RF) emission • active lasers with no safety labels • active optical fibres • contact with remote power feed

	<ul style="list-style-type: none"> • electrical supply that require mandatory separation from communications cable • exposed fibres • unsafe support structures • unsafe weather: <ul style="list-style-type: none"> • heavy rains • high winds • severe heat or cold • thunderstorms.
<i>Cable bearer</i> may include:	<ul style="list-style-type: none"> • aerial • coaxial cable • metallic • optical fibre • underground.
<i>Tools and safety equipment</i> may include:	<ul style="list-style-type: none"> • personal protective equipment • safety equipment • test equipment: <ul style="list-style-type: none"> • cable tester • continuity tester • local area network (LAN) Cat tester • optical time domain reflectometer (OTDR) • passive optical network (PON) meter • RF meter • tools: <ul style="list-style-type: none"> • crimping tool • fibre cleaning kit • fibre splicer • labeller • screw drivers • spanners • tagging tool • terminating tool.
<i>Cable tests</i> may include:	<ul style="list-style-type: none"> • for coaxial cable: <ul style="list-style-type: none"> • insulation • loss • for optical cable: <ul style="list-style-type: none"> • dispersion • frequency response • loss • polarisation

	<ul style="list-style-type: none"> • spectrum test • for metallic cable: <ul style="list-style-type: none"> • continuity • cross talk • insertion loss • return loss.
<p><i>OHS and environmental requirements</i> may include:</p>	<ul style="list-style-type: none"> • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management • identifying other services, including power and gas • personal protective equipment: <ul style="list-style-type: none"> • earmuffs • gloves: <ul style="list-style-type: none"> • leather • plastic • rubber • head protection • masks • protective suits • safety boots • safety glasses • safety equipment: <ul style="list-style-type: none"> • flashing lights • safety barriers • warning signs and tapes • witches hats • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • chemicals • materials • tools and equipment • special access requirements.
<p><i>Other services</i> may include:</p>	<ul style="list-style-type: none"> • availability and suitability of existing cabling trays and fixing systems • electricity supply • fire sprinkler systems • gas and water mains • high voltage (HV) cables.
<p><i>Cable parameters</i> may</p>	<ul style="list-style-type: none"> • age of cable

include:	<ul style="list-style-type: none">• cable length• cable type• number of joints<ul style="list-style-type: none">• splices• coax joints• terminations• performance characteristics.
<i>Performance tests</i> may include:	<ul style="list-style-type: none">• insertion loss (total end-to-end loss with cable and connectors)• link loss (cable loss without connectors)• return loss which measures signal reflected of an incident or point end-to-end.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Verify fault report	1.1. Locate source of fault using <i>available information</i> and contacts to verify <i>nature of fault</i> as reported 1.2. Perform preliminary <i>operational testing</i> according to <i>type of fault</i> presentation, <i>fault environment</i> and enterprise guidelines to verify nature of fault 1.3. Analyse <i>historical data</i> to identify possible causes and solutions
2. Conduct remote testing to diagnose network fault	2.1. Evaluate cable fault details and plan strategy to conduct remote testing 2.2. Conduct appropriate remote diagnostic test to isolate and diagnose the network fault 2.3. Determine the urgency and <i>impact of fault</i> and identify the required response time frame 2.4. Evaluate the diagnostic tests to determine the type, location and nature of network fault
3. Dispatch fault-finding field personnel	3.1. Prepare a fault report and forward to appropriate staff according to enterprise guidelines 3.2. Notify fault centre and arrange for the dispatch of technician to rectify fault 3.3. Notify customer of fault progress and arrange for fault clearance time

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements

REQUIRED SKILLS AND KNOWLEDGE

- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools

Required knowledge

- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- legislation, codes of practice and other formal agreements that impact on the work activity
- manufacturer's requirements for safe operation of equipment
- specific occupational health and safety (OHS) requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • methodically approach fault identification • conduct tests appropriate to the type of fault identified • interpret test results • provide instructions to staff engaged in on site repair.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where remote investigation of cable network faults may be conducted • use of fault-finding equipment currently used in industry • relevant documentation that impact on cable network and fault-finding activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report, including test results and fault-finding methodologies • direct observation of the candidate remotely locating and identifying cable system faults.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL4057A Test cable bearers • ICTTEN4087A Undertake remote diagnosis and repair of network faults. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

ICTCMP2022B Organise and monitor cabling to ensure compliance with regulatory and industry standards

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to organise and monitor teams undertaking cabling work on all cable types, and to ensure compliance with regulatory and industry standards.

Assessment by a TITAB registered assessor is recommended.

The six unit competency set ICTCBL2005B, ICTCBL2006B, ICTCBL2008B, ICTCBL2012B, ICTCBL2017B and ICTCMP2022B, that meets the Australian Communications and Media Authority's (ACMA) requirements for Cabling Provider Registration (CPR), is generally used as part of a more specialised customer cabling qualification. This set is usually regarded as more suitable for new entrants where limited industry experience has been obtained and forms the major part of specialised qualifications, such as ICT20313 Certificate II in Telecommunications Cabling. When these six units are selected as a set within state and territory funding approved programs, the two benchmark CPR units (ICTCBL2136B and ICTCBL2137B) are not required.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an ACMA accredited registrar.

Application of the Unit

Technical staff apply the skills and knowledge in this unit for supervising teams within a customer premises and ensuring compliance with ACMA and industry standards. They may make use of formal documentation, such as accurate completion of a telecommunications cabling advice (TCA) form (TCA1 form), test routines and databases.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Organise cabling work activity	1.1 Arrange access to the site according to required procedure 1.2 Make worksite safe by identifying existing and potential hazards 1.3 Review site plans and documentation 1.4 Organise supply of cable , equipment, tools and materials in line with manufacturer's specifications 1.5 Schedule and allocate work 1.6 Establish communication protocols and processes
2. Monitor work activity	2.1 Manage remote power feed following occupational health and safety (OHS) and environmental requirements 2.2 Monitor work activity to ensure it meets site specifications, and enterprise requirements , and relevant legislation, codes, regulations and standards 2.3 Reallocate work as needed
3. Complete records and obtain sign off	3.1 Complete required records 3.2 Ensure installation waste and debris is removed from worksite and disposed of according to environmental requirements to maintain safe worksite conditions 3.3 Ensure site is reinstated according to customer and company requirements 3.4 Notify customer and obtain sign off

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation, such as:
 - equipment manuals and specifications
 - ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000
- numeracy skills to take and analyse measurements
- planning and organisational skills to organise and maintain equipment
- problem solving skills to solve equipment and logistics problems
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to:
 - perform fault clearance
 - use diagnostic equipment
 - use hand and power tools.
 -

Required knowledge

- ACMA Competency Requirements for Telecommunications Cabling Provider Rules 2000, legislation, codes of practice and other formal agreements that impact on the work activity
- basic telephony
- cable installations
- features and operating requirements of test equipment
- information required to operate equipment according to a test specification
- manufacturer's requirements for safe operation of equipment
- specific OHS requirements relating to the activity and site conditions
- test methods and performance requirements
- typical issues and challenges that occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • organise, schedule and communicate work • monitor work activity and reallocate as required to meet specifications, OHS and ensure compliance with relevant regulations and standards.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites where monitoring may be conducted • use of tools, materials and equipment currently used in industry • relevant regulatory and equipment documentation that impact on work activities.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a project supervised by the candidate • review of an oral and written report with completed documentation, such as TCA1 form • direct observation of the candidate organising and monitoring a cabling project.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2005B Install customer cable support systems • ICTCBL2006B Place and secure customer cable • ICTCBL2008B Terminate metallic conductor customer cable • ICTCBL2012B Install functional and protective telecommunications earthing system • ICTCBL2017B Alter services to existing cable system.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Unit Sector(s)

Telecommunications - Compliance

ICTCMP2239B Perform restricted customer premises broadband cabling work: ACMA Restricted Rule

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install simple point to point broadband cabling.

Customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. Cablers are required to register with a registrar accredited by the Australian Communications and Media Authority (ACMA).

Application of the Unit

The unit applies to technical staff who install and terminate customer premises' cable on new installations or upgrades, or maintain existing networks in domestic premises, including small office home office (SOHO) and small commercial premises that do not have a main distribution frame (MDF) or jumperable distributor as the network boundary point.

Broadband cabling involves the range of high performance twisted pair data cables that include Category 5, Category 5e, Category 6 and Category 6A.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

ICTCBL2136B Install, maintain and modify customer premises communications cabling:
ACMA Restricted Rule

Or equivalent industry experience.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for installation	1.1 Arrange access to site and organise <i>tools and equipment</i> for specialised broadband <i>cabling</i> for <i>restricted cabling work</i> 1.2 Review site according to <i>work health and safety (WHS) and environmental requirements</i> and assess <i>hazards</i> 1.3 Determine that cable route and <i>cabling environment</i> meet <i>manufacturer specifications, industry standards and regulatory requirements</i>
2. Install broadband cable	2.1 Place and secure correct cable type according to accepted industry practice and <i>relevant regulations and standards</i> 2.2 Maintain cable and services <i>separations</i> in runs and crossovers to meet manufacturer specifications and relevant legislation, codes, regulations and standards 2.3 Fit <i>over-voltage protection devices</i> to cables and metallic components where required
3. Terminate and test broadband cable	3.1 <i>Terminate</i> the cable according to accepted industry practice and relevant legislation, codes, regulations and standards 3.2 Maintain correct twist ratio to optimise system performance at rated level 3.3 Conduct <i>compliance testing</i> of the cable installation and termination with suitable tester and record compliance 3.4 Supply system performance documents to client and complete cabling <i>records</i>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with supervisors, team members and clients
- literacy skills to interpret:
 - related regulations and standards
 - technical documentation, such as equipment manuals and specifications
- numeracy skills to take and analyse measurements
- planning and organising skills to organise and maintain equipment
- problem-solving skills to solve equipment and logistics problems
- safety awareness skills to:
 - check that environmental conditions are suitable for termination
 - make sites safe and secure for cable installation
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- task-management skills to:
 - apply work practices without damaging cable
 - conform to work specifications and relevant industry standards
- technical skills to:
 - check cable route for obstructions and clear route using suitable methods
 - handle cable according to manufacturer specifications so that conductors, sheath and insulation are not damaged during installation
 - select cabling system to meet customer performance needs
 - read and interpret drawings related to:
 - cable layouts
 - outlet location
 - terminate internal copper twisted pair and data cables
 - use applicable testing equipment
 - use hand and power tools.
 -

Required knowledge

- ACMA cabling provider rules, cabler registration rules, regulations and standards
- cable test methods and system performance requirements
- features and operating requirements of applicable test equipment
- information required to operate equipment according to a test specification
- key components of codes of practice and other formal agreements that impact on the work activity
- manufacturer requirements for safe operation of equipment
- specific WHS requirements relating to the activity and site conditions
- techniques for terminating data cable
- typical installation issues and challenges that may occur on site.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • install and terminate fixed broadband cable to industry standards and manufacturer specifications • conduct a successful wire map and data rate qualification test and record test results • provide report to client documenting the installation and test results • comply with all related WHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • sites where installation and termination of cabling may be conducted • use of industry-current tools, testing equipment and personal protective equipment • relevant regulatory and equipment documentation that impacts on installation activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of a hands-on project completed by the candidate • review of an oral and written report with completed documentation, including test results • direct observation of the candidate installing and terminating coaxial cable.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTCBL2136B Install, maintain and modify customer premises communications cabling: ACMA Restricted Rule

	<ul style="list-style-type: none">• ICTCBL2139B Apply safe technical work practices for cabling registration when configuring an ASDL circuit. <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p><i>Tools and equipment</i> may include:</p>	<ul style="list-style-type: none"> • tools: <ul style="list-style-type: none"> • cable ties • coring tool • crimping tool • drills • hammers • labeller • ladders • saws • stripping and preparation tool • terminating tool • torque spanner • equipment: <ul style="list-style-type: none"> • multimeter • LAN cable qualification tester • LAN cable certification tester • wire map tester.
<p><i>Cabling</i> may include:</p>	<ul style="list-style-type: none"> • aerial customer • external customer • indoor customer • underground customer.
<p><i>Restricted cabling work</i> refers to:</p>	<ul style="list-style-type: none"> • aerial and underground cabling work on private property • cabling work that is performed only in relation to a customer’s premises • customer cabling that terminates directly at the network boundary on a socket or network termination device.
<p><i>WHS and environmental requirements</i> may include:</p>	<ul style="list-style-type: none"> • decommissioning and isolating work site and lines before beginning work • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management • identifying other services, including power and gas

	<ul style="list-style-type: none"> • personal protective clothing: <ul style="list-style-type: none"> • earmuffs • gloves (leather, plastic and rubber) • head protection • kneepads • masks • protective suits • safety boots • safety glasses • safety harness and line • safe work practices, such as the safe use and handling of: <ul style="list-style-type: none"> • asbestos • chemicals • materials • tools and equipment • work platforms • safety equipment, including: <ul style="list-style-type: none"> • flashing lights • gas and other hazard-detection equipment • safety barriers • traffic cones • trench guards • warning signs and tapes • special access requirements • suitable light and ventilation.
<p>Hazards may include:</p>	<ul style="list-style-type: none"> • general hazards, including: <ul style="list-style-type: none"> • building debris • earth potential rise (EPR) • live power lines • manual handling • mud and water • natural gas and other gas build-up • radio frequency equipment emitting radiation • remote power feeding services that operate at above telecommunications network voltage (TNV) • slippery surfaces • vermin.
<p>Cabling environment may refer to:</p>	<ul style="list-style-type: none"> • indoor environments, including concealed locations: <ul style="list-style-type: none"> • ceilings and false ceilings

	<ul style="list-style-type: none"> • internal wall spaces • modular workstations • under floor • outdoor environments, including cable installations: <ul style="list-style-type: none"> • aerial telecommunications cabling for restricted cabling work that does not include installations on poles shared with low voltage (LV) or high voltage (HV) electrical power cables or terminations • external walls • underground cabling in an exclusive trench or shared trench with electrical LV cables and other utilities.
<p>Manufacturer specifications may include:</p>	<ul style="list-style-type: none"> • attenuation rate, or absence of attenuation, for a class of cable in a defined cabling application • bend radius not exceeding manufacturer specification • placement of cable with sufficient slack to allow termination • cable lengths not exceeding manufacturer or design specifications • installation of cable safely without damage to cable or client’s premises • use of cable ties and brackets that do not damage cable.
<p>Industry standards and regulatory requirements may include:</p>	<ul style="list-style-type: none"> • accredited registrars and registration • ACMA Cabling Provider Rules • ANSI/TIA-570-B:2004 North American Design Standard • AS/ACIF S008:2006 and AS/ACIF S009:2006 • AS/NZS 3000:2007 • Australian Communications Industry Forum (ACIF) standards and codes maintained by Communications Alliance • Certified Components List (CCL) • Communications Cabling Manual (CCM) – restricted • IEC 61935-3:2008 International Standard • labelling requirements • Telecommunications Act 1997.
<p>Separations refer to:</p>	<ul style="list-style-type: none"> • correct separations between communications cable and other services: <ul style="list-style-type: none"> • low voltage • open terminations • separations covered by AS/ACIF S009:2006.
<p>Over-voltage protection device requirements must comply with:</p>	<ul style="list-style-type: none"> • ACMA standards • manufacturer specifications • organisational or local environmental hazards.

Termination may include:	<ul style="list-style-type: none">• 8 pin modular (RJ45 type) connectors terminated at both ends of a fixed broadband cable and tested <p>*Note: Jumperable distributors and patch panels are outside the scope of cabling registration at this level and so are not included in this work.</p>
Compliance testing must include:	<ul style="list-style-type: none">• qualification test of cabling at required data rate (e.g. 100MBs or 1GB)• wire map testing.
Records may include:	<ul style="list-style-type: none">• cable plans• network termination device record cards• telecommunication cabling advice forms TCA1 and TCA2.

Telecommunications - Compliance

ICTCMP5176A Undertake radio communications site audit

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to undertake a radio communications site audit regarding the compliance of radio frequency (RF) transmissions with relevant transmitter licence requirements.</p> <p>Individuals must comply with radio communications transmitter licensing requirements and operator certificates for maritime and aeronautical services and occupational health and safety (OHS) electromagnetic radiation (EMR) licensing requirements as appropriate.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Field officers from regulatory authorities or other private and public organisations apply the skills and knowledge in this unit. They combine technical radio communications skills with broader organisational and administrative skills to conduct audits in a range of commercial and community contexts and environments. They make recommendations for improvement and follow up by monitoring resulting actions.</p> <p>Field officers may be responsible for small projects or parts of larger projects, and for the coordination and direction of small groups working on sites remote from the organisational headquarters.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for radio communications site audit	<p>1.1. Confirm need for site audit through appropriate triggers and arrange formal approval for site access from authorised personnel</p> <p>1.2. Clarify audit requirements according to relevant legislation, codes, regulations and standards including safety and security arrangements and action required to comply</p> <p>1.3. Clarify audit requirements with client or project originator, where appropriate, and incorporate broader audit considerations</p> <p>1.4. Prepare a hardcopy of site information for use as an audit validation list at site</p> <p>1.5. Specify staff, equipment and material resource requirements for the audit based on particular site requirements ensuring equipment has been correctly calibrated and labelled</p> <p>1.6. Check industry requirements for site and obtain industry licence where appropriate</p>
2. Undertake radio communications site audit	<p>2.1. Validate specific site location according to database information</p> <p>2.2. Undertake audit tasks according to OHS, enterprise procedures and site specific safety requirements, and meet client or representative on site as required</p> <p>2.3. Conduct transmission and RF tests against approved specifications</p> <p>2.4. Conduct check of transmitters for licensing conditions</p> <p>2.5. Check transmission radio frequency against database list and obtain permission to check or alter transmission or radio frequency where appropriate</p> <p>2.6. Confirm site meets specific RF OHS safety requirements and licensing requirements where appropriate</p> <p>2.7. Confirm defined site equipment labelling comply with Australian Communications and Media Authority (ACMA) technical standards</p>
3. Complete audit administration tasks	<p>3.1. Update or arrange for update of required records regarding audit findings and action required, including liaison with authorised personnel as agreed</p> <p>3.2. Monitor actions that have been recommended to</p>

ELEMENT	PERFORMANCE CRITERIA
	ensure compliance with findings 3.3. Issue enforcement actions as required 3.4. Finalise audit administration and return equipment and resources according to organisational procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical, operational and legal site audit matters
- literacy skills to interpret technical documentation and write audit reports in required formats
- numeracy skills to take RF measurements, interpret results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the audit process in liaison with others
- problem solving and contingency management skills to adapt testing procedures to requirements of particular sites and modify activities depending on differing operational contingencies, risk situations and environments
- research skills to interrogate databases and investigate different audit requirements
- task management skills to work systematically with required attention to detail and adherence to all safety requirements
- technical skills to select and use appropriate test equipment and practices to suit different RF applications

Required knowledge

- features and operating requirements of test equipment, including:
 - digital radio communications measuring equipment
 - modulation analyser
 - power meter
 - RF termination
 - spectrum analyser
- features of licensing database
- information required to prepare and conduct a telecommunications audit
- legislation, licensing requirements for transmitters, codes of practice and other

REQUIRED SKILLS AND KNOWLEDGE

- formal agreements that directly impact on radio communications site audits
- overview of transmission lines, transmitter and receiver architecture and their impact on radio communications audit
- required field measurements including:
 - carrier frequency
 - harmonics
 - intermodulation distortion (IMD) products
 - modulation
 - RF power
- specific issues related to antenna installations and their impact on radio communications interference
- specific OHS requirements that impact on the conduct of radio communications audits, including:
 - use of equipment
 - use of RF protective equipment
 - other personal protective equipment
- types of adjustments that need to be made to audit procedures to meet the requirements of particular sites and environmental conditions
- typical issues and challenges that occur in telecommunications site audit and how these may be addressed

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • conduct radio communications site audit for at least three sites with differing licensing requirements • conduct transmission and RF tests • monitor non compliances to ensure actions completed.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which audits may be conducted • use of field measurement equipment currently used in industry • relevant databases, licensing requirements and other site related documentation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking an audit • review of audit reports completed by the candidate for differing site types and licence requirements • oral or written questioning to assess knowledge of licensing requirement and specific technical procedures.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTRFN3175A Operate and maintain radio communications technical instruments and field equipment • ICTRFN4095A Conduct radio frequency measurements • ICTRFN4174A Undertake radio communications signals monitoring.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Triggers may relate to:

- business plan targets
- codes of practice and standards for other services and utilities:
 - electricity
 - gas
 - water
- decisions to target certain clients
- decisions to target certain sites:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • communal • power level • EMR based on site power • geographical considerations • industry status (targeting of a dynamic industry) • interference complaints • investigation may be power measurement to ensure correct power • legislative requirements • licence conditions regarding the operating frequency of transmitters • occupancy transmitter still operating • power company requirements • radcom data purification • statutory authority requirements ACMA.
<i>Authorised personnel</i> may include:	<ul style="list-style-type: none"> • customers • major users • site managers • site owners.
<i>Legislation, codes, regulations and standards</i> may include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • ACMA technical standards • ARPANSA EMR standard • assignment guidelines • Australian building codes and regulations • Australian standards • enterprise standards • environmental protection • equipment standards • fire regulations • heritage legislation • international standards • intrinsically safe lightning protection, • local government • OHS • Privacy Act • Radcoms Act • site engineering standard • spectrum planning reports

RANGE STATEMENT	
	<ul style="list-style-type: none"> • Telecoms Act • Trade Practices Act • WIs, CIs, business operating procedures (BOPs), radiocommunications assignment and licensing instruction (RALI).
<i>Broader audit considerations</i> may relate to:	<ul style="list-style-type: none"> • commercial • cultural: <ul style="list-style-type: none"> • liaising with traditional land owners • environmental: <ul style="list-style-type: none"> • accessing protected areas • broken ground • location involving working over old underground workings and voids • on natural landscapes • wet conditions • working at heights or on rooftops.
<i>Site information</i> may include:	<ul style="list-style-type: none"> • address of physical location • frequency output • power of transmitters • site coordinates • technical details of site • user bandwidth.
<i>Equipment</i> may include:	<ul style="list-style-type: none"> • deviation meter • power meter • spectrum analyser.
<i>Industry licence</i> may include:	<ul style="list-style-type: none"> • industry training for particular sites • basic OHS induction training.
<i>Transmission and RF tests</i> may include:	<ul style="list-style-type: none"> • assessment of EMR levels • power measurement • RF technical measurements.
<i>RF OHS safety requirements</i> may relate to:	<ul style="list-style-type: none"> • EMR levels • RF measurements • visual checks of towers.
<i>Records</i> may include:	<ul style="list-style-type: none"> • completion of enterprise manual lists • computer-based documentation • electronic communication.

ICTDRE3156B Install digital reception equipment

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>Minor change to a performance criterion.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install and configure digital reception equipment (DRE) on customer premises as part of a home network.

Home networks integrate many services, such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and internet protocol TV (IPTV).

Application of the Unit

Technicians who install and maintain DRE in the home network or small business network apply the skills and knowledge in this unit to integrate many services for the customer.

Integrated services include broadband services, FTA, pay TV and IPTV.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare for installation</p>	<p>1.1 Review preparation to ensure work complies with requirements of <i>relevant legislation, codes, regulations and standards</i></p> <p>1.2 Notify customer to verify installation order and arrange for site access to comply with security arrangements</p> <p>1.3 Notify supervisor of identified <i>safety hazards</i> at the work site and complete a job safety analysis (JSA) before commencing work</p> <p>1.4 Confirm location of <i>digital reception</i> equipment and fittings with customer</p> <p>1.5 Identify <i>barriers to installation</i> and develop strategies to overcome them within time and budget restrictions</p> <p>1.6 Select and obtain <i>tools</i> and materials appropriate for the work order</p>
<p>2. Install hardware and equipment</p>	<p>2.1 Measure <i>signal level</i> at wall plate to ensure received signal strength is adequate</p> <p>2.2 Test customer's existing equipment for operational condition and reception quality</p> <p>2.3 Notify customer of detected problems and record remedial actions if required</p> <p>2.4 Identify interconnection cabling requirements and prepare cables for job requirements</p> <p>2.5 Affix wall plate to agreed position on wall and secure cable according to specification</p> <p>2.6 Connect set top unit to <i>customer equipment</i> and connect <i>cabling</i> between wall plate and set top unit following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i></p> <p>2.7 Power up set top unit and configure it to customer requirements</p> <p>2.8 Activate customer services to complete hardware installation where required</p>
<p>3. Commission and test installation</p>	<p>3.1 Conduct <i>functional test</i> to assess transmission signal quality</p> <p>3.2 Conduct tests to ensure that quality of all <i>services</i> are being delivered against pre-existing conditions</p> <p>3.3 Check that all interconnected equipment is functional</p>

4. Finalise installation and handover to customer	4.1 Restore site to original condition and customer satisfaction 4.2 Assess damages that may have occurred during installation and arrange with customer for repair or replacement of damaged components 4.3 Remove waste and debris from site and dispose of in a safe and environmentally appropriate manner 4.4 Conduct customer training appropriate to the equipment, services and vendor literature
5. Complete contract documentation	5.1 Provide <i>warranties</i> to customer in required format where work and equipment are subject to warranty 5.2 Prepare invoices and other financial documentation, where required, and present to customer 5.3 Obtain authorised signatures on required documentation to confirm acceptance of completed work

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer and colleagues and negotiate with site owner
- literacy skills to interpret technical documentation, specifications and service orders
- numeracy skills to:
 - set up
 - take measurements
 - interpret results
- planning and organising skills to organise and prepare installation resources
- problem-solving skills to respond to typical installation challenges
- task-management skills to:
 - adhere to all safety requirements
 - work systematically with required attention to detail
- technical skills to:
 - perform diagnostic procedures
 - use hand and power tools
 - use test equipment to install equipment.
 -

Required knowledge

- broad knowledge of whole industry product range
- contemporary equipment and connection methods
- customer service principles, particularly dealing with customers face to face
- enterprise or service specific knowledge of products and services supplied
- OHS general principles and enterprise-specific JSA requirements
- overview knowledge of:
 - objectives and methods of training for product use for customer education
 - radio frequency (RF) theory, principles and safety
 - telephony principles to support return path awareness
- pre-installation enterprise-specific requirements
- quality assurance of enterprise requirements
- return path technology.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify installation requirements • install equipment applying OHS requirements and work practices • configure set equipment to customer requirements • conduct functionality tests and interpret results • provide customer training appropriate to the equipment • complete the task and handover to customer.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for digital reception equipment installation • range of digital reception equipment currently used in industry • range of test equipment required for digital reception equipment installation and testing.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing digital reception equipment • direct observation of the candidate conducting signal measurement • oral or written questioning of the candidate to assess knowledge of digital reception equipment and test methods.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTDRE3165A Install a complex digital reception system.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

1. Prepare for DRE fault identification	<p>1.1 Obtain relevant legislation, codes, regulations and standards for compliance when conducting work</p> <p>1.2 Notify customer to verify fault report and arrange for site access to comply with security arrangements</p> <p>1.3 Notify supervisor of identified safety hazards at the worksite and complete a job safety analysis (JSA) before commencing work</p> <p>1.4 Identify existing warranties, service agreements and equipment specifications and documentation covering digital reception equipment</p> <p>1.5 Select and obtain tools and materials appropriate for the work order</p>
2. Assess likely cause and location of fault	<p>2.1 Verify system details to assist with fault identification</p> <p>2.2 Assess available data and historical trends to determine likelihood of fault being the set top fault or existing customer equipment fault</p> <p>2.3 Rank likely causes of fault in order of probability ensuring a methodical approach to fault-finding is used</p> <p>2.4 Discuss problem fully with the customer and advise of likely charges</p>
3. Perform tests to diagnose fault	<p>3.1 Conduct visual inspection of system for likely damage following occupational health and safety (OHS) and environmental requirements</p> <p>3.2 Check connections, plugs, terminations and leads for operation</p> <p>3.3 Measure signal strength at wall plate and beyond to ensure adequate signal level for equipment processing</p> <p>3.4 Conduct functional test of facilities to identify faulty equipment</p> <p>3.5 Progressively isolate fault to remove likely variables from assessment using manufacturer's diagnostic chart</p> <p>3.6 Locate fault with minimal disruption to client activity and in the shortest possible time</p> <p>3.7 Provide customer with regular progress reports</p>
4. Rectify faults	<p>4.1 Identify faulty parts and equipment and replace or repair according to service agreement</p> <p>4.2 Advise customer of cost of repair if service agreement does</p>

	<p>not exist</p> <p>4.3 Re-program equipment to customer requirements if required</p> <p>4.4 Complete work in a manner that is safe to repairer and customer</p>
5. Provide replacement service to customer	<p>5.1 Provide customer with temporary replacement equipment similar to existing equipment whilst faulty equipment is being repaired</p> <p>5.2 Program replacement equipment to customer requirements</p> <p>5.3 Test replacement service for functionality prior to meet customer satisfaction</p>
6. Clean up worksite and complete documentation	<p>6.1 Remove waste and debris from site and dispose of in a safe and environmentally appropriate manner</p> <p>6.2 Restore site to original condition and customer satisfaction</p> <p>6.3 Prepare invoices and other financial documentation, where required, and present to customer</p> <p>6.4 Obtain authorised signatures on required documentation to confirm acceptance of completed work</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer and colleagues and negotiate with site owner
- literacy skills to interpret technical documentation, specifications and service orders
- numeracy skills to:
 - setup
 - take measurements
 - interpret results
- planning and organisational skills to organise and prepare installation resources
- problem solving skills to respond to typical installation challenges
- task management skills to:
 - adhere to all safety requirements
 - work systematically with required attention to detail
- technical skills to:
 - perform diagnostic procedures
 - problem solving and fault-finding techniques:
 - enterprise methods
 - escalation level
 - halving technique
 - use hand and power tools.
 -

Required knowledge

- broad knowledge of whole industry product range
- customer service principles, particularly dealing with customers face to face
- enterprise diagnosis methods for test analysis and diagnosis
- enterprise or service specific knowledge of products and services supplied
- OHS general principles and enterprise specific JSA requirements
- overview knowledge of:
 - objectives and methods of training for product use for customer education
 - radio frequency (RF) theory, principles and safety
 - telephony principles to support return path awareness
- pre-installation enterprise-specific requirements
- quality assurance of enterprise requirements
- return path technology
- signal measurement and other enterprise-specific tools
- understanding of contemporary equipment and connection methods
- use test equipment.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • demonstrate methodical approach to fault identification • interpret test results • repair fault and test to verify outcomes • document fault, including nature, location, likely causes and repair methodology.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for locating and rectifying DRE faults • range of DRE currently used in industry • range of test equipment required for DRE testing.
<p>Methods of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing diagnostic tests • direct observation of the candidate locating and rectifying DRE faults • oral or written questioning of the candidate to assess knowledge of DRE and test methods and repair methodology.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTDRE3156B Install digital reception equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>Relevant legislation, codes, regulations and standards may include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • Trades Practices Act • ISO Draft 11801 • OHS • regulated or industry codes of practice including appropriate Australian Communications and Media Authority (ACMA) standards • relevant Institute of Electrical and Electronics Engineers (IEEE) standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<p>Safety hazards may refer to:</p>	<ul style="list-style-type: none"> • debris • excessive dust or noise • exposed electrical wiring • exposed machinery • industrial • spilled chemicals • unsafe spatial separation of cables • unsafe structures • wet areas.
<p>Warranties may refer</p>	<ul style="list-style-type: none"> • support as specified by the equipment manufacturer or supplier

to:	<ul style="list-style-type: none"> • support by network provider.
<i>Service agreements</i> may refer to:	<ul style="list-style-type: none"> • agreements between customer and third party • maintenance agreements between communication companies and their clients.
<i>Equipment specifications and documentation</i> may be found in:	<ul style="list-style-type: none"> • contract documents • specification schedules • system configuration diagrams and manuals.
<i>Digital reception</i> may include:	<ul style="list-style-type: none"> • services: <ul style="list-style-type: none"> • community television • FTA (open broadcast TV) • IPTV • pay TV • service provision media: <ul style="list-style-type: none"> • cable • satellite • terrestrial • wireless.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • crimping • fold covering sack • general electrical • general hand • stripping • terminating.
<i>System details</i> may include:	<ul style="list-style-type: none"> • functions • product • product model • type of system.
<i>Available data</i> may include:	<ul style="list-style-type: none"> • customer questioning details • customer records • details of system checks • equipment and product manuals and guides • test data.
<i>Set top fault</i> may include:	<ul style="list-style-type: none"> • aerial problems • equipment failure • faulty circuit board • faulty parts • power and TV terminations • program errors.
<i>Existing customer</i>	<ul style="list-style-type: none"> • colour variation

<p>equipment fault may include:</p>	<ul style="list-style-type: none"> • customer TV and video • distorted sound quality • ghosting • picture not filling the screen • poor reception • pre-made fly leads • rolling picture • use of non-approved peripheral equipment connected to pay TV equipment.
<p>Methodical approach may include:</p>	<ul style="list-style-type: none"> • fault-finding methodology described in system, equipment and product manuals and guides • methods for fault finding and repair: <ul style="list-style-type: none"> • equipment reprogram • functionality tests • replacement repair or modification • visual inspections.
<p>Fault-finding may be done:</p>	<ul style="list-style-type: none"> • as part of a service agreement • on a fee for service basis as agreed with client.
<p>Likely damage may include:</p>	<ul style="list-style-type: none"> • broken display • broken remote control • damaged cable • damaged connectors • excessive dust • heat damage • spillage • water damage.
<p>OHS and environmental requirements may relate to:</p>	<ul style="list-style-type: none"> • identifying other services, including power and gas • personal protective equipment: <ul style="list-style-type: none"> • earmuffs • gloves • head protection • masks • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • chemicals • materials • tools and equipment

	<ul style="list-style-type: none">• safety equipment:<ul style="list-style-type: none">• flashing lights• safety barriers• warning signs and tapes• witches hats• special access requirements• environmental considerations:<ul style="list-style-type: none">• clean-up protection• stormwater protection• waste management.

Telecommunications - Digital reception technology

ICTDRE3165A Install a complex digital reception system

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to design, install, test and commission a complex digital reception system.</p> <p>Depending on the particular installation, organisational requirements, and state or territory legislation, specific licences may be required in areas such as:</p> <ul style="list-style-type: none"> • working at heights • confined spaces • working on construction worksites. <p>Some cabling and installation work may fall within the definition of construction work. If so, people entering the construction site are required to complete the general induction training program specified by the National Code of Practice for Induction Training for Construction Work (Australian Safety Compensation Council, May 2007).</p> <p>Achievement of the unit CPCCOHS1001A Work safely in the construction industry from the CPC08 Construction and Plumbing Services Integrated Framework Training Package fulfils this requirement.</p> <p>Users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technicians working on large scale, complex radio frequency (RF) and digital distribution systems, such as master antenna television (MATV), and satellite master antenna television (SMATV) in commercial or multi-dwelling unit (MDU) environment apply the skills and knowledge in this unit.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the installation of a complex digital reception system	1.1. Notify <i>customer</i> to arrange access to site and identify <i>customer equipment</i> 1.2. Select type of <i>complex digital systems</i> and consequent constraints on installation according to client specifications 1.3. Complete a job safety analysis (JSA) identifying occupational health and safety (OHS) issues 1.4. Prepare for installation according to <i>relevant legislation, codes, regulations and standards</i> 1.5. Verify <i>design requirements</i> are suitable for site application and required system performance
2. Assemble complex digital reception system	2.1. Select and obtain materials, <i>tools and equipment</i> for installation 2.2. Select suitable <i>headend</i> location and cable access 2.3. Build headend according to design requirements and manufacturer's specifications 2.4. Configure headend and distribution devices to operate according to design and manufacturer's specifications 2.5. Run <i>cables</i> along identified runs 2.6. Terminate cables according to both design and manufacturer's specifications
3. Test and commission system	3.1. Conduct <i>performance test</i> operation of headend and distribution <i>devices</i> 3.2. Activate system and conduct signal measurement using test equipment 3.3. Record and analyse initial test results for quality of service according to design specifications 3.4. Rectify identified faults and adjust system to optimal operation 3.5. Conduct final signal measurement using test equipment to <i>optimise performance</i> 3.6. Update design plans to 'as built' status
4. Complete administrative tasks	4.1. Record final commissioning test results and settings in line with client requirements 4.2. Complete appropriate records and test results, and store according to policy 4.3. Completion of all financial and other documentation 4.4. <i>Handover to customer</i> and obtain sign off

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - negotiate with site owner and organisations or individuals who may be affected by an outage
 - provide advice and guidance to others or to seek assistance
- literacy skills to interpret technical documentation, specifications and service orders
- numeracy skills to:
 - set up
 - check that equipment is calibrated
 - take RF measurements
 - interpret results
 - evaluate different types of technical data
- planning and organisational skills to organise and prepare installation resources
- problem solving skills to respond to typical antenna installation challenges
- task management skills to:
 - work systematically with required attention to detail
 - adhere to all safety requirements
- technical skills to:
 - use hand and power tools
 - operate a range of specialised radio communications equipment
 - perform diagnostic procedures.

Required knowledge

- detailed knowledge of procedures and equipment required for measurement of:
 - forward and reflected RF power
 - feedline insertion loss
 - distance to fault
 - modulation error rate (MER) and bit error rate (BER) for the purpose of signal integrity
- features of instruments, test equipment and performance requirements
- performance of adjustments (tuning, balancing and replacing components)
- legislation, codes of practice and other formal agreements that directly impact on

REQUIRED SKILLS AND KNOWLEDGE

- operation and testing of radio communications antennas and equipment
- MATV and SMATV
- overview knowledge of RF spectrum
- RF awareness, electromagnetic radiation (EMR) standards and specific OHS requirements that impact on the use and testing of radio communications instruments and equipment
- typical issues and challenges that occur in telecommunications antenna installations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • plan, assemble and install a complex digital reception system • conduct functionality tests and interpret results • perform handover to customer • apply related OHS requirements and work practices.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for complex digital reception system installation • range of complex digital reception systems currently used in industry • range of test equipment required for digital reception system installation and testing.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing a complex digital reception system • direct observation of the candidate conducting signal measurement and adjusting for optimal performance • oral or written questioning of the candidate to assess knowledge of complex digital reception systems • oral or written questioning of the candidate to assess knowledge of test methods and performance requirements.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTDRE4166A Integrate customer digital reception equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Customer may include:

- consultant
- individual client
- project manager
- site manager
- site supervisor.

Customer equipment may include:

- digital free to air (FTA)
- hard disk recorder
- high definition (HD) TV
- home automation
- MATV

RANGE STATEMENT	
	<ul style="list-style-type: none"> • media centre • SMATV • video player • video and audio distribution systems.
<i>Complex digital systems</i> may include:	<ul style="list-style-type: none"> • MATV • SMATV.
<i>Relevant legislation, codes, regulations and standards</i> may include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • ARPANSA EMR standard • Australian building codes and regulations • Australian standards • enterprise standards • environmental protection • equipment standards, intrinsically safe lightning protection, site engineering standard • fire regulations • heritage legislation • international standards • local government • OHS • Radcoms Act • Telecoms Act.
<i>Design requirements</i> may include:	<ul style="list-style-type: none"> • equipment performance • symbols: <ul style="list-style-type: none"> • audiovisual (AV) system features • common electrical circuit features.
<i>Tools and equipment</i> may include:	<ul style="list-style-type: none"> • hand and power tools • test equipment: <ul style="list-style-type: none"> • antenna analyser • directional RF power meter • multimeter • return loss measuring equipment • RF termination • spectrum analyser.
<i>Headend</i> may include:	<ul style="list-style-type: none"> • RF • optical.

RANGE STATEMENT	
<i>Cables</i> may include:	<ul style="list-style-type: none"> • flexible coaxial • interconnected cable harness • optical • rigid or semi-rigid coaxial line.
<i>Performance test</i> may include:	<ul style="list-style-type: none"> • antenna sweep: <ul style="list-style-type: none"> • antenna analyser • return loss bridge and RF sweep generator • scalar network analyser • vector network analyser • distance to fault • insertion loss • reflected power: <ul style="list-style-type: none"> • antenna analyser • directional power meter at a single frequency only • return loss bridge and RF sweep generator • scalar network analyser • vector network analyser • return loss.
<i>Devices</i> may include:	<ul style="list-style-type: none"> • active: <ul style="list-style-type: none"> • amplifiers • modulators • passive: <ul style="list-style-type: none"> • couplers • multi-switches • splitters • taps.
<i>Optimise performance</i> may relate to:	<ul style="list-style-type: none"> • antenna orientation • aspect ratio • contrast • picture quality • signal amplification adjustment.
<i>Handover to customer</i> may include:	<ul style="list-style-type: none"> • functionality demonstration • provision of appropriate literature • training customers on equipment use.

ICTDRE3248A Design communications wiring systems for customer premises

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0.</i>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to design a smart cable wiring system for customer premises.

All customer cabling work in the telecommunications, fire, security and data industries must be performed by a registered cabler. All cablers are required to register with an Australian Communications and Media Authority (ACMA)-accredited registrar. ACMA open registration with appropriate industry endorsements is essential.

Application of the Unit

Cablers installing cabling systems apply the skills and knowledge in this unit.

The unit applies to emerging opportunities in domestic and small to medium enterprise information technology. The digital reception stream in ICT qualifications has related units, such as ICTDRE4166A Integrate customer digital reception equipment.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

ICTCBL2137B Install, maintain and modify customer premises communications cabling:
ACMA Open Rule

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to design a wiring system for premises</p>	<p>1.1 Consult customer and visit work site to determine immediate and future <i>functional needs</i> of the cabling system</p> <p>1.2 Identify and document immediate and future location of the cabling system <i>customer interface elements</i>, and seek confirmation from <i>appropriate persons</i></p> <p>1.3 Review <i>technology</i> used to deliver functional needs</p> <p>1.4 Identify specific <i>service provider</i> requirements and requirements of <i>applicable standards, codes and regulations</i></p>
<p>2. Design a wiring system for premises</p>	<p>2.1 Follow <i>work health and safety</i> procedures when carrying out the work</p> <p>2.2 Transfer functional needs of customer to architectural plans</p> <p>2.3 Determine size and location of home distributor, security system, carrier and carriage service facilities, antennas and switch boards</p> <p>2.4 Identify cable pathways and <i>cable support systems</i></p> <p>2.5 Select appropriate <i>cable types</i> to meet functional needs</p> <p>2.6 Develop cable identification method to aid the installation</p>
<p>3. Document the cable wiring system design</p>	<p>3.1 Document by room the customer interface elements</p> <p>3.2 Document requirements for the home distributor, security system, carrier and carriage service facilities, antennas and switch boards</p> <p>3.3 Document <i>testing and commissioning requirements</i></p> <p>3.4 Specify <i>user documentation</i> required after the completion of the installation</p> <p>3.5 Provide customer quote that includes a bill of materials and a project schedule</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret customer requirements
- communication skills to liaise with customer to ensure requirements are identified
- literacy skills to interpret technical standards, regulations and codes
- numeracy skills to provide costings
- planning and organising skills to:
 - develop a cabling design
 - develop an installation schedule
- workplace safety awareness skills, with particular attention to accessing work sites safely
- writing and drafting skills to document specifications and record plans.
-

Required knowledge

- cabling standards, regulations and codes:
 - building regulations that apply to the installation of cabling systems
 - code of practice for home wiring
 - standard called on by the code of practice for home wiring
 - standards mandated by ACMA
- carrier network delivery systems used in single dwelling and multi-dwelling units for:
 - fibre
 - fixed wireless
 - satellite
 - twisted copper pair
 - subscription TV
- cabling requirements of home technologies:
 - age and assisted living
 - communications
 - digital home health
 - energy management
 - entertainment
 - intelligent light and power
 - security and safety
- test methods and performance requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • capture customer functional needs for cabling system • apply industry standards, regulations and codes when designing the wiring system for customer premises • develop a detailed design in compliance with industry practices, including signal losses and/or expected measurements that need to be achieved at wallplates • document the design, including a bill of materials, schedule of work and associated costs.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • candidate is provided with a contemporary dwelling design, which covers all functional requirements of a modern home • candidate has access to all current standards, codes and regulations.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate communicating with the customer • review of the planning sheets used by the candidate in developing the design • oral and written questioning to assess candidate skills and knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4229B Design, install and configure a customer smart technology network.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Functional needs</i> may include:	<ul style="list-style-type: none"> • age and assisted living • communications • digital home health • energy management • entertainment • intelligent light and power • security and safety.
<i>Customer interface elements</i> may include:	<ul style="list-style-type: none"> • audio visual systems: <ul style="list-style-type: none"> • speakers • screens • remote control • entertainment outlets: F connectors • intercom: <ul style="list-style-type: none"> • internal station • outdoor station • light fittings • power points • security: <ul style="list-style-type: none"> • passive infra-red (PIR) sensors • smoke detectors • code pads • telecommunications outlets RJ45.
<i>Appropriate persons</i> may include:	<ul style="list-style-type: none"> • architect • builder • consultant • customer.
<i>Service provider</i> may include:	<ul style="list-style-type: none"> • age and assisted service providers • content providers, such as subscription TV providers • home health providers • internet/broadband service providers • security service providers • telecommunications carriers.
<i>Applicable standards,</i>	<ul style="list-style-type: none"> • AS/ACIF S009

<p>codes and regulations may include:</p>	<ul style="list-style-type: none"> • AS/NZS 1367 • AS/NZS 3000 • AS/NZS ISO/IEC 15018 • AS 4755.3.1 • AS 4755.3.2 • AS 4755.3.3 • code of practice for home wiring series: <ul style="list-style-type: none"> • Quick Guide to Smart Wired® • code of practice for home wiring • installer handbook for home wiring • digital taskforce handbooks • HB252 • ISO/IEC TR 15067-4 • subscription TV standards: <ul style="list-style-type: none"> • domestic installation manual • manuals for multi-dwelling units, multi-residential estates and commercial installations • installer product list • installer handbook for satellite feed into multi-dwelling units and commercial installations • vendor- and equipment-specific handbooks.
<p>Work health and safety may include:</p>	<ul style="list-style-type: none"> • identifying hazards: <ul style="list-style-type: none"> • installation site • earth potential rise (EPR) • personal protective clothing: <ul style="list-style-type: none"> • head protection • safety boots.
<p>Cable support systems may include:</p>	<ul style="list-style-type: none"> • cable tray • catenary • duct and conduit.
<p>Cable types may include:</p>	<ul style="list-style-type: none"> • coaxial cable RG6, RG11 or better • intelligent light and power: <ul style="list-style-type: none"> • data bus twisted pair • tough plastic sheath (TPS) • security cable: <ul style="list-style-type: none"> • four core multi-strand • six core multi-strand • unshielded twisted pair (UTP) Category 5, 6, 7 and beyond.
<p>Testing and commissioning</p>	<ul style="list-style-type: none"> • certification testing: <ul style="list-style-type: none"> • attenuation-to-crosstalk ratio (ACR)

<p><i>requirements</i> may include:</p>	<ul style="list-style-type: none"> • attenuation • crosstalk • equal level far end crosstalk (ELFEXT) • far end crosstalk (FAXT) • length • power sum near end crosstalk PS (NEXT) • wire map • continuity and pair integrity testing • delay skew • return loss • radio frequency (RF) signal tests: <ul style="list-style-type: none"> • bit error ratio (BER) • modulation error ratio (MER) • reflection • testing to AS/NZS3017.
<p><i>User documentation</i> may include:</p>	<ul style="list-style-type: none"> • as-built plans • cable losses • certificate of compliance of electrical testing • code compliance label • copy of test results • device losses • telecommunications cabling advice form.

Unit Sector(s)

Telecommunications - Digital reception technology

ICTDRE3249A Develop integrated digital reception systems

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop integrated digital reception system applications, topologies, devices and capabilities, and system programming methods. The unit also covers the use of diagnostic tools and documentation of developed systems.

The skills and knowledge described in this unit do not require a licence to practice in the workplace. Practice in the workplace and during training are subject to work health and safety (WHS) regulations and codes of practice.

Application of the Unit

This unit applies to cabling who install digital reception equipment and cabling systems. It applies to emerging opportunities in domestic and small to medium enterprise information technology.

The digital reception stream in ICT qualifications has related units, such as ICTDRE3248A Design communications wiring systems for customer premises.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to develop an integrated system</p>	<p>1.1 Determine types and location of loads and control devices from project specifications and <i>customer</i> requirements</p> <p>1.2 Determine number of control bus networks and current requirements from load calculations for devices on the system</p> <p>1.3 Determine appropriate placement of system devices to optimise bus network power and load parameters, and to maintain system stability</p> <p>1.4 Develop an integrated system to comply with regulator, safety and manufacturer requirements</p> <p>1.5 Document take-off of the number of devices and accessories required for the system using manufacturer's title and ID for each</p> <p>1.6 Download required programming and diagnostic tools to a compatible PC and check for correct operation and safety</p>
<p>2. Program integrated system devices</p>	<p>2.1 Follow WHS risk control measures and procedures</p> <p>2.2 Apply correct modes of programming to develop integrated system according to manufacturer's programming software instructions</p> <p>2.3 Follow manufacturer's instructions and recommendations when programming system devices to project requirements</p> <p>2.4 Program the parameters for operation of loads to project requirements and within manufacturer's designated range</p> <p>2.5 Save and back up the programmed system database according to manufacturer instructions</p>
<p>3. Load and test integrated system</p>	<p>3.1 Follow WHS risk control work measures and procedures</p> <p>3.2 Transfer database of integrated system program to the network</p> <p>3.3 Test all functions of the integrated system for compliance with project requirements and manufacturer specifications</p> <p>3.4 Use diagnostic tools to locate system faults, defects and anomalies</p> <p>3.5 Correct defects and anomalies to comply with project requirements and manufacturer specifications</p> <p>3.6 Provide copy of documentation of integrated system at <i>handover to customer</i></p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - negotiate with site owner and organisations or individuals who may be affected by an outage
 - provide advice and guidance to others or seek assistance
- literacy skills to interpret technical documentation, specifications and service orders
- numeracy skills to:
 - check that equipment is calibrated
 - interpret results of system testing
 - evaluate different types of technical data
- planning and organising skills to organise and prepare installation resources
- problem-solving skills to respond to programming challenges
- task-management skills to:
 - work systematically with required attention to detail
 - adhere to safety requirements
- technical skills to:
 - operate computer equipment
 - perform diagnostic procedures
 - undertake fault-finding activities, including the use of multimeters, oscilloscopes, system analysers and diagnostic software.
-

Required knowledge

- applications and advantages of integrated systems
- bus system cable type, polarity, length and acceptable topologies
- controlling digital system integration (DSI) and communicating with digital addressable lighting interface (DALI) electronic ballasts
- factors that affect control bus stability, including number of units on a network, and current drawn by devices in relation to current output of power supplies
- operating parameters of integrated systems and programming to an extent indicated by the following aspects:
 - importance of project documentation and backup
 - importance of the location of output and input devices and control bus power supplies
- lighting dimmer capabilities and selection
- low voltage (LV) supply overcurrent and surge protection
- multiple network connectivity
- software for system and device programming, monitoring and control
- system and device programming, encompassing:
 - addressing conventions for networks, devices, applications, output groups, types of control and outputs, which include 'on', 'off', a specific level, and over a specific time

- PC programming tools and methods (programming includes configuring network database using addressing tools and objects, function objects, editing, altering and transferring the data base to network)
- system fault-finding processes
- system components, encompassing:
 - support devices for control bus supply and control
 - support devices for programming, interconnection between networks and integration with third party systems
- types and capabilities of output devices
- types and capabilities of input devices.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement WHS procedures and practices when developing an integrated system • apply sustainable energy principles and practices when developing an integrated system • determine the types and location of loads and control devices • use load calculations to correctly determine the number of network and current requirements • place system devices appropriately in the system scheme • check programming and diagnostic tools • apply appropriate modes of programming to develop the integrated system • follow manufacturer instructions and recommendations in programming devices and setting load operating parameters • develop an integrated system to comply with regulator, safety and project requirements • download program to network successfully • use diagnostic tools to locate and correct system defects, faults and anomalies • document and back up an integrated system during the following stages of the project: <ul style="list-style-type: none"> • at preparation • at programming • at completion.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a typical contemporary dwelling into which a digital system will be developed • availability of all functional requirements of a modern home • access to contemporary digital equipment • access to all current standards, codes and regulations.

Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing a digital reception system • direct observation of the candidate conducting signal measurement and adjusting for optimal performance • oral or written questioning of the candidate to assess knowledge of complex digital reception systems • oral or written questioning of the candidate to assess knowledge of test methods and performance requirements.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN4229B Design, install and configure a customer smart technology network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Customer</i> may include:	<ul style="list-style-type: none"> • consultant • individual customer • project manager • site manager • site supervisor.
<i>Handover to customer</i> may include:	<ul style="list-style-type: none"> • demonstrating functionality • providing appropriate literature • training customer on equipment use.

ICTDRE4166A Integrate customer digital reception equipment

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to integrate emerging audiovisual technology equipment in a customer home network.</p> <p>Home networks integrate many services such as broadband, digital TV, free to air (FTA), subscription TV (pay TV) and Internet protocol TV (IPTV).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>The unit applies to an installer working with a wide range of customer equipment types, in a variety of customer premises requiring current knowledge of equipment capabilities and connection types. The unit is contextually limited to radio frequency (RF) signal services.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate existing customer equipment	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Notify customer to verify installation order and arrange for site access to comply with security arrangements 1.3. Notify supervisor of identified safety hazards at the worksite and complete a job safety analysis (JSA) before commencing work 1.4. Use test equipment to verify that customer equipment is operational prior to installation 1.5. Assess equipment capabilities and connection types against customer requirements for suitability 1.6. Assess customer premises against installation plan according to client specifications and by-laws, standards and regulations 1.7. Produce an installation diagram using appropriate drawing symbols to indicate connection details of customer system
2. Design and build the system	2.1. Determine connection pathways for optimal performance of system equipment 2.2. Confirm compatibility for proposed connections to existing system 2.3. Produce a final design with block diagrams and specifications 2.4. Select and connect cables to suit connectivity using appropriate materials 2.5. Activate equipment to check for operation of the network
3. Provide enterprise equipment	3.1. Determine best method of connection to service source according to client specifications 3.2. Connect service to system following occupational health and safety (OHS) and environmental requirements and test to verify status of the connection 3.3. Notify service provider if identified problems cannot be rectified at the local level
4. Configure services and optimise customer system	4.1. Conduct client specific and customer set-up operations 4.2. Test performance of enterprise and customer equipment across a range of settings

ELEMENT	PERFORMANCE CRITERIA
	4.3. Record and evaluate test results to satisfy manufacturer's operational margins 4.4. Tune customer equipment for optimal performance 4.5. Restore site to original condition and customer satisfaction
5. Train customer and complete contract documentation	5.1. Conduct <i>customer training</i> appropriate to the equipment, services and vendor literature 5.2. Complete <i>appropriate records</i> and update administration systems according to enterprise policy 5.3. Record and store test results in the appropriate database, leaving copies on site according to enterprise policy 5.4. Provide <i>warranties</i> to customer in required format where work and equipment are subject to warranty 5.5. Prepare invoices and other financial documentation, where required ,and present to customer 5.6. Obtain authorised signatures on required documentation to confirm acceptance of completed work

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer and colleagues and negotiate with site owner
- literacy skills to interpret technical documentation, specifications and service orders
- numeracy skills to take measurements and interpret results
- planning and organisational skills to provide enterprise equipment
- problem solving skills to respond to typical integration challenges
- task management skills to:
 - adhere to all safety requirements
 - work systematically with required attention to detail
- technical skills to:
 - configure services

REQUIRED SKILLS AND KNOWLEDGE

- design and build system
- perform diagnostic procedures
- use hand and power tools
- use test equipment for signal measurement and other enterprise-specific tools

Required knowledge

- analog and digital connectors
- contemporary equipment and connection methods
- continuity, ingress, egress, signal level and signal quality performance tests
- customer service principles, particularly dealing with customers face-to-face
- enterprise or service specific knowledge of products and services supplied
- equipment types:
 - amplifiers
 - couplers
 - splitters
 - taps
- modulation techniques
- objectives and methods of training for product use for customer education
- OHS general principles and enterprise-specific JSA requirements
- performance adjustments for tuning, balancing and replacing components
- quality assurance of enterprise requirements
- test analysis and diagnosis (enterprise diagnosis methods)
- video and audio fundamentals

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify the modulation and other signal characteristics of a range of contemporary products • design and build system • install three types of equipment and services applying all related OHS requirements and work practices • configure services and optimise customer system • conduct functionality tests and interpret results • provide customer training appropriate to the equipment • complete the task and handover to customer.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for DRE integration • DRE currently used in industry • test equipment required for DRE integration.
<p>Methods of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing three types of equipment and services applying all related OHS requirements and work practices • direct observation of the candidate configuring services and optimising customer system • oral or written questioning of the candidate to assess required knowledge.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTDRE4167A Integrate data delivery modes. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE

	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- Australian Communications Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006
- AS/NZS IEC 61935.2:2006
- AS/NZS ISO/IEC 14763.3:2007

RANGE STATEMENT	
	<ul style="list-style-type: none"> • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • cabling security codes and regulations • Environmental Protection Acts • Trades Practices Act • Institute of Electrical and Electronics Engineers (IEEE) standards • ISO Draft 11801 • OHS • regulated or industry codes of practice including appropriate Australian Communications and Media Authority (ACMA) standards • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
<i>Safety hazards</i> may refer to:	<ul style="list-style-type: none"> • debris • excessive dust or noise • exposed electrical wiring • exposed machinery • industrial • spilled chemicals • unsafe spatial separation of cables • unsafe structures • wet areas.
<i>Test equipment</i> may include:	<ul style="list-style-type: none"> • multimeter • signal level meter • spectrum analyser.
<i>Customer equipment</i> may include:	<ul style="list-style-type: none"> • devices: <ul style="list-style-type: none"> • antennas • audio equipment (amplifiers and equalisers) • recorders (disk and hard drive) • speaker systems • TV receivers • digital FTA • hard disk recorder • high definition (HD) TV • home automation • LCD TV • media centre

RANGE STATEMENT	
	<ul style="list-style-type: none"> • plasma TV • security systems • simulation consoles • video player • video and audio distribution systems.
<i>Customer premises</i> may include:	<ul style="list-style-type: none"> • alternative construction types, such as mud brick • concrete construction • domestic brick or timber dwelling • multi-level construction.
<i>Client specifications</i> may include:	<ul style="list-style-type: none"> • equipment types • policy, procedures and practices • service level agreements (SLAs) • standards and quality requirements.
<i>By-laws, standards and regulations</i> may include:	<ul style="list-style-type: none"> • Australian and New Zealand standards and cabling regulations • council by-laws for siting equipment and cables • electrical safety factors.
<i>Drawing symbols</i> may include:	<ul style="list-style-type: none"> • audiovisual (AV) system features • common electrical circuit features.
<i>Optimal performance</i> may include:	<ul style="list-style-type: none"> • antenna orientation • aspect ratio • contrast • picture quality • signal amplification adjustment.
<i>Cables</i> may include:	<ul style="list-style-type: none"> • coaxial • optical fibre.
<i>Materials</i> may include:	<ul style="list-style-type: none"> • antennas • cables • joiners • plugs and other connectors • support fittings.
<i>Client</i> may be:	<ul style="list-style-type: none"> • the organisation contracting the work • the organisation providing services.
<i>OHS and environmental requirements</i> may relate to:	<ul style="list-style-type: none"> • identifying other services, including power and gas • personal protective equipment: <ul style="list-style-type: none"> • earmuffs

RANGE STATEMENT	
	<ul style="list-style-type: none"> • gloves • head protection • masks • protective suits • safety boots • safety glasses • safe working practices, such as the safe use and handling of: <ul style="list-style-type: none"> • chemicals • materials • tools and equipment • safety equipment: <ul style="list-style-type: none"> • flashing lights • safety barriers • warning signs and tapes • witches hats • special access requirements • environmental considerations: <ul style="list-style-type: none"> • clean-up protection • stormwater protection • waste management.
<i>Service provider</i> may be:	<ul style="list-style-type: none"> • an internet service provider (ISP) or a delegated organisation acting on their behalf • a registered telecommunications carrier.
<i>Customer</i> may include:	<ul style="list-style-type: none"> • an individual • entity who is the final recipient of the service.
<i>Customer training</i> may include:	<ul style="list-style-type: none"> • customer to operate equipment functions • demonstration to customer • explanation of operating functions as provided in vendor product literature • explanation of relevant equipment functions • feedback to customer on their operation of equipment functions.
<i>Appropriate records</i> may include:	<ul style="list-style-type: none"> • connection records • equipment user guides • invoices.
<i>Warranties</i> may include:	<ul style="list-style-type: none"> • support provided by network service provider • support specified by the equipment manufacturer or supplier.

ICTDRE4167A Integrate data delivery modes

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to connect and configure a media centre that integrates signal for distribution.</p> <p>Received signals from radio frequency (RF) sources are combined with voice and data signals from other sources and the composite signal is distributed to a range of devices.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	--

Application of the Unit

Application of the unit	<p>The unit applies to an installer working in a digital reception sector integrating services from multiple sources and in multiple formats (RF, digital, data, and voice) for both inward and outbound signals into complex customer systems.</p> <p>Note: This unit builds on ICTDRE4166A Integrate customer digital reception equipment, and extends the concept of system integration by adding a new dimension - multiple services and multiple delivery modes.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate existing customer equipment	1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work 1.2. Notify customer to verify installation order and arrange for site access to comply with security arrangements 1.3. Notify supervisor of identified safety hazards at the worksite and complete a job safety analysis (JSA) before commencing work 1.4. Use test equipment to verify that customer equipment is operational prior to installation 1.5. Assess equipment capabilities and connection types against customer requirements for suitability 1.6. Assess customer premises against installation plan according to client specifications and by-laws, standards and regulations 1.7. Produce an installation diagram using appropriate drawing symbols to indicate connection details of customer system
2. Design and build a multiple service customer system solution	2.1. Determine connection requirements and pathways for each service to be connected and locate a signal source for each service 2.2. Confirm compatibility for proposed pathway options connections to existing system and for optimal performance 2.3. Produce a preliminary connection plan with block diagrams and specifications to optimise system performance 2.4. Evaluate connection plan design to determine any local spectrum management issues arising from multiple service 2.5. Produce a final connection design with amendments to eliminate local spectrum management contentions if required 2.6. Select and connect cables according to connection plan using appropriate materials 2.7. Activate equipment to check for operation of the network 2.8. Resolve connection issues that arise during the build phase and modify connection plan
3. Provide enterprise equipment with	3.1. Determine optimal method of connection to each

ELEMENT	PERFORMANCE CRITERIA
multiple services	<p>service source according to <i>client</i> specifications</p> <p>3.2. Connect service to system following occupational health and safety (<i>OHS</i>) and <i>environmental requirements</i> and test to identify and rectify connection issues</p> <p>3.3. Notify <i>service provider</i> if problems cannot be rectified at the local level and escalate unresolvable connection issues accordingly</p>
4. Configure services and optimise customer system across multiple services	<p>4.1. Conduct client specific and <i>customer</i> set-up operations for each service</p> <p>4.2. Test performance of enterprise and customer equipment across a range of settings</p> <p>4.3. Test integrated performance of system across multiple services</p> <p>4.4. Record and evaluate test results to satisfy manufacturer's operational margins</p> <p>4.5. Tune customer equipment for optimal integrated performance across multiple services</p> <p>4.6. Restore site to original condition and customer satisfaction</p>
5. Train customer and complete contract documentation	<p>5.1. Conduct <i>customer training</i> appropriate to the equipment, services and vendor literature</p> <p>5.2. Complete <i>appropriate records</i> and update administration systems according to enterprise policy</p> <p>5.3. Record and store test results in the appropriate database, leaving copies on site according to enterprise policy</p> <p>5.4. Provide <i>warranties</i> to customer in required format where work and equipment are subject to warranty</p> <p>5.5. Prepare invoices and other financial documentation where required and present to customer</p> <p>5.6. Obtain authorised signatures on required documentation to confirm acceptance of completed work</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customer and colleagues and negotiate with site owner
- literacy skills to interpret technical documentation, specifications and service orders
- negotiation skills to interact with site owner
- numeracy skills to take measurements and interpret results
- planning and organisational skills to provide enterprise equipment
- problem solving skills to respond to typical integration challenges
- task management skills to:
 - adhere to all safety requirements
 - work systematically with required attention to detail
- technical skills to:
 - adjust performance by tuning, balancing and replacing components
 - configure network
 - perform digital home technology integration (DHTI) and troubleshooting
 - perform tests for continuity, ingress, egress, signal level and signal quality
 - use hand and power tools
 - use test equipment for signal measurement and other enterprise-specific tools

Required knowledge

- contemporary equipment and connection methods
- customer service principles, particularly dealing with customers face to face
- enterprise or service specific knowledge of products and services supplied
- equipment types:
 - amplifiers
 - couplers
 - taps
 - splitters
- home automation
- home theatre systems
- modulation techniques
- OHS general principles and enterprise specific JSA requirements
- performance adjustments for tuning, balancing and replacing components
- quality assurance of enterprise requirements
- security systems
- telephone service

REQUIRED SKILLS AND KNOWLEDGE

- test analysis and diagnosis (enterprise diagnosis methods)
- test equipment and signal measurement and other enterprise-specific tools
- video and audio fundamentals
- wireless local area networks (WLANs)
- wireless technology

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify service requirements of a range of contemporary products • design and build a multiple service customer system solution • install and integrate at least two services to a customer system comprised of at least three equipment components applying all related OHS requirements and work practices • activate and optimise customer equipment using two or more signal sources • configure services and optimise customer system across multiple services • conduct functionality tests and interpret results • provide customer training appropriate to the equipment.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site for data delivery modes integration • range of equipment currently used in industry • range of test equipment required for data delivery integration.
<p>Methods of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing and integrating at least two services to a customer system comprised of at least three equipment components • direct observation of the candidate configuring services and optimising customer system across multiple services • oral or written questioning of the candidate to assess required knowledge.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTDRE4166A Integrate customer digital reception equipment. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to conduct training for customers on telecommunications equipment. It involves assessing the type of training suitable for the product and customer, delivering and checking the training.</p> <p>The equipment may be a new installation or technology or an upgrade for an existing network or subsystem deploying Next Generation Networks (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Customer premises equipment (CPE) installation staff or dedicated trainers involved in very large installations apply the skills and knowledge in this unit.</p> <p>The unit applies to convergent technology applications, such as internet protocol TV (IPTV), digital TV and internet protocol (IP) based customer equipment.</p>
---------------------------------------	---

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify training required	1.1. Confirm <i>training to be provided</i> with the installation quote 1.2. Assess customer's expertise and actual <i>training details</i> 1.3. Identify and prepare for specialised training needs 1.4. Provide quotes for enhanced training and confirm with the customer
2. Conduct training	2.1. Demonstrate and explain relevant <i>equipment, functions and network facilities</i> 2.2. Provide customers with hands-on experience operating the equipment 2.3. Provide feedback to customers on their operational ability 2.4. Provide customers with relevant <i>product literature</i> 2.5. Provide enhanced training as agreed
3. Check training	3.1. <i>Measure</i> customer's skill in the use of the equipment 3.2. Review training delivery and note improvements 3.3. Update and store records according to organisational requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to use information to ascertain training needs
- communication skills to:
 - communicate with customers, employer, supervisors, work associates, team members and other contractors
 - give constructive feedback
 - organise and give demonstrations
 - provide clear information
- literacy skills to complete and maintain documentation
- numeracy skills to cost training

REQUIRED SKILLS AND KNOWLEDGE

- planning and organisational skills to manage training program

Required knowledge

- content of learning to be provided
- learner characteristics and needs
- sources and availability of technical training information
- training techniques:
 - demonstration
 - individual and group activities
 - instruction
 - questioning

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • identify training needs required for CPE installation • conduct customer training on a CPE installation including: <ul style="list-style-type: none"> • demonstration • hands-on experience • feedback on performance • complete training documentation.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • training resources • CPE product information • training rooms.
Methods of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of training plans prepared by the candidate • direct observation of the candidate conducting a training program session • oral or written questioning of the candidate on the training process and review.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTEDU5025A Develop and deliver training associated with new and modified products. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

EVIDENCE GUIDE

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Training to be provided may be:

- general
- specific to particular products.

Training details may include:

- enhanced with specific price structure
- language, literacy and numeracy levels
- learning styles
- product specifications
- past learning and work experiences
- specific needs.

Equipment, functions and network facilities may include:

- NGN:
 - broadband access
 - data transfer

RANGE STATEMENT	
	<ul style="list-style-type: none"> • home networks • IP based systems • IP PBX • IP security networks • IPTV • mobile data • mobile telephony • multimedia • remote telemetry • video • voice over internet protocol (VoIP).
<i>Product literature</i> may include:	<ul style="list-style-type: none"> • configuration • equipment plans • explanatory booklets • manuals • training aids • user guides.
<i>Measure</i> may include:	<ul style="list-style-type: none"> • informal review or discussion • learner evaluations • learner feedback • observation.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare to develop a training program	1.1. Confirm the <i>training specifications</i> required for a specific product with <i>client</i> 1.2. Research available and relevant material and prepare an outline for proposed training 1.3. Present and confirm suitability of proposed outline with client 1.4. Determine <i>training schedule</i> parameters 1.5. Establish criteria for post-training evaluation
2. Design training program and support material	2.1. Develop a training program that follows a logical sequence and builds on the existing knowledge of recipients 2.2. Create training material that meets up-to-date <i>product and technical information</i> and all related occupational health and safety (OHS) issues and work practices 2.3. Develop <i>training delivery</i> style to suit the skills of the recipient 2.4. Review and amend training material prior to product, equipment or facility changes being introduced by the company 2.5. Develop training schedule to meet needs and schedules of recipients
3. Deliver training to sales and technical staff	3.1. Deliver training sessions in a systematic fashion and in a format suitable to client's needs 3.2. Monitor student performance against pre-determined criteria 3.3. Provide feedback on student performance against pre-determined criteria 3.4. Evaluate training session against pre-determined criteria on completion and identify potential improvements
4. Complete documentation	4.1. Record session evaluation and feedback from recipients 4.2. Present report to client on effectiveness of training sessions and recommendations for improvements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - demonstrate procedures and features of products to others
 - liaise with customers to ensure requirements are known
- interpersonal skills to relate to customers, employer, work associates, team members and individuals
- literacy skills to:
 - interpret technical specifications and related documentation
 - enterprise policy and documentation
- planning and organisation skills to prepare for training, including agendas and logistical requirements
- problem solving skills to present information appropriate for a range of clients
- research skills to gain and maintain relevant and current technical knowledge

Required knowledge

- common customer telecommunications applications and related equipment
- features of specific products
- high level knowledge of the specific technical content of training and its application
- sources of:
 - reference documents available relevant to training
 - support available after training is complete

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan simulation of hardware instruments	1.1. Arrange access to the site according to required procedure 1.2. Determine the specific <i>applications</i> for virtual instruments in telecommunication systems 1.3. Determine the <i>features</i> of virtual instruments applicable to telecommunication systems, including limitations of virtual instruments 1.4. Select a <i>range</i> of simple and complex virtual instruments applicable to telecommunication systems
2. Perform simulation techniques	2.1. Perform measurements on telecommunication systems using simple virtual instruments 2.2. Simulate and display the properties of a modulated signal with software generated instruments following enterprise occupational health and safety (OHS) processes and procedures 2.3. Simulate and display a data signal transmitted through a band-limited channel 2.4. Control virtual instruments using data bus operation
3. Analyse simulation measurements	3.1. Determine the <i>conversion processes</i> used in virtual instruments 3.2. Document the potential effect of a simulation <i>algorithm</i> on the readings taken 3.3. Analyse measurements in context of conversion process and simulation algorithm
4. Report measurement results	4.1. Prepare report on measurement results 4.2. Submit report to supervisor

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
<ul style="list-style-type: none"> research skills to source information on simulation techniques communication skills to:

REQUIRED SKILLS AND KNOWLEDGE

- liaise with internal and external personnel on technical and operational matters
- relate to work associates, supervisors, team members and clients
- literacy skills to:
 - interpret technical documentation such as equipment manuals, specifications and service orders
 - write reports using standard formats
- technical skills to use:
 - simulation techniques for measurements on telecommunication systems
 - software generated instruments to display basic communication signals
 - word processing and desktop research

Required knowledge

- applications of virtual instruments
- current and emerging developments in relation to virtual instruments
- familiarity with workplace and industry environment
- instrumentation principles and practices
- internet support services
- modulation methods, AM, FM and digital formats
- organisational policy and procedures
- sampling and data conversion processes
- virtual instrument features and benefits

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply the Unix operating system to system automation in a distributed computing environment as used in telecommunications applications.

Application of the Unit

Telecommunication engineers apply the skills and knowledge in this unit to manage a range of automated systems within a telecommunications network.

This includes responsibility for managing databases, files systems and user administration.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Operate a Unix based system</p>	<p>1.1 Modify boot options by operating a Unix system</p> <p>1.2 Shutdown a Unix system using system commands with <i>qualifiers</i></p> <p>1.3 Manage files using file management commands and wildcards and creating disk partitions and other media file systems</p> <p>1.4 Mount and unmount file systems using system commands</p> <p>1.5 Verify the integrity of file systems using <i>system utilities</i></p> <p>1.6 Configure <i>telecommunication applications</i> by using system commands with special <i>permission modes</i></p> <p>1.7 Analyse, evaluate and apply Unix features to a given telecommunications multi-user application using distributed computing</p>
<p>2. Apply system functions</p>	<p>2.1 Use the command line interface to interact with shells and commands to the telecommunications application on distributed computing</p> <p>2.2 Manage files by applying <i>regular expressions</i> with system functions</p> <p>2.3 Send text files and output streams through <i>text utilities</i> using commands</p> <p>2.4 Evaluate and apply Unix system functions to a telecommunications application on distributed computing to create menu options</p>
<p>3. Manage user login environment and customisation</p>	<p>3.1 Manage user and group accounts to the telecommunications application on distributed computing</p> <p>3.2 Change user and group <i>profiles</i> to allowed security access level using commands</p> <p>3.3 Scan log files for activity using commands</p> <p>3.4 Configure the user environment for setting user and global profiles</p> <p>3.5 Record the configuration settings</p>
<p>4. Manage system level functions</p>	<p>4.1 Automate scheduling using the system 'cron' command</p> <p>4.2 Analyse the need for backup strategy in a telecommunications network application</p> <p>4.3 Plan a backup strategy to maintain redundancy of the system</p>

	<p>4.4 Configure the system to perform scheduled backing up the file system to various media</p> <p>4.5 Verify integrity of backup operations by restoring system using backup files</p> <p>4.6 Configure system log files for administration and security needs</p> <p>4.7 Manage a print server and print files to provide customer service</p> <p>4.8 Document the configuration backup schedules and system logs</p>
<p>5. Complete evaluation and configuration documentation</p>	<p>5.1 Produce a project evaluation report on the application of Unix features to a given telecommunications multi-user application using distributed computing with recommendations on improvements to the system</p> <p>5.2 Produce a report on the management and configuration of user applications and system level functions</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - present technical information
 - liaise with customers and internal team members
- literacy skills to prepare reports
- planning and organising skills to direct and manage own work
- problem solving skills to address operational issues
- research skills to gather data and information from ICT systems
- technical skills to use automated systems in distributed computing.
-

Required knowledge

- automated systems
- communication systems
- distributed computing
- encoding and programming techniques
- network security
- networking of infrastructure
- realisation of software simulation
- Unix commands.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use Unix operating system to manage ICT system functions • analyse system functions based on data • produce a report on the system with recommendations for improvement.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a telecommunications operations site with Unix based system to manage automated functions.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • oral or written questioning to assess required knowledge • review of evaluation and configuration reports • direct observation of the candidate performing operational procedures on a Unix based system to manage telecommunications network functions.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTPMG7145B Undertake a telecommunications project • ICTPMG8143B Manage a telecommunications project. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p>

	<p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Qualifiers may refer to:	<ul style="list-style-type: none"> • current applications • notifications to users on future applications.
System utilities may include:	<ul style="list-style-type: none"> • df • du • fsck.
Telecommunication applications may include:	<ul style="list-style-type: none"> • directories and network files • network mountable file systems • set permissions on files.
Permission modes may include:	<ul style="list-style-type: none"> • sticky bit • suid.
Regular expressions may include:	<ul style="list-style-type: none"> • grep • sed.
Text utilities may include:	<ul style="list-style-type: none"> • cut • expand • fmt • head • join • nl • paste • pr • sed • sort • split.
Profiles may include:	<ul style="list-style-type: none"> • addresses • level of user login • passwords • type of user login.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse forecasts using customer demand	1.1. Gather and organise information concerning customer service and usage data to determine customer demand 1.2. Determine <i>trends in customer demands</i> in specific customer operating environment and markets 1.3. Assess <i>key measures of capacity</i> and customer demand for forecast
2. Build models to develop business cases	2.1. Construct a model to represent key options to formulate strategic proposals in network planning 2.2. Access the <i>legislation</i> that govern carriers in Australia to determine the rights of carriers and service providers in installing facilities under Commonwealth legislation 2.3. Produce a strategic network plan using <i>key variables</i> and communicate them to <i>intended audience</i> 2.4. Apply business case methodology to determine <i>key economic measures</i> and risks to business success 2.5. Evaluate business value and options to recommend appropriate planning strategy
3. Apply financial analysis	3.1. Use a <i>financial investment tool</i> relevant to the business environment to determine financial viability of the planning project 3.2. Apply key economic measures in an analysis process and develop business strategy 3.3. Determine relevant level of financial analysis required to optimise network planning
4. Analyse demographic trends for strategy development	4.1. Gather demographic data and determine impact of <i>demographic diversity</i> on planning strategies 4.2. Analyse data and produce <i>demographic trends</i> for use in strategy developments in network planning
5. Assess technology implementation	5.1. Determine unit costs associated with technologies and products by using lifecycle of technologies 5.2. Research what different technology bases can deliver and the circumstances and locations in which they should be successfully deployed
6. Evaluate network deployment architecture	6.1. Evaluate network deployment architecture using network deployment rules and reasoning behind architecture rules 6.2. Produce a business model of network planning applying <i>commercial considerations</i> and <i>exemption</i>

ELEMENT	PERFORMANCE CRITERIA
	<i>process</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - evaluate technical and financial models
 - interpret, analyse and evaluate data
- communications skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to read and interpret technical and financial information from a range of sources
- planning and organisational skills to prioritise and monitor own work
- research skills to gather information on a range of network planning issues
- technical skills to:
 - carry out financial analyses
 - use emerging technologies in network planning

Required knowledge

- business modelling
- commercial considerations:
 - capital expenditure (CAPEX)
 - operational expenditure (OPEX)
 - product revenue and demand versus network cost
 - return on investment (RoI)
 - time to market
- demographics
- emerging technologies of telecommunications
- financial investment tools:
 - cost-benefit analysis
 - investment management system
 - net present value (NPV)
- financial models
- forecasting of trends

REQUIRED SKILLS AND KNOWLEDGE

- legislation:
 - Australian Competition and Consumer Commission (ACCC)
 - Telecommunications Industry Regulatory Accounting Framework (RAF)
 - Universal Service Obligation (USO)
- network planning processes

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • analyse forecasts using customer demand • build models to develop business cases • apply financial analysis • analyse demographic trends for strategy development • assess technology implementation • evaluate network deployment architecture.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • access to network planning data, relevant databases, business and financial models • systems and deployment rules • relevant legislations, planning processes and Telecommunications Industry Regulatory Accounting Framework (RAF).
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of business models and strategic network plans completed by the candidate • oral or written questioning to assess required knowledge that applies to the business acumen for network planning • review of demographic data and research collected by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4108A Plan the deployment of access network architectures • ICTNPL4113A Plan the deployment of core network • ICTNPL4151A Plan the telecommunications access network for an estate.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Trends in customer demands</i> may include:	<ul style="list-style-type: none"> • demands for new services • demographic trends • growth in customer demand • service level forecast • technology upgrade.
---	--

<i>Key measures of capacity</i> may	<ul style="list-style-type: none"> • available bandwidth
--	---

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • available headroom in infrastructure • available outlets or ports • spare channels.
Legislation may include:	<ul style="list-style-type: none"> • ACCC • ACMA legislations • Telecommunications Act 1997 • RAF • telecommunications ombudsman • Trade Practices Act • USO.
Key variables may include:	<ul style="list-style-type: none"> • deployment rate • growth rate • high output sensitivity • time to market.
Intended audience may include:	<ul style="list-style-type: none"> • customers • decision makers • financial managers • planners.
Key economic measures may include:	<ul style="list-style-type: none"> • macro-economic environment • market trends.
Financial investment tools may include:	<ul style="list-style-type: none"> • cost-benefit analysis • investment management system • NPV.
Demographic diversity may include:	<ul style="list-style-type: none"> • cultural diversity • non-homogenous customer demand • socioeconomic diversity.
Demographic trends may include:	<ul style="list-style-type: none"> • ageing population • forecast non-homogenous demand • increase in cultural groups • technology poor.
Commercial considerations may include:	<ul style="list-style-type: none"> • CAPEX • OPEX • product revenue and demand versus network cost • RoI • time to market.
Exemption process may include:	<ul style="list-style-type: none"> • financial impediments • network deployment rules

ICTNPL4108A Plan the deployment of access network architectures

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to plan the deployment of network architecture when conducting access network telecommunications work. It includes use and consideration of access network deployment data, technology, equipment, capacity management and network management information sources.</p> <p>The plan may be for a new installation or upgrade of capacity or technology for existing network or subsystem for convergence to Next Generation Networks (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff and their sub-contractors from private and public organisations apply the skills and knowledge in this unit. They combine technical design skills with broader organisational skills to plan and deploy access network technologies for a service provider such as a major carrier or a rail service provider.</p> <p>Technical officers or engineers may be responsible for small projects or parts of larger projects on NGN in the deployment of copper, wireless, hybrid fibre coaxial (HFC), fibre to the x (FTTx) and fibre networks.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope the project	<p>1.1. Prepare for work according to site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures</p> <p>1.2. Determine the type of <i>access network</i> by accessing and using <i>network information sources</i></p> <p>1.3. Produce a brief on how <i>access network architecture components</i> relate to the larger network and their impact on the work</p> <p>1.4. Evaluate the <i>equipment type</i> and <i>technologies</i> to be considered to determine availability and compatibility with existing network equipment</p> <p>1.5. Obtain <i>resources</i> and equipment needed for the work according to <i>enterprise procedures</i> and check for correct operation and safety</p> <p>1.6. Assess the capacity limitation of various platforms in the context of the work to ensure maximum network performance</p> <p>1.7. Determine product capability and calculate allowable capacity of the Access Network to allow for network growth</p>
2. Produce deployment plan for an Access Network	<p>2.1. Conduct planning work using current <i>equipment components</i> and complying with <i>access network deployment rules</i> and exemption process criteria</p> <p>2.2. Produce a preliminary plan on the deployment of the network that maintains integrity of the access network</p> <p>2.3. Discuss unexpected situations with appropriate personnel, with consideration to job specifications, safety and enterprise procedures to establish a solution</p> <p>2.4. Review plan to ensure that it complies with all standards and codes required when working on network access and where appropriate make adjustments</p>
3. Complete work and report its impact on network access	<p>3.1. Produce final deployment plan including recommendations agreed with the customer</p> <p>3.2. Provide a report on <i>network monitoring techniques</i> used to manage the network to ensure the network is performing at optimum level</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - interpret data results and evaluate different types of technical data
 - interpret technical and non-technical documentation and write summary reports in required formats
 - select and compare benefits and limitations of access equipment
- communications skills to liaise with internal and external personnel on technical and operational matters
- planning and organisational skills to prioritise and monitor own work
- technical skills to:
 - identify the various technologies that constitute an access network
 - interrogate databases and evaluate equipment types and technologies

Required knowledge

- Access Network:
 - architectures and geographical categorisation
 - information sources
 - technology and equipment
- capacity and capability management
- capacity limitation of various platforms
- commercial considerations of access network deployment
- compatibility issues of technology and equipment
- currency of technology and equipment use
- enterprise deployment rules and rational
- exemption process criteria
- major equipment components of a modern access architecture
- monitoring techniques to manage the access network
- network topologies
- product capability and availability that are allowable within an access network
- telecommunications access networks issues and challenges

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> gather data appropriately within information sources and evaluate how the data relates to the access architecture source major equipment and technologies used in an access network and detail their compatibilities plan the deployment of an access network architecture, including deployment rules, capacity and capability management and monitoring techniques complete work within a timeframe typically expected of the discipline, work function and industrial environment.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> network design documentation and other site related documentation equipment specifications live network or training facilities organisational guidelines networked computers networked telecommunications components.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate planning the deployment of an access network architecture review of reports completed by the candidate for differing access network examples review of final deployment plan prepared by the candidate outlining recommendations for the customer oral or written questioning to assess knowledge of equipment and technologies as used within the access network.

EVIDENCE GUIDE**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICTNPL4109A Evaluate the capability of access networks.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

Access network may refer to:

- broadband:
 - wireless fidelity (WiFi)
 - world interoperability for microwave access (WiMAX)
- copper:
 - coaxial
 - HFC
 - twisted pair
- digital services:
 - asymmetrical digital subscriber lines (ADSL)
 - digital subscriber lines (DSL)
- NGN:
 - broadband access
 - data transfer
 - internet protocol (IP) based systems
 - internet protocol private branch exchange (IP PBX)
 - Internet protocol TV (IPTV)
 - mobile data
 - mobile telephony
 - multimedia
 - video
 - voice over internet protocol (VoIP)
- optical:
 - FTTN
 - FTTP
 - FTTx
 - HFC
- wireless networks:
 - cellular
 - microwave
 - radio
 - satellite.

Network information sources may include:

- network management databases for:
 - capacity assessment data
 - network performance data
 - traffic dimensioning data

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network management tools.
<p><i>Access network architecture components</i> may include:</p>	<ul style="list-style-type: none"> • copper network: <ul style="list-style-type: none"> • copper cable • lead-in • lightning protection • line power supply • loading coils • main distribution frame • pair gain system • Ethernet broadband remote access server (EBRAS) • HFC network • IP edge • optical: <ul style="list-style-type: none"> • add/drop multiplexer • broadband passive optical network (BPON) • cross connect unit • distribution/lead-in multi-port (DLM/LM) • fibre access points • fibre distribution hub (FDH) • gigabit passive optical network (GPON) • high density/optical fibre distribution frame (HD/OFDf) • home optical network terminal • optical distribution network • optical fibre • optical receiver • packet optical line terminal (P-OLT) • video optical line terminal (V-OLT) • wave division multiplexer (WDM) • wireless network: <ul style="list-style-type: none"> • antennae • dish • headend • hubs and nodes • radio towers and huts • radio frequency (RF) amplifier • RF transmitters and receivers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • satellite • tap • waveguide • video service centre.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope the project	1.1. Prepare for given work according to site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures 1.2. Determine the <i>types of access networks</i> currently deployed by accessing and using <i>network information sources</i> 1.3. Determine the nature, quantity, architecture and condition of existing network equipment and their <i>attributes</i> 1.4. Produce a brief on the deployment scope of current access networks, including geographical limitations and their contribution to the larger network
2. Assess capability and technologies of current and future access networks	2.1. Produce the layout of the topology of the identified types of Access Networks with the <i>network elements</i> clearly indicated 2.2. Evaluate the <i>equipment type</i> and <i>technologies</i> of the access network to determine compatibility with existing network equipment and interoperability with other networks 2.3. Assess the current and future capability and limitations of the network to ensure potential growth of the network 2.4. Determine future offerings of product and services outlining the product offerings allowable over each network
3. Document capability evaluation	3.1. Assess the capability of current access networks to deliver products and services to customers 3.2. Recommend preferred solutions for network growth with future capabilities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to outline the product offerings allowable across all competing

REQUIRED SKILLS AND KNOWLEDGE

Access Network technologies

- communication skills to liaise with internal and external personnel on technical and non-technical matters
- literacy skills to:
 - interpret technical and non-technical documentation
 - write summary reports in required formats
- numeracy skills to interpret data results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work
- research skills to:
 - assess the elements and architectures of the various access network technologies
 - assess the capability and limitations of the various Access Network technologies (present and future needs)
 - explain the key technologies that make up the access network
 - interrogate databases and investigate different audit requirements
 - source the equipment that will be used across the spectrum of access network technologies
- technical skills to select and compare benefits and limitations of access network technologies

Required knowledge

- detailed knowledge of:
 - typical access network technologies
 - the elements and architecture of the various access networks
- typical problems and challenges that describe the capabilities of the various access networks

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment

ICTNPL4110A Evaluate the planning requirements for provisioning a telecommunications building facility

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to evaluate building service capability to meet present and future demands for a building facility housing telecommunications equipment.</p> <p>It involves gathering information and evaluating allowable types of building services, power systems, air conditioning, fire safety services, energy use and alarm systems within each technology.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Technical officers or engineers from private and public organisations apply the skills and knowledge in this unit. They combine technical design skills with organisational skills to assess the planning requirements of the various building projects and technologies within a telecommunications network to meet future customer demands.</p> <p>Technical officers or engineers may be responsible for small projects or parts of larger projects, and for the operation and engineering of the telecommunications network.</p>
--------------------------------	---

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope the project	<p>1.1. Prepare for given work according to relevant legislation, codes, regulations and standards including occupational health and safety (OHS) processes and procedures</p> <p>1.2. Obtain building plans and specifications from planning section</p> <p>1.3. Determine the type of facility and building services required to house telecommunications network equipment and plant to efficiently support the network</p> <p>1.4. Determine the purpose of the main areas or rooms in the network building and note special requirements to support the safe operation of the facility</p> <p>1.5. Verify who is responsible for the planning, provisioning, maintaining and operation of a facility</p>
2. Evaluate the power requirements	<p>2.1. Assess how the functions of the main power and building services support network equipment and the impact if building services are not provided correctly or fail</p> <p>2.2. Produce a schematic diagram of the relationship of electrical components in an end-to-end power and building services system</p> <p>2.3. Assess the different types of power sources likely to supply network equipment and determine the benefits or deficiencies</p> <p>2.4. Determine how resiliency is built into the provisioning of a reliable power supply and how different levels of reliability can be achieved</p> <p>2.5. Evaluate the impact of energy use and energy loads in the facility and determine how energy use can be minimised</p>
3. Evaluate the requirements of air conditioning services	<p>3.1. Assess the main types of air conditioning components or plant available and their suitability to the building requirements and draw a schematic diagram of the proposed layout</p> <p>3.2. Determine how different equipment rack heat dissipation and size of a load can affect the cooling needs</p> <p>3.3. Evaluate how the deployment of network equipment and other supporting infrastructure can affect the performance and loading of the installed air</p>

ELEMENT	PERFORMANCE CRITERIA
	conditioner
4. Evaluate the requirements of fire safety services	4.1. Assess the type, functions and components of <i>fire service protection systems</i> for fire and smoke required in a network facility for the safety and protection of people and assets 4.2. Use the building plan to locate fire systems to be deployed to comply with fire regulations 4.3. Evaluate the effect equipment deployments may have on fire services and its ability to protect the site and maintain regulatory obligations
5. Evaluate requirements of alarm systems	5.1. Determine the level of alarming requirements from the building plan and specifications 5.2. Assess if basic monitoring is to be used with system or plant interrogation capabilities to produce an integrated alarm system for the facility 5.3. Determine where <i>alarm systems</i> are monitored and actioned and the personnel responsible 5.4. Evaluate what systems are used to connect power and building services output alarms and the software requirements needed to allow interrogation
6. Produce evaluation document	6.1. Assess the requirements for each of the building services needed to support the facility allowing for projection of future growth of the network and building expansion 6.2. Produce an evaluation document on the planning requirements for the proposed provisioning including identified services to support the building facility

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation and write reports in required formats

REQUIRED SKILLS AND KNOWLEDGE

- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt requirements to particular building facilities
- research skills to interrogate databases and investigate different building services
- technical skills to evaluate:
 - air conditioning systems
 - alarm systems
 - fire safety services
 - general energy use
 - impact of energy use in a facility
 - power supplies

Required knowledge

- detailed knowledge of:
 - alarm monitoring and hierarchy of responsibility
 - capacity of air conditioning system on a given load
 - different building services that are supported at a network site
- basic monitoring and plant interrogation capabilities
- complexities of various levels of alarming as applied to building facilities
- general types of facilities within building housing network equipment
- overview knowledge of:
 - different types of air conditioning components
 - different types of fire safety services
 - different types of power sources
 - equipment deployments on fire safety services
 - main energy loads associated in a facility
- regulatory obligations in relation to fire safety services
- software systems needed to allow alarm interrogation (outputs)

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • evaluate facilities used for housing network equipment and how they may be used for provisioning • provide documentation that correctly associates responsibilities to planning, provisioning, maintenance and operation of a building facility • evaluate planning requirements for telecommunications building facilities including: <ul style="list-style-type: none"> • correct provisioning of equipment for air conditioning systems and power supplies into building facilities • energy use, alarm and fire safety services.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • building facilities where planning requirements for provisioning may be conducted • relevant regulatory, organisational procedures and documentation, and equipment documentation that impact on work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking an evaluation of a telecommunications building facility • review of evaluation report prepared by the candidate outlining the planning requirements for the proposed provisioning of identified services • oral or written questioning to assess knowledge of key building facilities, such as power supplies, fire safety, alarm and air conditioning systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p>

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • ICTNPL4111A Develop provisioning of telecommunications building works project. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<p><i>Relevant legislation, codes, regulations and standards</i> may include:</p>	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • Australian Communications and Media Authority (ACMA) technical standards • acts on noise and dust pollution

RANGE STATEMENT	
	<ul style="list-style-type: none"> • ARPANSA electromagnetic radiation (EMR) standard • Australian building codes and regulations • Australian standards • electricity supply codes • enterprise standards • environmental protection • equipment standards, intrinsically safe lightning protection, site engineering standard • fire regulations • hazardous situation • heritage legislation • international standards • local government building codes • OHS • Radcoms Act • Telecoms Act • traffic authorities.
<i>Facility</i> may relate to:	<ul style="list-style-type: none"> • buildings or shelters used to house: <ul style="list-style-type: none"> • people: <ul style="list-style-type: none"> • administration • billing centres • call centres • engineering offices • human resources • network facility for equipment or plant: <ul style="list-style-type: none"> • air conditioning plant • cabling room and main frame • computer facility • exchange equipment (switching and transmission) • power, no-break power plant and battery room • (Note: does not include towers, pipes and conduits).
<i>Building services</i> may relate to:	<ul style="list-style-type: none"> • air conditioning • alarm systems • fire safety • power sources.

RANGE STATEMENT	
<i>Electrical components</i> may include:	<ul style="list-style-type: none"> • battery load monitoring panel • busbars • diesel generator • exchange battery • exchange earth • fuses • mains converter • no-break power plant • power distribution cables • power monitoring panel • rectifier unit • solar panels • wind generators.
<i>Types of power sources</i> may relate to:	<ul style="list-style-type: none"> • electrical energy sources: <ul style="list-style-type: none"> • diesel generator • exchange battery • mains converter • mains power • no-break power plant • solar panels • wind generators • (Note: does not include a power utility company's external generation supply).
<i>Energy loads</i> may relate to:	<ul style="list-style-type: none"> • air conditioning • battery charger • cooling fans • lift motors • lighting • power outlets • pump motors • rectifier unit.
<i>Types of air conditioning</i> may include:	<ul style="list-style-type: none"> • air cooled • ducted • electric • freestanding • gas • water cooled.
<i>Fire service protection systems</i> may refer to:	<ul style="list-style-type: none"> • components: <ul style="list-style-type: none"> • automatic notification system to fire

RANGE STATEMENT	
	<ul style="list-style-type: none"> authorities • control panel • fire alarm • infra-red detectors • smoke sensors • sprinkler system • warning activation system • functions: <ul style="list-style-type: none"> • control • detect • manage • suppress fire and smoke • system type: <ul style="list-style-type: none"> • active • passive.
<i>Alarm systems</i> may refer to:	<ul style="list-style-type: none"> • air conditioning alarm • components: <ul style="list-style-type: none"> • air conditioning alarm panel • biometric system • digital code • fire alarm panel • personal badge • radio frequency identification (RFID) • security alarm panel • fire exit alarms • intruder alarms • lift failure • power loading.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope the project	<p>1.1. Prepare for given work according to relevant legislation, codes, regulations and standards, including occupational health and safety (OHS) processes and procedures</p> <p>1.2. Determine the main role power and building services perform in a network facility and note their effect on the reliability and performance of the network performance</p> <p>1.3. Assess the provisioning process required to identify, plan and implement power and building services for equipment deployment plans</p>
2. Assess equipment and infrastructure deployments	<p>2.1. Evaluate the available capacity from power and cooling plant to support the effect on floor loading, power and heat load from equipment deployments</p> <p>2.2. Determine the different levels of reliability performance standards applicable to the specific equipment deployment needs</p> <p>2.3. Develop a process to plan or implement a power and building services upgrade that is compatible to the network equipment requirements</p> <p>2.4. Assess the options available to manage capacity growth in a facility and the effect of potential single points of failure in an end-to-end power and building services system</p>
3. Develop building works programs	<p>3.1. Develop short and long term works programs for building projects that include minor upgrades to large installations</p> <p>3.2. Determine triggers that may require a power and building services capacity or reliability upgrade</p> <p>3.3. Prioritise projects based on customer demand and business needs</p>
4. Assess provisioning of building services	<p>4.1. Assess the possible effect on the current and future use of a building or space when provisioning power and building services</p> <p>4.2. Produce cost estimates including constraints for the provisioning of a power and building services upgrade</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to read and interpret technical documentation and write technical reports in required formats
- numeracy skills to:
 - calculate floor loading, power and heat load data
 - interpret results
 - evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt requirements to particular building facilities
- research skills to interrogate databases and investigate different building services
- technical skills to:
 - apply precautions and required action to minimise, control or eliminate single points of failure in an end-to-end power and building services system
 - estimate floor loading, power and heat loads
 - select and manage capacity growth in a facility

Required knowledge

- detailed knowledge and information required to assess the capacity and suitability of available power and building services
- overview knowledge of:
 - correlation between building service systems to network equipment requirements
 - different levels of reliability performance standards, applicable to the specific equipment deployment needs
 - information required to assess the effect on floor loading, power and heat load from equipment deployments
 - main regulatory standards
 - role of power and building services, capacity and standards
 - source budget cost estimates
 - specific short and long term works programs
- typical issues and challenges that occur in telecommunications building service systems and how these may be addressed
- upgrade knowledge of both power and building services

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • assess the capacity and suitability of available power and building services for telecommunications building works • develop a process to implement a power and building services upgrade • develop short and long term works projects for equipment and infrastructure deployments • produce cost estimates for provisioning.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • building facilities where a telecommunications network project may be conducted • relevant regulatory, organisational procedures and documentation, and equipment documentation that impact on work.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate developing short and long term works programs for building projects • review of cost estimates prepared by the candidate • review of report prepared by the candidate outlining constraints of provisioning power and building services upgrade • oral or written questioning to assess knowledge of power and building services and equipment and infrastructure deployments.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4110A Evaluate the planning requirements for provisioning a telecommunications building facility.

EVIDENCE GUIDE	
	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Elements and Performance Criteria Pre-Content

<p>Elements Determine the essential outcomes of a unit of competency.</p>	<p>Performance criteria Determine the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</p>
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate basic IP network architecture	<p>1.1. Produce a layout of the topology of an IP network showing the network elements and the application of the 7-layer open system interconnect (OSI) model</p> <p>1.2. Determine the purpose of routers and switches and the use of routing protocols</p> <p>1.3. Determine the different types of generic resiliency and redundancy that can be applied in network architectures and when they should be applied</p> <p>1.4. Evaluate the benefits of IP networks compared to circuit-based networks and the impact on modern telecommunications networks</p>
2. Evaluate synchronous digital hierarchy (SDH) transport architectures	<p>2.1. Produce a layout of the topology of SDH transport networks showing the structure and the role of rings in the networks</p> <p>2.2. Determine the purpose of SDH switching and its function within the transport architecture</p> <p>2.3. Assess key capacity and distance limitations in SDH networks</p> <p>2.4. Assess resiliency and redundancy techniques that can be used within SDH transport networks</p> <p>2.5. Evaluate the compatibility of SDH transport architectures with other transport architectures</p>
3. Evaluate broadband architectures	<p>3.1. Produce a layout of the topology structure of the asymmetrical digital subscriber line (ADSL) edge network and the hybrid fibre coaxial (HFC cable edge network) in providing broadband access to the customer</p> <p>3.2. Determine the purpose of point-to-point protocol (PPP) and the function of the digital subscriber line access multiplexer (DSLAM), broadband remote access server (BRAS) and layer2 network protocol network server (LNS) in the ADSL network</p> <p>3.3. Assess the arrangement of carrier channels connecting the HFC cable customer</p> <p>3.4. Determine the function of the CMTS and the purpose of DOCSIS, and the key capabilities of its different versions in the HFC network</p> <p>3.5. Assess resiliency considerations for ADSL and HFC Cable network architectures</p> <p>3.6. Evaluate the benefits of providing cable broadband access to wireless broadband from a network security</p>

ELEMENT	PERFORMANCE CRITERIA
	aspect
4. Evaluate data architectures	<p>4.1. Produce a layout of the topology of key structures of a data network showing the IP network and multiprotocol label switching (MPLS) structures</p> <p>4.2. Determine the purpose of internal and external routing protocols in an IP network outlining the reasons for the creation of a virtual private network (VPN)</p> <p>4.3. Determine the purpose of label distribution protocol (LDP) in an MPLS network</p> <p>4.4. Assess resiliency and redundancy techniques that can be used within data networks</p> <p>4.5. Evaluate the compatibility of IP and MPLS networking</p>
5. Evaluate metropolitan ethernet architectures	<p>5.1. Produce a layout of the topology structure of a metropolitan ethernet network showing the optimum siting of the ethernet switch</p> <p>5.2. Determine the types and limitations of the varieties of ethernet transmission</p> <p>5.3. Assess the scaling limitations of ethernet networks</p> <p>5.4. Assess resiliency and redundancy techniques that can be used within metropolitan ethernet networks</p> <p>5.5. Evaluate the need for the creation of virtual local area networks (VLAN) in metropolitan Ethernet architecture for improved performance</p>
6. Evaluate voice architectures	<p>6.1. Produce a layout of the topology of a voice over internet protocol (VoIP network and a wireless voice network) showing the network elements</p> <p>6.2. Determine the function of local exchange and transit exchange switches in the public switched telephone network (PSTN)</p> <p>6.3. Determine the function of an secure broadband connection (SBC) and the purpose of session initiation protocol (SIP) in wireless networking</p> <p>6.4. Assess resiliency and redundancy techniques that can be applied in the design of voice networks</p> <p>6.5. Evaluate the benefits of VoIP networks compared to circuit based networks and the impact on modern telecommunications networks</p>
7. Evaluate media and content architectures	7.1. Determine the structure, elements and purpose of hosting networks in data centres and a content

ELEMENT	PERFORMANCE CRITERIA
	distribution network 7.2. Evaluate the impact of high speed broadband for the wide deployment of <i>media and content architectures</i>
8. Prepare evaluation report	8.1. Assess compatibility and interoperability of competing core network architectures 8.2. Prepare an evaluation report outlining core network solutions using emerging technologies

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section Determines the skills and knowledge required for this unit.

Required skills

- communication skills to analyse, evaluate and present information
- financial modelling skills to specify, analyse and evaluate a range of different solutions
- group facilitation and presentation skills to transfer and collect information and gain consensus on concepts
- problem solving skills to:
 - address a defined range of unpredictable problems, for example, when predicting line traffic and the impact on input and output devices and processors from current and future demand requirements
 - address a predictable range of network problems
- project planning skills to:
 - scope, time and cost work when reviewing client user requirements and network requirements
 - set benchmarks and identified scope
- research skills to specify, analyse and evaluate broad features of current security issues and best practice in security devices, products and procedures
- technical skills to:
 - evaluate and compare a range of complex technical data
 - research and identify, analyse and evaluate features of a particular core network architecture

Required knowledge

- broad knowledge of:

REQUIRED SKILLS AND KNOWLEDGE

- client business domain, business function and organisation
- networking technologies
- theoretical concepts of three or more current industry network development and design methodologies
- transmission technologies and protocols
- MPLS and IP architectures across a core network environment
- overview knowledge of current industry-accepted hardware and software products
- protocols, such as routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF), border gateway protocol (BGP) operations
- VLANs and VPN tunnels and how its is implemented in an ethernet/MPLS environment

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • determine the first three layers of the OSI model • determine the role of switches and routers in the core network and the different types of routing protocols • evaluate SDH switching and transmission and its ability to create resiliency in the network through various redundant configurations • evaluate the benefits, purpose and structure of ADSL networks and other broadband products • determine and compare data networks with specific reference to IP and MPLS • evaluate the most important routing protocols of internal and external MPLS and the resilience that is built into them • evaluate the limitations of an Ethernet network and how VLAN can be incorporated in them • compare various voice protocols • determine the purpose of various hosting in data centres and media and distribution platforms.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • network design documentation and other site related documentation • equipment specifications • live network or training facilities • organisational guidelines • networked computers • networked telecommunications components.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing an evaluation of core network architectures • review of evaluation report completed by the candidate outlining compatibility and interoperability

EVIDENCE GUIDE	
	<p>of competing core network architectures</p> <ul style="list-style-type: none"> oral or written questioning to assess knowledge of planning various core networks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTNPL4113A Plan the deployment of core network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and

RANGE STATEMENT	
regional contexts) may also be included.	
<i>IP network</i> may include:	<ul style="list-style-type: none"> • gateways • routers • servers • switches.
<i>SDH transport networks</i> may include:	<ul style="list-style-type: none"> • add-drop multiplexers (ADM) • synchronous digital hierarchy (SDH) switch • synchronous transport module - level1 (STM-1).
<i>HFC cable edge network</i> may include:	<ul style="list-style-type: none"> • ADM • broadband amplifier • cable modems • DSLAMS • fibre network • multiplexer.
<i>Data network</i> may include:	<ul style="list-style-type: none"> • access • backbone • edge • MPLS protocols • routers • routing protocols • switches.
<i>Routing protocols</i> may include:	<ul style="list-style-type: none"> • BGP • EIGRP • interior gateway routing protocol (IGRP) • intermediate system-to-intermediate system (IS-IS) • OSPF • RIP.
<i>Ethernet network</i> may include:	<ul style="list-style-type: none"> • applications • gateways • LAN switch • routers • servers • switches • transmission equipment • VLAN.
<i>VoIP network and a wireless voice network</i> may include:	<ul style="list-style-type: none"> • access points • adapters

RANGE STATEMENT	
	<ul style="list-style-type: none"> • antennas • gateways • routers • servers • switches • voice managers.
<i>Media and content architectures</i> may include:	<ul style="list-style-type: none"> • central processing unit (CPU) • media managers • multiplexers • routers • servers.

ICTNPL4113A Plan the deployment of core network

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to plan the deployment of core network for a telecommunications service provider. It includes use and consideration of core network deployment data, technology, equipment, capacity management and network management information sources. Core networks use convergent internet protocol (IP) based technologies with conventional technologies.</p> <p>The plan may be for a new installation or upgrade of capacity or technology for existing network or subsystem for convergence to Next Generation Networks (NGN).</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical staff and their subcontractors from private and public organisations apply the skills and knowledge in this unit. They combine technical design skills with organisational skills to plan and deploy core network technologies for a service provider such as a major carrier or a rail service provider.</p> <p>Technical officers or engineers may be responsible for projects and for operational and engineering work in deployment or conversion to IP based technologies of the telecommunications network in general.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope the project	<p>1.1. Prepare for work according to site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures</p> <p>1.2. Determine the type of <i>core network</i> by accessing and using network information sources</p> <p>1.3. Produce a brief showing how <i>core network architecture components</i> relate to the larger network and their impact on the work</p> <p>1.4. Evaluate the <i>equipment type</i> and <i>technologies</i> to be considered to determine availability and compatibility with existing network equipment</p> <p>1.5. Obtain <i>resources</i> and equipment needed for the work according to <i>enterprise procedures</i> and check for correct operation and safety</p> <p>1.6. Assess the capacity limitation of platforms in the context of the work to ensure maximum network performance</p> <p>1.7. Determine product capability and calculate allowable capacity of the core network to allow for network growth</p>
2. Produce deployment plan for a core network	<p>2.1. Assess demand for the core network using key geographic, demographic, forecast and bandwidth data</p> <p>2.2. Identify key <i>parameters of the core network</i> to be measured for capacity management</p> <p>2.3. Produce a preliminary deployment plan for the core network using architectural principles and assessed demand to maintain integrity of the core network</p> <p>2.4. Assess the additional planning requirements for voice over internet protocol (VoIP) and wireless voice networks from voice networks, and for hosting and content distribution networks from media and content network</p> <p>2.5. Create a financial business case for the deployment of the core network based on assessed demand to justify a return on investment (RoI) and operational costs</p> <p>2.6. Discuss unexpected situations with appropriate personnel, with consideration to job specifications, safety and enterprise procedures to establish a solution</p>

ELEMENT	PERFORMANCE CRITERIA
3. Complete work and report its impact on network performance	3.1. Produce final deployment plan including recommendations agreed with the customer 3.2. Provide a report on <i>network monitoring techniques</i> used to manage the network to ensure the network is performing at optimum level

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to analyse, evaluate and present information
- group facilitation and presentation skills to transfer and collect information and gain consensus on concepts
- problem solving skills to:
 - address a defined range of unpredictable problems, for example, when predicting line traffic and the impact on input and output devices and processors from current and future demand requirements
 - address a predictable range of network problems
- project planning skills to:
 - scope, time and cost when reviewing client user requirements and network requirements
 - set benchmarks and identified scope
- research skills to specify, analyse and evaluate broad features of current security issues and best practice in security devices, products and procedures
- technical skills to:
 - evaluate and compare a range of complex technical data
 - research, identify, analyse and evaluate features of core network architecture

Required knowledge

- MPLS and IP architectures across a core network environment
- protocols such routing information protocol (RIP), enhanced interior gateway routing protocol (EIGRP), open shortest path first (OSPF), border gateway protocol (BGP) operations
- virtual local area networks (VLAN) and virtual private network (VPN) tunnels and how it is implemented in an ethernet and multiprotocol label switching (MPLS) environment

REQUIRED SKILLS AND KNOWLEDGE

- overview knowledge of:
 - client business domain, business function and organisation
 - current industry-accepted hardware and software products
 - networking technologies incorporating substantial depth in some areas
 - transmission technologies and protocols
 - theoretical concepts of three or more current industry network development and design methodologies

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> gather data from information sources and evaluate how the data relates to the core network source major equipment and technologies used in a core network and detail their compatibilities plan the deployment of a core network including management and monitoring techniques produce a deployment plan for a core network with recommendations for the customer.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> network design documentation and other site related documentation equipment specifications live network or training facilities organisational guidelines networked computers networked telecommunications components.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate planning the deployment of a core network review of reports completed by the candidate for different core networks review of final deployment plan prepared by the candidate outlining recommendations for the customer oral or written questioning to assess knowledge of planning various core networks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTNPL4112A Evaluate core network architectures.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Scope the project	1.1. Prepare for given work according to site specific safety requirements and enterprise occupational health and safety (OHS) processes and procedures 1.2. Determine the types of currently deployed <i>end-to-end service delivery networks</i> by accessing and using <i>network information sources</i> 1.3. Produce a brief on how end-to-end service delivery network elements relate to the larger network and their impact on the work
2. Assess the capacity and capability of a specific end-to-end service delivery project and a building facility project	2.1. Determine the nature, quantity, architecture and condition of existing end-to-end service delivery <i>network elements</i> and <i>attributes</i> that contribute to determining planning specifications 2.2. Assess the capacity and capability limitations of an existing end-to-end service delivery network project by accessing network information sources and conducting site visits 2.3. Assess the capacity and capability <i>limitations of a building facility</i> project that contribute to determining planning specifications
3. Assess the capacity and capability of product and service delivery	3.1. Determine the types of currently deployed <i>products and services</i> by accessing sales and marketing information database 3.2. Produce a brief evaluating the capability and technology of current product and services to meet demands and their relationship to the larger network 3.3. Evaluate the <i>emerging technologies</i> that contribute to determining planning specifications for demands of future products and services
4. Produce planning briefs	4.1. Produce a brief on the planning specifications of an end-to-end service delivery network and a building facility project for planning section to determine current and future network demands 4.2. Produce a brief on products and services planning requirements for sales and marketing to determine provisioning of future demands

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation and write briefs in required formats
- numeracy skills to compare technical data on various network technologies
- planning and organisational skills to plan, prioritise and monitor own work
- research skills to interrogate databases and investigate different equipment requirements
- technical skills to select and describe appropriate end-to-end services models

Required knowledge

- emerging technologies, trends and products that are available overseas and will be in demand in the Australian market
- information required to prepare and review the limits of:
 - broadband networks
 - data networks
 - facilities and environmental issues
 - fixed access transmission network
 - media and content
 - regional and metropolitan network
 - voice networks
 - wireless network
- overview knowledge of:
 - basic network design including routing and redundancy
 - levels of reliability performance standards applicable to specific equipment deployment needs
 - standards and regulations
- specific knowledge on the distribution structure of networks including:
 - access
 - backbone
 - edge
- up to date knowledge of current equipment and product types to meet future service obligations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • access network information databases to determine the types of end-to-end services and products • conduct site evaluation assessment • evaluate the capacity and capability of end-to-end services to meet current and future demands • assess the limitations of current end-to-end services and produce specifications to meet future demands • assess the limitations of current building facility and services and produce specifications to meet future demands • summarise and produce planning briefs to network, sales and marketing planning sections.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • an access network planning area, with access to systems and deployment rules and standards • end-to-end services and products databases • relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate evaluating competing technologies and producing planning specifications • review of reports completed by the candidate for differing project briefs • oral or written questioning to assess knowledge of the various access methods of providing an end-to-end service in terms of delivery.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Evaluate economic and political influences on the telecommunications industry in Australia</p>	<p>1.1. Research the impact of deregulation and competition in the telecommunications industry on <i>planning priorities</i> of competing service providers in Australia due to the different federal government policies</p> <p>1.2. Assess the influence of local and international economic conditions on the growth of the industry that would impact on the <i>planning</i> justification for a new network</p> <p>1.3. Evaluate and produce a report on the economic and political influences upon public and commercial enterprises providing services in a competitive telecommunications market of fast changing technologies</p>
<p>2. Evaluate impact of key regulation and legislation on the telecommunications industry</p>	<p>2.1. Access the <i>legislations</i> that govern carriers in Australia to determine the rights of carriers and service providers in installing facilities under Commonwealth legislation</p> <p>2.2. Use the Telecommunications Industry Regulatory Accounting Framework (RAF) to determine the method used by the Australian Competition and Consumer Commission (ACCC) in enforcing competitive provisions between service providers</p> <p>2.3. Evaluate the impact on planning of services by the obligation placed by Universal Service Obligation (USO) on service providers to ensure that services are reasonably accessible to all people in Australia on an equitable basis</p> <p>2.4. Produce a summary report evaluating the impact by the legislations on the planning process of Access Networks and plan strategies to facilitate network planning</p>
<p>3. Apply internal financial compliance</p>	<p>3.1. Use an enterprise-specific investment management system (IMS) to create on the spot reports for performance measurement of an existing planning project against the <i>business plan</i></p> <p>3.2. Produce a report of planning work activities incorporating enterprise-specific policies and procedures underpinned by regulatory and compliance obligations</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to assess impact of economic and political influences on enterprise policies and procedures
- literacy skills to write evaluation reports
- planning skills to review current and new technology, facilities and features when developing options
- problem solving skills to assess current Access Network conditions
- research skills to:
 - analyse impact on planning processes
 - obtain and study information relating to the telecommunications industry
 - study relevant legislation and associated operational codes

Required knowledge

- deregulation of industry
- investment management system
- legislations
- market forces
- planning procedures
- telecommunications framework
- telecommunications industry
- telecommunications networks

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> produce an evaluation report on the economic and political influences on the telecommunications industry in Australia produce an evaluation report on the impact of key regulation and legislation on the telecommunications industry produce a summary report evaluating the impact by the legislations on the planning process of Access Networks.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> relevant legislations, planning processes and Telecommunications Industry Regulatory Accounting Framework (RAF) planning tools, enterprise-specific investment management system (IMS), relevant databases, licensing requirements and other related procedures.
<p>Methods of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> review of evaluation and summary reports completed by the candidate oral or written questioning to assess required knowledge.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTNPL4108A Plan the deployment of access network architectures ICTNPL4151A Plan the telecommunications access network for an estate. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

EVIDENCE GUIDE	
	<p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. ICTNPL4151A Plan the telecommunications access network for an estate

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	<p>This unit describes the performance outcomes, skills and knowledge required to plan access networks delivering voice, data and video services to customers. It involves collation and evaluation of data relating to network shortfalls and projected usage, leading to the development of solutions and ultimately network plans for an estate.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
------------------------	---

Application of the Unit

Application of the unit	<p>Technical officers from private and public organisations apply the skills and knowledge in this unit to perform the role of a network planner. They combine technical design and planning skills with organisational, economic and regulation skills to plan the access network for an estate or green field site.</p> <p>Technical officers may be responsible for small projects or parts of larger projects, and for the operations and engineering of the enterprise and telecommunications network in general.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather data on network usage for planning activity	1.1. Determine the type of <i>access network</i> by accessing and using <i>network information sources</i> 1.2. Collect <i>planning data</i> using network information sources to determine <i>network trends</i> 1.3. Evaluate <i>new and emerging technologies</i> to determine availability and compatibility with existing network equipment 1.4. Access <i>relevant legislation</i> and associated regulatory and operational codes
2. Evaluate need for network growth	2.1. Evaluate capacity of the <i>existing network</i> to absorb planned growth 2.2. Identify need and likely timing of necessary network increments 2.3. Assess new or alternate technologies to rectify network shortfall 2.4. Identify <i>barriers relating to planned network extensions</i> that impact on planning the network realisation 2.5. Assess the impact of not meeting network shortfall needs and the long term ramifications on the business
3. Develop solution and network plan to address network shortfall	3.1. Review overall <i>planning parameters</i> prior to commencement of the planning process to produce forecasts for specific network area and cost-benefit analysis 3.2. Establish the optimum solution to address network shortfall with justification for the proposal 3.3. Determine project details and ascertain preliminary costing and <i>resource requirements</i> 3.4. Determine the availability of required technology or technology features within the specified timeframe 3.5. Produce a specific <i>network plan</i> with solution and recommendations for anticipated projects for approval according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify details relating to the project from the approved network plan
- communication skills to discuss project brief with the customer
- learning skills to:
 - develop and study planning options, considering present and future needs
 - identify barriers to plan realisation
- literacy skills to write project briefs
- numerical skills to:
 - analyse site survey data
 - cost estimates and operating budgets according to enterprise policy
 - undertake cost-benefit studies to inform the decision making process
- planning skills to review current and new technology, facilities and features when developing options
- problem solving skills to:
 - address and analyse specific customer requirements
 - assess current Access Network conditions
- research skills to:
 - analyse impact on planning processes
 - obtain and study information relating to new technology or technology features
 - obtain geographical information
 - study relevant legislation and associated operational codes
- technical skills to apply the three phases of project management to the project brief

Required knowledge

- awareness of relevant legislation
- detailed knowledge of:
 - cost estimates and operating budgets according to enterprise policy
 - telecommunications industry in Australia
 - theory of project management and associated databases and project management software programs
- overview knowledge of:
 - economic and political influences upon public and commercial enterprises
 - financial authorities and delegations
 - influence of the local and international economic conditions on the telecommunications industry
 - typical challenges and limits facing technology today and the consideration of

REQUIRED SKILLS AND KNOWLEDGE

future needs

- specific knowledge of collating and writing project briefs, reports and project charters

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • implement planning processes including associated monitoring and control mechanisms • develop solutions to address Access Network shortfalls that satisfy customer and enterprise needs • merge technological development and product implementation into network development plans • produce forecasts for a specific network including cost-benefit analysis.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • a network planning area, systems and deployment rules and standards • relevant databases, licensing requirements and other site related procedures.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking an assessment of an access network • review of documented network development plan, within specification and within specified timeframes completed by the candidate for differing project briefs • review of solutions developed by the candidate that address network shortfalls • oral or written questioning to assess knowledge of planning the access network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4108A Plan the deployment of access network architectures • ICTNPL4109A Evaluate the capability of access

EVIDENCE GUIDE

	<p>networks.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	--

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Access network may refer to:

- copper:
 - coaxial
 - hybrid fibre coaxial (HFC)
 - twisted pair
- broadband:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • wireless fidelity (WiFi) • world interoperability for microwave access (WiMAX) • digital services: <ul style="list-style-type: none"> • asymmetrical digital subscriber line (ADSL) • digital subscriber line (DSL) • internet protocol (IP) network: <ul style="list-style-type: none"> • computer • IP private branck exchange (IP PBX) • Internet protocol TV (IPTV) • Voice over internet protocol (VoIP) • optical: <ul style="list-style-type: none"> • fibre to the x (FTTx) • fibre to the premises (FTTP) • fibre to the node (FTTN) • HFC • point-to-point network • point-to-multipoint network • wireless networks: <ul style="list-style-type: none"> • cellular • microwave • radio • satellite.
<i>Network information sources</i> may include:	<ul style="list-style-type: none"> • network management databases for: <ul style="list-style-type: none"> • capacity assessment data • network performance data • traffic dimensioning data • network management tools.
<i>Planning data</i> may relate to:	<ul style="list-style-type: none"> • current and proposed network growth • demographic growth • traffic quantity and flow.
<i>Network trends</i> may include:	<ul style="list-style-type: none"> • current network capacity • demographic trends • forecasts service demand • forecasts traffic demand • projected network capacity.
<i>New and emerging technologies</i>	<ul style="list-style-type: none"> • digital subscriber lines:

RANGE STATEMENT	
may include:	<ul style="list-style-type: none"> • ADSL • DSL • IP broadband converging technologies: <ul style="list-style-type: none"> • IPTV • VoIP • WiFi • WiMAX • optical transmission systems: <ul style="list-style-type: none"> • dense wavelength division multiplexing (DWDM) systems • wavelength division multiplexing (WDM) systems • mobile radio.
Relevant legislation may include:	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards TS 14 • Australian standards applying to radiation hazards • heritage legislation • industrial awards and conditions • International Standards ISO 9000 9001 • International Telecommunications Union (ITU) recommendations • National Parks Act • OHS • Privacy Act • State/Territory and Federal Environment Acts • Telecommunications Act and relevant codes.
Existing network may include:	<ul style="list-style-type: none"> • boundaries between: <ul style="list-style-type: none"> • access and inter-exchange networks • Access Network technology and exchange switching and transmission systems.
Barriers relating to planned network extensions may include:	<ul style="list-style-type: none"> • building availability • environmental considerations • financial constraints • government policy • heritage legislation restrictions • land acquisition problems • material availability • planning approvals • technology availability.

RANGE STATEMENT	
<i>Planning parameters</i> may relate to:	<ul style="list-style-type: none"> • network criteria: <ul style="list-style-type: none"> • cover sites, buildings and structures • network change • network growth • network reduction • organisational policies, procedures and guidelines • planning priorities driven by: <ul style="list-style-type: none"> • customer demand • legislative requirements • marketing initiatives • network conditions • revenue projections • planning processes: <ul style="list-style-type: none"> • documented within enterprise process manuals • enterprise specific.
<i>Resource requirements</i> may refer to:	<ul style="list-style-type: none"> • external to the enterprise • internal to the enterprise.
<i>Network plan</i> may include:	<ul style="list-style-type: none"> • activities • finance • labour • material.

ICTNPL4247A Apply compliance requirements to telecommunications work

Modification History

Release	Comments
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to apply legislation, regulations, codes of practice and standards when designing and installing telecommunications equipment and infrastructure in access networks.

Application of the Unit

Planning and design persons from private and carrier organisations apply the skills and knowledge in this unit to perform the role of a network planner or designer.

They combine technical design and planning skills with skills in observing legislation, regulations, codes of practice and standards to be able to plan and design the access network infrastructure of private and/or carrier service providers.

Technical officers may be responsible for small projects or parts of larger projects and for the operation and engineering of enterprise and telecommunications networks in general.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Evaluate project brief for activities that are subject to legislation, regulations, codes of practice and standards</p>	<p>1.1 Identify and document <i>project</i> activities and outcomes that are subject to legislation, regulations, codes of practice and standards</p> <p>1.2 Examine organisational procedures that have been developed to deal with these requirements</p> <p>1.3 Use knowledge bases, authorities' and other external records for information relevant to these project activities and outcomes, and identify their regulatory requirements</p> <p>1.4 Evaluate and document how these <i>regulatory requirements</i> may impact on the design and construction of the telecommunications project</p>
<p>2. Evaluate design of telecommunications project for activities that require approval to enter land or premises</p>	<p>2.1 Determine project activities to be undertaken during survey and construction that require access to land or premises</p> <p>2.2 Determine rights of entry and required notifications to enter property for the purpose of designing and executing a telecommunications project</p> <p>2.3 Examine courses of action available in case of dispute</p> <p>2.4 Access <i>legislation</i> that governs carriers and service providers to determine the rights of carriers and service providers in installing facilities under Commonwealth legislation</p> <p>2.5 Document procedures for obtaining the required access to land or premises</p>
<p>3. Examine the processes necessary to facilitate the completion of a design to meet relevant regulatory requirements</p>	<p>3.1 Review studies and information gathered to develop a design that complies with requirements</p> <p>3.2 Discuss with expert stakeholders the steps necessary to meet the legislative requirements of network infrastructure design</p> <p>3.3 Compare the solutions to regulatory requirements with financial plans to ensure budgetary requirements for the design project are met</p> <p>3.4 Produce a report on project activities incorporating enterprise-specific policies and regulatory compliance requirements</p>
<p>4. Document compliance procedures and execute legally binding agreements</p>	<p>4.1 Gather reports and studies that support the design and construction activities, and incorporate into final design documentation</p> <p>4.2 Document all activities for evidence of compliance with</p>

	<p>requirements in case of future actions</p> <p>4.3 Ensure legally binding documentation that fulfils obligations with regard to land or premises access is signed by relevant parties as required</p> <p>4.4 Identify alternative courses of action to be used in case of dispute prior to or after an agreement is signed by all parties</p>
--	---

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to assess impact of economic and political influences on enterprise policies and procedures
- literacy skills to write evaluation reports
- planning skills to review current and ***emerging technology***, facilities and features when developing options
- problem-solving skills to assess current ***access network*** conditions
- research skills to:
 - analyse impact of regulatory requirements on ***planning processes***
 - obtain and evaluate information relating to the telecommunications industry, including ***relevant legislation*** and associated operational codes

Required knowledge

- earth potential rise (EPR) and low frequency induction (LFI) requirements
- requirements relevant to the telecommunications work being undertaken in the following sources of legislation, regulations, codes of practice and standards:
 - Environmental Protection Authority
 - National Parks and Wildlife
 - Ports Authorities
 - Power Distribution Authorities
 - Rail Authorities requirements
 - Roads Authorities
 - Dial Before You Dig and electronic underground locators
 - Telecommunications Authorities
 - Waterway Authorities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>Critical aspects for assessment and evidence required to demonstrate competency in this unit</p>	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • produce a detailed report for a telecommunications design project identifying the regulatory requirements for each aspect of the project • produce a report detailing practices to mitigate the impact of a design project and the regulatory requirements addressed • produce a summary report detailing a designer's and contractor's obligations to access land under the Telecommunications Act and code of practice.
<p>Context of, and specific resources for assessment</p>	<p>Assessment must ensure access to:</p> <ul style="list-style-type: none"> • relevant legislation and planning processes • telecommunications industry Regulatory Accounting Framework (RAF) • planning tools, enterprise-specific investment management system (IMS), relevant databases, licensing requirements and other related procedures.
<p>Methods of assessment</p>	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of evaluation and summary reports completed by the candidate • oral or written questioning to assess required knowledge.
<p>Guidance information for assessment</p>	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4108A Plan the deployment of access network architectures • ICTNPL4151A Plan the telecommunications access network for an estate. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate the core network requirements and infrastructure capability	1.1. Estimate likely growth in <i>core network</i> use by analysing forecasting <i>market intelligence data</i> on customer demand 1.2. Analyse current traffic and growth trends in edge and backbone networks to forecast the traffic growth and capacity demand for the core network 1.3. Compare available <i>capacity, capability</i> and <i>parameters</i> of current <i>core infrastructure</i> deployment against the researched demand data to identify infrastructure shortfalls 1.4. Quantify the <i>network requirements</i> for any upgrades or network augmentation 1.5. Determine relevant <i>standards and regulatory requirements</i> to be considered in core network planning 1.6. Formulate justification to proceed by analysing the <i>business requirements</i> and benefits to the business
2. Prepare a strategic plan and scoping document	2.1. Determine appropriate <i>technologies</i> and <i>network elements</i> for core network deployment, including new or alternative solutions to meet business requirements 2.2. Select commercially viable technology compatible with the existing network to deploy with existing and future network 2.3. Prepare a planning document and <i>supporting documentation</i> with recommendations that complies with deployment standards and regulatory requirements 2.4. Provide <i>estimated costs</i> and schedule for a planning solution
3. Produce the project brief	3.1. Evaluate and summarise <i>project scope</i> into the required briefing format with supporting documentation that complies with <i>core network deployment rules</i> 3.2. Plan project delivery to suit business requirements and <i>practical limitations</i> 3.3. Produce the core networks specifications with <i>approvals</i> and present to the design section to produce detailed design specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate the equipment and product offerings allowable across the competing core network technologies
- communication skills to liaise with internal and external personnel on technical and non- technical matters
- learning skills to keep up to date with equipment to meet future service obligations
- literacy skills to interpret technical and non-technical documentation and the writing of summary reports in required formats
- numeracy skills to interpret data results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the planning process in liaison with others
- problem solving and contingency management skills to adapt planning procedures to requirements of particular sites and modify activities depending on differing operational contingencies, risk situations and environments
- research skills to interrogate databases and investigate different network requirements
- technical skills to select and compare benefits and limitations of core network technologies

Required knowledge

- capability and limitations of the various core network technologies for present and future needs
- detailed knowledge of:
 - elements and architecture of core networks
 - limits of a core network
 - typical core network technologies
- elements and architectures of the various core technologies
- key technologies that make up the core network
- overview knowledge of:
 - distribution structure of networks including backbone, core and edge
 - levels of reliability performance standards applicable to the specific equipment deployment needs
 - network design including routing and redundancy
 - standards and regulations

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use data to interpret growth patterns and develop options for core network design which satisfy customer and enterprise financial goals • develop a clearly documented network plan within specification and including merging technological developments and product implementation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • computer assisted design (CAD) • computer networks • data for network planning • network equipment deployment plans • planning models • standards and regulations.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking core network evaluation and planning • review of reports completed by the candidate for planning the development and growth of the ore network • oral or written questioning to assess knowledge of the various aspects of planning for a core telecommunications network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL4112A Evaluate core network architectures • ICTNPL4113A Plan the deployment of Core Network • ICTNPL5096A Develop planning strategies for Access Network design

EVIDENCE GUIDE

	<ul style="list-style-type: none"> • ICTNPL5154A Develop planning strategies for building environment design. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Core network may include:

- billing
- broadband
- data
- Ethernet

RANGE STATEMENT	
	<ul style="list-style-type: none"> • media and content • network management • NGN • switching • transport (synchronous digital hierarchy (SDH) optical networking) • voice.
<i>Market intelligence data</i> may refer to:	<ul style="list-style-type: none"> • customer request • development area plans • development triggers • market research: <ul style="list-style-type: none"> • external triggers may include: <ul style="list-style-type: none"> • government initiatives • local councils • local government planning • property developers • market surveys • planning approvals • planning commission • service delivery • telecommunication databases: <ul style="list-style-type: none"> • capacity assessment • network performance • traffic dimensioning • zoning.
<i>Capacity</i> may refer to:	<ul style="list-style-type: none"> • available ports • ability to augment • technical limitations of port provision.
<i>Capability</i> may refer to:	<ul style="list-style-type: none"> • ability to deliver desired products • meeting design specifications • meeting technical limitations.
<i>Parameters</i> may include:	<ul style="list-style-type: none"> • asymmetrical digital subscriber line (ADSL) network: <ul style="list-style-type: none"> • bandwidth utilisation of broadband remote access server (BRAS)-digital subscriber line access multiplexer (DSLAM) trunks • bandwidth utilisation of BRAS- layer 2 network protocol network server (LNS) trunks • BRAS memory and central processing unit

RANGE STATEMENT

	<p>(CPU) load</p> <ul style="list-style-type: none"> • number of available BRAS ports • number of internet protocol (IP) addresses in use • number of point-to-point protocol (PPP) sessions in use • hybrid fibre coaxial (HFC) cable broadband network: <ul style="list-style-type: none"> • cable modem termination system (CMTS) memory and CPU load • IP address availability • number of services connected to a segment • upstream/downstream bandwidth utilisation • IP or multiprotocol label switching (MPLS) data network: <ul style="list-style-type: none"> • available and utilised bandwidth and ports • network latency • packet loss rates • router or switch card slots available • router or switch CPU load • router or switch memory • media and content hosting and distribution network: <ul style="list-style-type: none"> • available and utilised bandwidth • available and utilised ports • router CPU load • router memory • router slots available • metropolitan Ethernet network: <ul style="list-style-type: none"> • available and utilised bandwidth • available and utilised ports • available and utilised virtual local area networks (VLAN) • packet loss rates • switch card slots available • switch CPU load • switch memory • SDH network: <ul style="list-style-type: none"> • bandwidth provisioned
--	---

RANGE STATEMENT	
	<ul style="list-style-type: none"> • number of add-drop multiplexers (ADM) connected to a ring • number of card slots and ports available • number of circuits provisioned • voice network: <ul style="list-style-type: none"> • available and utilised bandwidth • available and utilised ports • echo cancellation considerations • network jitter • network latency • number and duration of calls • packet loss rate • quality of service (QoS) • signalling capacity • traffic.
<i>Core infrastructure</i> may refer to:	<ul style="list-style-type: none"> • building facilities and services • equipment: <ul style="list-style-type: none"> • billing • cable • customer • data networking • network management • network operations centre • optical • switching • test and monitoring • transmission • wireless • power requirements.
<i>Network requirements</i> may refer to:	<ul style="list-style-type: none"> • appropriate equipment • compatibility • interoperability • scalable network • suitable technology • upgradeable network.
<i>Standards and regulatory requirements</i> may include:	<ul style="list-style-type: none"> • company specific policy and standards • design standards • deployment rules

RANGE STATEMENT	
	<ul style="list-style-type: none"> • regulatory body requirements: <ul style="list-style-type: none"> • Australian Competition and Consumer Commission (ACCC) • Telecommunications Act.
<i>Business requirements</i> may refer to:	<ul style="list-style-type: none"> • complying with standards and regulations • deployment of infrastructure in a commercially viable way • meeting customer demands on the network.
<i>Technologies</i> may include:	<ul style="list-style-type: none"> • carrier Ethernet • dense wavelength division multiplexing (DWDM) systems • IP core • IP private branch exchange (IP PBX) • IPTV • IPv6 networks • MPLS networks • optical routing • optical switching • optical transmission systems • virtual networks.
<i>Network elements</i> may include:	<ul style="list-style-type: none"> • access points • adapters • antennas • CPU • data network: <ul style="list-style-type: none"> • backbone • edge • MPLS • routers • switches • Ethernet network: <ul style="list-style-type: none"> • applications • gateways • LAN switch • routers • servers • switches • transmission equipment • VLAN

RANGE STATEMENT	
	<ul style="list-style-type: none"> • HFC cable: <ul style="list-style-type: none"> • ADM • broadband amplifier • cable modems • DSLAMs • fibre network • multiplexer • IP network: <ul style="list-style-type: none"> • gateways • routers • servers • switches • media and content network <ul style="list-style-type: none"> • media managers • routers • servers • SDH transport: <ul style="list-style-type: none"> • add/drop multiplexer (ADM) • SDH switch • STM-1 • VoIP and wireless voice network: <ul style="list-style-type: none"> • gateways • routers • servers • switches • voice managers.
<i>Supporting documentation</i> may include:	<ul style="list-style-type: none"> • briefing documents • business justifications • demand data • government initiatives • market surveys.
<i>Estimated costs</i> may refer to:	<ul style="list-style-type: none"> • comparable past project costs • costing models • unit rates.

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to develop specifications for access networks to be used by network designers. It involves gathering information on anticipated demand and business requirements for the access network to determine design criteria to meet current and future needs.</p> <p>No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.</p>
-------------------------------	---

Application of the Unit

<p>Application of the unit</p>	<p>Technical officers or engineers from private and public organisations apply the skills and knowledge in this unit. They combine technical skills with broader organisational skills to plan the various access network technologies within a telecommunications network.</p> <p>As a member of a network planning team, their job titles include network planner, project manager and access network planner.</p> <p>This unit may apply to various technologies and transmission mediums such as fibre to the x (FTTx), hybrid fibre coaxial (HFC), convergent Next Generation Networks (NGN), copper, optical fibre and wireless required to support the deployment of Access Network Infrastructure.</p>
---------------------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate the access network requirements and infrastructure capability	1.1. Estimate likely growth in <i>access network</i> use by analysing forecasting <i>market intelligence data</i> on customer demand 1.2. Compare available <i>capacity</i> and <i>capability</i> of current <i>access infrastructure</i> deployment against the researched demand data to identify infrastructure and product shortfalls 1.3. Quantify <i>network requirements</i> for upgrades or network augmentation to increase capacity and capability of existing network 1.4. Determine relevant <i>standards, business and regulatory requirements</i> to be considered in access network planning 1.5. Formulate justification to proceed by analysing the <i>business requirements</i> and benefits to the business
2. Prepare a strategic plan and scoping document	2.1. Determine appropriate <i>technologies, network elements</i> and <i>equipment</i> for access network deployment, including new or alternative solutions to meet business requirements 2.2. Select commercially viable technology compatible with the existing network to deploy with existing and future network 2.3. Prepare a planning document and <i>supporting documentation</i> with recommendations that complies with deployment standards and regulatory requirements 2.4. Provide <i>estimated costs</i> and schedule for a planning solution
3. Produce the project brief	3.1. Evaluate and summarise <i>project scope</i> into the required briefing format with relevant supporting documentation for a project brief that complies with <i>access network deployment rules</i> 3.2. Plan project delivery to suit business requirements and <i>practical limitations</i> 3.3. Produce the access networks specifications with <i>approvals</i> and present to the design section to produce detailed design specifications

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to:
 - determine the equipment that will be used across the spectrum of access network technologies
 - outline the product offerings allowable across all competing access network technologies
- communication skills to liaise with internal and external personnel on technical and non-technical matters
- learning skills to keep up to date with technological changes
- literacy skills to interpret technical and non-technical documentation and the writing of summary reports in required formats
- numeracy skills to interpret data results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work and coordinate the planning process in liaison with others
- problem solving and contingency management skills to adapt to requirements of particular access networks and modify activities depending on differing operational contingencies, risk situations and environments
- research skills to interrogate databases and investigate different network requirements
- technical skills to select and compare benefits and limitations of access network technologies

Required knowledge

- capability and limitations of the various access network technologies
- current equipment to meet future service obligations
- detailed knowledge of:
 - broadband networks
 - data networks
 - elements and architecture of the various access networks
 - elements and architectures of the various access network technologies
 - facilities and environmental issues
 - limits of a fixed access transmission network
 - media and content
 - regional and metropolitan network
 - typical access network technologies
 - voice networks

REQUIRED SKILLS AND KNOWLEDGE

- wireless network
- distribution structure of networks, including backbone, access and edge
- key technologies that make up the access network
- overview knowledge of:
 - levels of reliability performance standards, applicable to the specific equipment deployment needs
 - network design including routing and redundancy
 - standards and regulations
- typical problems and challenges that describe the capability and limitations of the various access networks

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • use data to interpret growth patterns and develop options for access network design which satisfy customer and enterprise financial goals • develop a clearly documented network plan, within specification and including merging technological development and product implementation.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • computer assisted design (CAD) • computer networks • data for network planning • network equipment deployment plans • planning models • standards and regulations.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking network evaluation and planning • review of reports completed by the candidate for planning the development and growth of the telecommunications network • oral or written questioning to assess knowledge of the various aspects of planning for an access telecommunications network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL5071A Develop planning strategies for core network design • ICTNPL5154A Develop planning strategies for building environment design.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Access network may refer to:

- access fibre network
- broadband network
- copper:
 - asymmetrical digital subscriber line (ADSL)
 - digital subscriber line (DSL)
 - twisted pair

RANGE STATEMENT	
	<ul style="list-style-type: none"> • fibre to the premises (FTTP) • hybrid fibre coaxial (HFC) • wireless networks: <ul style="list-style-type: none"> • wireless fidelity (WiF)i • world interoperability for microwave access (WiMAX) • wide local area networks (WLAN).
<i>Market intelligence data</i> may refer to:	<ul style="list-style-type: none"> • customer request • development area plans • development triggers • external triggers may include: <ul style="list-style-type: none"> • government initiatives • local councils • local government planning • property developers • market research • market surveys • planning approvals • planning commission • service delivery • telecommunication databases: <ul style="list-style-type: none"> • capacity assessment • network performance • traffic dimensioning • zoning.
<i>Capacity</i> may refer to:	<ul style="list-style-type: none"> • ability to augment • available ports • technical limitations of port provision.
<i>Capability</i> may refer to:	<ul style="list-style-type: none"> • ability to deliver desired products • meeting design specifications • meeting technical limitations.
<i>Access infrastructure</i> may refer to:	<ul style="list-style-type: none"> • building facilities and services • equipment: <ul style="list-style-type: none"> • cable • customer • data networking • network management • optical

RANGE STATEMENT	
	<ul style="list-style-type: none"> • switching • test and monitoring • transmission • wireless • power requirements.
<i>Network requirements</i> may refer to:	<ul style="list-style-type: none"> • appropriate equipment • compatibility • interoperability • scalable network • suitable technology • upgradeable network.
<i>Standards, business and regulatory requirements</i> may include:	<ul style="list-style-type: none"> • company specific policy and standards • council requirements • deployment rules • design standards • regulatory body requirements: <ul style="list-style-type: none"> • Australian Competition and Consumer Commission (ACCC) • Telecommunications Act.
<i>Business requirements</i> may refer to:	<ul style="list-style-type: none"> • complying with standards and regulations • deployment of infrastructure in a commercially viable way • meeting customer demands on the network.
<i>Technologies</i> may include:	<ul style="list-style-type: none"> • digital subscriber lines: <ul style="list-style-type: none"> • ADSL • DSL • mobile radio • NGN: <ul style="list-style-type: none"> • broadband access • data transfer • internet protocol (IP) based systems • IP private branch exchange (IP PBX) • internet protocol TV (IPTV) • mobile data • mobile telephony • multimedia • video • voice over internet protocol (VoIP)

RANGE STATEMENT	
	<ul style="list-style-type: none"> • optical transmission systems: <ul style="list-style-type: none"> • dense wavelength division multiplexing (DWDM) systems • wavelength division multiplexing (WDM) systems.
<i>Network elements</i> may include:	<ul style="list-style-type: none"> • current copper network: <ul style="list-style-type: none"> • copper cable • exchange • lead in cable • lightning protection • loading coils • main distribution frame, cross connect unit • manhole • pair gain system • pits • current fibre network: <ul style="list-style-type: none"> • exchange • fibre access points • high density/optical fibre distribution frame (HD/OFDF) • joint enclosure • manhole • optical fibre • pits • FTTP network: <ul style="list-style-type: none"> • broadband passive optical network (BPON) • conduit • distribution/lead in multi-port (DLM/LM) • ethernet broadband remote access server (EBRAS) • exchange • fibre distribution hub (FDH) • gigabit passive optical network (GPON) • headend • high density/optical fibre distribution frame (HD/OFDF) • home optical network terminal • lead-in • manhole

RANGE STATEMENT

	<ul style="list-style-type: none"> • optical distribution network • optical fibre • packet optical line terminal (P-OLT) • pits • video optical line terminal (V-OLT) • wave division multiplexer (WDM) • HFC network: <ul style="list-style-type: none"> • coaxial cable • exchange • headend • hub • IP edge • line power supply • node • optical fibre • optical receiver • radio frequency (RF) amplifier • tap • video service centre • transmission hub • wireless network: <ul style="list-style-type: none"> • access points • antennas • dish • exchange • RF amplifiers • radio towers and huts • RF receivers • RF transmitters • satellite • waveguide.
Equipment may include:	<ul style="list-style-type: none"> • digital • IP based • optical: <ul style="list-style-type: none"> • add/drop multiplexers • amplifiers • filters • receivers

RANGE STATEMENT	
	<ul style="list-style-type: none"> • splitters/combiners • switches • transmitters • wireless: <ul style="list-style-type: none"> • amplifiers • filters • microwave • receivers • RF broadband • satellite • transmitters.
<i>Supporting documentation</i> may include:	<ul style="list-style-type: none"> • area plans • briefing documents • business justifications • demand data • maps.
<i>Estimated costs</i> may refer to:	<ul style="list-style-type: none"> • comparable past project costs • costing models • unit rates.
<i>Project scope</i> may include:	<ul style="list-style-type: none"> • costing • details of requirements to build • justification • materials • resource allocation • timing.
<i>Access network deployment rules</i> may refer to:	<ul style="list-style-type: none"> • separation from other services: <ul style="list-style-type: none"> • electricity • fire equipment • gas • other telecommunications service providers • water • restricted site access: <ul style="list-style-type: none"> • financial institutions • government offices • rail corridor • research establishments.
<i>Practical limitations</i> may include:	<ul style="list-style-type: none"> • accessibility of project site • material delivery and installation times

RANGE STATEMENT	
	<ul style="list-style-type: none"> • resource availability • resource skill set.
<i>Approvals</i> may include:	<ul style="list-style-type: none"> • compliance • contract delivery • financial delegation • governance • quality assurance.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse customer base	1.1. Establish the <i>reasons for forecasting</i> in network planning and <i>factors that influence forecasting</i> 1.2. Collate <i>data</i> from appropriate organisations involved in <i>planning initiatives</i> for planning delivery of products and services 1.3. Establish <i>market segmentation</i> to improve marketing effectiveness on new technology adoption 1.4. Analyse the market segments of customers based on <i>geography</i> and <i>demographics</i> for a new service or product and predict the adoption of a new product
2. Evaluate current utilisation	2.1. Evaluate current service usage of the network and determine current traffic load 2.2. Evaluate current network occupancy and determine any spare capacity
3. Predict future customer base	3.1. Evaluate the expected customer growth and segment mix in a defined geographical area and assess impact on network planning 3.2. Use a <i>forecasting model</i> and predict the customer demand for new technology products and services
4. Use property market and development data to produce plans	4.1. Develop strategic plans on infrastructure planning using <i>planning authority</i> data for development and redevelopments 4.2. Produce a plan for future development projects using property market data
5. Predict future service requirements	5.1. Create a customer service plan to maintain valuable customer relationships and strengthen business 5.2. Measure customer service results using <i>key factors</i> that provide an indicator for customer service quality 5.3. Use <i>forecasting tools</i> to predict future service demand and requirements for emerging technology <i>services of Next Generation Networks (NGN)</i>
6. Produce network forecast and documentation	6.1. Produce geographically-based network growth forecasts utilising the change in customer base, changes to property market and future service predications 6.2. Produce and present <i>documentation</i>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to examine market segments of customers based on geography and demographics
- communication skills to liaise with internal and external personnel on technical and operational matters maintaining customer focus and consideration of customer needs
- literacy skills to interpret technical documentation and write analytical reports in required formats
- numeracy skills to be able to compare technical data on various network topologies
- planning and organisational skills to plan, prioritise and monitor own work
- research skills to interrogate databases and investigate different customer requirements
- technical skills to:
 - evaluate current service usage of the network
 - select and use forecasting tools and forecasting models to make planning predictions

Required knowledge

- different levels of reliability performance standards applicable to the specific equipment deployment needs
- emerging technologies
- factors affecting forecasting
- forecasting models
- forecasting tools
- market segmentations
- network designs
- new products and services
- NGN services
- planning authorities
- planning initiatives
- prepare and review customer bases
- service measures

Evidence Guide

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Evaluate the building environment requirements	<p>1.1. Utilise network equipment deployment plans to convert network equipment specifications into building requirements data</p> <p>1.2. Determine the planned and forecast network equipment deployment locations and quantities to prioritise tasks</p> <p>1.3. Formulate justification to proceed by analysing the business requirements and benefits to the business</p> <p>1.4. Analyse the current building capacities or capabilities against the planned deployment data to determine building environment shortfalls or additional needs</p> <p>1.5. Determine the minimum needs required to address identified building services shortfalls, upgrades or changes</p> <p>1.6. Identify relevant standards, business and regulatory requirements that are essential for building plan compliance</p>
2. Scope the buildings design requirements	<p>2.1. Quantify the building's requirements from known needs to determine if any standard deliverables can be used</p> <p>2.2. Assess if requirements can be met using new or alternative solutions</p> <p>2.3. Provide estimated costs and schedule to determine a planning solution</p> <p>2.4. Prepare a scoping document and supporting documentation with recommendations that complies with deployment standards and regulatory requirements</p>
3. Produce the project brief	<p>3.1. Prepare a project scope in required briefing format to present to the design section</p> <p>3.2. Plan project delivery to meet any business timing and funding constraints</p> <p>3.3. Produce the building planning specifications with approvals and present to the building design section to be used for detailed design or construction specifications</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to evaluate technical requirements and produce building specifications
- communication skills to liaise with internal and external personnel on technical and non-technical matters
- learning skills to keep up to date with technological changes
- literacy skills to interpret technical and non-technical documentation and the writing of summary reports in required formats
- numeracy skills to interpret data results and evaluate different types of technical data
- planning and organisational skills to plan, prioritise and monitor own work
- problem solving and contingency management skills to adapt technology to requirements of particular sites and modify activities depending on differing operational contingencies, risk situations and environments
- research skills to interrogate databases and investigate different audit requirements
- technical skills to select and compare benefits and limitations of building technologies to offer alternatives

Required knowledge

- capability and limitations of the various network technologies to meet present and future needs
- costing and funding models
- detailed knowledge required to prepare and review the limits of a buildings facilities and services
- network equipment requirements to derive buildings specifications
- overview knowledge of:
 - network building design
 - regulations
 - standards
- typical problems and challenges that describe the limitations of the various buildings project work
- upgrade knowledge of current building requirements to meet future service obligations

Evidence Guide

<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to :</p> <ul style="list-style-type: none"> • assess building environment requirements to provide network capability for current demands, including consideration of merging technological development and product implementation • prepare a scoping document with solutions, costing and scheduling recommendations to meet network capability needs and regulatory requirements.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • computer assisted design (CAD) • computer networks • data for network planning • network equipment deployment plans • planning models • standards and regulations.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate implementing planning processes • review of reports completed by the candidate for planning the development and growth of the telecommunications network • oral or written questioning to assess knowledge of the various aspects of the planning for the access telecommunications network.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL5096A Develop planning strategies for Access Network design • ICTNPL5071A Develop planning strategies for core network design.

EVIDENCE GUIDE

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Network equipment may include:

- billing centre
- broadband
- broadcasting
- call centre
- internet protocol (IP) networking
- network alarm

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network operations centre • radio • switching • transmission.
<i>Building requirements data</i> may include:	<ul style="list-style-type: none"> • alarms • cooling • fire protection • power usage • security protection • spatial.
<i>Business requirements</i> may refer to:	<ul style="list-style-type: none"> • complying with standards and regulations • deployment of infrastructure in a commercially viable way • meeting customer demands on the network.
<i>Capacities</i> may refer to:	<ul style="list-style-type: none"> • ability to extend building area • adequate fire and security protection • available adequate cooling power • available adequate power feed from electricity supply authority • available floor space for use • vehicular access.
<i>Capabilities</i> may refer to:	<ul style="list-style-type: none"> • ability to deliver desired products • building design specifications • building limitations on facility and services • future needs.
<i>Relevant standards</i> may include:	<ul style="list-style-type: none"> • accepted industry design standards and codes • Australian or international standards • company design standards • company specific policy and standards • deployment rules • environmental codes • fire authority codes • heritage codes • local council building codes • regulatory body requirements: <ul style="list-style-type: none"> • Australian Competition and Consumer Commission (ACCC) • Telecommunications Act.
<i>Regulatory requirements</i> may	<ul style="list-style-type: none"> • community

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • environmental • legal • statutory.
<i>Estimated costs</i> may include:	<ul style="list-style-type: none"> • comparable past project costs • costing models • funding model • unit rates.
<i>Supporting documentation</i> may include:	<ul style="list-style-type: none"> • area plans • briefing documents • business justifications • cost-benefit analysis • customer demands.
<i>Project scope</i> may include:	<ul style="list-style-type: none"> • costing • details of requirements to build • justification • materials • provisions • resource allocation • timing.
<i>Funding constraints</i> may include:	<ul style="list-style-type: none"> • delay in funding • lack of budget or funding • low priority • project deferment.
<i>Approvals</i> may include:	<ul style="list-style-type: none"> • compliance • contract delivery • financial delegation • governance • quality assurance.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather data related to existing and projected network usage	1.1. Access <i>market intelligence</i> for information on customer demand on the network and likely growth in network use 1.2. Obtain <i>demand data</i> to plan for potential network traffic quantity and flow 1.3. Access information relating to <i>new and emerging technologies</i> , facilities and features and their specific applications 1.4. Access <i>relevant legislation</i> and associated operational codes and analyse impact on <i>planning</i> processes
2. Assess need for network growth	2.1. Evaluate capacity of existing network to absorb planned growth using network capacity usage and traffic measurements 2.2. Plan likely timing of necessary network increments to minimise impact on the network 2.3. Assess use of new or alternate technologies to meet forecast growth
3. Develop network plans	3.1. Assess overall planning parameters including approved business plan prior to commencement of planning process 3.2. Analyse gathered information and produce a project plan with <i>specifications</i> to meet network growth 3.3. Conduct appropriate investment study including cost benefit analysis where required with consideration of <i>barriers</i> that may affect project plan 3.4. Produce a network plan with detailed specifications and seek approval according to enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify details relating to the project from the approved network plan
- communication skills to discuss project brief with enterprise personnel, customers and other contractors
- literacy skills to write project briefs
- numeracy skills to:
 - analyse site survey data
 - cost estimates and operate budgets according to enterprise policy
 - undertake cost and benefit studies as a guide to the decision making process
- planning and organisational skills to consider current, new technology, facilities and features when developing options
- problem solving skills to:
 - address and analyse specific customer requirements
 - assess current access network conditions
- research skills to:
 - analyse impacts on planning processes
 - obtain and study information relating to new technology or technology features
 - obtain geographical information
 - study relevant legislation and associated operational codes
- technical skills to:
 - apply the three phases of project management to complete the project brief
 - develop and study planning options considering present and future needs
 - identify barriers to plan realisation

Required knowledge

- detailed knowledge of:
 - cost estimates and operating budgets according to enterprise policy
 - project management theory, associated databases and project management software programs
 - telecommunications industry in Australia
- overview knowledge of:
 - economic and political influences on public and commercial enterprises

REQUIRED SKILLS AND KNOWLEDGE

- financial authorities and delegations
- influence of the local and international economic conditions on the telecommunications industry
- typical challenges and limits facing technology today and the consideration of future needs
- relevant legislation
- specific knowledge of collating and writing project briefs, reports and project charters

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> gather data related to existing and projected network usage assess need for network growth develop network plans.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> data from organisations involved in planning initiatives a range of software currently used in industry relevant regulations, specifications that impact on forecasting activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> direct observation of the candidate undertaking network planning tasks review of data gathered, reports and project plans prepared by the candidate for planning the development and growth of telecommunication networks oral or written questioning to assess knowledge of planning the development telecommunications networks.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> ICTNPL6030A Forecast service demand. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and</p>

EVIDENCE GUIDE	
	<p>assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT	
<p>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</p>	
<i>Market intelligence</i> may include:	<ul style="list-style-type: none"> • customer demand • customer feedback • customer projections • customer specific technology needs • new technology impact.
<i>Demand data</i> may be:	<ul style="list-style-type: none"> • collected from: <ul style="list-style-type: none"> • customers: <ul style="list-style-type: none"> • actual • prospective • economic planners • internal organisational groups

RANGE STATEMENT	
	<ul style="list-style-type: none"> • local • marketing organisations • real estate agents • sales organisations • state and federal governments • statutory bodies • traffic management systems • in relation to: <ul style="list-style-type: none"> • access transport planning • changing customer use patterns • demographic changes • economic forecasts • industry trends • influence of technology on traffic demand • land developments • local industry • market conditions • marketing programs • population trends • possible environmental impacts • power re-zoning • sales forecasts • shire planning • traffic patterns.
<i>New and emerging technologies</i> may be obtained from:	<ul style="list-style-type: none"> • marketing groups • specific technology planning groups • vendor and enterprise forward planning groups.
<i>Relevant legislation</i> may include:	<ul style="list-style-type: none"> • Australian Communications and Media Authority (ACMA) standards TS 14 • International Standards ISO 9000/9001 • International Telecommunication Union (ITU) recommendations • OHS • Privacy Act • State/Territory and Federal Environment Acts • Telecommunications Act and relevant codes.
<i>Planning</i> can relate to:	<ul style="list-style-type: none"> • buildings • network change

RANGE STATEMENT	
	<ul style="list-style-type: none"> • network growth and network reduction • priorities which are driven by: <ul style="list-style-type: none"> • customer demand • legislative requirements • marketing initiatives • revenue projections • sites • structures.
<i>Specifications</i> may include:	<ul style="list-style-type: none"> • availability of equipment • availability of resources • costing • funding • infrastructure developments • priority • risk assessment • technology requirements • timeframe.
<i>Barriers</i> may include:	<ul style="list-style-type: none"> • building availability • environmental considerations • financial constraints • government policy • heritage legislation restrictions • land acquisition problems • material availability • planning approvals • technology availability.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Gather forecast intelligence	1.1. Access <i>market intelligence</i> for information on customer demand on the network and likely growth in network use 1.2. Obtain <i>demand data</i> to assess the potential network traffic quantity and flow 1.3. Access information relating to <i>new and emerging technologies</i> , facilities and features and their specific applications to evaluate the market trends in new technology implementation 1.4. Obtain data from network analysis to determine the state of the existing network using customer complaint reports and network fault incidence rate
2. Produce forecast service demand information	2.1. Analyse and process all collated data and prepare to the format required for forecasting activity 2.2. Select and configure a suitable <i>software forecasting tool</i> to process the collated data 2.3. Evaluate forecast results to generate <i>forecasts</i> of service demand using information in reference to new developments 2.4. Compile forecast figures and report according to enterprise policy
3. Review forecasts and update systems records	3.1. Review forecasts according to enterprise policy 3.2. Ensure forecasts consider <i>new developments</i> in the area and technological changes where appropriate 3.3. Maintain updated <i>systems records</i> with information received from each installation amendment activity

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to assess technical demand requirements based on technical and non-technical input data
- literacy skills to:
 - document technical requirements

REQUIRED SKILLS AND KNOWLEDGE

- read and interpret equipment, system manuals, specifications and relevant enterprise policy
- numeracy skills to:
 - apply forecasting techniques
 - assess channel capacities and overall dimensioning requirements
 - work with statistical data
- problem solving skills to account for unexpected changes in demand requirements
- technical skills to:
 - compile reports and record activities of enterprise systems
 - work with data and statistical techniques

Required knowledge

- broad knowledge of:
 - common telecommunications measurements quantities
 - network and transmission equipment and capabilities
 - network topologies and common access and transmission hierarchies
- configure and use software forecasting tools
- detailed knowledge of:
 - forecasting techniques
 - sources of data to aid forecasting
- market intelligence
- new and emerging technologies
- typical customer applications and usage levels

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • collect data vital to the development of traffic and service variation • generate forecasts in relation to traffic and service variation using appropriate forecasting techniques • review forecasts relevant to specific planning periods.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • data from organisations involved in planning initiatives • a range of software currently used in industry • relevant regulations, specifications that impact on forecasting activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate undertaking practical forecasting • review of reports and demand forecasts completed by the candidate • oral or written questioning to assess knowledge of dimensioning issues, types of systems and applications.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTNPL6029A Plan the development and growth of the telecommunications network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p>

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Analyse network performance to determine service levels	1.1. Establish <i>network type</i> and <i>quality of service (QoS)</i> standards levels required, in conjunction with equipment suppliers and <i>customer</i> opinion, to determine the benchmark for network performance standards 1.2. Analyse trend analysis data and statistical data to assess the level and type of <i>network degradation</i> 1.3. Conduct <i>performance tests</i> according to established <i>performance checklist</i> to systematically evaluate the level of QoS using appropriate <i>performance analysis tools</i> 1.4. Analyse test results and determine the QoS levels and network problems 1.5. Establish restoration times in the event of service breakdown 1.6. Determine, organise and allocate resources necessary to monitor service levels
2. Monitor the integrity of the network	2.1. Monitor alarm panels and verify message retrieval system on an ongoing basis to maintain network integrity 2.2. Undertake real time analysis of data from all sources to determine network health
3. Manage the delivery of quality service	3.1. Conduct <i>monitoring activities</i> to maintain the quality of service level and integrity of the network 3.2. Analyse trouble reports and performance data including customer feedback on a regular basis as an indicator of network performance 3.3. Analyse drive test data as an input to performance and optimise the network to improve network level of service
4. Analyse problems and organise repair	4.1. Analyse performance results regularly and initiate investigations when performance levels are below specified standards and recommend network changes 4.2. Analyse causes of problems by testing specific network components 4.3. Isolate problems where possible and escalate repair according to enterprise policy 4.4. Undertake evaluation testing after repair to ensure that the problem has been rectified
5. Coordinate upgrade	5.1. Develop strategies to affect changes according to

ELEMENT	PERFORMANCE CRITERIA
of software and hardware	<p>recommendations and produce a plan to coordinate activities</p> <p>5.2. Produce a cost estimate of proposed change and submit a cost-benefit study for approval</p> <p>5.3. Confirm shortcomings in hardware and software and negotiate with planners for network modifications</p> <p>5.4. Evaluate the modifications to ensure network compatibility and use of appropriate <i>protocols providing QoS</i> in the network</p> <p>5.5. Produce a plan for software and hardware changes to be initiated with minimum network downtime and customer impact</p> <p>5.6. Undertake tests following upgrade to ensure the level of performance planned as a result of the upgrade has been achieved</p> <p>5.7. Produce documentation including configuration details and tests results and submit to network planner</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to interpret performance tests and make recommendations
- communication skills to liaise with customers and technical staff to ensure requirements are known and can be met within timeframes
- literacy skills to interpret technical specifications and related documentation
- numeracy skills to make calculations on test data for evaluation of network performance
- planning and organisation skills to develop activity plans and strategies to monitor, repair or upgrade equipment, systems or software
- problem solving skills to account for unexpected faults or equipment configuration anomalies
- technical skills to correctly analyse network performance service levels and provide solutions

Required knowledge

- cost estimation
- customer:
 - customer policies
 - expectancies
 - service level agreements
- network:
 - alarms
 - compatibility and interoperability
 - operations
 - performance analysis methodologies
 - performance analysis tools
 - performance tests
 - planning and design principles
- protocols providing QoS
- QoS standard levels
- software and hardware upgrades
- technologies and architectures of:
 - switching network

REQUIRED SKILLS AND KNOWLEDGE

- transmission network
- technologies of customer network

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • interpret current network performance data • monitor the integrity of the network • manage the delivery of quality service • conduct performance tests using appropriate performance analysis tools • analyse problems and organise repair applying escalation procedures, if required, within service assurance guidelines • coordinate upgrade of software and hardware.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site where network performance analysis may be conducted • data from organisations involved in planning initiatives • range of software currently used in industry • relevant regulations, specifications that impact on service measures and forecasting activities.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • review of proposed upgrade strategy prepared by the candidate, outlining cost-benefit analysis, equipment compatibility study and proposed testing routine • direct observation of the candidate undertaking a practical monitoring, testing or planning exercise • oral or written questioning to assess knowledge of monitoring and testing procedures and types of systems.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplaces and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN6043A Undertake network traffic

EVIDENCE GUIDE

management

- ICTTEN6045A Implement planned network changes with minimal impact to the customer
- ICTTEN6047A Manage a common channel signalling network.

Aboriginal people and other people from a non-English speaking background may have second language issues.

Access must be provided to appropriate learning and assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.

Where applicable, physical resources should include equipment modified for people with special needs.

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT	
<i>Network type</i> may refer to:	<ul style="list-style-type: none"> • internet protocol (IP) networks: <ul style="list-style-type: none"> • internet protocol TV (IPTV) • mesh • multiprotocol label switching (MPLS) • online games • video conferencing (VTC) • voice over internet protocol (VoIP) • web • packet switched networks • frame relay (FR) • <u>asynchronous transfer mode</u> (ATM) • optical networks: <ul style="list-style-type: none"> • dense wavelength division multiplexing (DWDM) networks • optical Ethernet • wireless networks: <ul style="list-style-type: none"> • world interoperability for microwave access (WiMAX) • cellular mobile • general packet radio service (GPRS) • long term evolution (LTE).
<i>Quality of service (QoS)</i> is a measurement of:	<ul style="list-style-type: none"> • customer satisfaction • level of performance • level of quality of service • quality of service by the network • service response times.
<i>Customer</i> may include:	<ul style="list-style-type: none"> • communications consultant • contractor to a major supplier • end users • other divisions of the company • small, medium or large organisations • wholesale service providers.
<i>Network degradation</i> may refer to:	<ul style="list-style-type: none"> • blockages • call drop out • congestion • connection drop out • latency • lockouts • packet loss

RANGE STATEMENT	
	<ul style="list-style-type: none"> • poor data transfer rate • poor quality of service • server performance.
<i>Performance tests</i> may include:	<ul style="list-style-type: none"> • grade of service (GoS) • IP systems: <ul style="list-style-type: none"> • bit rate • data throughput • delay • error probability • jitter • out of order packet delivery • packet dropping • mean opinion score (MOS) • mean time between failures (MTBF) • packet switched network: <ul style="list-style-type: none"> • cross-talk • echo • frequency response • interrupts • loss • loudness levels • service response time • signal-to-noise ratio • quality of experience (QoE).
<i>Performance check list</i> may include:	<ul style="list-style-type: none"> • compression: <ul style="list-style-type: none"> • disable • firewalls: <ul style="list-style-type: none"> • disable software types • hardware: <ul style="list-style-type: none"> • central processing unit (CPU) • modems • routers • network service provider: <ul style="list-style-type: none"> • port blocking • compression • software: <ul style="list-style-type: none"> • applications • operating system (OS)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Follow workplace procedures for hazard identification and risk control</p>	<p>1.1. Notify customer and arrange access to the site</p> <p>1.2. Recognise and report hazards in the work area to designated personnel according to workplace procedures</p> <p>1.3. Follow occupational health and safety (OHS) legislative requirements, workplace procedures and work instructions to control risks</p> <p>1.4. Comply with safe work practices for working safely on roofs and adhere to workplace environmental requirements throughout the work</p> <p>1.5. Implement duty of care requirements to provide a safe working environment</p> <p>1.6. Complete job safety analysis (JSA) sheets according to work requirements, including hazard identification and risk assessment</p> <p>1.7. Use and maintain personal protective equipment and personal safety equipment according to work requirements and apply fall protection and personal safety requirements according to regulatory requirements</p>
<p>2. Prepare for work on rooftop</p>	<p>2.1. Assess scope of work according to workplace procedures, relevant legislation, codes, regulations and standards and relevant job information details</p> <p>2.2. Inspect site to determine layout and equipment requirements according to work order</p> <p>2.3. Select materials, tools and equipment, including personal protective equipment and check for serviceability</p> <p>2.4. Inspect and install fall protection and perimeter protection equipment, ensuring adequacy for work and conformance to regulatory requirements</p> <p>2.5. Install roof safety system according to workplace and regulatory requirements</p> <p>2.6. Select and install appropriate signage and barricades</p>
<p>3. Perform telecommunications work on rooftop</p>	<p>3.1. Inspect access from ground to work area ensuring it is safe and according to regulatory requirements</p> <p>3.2. Estimate the total weight of material to be raised to rooftop to carry out the work</p> <p>3.3. Determine and use the safest lifting method to bring materials and equipment to rooftop according</p>

ELEMENT	PERFORMANCE CRITERIA
	<p>to regulatory requirements.</p> <p>3.4. Secure test equipment, hardware and tools safely on rooftop and distribute weight to eliminate risk of damage to roof cover</p> <p>3.5. Inspect safety system periodically for compliance with regulations according to workplace procedures and report faults</p> <p>3.6. Monitor risk control measures to ensure that they are effective and appropriate to the task and work environment</p> <p>3.7. Reassess risk control measures as required, according to changed work practices or site conditions and make alterations within scope of authority</p>
4. Complete activities and documentations	<p>4.1. Dismantle safety system according to prescribed sequence and remove from worksite</p> <p>4.2. Clear work area and dispose of materials or recycle according to state and territory legislation and workplace procedures</p> <p>4.3. Clean, check and maintain tools and equipment according to manufacturer's recommendations and workplace procedures</p> <p>4.4. Complete documentation according to workplace requirements and notify customer for sign off</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
 - access information
 - determine requirements
 - enable clear and direct communication to identify and confirm requirements and share information
 - follow instructions
 - report faults

REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- literacy skills to:
 - complete workplace documentation
 - document scope of work and work practices
 - read and interpret:
 - documentation from a variety of sources
 - drawings and specifications
- numeracy skills to estimate and calculate weight of materials
- organisational skills, including the ability to plan and set out work
- providing necessary safety measures, including the installation of a roof safety system
- safety awareness skills to :
 - conduct a safety assessment of a roof worksite
 - identify and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- technical skills to:
 - access and understand site-specific instructions in a variety of media
 - use communications equipment

Required knowledge

- JSA and safe work method statements
- nature of work undertaken on roofs
- processes of providing for safe working practices
- relevant statutory and regulatory authority requirements related to working safely on roofs
- roof safety equipment and systems and considerations to facilitate working safely on roofs
- SI system of measurement

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • locate, interpret and apply relevant information, standards and specifications for working safely on roofs • apply safety requirements throughout the work sequence, including the use of personal protective equipment • provide for erection, maintenance and dismantling of the fall and perimeter protection requirements for the site. As a minimum given the plans and specifications for the roof working area of a corner, extending at least 4 metres in either direction and greater than 1.8 m high, incorporating harnesses and harness fixing points for safe personal and stores access to the roof, stores and equipment locations • carry out a risk assessment ensuring: <ul style="list-style-type: none"> • correct identification of risks and safety requirements • correct selection and use of appropriate processes, tools and equipment • completing all work to specification • compliance with regulations, standards and organisational quality procedures and processes • communicating and working effectively and safely with others.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • site on roof where operations may be conducted • induction procedure and requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe working practices and addressing hazards and emergencies

EVIDENCE GUIDE	
	<ul style="list-style-type: none"> • relevant regulations, standards specifications and manuals, including industry related systems information.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate preparing and carrying out telecommunications work on roofs • oral or written questioning of the candidate to assess OHS requirements and work practices associated with working on roofs • review of JSAs and documentation prepared by the candidate.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.</p> <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include:

- contact with electrical wiring
- environmental hazards:
 - air pollution
 - dangerous gases
 - heavy or noxious metals pollution
 - noise
 - petrochemical spillage
 - prevailing weather condition
 - release of hydrochlorofluorocarbons (HCFC)
- fibre offcut damage to eyes and skin
- flammable cleaning chemicals fluids and solvents
- health hazards:
 - dangerous or harmful substances
 - handling of optic fibres and lasers
 - risk of infection
 - risk of sustained injury from repetitive tasks
- laser damage to eyes
- radio frequency (RF) exposure from transmitting antenna in close proximity
- roof safety system in poor condition or non-existent
- safety hazards
 - biomechanical
 - lifting
 - potentially harmful procedures, such as welding
 - working at heights.

Designated personnel includes:

- OHS personnel
- other persons authorised or nominated by the enterprise or industry to:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • perform specified work • approve specified work • inspect specified work • direct specified work • project manager • site manager • supervisors • team leaders.
<i>OHS legislative requirements</i> may relate to:	<ul style="list-style-type: none"> • Australian standards • duty of care • health and safety representatives, committees and supervisors • industry OHS standards and guidelines • licences, tickets or certificates of competency • national safety standards • OHS and Welfare Acts and regulations • safety codes of practice.
<i>Workplace procedures</i> may include:	<ul style="list-style-type: none"> • assessing risks • controlling hazards • emergency responses to: <ul style="list-style-type: none"> • accidents • fires • other emergencies • identifying hazards • reporting OHS issues • resolving OHS issues • using personal protective equipment • using personal safety equipment.
<i>Control risks</i> may include:	<ul style="list-style-type: none"> • three steps in risk management process: <ul style="list-style-type: none"> • assess risk • identify hazard • implement control methods.
<i>Safe work practices</i> may relate to:	<ul style="list-style-type: none"> • avoiding contact with chemicals, breathing in fumes and vapours, and digesting such materials • being aware of what to do and how to treat any potential accident • drugs and alcohol at work • general requirements for:

RANGE STATEMENT	
	<ul style="list-style-type: none"> • safe use of plant and equipment • use of personal protective equipment and clothing and personal safety equipment • housekeeping to ensure a clean, tidy and safe work area • manufacturer's warnings or instruction labels in relation to the laser product are not damaged or obscured during installation • no fibre particles, hazardous solvents or chemicals are left on site at the completion of the work • observing warning labels used in conjunction with laser and optical fibre systems and RF system • preventing bullying and harassment • relevant Australian standards of required health and safety precautions • smoking in designated areas • specific organisational safety requirements • storing and removing debris • using appropriate warning labels on climbing equipment and rooftop • using fire fighting equipment • using first aid equipment • using safe operating procedures, including recognising and preventing hazards associated with: <ul style="list-style-type: none"> • hazardous materials and substances • service lines • surrounding structures and facilities • trip hazards • use of tools and equipment • worksite visitors and the public • working at heights • working in proximity to others.
<i>Environmental requirements</i> may include:	<ul style="list-style-type: none"> • clean-up protection and management • dust • noise • ozone protection • waste management.
<i>Duty of care requirements</i> relate	<ul style="list-style-type: none"> • legal responsibility to do everything reasonably

RANGE STATEMENT	
to:	<p>practicable to protect others from harm</p> <ul style="list-style-type: none"> • own responsibilities to comply with safe work practices: <ul style="list-style-type: none"> • activities that require licences • certificates of competency • tickets • relevant state OHS requirements: <ul style="list-style-type: none"> • construction supervisors • construction workers • designers • employers and self-employed persons • inspectors • manufacturers and suppliers • persons in control of the work site • subcontractors.
Job safety analysis (JSA) may include:	<ul style="list-style-type: none"> • each new workplace or worksite situation • health, safety and environmental hazards • primary application of assessment • sheets to record the steps in the risk management process: <ul style="list-style-type: none"> • assessment • control • identification.
Hazard identification may include:	<ul style="list-style-type: none"> • checking equipment and work area: <ul style="list-style-type: none"> • before work commences • during work • housekeeping • reviewing accident or incident records • workplace inspections.
Risk assessment may include:	<ul style="list-style-type: none"> • a scale: <ul style="list-style-type: none"> • high • low • medium • awareness of likelihood and consequence factors • JSA.
Personal protective equipment used to control a hazard may	<ul style="list-style-type: none"> • breathing apparatus: <ul style="list-style-type: none"> • dust masks

RANGE STATEMENT	
include:	<ul style="list-style-type: none"> • respirators • clothing: <ul style="list-style-type: none"> • boots • gloves • overalls • protective jackets or pants for preparing, cutting or jointing optical fibres • face and head protection: <ul style="list-style-type: none"> • face masks • goggles • helmets • radiation detectors.
<i>Personal safety equipment</i> includes:	<ul style="list-style-type: none"> • aerial safety belts and lines • anchor straps • karabiners • lanyard • rope clamps • safety harness.
<i>Relevant legislation, codes, regulations and standards</i> shall include:	<ul style="list-style-type: none"> • Australian Communications Industry Forum (ACIF) standards and codes • AS Communications Cabling Manual (CCM) Volume 1 • AS/NZS 3000:2007 • AS/NZS 3080:2003 • AS/NZS 3084:2003 • AS/NZS 3085.1:2004 • AS/NZS IEC 61935.1:2006 • AS/NZS IEC 61935.2:2006 • AS/NZS ISO/IEC 14763.3:2007 • AS/NZS ISO/IEC 15018:2005 • AS/NZS ISO/IEC 24702:2007 • Australian building codes and regulations • cabling security codes and regulations • compliance with appropriate Australian Communications and Media Authority (ACMA) technical standard requirements for aerial cables • Environmental Protection Acts • fire regulations • Institute of Electrical and Electronics Engineers

RANGE STATEMENT	
	(IEEE) <ul style="list-style-type: none"> • noise abatement and heritage legislation • OHS • technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.
Job information details may include:	<ul style="list-style-type: none"> • diagrams and sketches • instructions issued by customer • regulatory and legislative requirements • safe work procedures relating to working on roofs • signage • work order • work schedules, plans and specifications.
Tools and equipment may include:	<ul style="list-style-type: none"> • communications equipment: <ul style="list-style-type: none"> • mobile phones • 2 way radios • fall protection • ladders • lifting and load shifting equipment, including: <ul style="list-style-type: none"> • chain blocks • elevated work platforms • hoists and jacks • scaffolds • perimeter protection • signage and barricades.
Roof safety system may include:	<ul style="list-style-type: none"> • footwalks • handrails • harness fixing points • kickboards • safety harness • scaffolds.
Lifting method may include:	<ul style="list-style-type: none"> • arranging for pre-delivery of goods • using block and tackle • using construction elevator • using elevated work platforms.
Report faults may be:	<ul style="list-style-type: none"> • according to company's workplace procedures • written or verbal notification.
Documentation may include:	<ul style="list-style-type: none"> • completed work order • modifications to procedures

RANGE STATEMENT	
	<ul style="list-style-type: none">• reported faults• work details.

ICTOHS2153B Work safely near power infrastructure

Modification History

Release	Comments
Release 2	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i>.</p> <p>References to other units updated.</p> <p>Outcomes deemed equivalent.</p>
Release 1	<p>This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i>.</p>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge to conduct telecommunications operations near substantial safety hazards. It includes safe hazard management at heights near electrical distribution infrastructure, radiation devices or other services in confined spaces.

If state or territory law require a licence to operate an elevated work platform (EWP) TLILIC508A Licence to operate a boom-type elevating work platform (boom length 11 metres or more) should be completed concurrently.

Application of the Unit

Field officers who work with cables on elevated work platforms, in confined spaces and on roofs and other structures apply the skills and knowledge in this unit.

Licensing/Regulatory Information

Licensing, legislative, regulatory and certification requirements apply to working at heights. If an EWP is required, verify state or territory law requirements for a licence to operate an EWP.

If working at heights, achievement of the unit CPCPCM2015A Work safely on roofs from the CPC08 Construction and Plumbing Services integrated framework training package fulfils this requirement.

This unit addresses confined spaces but does not confer endorsement for work in confined spaces. This requires extensive specialised training which is beyond the scope of this unit. Users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Conduct a risk assessment</p>	<p>1.1 Confirm work instructions with <i>appropriate personnel</i> and seek clarification if required</p> <p>1.2 Select occupational health and safety (<i>OHS</i>) <i>legislation, policy and procedures and technical standards</i> relevant to the work and work site</p> <p>1.3 Assess the <i>risks from electrical, radiation, gas and other services</i> in or adjacent to the worksite</p> <p>1.4 Assess the safety of the worksite, other services and <i>support structures</i> using appropriate <i>monitoring equipment</i></p> <p>1.5 Complete a <i>job safety analysis (JSA)</i> or similar risk assessment record listing potential safety hazards associated with site and work requirements and report <i>safety hazards</i> to relevant personnel</p> <p>1.6 Obtain and confirm permits from <i>relevant authorities</i> within scope of personal authority</p> <p>1.7 Assess potential <i>emergency situations</i> relevant to the site</p> <p>1.8 Note <i>earthing arrangements</i> for telecommunications infrastructure and any other services that impinge on the worksite</p>
<p>2. Develop hazard management plan</p>	<p>2.1 Propose strategies to <i>manage potential safety hazards</i></p> <p>2.2 Communicate hazard management strategies and confirm with co-workers</p> <p>2.3 Establish and confirm safety procedures to ensure management of emergency situations</p> <p>2.4 Obtain <i>safety equipment</i> and <i>personal protective equipment</i></p> <p>2.5 Delineate <i>safe work zones and limits of approach</i> to other services</p> <p>2.6 Arrange <i>road safety and traffic control measures</i></p> <p>2.7 Implement safe strategies for working at heights and in <i>confined spaces</i></p>
<p>3. Work safely</p>	<p>3.1 Use safety equipment and clothing effectively</p> <p>3.2 Use <i>ladders, climbing or lifting equipment</i> to work safely at heights</p> <p>3.3 Operate hand and power tools safely at heights</p> <p>3.4 Work within identified safety zones and approach limits</p>

	<p>3.5 Comply with enterprise and industry earthing practices</p> <p>3.6 Monitor and manage risks throughout work procedures</p> <p>3.7 Apply emergency procedures in the event of an incident</p> <p>3.8 Reinstate the worksite to ensure the safety of telecommunications workers, the public and the telecommunications network</p>
--	--

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to listen and liaise with clients on technical and operational matters and raise OHS matters
- literacy skills to interpret technical documentation and standards and demonstrate knowledge by incorporating technical language into identifying and reporting on safety hazards and emergency situations
- planning skills in establishing measures in road safety and strategies for working at heights
- problem solving skills to apply methodology in minimising risks
- research skills to identify OHS legislation, policy and procedures relevant to the worksite safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to distinguish between insulated and bare conductors, low voltage (LV) and high voltage (HV) cables and ways of ascertaining the voltages present.
-

Required knowledge

- appropriate electrical safety and technical knowledge relating to the type of work, operating plant or vehicle near power lines (safe system of work according to the relevant electrical regulations and Acts)
- environmental control processes:
 - disposal and handling of hazardous and dangerous substances
 - noise pollution
 - waste disposal
- rights and responsibilities of the workplace parties under environmental and OHS Acts, regulations and codes of practice
- sound knowledge of OHS including legislation and standards
- ways in which OHS is managed in the workplace, and activities required under OHS legislation, including:
 - hazard identification
 - hazards that exist in the workplace
 - OHS instruction
 - preferred order of ways to control risks (known as the hierarchy of control)
 - risk assessment and control
 - sound knowledge of operating safely at heights
 - training and provision of OHS information

- workplace environmental and OHS procedures relevant to the work being undertaken, including procedures for:
 - designated personnel responsible for OHS
 - employee participation in OHS management
 - meaning of OHS symbols found on signs and labels in the workplace
 - raising OHS issues
 - recognising and reporting on hazards
 - responding to accidents, fires and emergencies
 - work operations to control risks.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • conduct a risk assessment for a telecommunications site near power infrastructure • develop a hazard management plan • apply safety precautions while working at heights and confined spaces near power infrastructure.
Context of, and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • telecommunications site near power infrastructure • relevant OHS Acts, regulations and codes of practice • enterprise OHS policies and procedures • personal protective equipment.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate assessing and implementing safe work practices • oral or written questioning to assess knowledge of OHS concepts, risk assessment practices and development of hazard management plan • evaluation of written documentation on planning and implementation of safety measures and strategies.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTWHS2170B Follow occupational health and safety and environmental policy and procedures • ICTCBL2065B Splice and terminate optical fibre cable for carriers or service providers.

	<p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

<p><i>Monitoring equipment</i> may include:</p>	<ul style="list-style-type: none"> • electrical current leakages devices • gas leakage detector • pole safety tester • radio frequency (RF) leakage detector.
<p><i>Job safety analysis (JSA)</i> includes:</p>	<ul style="list-style-type: none"> • documents for new workplace or worksite situation • health, safety and environmental hazards • primary application of assessment • sheets to record the steps in the risk management process: <ul style="list-style-type: none"> • assessment • control • identification.
<p><i>Safety hazards</i> may include:</p>	<ul style="list-style-type: none"> • electrical current leakage • general site conditions • geography structural faults in support structures • radiation • weather • debris on ground • electrically unsafe equipment • faulty equipment • gas leak • loose wires • slippery surfaces • unsafe work at heights.

<p><i>Relevant authorities</i> may include:</p>	<ul style="list-style-type: none"> • cable location services (Dial Before you Dig) • environment protection • local government • private owners • utility providers: <ul style="list-style-type: none"> • electricity • gas • telecommunications • water.
<p><i>Emergency situations</i> may include:</p>	<ul style="list-style-type: none"> • collapse of support structure • damage to infrastructure • injury to personnel.
<p><i>Earthing arrangements</i> may include:</p>	<ul style="list-style-type: none"> • ACMA standards • manufacturer's • enterprise • local environmental hazard requirements.
<p><i>Manage potential safety hazards</i> may include:</p>	<ul style="list-style-type: none"> • additional safety precautions or equipment • road closures • roof guards • shutdown or relocation of other services • site clearances • specialised operational equipment • temporary outage • warning signs.
<p><i>Safety equipment</i> may include:</p>	<ul style="list-style-type: none"> • aerial safety belts and lines • flashing lights • guards • traffic signs • warning signs and tapes • witches hats.
<p><i>Personal protective equipment</i> may include:</p>	<ul style="list-style-type: none"> • asbestos precautions • dust protection • earmuffs • eye protection • gas monitoring equipment • gloves: <ul style="list-style-type: none"> • plastic • rubber • leather • gumboots

	<ul style="list-style-type: none"> • hard hats • overalls • personal reflecting jackets • radiation protection clothing • riggers gloves • safety boots • vests.
<i>Safe work zones and limits of approach</i> may relate to:	<ul style="list-style-type: none"> • area near electricity supply assets and sources of radiation • advice published by: <ul style="list-style-type: none"> • ACIF • asset owners • private companies • state and territory authorities • from one to several metres away from live electrical or radiation emitting infrastructure • gas and water services.
<i>Road safety and traffic control measures</i> may include:	<ul style="list-style-type: none"> • additional personnel to manage traffic flow • barricades • placement of cones • sign and warning lights.
<i>Confined spaces</i> includes:	<ul style="list-style-type: none"> • equipment cupboards • pits • power asset space • roof spaces • shafts.
<i>Ladders, climbing or lifting equipment</i> may include:	<ul style="list-style-type: none"> • devices to support construction personnel at heights: <ul style="list-style-type: none"> • elevated work platforms • fixed ladders • non-metallic ladders • safety harnesses.

Unit Sector(s)

Telecommunications - Occupational health and safety

ICTOPN4115B Install and test a dense wavelength division multiplexing system

Modification History

Release	Comments
Release 2	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 3.0</i> . References to other units updated. Outcomes deemed equivalent.
Release 1	This version first released with <i>ICT10 Integrated Telecommunications Training Package Version 1.0</i> .

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to install dense wavelength division multiplexing (DWDM) equipment in optical networks.

Application of the Unit

Telecommunications technical staff who install long haul or metropolitan area DWDM equipment apply the skills and knowledge in this unit. They install the DWDM unit and circuit cards and inspect, clean, and install optical fibres, connectors and associated equipment and prepare the system for subsequent testing and commissioning.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
<i>Elements describe the essential outcomes of a unit of competency.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</i>

Elements and Performance Criteria

<p>1. Prepare to install DWDM units</p>	<p>1.1 Determine the number of racks and DWDM units at each <i>site</i> by referring to installation documents</p> <p>1.2 Determine the DWDM unit and equipment positions within the individual racks</p> <p>1.3 Assemble <i>equipment racks</i> according to safe industry practice and manufacturer's instructions</p> <p>1.4 Select <i>tools</i> and equipment</p> <p>1.5 Prepare <i>patch panels</i> with connectors according to installation plan</p>
<p>2. Install DWDM units and associated cabling</p>	<p>2.1 Install DWDM unit in the designated rack position in order to maintain the planned link budget margin</p> <p>2.2 Install patch panels and <i>ancillary equipment and connections</i> into equipment rack in preparation for commissioning procedures</p> <p>2.3 Insert circuit cards into specified slot locations in readiness for commissioning procedures, but do not seat cards into backplane nor lock into position at this stage</p> <p>2.4 Connect optical fibre cables between circuit cards, optical multiplexers, adjoining DWDM units and patch panels according to manufacturer's specifications</p>
<p>3. Test power connections and complete the installation report</p>	<p>3.1 Measure the main and redundant power supplies to verify the correct polarity of the ground and power connections</p> <p>3.2 Rectify any identified <i>power wiring fault</i> if applicable</p> <p>3.3 Confirm that cooling fans, panel lights, indicator lights and alarms behave according to the manufacturer's prescribed specifications when power is applied</p> <p>3.4 Complete the installation report and reinstate site</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with internal and external personnel on technical and operational matters
- literacy skills to interpret technical documentation
- technical skills to:
 - assemble and secure standard telecommunications equipment rack, associated ironwork and optical fibre support ducting
 - clean optical fibre connector
 - examine optical fibre connector for contamination and assess whether cleaning is required
 - prepare and connect power and ground wires
 - use a digital multimeter to measure DC and AC voltage and to check continuity.
 -

Required knowledge

- DWDM principles of operation
- electrostatic discharge
- optical fibre connector types and characteristics
- optical fibre types and characteristics
- specific OHS requirements that impact on the safe inspection of optical connectors and the safe measurement of optical power from laser transmission systems.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to:</p> <ul style="list-style-type: none"> • conduct installation of DWDM systems and associated cabling according to plans and specifications • test power and ground connections • complete installation reports.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • suitable site for DWDM equipment installation • access to tools and equipment required for installation • a range of optical fibres to suit the installation.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate installing a DWDM unit from a DWDM system together with installation of optical fibre interconnecting cables • review of DWDM installation report prepared by the candidate • oral or written questioning of the candidate to assess knowledge of DWDM installation practices.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTTEN3056A Install telecommunications network equipment • ICTBWN3088B Install optical fibre splitters in fibre distribution hubs. <p>Aboriginal people and other people from a non-English</p>

	<p>speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>
--	---

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<i>Site</i> may include:	<ul style="list-style-type: none"> • optical add drop multiplexer (OADM) site • terminal site.
<i>Equipment racks</i> may include:	<ul style="list-style-type: none"> • 19 inch type • 23 inch type • 535 mm (ETSI rack) type.
<i>Tools</i> may include:	<ul style="list-style-type: none"> • hand tools: <ul style="list-style-type: none"> • crimping tool • screwdrivers • wire cutters • wire stripping tool • optical fibre connector cleaning cassette • microscope or video fibre connector inspection instrument.
<i>Patch panels</i> may include:	<ul style="list-style-type: none"> • rack mounted • wall mounted.
<i>Ancillary equipment and connections</i> may include:	<ul style="list-style-type: none"> • air filter • alarm connections • C/L band splitter tray • cooling fan assembly • coupler tray • craft terminal • data communications connections • equaliser tray • Ethernet hub • fibre management trays • optical attenuators • optical fibre patch cords • optical multiplexer • optical service channel tray • telemetry connections • variable optical attenuators.
<i>Power wiring</i> fault may include:	<ul style="list-style-type: none"> • battery and ground wires are reversed to the DWDM unit • battery wire is open or missing • return wire is open or missing.

Unit Sector(s)

Telecommunications - Optical networks

ICTOPN4116A Use advanced optical test equipment

Modification History

Not Applicable

Unit Descriptor

<p>Unit descriptor</p>	<p>This unit describes the performance outcomes, skills and knowledge required to test optical communication systems and components using advanced optical test equipment. It involves using the optical time domain reflectometer (OTDR), optical spectrum analyser (OSA) and optical return loss (ORL) test set for performance testing and link budget calculation.</p> <p>Licensing, legislative, regulatory and certification requirements apply to working at heights. If an elevated work platform (EWP) is required, verify state or territory law requirements for a licence to operate an EWP. Users should confirm requirements with the relevant federal, state or territory authority.</p> <p>If working at heights, achievement of the unit 'CPCPCM2015A Work safely on roofs' from the CPC08 Construction and Plumbing Services Integrated framework training Package fulfils this requirement.</p>
-------------------------------	--

Application of the Unit

<p>Application of the unit</p>	<p>Installation contractors, technical staff and field officers from telecommunications carriers or other private and public organisations, or regulatory authorities apply the skills and knowledge in this unit.</p> <p>They combine technical skills with organisational and administrative skills to perform specialised testing of complex optical faults, optical network monitoring and link budget calculations on broadband passive optical network (PON), fibre to the x (FTTx) networks, hybrid fibre coaxial (HFC) networks and dense wavelength division multiplexing (DWDM) systems during installation, maintenance, commissioning and troubleshooting phases.</p>

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
<p>1. Prepare to use advanced optical measuring instruments</p>	<p>1.1. Obtain relevant legislation, codes, regulations and standards for compliance when conducting work</p> <p>1.2. Notify customer for site access, security arrangements and location details of optical system and test purpose</p> <p>1.3. Identify site hazards and notify appropriate personnel to make site safe</p> <p>1.4. Devise and implement risk control measures of hazards with handling of optical fibres and lasers in consultation with appropriate personnel</p> <p>1.5. Prepare a testing plan indicating the type of measurement, procedures and nominated wavelength and seek approval from customer</p> <p>1.6. Select the appropriate tools and test instruments according to the required measurement and enterprise practice</p>
<p>2. Evaluate optical performance and link budget using advanced optical test equipment</p>	<p>2.1. Set up test instrument according to manufacturer's instructions and occupational health and safety (OHS) and environmental requirements</p> <p>2.2. Perform measurement using knowledge of appropriate testing techniques and advanced test equipment in a safe manner to evaluate the performance of optical system and component</p> <p>2.3. Record test results and compare with standard test specifications from manufacturer's and enterprise guidelines</p> <p>2.4. Perform end-to-end measurements on an optical link to a customer and record test results and test points</p> <p>2.5. Calculate the optical losses for a link budget figure of an optical link to determine if within operational margins as specified in manufacturer's manual</p> <p>2.6. Evaluate the test results and report on the functionality of the optical component or equipment and the performance of the optical link</p>
<p>3. Document measurement results</p>	<p>3.1. Document test results for future reference and make recommendations on optimising component and system performance</p> <p>3.2. Clean worksite and make safe according to the enterprise requirements and to customer satisfaction</p> <p>3.3. Notify appropriate personnel of job completion for sign off and present test documentations</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to liaise with customers and enterprise staff
- literacy skills to read and interpret work instructions and document work
- numeracy skills to gather and record data from measurements
- planning and organisational skills to plan prioritise and manage own work
- safety awareness skills to:
 - apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
 - select and use required personal protective equipment conforming to industry and OHS standards
 - work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
 - clean an optical connector to an acceptable industry standard
 - safely inspect an optical connector for contamination and determine if cleaning is necessary
 - safely operate:
 - optical loss test set (OLTS)
 - optical time domain reflectometer (OTDR)
 - PON power meter

Required knowledge

- consequences of mating contaminated optical connectors
- decibels, dBm
- downstream and upstream signals
- DWDM metro and long haul system architecture
- measurement of DWDM signals
- measurement of gain and gain flatness of optical amplifier
- measurement of laser spectral stability, drift and unexpected variation in spectral transmission characteristics
- non-linear effects, four-wave mixing
- optical connector types
- optical signal to noise ratio (OSNR)
- optical spectrum limits, wavelengths used in various applications and International

REQUIRED SKILLS AND KNOWLEDGE

- Telecommunications Union (ITU) grid
- optical transmitters and receivers
- ORL
- OTDR dead zones, dynamic range and launch cable
- reflectance
- safe handling procedures with optical fibres
- transmission system line rates:
 - optical Ethernet
 - optical transport network (OTN)
 - synchronous digital hierarchy (SDH)
- wavelength division multiplexing (WDM), coarse wavelength division multiplexing (CWDM) and DWDM principles and optical multiplexers

Evidence Guide

EVIDENCE GUIDE	
<p>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</p>	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	<p>Evidence of the ability to :</p> <ul style="list-style-type: none"> • use OTDR, OSA and ORL advanced optical test equipment to: <ul style="list-style-type: none"> • measure optical power level • measure insertion loss of optical network • measure end-to-end fibre loss (bi-directional) • test and calculate optical link budget • comply with all related OHS requirements and work practices.
Context of and specific resources for assessment	<p>Assessment must ensure:</p> <ul style="list-style-type: none"> • sites on which optical measurements can be conducted • tools and equipment required for measurements • manufacturer's documentation for test instruments and equipment under test.
Method of assessment	<p>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</p> <ul style="list-style-type: none"> • direct observation of the candidate performing optical measurements • review of a written report for the OTDR, the OSA and the ORL test set • oral or written questioning to assess required knowledge.
Guidance information for assessment	<p>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</p> <ul style="list-style-type: none"> • ICTOPN5118A Plan and configure dense wavelength division multiplexing systems • ICTOPN5119A Perform acceptance and commissioning tests on optical network • ICTOPN5120A Plan for an optical system upgrade

EVIDENCE GUIDE

	<p>and cut over</p> <ul style="list-style-type: none"> • ICTOPN5121A Test and commission a dense wavelength division multiplexing transmission system • ICTOPN5122A Test the performance of specialised optical devices • ICTOPN5123A Analyse and integrate specialised optical devices in the network. <p>Aboriginal people and other people from a non-English speaking background may have second language issues.</p> <p>Access must be provided to appropriate learning and assessment support when required.</p> <p>Assessment processes and techniques must be culturally appropriate, and appropriate to the oral communication skill level, and language and literacy capacity of the candidate and the work being performed.</p> <p>In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</p> <p>Where applicable, physical resources should include equipment modified for people with special needs.</p>

Range Statement**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of

RANGE STATEMENT

the item, and local industry and regional contexts) may also be included.

Relevant legislation, codes, regulations and standards may include:

- appropriate licences:
 - crane
 - EWP
 - forklift
 - winch
- Australian Construction Industry Forum (ACIF) standards and codes
- AS Communications Cabling Manual (CCM) Volume 1
- AS/NZS 3000:2007
- AS/NZS 3080:2003
- AS/NZS 3084:2003
- AS/NZS 3085.1:2004
- AS/NZS IEC 61935.1:2006
- AS/NZS IEC 61935.2:2006
- AS/NZS ISO/IEC 14763.3:2007
- AS/NZS ISO/IEC 15018:2005
- AS/NZS ISO/IEC 24702:2007
- cabling security codes and regulations
- Environmental Protection Acts
- OHS
- technical standards AS/ACIF S008:2006 and AS/ACIF S009:2006.

Customer may be:

- asset manager
- installation manager
- maintenance manager
- nominated customer representative
- outage manager
- project manager.

Optical system may contain:

- add-drop multiplexer
- Bragg filters
- DWDM system
- fibre hub
- HFC network
- optical amplifier
- optical line termination (OLT)
- optical links
- optical network termination (ONT)
- optical splitter.

RANGE STATEMENT	
<i>Hazards</i> may include:	<ul style="list-style-type: none"> • building debris • earth potential rise • glass fibre • live power lines • manual handling • mud and water • natural gas and other gas build up • optical fibre cable may contain hazardous light • radio frequency (RF) equipment emitting radiation • remote power feeding services which operate at above telecommunications network voltage (TNV) • vermin.
